CONTENTS

PREFACE xiv

CHAPTER 1

▶ AN INTRODUCTION TO TAXATION 1-1

History of Taxation in the United States 1-2
- Early Periods 1-2
- Revenue Acts from 1913 to the Present 1-3
- Revenue Sources 1-3

Types of Tax Rate Structures 1-4
- The Structure of Individual Income Tax Rates 1-4
- The Structure of Corporate Tax Rates 1-5
- Marginal, Average, and Effective Tax Rates for Taxpayers 1-5
- Determination of Taxable Income and Tax Due 1-6

Other Types of Taxes 1-7
- State and Local Income and Franchise Taxes 1-7
- Wealth Transfer Taxes 1-7
- Other Types of Taxes 1-11

Criteria for a Tax Structure 1-12
- Equity 1-12
- Certainty 1-13
- Convenience 1-13
- Economy 1-13
- Simplicity 1-14
- Objectives of the Federal Income Tax Law 1-14

Entities in the Federal Income Tax System 1-16
- Taxpaying Entities 1-17
- Flow-Through Entities 1-20
- Other Entities 1-23

Tax Law Sources 1-24

Enactment of a Tax Law 1-24
- Steps in the Legislative Process 1-24

Administration of the Tax Law and Tax Practice Issues 1-26
- Organization of the Internal Revenue Service 1-26
- Enforcement Procedures 1-27
- Selection of Returns for Audit 1-27
- Statute of Limitations 1-28
- Interest 1-28
- Penalties 1-28
- Administrative Appeal Procedures 1-29

Components of a Tax Practice 1-29
- Tax Compliance and Procedure 1-29
- Tax Research 1-30
- Tax Planning and Consulting 1-30
- Personal Financial Planning 1-31

Computer Applications in Tax Practice 1-31
- Tax Return Preparation 1-31
- Tax Planning Applications 1-31
- Tax Research Applications 1-31

Problem Materials 1-32
- Discussion Questions 1-32
- Problems 1-34
- Tax Strategy and Critical Thinking Problem 1-36
- Case Study Problem 1-36
- Tax Research Problem 1-36

CHAPTER 2

▶ DETERMINATION OF TAX 2-1

Formula for Individual Income Tax 2-2
- Basic Formula 2-2
- Definitions 2-3
- Tax Formula Illustrated 2-6

Deductions from Adjusted Gross Income 2-7
- Itemized Deductions 2-7
- Standard Deduction 2-11
- Dependency Requirements 2-13
- Child Tax Credit and Credit for Other Dependents 2-19

Determining the Amount of Tax 2-20
- Filing Status 2-21
- Married Filing Jointly 2-21
- Surviving Spouse 2-23
- Head of Household 2-23
- Single Taxpayer 2-24
- Married Filing Separately 2-24
- Abandoned Spouse 2-24
- Children with Unearned Income 2-25
- Additional Medicare Tax and Net Investment Income Tax 2-28

Business Income and Business Entities 2-28

Treatment of Capital Gains and Losses 2-31
- Definition of Capital Assets 2-31
- Tax Treatment of Gains and Losses 2-32

Tax Planning Considerations 2-32
- Shifting Income Between Family Members 2-32
- Splitting Income 2-32
- Maximizing Itemized Deductions 2-33
- Filing Joint or Separate Returns 2-33

Compliance and Procedural Considerations 2-35
- Who Must File 2-35
- Due Dates and Extensions 2-35
- Form 1040 2-36
- System for Reporting Income 2-36

Problem Materials 2-37
- Discussion Questions 2-37
- Issue Identification Questions 2-38
- Problems 2-38
- Tax Strategy and Critical Thinking Problems 2-43
- Tax Form/Return Preparation Problems 2-44
- Case Study Problems 2-44
- Tax Research Problems 2-45

CHAPTER 3

▶ GROSS INCOME: INCLUSIONS 3-1

Economic, Accounting, and Tax Concepts of Income 3-2

- Economic Concept 3-2
- Accounting Concept 3-2
- Tax Concept of Income 3-3

To Whom Is Income Taxable? 3-6

- Assignment of Income 3-6
- Allocating Income Between Married People 3-6
- Income of Minor Children 3-8

When Is Income Taxable? 3-8

- Cash Method 3-8
- Accrual Method 3-11
- Hybrid Method 3-12

Items of Gross Income: Sec. 61(a) 3-13

- Compensation 3-13
- Business Income 3-13
- Gains from Dealings in Property 3-13
- Interest 3-13
- Rents and Royalties 3-15
- Dividends 3-16
- Alimony and Separate Maintenance Payments 3-19
- Pensions and Annuities 3-20
- Income from Life Insurance and Endowment Contracts 3-22
- Income from Discharge of Indebtedness 3-23
- Income Passed Through to Taxpayer 3-23
- Other Items of Gross Income 3-23
- Prizes, Awards, Gambling Winnings, and Treasure Finds 3-24
- Illegal Income 3-24
- Unemployment Compensation 3-24
- Social Security Benefits 3-24
- Insurance Proceeds and Court Awards 3-26
- Recovery of Previously Deducted Amounts 3-26
- Claim of Right 3-27

Tax Planning Considerations 3-27

- Shifting Income 3-27
- Divorce Settlements 3-28
- Prepaid Income 3-28
- Taxable, Tax-Exempt, or Tax-Deferred Bonds 3-28
- Reporting Savings Bond Interest 3-29
- Deferred Compensation Arrangements 3-29

Compliance and Procedural Considerations 3-30

Problem Materials 3-37

- Discussion Questions 3-37
- Issue Identification Questions 3-38
- Problems 3-38
- Comprehensive Problems 3-41
- Tax Strategy and Critical Thinking Problems 3-42
- Tax Form/Return Preparation Problems 3-42
- Case Study Problems 3-44
- Tax Research Problem 3-44

CHAPTER 4

▶ GROSS INCOME: EXCLUSIONS 4-1

Items That Are Not Income 4-2

- Unrealized Income 4-2
- Self-Help Income 4-3
- Rental Value of Personal-Use Property 4-3
- Selling Price of Property 4-3

Major Statutory Exclusions 4-4

- Gifts and Inheritances 4-4
- Life Insurance Proceeds 4-5
- Awards for Meritorious Achievement 4-7
- Scholarships and Fellowships 4-7
- Distributions from Qualified Tuition Programs 4-7
- Payments for Injury and Sickness 4-8
- Employee Fringe Benefits 4-10
- Foreign-Earned Income Exclusion 4-19
- Income from the Discharge of a Debt 4-20
- Exclusion for Gain from Small Business Stock 4-22
- Other Exclusions 4-22

Tax Planning Considerations 4-23

- Employee Fringe Benefits 4-23
- Self-Help Income and Use of Personally Owned Property 4-24

Compliance and Procedural Considerations 4-24

Problem Materials 4-25

- Discussion Questions 4-25
- Issue Identification Questions 4-26
- Problems 4-26
- Comprehensive Problem 4-30
- Tax Strategy and Critical Thinking Problems 4-30
- Tax Form/Return Preparation Problems 4-31
- Case Study Problems 4-32
- Tax Research Problems 4-33

CHAPTER 5

▶ PROPERTY TRANSACTIONS: CAPITAL GAINS AND LOSSES 5-1

Determination of Gain or Loss 5-3

- Realized Gain or Loss 5-3
- Recognized Gain or Loss 5-5

Basis Considerations 5-5

- Cost of Acquired Property 5-5
- Property Received as a Gift: Gifts After 1921 5-7
- Property Received from a Decedent 5-8
- Property Converted from Personal Use to Business Use 5-10
- Allocation of Basis 5-11

Definition of a Capital Asset 5-13

- Influence of the Courts 5-14
- Other IRC Provisions Relevant to Capital Gains and Losses 5-14

Tax Treatment for Capital Gains and Losses of Noncorporate Taxpayers 5-16

- Capital Gains 5-16
- Adjusted Net Capital Gains (ANCG) 5-18
- Capital Losses 5-19

Tax Treatment of Capital Gains and Losses: Corporate Taxpayers 5-22

Sale or Exchange 5-22

- Worthless Securities 5-23
- Retirement of Debt Instruments 5-23
- Options 5-26
- Patents 5-27

- Franchises, Trademarks, and Trade Names 5-27
- Lease Cancellation Payments 5-28

Holding Period 5-29
- Property Received as a Gift 5-29
- Property Received from a Decedent 5-29
- Nontaxable Exchanges 5-30
- Receipt of Nontaxable Stock Dividends and Stock Rights 5-30
- Justification for Preferential Treatment of Net Capital Gains 5-30
- Mobility of Capital 5-31
- Mitigation of the Effects of Inflation and the Progressive Tax System 5-31
- Lowers the Cost of Capital 5-31
- Provides Congress with a Method of Affecting Taxpayer's Behavior 5-31

Tax Planning Considerations 5-32
- Selection of Property to Transfer by Gift 5-32
- Selection of Property to Transfer at Time of Death 5-33

Compliance and Procedural Considerations 5-33
- Documentation of Basis 5-33
- Reporting of Capital Gains and Losses on Schedule D 5-34

Problem Materials 5-41
- Discussion Questions 5-41
- Issue Identification Questions 5-42
- Problems 5-42
- Comprehensive Problem 5-47
- Tax Strategy and Critical Thinking Problems 5-47
- Tax Form/Return Preparation Problems 5-48
- Case Study Problems 5-49
- Tax Research Problems 5-49

CHAPTER 6

▶ DEDUCTIONS AND LOSSES 6-1

Classifying Deductions as for Versus from Adjusted Gross Income (AGI) 6-3

Criteria for Deducting Business and Investment Expenses 6-4
- Business or Investment Activity 6-5
- Ordinary Expense 6-7
- Necessary Expense 6-7
- Reasonable Expense 6-8
- Expenses and Losses Incurred Directly by the Taxpayer 6-8

General Restrictions on the Deductibility of Expenses 6-9
- Capitalization Versus Expense Deduction 6-10
- Expenses Related to Exempt Income 6-11
- Expenditures Contrary to Public Policy 6-12
- Other Expenditures Specifically Disallowed 6-14

Substantiation Requirements 6-18

When an Expense Is Deductible 6-18
- Cash Method 6-19
- Accrual Method 6-21

Special Disallowance Rules 6-23
- Wash Sales 6-23
- Transactions Between Related Parties 6-26
- Hobby Activities 6-29
- Vacation Home 6-30
- Expenses of an Office in the Home 6-34

Tax Planning Considerations 6-35
- Hobby Versus Business 6-35
- Unreasonable Compensation 6-36
- Timing of Deductions 6-36

Compliance and Procedural Considerations 6-37
- Proper Classification of Deductions 6-37
- Proper Substantiation 6-37
- Business Versus Hobby 6-37

Problem Materials 6-38
- Discussion Questions 6-38
- Issue Identification Questions 6-39
- Problems 6-40
- Comprehensive Problems 6-45
- Tax Strategy and Critical Thinking Problems 6-46
- Tax Form/Return Preparation Problems 6-46
- Case Study Problem 6-49
- Tax Research Problems 6-49

CHAPTER 7

▶ BUSINESS EXPENSES AND DEFERRED COMPENSATION 7-1

Part I: Self-Employed Expenses 7-2

Business and Rental Real Estate Expenses 7-2

Self-Employed Individual Versus Employee 7-3
- Employee Expenses 7-3

Travel Expenses 7-4
- Deductibility of Travel Expenses 7-4
- Definition of Travel Expenses 7-5
- General Qualification Requirements 7-6
- Business Versus Pleasure 7-7
- Foreign Travel 7-8
- Additional Limitations on Travel Expenses 7-8

Transportation Expenses 7-9
- Definition and Classification 7-9
- Treatment of Automobile Expenses 7-10

Meals and Entertainment Expenses 7-12
- Business Meals and Beverages 7-12
- Per Diem Allowances for Meals and Lodging 7-13
- Business Gifts 7-14

Moving Expenses 7-14

Education Expenses 7-15
- Classification of Education Expenses/Credits 7-16
- General Requirements for a Deduction 7-16

Office in Home Expenses 7-17
- General Requirements for a Deduction 7-18
- Deductions and Limitations 7-19

Part II: Deferred Compensation 7-20
- Qualified Pension and Profit-Sharing Plans 7-20
- Qualification Requirements for a Qualified Plan 7-22
- Tax Treatment to Employees and Employers 7-23
- Nonqualified Plans 7-25
- Employee Stock Options 7-27
- Plans for Self-Employed Individuals 7-30
- Simplified Employee Pensions (SEP IRAs) 7-31
- Simple Retirement Plans 7-31
- Individual Retirement Accounts (IRAs) 7-31
- Traditional IRA 7-31

  - Roth IRA 7-33
  - Coverdell Education Savings Account 7-35
  - Health Savings Accounts 7-36
- **Tax Planning Considerations 7-37**
  - Providing Nontaxable Compensation to Employees 7-37
  - Rollovers to Roth IRA 7-37
- **Compliance and Procedural Considerations 7-38**
  - Substantiating Travel and Business Meal Expenses 7-38
  - Reporting Office in Home Expenses 7-38
  - Qualification of Pension and Profit-Sharing Plans 7-39
- **Problem Materials 7-41**
  - Discussion Questions 7-41
  - Issue Identification Questions 7-43
  - Problems 7-43
  - Comprehensive Problem 7-49
  - Tax Strategy and Critical Thinking Problem 7-50
  - Tax Form/Return Preparation Problem 7-50
  - Case Study Problems 7-50
  - Tax Research Problem 7-51

CHAPTER 8

▶ **ITEMIZED DEDUCTIONS 8-1**

- **Medical Expenses 8-2**
  - Qualified Individuals 8-2
  - Qualified Medical Expenses 8-3
  - Amount and Timing of Deduction 8-6
- **Taxes 8-9**
  - Definition of a Tax 8-9
  - Deductible Taxes 8-9
  - Limits on Itemized Deductions for State and Local Taxes 8-9
  - State and Local Income Taxes 8-10
  - State and Local Sales Taxes 8-10
  - Personal Property Taxes 8-10
  - Real Estate Taxes 8-11
  - Self-Employment Tax 8-12
  - Nondeductible Taxes 8-12
- **Interest 8-12**
  - Definition of Interest 8-13
  - Classification of Interest Expense 8-13
  - Timing of the Interest Deduction 8-19
- **Charitable Contributions 8-21**
  - Qualifying Organization 8-21
  - Type of Property Contributed 8-22
  - Deduction Limitations 8-25
  - Application of Carryovers 8-26
  - Special Rules for Charitable Contributions Made by Corporations 8-27
  - Summary of Charitable Contributions Deduction Limitations 8-27
- **Casualty and Theft Losses 8-28**
- **Qualified Business Income Deduction 8-29**
- **Tax Planning Considerations 8-29**
  - Medical Expense Deduction 8-29
  - Interest Expense Deduction 8-30
  - Deduction for Charitable Contributions 8-31
- **Compliance and Procedural Considerations 8-32**
  - Medical Expenses 8-32
  - Charitable Contributions 8-33
  - Taxes 8-35
- **Problem Materials 8-37**
  - Discussion Questions 8-37
  - Issue Identification Questions 8-38
  - Problems 8-38
  - Comprehensive Problem 8-42
  - Tax Strategy and Critical Thinking Problems 8-43
  - Tax Form/Return Preparation Problems 8-43
  - Case Study Problems 8-45
  - Tax Research Problems 8-46

CHAPTER 9

▶ **LOSSES AND BAD DEBTS 9-1**

- **Transactions That May Result in Losses 9-2**
  - Sale or Exchange of Property 9-2
  - Expropriated, Seized, Confiscated, or Condemned Property 9-3
  - Abandoned Property 9-3
  - Worthless Securities 9-3
  - Demolition of Property 9-4
- **Classifying the Loss on the Taxpayer's Tax Return 9-4**
  - Ordinary Versus Capital Loss 9-5
  - Disallowance Possibilities 9-6
- **Passive Losses 9-7**
  - Computation of Passive Losses and Credits 9-7
  - Carryovers 9-8
  - Definition of a Passive Activity 9-10
  - Taxpayers Subject to Passive Loss Rules 9-12
  - Real Estate Businesses 9-14
  - Other Rental Real Estate Activities 9-15
- **Casualty and Theft Losses 9-17**
  - Casualty Defined 9-17
  - Theft Defined 9-19
  - Deductible Amount of Casualty Loss 9-19
  - Limitations on Personal-Use Property 9-20
  - Netting Casualty Gains and Losses on Personal-Use Property 9-21
  - Casualty Gains and Losses Attributable to Business and Investment Property 9-22
  - Timing of Casualty Loss Deduction 9-22
- **Bad Debts 9-24**
  - Bona Fide Debtor-Creditor Relationship 9-24
  - Taxpayer's Basis in the Debt 9-25
  - Debt Must Be Worthless 9-26
  - Nonbusiness Bad Debts 9-26
  - Business Bad Debts 9-28
  - Deposits in Insolvent Financial Institutions 9-28
- **Net Operating Losses 9-29**
  - Computing the Net Operating Loss for Individuals 9-29
  - Carryover Periods 9-32
- **Excess Business Losses 9-33**
- **Tax Planning Considerations 9-33**
  - Bad Debts 9-33
  - Casualties 9-34
- **Compliance and Procedural Considerations 9-34**
  - Casualty Losses 9-34
  - Worthless Securities 9-34
- **Problem Materials 9-35**
  - Discussion Questions 9-35
  - Issue Identification Questions 9-37

Problems 9-37
Tax Strategy and Critical Thinking Problems 9-41
Tax Form/Return Preparation Problems 9-42
Case Study Problems 9-44
Tax Research Problem 9-45

CHAPTER 10

▶ **DEPRECIATION, COST RECOVERY, AMORTIZATION, AND DEPLETION 10-1**

Depreciation and Cost Recovery 10-2
General Considerations 10-2
Depreciation Methods 10-4
Calculation of Depreciation 10-5
MACRS Restrictions 10-12

Amortization 10-18
Sec. 197 Intangibles 10-18
Research and Experimental Expenditures 10-19
Computer Software 10-21

Depletion, Intangible Drilling and Development Costs 10-22
Depletion Methods 10-22
Treatment of Intangible Drilling and Development Costs 10-24

Tax Planning Considerations 10-24
Alternative Depreciation System Under MACRS 10-24
Use of Units of Production Depreciation 10-24
Structuring a Business Combination 10-25

Compliance and Procedural Considerations 10-25
Reporting Cost Recovery, Depreciation, Depletion, and Amortization Deductions 10-25

Problem Materials 10-26
Discussion Questions 10-26
Issue Identification Questions 10-30
Problems 10-30
Comprehensive Problem 10-35
Tax Strategy and Critical Thinking Problems 10-36
Tax Form/Return Preparation Problems 10-37
Case Study Problems 10-37
Tax Research Problem 10-38

CHAPTER 11

▶ **ACCOUNTING PERIODS AND METHODS 11-1**

Accounting Periods 11-2
Required Payments and Fiscal Years 11-3
Changes in the Accounting Period 11-4
Returns for Periods of Less than 12 Months 11-5

Overall Accounting Methods 11-7
Cash Receipts and Disbursements Method 11-7
Accrual Method 11-9
Hybrid Method 11-10

Inventories 11-11
Determination of Inventory Cost 11-11

Special Accounting Methods 11-15
Long-Term Contracts 11-15
Installment Sales Method 11-17
Deferred Payment Sales 11-21

Imputed Interest 11-22
Imputed Interest Computation 11-23
Accrual of Interest 11-23
Gift, Shareholder, and Other Loans 11-24

Change in Accounting Methods 11-25
Amount of Change 11-26
Reporting the Amount of the Change 11-27
Obtaining IRS Consent 11-27

Tax Planning Considerations 11-28
Accounting Periods 11-28
Accounting Methods 11-28
Installment Sales 11-28

Compliance and Procedural Considerations 11-28
Reporting Installment Sales on Form 6252 11-28
Procedures for Changing to LIFO 11-30

Problem Materials 11-30
Discussion Questions 11-30
Issue Identification Questions 11-31
Problems 11-32
Comprehensive Problem 11-34
Tax Strategy and Critical Thinking Problems 11-35
Tax Form/Return Preparation Problem 11-35
Case Study Problems 11-35
Tax Research Problems 11-36

CHAPTER 12

▶ **PROPERTY TRANSACTIONS: NONTAXABLE EXCHANGES 12-1**

Like-Kind Exchanges 12-2
Like-Kind Property Defined 12-2
A Direct Exchange Must Occur 12-4
Three-Party Exchanges 12-4
Receipt of Boot 12-5
Basis of Property Received 12-6
Exchanges Between Related Parties 12-7
Transfer of Non–Like-Kind Property 12-8
Holding Period for Property Received 12-8

Involuntary Conversions 12-9
Involuntary Conversion Defined 12-10
Tax Treatment of Gain Due to Involuntary Conversion into Boot 12-10
Replacement Property 12-12
Obtaining Replacement Property 12-13
Time Requirements for Replacement 12-14

Sale of Principal Residence 12-15
Principal Residence Defined 12-16
Sale of More than One Principal Residence Within a Two-Year Period 12-17
Nonqualified Use After 2008 12-19
Involuntary Conversion of a Principal Residence 12-20

Tax Planning Considerations 12-20
Avoiding the Like-Kind Exchange Provisions 12-20
Sale of a Principal Residence 12-21

Compliance and Procedural Considerations 12-22
Reporting of Involuntary Conversions 12-22
Reporting of Sale or Exchange of a Principal Residence 12-23

Problem Materials 12-23
- Discussion Questions 12-23
- Issue Identification Questions 12-24
- Problems 12-25
- Comprehensive Problem 12-29
- Tax Strategy and Critical Thinking Problem 12-29
- Tax Form/Return Preparation Problems 12-30
- Case Study Problem 12-31
- Tax Research Problems 12-31

CHAPTER 13

▶ **PROPERTY TRANSACTIONS: SECTION 1231 AND RECAPTURE 13-1**
- History of Sec. 1231 13-2

Overview of Basic Tax Treatment for Sec. 1231 13-3
- Net Gains 13-3
- Net Losses 13-3
- Tax Rate for Net Sec. 1231 Gain 13-4

Section 1231 Property 13-5
- Section 1231 Property Defined 13-5
- Real or Depreciable Property Used in Trade or Business 13-5
- Involuntary Conversions 13-6
- Condemnations 13-6
- Other Involuntary Conversions 13-7

Procedure for Sec. 1231 Treatment 13-7

Recapture Provisions of Sec. 1245 13-8
- Purpose of Sec. 1245 13-9

Recapture Provisions of Sec. 1250 13-10
- Purpose of Sec. 1250 13-11
- Section 1250 Property Defined 13-11
- Unrecaptured Section 1250 Gain 13-12
- Taxation of Gains on Sale or Exchange of Depreciable Real Property 13-12
- Low-Income Housing 13-15

Additional Recapture for Corporations 13-16
- Summary of Secs. 1231, 1245, and 1250 Gains 13-17

Recapture Provisions—Other Applications 13-18
- Gifts of Property Subject to Recapture 13-18
- Transfer of Property Subject to Recapture at Death 13-18
- Charitable Contributions 13-18
- Like-Kind Exchanges 13-19
- Involuntary Conversions 13-19
- Installment Sales 13-19
- Section 179 Expensing Election 13-20
- Conservation and Land Clearing Expenditures 13-20
- Intangible Drilling Costs and Depletion 13-21
- Gain on Sale of Depreciable Property Between Related Parties 13-22

Tax Planning Considerations 13-23
- Avoiding the Recapture Provisions 13-23

Compliance and Procedural Considerations 13-24
- Reporting Sec. 1231 Gains and Losses on Form 4797 13-24
- Reporting Gains Recaptured as Ordinary Income on Form 4797 13-24
- Reporting Casualty or Theft Gain or Loss on Form 4684 13-24

Problem Materials 13-27
- Discussion Questions 13-27
- Issue Identification Questions 13-28
- Problems 13-29
- Comprehensive Problem 13-34
- Tax Strategy and Critical Thinking Problems 13-34
- Tax Form/Return Preparation Problems 13-34
- Case Study Problems 13-35
- Tax Research Problem 13-36

CHAPTER 14

▶ **SPECIAL TAX COMPUTATION METHODS, TAX CREDITS, AND PAYMENT OF TAX 14-1**

Alternative Minimum Tax 14-2
- AMT Computation 14-3
- AMT Tax Rates and Brackets 14-3
- AMT Exemption Amount 14-3
- AMT Tax Preference Items 14-4
- AMT Adjustments 14-4
- AMT Credits 14-6
- Summary Illustration of the AMT Computation 14-7

Self-Employment Tax 14-8
- What Constitutes Self-Employment Income 14-9

Personal and Business Tax Credits 14-10
- Use and Importance of Tax Credits 14-10
- Value of a Credit Versus a Deduction 14-10
- Nonrefundable Personal Tax Credits 14-11
- Foreign Tax Credit 14-17
- Business Related Tax Credits 14-19
- Refundable Personal Credits 14-23

ABOUT THE EDITORS

Mitchell Franklin

Mitchell Franklin PhD., CPA is The Distinguished Jack Collins '60 Chair in Accounting and Professor of Accounting at Le Moyne College, Madden College of Business and Economics, in Syracuse, New York. His research interests explore the impact of tax policies on individual and business decisions, as well as pedagogical issues in both financial accounting and taxation. Dr. Franklin has published over fifty articles in journals that include *Issues in Accounting Education, Advances in Accounting Education, Journal of Taxation, Tax Notes*, and *The Tax Adviser*. Dr. Franklin presently serves on the editorial board of *Issues in Accounting Education* and is an associate editor for *The Accounting Educators' Journal*. Professionally, Dr. Franklin previously served as President of the American Accounting Association Northeast Region and served as Chair of the 2023 American Taxation Association Conference for Teaching and Learning. Prior to joining Le Moyne College, Dr. Franklin served on the accounting faculty at the Syracuse University, Whitman School of Management for fifteen years.

Luke E. Richardson

Luke E. Richardson is an Associate Professor of Instruction and Kerkering Barberio Fellow in the Lynn Pippenger School of Accountancy at the University of South Florida. He received undergraduate and graduate degrees in accounting from the University of South Florida and a J.D. from the Stetson University College of Law. Professor Richardson, a CPA and lawyer in Florida, worked with Deloitte prior to his current role. He teaches several courses in taxation of individuals and business entities. Outside the classroom, he serves as a faculty advisor for the Delta Gamma chapter of Beta Alpha Psi and continues in his professional practice. Professor Richardson has published articles in practitioner journals such as *Tax Notes, The Tax Adviser*, and the *Journal of Accountancy*.

ABOUT THE AUTHORS

Thomas R. Pope

Thomas R. Pope is the Ernst & Young Professor of Accounting at the University of Kentucky. He received a B.S. from the University of Louisville and an M.S. and D.B.A. in business administration from the University of Kentucky. He teaches international taxation, partnership and S corporation taxation, tax research and policy, and introductory taxation and has won outstanding teaching awards at the University, College, and School of Accountancy levels. He has published articles in *The Accounting Review, The Tax Adviser, Taxes, Tax Notes,* and a number of other journals. Professor Pope's extensive professional experience includes eight years with Big Four accounting firms. Five of those years were with Ernst & Whinney (now part of Ernst & Young), including two years with their National Tax Department in Washington, D.C. He subsequently held the position of Senior Manager in charge of the Tax Department in Lexington, Kentucky. Professor Pope also has been a leader and speaker at professional tax conferences all over the United States and is active as a tax consultant.

Timothy J. Rupert

Timothy J. Rupert is a Professor at the D'Amore-McKim School of Business at Northeastern University. He received his B.S. in Accounting and his Master of Taxation from the University of Akron. He also earned his Ph.D. from Penn State University. Professor Rupert's research has been published in such journals as *The Accounting Review, The Journal of the American Taxation Association, Behavioral Research in Accounting, Advances in Taxation, Applied Cognitive Psychology, Advances in Accounting Education,* and *Journal of Accounting Education*. In 2010, he received the Outstanding Educator Award from the Massachusetts Society of CPAs. He also has received the University's Excellence in Teaching Award and the D'Amore-McKim School's Best Teacher of the Year award multiple times. He is active in the American Accounting Association and the American Taxation Association (ATA) and has served as president, vice president, and secretary of the ATA.

David S. Hulse

David S. Hulse is a Professor Emeritus at the University of Kentucky, where he taught introductory and corporate taxation courses. He received an undergraduate degree from Shippensburg University, an M.S. from Louisiana State University, and a Ph.D. from the Pennsylvania State University. Professor Hulse has published a number of articles on tax issues in academic and professional journals, including *The Journal of the American Taxation Association, Advances in Taxation,* the *Journal of Financial Service Professionals,* the *Journal of Financial Planning,* and *Tax Notes*.

N. Allen Ford

N. Allen Ford is a Professor Emeritus at the University of Kansas. He received an undergraduate degree from Centenary College in Shreveport, Louisiana, and both the M.B.A. and Ph.D. in Business from the University of Arkansas. He has published over 40 articles related to taxation, financial accounting, and accounting education in journals such as *The Accounting Review, The Journal of the American Taxation Association,* and *The Journal of Taxation*. He served as president of the American Taxation Association in 1979–80. Professor Ford has received numerous teaching awards, at the college and university levels. In 1993, he received the Byron T. Shutz Award for Distinguished Teaching in Economics and Business. In 1996 he received the Ray M. Sommerfeld Outstanding Tax Educator Award, which is jointly sponsored by the American Taxation Association and Ernst & Young, and in 1998 he received the Kansas Society of CPAs Outstanding Education Award. He received the CHANCELLORS CLUB Career Teaching Award in 2011.

Charlene Henderson

Charlene Henderson is a faculty member in the Department of Accounting at Louisiana State University. She earned undergraduate and master's degrees in accounting from Mississippi State University. After working in public accounting and banking, she earned a Ph.D. from Arizona State University. She has taught introductory taxation, corporate taxation, and tax research. Her research has appeared in several journals, including *Journal of the American Taxation Association, Journal of Accounting, Auditing and Finance, Auditing: A Journal of Practice and Theory*, and a number of other journals.

William D. Brink

William D. Brink, Ph.D., CPA, CFP is an Associate Professor in the Department of Accountancy at the Farmer School of Business at Miami University in Oxford, Ohio. He received his B.S. from Appalachian State University in 2005 and his Masters in Accountancy from The University of North Carolina Wilmington in 2007. Before attending the University of South Carolina to obtain his Ph.D. in Accountancy in 2014, he worked in public accounting for RSM McGladrey. He teaches tax courses at both the undergraduate and graduate level focusing on individual taxation, business taxation, tax policy, tax academic research, and tax legal research. He has co-authored articles in the *Journal of Business Ethics, Journal of the American Taxation Association, Behavioral Research in Accounting, Advances in Accounting Education, Advances in Taxation, The Conversation, CGMA Magazine*, and *The Tax Adviser*. He was the Winner of the Outstanding Author Contribution in the 2017 Emerald Literati Network Awards for Excellence for an article published in *Advances in Accounting Education* and has received numerous teaching awards.

Susan Albring

Susan Albring is a Professor at the Martin J. Whitman School of Management at Syracuse University where she teaches introductory and corporate taxation classes. She received her B.S. in Accounting at LeMoyne College. After working in public accounting, she earned her M.S. in Accounting from Syracuse University and a Ph.D. from the University of Arizona. Professor Albring's research has been published in such journals as *Management Science, The Journal of the American Taxation Association, Journal of Accounting and Public Policy, Journal of Accounting, Auditing and Finance, Journal of Corporate Finance, Advances in Accounting, Issues in Accounting Education, Tax Notes*, and several other journals. She serves as Co Editor-in-Chief of *Advances in Accounting*. She was named the Whitman School of Management Teaching Fellow and has received numerous teaching awards at the college level including Beta Gamma Sigma and Beta Alpha Psi Professor of the Year. She received nominations for the Ernst & Young Inclusive Excellence Award for Accounting and Business Faculty. She is active in the American Accounting Association and served in the American Taxation Association as a Trustee, a member of the Publications Committee, Vice-Chair of Program Logistics for the Doctoral Consortium Committee, and Chair of the Annual Meeting Program Committee.

PREFACE

New to this Edition

INDIVIDUALS

- The latest tax rulings and regulations bring currency to your course.
- A complete refresh of the material to include the most recent laws passed and their implications helps prepare students for their field. Updates include the following:
  - Real-world examples relating the text material to events, cases, and statistics (some from the IRS's Statistics of Income) occurring in tax and business environments.
  - Significant court cases and IRS rulings and procedures during 2024 and early 2025, for information that was available at the time of update.
  - All tax rate schedules to reflect rate and inflation adjustments for 2025, as available at the time of update.
  - End-of-chapter tax return problems revised to 2024.
  - All end-of-chapter problems to reflect the most recent changes in tax law as of the time of publication.
- All thresholds for the 2024 tax year have been updated.
- All form-related problems have been updated to the most recent available tax forms at the time of publication.

CORPORATIONS

- Updates to content and problem materials in all chapters affected by tax legislation and subsequent administrative guidance or judicial decisions announced in 2024 and early 2025, at the time of content updates.
- Updates to tax rate schedules and other figures affected by law changes and inflation adjustments for 2024.
- Updates to tax return problems to feature 2024 tax forms (the most recent available at time of publication).
- Updates to wording in several chapters as part of an effort to convey material more accurately and concisely.

Solving Teaching and Learning Challenges

The Franklin/Richardson 2026 Series in Federal Taxation is appropriate for use in any undergraduate course in federal taxation, and comes in a choice of three volumes:

- Federal Taxation 2026: Individuals
- Federal Taxation 2026: Corporations, Partnerships, Estates & Trusts (the companion book to Individuals)
- Federal Taxation 2026: Comprehensive (available in eTextbook only; all chapters from both Individuals and Corporations volumes)

- The *Individuals* volume covers *all* entities, although the treatment is often briefer than in the *Corporations* and *Comprehensive* volumes. The Individuals volume, therefore, is appropriate for colleges and universities that require only one semester of taxation as well as those that require more than one semester of taxation. Further, this volume adapts the suggestions of the Model Tax Curriculum as promulgated by the American Institute of Certified Public Accountants.
- The *Corporations, Partnerships, Estates & Trusts* and *Comprehensive* volumes contain much more extensive coverage of entities and multiple comprehensive tax return problems. Problem C:3-66 contains the comprehensive corporate tax return, Problem C:9-59 contains the comprehensive partnership tax return, and Problem C:11-62 contains the comprehensive S corporation tax return. Problem C:11-62 is based on the same facts as Problem C:9-59 so that students can compare the returns for these two entities.
- The *Corporations, Partnerships, Estates & Trusts* and *Comprehensive* volumes contain sections called Financial Statement Implications, which discuss the implications of Accounting Standards Codification (ASC) 740. The main discussion of accounting for income taxes appears in Chapter C:3. The financial statement implications of other transactions appear in Chapters C:7 and C:8.

Real-World Approach

The Pearson 2026 Series in Federal Taxation has an appropriate blend of technical content of the tax law with a high level of readability for students. It is focused on enabling students to apply tax principles within the chapter to real-life situations using many strong pedagogical aids:

Real-World Example

These comments relate the text material to events, cases, and statistics occurring in the tax and business environment. The statistical data presented in some of these comments are taken from the IRS's Statistics of Income at www.irs.gov.

Book-to-Tax Accounting Comparison

These comments compare the tax discussion in the text to the accounting and/or financial statement treatment of this material. Also, the last section of Chapter C:3 discusses the financial statement implications of federal income taxes.

What Would You Do in This Situation?

Unique to the Franklin/Richardson series, these boxes place students in a decision-making role. The boxes include many *controversies* that are as yet unresolved or are currently being considered by the courts. These boxes make extensive use of **Ethical Material** as they represent choices that may put the practitioner at odds with the client.

Stop & Think

These "speed bumps" encourage students to pause and apply what they have just learned. Solutions for each issue are provided in the box.

Ethical Point

These comments provide the ethical implications of material discussed in the adjoining text. Students apply what they have just learned.

Tax Strategy Tip

These comments suggest tax planning ideas related to material in the adjoining text.

Additional Comment

These comments provide supplemental information pertaining to the adjacent text.

Instructor Teaching Resources

This program comes with the following teaching resources.

Supplements available to instructors at www.pearsonhighered.com/pearsontax	**Features of the Supplement**
Instructor's Resource Manual authored by Mitchell Franklin from Le Moyne College and Joshua G. Coyne, Ph.D.	• Sample syllabi • Instructor outlines • Information regarding problem areas for students • Solutions to the tax form/tax return preparation problems
Instructor's Solutions Manual authored by Mitchell Franklin from Le Moyne College and Luke E. Richardson from University of South Florida	• Solutions to discussion questions • Solutions to problems • Solutions to comprehensive and tax strategy problems
Test Bank authored by Anthony Masino, JD, CPA, and Kate Demarest from University of Baltimore	Over 2,000 multiple-choice, true/false, short-answer, essays, and worked problems. • Type (Multiple-choice, true/false, short-answer, essay) • Page references to where content is found in the text
Computerized TestGen	TestGen allows instructors to: • Customize, save, and generate classroom tests • Edit, add, or delete questions from the Test Item Files • Analyze test results • Organize a database of tests and student results.
PowerPoint Presentations authored by Michael P. Griffin from University of Massachusetts Dartmouth	Slides include key graphs, tables, and equations in the textbook. PowerPoints meet accessibility standards for students with disabilities. Features include, but not limited to: • Keyboard and Screen Reader access • Alternative text for images • High color contrast between background and foreground colors
TaxAct 2024 Professional Software	Available for download with Individuals, Corporations, and Comprehensive Texts—please contact your Pearson representative for assistance with the registration process. This user-friendly tax preparation program includes more than 80 tax forms, schedules, and worksheets. TaxAct calculates returns and alerts the user to possible errors or entries. Consists of Forms 990, 1040, 1041, 1065, 1120, and 1120-S.

Acknowledgments

Our policy is to provide annual editions and to prepare timely updated supplements when major tax revisions occur. We are most appreciative of the suggestions made by outside reviewers because these extensive review procedures have been valuable to the authors and editors during the revision process.

We also are grateful to the various graduate assistants, doctoral students, and colleagues who have reviewed the text and supplementary materials and checked solutions to maintain a high level of technical accuracy. In particular, we would like to acknowledge the following colleagues who assisted in the preparation of supplemental materials for this text: Joshua G. Coyne, Ph.D.; Kate Demarest, University of Baltimore; Anthony Masino, JD, CPA; Brian Hogan, University of Pittsburgh; Michael P. Griffin, University of Massachusetts Dartmouth; and Nancy Osborne, University of Massachusetts Dartmouth.

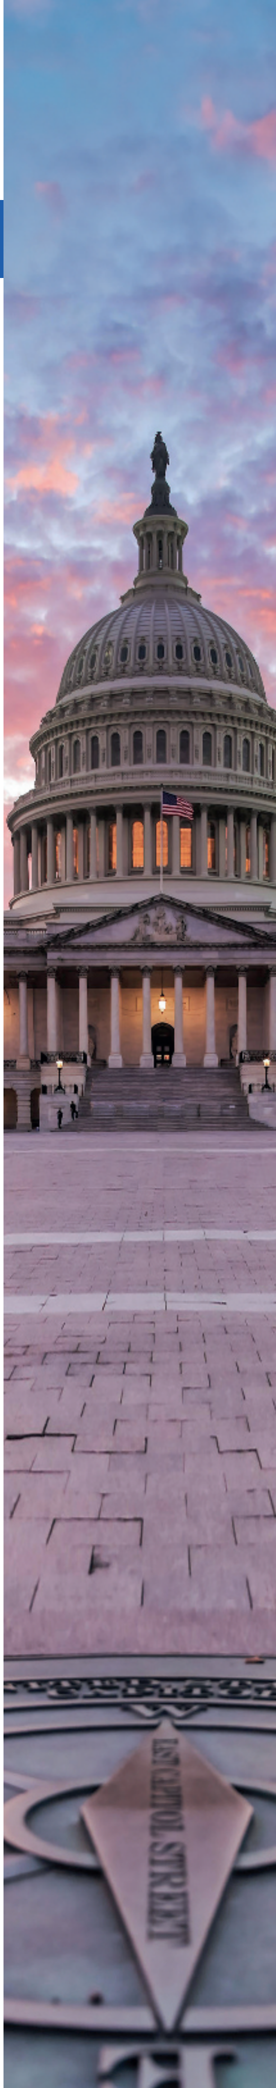
In addition, we want to thank Merle M. Erickson, M. L. Hanlon, Edward L. Maydew, and Terry J. Shevlin for allowing us to use the model discussed in their text, *Scholes & Wolfson's Taxes and Business Strategy*, as the basis for material in Chapter I:18.

Please send any comments to Mitchell Franklin or Luke E. Richardson.

CHAPTER

1

AN INTRODUCTION TO TAXATION



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Discuss the history of taxation in the United States
2. Describe the three types of tax rate structures
3. Describe the various types of taxes
4. Discuss the criteria for a "good" tax structure, the objectives of the federal income tax law, and recent tax reform proposals
5. Describe the tax entities in the federal income tax system
6. Identify the various tax law sources and understand their implications for tax practice
7. Describe the legislative process for the enactment of the tax law
8. Describe the administrative procedures under the tax law
9. Describe the components of a tax practice
10. Understand the importance of computer applications in taxation

CHAPTER OUTLINE

History of Taxation in the United States...1-2
Types of Tax Rate Structures...1-4
Other Types of Taxes...1-7
Criteria for a Tax Structure...1-12
Entities in the Federal Income Tax System...1-16
Tax Law Sources...1-24
Enactment of a Tax Law...1-24
Administration of the Tax Law and Tax Practice Issues...1-26
Components of a Tax Practice...1-29
Computer Applications in Tax Practice...1-31

Federal income taxes have a significant effect on business, investor, and personal decisions in the United States. Because tax rates are currently as high as 21% on corporations and over 40% on individuals, virtually every transaction is impacted by income taxes. The following examples illustrate the effect of the **tax law** on various decisions in our society:

- Because of the deductibility of home mortgage interest and real estate taxes, an individual may decide to purchase a home rather than to continue to rent an apartment.
- An investor may decide to delay selling some stock because of the significant taxes that may result from the sale.
- A corporation may get a larger tax deduction if it leases property rather than purchases the property.

The purpose of this text is to provide an introduction to the study of federal income taxation. However, before discussing the specifics of the U.S. federal income tax law, it is helpful to have a broad conceptual understanding of the taxation process. This chapter provides an overview of the following topics:

- Historical developments of the federal tax system
- Types of taxes levied and structural considerations
- Objectives of the tax law, including a discussion of recent tax reform proposals
- Taxpaying entities in the federal income tax system
- Tax law sources and the legislative process
- Internal Revenue Service (IRS) collection, examination, and appeals processes
- The nature of tax practice, including computer applications and tax research

KEY POINT

In many situations, the use of the tax laws to influence human behavior is deliberate. As will be seen later in this chapter, tax laws are often used to achieve social and economic objectives.

HISTORY OF TAXATION IN THE UNITED STATES

OBJECTIVE 1

Discuss the history of taxation in the United States

EARLY PERIODS

The federal income tax is the dominant form of taxation in the United States. In addition, most states and some cities and counties also impose an income tax. Both corporations and individuals are subject to such taxes.

Prior to 1913 (the date of enactment of the modern-day federal income tax), the federal government relied predominantly on customs duties and excise taxes to finance its operations. The first federal income tax on individuals was enacted in 1861 to finance the Civil War but was repealed after the war. The federal income tax was reinstated in 1894; however, that tax was challenged in the courts because the U.S. Constitution required that an income tax be apportioned among the states in proportion to their populations. This type of tax system, which would be both impractical and difficult to administer, would mean that different tax rates would apply to individual taxpayers depending on their states of residence.

In 1895, the Supreme Court ruled that the tax was in violation of the U.S. Constitution.[1] Therefore, it was necessary to amend the U.S. Constitution to permit the passage of a federal income tax law. This was accomplished by the Sixteenth Amendment, which was ratified in 1913. The Sixteenth Amendment, while being an extraordinarily important amendment, consists of one sentence.

HISTORICAL NOTE

The reinstatement of the income tax in 1894 was the subject of heated political controversy. In general, the representatives in Congress from the agricultural South and West favored the income tax in lieu of customs duties. Representatives from the industrial eastern states were against the income tax and favored protective tariff legislation.

Sixteenth Amendment to the Constitution of the United States

> The Congress shall have the power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

---

[1] *Pollock v. Farmers' Loan & Trust Co.*, 3 AFTR 2602 (USSC, 1895). Note, however, that a federal income tax on corporations that was enacted in 1909 was held to be constitutional because it was treated as an excise tax. See *Flint v. Stone Tracy Co.*, 3 AFTR 2834 (USSC, 1911).

REVENUE ACTS FROM 1913 TO THE PRESENT

HISTORICAL NOTE

The Revenue Act of 1913 contained sixteen pages.

HISTORICAL NOTE

Before 1939, the tax laws were contained in the most current revenue act, a reenactment of a prior revenue act plus amendments. In 1939, a permanent tax code was established; major revisions were made in 1954 and 1986.

The Revenue Act of 1913 imposed a flat 1% tax (with no exemptions) on a corporation's net income. The rate varied from 1% to 7% for individuals, depending on the individual's income level. However, very few individuals paid federal income taxes because a $3,000 personal exemption ($4,000 for married individuals) was permitted as an offset to taxable income. These amounts were greater than the incomes of most individuals in 1913.

Various amendments to the original law were passed between 1913 and 1939 as separate revenue acts. For example, a deduction for dependency exemptions was provided in 1917. In 1939, the separate revenue acts were codified into the Internal Revenue Code of 1939. A similar codification was implemented in 1954. The 1954 codification, which was known as the Internal Revenue Code of 1954, included the elimination of many "deadwood" provisions, a rearrangement and clarification of numerous IRC sections, and the addition of major tax law changes. Whenever changes to the **Internal Revenue Code** (**IRC**) are made, the old language is deleted and the new language added. Thus, the statutes are organized as a single document, and a tax advisor does not have to read through the applicable parts of all previous tax bills to find the most current law. In 1986, significant changes were made to the tax law, and the basic tax law was redesignated as the Internal Revenue Code of 1986. The most recent significant change in the tax law occurred in late 2017, the Tax Cuts and Jobs Act (TCJA), effective for 2018 and later tax years until 2025. However, the TCJA is somewhat controversial and may undergo changes due to the political environment. A discussion of possible changes is provided later in this chapter.

The federal income tax became a "mass tax" on individuals during the early 1940s. This change was deemed necessary to finance the revenue needs of the federal government during World War II. In 1939, less than 6% of the U.S. population was subject to the federal income tax; by 1945, 74% of the population was taxed.[2] To accommodate the broadened tax base and to avoid significant tax collection problems, Congress enacted pay-as-you-go withholding in 1943.

A major characteristic of the federal income tax since its inception to today is the manner in which the tax law is changed or modified. The federal income tax is changed on an incremental basis rather than a complete revision basis. Under so-called **incrementalism**, when Congress deems a change in the tax law as necessary, the entire law is not changed, but specific provisions of the tax law are added, changed, or deleted on an incremental basis. Thus, the federal income tax has been referred to as a "quiltwork" of tax laws, referring to the patchwork nature of the law. Without question, one of the principal reasons for the complexity of the federal income tax today is the incremental nature of tax legislation.

REVENUE SOURCES

ADDITIONAL COMMENT

In 2023, 163 million individual income tax returns were filed, and collections from individuals totaled $2.18 trillion.

As mentioned earlier, the largest source of federal revenues is individual income taxes. Other major revenue sources include Social Security (FICA) taxes and corporate income taxes (see Table I:1-1). Two notable trends from Table I:1-1 are (1) the gradual increase in social insurance taxes from 1960 to 2024 and (2) the gradual decrease in corporate income taxes for the same period. Individual income taxes have remained fairly stable during the past 64 years.

TYPICAL MISCONCEPTION

It is often assumed that the tax revenue from corporation income taxes is the largest source of tax revenue. However, the revenue generated from this tax only represents approximately 11% of total federal revenues in 2024.

▼ TABLE I:1-1
Breakdown of Federal Revenues

	1960	1975	2000	2024
Individual income taxes	44%	45%	50%	49%
Social insurance taxes and contributions	16	32	32	35
Corporation income taxes	23	15	10	11
Other	17	8	8	5
Total	100%	100%	100%	100%

TYPES OF TAX RATE STRUCTURES

OBJECTIVE 2

Describe the three types of tax rate structures

THE STRUCTURE OF INDIVIDUAL INCOME TAX RATES

Virtually all tax structures are comprised of two basic parts: the **tax base** and the *tax rate*. The tax base is the amount to which the tax rate is applied to determine the tax due. For example, an individual's tax base for the federal income tax is *taxable income*, as defined and determined by the income tax law. Similarly, the tax base for the property tax is generally the fair market value of property subject to the tax. The tax rate is merely the percentage rate applied to the tax base.

Tax rates may be progressive, proportional, or regressive. A **progressive rate** structure is one where the rate of tax increases as the tax base increases. The most notable tax that incorporates a progressive rate structure is the federal income tax. Thus, as a taxpayer's taxable income increases, a progressively higher rate of tax is applied. For 2025, the federal income tax rates for individuals begin at 10% and increase to 12%, 22%, 24%, 32%, 35%, and 37% as a taxpayer's taxable income increases.[3] Examples I:1-1 and I:1-2 show how the progressive rate structure of the federal income tax operates. (See the Quick Reference section near the end of this text for the tax rate tables.)

ADDITIONAL COMMENT

In the 1950s, the top marginal tax rate for individual taxpayers reached 92%. This astonishingly high rate only applied to taxpayers with very high taxable incomes but still is an extremely confiscatory tax rate.

EXAMPLE I:1-1 ▶

Alice, who is single, has $30,000 taxable income in 2025. Her federal income taxes for the year are $3,362, computed as follows: the first $11,925 of taxable income is taxed at 10% and the remaining $18,075 at 12%. (For tax rates, see the Quick Reference section of the text.)

Allen, who also is single, has taxable income of $60,000. A 10% rate applies to the first $11,925 of taxable income, 12% on the next $36,550, and a 22% rate applies to the taxable income over $48,475. Thus, Allen's total tax is $8,114 [(0.10 × $11,925) + (0.12 × $36,550) + (0.22 × $11,525)].

If Allen's taxable income is $120,000, a 24% rate applies to $16,650 of his taxable income ($120,000 − $103,350) because the 24% rate applies to taxable income above $103,350 for a single individual, and his total tax for the year is $21,647. Thus, the tax rates are progressive because the rate of tax increases as a taxpayer's taxable income increases. ◀

LEGISLATIVE HISTORY

Beginning with tax year 2018, the top rate for high-income individual taxpayers was decreased to 37% from 39.6%.

Notice in Example I:1-1 that taxable income has doubled in size in the three cases, but the income taxes have more than doubled (i.e., $3,362 to $8,114 to $21,647). This further demonstrates how a progressive rate structure operates.

EXAMPLE I:1-2 ▶

Assume the same facts as in Example I:1-1 except Alice has taxable income of $280,000. Of Alice's taxable income, $29,475 ($280,000 − $250,525) is subject to the 35% rate. Alternatively, if Allen has taxable income of $800,000, $173,650 ($800,000 − $626,350) is subject to the top marginal rate of 37%. ◀

A **proportional tax** rate, sometimes called a **flat tax**, is one where the rate of tax is the same for all taxpayers, regardless of the level of their tax base. This type of tax rate is generally used for real estate taxes, state and local sales taxes, personal property taxes, customs duties, and excise taxes. A flat tax has been the subject of considerable discussion over the past 40 years and promises to be a controversial topic as the debate on federal income tax reform continues into the future.

EXAMPLE I:1-3 ▶

Assume the same facts as in Example I:1-1, except that a 17% tax rate applies to all amounts of taxable income. Based on the assumed flat tax rate structure, Alice's federal income tax is $5,100 on $30,000 of taxable income; Allen's tax is $10,200 on $60,000 of taxable income and $20,400 on $120,000 of taxable income. The tax rate is proportional because the 17% rate applies to both taxpayers without regard to their income level. As you can see, compared to a progressive tax rate structure, a proportional tax rate results in lower taxes for higher income taxpayers and slightly higher taxes for other taxpayers.[4] ◀

---

[3] See the Quick Reference section of the text for the 2025 tax rates and Chapter I:2 for a discussion of the computation procedures. 2024 rate schedules and tax tables are located immediately before Appendix A.

[4] This example assumes the same tax base (taxable income) for the flat tax as with the current federal tax. Most flat tax proposals allow only a few deductions and, therefore, would generate higher taxes than in the example.

SELF-STUDY QUESTION

Assume a tax system with a tax of $1,000 on taxable income of $10,000 and a $1,500 tax on taxable income of $20,000. Is the tax rate system progressive, proportional, or regressive?

ANSWER

This tax system is regressive. Even though the amount of tax has increased, the rate of taxation has decreased from 10% on the first $10,000 of taxable income to 5% on the second $10,000 of taxable income.

ADDITIONAL COMMENT

In recent years, many countries around the world significantly reduced their tax rates on corporations. As a result, the top 35% tax rate in the United States for years prior to 2018 was one of the highest statutory corporate rates in the world and led many U.S. corporations to move their international operations to other countries. However, the reduction of the corporate tax rate to 21% has made the United States more competitive on the world stage.

A **regressive tax** rate decreases with an increase in the tax base (e.g., income). Regressive taxes, while not consistent with the fairness of the income tax,[5] are found in the United States. The Social Security (FICA) tax is regressive because a fixed rate of tax of 6.20% for OASDI for both the employer and employee is levied up to a ceiling amount of $176,100 for 2025. So, for example, assume Taxpayer A has income subject to Social Security of $80,000 and Taxpayer B income of $400,000. Taxpayer A's OASDI would be $4,960 ($80,000 × 0.062), and Taxpayer B's OASDI would be $10,918 ($176,100 × 0.062). Taxpayer A's average rate of OASDI tax is 6.2% while Taxpayer B's average rate of tax is 2.73% ($10,918/$400,000). Sales taxes, which are levied by many states, are also regressive when measured against an income base.

THE STRUCTURE OF CORPORATE TAX RATES

Corporations are separate entities and are subject to income tax.[6] Beginning with the 2018 tax year, corporations are subject to a flat rate of 21%,[7] a rate that is a substantial reduction from the top rate for 2017 of 35%. For 2017 and many earlier years, the corporate tax rates were progressive in nature, ranging from 15% to 35%. The reduction in corporate tax rates for 2018 and future years were made for two principal reasons: (1) to make the corporate income tax rate in the United States more competitive with other countries around the world, and (2) to attempt to stimulate the economy and create jobs in the United States.

MARGINAL, AVERAGE, AND EFFECTIVE TAX RATES FOR TAXPAYERS

A taxpayer's **marginal tax rate** is the tax rate applied to an incremental amount of taxable income that is added to the tax base. The marginal tax rate concept is useful for planning because it measures the tax effect of a proposed transaction.

EXAMPLE I:1-4 ▶ Tania, who is single, is considering the purchase of a personal residence that will provide a $20,000 tax deduction for interest expense and real estate taxes in 2025. Tania's taxable income would be reduced from $240,000 to $220,000 if she purchases the residence. Because a 32% tax rate applies to her taxable income from $240,000 to $220,000, Tania's marginal tax rate is 32%. Thus, Tania's tax savings from purchasing the personal residence would be $6,400 (0.32 × $20,000). ◀

While the marginal tax rate measures the tax rate applicable to the next $1 of income or deduction for a taxpayer, two other tax rates are used primarily by tax policymakers: average tax rate and effective tax rate. The **average tax rate** is computed by dividing the total tax liability by the amount of taxable income. This represents the average rate of tax for each dollar of taxable income. For example, a single taxpayer with taxable income of $500,000 in 2025 would incur a total tax liability of $144,547. The taxpayer's marginal tax rate is 35%, but the average tax rate is 28.9% ($144,547/$500,000).

---

[5] See the discussion of equity and fairness later in this chapter.

[6] See Chapter I:16 of this text for a more complete discussion of the taxation of C corporations.

[7] Sec. 11(b).

ADDITIONAL COMMENT

One method of calculating economic income is to start with adjusted gross income (AGI), add back items of excludible income, such as tax-exempt bond interest, proceeds of life insurance policies, etc., and then deduct certain nondeductible business expenses, such as life insurance premiums, penalties and fines, etc. (Note that the definition of effective tax rate used here differs from that used for financial statement reporting.)

The **effective tax rate** is the total tax liability divided by total economic income. **Total economic income** includes all types of economic income that a taxpayer has for the year. Thus, economic income is much broader than taxable income and includes most types of excludible income, such as tax-exempt bond interest, and generally permits business deductions but not personal-type deductions. It should be pointed out that economic income is *not* statutorily defined, and experts may disagree on a precise calculation. The basic purpose of calculating the effective tax rate is to provide a broad measure of taxpayers' ability to pay taxes. Accordingly, the effective tax rate mainly is used by tax policymakers to determine the fairness of the income tax system.

EXAMPLE I:1-5 ▶ Amelia, who is single, has adjusted gross income of $140,000 and economic income of $175,000 in 2025. The difference is attributable to $35,000 of tax-exempt bond interest. If Amelia has personal deductions of $30,000, her taxable income is $110,000, and her total tax is $19,247. Her average tax rate is 17.50% ($19,247 ÷ $110,000). Amelia's effective tax rate is 11.00% ($19,247 ÷ $175,000). Amelia's effective tax rate is considerably lower than her average tax rate because of her substantial amount of tax-exempt income. ◀

STOP & THINK

Question: Gwen, a single taxpayer, has seen her taxable income climb to $250,000 in the current year. She wants a tax planner to help her reduce her tax liability. In planning for tax clients, tax professionals almost exclusively use the marginal tax rate in their analysis rather than the average tax rate. Why is the marginal tax rate much more important in the tax planning process than the average tax rate?

Solution: Because tax planning is done at the margin, a single taxpayer who has taxable income of $250,000 has a marginal tax rate of 32% (at 2025 rates), but an average tax rate of 27.17%, computed as follows:

Taxable income		$250,000
Tax on first $197,300 of taxable income		$ 40,199
Remaining taxable income	$52,700	
Times: Marginal tax rate	× 0.32	16,864
Total tax liability		$ 57,063

$$\text{Average tax rate} = \frac{\text{Total tax}}{\text{Taxable income}} = \frac{\$\ 57{,}063}{\$210{,}000} = 27.17\%$$

If a tax planner could reduce Gwen's taxable income by $10,000, Gwen's tax liability would decrease by $3,200 ($10,000 × 0.32). When the taxpayer wants to know how much she can save through tax planning, the appropriate marginal tax rate yields the answer.

ADDITIONAL COMMENT

In the determination of tax rates, one should consider the incidence of taxation that involves the issue of who really bears the burden of the tax. If a city raises the real property tax but landlords simply raise rents to pass on the higher taxes, the tax burden is shifted to their tenants. The concept has important implications in determining any kind of average or effective tax rate.

Overall, estimated effective federal income tax rates for individuals have increased slightly over the past several years. The top income tax rate for individuals is 41.7% (37% plus some other special taxes imposed on higher income taxpayers). However, the effective tax rate for the top 1% of Americans was 24.7% in 2014. The effective tax rate for individuals with income of $75,000 was 19.7%.[8] Many higher income taxpayers have the ability to take advantage of tax strategies to reduce their income tax.

DETERMINATION OF TAXABLE INCOME AND TAX DUE

As will be discussed in later chapters, the federal income taxes imposed on all taxpayers (individuals, corporations, estates, and trusts) are based on the determination of taxable income. In general, taxable income is computed as follows:

---

[8] Fact Sheet: *Taxing Wealthy Americans*, Americans for Tax Fairness, 2019.

Total income (income from whatever source derived)	$xxx
Minus: Exclusions (specifically defined items, such as tax-exempt bond interest)	(xx)
Gross income	$xxx
Minus: Deductions (business expenses and itemized deductions)	(xx)
Taxable income	$xxx
Times: Applicable tax rate	× .xx
Income tax before credits	$xxx
Minus: Tax credits	(xx)
Total tax liability	$xxx
Minus: Prepayments	(xx)
Balance due or refund	$xxx

Each different type of taxpayer (individuals, corporations, etc.) computes taxable income in a slightly different manner, but all use the general framework above. An introductory discussion of the various types of taxpayers is provided later in this chapter. More detailed discussions of individual taxpayers (Chapter I:2) and corporate taxpayers (Chapter I:16) are examined in this *Individuals* volume. Corporations, estates, and trusts are further examined in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts.*

OTHER TYPES OF TAXES

OBJECTIVE 3

Describe the various types of taxes

STATE AND LOCAL INCOME AND FRANCHISE TAXES

In addition to federal income taxes, many states and local jurisdictions impose income taxes on individuals and businesses. These state and local taxes have gradually increased over the years and currently represent a significant source of revenue for state and local governments but also represent a significant tax burden on taxpayers.

State and local income taxes vary greatly in both form and rates.[9] Only eight states do not impose an individual income tax.[10] In most instances, state income tax rates are mildly progressive and are based on an individual's federal adjusted gross income (AGI), with minor adjustments.[11] For example, a typical adjustment to a state income tax return is interest income on federal government bonds, which is subject to tax on the federal return but is not subject to state income taxes. Some states also allow a deduction for federal income taxes in the computation of taxable income for state income tax purposes.

ADDITIONAL COMMENT

States that do not impose a state income tax depend on other taxes to support the government mission, principally sales taxes.

States imposing a state income tax generally require the withholding of state income taxes and have established mandatory estimated tax payment procedures. The due date for filing state income tax returns generally coincides with the due date for the federal income tax returns (e.g., the fifteenth day of the fourth month following the close of the tax year for individuals).

ADDITIONAL COMMENT

State income tax rates for individuals have increased in the past 20 years. More than 20 states now have marginal tax rates of 6% or higher. However, recently, a few states have decreased their tax rates, principally to become more competitive with other states.

Most states impose a corporate income tax, although in some instances the tax is called a **franchise tax**. Franchise taxes for a particular state usually are based on a weighted-average formula consisting of net worth, income, and sales times modified federal taxable income.

WEALTH TRANSFER TAXES

U.S. citizens are subject to taxation on certain transfers of property to another person. The tax law provides a unified transfer tax system that imposes a single tax on transfers of property taking place during an individual's lifetime (gifts) and at death (estates). (See the Quick Reference section of the text for the transfer tax rate schedules.) Formerly, the gift and estate tax laws were separate and distinct. The federal estate tax was initially enacted in 1916. The original gift tax law dates back to 1932. The gift tax was originally imposed to prevent widespread avoidance of the estate tax (e.g., taxpayers could make tax-free gifts of property before their death). Both the gift and estate taxes are **wealth transfer taxes** levied on the transfer of property and are based on the fair market value (FMV) of the transferred property on the date of the transfer. Following are brief descriptions of the gift tax and estate tax.

---

[9] The Tax Policy Center's website (https://www.taxpolicycenter.org/topic/state-and-local-issues/state-and-local-taxes) offers more information about state and local tax systems.

[10] These states are Alaska, Florida, Nevada, South Dakota, Tennessee, Texas, Washington, and Wyoming. New Hampshire has an income tax that is levied only on dividend and interest income. Tennessee had an income tax only on dividends and interest, but this provision was repealed beginning in 2021.

[11] See Chapter I:2 for a discussion of the AGI computation.

KEY POINT

The $19,000 annual exclusion is an important tax-planning tool for wealthy parents who want to transfer assets to their children and thereby minimize their gift and estate taxes. A husband and wife who have three children could transfer a maximum of $38,000 to each child, for a total of $114,000 ($38,000 x 3) each year without incurring any gift tax.

The Federal Gift Tax. The **gift tax** is an excise tax imposed on the donor (not the donee) for transfers of property considered to be a taxable gift. A gift, generally speaking, is a transfer made gratuitously and with donative intent. However, the gift tax law has expanded the definition to include transfers that are not supported by full and adequate consideration.[12] To arrive at the amount of taxable gifts for the current year, an $19,000 (2025) annual exclusion is allowed per donee.[13] In addition, an unlimited marital deduction is allowed for transfers between spouses.[14] The formula for computing the gift tax is as follows:

FMV of all gifts made in the current year			$x,xxx
Minus:	Annual donee exclusions ($19,000 per donee)	$ xx	
	Marital deduction for gifts to spouse	xx	
	Charitable contribution deduction	xx	(xxx)
Taxable gifts for the current year			$x,xxx
Plus:	Taxable gifts for all prior years		xxx
Cumulative taxable gifts (tax base)			$x,xxx
Times:	Unified transfer tax rates		× .xx
Tentative tax on gift tax base			$ xxx
Minus:	Unified transfer taxes paid in prior years		(xx)
	Unified credit		(xx)
Unified transfer tax (gift tax) due in the current year			$ xx

ADDITIONAL COMMENT

The gift tax was enacted to make the estate tax more effective. Without a gift tax, estate taxes could be easily avoided by large gifts made before death.

Note that the gift tax is cumulative over the taxpayer's lifetime (i.e., the tax calculation for the current year includes the taxable gifts made in prior years). The detailed tax rules relating to the gift tax are covered in Chapter C:12 in both *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* and the *Comprehensive* volume. The following general concepts and rules for the federal gift tax are presented as background material for other chapters of this text dealing with individual taxpayers:

- Gifts between spouses are exempted from the gift tax due to the unlimited marital deduction.
- The primary liability for payment of the gift tax is imposed on the *donor*. The donee is contingently liable for payment of the gift tax in the event of nonpayment by the donor.
- A donor is permitted an $19,000 annual exclusion for gifts of a present interest to each donee.[15]
- Charitable contributions are effectively exempted from the gift tax because an unlimited deduction is allowed.
- The tax basis of the property to the donee is generally the donor's cost. It is the lesser of the donor's cost or the property's FMV on the date of the gift if the donee subsequently sells the property at a loss. (See Chapter I:5 for a discussion of the gift tax basis rules.)
- A unified tax credit equivalent to a $13.99 million deduction, adjusted for inflation, is available to offset any gift tax on taxable gifts that exceed the $19,000 annual exclusion for decedents dying in 2025.[16] The exclusion amount in 2024 was $13.61 million.

---

[12] Sec. 2512(b).

[13] Sec. 2503(b). The annual exclusion for gift tax purposes was $10,000 for many years. However, for 2002–2005, the inflation adjustment increased the exclusion to $11,000, for 2006–2008, the exclusion was increased to $12,000, for 2009–2012 to $13,000, for 2013–2017 to $14,000, for 2018–2021 to $15,000, for 2022 to $16,000, for 2023 to $17,000, and $18,000 for 2024. For 2025 and later years, the current exclusion has been increased to $19,000.

[14] Sec. 2523(a).

[15] A gift of a present interest is an interest that is already in existence and the donee is currently entitled to receive the income from the property. A gift of a future interest comes into being at some future date (e.g., property is transferred by gift to a trust in which the donee is not entitled to the income from the property until the donor dies) and is not eligible for the $18,000 annual exclusion.

[16] The applicable exclusion amount was $1 million since 2002. Beginning in 2011, the exclusion was increased to $5 million, adjusted for inflation. Now, effective in 2025, the exclusion has been increased to $13.99 million ($13.61 million in 2024). For further details, see *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*, Chapters C:12 and C:13.

EXAMPLE I:1-6 ▶ Antonio makes the following gifts in 2025:

- $50,000 cash gift to his wife
- $20,000 contribution to the United Way
- Gift of a personal automobile valued at $60,000 to his adult son
- Gift of a personal computer valued at $4,000 to a friend

The $50,000 gift to his wife is not taxed because of a $19,000 annual exclusion and a $31,000 marital deduction. The $20,000 contribution to the United Way is also not taxed because of the unlimited deduction for charitable contributions. The $60,000 gift Antonio made to his son is reduced by the $19,000 annual exclusion, leaving a $41,000 taxable gift.[17] The $4,000 gift to the friend is not taxed because of the annual exclusion of up to $19,000 in gifts to a donee in a tax year. Thus, total taxable gifts for the current year subject to the unified transfer tax are $41,000. ◀

STOP & THINK

Question: An important but frequently overlooked aspect of gift taxes is the interaction of gift taxes and income taxes. In many cases, gifts are made *primarily* for income tax purposes. Why would a gift be made for income tax purposes?

Solution: Gifts are frequently made to shift income from one family member to another family member who is in a lower marginal tax bracket. For example, assume Fran and Jan are married, have one 25-year-old son, earn $800,000 per year from their business, and generate $100,000 per year in dividends and interest from a substantial portfolio of stocks and bonds. With such a high level of income, Fran and Jan are in the 37% marginal tax bracket. If they make a gift of some of the stocks and bonds to their son, the dividends and interest attributable to the gift are taxed to the son at his marginal tax rate (maybe 10% or 12%). If the son's marginal tax rate is lower than 37%, the family unit reduces its overall income taxes.

The Federal Estate Tax. The **federal estate tax** is part of the unified transfer tax system that is based on the total property transfers an individual makes both during his or her lifetime and at death. The basic structure of the estate tax is shown in Example I:1-7.

EXAMPLE I:1-7 ▶ Amy dies during 2025. The formula for computing the estate tax on Amy's estate is as follows:

Gross estate (FMV of all property owned by the decedent at the date of death)		$xxx,xxx
Minus:	Deductions for funeral and administration expenses, debts of the decedent, charitable contributions, and the marital deduction for property transferred to a spouse	(x,xxx)
Taxable estate		$ x,xxx
Plus:	Taxable gifts made after 1976	xx
Tax base		$ x,xxx
Times:	Unified transfer tax rate(s)	× .xx
Tentative tax on estate tax base		$ xxx
Minus:	Tax credits (e.g., the unified tax credit equivalent to a $13.99 million deduction in 2025)	(xx)
Gift taxes paid after 1976		(xx)
Unified transfer tax (estate tax) due		$ xx

◀

TYPICAL MISCONCEPTION

It is sometimes thought that the federal estate tax raises significant amounts of revenue, but it has not been a significant revenue producer since World War II. Only 8,130 estate tax returns were filed in 2022 generating approximately $22.5 billion in tax revenues. This amount represents about 1% of revenues generated by income taxes on individuals.

The federal estate tax has been on a roller coaster ride the last several years, with many changes and uncertainties. For a complete discussion of these developments, see *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*, Chapter C:13. Since 2013, however, some certainty has been added to the estate tax law. The computation of the taxable estate and tax base (see Example I:1-7 above) is much the same as in prior years. However, the highest tax rate for tax years after 2012 has been increased to 40% from 35%. More importantly, the unified credit exclusion amount was made permanent at $11 million per person and indexed annually for inflation. For 2025, the unified credit exclusion amount is now $13.99 million ($13.61 million for 2024) as a result of the annual inflation increase. In essence, estates of individuals dying in 2025 generally will not be subject to estate taxes if their

---

[17] This example assumes that the automobile is a gift rather than an obligation of support under state law and also assumes that Antonio's wife does not join with Antonio in electing to treat the gift to the son as having been made by both spouses (a gift-splitting election). If gift splitting was elected, donee exclusions of $38,000 (2 × $19,000) would be available, resulting in a taxable gift of only $22,000.

LEGISLATIVE UPDATE

As a result of the 2024 Presidential election, it is unclear at this time whether the unified credit equivalent amounts will be changed for 2026 and beyond.

tax base is equal to or less than $13.99 million. With this large exemption amount, most estates will not be subject to estate taxes. Further, the number of estate tax returns filed each year has dramatically decreased as well as tax revenues from the estate tax.

The estate tax rules are discussed in more detail in Chapter C:13 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* and in the *Comprehensive* volume. The general rules discussed below are provided as background material for subsequent chapters of this text dealing with individual taxpayers:

- The decedent's property is valued at its FMV on the date of death unless the alternative valuation date (six months after the date of death) is elected. The alternative valuation date may be elected only if the aggregate value of the gross estate decreases during the six-month period following the date of death and the election results in a lower estate tax liability.
- The basis of the property received by the estate and by the decedent's heirs is the property's FMV on the date of death (or the alternate valuation date if it is elected).
- Property transferred to the decedent's spouse is exempt from the estate tax because of the estate tax marital deduction provision.
- The unified credit is $5,541,800 (in 2025) based on an exclusion amount of $13.99 million and is computed as follows: [$345,800 + 0.40 ($13,990,000 − $1,000,000)]. See the tax rates for estate and gift taxes in the Quick Reference section of the text.

EXAMPLE I:1-8 Barry died in 2025, leaving a $12 million gross estate. Of the $12 million gross estate, one-half of the estate was transferred to his wife, administrative and funeral expenses are $30,000, Barry had debts of $200,000, and the remainder of the estate was transferred to his children. Barry had not made any taxable gifts during his lifetime. The estate tax due is computed as follows:

Gross estate		$12,000,000
Minus:	Marital deduction	(6,000,000)
	Funeral and administrative expenses	(30,000)
	Decedent's debts	(200,000)
Taxable estate		$ 5,770,000
Plus:	Taxable gifts made after 1976	0
Tax base		$ 5,770,000
Tentative tax on estate tax base		$ 2,253,800[a]
Minus:	Tax credits (unified tax credit—see above or Quick Reference for table)	(5,541,800)
Unified transfer tax due		$ –0–

[a] $345,800 + [0.40 × ($5,770,000 − $1,000,000)]

Because of the generous credit and deduction provisions (e.g., the unified tax credit and the unlimited marital deduction), few estates are required to pay estate taxes. As can be seen above, the gross estate of the decedent was $12 million but no estate taxes were due primarily because of the large marital deduction and the unified credit. However, estate taxes arise, as is demonstrated below in Example I:1-9.

EXAMPLE I:1-9 Assume the same facts for Barry as in Example I:1-8 except that Barry's gross estate is $30 million rather than $12 million. The estate tax due is computed as follows:

Gross estate		$30,000,000
Minus:	Marital deduction	(15,000,000)
	Funeral and administrative expenses	(30,000)
	Decedent's debts	(200,000)
Taxable estate		$14,770,000
Plus:	Taxable gifts made after 1976	–0–
Tax base		$14,770,000
Tentative tax on estate tax base		$ 5,853,800[b]
Minus:	Tax credits (unified tax credit)	(5,541,800)
Unified transfer tax due		$ 312,000

[b] $345,800 + [0.40 × ($14,770,000 − $1,000,000)]

OTHER TYPES OF TAXES

Although this text focuses primarily on the federal income tax, some mention should be made of the following other types of taxes levied by federal, state, and local governments.

- **Property taxes** are based on the value of a taxpayer's property, which may include both real estate and personal property. Real estate taxes are a major source of revenue for local governments. In addition, some state and local governments levy a personal property tax on intangibles such as securities and tangible personal property (e.g., the value of a personal automobile).
- **Excise taxes** and **customs duties** on imported goods have declined in relative importance over the years but remain significant sources of revenue. Federal excise taxes are imposed on alcohol, tobacco, gasoline, telephone usage, production of oil and gas, and many other types of goods. Many state and local governments impose similar excise taxes on goods and services.
- **Sales taxes** are a major source of revenue for state and local governments. Sales taxes are imposed on retail sales of tangible personal property (e.g., clothing and automobiles). Some states also impose a sales tax on personal services (e.g., accounting and legal fees). Certain items often are exempt from the sales tax levy (e.g., food items or medicines), and the rates vary widely between individual state and local governments. Sales taxes generally are not deductible for federal income tax purposes. However, they are deductible if incurred in a trade or business. In addition, state and local sales taxes are deductible as an itemized deduction if the taxpayer elects to deduct them instead of deducting state and local income taxes.
- **Employment taxes** include Social Security (**FICA**) and federal and state unemployment compensation taxes. If an individual is classified as an employee, the FICA tax imposed on the employee is comprised of two parts: the old-age survivors and disability insurance (OASDI) and the Medicare or hospital insurance (HI). The OASDI is 6.2% and is imposed on the first $$176,100 (in 2025) of wages. This tax is imposed on both the employer and the employee at the same rate. Similarly, the HI portion is imposed on both the employer and the employee, but it has no ceiling on wages like the OASDI portion. In fact, the HI portion is generally 1.45% of wages, but beginning in 2013, the employee is required to pay an additional 0.9% on wages above $200,000 ($250,000 for married taxpayers filing a joint return). So while the employer will pay 1.45% on all wages, an employee who is single will pay 1.45% on the first $200,000 of wages and 2.35% on any wages over $200,000.
- If an individual is self-employed, a **self-employment tax** comprised of the OASDI and HI taxes is imposed. The OASDI portion is 12.4% on the individual's self-employment income of up to $176,100 (in 2025). The HI portion is 2.9% on the first $200,000 of self-employment income ($250,000 combined self-employment income for married taxpayers filing a joint return) and 3.8% (2.9% + 0.9%) on the full amount of self-employment income over that amount.[18]
- Employers are required to pay federal and state unemployment taxes to fund the payment of unemployment benefits to former employees. The federal rate is 6.0% on the first $7,000 of wages for each employee in 2025.[19] However, a credit is granted for up to 5.4% of wages for taxes paid to the state government so that the actual amount paid to the federal government may be as low as 0.6%.[20] The amount of tax paid to the state depends on the employer's prior experience with respect to the frequency and amount of unemployment claims. In Florida, for example, the highest rate of unemployment tax imposed is 5.4% and this rate is subsequently adjusted down if the employer has a small number of unemployment claims to a minimum of 0.29%.

The types of taxes and structural considerations previously discussed are summarized in Topic Review I:1-1.

ADDITIONAL COMMENT

Property taxes are a type of **ad valorem tax**, from the Latin phrase "according to value."

ADDITIONAL COMMENT

Proposals to decrease reliance on the federal income tax have focused primarily on consumption taxes, such as a national sales tax or a value-added tax. A value-added tax basically is a sales tax levied at each stage of production on the "value added."

ADDITIONAL COMMENT

Revenue from employment taxes are indeed significant. In 2024, $1.7 trillion in employment taxes were collected, representing 35% of all Internal Revenue Service collections.

---

[18] Self-employed individuals receive an income tax deduction equal to 50% of taxes paid on their self-employment income and this deduction is also allowed to compute the amount of self-employment income (see Secs. 164(f) and 1402(a)(12) and Chapter I:14).

[19] Sec. 3301.

[20] Sec. 3302. State unemployment taxes in many states are levied on tax bases above $7,000. For example, the wage base ceiling in North Carolina is $31,400 in 2024.

TOPIC REVIEW I:1-1

Types of Taxes and Tax Structure

TYPE OF TAX	TAX STRUCTURE	TAX BASE
Individuals:		
Federal income tax	Progressive	Gross income from all sources unless specifically excluded by law reduced by deductions and exemptions
State income tax	Progressive	Generally based on AGI for federal income tax purposes with adjustments
Federal gift tax	Progressive	FMV of all taxable gifts made during the tax year
Federal estate tax	Progressive	FMV of property owned at death plus taxable gifts made after 1976
Corporations:		
Federal corporate income tax	Progressive	Gross income from all sources unless specifically excluded by law reduced by deductions
State corporate income tax	Proportional or progressive	Federal corporate taxable income with adjustments
State franchise tax	Proportional	Usually based on a weighted-average formula consisting of net worth, income, and sales
Other Types of Taxes:		
Property taxes	Proportional	FMV of personal or real property
Excise taxes	Proportional	Customs and duties on imported and domestic goods from alcohol to telephone usage
Sales taxes	Proportional	Retail sales of tangible personal property or personal services
FICA and self-employment taxes	Regressive	Based on wages or self-employment income
Unemployment taxes	Regressive	Usually first $7,000 of an employee's wages

CRITERIA FOR A TAX STRUCTURE

OBJECTIVE 4

Discuss the criteria for a "good" tax structure, the objectives of the federal income tax law, and recent tax reform proposals

Establishing criteria for a "good" tax structure was first attempted in 1776 by economist Adam Smith.[21] Smith's four "canons of taxation"—equity, certainty, convenience, and economy—are still used today when tax policy issues are discussed. Many have added a fifth canon of simplicity. Below is a discussion of these criteria and how they relate to income taxes as well as other taxes.

EQUITY

A rather obvious criteria for a good tax is that the tax be equitable or fair to taxpayers. However, equity or fairness is elusive because of the subjectivity of the concept. What one person may conclude is fair in a particular situation may be considered totally unfair by another person. In other words, fairness is relative in nature and is extremely difficult to measure. For example, the deductibility of mortgage interest on a taxpayer's home certainly seems to be a fair provision for taxpayers. However, for taxpayers who do not own a home but live in a rental apartment, the deductibility of mortgage interest may not be considered as fair because the renter cannot deduct any portion of the rent paid. In other types of situations, the federal tax law includes various measures to ensure that taxpayers are treated fairly. For example, a foreign tax credit is available to minimize the double taxation that would otherwise occur when U.S. taxpayers earn income in a foreign country that is taxed by both the United States and the country in which it is earned. (See the glossary at the end of this volume for a definition of tax credits and Chapter I:14 for a discussion of the foreign tax credit.) Two aspects of equity are commonly discussed in the tax policy literature, **horizontal equity** and **vertical equity**. Horizontal equity refers to the notion that similarly situated taxpayers should be treated equally. Thus, two taxpayers who each have income of $50,000 should both pay the same amount of tax. Vertical equity, on the other hand, implies that taxpayers who are not similarly situated should be treated differently. Thus, if Taxpayer A has income of $100,000 and Taxpayer B has income of $20,000, Taxpayers A and B should not pay the same amount of income tax. Vertical equity provides that the incidence of taxation should be borne by those who have the **ability to pay** the tax, based on income or wealth. The progressive rate structure is founded on the vertical equity premise.

CERTAINTY

KEY POINT

Using retroactive dates for changes in the tax law does not help to accomplish the objective of certainty. For example, the effective date of major changes in the estate tax was recently made on a retroactive basis. These retroactive changes created considerable uncertainty for taxpayers and their advisors.

A certain tax (1) ensures a stable source of government operating revenues and (2) provides taxpayers with some degree of predictability concerning the amount of their annual tax liability. A tax that is simple to understand and administer provides certainty for taxpayers. For many years, our income tax laws have been criticized as being overly complex and difficult to administer. Consider the remarks of a noted tax authority at a conference on federal income tax simplification:

> Tax advisers—at least some tax advisers—are saying that the income tax system is not working. They are saying that they don't know what the law provides, that the IRS does not know what the law provides, that taxpayers are not abiding by the law they don't know.[22]

While the above statement is 40 years old, it certainly is still viable today. This uncertainty in the tax law causes frequent disputes between taxpayers and the IRS and has resulted in extensive litigation.

ADDITIONAL COMMENT

Humorist Jim Boren has proposed a constitutional amendment that would require any retroactive tax increases to be followed by retroactive elections for president, vice president, and all members of Congress.

The federal tax system has made some attempts to provide certainty for taxpayers. For example, the IRS issues advance rulings to taxpayers, which provides some assurance concerning the tax consequences of a proposed transaction for the taxpayer who requests the ruling. The taxpayer may rely on the ruling if the transaction is completed in accordance with the terms of the ruling request. For example, if a merger of two corporations is being considered, the transaction can be structured so that the shareholders and the corporations do not recognize gain or loss. If a favorable ruling is received and the transaction is completed as planned, the IRS cannot later assert that the merger does not qualify for tax-free treatment.

CONVENIENCE

A tax law should be easily assessed, collected, and administered. Taxpayers should not be overly burdened with the maintenance of records and compliance considerations (preparation of their tax returns, payment of their taxes, and so on). The income tax in the United States does not fare well in this category, as the annual preparation of income tax returns as well as accumulation of underlying records is a formidable task. One of the reasons that the sales tax is such a popular form of tax for state and local governments is that it is convenient for taxpayers to pay and for the government to collect. The consumer need not complete a tax return or keep detailed records.

ADDITIONAL COMMENT

Approximately 56% of all tax returns are prepared by paid tax return preparers. Another 34% use tax preparation software, such as TurboTax. So at least 90% of taxpayers use some form of tax return preparation assistance.

ECONOMY

An economical tax structure should require only minimal compliance and administrative costs. The IRS collection costs, amounting to less than 0.5% of revenues, are minimal relative to the total collections of revenues from the federal income tax. Estimates of taxpayer compliance costs are less certain. One indicator of total compliance costs for taxpayers is the demand for tax professionals. Tax practice has been and continues to be a significant portion of revenues of public accounting firms. Most large corporations also maintain sizable tax departments that engage in tax research, compliance, and planning activities. In addition, many commercial tax return preparer services are available to assist taxpayers who have relatively uncomplicated tax returns.

---

[22] Sidney L. Roberts, "The Viewpoint of the Tax Adviser: An Overview of Simplification," *Tax Adviser,* January 1979, p. 32.

ADDITIONAL COMMENT

On the other hand, some new TCJA provisions, such as the qualified business income deduction for pass-through entities, increase complexity and compliance costs for affected taxpayers.

Complying with the tax laws is enormously expensive for both businesses and individuals in the United States. Americans spent more than 7.9 billion hours complying with IRS tax filing requirements in 2024, and tax compliance will cost approximately $546 billion.[23] Compliance with state and local taxes costs billions more. Clearly, the cost of complying with the nation's tax laws is significant, in terms of both money and time.

A more difficult question is whether the tax structure is economical in terms of taxpayer compliance. The issues of tax avoidance and tax evasion are becoming increasingly more important. The IRS estimates the gross tax gap to be $696 billion, which is just over 13% of total taxes owed.[24] The tax gap is defined as the difference between the reported tax liability and the true tax liability.

SIMPLICITY

One of the important measures of any tax system is that of simplicity, or at least, not undue complexity. Taxpayers should be able to understand and comply with any tax system within reasonable boundaries. The sales tax is an example of a tax system that is relatively simple, although the sales tax as it applies to businesses can become fairly complex. The federal income tax system in the United States has become inordinately complex over the years and complexity is one of the major criticisms of the income tax. The following is a quote from the report from the President's Advisory Panel on Federal Tax Reform:[25]

> In short, our current tax code is a complicated mess. Instead of clarity, we have opacity. Instead of simplicity, we have complexity. Instead of fair principles, we have seemingly arbitrary rules. Instead of contributing to economic growth, it detracts from growth. Time and time again, witnesses told the Panel about these failings in the tax code.

While simplicity is an admirable goal of any tax system, achieving this goal in the federal income tax system is difficult and involves the trade-off of other important objectives. For example, simplicity and fairness are almost impossible to achieve together. If the income tax law is extremely simple, like a flat tax rate on all income, the possible result is that many taxpayers will not be treated fairly. Consider this case: Two taxpayers, A and B each earn $100,000 per year and are subject to a flat rate tax of 20% so that each taxpayer will pay $20,000 in income taxes for the year. This result seems fair as both have the same income and pay identical amounts of income tax. However, assume that taxpayer B has a severe illness that requires him to pay medical expenses of $60,000 per year. Should both A and B pay the same income tax for the year? There is no absolute correct answer in this case; it depends on the definition of fairness. Thus, making the income tax law simple may not be the top priority in tax reform because of the tradeoffs involved.

OBJECTIVES OF THE FEDERAL INCOME TAX LAW

The primary objective of the federal income tax law is to raise revenues for government operations. Over the years, the federal government has broadened its use of the tax laws to accomplish various economic and social policy objectives.

ADDITIONAL COMMENT

Among the provisions in the tax law that are designed to enhance the level of health care are the deductibility of medical expenses, deductibility of charitable contributions to hospitals, and exclusion of fringe benefits provided by employers for medical insurance premiums and medical care.

Economic Objectives. The federal income tax law is used as a fiscal policy tool to stimulate private investment, reduce unemployment, and mitigate the effects of inflation on the economy. Consider the following example: Tax credits for businesses operating in distressed urban and rural areas (empowerment zones) are allowed to provide economic revitalization of such areas. This is a clear example of using the federal income tax law to stimulate private investment in specific areas.

---

[23] Scott A. Hodge, "Tax Complexity Now Costs the US Economy Over $546 Billion Annually" *Tax Foundation*, August 6, 2024.

[24] Internal Revenue Service, IR-2024-262, Oct.10, 2024.

[25] Report of the President's Advisory Panel on Federal Tax Reform, *Simple, Fair, & Pro-Growth: Proposals to Fix America's Tax System*, November 2005, p. 2. See the discussion of tax reform in this chapter.

Many items in the tax law are adjusted for inflation by using the consumer price index, including the tax brackets and standard deduction amounts. These inflation adjustments provide relief for individual taxpayers who would otherwise be subject to increased taxes due to the effects of inflation. (See Chapter I:2 for a discussion of the tax computation for individuals.)

Encouragement of Certain Activities and Industries. The federal income tax law also attempts to stimulate and encourage certain activities, specialized industries, and small businesses. One such example is the encouragement of research activities by permitting an immediate write-off of expenses and a special tax credit for increasing research and experimental costs. Special incentives are also provided to the oil and gas industry through percentage depletion allowances and an election to deduct intangible drilling costs.

Certain favorable tax provisions are provided for small businesses, including reduced corporate tax rates of 21%. Favorable ordinary loss (instead of capital loss) deductions are granted to individual investors who sell their small business corporation stock at a loss, provided certain requirements are met.[26] In addition, noncorporate investors may exclude a portion, or in some cases all, of the gain realized from the disposition of qualified small business stock if the stock is held for more than five years.[27]

Social Objectives. The tax law attempts to encourage or discourage certain socially desirable or undesirable activities. For example:

ADDITIONAL COMMENT

Deductible contributions made by self-employed individuals to their retirement plans totaled $28.9 billion in 2021. Charitable deductions totaled over $263 billion that same year.

- Special tax-favored pension and profit-sharing plans have been created for employees and self-employed individuals to supplement the social security retirement system.
- Charitable contributions are deductible to encourage individuals to contribute to charitable organizations.
- The claiming of a deduction for illegal bribes, fines, and penalties is prohibited to discourage activities that are contrary to public policy.

EXAMPLE I:1-10 ▶ Able Corporation establishes a qualified pension plan for its employees whereby it makes all the annual contributions to the plan. Able's contributions to the pension trust are currently deductible but are not includible in the employees' gross income until the pension payments are distributed during their retirement years. Earnings on the contributed funds also are nontaxable until such amounts are distributed to the employees. ◀

EXAMPLE I:1-11 ▶ Anita contributes $10,000 annually to her church, which is a qualified charitable organization. Anita's marginal tax rate is 24%. Her after-tax cost of contributing to the church is only $7,600 [$10,000 − (0.24 × $10,000)]. ◀

EXAMPLE I:1-12 ▶ Ace Trucking Company incurs $10,000 in fines imposed by local and state governments for overloading its trucks during the current tax year. The fines are not deductible because the activity is contrary to public policy. ◀

The tax law objectives previously discussed are highlighted in Topic Review I:1-2.

---

[26] Sec. 1244.

[27] Sec. 1202.

TOPIC REVIEW I:1-2

Objectives of the Tax Law

Objective	Example
Stimulate investment	Provide immediate expensing for the purchase of business equipment
Prevent taxpayers from paying a higher percentage of their income in personal income taxes due to inflation (bracket creep)	Index the tax rates and standard deduction for inflation
Encourage research activities that will in turn strengthen the competitiveness of U.S. companies	Allow research expenditures to be written off in the year incurred and offer a tax credit for increasing research and experimental costs
Encourage social objectives	Provide a tax deduction for charitable contributions; provide favorable tax treatment for contributions to qualified pension plans

ENTITIES IN THE FEDERAL INCOME TAX SYSTEM

OBJECTIVE 5

Describe the tax entities in the federal income tax system

The federal income tax law levies taxes on taxpayers. However, not all entities that file income tax returns pay income taxes. For example, a partnership is required to file a tax return but does not pay any income tax because the income (or loss) of the partnership is allocated to the partners who report the income or loss on their individual tax returns. Therefore, the various entities in the federal income tax system may be classified into two general categories, *taxpaying entities* and *flow-through entities*.[28] Taxpaying entities generally are required to pay income taxes on their taxable income. Flow-through entities, on the other hand, generally do not directly pay income taxes but merely pass the income on to a taxpaying entity. The major entities in each category are as follows:

Taxpaying Entities	*Flow-through Entities*
Individuals	Sole proprietorships
C corporations (regular corporations)	Partnerships
	S corporations
	Limited Liability Companies (LLCs) or Limited Liability Partnerships (LLPs)
	Trusts

Each of these entities is discussed in the pages that follow. The purpose of this section is to provide an overall picture of the various entities in the federal income tax system.

---

[28] Some entities have characteristics of both categories of entities, including certain types of trusts and S corporations.

TAXPAYING ENTITIES

Individuals. Individual taxpayers are the principal taxpaying entities in the federal income tax system. In 2024, income taxes paid by individual taxpayers are expected to comprise approximately 49% of total federal revenues. If Social Security taxes are included, individual taxpayers will pay approximately 84% of total federal revenues (see Table I:1-1 for details). Thus, the study of taxation of individuals is a very important topic and is discussed extensively in this *Individuals* volume.

Individuals pay income taxes on all gross income minus allowable deductions. Gross income minus allowable deductions is referred to as *taxable income*. Gross income subject to taxation may be broadly classified into three categories:

- Earned income from sources such as salaries and wages, business income, and retirement income.
- **Investment income**, including interest income, dividends, capital gains, and rents and royalties.
- Flow-through income from partnerships, limited liability companies (LLCs), Subchapter S corporations, estates, and trusts.

Allowable deductions include expenses attributable to the gross income above and certain personal deductions specifically allowed under the tax law. Gross income and allowable deductions are discussed in detail later in this text.

Individual taxpayers use the tax formula below to compute their taxable income in 2025:

Total income, from whatever source derived		$xxx
Minus:	Exclusions, as provided in the tax law	(xxx)
Gross income		xxx
Minus:	Deductions for adjusted gross income	(xxx)
Adjusted gross income (AGI)		xxx
Minus:	Deductions from AGI:	
	Greater of itemized deductions or standard deduction	(xxx)
	Qualified Business Income Deduction	(xxx)
Taxable income		$xxx

ADDITIONAL COMMENT

Personal and dependency exemptions were allowed prior to 2018. However, TCJA eliminated these deductions for individual taxpayers for the years 2018 to 2025.

Exclusions are items of income that the tax law specifically exempts from taxation. They include such items as gifts, inheritances, interest income from state and local bonds, loans, and life insurance proceeds. Exclusions are discussed in Chapter I:4.

Once an individual determines that an expenditure is allowed as a deduction for tax purposes, he or she must classify the deduction as *for* AGI or *from* AGI. This classification is very important and is discussed in Chapter I:6. Deductions *for* AGI basically are (1) expenses connected with a taxpayer's business or rental property or (2) other specified deductions, such as contributions to an **Individual Retirement Account (IRA)** and a number of other specific items. Deductions *from* AGI are either itemized deductions or the standard deduction, whichever is greater. Itemized deductions primarily are personal-type deductions of the taxpayer, such as medical expenses, state and local taxes, mortgage interest, and charitable contributions. Itemized deductions are discussed in Chapter I:8. The standard deduction is a set amount that all taxpayers may deduct. For 2025, the standard deduction is $15,000 ($30,000 for married couples filing a joint return) and is indexed annually for inflation. Thus, if a single taxpayer's itemized deductions for 2025 were $12,000, the taxpayer would deduct the standard deduction of $15,000 instead. On the other hand, if the taxpayer's itemized deductions were $16,000, the taxpayer would deduct $16,000 because that amount exceeds the standard deduction.

LEGISLATIVE UPDATE

As part of COVID relief legislation, Congress added a deduction for charitable contributions for taxpayers who do not itemize. This deduction is discussed further in following chapters.

Once taxable income is determined, tax rates are applied to this amount to arrive at the income tax liability for the year. Certain credits are allowed that reduce the income tax liability on a dollar-for-dollar basis. Individual income tax rates may be found in the Quick Reference section of the text. Because individuals are subject to withholding and estimated tax payment rules, they may pay a balance due or receive a refund upon filing their tax return.

Individual taxpayers are required to file a tax return annually, Form 1040, which is generally due on or before April 15 of the year following the taxable year. As can be seen from the tax rate schedules located in the Quick Reference section of the text, rates range from 10% to 37%.

EXAMPLE I:1-13 ► Jeff Payne, a single taxpayer, is employed by a large corporation and has the following information for the current year of 2025 (assume Jeff is not eligible for the qualified business income deduction):

INCOME AND OTHER RECEIPTS	
Salary from corporation	$150,000
Interest income from savings account	13,000
Interest on New York City bond	600
Loan from bank	20,000
Share of income from a partnership in which Jeff is a partner	8,600
Gift from Jeff's grandmother	11,000
Total	$203,200
DEDUCTIONS AND PAYMENTS	
Itemized deductions	21,000
Federal income taxes withheld from salary	30,500

Jeff's taxable income and income tax liability for 2025 would be computed as follows:

Total income			$203,200
Minus:	Exclusions:		
	Interest on New York City bond	$ 600	
	Loan from bank	20,000	
	Gift from Jeff's grandmother	11,000	(31,600)
Gross income			$171,600
Minus:	Deductions for AGI		–0–
Adjusted gross income (AGI)			$171,600
Minus:	Deductions from AGI:		
	Itemized deductions (larger than $15,000 standard deduction)		(21,000)
Taxable income			$150,600

The itemized deductions of $21,000 exceed Jeff's allowable standard deduction for 2025 of $15,000 and, therefore, are used to reduce taxable income.

To compute Jeff's income tax liability for the year, the 2025 rate schedules in the Quick Reference section of the text are used. Jeff's income tax liability (using single taxpayer rates and rounded) would be $28,991 [$17,651 + 0.24 × ($150,600 − $103,350)]. Since Jeff had $30,500 of federal income taxes withheld from his salary, he would be entitled to a tax refund of $1,509 ($30,500 − $28,991). ◄

ADDITIONAL COMMENT

It should be noted that high individual taxpayers may also be subject to Medicare taxes, as follows: (1) 0.9% on wages over $200,000 and (2) 3.8% on unearned income, such as interest income and dividends.

Some types of income are taxed at lower rates. For example, dividends from most U.S. corporations are subject to a maximum rate of 20%. This 20% maximum rate also applies to long-term capital gains, such as gains on the sale of stocks and bonds. With these lower rates, a high-income taxpayer in approximately the 37% marginal tax bracket would only pay a maximum of 20% on any qualified dividends received or long-term capital gains. The remainder of the taxpayer's income would be subject to the higher rates. Taxpayers whose tax rates are below the top rate amount in 2025 ($533,400 for single taxpayers; $600,050 for married filing a joint return) generally are subject to a maximum tax rate of 15% on qualified dividends and long-term capital gain. (See Chapter I:5 for a detailed discussion of these preferential tax rates.)

ADDITIONAL COMMENT

Although corporations "pay" taxes, those taxes are ultimately passed on to individuals in the form of reduced dividends or stock gains to shareholders, reduced wages to employees, or increased prices to customers.

C Corporations. C corporations, many times referred to as regular corporations, also are taxpaying entities. These corporations, both publicly-held corporations traded on stock exchanges and privately-owned corporations, accounted for approximately 11% of total federal revenues in 2024. The percentage of federal revenues provided by C corporations has been steadily declining over the past 40 years, a concern of tax policymakers as more and more taxes are being shifted to individual taxpayers. A major disadvantage of C corporations is they are subject to so-called double taxation. Double taxation results from the corporation paying income tax on its taxable income and shareholders paying income tax on any dividends received from the corporation or on the gain from selling their stock in the corporation. Thus, the same corporate income is subjected to taxation twice—once at the corporate level and again at the shareholder level. For many years, much tax planning has been directed at trying to so arrange the tax affairs of a C corporation to avoid double taxation. This discussion of C corporations is divided into two parts, (1) taxation of C corporations and (2) the operation of double taxation.

Taxation of C Corporations. C corporations are taxed on their taxable income in a manner similar to individuals. The major difference between corporations and individuals is that corporations are not allowed personal deductions. Thus, the concept of AGI does not pertain to corporations. Taxable income for corporations is computed as follows:

Total income, from whatever source derived	$xxx
Minus: Exclusions, as provided in the tax law	(xxx)
Gross income	xxx
Minus: Deductions (ordinary and necessary expenses related to the corporation's trade or business)	(xxx)
Taxable income	$xxx

This taxable income is subject to a flat tax rate of 21%. A more detailed discussion of corporation taxation is contained in Chapter I:16 of this *Individuals* volume and Chapter C:3 of the *Corporations, Partnerships, Estates & Trusts* volume.

EXAMPLE I:1-14 ▶ During the current taxable year, Crimson Corporation, a domestic U.S. corporation, generated gross income of $1.5 million and had ordinary and necessary deductions of $900,000, resulting in taxable income of $600,000. Based on the corporation rates, Crimson would be subject to taxes of $126,000 ($600,000 × 21%). ◀

C corporations are required to file tax returns annually using Form 1120, which is generally due on or after the 15th day of the fourth month after the close of the corporation's tax year (e.g., April 15 for calendar year taxpayers).

Double Taxation of C Corporation Earnings. As mentioned previously, C corporations are subject to double taxation. The corporation pays income tax on its taxable income and then shareholders must pay income tax on any dividends paid by the corporation or on the sale of their stock. Under current tax laws, the impact of double taxation has been substantially decreased by reducing to 0%, 15%, or 20% the maximum tax rate on most corporate dividends received by individuals. Prior to this reduction in tax rates on qualified dividends, dividends were subject to tax at regular tax rates. Single taxpayers who have taxable income in 2025 of less than $48,350 have a 0% tax rate on qualified dividends ($96,700 for a married couple filing a joint return). Single taxpayers who have taxable income of more than $48,350 but equal to or less than $533,400 pay a marginal tax rate of 15% on qualified dividends while single taxpayers who have taxable income of greater than $533,400 pay a marginal tax rate of 20% on qualified dividends. Thus, under current tax law, a single taxpayer with taxable income of $400,000 has a marginal tax rate of 35% on ordinary income but pays only a 15% tax rate on any qualified dividends received. The same reduced tax rates apply to long-term capital gains on the sale of their corporate stock. The Quick Reference section of the text has the income level cutoffs for the other filing statuses.

EXAMPLE I:1-15 ► Using the same facts for Crimson Corporation in Example I:1-14, assume the corporation paid dividends to shareholders during 2025 of $400,000. Further assume that the taxable income of the shareholders is such that they pay a tax rate of 15% on qualified dividends. The shareholders collectively would have to pay individual income taxes of $60,000 ($400,000 × 15%) as the tax rate on qualified dividends is 15%. The total tax on the corporation's taxable income of $600,000, therefore, would be $186,000 ($126,000 paid by Crimson Corporation plus $60,000 paid by the shareholders), or an effective tax rate of 31% ($186,000/$600,000). The 31% is only federal income taxes and does not include any state or local income taxes that the corporation may have to pay. ◄

The double taxation of dividends paid by C corporations has long been criticized as creating income taxes that are too high. Before 2018, corporations were subject to income taxes as high as 35%, and then individuals would typically be taxed on dividends received at rates of 15% to 20%. This so-called "double taxation" could create total taxes of 55% (35% + 20%) on the same income. However, with the corporate rate reduced to 21% in 2018, the combined taxes are not as onerous as in prior years.

FLOW-THROUGH ENTITIES

The simplest form of a flow-through entity is the sole proprietorship as there are no formal requirements to form such an entity. The net income earned by the proprietor is reported on Schedule C of Form 1040. Thus, the income of the sole proprietorship merely flows to the proprietor's individual tax return. The net income of the sole proprietorship is subject to income tax only once (at the individual level) but is also subject to self-employment tax (Social Security and Medicare taxes).

Flow-through entities, such as partnerships, limited liability companies (LLCs), limited liability partnerships (LLPs), and S corporations have the major advantage of being subject to only one level of taxation. All of these entities file tax returns, but, in general, the entities do not pay any income taxes. The income earned by the entity is allocated to the owners based on their proportionate ownership or some other allocation arrangement. Thus, the entity income tax return is really just an information return. The income allocated to the owners is then reported on their own tax returns. The income of the entity, therefore, is subject to a single level of taxation. This single level of tax is a major advantage of the flow-through form over C corporations.

As a result of tax law changes effective after 2017, to better equalize the tax breaks given to C corporations (i.e., 21% tax rate), most flow-through entities may deduct 20% of qualified business income (QBI). Qualified Business Income is net income from business activities and does not include investment income (interest, dividends, etc.).

EXAMPLE I:1-16 ► Assume AB Partnership is in the wholesale hardware business and A and B are 50-50 partners. During 2025, the AB Partnership had gross business receipts of $1 million and business deductions of $400,000, resulting in net ordinary income of $600,000. The partnership also had interest and dividend income from investments of $50,000. Based on the above information, AB partnership would have qualified business income (QBI) of $600,000 as the $50,000 of interest and dividends is not part of QBI. Therefore, each partner would be entitled to a 20% deduction of his or her share of QBI, or $60,000 ($600,000 × 50% × 20%). There are several limitations on the 20% deduction, primarily a limitation based on W-2 wages, and the deduction is generally not allowed for personal service activities, such as lawyers, accountants, etc. The deduction and limitations are discussed in other areas of this text. ◄

To ensure a single level of taxation for flow-through entities, the tax law employs a unique method of basis adjustments. Every owner of the entity has an *adjusted basis* (basis) in his or her ownership interest. An owner's basis in a flow-through entity is determined as follows:

- Each owner obtains an original basis in his or her ownership interest upon the formation of the entity (investment in the entity) or purchase of the interest.
- The owner's basis increases for any additional capital contributions to the entity in subsequent years.
- The owner's basis increases for the owner's share of income for tax purposes or decreases for losses.
- The owner's basis increases for the owner's share of entity liabilities. Differences exist between partnerships and S corporations as to which liabilities are added to an owner's basis. Details on this topic are covered in later chapters of this text.
- The owner's basis decreases for money or property distributed to the owner by the entity.

Without these basis adjustments, the owner could be subject to double taxation upon selling his or her interest or upon dissolution of the entity. Practitioners refer to this basis as "outside basis" as opposed to "inside basis," which is the entity's basis in its assets.

EXAMPLE I:1-17 ▶ Wildcat Company is a flow-through entity with two owners, Rich and Teresa. Each owner has a $10,000 original basis in the entity. In its first year of operations, Wildcat Company earns $50,000, which is allocated $25,000 to each owner. Thus, each owner reports $25,000 in his individual income tax return even though the entity does not distribute any of the earnings to the owners. At the beginning of the second year, Rich sells his interest to Steve for $35,000. If Rich did not get an increased basis adjustment for his $25,000 of earnings, he would recognize a $25,000 gain ($35,000 selling price − $10,000 basis in the entity) on the sale of his interest, which taxes him twice on the $25,000. However, both Rich and Teresa do increase their bases to $35,000 ($10,000 original basis + $25,000 share of entity earnings) at the end of the first tax year. Therefore, when Rich sells his interest for $35,000, he incurs no additional taxable gain ($35,000 selling price − $35,000 basis in the entity = $0 gain). ◀

Below is a brief description of the four basic types of flow-through business entities.

Partnerships. A partnership is the classic flow-through entity as it has been around the longest. The Internal Revenue Code (IRC) defines a partnership as "a syndicate, group, pool, joint venture, or other incorporated organization" that carries on any business, financial operation, or venture.[29] Thus, if two or more individuals, corporations, trusts, or estates decide to operate a business or financial venture, the business or venture can be classified as a partnership. Unlike a corporation, which must file incorporation documents with the state, partnerships require no legal documentation. However, tax advisors strongly advise partnerships to have written agreements as to the operation of the partnership and how income, deductions, losses, and credits will be allocated to the partners. Most states have laws that govern the rights and restrictions of partnerships and their partners.

Partnerships file an annual income tax return which is just an information return because the partnership entity is not subject to taxation. The return, Form 1065 (U.S. Partnership Return of Income), reports the results of the partnership's operations. An accompanying form, Schedule K-1, reports the separate income, deductions, losses, and credits that flow through to the partners. The partners, in turn, take the information from their Schedule K-1 and report the various items on their individual returns.

EXAMPLE I:1-18 ▶ Donald and Minnie form a real estate company and decide to operate as a partnership, the DM Partnership. Donald is a 60% partner and Minnie is a 40% partner. Donald invests $60,000 into DM and Minnie contributes real estate with a basis and fair market value of $40,000. In its first year of operation, DM Partnership earns ordinary income of $150,000. The partnership files Form 1065 and reports the $150,000 but is not subject to any income taxation. Included in the partnership return are two Schedule K-1s that report $90,000 to Donald ($150,000 × 60%) and $60,000 ($150,000 × 40%) to Minnie. Donald reports $90,000 on his individual income tax return, Form 1040, and Minnie reports $60,000 on her individual return. If the partnership distributed $72,000 to Donald and $48,000 to Minnie during the year, the distributions are considered a return of capital and are not taxable to either partner. Donald's adjusted basis in his partnership interest would be $78,000 ($60,000 + $90,000 − $72,000), and Minnie's adjusted basis would be $52,000 ($40,000 + $60,000 − $48,000). ◀

---

[29] Sec. 761(a).

S Corporations. S corporations are a special form of corporation treated by the tax laws as flow-through entities. They are incorporated under state law just as any other corporation but, if they so elect, are treated as flow-through entities for tax purposes. S corporations are so named because the rules pertaining to this type of entity are located in Subchapter S of the IRC. S corporations have been referred to as "corporations taxed like a partnership." Although this statement is partially true, important differences exist, such as a limitation on the number of shareholders, strict rules on allocation of income or losses, and several other differences. Similar to partnerships, S corporations are not taxed and income, deductions, losses, and credits flow through to its shareholders. Allocations of income, deductions, losses, and credits to shareholders are based on a per share–per day basis. Importantly, S corporation shareholders enjoy limited liability, as do C corporation shareholders.

To achieve S corporation status, the corporation must file an S election and all of its shareholders must consent to that election. S corporations annually file an information return, Form 1120S (U.S. Income Tax Return for an S Corporation), which reports the results of the corporation's operations and, like partnerships, also submits a Schedule K-1 to each shareholder, which reports the allocable share of income, deduction, loss, and credit that flow through to each shareholder.

Similar to partnerships, S corporations impose only a single level of taxation to its shareholders and the tax law uses basis adjustments to achieve this single level of taxation. The basis adjustments for S corporation shareholders are nearly identical to those for partnerships. The major difference is how liabilities affect the basis of S corporation shareholders. S corporation shareholders obtain basis only for *direct* loans to the corporation, and they treat their debt basis separately from stock basis. Partners of a partnership generally increase their basis for all partnership liabilities.

EXAMPLE I:1-19 ▶ Paul and Peter form a corporation in Ohio as equal shareholders. Upon advice from their tax advisor, they decide to elect S corporation status for federal and state tax purposes and file the necessary forms. Both Paul and Peter invest $25,000 in the corporation and each receives 100 shares of common stock of the corporation. During the first year, the corporation reports net ordinary income of $62,000 and a long-term capital gain of $10,000 on Form 1120S. Each shareholder receives a $20,000 distribution from the corporation during the year. In Year 1, the corporation pays no federal income taxes, but both Paul and Peter report $31,000 of ordinary income and $5,000 of long-term capital gain on their individual returns. Since the shareholders have sufficient basis, the $20,000 distribution to each shareholder is not subject to taxation. Paul and Peter would each have a basis in their S corporation stock of $41,000 ($25,000 + $31,000 + $5,000 − $20,000) at the end of Year 1. ◀

EXAMPLE I:1-20 ▶ In Year 2, the corporation earns $74,000 of ordinary income and no capital gains. Also, on July 1 of Year 2, Peter sells one-half (50 shares) of his stock to Mary. So, from July 1 through December 31, Paul owns 50% of the corporate stock, and Peter and Mary each own 25%. S corporation earnings must be allocated on a per share–per day basis, so the income of $74,000 is allocated to each shareholder as follows:

Paul	$74,000 × 365/365 × 50% = $37,000
Peter	($74,000 × 181/365 × 50%) + ($74,000 × 184/365 × 25%) = $27,674
Mary	$74,000 × 184/365 × 25% = $9,326

◀

Limited Liability Companies. A limited liability company (LLC) is a legal entity under the laws of all 50 states and the District of Columbia and is a very popular organizational form. LLCs combine the best features of a partnership and a corporation by being treated as a partnership for tax purposes while providing the limited liability protection of a corporation. Thus, LLC owners, called members, are subject to a single level of taxation and are not liable for the liabilities of the LLC.

An LLC is formed under state law similar to a corporation. After formed, the LLC elects whether to be taxed either as a partnership or a corporation.[30] Under Treasury Regulations, an LLC with more than one member is treated as a partnership unless the LLC affirmatively elects to be classified as a corporation. In most cases, LLCs will prefer to be classified as a partnership because of the tax advantages of a single level of taxation. If an LLC elects to be treated as a partnership, it files its tax return on Form 1065 (U.S. Partnership Return of Income). The LLC, however, is not legally a partnership; it is just treated as one for federal income tax purposes. A single member LLC is disregarded for tax purposes, and the LLC income, deductions, etc. are reported directly on the member's Schedule C of Form 1040 as a sole proprietor. If an LLC elects to be taxed as a corporation under the Treasury Regulations, it would file Form 1120 (U.S. Corporation Income Tax Return). Further, S corporation status can be achieved by electing to be taxed as a corporation and then make an S election. Thus, the LLC would be considered an LLC for state law purposes but an S corporation for income tax purposes.

EXAMPLE I:1-21 ▶ Karen and David start a wholesale business and decide to operate the business as an LLC. They first must legally form the organization under state law. After the LLC is legally formed, they must decide how the LLC will be treated for income tax purposes. Because they want a single level of taxation, Karen and David elect to be treated as a partnership. Since being treated as a partnership is the default classification under Treasury Regulations, no forms need to be filed with the IRS. At the end of the first year, the LLC will file a Form 1065 and check the box indicating that the entity is an LLC filing as a partnership. All partner allocations, basis adjustments, and all other tax rules for the LLC are identical with partnership rules. ◀

Limited Liability Partnerships. All 50 states and the District of Columbia have statutes that allow a business to operate as a limited liability partnership (LLP). Basically, an LLP is similar to an LLC except a partner of an LLP *is not* liable for any liability arising from acts of negligence or misconduct or similar acts of another partner of the LLP. Thus, an LLP is much more desirable than a general partnership where partners are liable for all partnership liabilities. Professional service organizations, such as many CPA firms, have adopted the LLP form, primarily to limit legal liability.

EXAMPLE I:1-22 ▶ The accounting firm of Gartman & Kuhn, CPAs, is operating as a general partnership and has 20 partners in the firm. The firm is concerned about the unlimited liability that exists for the partnership, especially in today's litigious environment. The firm decides to convert from a partnership to an LLP. The conversion is simple and tax-free,[31] and protects the partners of the new LLP entity against liabilities of the LLP arising from acts of negligence or misconduct of other partners or employees. ◀

OTHER ENTITIES

Trusts. Trusts are somewhat of a hybrid entity in that they may either be a taxpaying entity or flow-through entity. Also, there are a number of different types of trusts, so the discussion here is very general in nature. Trusts typically are subject to income taxation on all its net income that is *not* distributed to the beneficiaries. The portion of net income that is distributed to beneficiaries is taxed to the beneficiaries. One drawback to the use of trusts is that the income tax rates are extremely progressive, reaching the 37% bracket when the taxable income of the trust reaches $15,650 in 2025. Trusts use Form 1041 to file its tax information.

EXAMPLE I:1-23 ▶ Ben establishes a trust for the benefit of his daughter. The principal amount of the trust is $500,000 and is projected to earn approximately 10% per year. In the current year, the trust earned $50,000 of investment income and had $5,000 of expenses. If the trust did not make any distributions during the year to the daughter, the entire $45,000 (less a small exemption) would be subject to income taxation to the trust. Much of the taxable income would be subject to taxation at the 37% rate. Alternatively, if the trust distributed the entire $45,000 to the daughter, she would report the $45,000 on her individual tax return. Assuming she does not have significant other income, she would most likely be in the 22% marginal tax bracket. The trust's taxable income would be zero and would have no income tax liability. ◀

---

[30] The LLC makes the election pursuant to the "check-the-box" Regulations, Reg. Secs. 301.7701-1 through -4.

[31] Rev. Rul. 95-37, 1995-1 C.B. 130.

TAX LAW SOURCES

OBJECTIVE 6

Identify the various tax law sources and understand their implications for tax practice

The solution to any tax question may only be resolved by reference to tax law sources (also referred to as tax law authority). Tax law sources are generated from all three branches of the federal government, i.e., legislative, executive, and judicial. The principal sources of tax law are as follows:

Branch	*Tax Law Source*
Legislative	Internal Revenue Code
	Congressional Committee Reports
Executive (Administrative)	Income Tax Regulations
	Revenue Rulings
	Revenue Procedures
	Letter Rulings
Judicial	Court Decisions

ADDITIONAL COMMENT

Knowledge of tax law sources could be considered the most important topic in this book. It is similar to the old Chinese proverb that states that if you give a person a fish you have fed him for one day, but if you teach a person how to fish you have fed him for the rest of his life. By analogy, if a person has a knowledge of the tax law sources, he or she should be able to locate the answers to tax questions throughout his or her career.

A thorough knowledge of the various sources above as well as the relative weights attached to each source is vital to tax professionals. Because of the vast volume of tax law sources, the ability to "find an answer" to a tax question is of fundamental importance. In addition, the evaluation of the weight (or importance) of different sources of authority is also crucial in arriving at a proper conclusion. For example, a decision of the U.S. Supreme Court on a tax matter would certainly carry more weight than a Revenue Ruling issued by the Internal Revenue Service.

Clearly, the most authoritative source of tax law is the Internal Revenue Code (IRC), which is the tax law passed by Congress. However, Congress is not capable of anticipating every type of transaction that taxpayers might engage in, so most of the statutes in the Code contain very general language. Because of the general language contained in the Code, both administrative and judicial interpretations are necessary to apply the tax law to specific situations and transactions. Thus, the regulations and rulings of the IRS and the decisions of the courts are an integral part of the federal income tax law. For a detailed discussion of tax law sources, see Chapter I:15 (Chapter C:1 of the *Comprehensive* volume). Topic Review I:1-3 provides an overview of the tax law sources.

ENACTMENT OF A TAX LAW

OBJECTIVE 7

Describe the legislative process for the enactment of the tax law

Under the U.S. Constitution, the House of Representatives is responsible for initiating new tax legislation. However, tax bills may also originate in the Senate as riders to nontax legislative proposals. Often, major tax proposals are initiated by the President and accompanied by a Treasury Department study or proposal, and then introduced into Congress by one or more representatives from the President's political party.

STEPS IN THE LEGISLATIVE PROCESS

The specific steps in the legislative process are discussed below and are summarized in Table I:1-2. These steps typically include:

1. A tax bill is introduced in the House of Representatives and is referred to the House Ways and Means Committee.
2. The proposal is considered by the House Ways and Means Committee, and public hearings are held. Testimony may be given by members of professional groups such

TOPIC REVIEW I:1-3

Tax Law Sources

Source	Key Points	Weight of Authority
LEGISLATIVE		
Internal Revenue Code	Contains provisions governing income, estate and gift, employment, alcohol, tobacco, and excise taxes.	Serves as the highest legislative authority for tax research, planning, and compliance activities.
ADMINISTRATIVE		
Treasury Regulations	Represents interpretations of the tax code by the Secretary of the Treasury. Regulations may be initially issued in proposed, temporary, and final form and may either be interpretative or legislative in nature.	Legislative regulations have a higher degree of authority than interpretative regulations. Proposed regulations do not have authoritative weight.
IRS Rulings	The IRS issues Revenue Rulings (letter rulings or published rulings), Revenue Procedures, Information Releases, and Technical Advice Memoranda.	These pronouncements reflect the IRS's interpretation of the law and do not have the same level of scope and authority as Treasury Regulations.
JUDICIAL		
Judicial doctrines	Judicial doctrines are concepts that have evolved from Supreme Court cases that are used by the courts to decide tax issues. Examples include **substance-over-form doctrine**, **tax benefit rule**, and constructive receipt.	Judicial doctrines that evolve from Supreme Court cases have substantial weight of authority because they have the force and effect of law.
Judicial interpretations	Tax cases are initially considered by a trial court (i.e., the Tax Court, a Federal district court, or the U.S. Court of Federal Claims). Either the taxpayer or the IRS may appeal to an appeals court. A final appeal is to the U.S. Supreme Court.	A trial court must abide by the precedents set by the court of appeals of the same jurisdiction. An appeals court is not required to follow the decisions of another court of appeals. A Supreme Court decision is the "law of the land."

as the American Institute of CPAs and the American Bar Association and from various special-interest groups.

3. The tax bill is voted on by the House Ways and Means Committee and, if approved, is forwarded to the House of Representatives for a vote. Amendments to the bill from individual members of the House of Representatives are generally not allowed.
4. If passed by the House, the bill is forwarded to the Senate for consideration by the Senate Finance Committee, and public hearings are held.
5. The tax bill approved by the Senate Finance Committee may be substantially different from the House of Representatives' version.
6. The Senate Finance Committee reports the Senate bill to the full Senate for consideration. The Senate generally permits amendments (e.g., new provisions) to be offered on the Senate floor.
7. If approved by the Senate, both the Senate and House bills are sent to a Joint Conference Committee consisting of an equal number of members from the Senate and the House of Representatives.
8. The Senate and House bills are reconciled in the Joint Conference Committee. This process of reconciliation generally involves substantial compromise if the provisions of both bills are different. A final bill is then resubmitted to the House and Senate for approval.
9. If the Joint Conference Committee bill is approved by the House and Senate, it is sent to the President for approval or veto.
10. If approved by the President, the bill becomes law and is incorporated into the Internal Revenue Code. If the president vetoes the bill, a two-thirds majority vote obtained in both the House and Senate can overturn the veto.

ADDITIONAL COMMENT

Rep. Jason Smith of Missouri is the chairman of the House Ways and Means Committee, and the chairman of the Senate Finance Committee is Sen. Mike Crapo of idaho.

HISTORICAL NOTE

For many years, only a few members of Congress were CPAs. This trend is changing. In 2019, eight members of the House of Representatives are CPAs and two members of the Senate are CPAs.

▼ TABLE I:1-2
Steps in the Legislative Process

1. A tax bill is introduced by a member or members of the House of Representatives and referred to the House Ways and Means Committee.
2. The House Ways and Means Committee considers and studies the tax bill.
3. The House Ways and Means Committee votes, and the approved tax bill is forwarded to the full House.
4. The House bill is approved by the House of Representatives and forwarded to the Senate Finance Committee.
5. The Senate Finance Committee modifies and amends the House bill into a separate Senate bill.
6. The Senate bill is considered by the full Senate.
7. If the Senate bill is approved by the Senate, both Senate and House bills are sent to a Joint Conference Committee.
8. The reconciled bill of the House and Senate is issued by the Joint Conference Committee and sent to both the House and Senate for approval.
9. The President approves or vetoes the legislation.
10. The new tax law and amendments are incorporated into the Code.

ADDITIONAL COMMENT

After enactment of a new tax law, the Staff of the Joint Committee on Taxation also publishes its explanation of the new law in what's informally called the "Blue Book."

As the tax legislation progresses through Congress, committee reports are prepared by the staffs of the House Ways and Means Committee, the Senate Finance Committee, and the Joint Conference Committee. These reports help to explain the new law before the Treasury Department drafts regulations on the tax law changes as well as to explain the intent of Congress for passing the new law.

ADMINISTRATION OF THE TAX LAW AND TAX PRACTICE ISSUES

OBJECTIVE 8

Describe the administrative procedures under the tax law

ORGANIZATION OF THE INTERNAL REVENUE SERVICE

The **IRS** is the branch of the Treasury Department that is responsible for administering the federal tax law. It is organized on a type-of-taxpayer basis, which allows the IRS to become more specialized. The responsibilities and functions of the various administrative branches include the following:

LEGISLATIVE UPDATE

The Inflation Reduction Act, enacted in 2022, provided almost $80 billion for resources to modernize the IRS. Congress later reduced that sum to $60 billion. Over 50% of this amount in designated for enforcement. So, more IRS agents are coming in the future, although this provision remains controversial especially after the election of President Trump.

- The Commissioner of Internal Revenue, appointed by the President, is the chief officer of the IRS. This individual is supported by the Chief Counsel's office, which is responsible for preparing the government's case for litigation of tax disputes.
- The National Office includes a deputy commissioner, a series of assistants to the commissioner, and a chief counsel. A significant responsibility of the National Office is to process ruling requests and to prepare revenue procedures that assist taxpayers with compliance matters.
- There are two principal divisions under the Commissioner that are headed by two deputy commissioners, (1) Operations Support and (2) Services and Enforcement. The Operations Division deals with internal aspects of the IRS while the Services and Enforcement Division deals with enforcement of the tax law and relationships with taxpayers.
- The Enforcement and Services division, organized functionally, includes (1) Wage and Investment Income, (2) Small Business and Self-Employed, (3) Large Business and International, and (4) Tax Exempt and Government Entities.
- Tax service centers, located around the country, perform tax return processing work, based on the four divisions above. They also select tax returns for audit.
- As discussed above in the LEGISLATIVE UPDATE, the IRS has increased its workforce from 79,000 employees in 2022 to 83,000 in 2023. For 2023, the total expenditures of the IRS were $16.1 billion. The IRS collected nearly $4.7 trillion for 2023.

ADDITIONAL COMMENT

A survey of members of the American Institute of CPAs found that more than half of the 1,036 members who responded had an unfavorable opinion of the IRS. However, the accountants gave the IRS good marks for courtesy and a willingness to solve problems.

ENFORCEMENT PROCEDURES

All tax returns are initially checked for mathematical accuracy and items that are clearly erroneous. The Form W-2 amounts (e.g., wages, and so on), Form 1099 information return amounts (e.g., relating to dividend and interest payments, and so on), and other forms filed with the IRS by the payer are checked against the amounts reported on the tax return. If differences are noted, the IRS Center merely sends the taxpayer a bill for the corrected amount of tax and a statement of the differences. This type of examination is referred to as a correspondence audit. In some instances, the difference is due to a classification error by the IRS, and the additional assessment can be resolved by written correspondence. A refund check may be sent to the taxpayer if an overpayment of tax has been made.

ADDITIONAL COMMENT

Individuals may call 800-366-4484 to report misconduct of IRS employees.

EXAMPLE I:1-24 ▶

Bart is an author of books and properly reports royalties on Schedule C (Profit or Loss from Business). The IRS computer matching of the Form 1099 information returns from the publishing companies incorrectly assumes that the royalties should be reported on Schedule E (Supplemental Income and Loss). If the IRS sends the taxpayer a statement of the difference and an adjusted tax bill, this matter (including the abatement of added tax, interest, and penalties) should be resolved by correspondence with the IRS. ◀

ADDITIONAL COMMENT

The IRS audit rate has continued to decline over the past ten years. In 2022, the percentage of returns audited by the IRS dropped to 0.38% or about 3.8 in 1,000 returns. Of course, the audit rate varies by levels and types of income. Higher income taxpayers and self-employed taxpayers face higher audit rates.

SELECTION OF RETURNS FOR AUDIT

The U.S. tax system is based on self-assessment and voluntary compliance. However, enforcement by the IRS is essential to maintain the integrity of the tax system. The IRS uses both computers and experienced personnel to select returns for examination. With respect to the use of the computer, a **Discriminant Function System (DIF)** is used to classify returns to be selected for audit. The DIF system generates a "score" for a return based on the potential for the return to generate additional tax revenue. After returns are scored under the DIF system, the returns are manually screened by experienced IRS personnel who decide which returns warrant further examination. In the aggregate, less than 1% of all individual returns are selected for examination each year. Some examples of situations where individuals are more likely to be audited include the following:

- Individuals who are sole proprietors and claim expenses in connection with their trade or businesses, especially if significant tax losses are incurred.
- Itemized deductions exceeding an average amount for the person's income level
- Filing of a refund claim by a taxpayer who has been previously audited, where substantial tax deficiencies have been assessed
- Individuals who are self-employed with substantial business income or income from a profession (e.g., a medical doctor)

ADDITIONAL COMMENT

A special task force has recommended that the percentage of returns audited be increased to 2.5%. Many individuals feel that the probability of being audited is so low as to be disregarded.

Audit Procedures. Audits of most individuals are handled through an **office audit procedure** in an office of the IRS. In most cases, an individual is asked to substantiate a particular deduction, credit, or income item (e.g., charitable contributions that appear to be excessive). The office audit procedure does not involve a complete audit of all items on the return.

ETHICAL POINT

A CPA is not permitted to recommend a position to a client that exploits the IRS audit selection process.

EXAMPLE I:1-25 ▶

Brad is a high-income taxpayer and a very charitable person. On his tax return for 2023, Brad claims a deduction of over $200,000 for donations to qualified charities. The IRS may contact the taxpayer to submit verification of the charitable donations because of the size of such amounts. ◀

A **field audit procedure** often is used for corporations and individuals engaged in a trade or business. A field audit generally is broader in scope than the office audit (e.g., several items on the tax return may be reviewed). A field audit usually is conducted at the taxpayer's place of business or the office of his or her tax advisor.

Most large corporations are subject to annual audits. The year under audit may be several years prior to the current year because the corporation often will waive the statute of limitations pending the resolution of disputed issues.

KEY POINT

A taxpayer may appear on his or her own behalf before the IRS during an audit. An attorney or CPA in good standing is authorized to practice before the IRS upon the filing of a written statement that he or she is currently so qualified and is authorized to represent the taxpayer.

STATUTE OF LIMITATIONS

Most taxpayers feel a sense of relief after they have prepared their income tax return and have mailed it to the IRS. However, the filing of the tax return is not necessarily the end of the story for that particular taxable year. It is possible, of course, that the IRS may select their tax return for audit after the return has been initially processed or a taxpayer may have filed an amended return to correct an error or omission.

REAL-WORLD EXAMPLE

Based on an IRS audit, the Mustang Ranch, Nevada's most famous legal bordello, was assessed some $13 million in taxes. When the amount owed could not be paid, the IRS sold the property to recoup the taxes.

Both the IRS and taxpayers can make corrections to a return after it has been originally filed. Fortunately, both only have a limited time period in which to make such corrections. This time period is called the **statute of limitations** and prevents either the taxpayer or the IRS from changing a filed tax return after the time period has expired. The general rule for the statute of limitations is three years from the later of the date the tax return was actually filed or its due date.[32] However, a six-year statute of limitations applies if the taxpayer omits items of gross income that in total exceed 25% of the gross income reported on the return.[33] The statute of limitations remains open indefinitely if a fraudulent return is filed or if no return is filed.[34]

EXAMPLE I:1-26 ▶ Betty, a calendar-year taxpayer, is audited by the IRS in February 2025 for the tax year 2023. During the course of the audit, the IRS proposes additional tax for 2023 because Betty failed to substantiate certain charitable deductions. During the course of the audit, the IRS discovers that Betty failed to file a tax return for 2016, and in 2020 an item of gross income amounting to $26,000 was not reported. Gross income reported on the 2020 return was $72,000. Assuming Betty's 2023 return was filed on or before its due date (April 15, 2024), the IRS may assess a deficiency for 2023 because the three-year statute of limitations will not expire until April 15, 2027. A deficiency also may be assessed for the 2020 return because a six-year statute of limitations applies since the omission is more than 25% of the gross income reported on the return. A deficiency also may be assessed for 2026 as there is no statute of limitations for fraud. ◀

ADDITIONAL COMMENT

More than 150 penalties can be imposed on taxpayers. In fact, applying the penalties has become so complicated that the IRS is currently considering ways to consolidate and simplify them.

INTEREST

Interest accrues on both assessments of additional tax due and on refunds that the taxpayer receives from the government.[35] No interest is paid on a tax refund if the amount is refunded by the IRS within 45 days of the day prescribed for filing the return (e.g., April 15) determined without regard to extensions.[36] If a return is filed after the filing date, no interest is paid if the refund is made within 45 days of the date the return was filed.

EXAMPLE I:1-27 ▶ Beverly, a calendar-year taxpayer, files her 2024 tax return on March 1, 2025, and requests a $500 refund. No interest accrues on the refund amount if the IRS sends the refund check to Beverly within 45 days of the April 15, 2025, due date. ◀

ADDITIONAL COMMENT

In addition to the penalties listed on this page, the government also assesses penalties for civil fraud and criminal fraud. Criminal fraud carries a maximum penalty of $100,000, a prison sentence of up to five years, or both.

PENALTIES

Various nondeductible penalties are imposed on the net tax due for failure to comply, including

- A penalty of 5% per month (or fraction thereof) subject to a maximum of 25% for failure to file a tax return[37]

---

[32] Secs. 6501(a) and (b)(1). Similar rules apply to claims for a refund filed by the taxpayer. Section 6511(a) requires that a refund claim be filed within three years of the date the return was filed or within two years of the date the tax was paid, whichever is later. For more information on the rules for statute of limitations, see Chapter C:15 in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

[33] Sec. 6501(e). See also *Stephen G. Colestock*, 102 T.C. 380 (1994), where the Tax Court ruled that the extended six-year limitation period applied to a married couple's entire tax liability for the tax year at issue, not just to items that constituted substantial omissions of gross income. Thus, the IRS was able to assert an increased deficiency and additional penalties attributable to a disallowed depreciation deduction.

[34] Sec. 6501(c).

[35] Sec. 6621(a). The rate is adjusted four times a year by the Treasury Department based on the current interest rate for short-term federal obligations. The interest rate that must be added to underpayments and overpayments of tax is the federal short-term rate plus three percentage points. The annual interest rate on noncorporate underpayments and overpayments for the period January 1, 2024, through March 31, 2024, was 8%.

[36] Sec. 6611(e).

[37] Sec. 6651(a)(1). The penalty assessed may be very small in some instances even though the taxpayer owes a large tax bill for the year because penalties are imposed on the net tax due. The percentages are increased to 15% per month (or fraction thereof) up to a maximum of 75% if the penalty is for fraudulent failure to file under Sec. 6651(f).

ADDITIONAL COMMENT

In some cases, these penalties can be avoided if the taxpayer can show there is "reasonable cause." See Chapter C:15 in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for further discussion.

- A penalty of 0.5% per month (or fraction thereof) up to a maximum of 25% for failure to pay the tax that is due[38]
- An accuracy-related penalty of 20% of the underpayment for items such as negligence or disregard of rules or regulations, any substantial understatement of income tax, or any substantial misstatement of valuation[39]
- A 75% penalty for fraud[40]
- A penalty based on the current interest rate for underpayment of estimated taxes[41]
- Significant penalties on tax return preparers have been enacted by Congress. In general, these new penalties are applicable for any position on a tax return where there is a "realistic possibility" (one-in-three chance) that the position would not be upheld in a court of law. The penalty is not assessed if the position is disclosed in the return.

ADDITIONAL COMMENT

Pete Rose, major league baseball's all-time hit leader, was sent to prison in 1990 for income tax evasion.

ADMINISTRATIVE APPEAL PROCEDURES

If an IRS agent issues a deficiency assessment, the taxpayer may make an appeal to the IRS Appeals Division. Some disputes involve a gray area (e.g., a situation where some courts have held for the IRS whereas other courts have held for the taxpayer on facts that are similar to the disputed issue). In such a case, the taxpayer may be able to negotiate a compromise settlement (e.g., a percentage of the disputed tax amount plus interest and penalties) with the Appeals Division based on the "hazards of litigation" (i.e., the probability of winning or losing the case if it is litigated).

COMPONENTS OF A TAX PRACTICE

OBJECTIVE 9

Describe the components of a tax practice

Tax practice is a rapidly growing field that provides substantial opportunities for tax specialists in public accounting, law, and industry. The tasks performed by a tax professional may range from the preparation of a simple Form 1040 for an individual to the conduct of tax research and planning for highly complex business situations. Tax practice consists of the following activities:

- Tax compliance and procedure (i.e., tax return preparation and representation of a client in administrative proceedings before the IRS)
- Tax research
- Tax planning and consulting
- Personal financial planning

TYPICAL MISCONCEPTION

Many people believe that a tax practitioner should serve in the capacity of a neutral, unbiased expert. They tend to forget that tax practitioners are being paid to represent their clients' interests. A tax practitioner may sometimes recommend a position that is defensible, but where the weight of authority is on the side of the IRS.

TAX COMPLIANCE AND PROCEDURE

Preparation of tax returns is a significant component of tax practice. Tax practitioners often prepare federal, state, and local tax returns for individuals, corporations, estates, trusts, and so on. In larger corporations, the tax return preparation (i.e., compliance) function usually is performed by a company's internal tax department staff. In such a case, a CPA or other tax practitioner may assist clients with the tax research and planning aspects of their tax practice, and may even review their return before it is filed.

An important part of tax practice consists of assisting the client in negotiations with the IRS. If a client is audited, the practitioner acts as the client's representative in discussions with the IRS agent. If a tax deficiency is proposed, the practitioner assists the client if an administrative appeal is contemplated with the IRS's Appellate Division. In most instances, an attorney is retained if litigation is being considered.

---

[38] Sec. 6651(a)(2). If the failure to file penalty (5%) and the failure to pay the tax penalty (0.5%) are both applicable, the failure to file penalty is reduced by the failure to pay penalty per Sec. 6651(c)(1). Further, the penalty is increased to 1% per month after the IRS notifies the taxpayer that it will levy on the taxpayer's assets.

[39] Sec. 6662.

[40] Sec. 6663.

[41] Sec. 6654.

TAX RESEARCH

Tax research is the search for the best possible defensibly correct solution to a problem involving either a completed transaction (e.g., a sale of property) or a proposed transaction (e.g., a proposed merger of two corporations). Research involves each of the following steps:

- Determine the facts.
- Identify the issue(s).
- Identify and analyze the tax law sources (i.e., IRC provisions, Treasury Regulations, administrative rulings, and court cases).
- Evaluate nontax (e.g., business) implications.
- Solve the problem.
- Communicate the findings to the client.

Tax research may be conducted in connection with tax return preparation, tax planning, or procedural activities. A more thorough discussion of tax research is presented in Chapter I:15.

SELF-STUDY QUESTION

Do large national CPA firms generally stress the importance of tax research in connection with tax-return preparation or tax planning?

ANSWER

The large CPA firms emphasize their skills in tax planning. Sometimes a slight alteration of a proposed transaction can save the client substantial tax dollars. This is high-value-added work and can be billed at premium rates.

TAX PLANNING AND CONSULTING

Tax planning involves the process of structuring one's affairs so as to minimize the amount of taxes *and* maximize the after-tax return. Thus, optimal tax planning is *not* to just pay the least amount of tax but to maximize after-tax cash flows. A text from several years ago on tax research and planning has delineated the following tax planning principles:[42]

- Keep sufficient records.
- Forecast the effect of future events.
- Support the plan with a sound business purpose.
- Base the plan on sound legal authorities.
- Do not carry a good plan too far.
- Make the plan flexible.
- Integrate the tax plan with other factors in decision making.
- Conduct research to learn whether a similar plan has previously proved unsuccessful (e.g., a court case involving similar facts may have upheld the IRS's position).
- Consider the "maximum" risk exposure of the client (e.g., if the plan is subsequently challenged by the IRS and the tax treatment is disallowed, what is the economic impact upon the taxpayer?).
- Consider the effect of timing (e.g., whether it is more beneficial to take a deduction in one year versus another).
- Shape the plan to the client's needs and desires.

ADDITIONAL COMMENT

Several national accounting firms have divided their tax departments into two basic groups, consulting and compliance. The tax consultants work with clients in tax planning and consulting matters and do not prepare tax returns. Tax returns are prepared by the compliance staff.

CPAs and attorneys frequently are engaged by their clients to perform consulting services to optimize the client's tax situation. For example, a major corporation client is considering the acquisition of a major international corporation and wants to make sure the tax implications of such an acquisition are properly managed. The CPA will be engaged to perform a thorough review of the transaction to ensure that the client is fully aware of the tax results of the acquisition, and possibly may request an advance ruling from the IRS.

Because of the importance of planning in tax practice, subsequent chapters in this text include a separate section on tax planning to discuss issues that are related to the topical coverage. These tax planning principles should be kept in mind when attempting to use the tax planning recommendations. Also, a systematic approach to tax strategy developed by two noted academicians, Myron Scholes and Mark Wolfson, is discussed in Chapter I:18.

---

[42] Norton, Fred W., *Federal Taxation: Research, Planning, and Procedures 2Ed*, © 1979. Pearson Education, Inc., Upper Saddle River, New Jersey. The tax planning principles are still viable today.

PERSONAL FINANCIAL PLANNING

An important field for tax professionals is that of personal financial planning for individual clients. Since taxes are an integral part of any financial plan and since a tax specialist regularly meets with his or her clients (filing returns and other tax matters), the area of personal financial planning has become increasingly a part of tax practice. Performing a personal financial planning engagement typically includes the following steps:

- Determine the client's financial goals and objectives.
- Review the client's insurance coverage for adequacy and appropriateness.
- Recommend an investment strategy, including risk analysis and asset allocation.
- Review tax returns to ensure that, through proper tax planning, the client is maximizing his or her after-tax cash flow.
- Review the client's retirement plans to assure compliance with the law and possible new alternatives.
- Review all documents related to estate and gift planning and work with the client's attorney to minimize all transfer taxes and fulfill the client's objectives.

COMPUTER APPLICATIONS IN TAX PRACTICE

OBJECTIVE 10

Understand the importance of computer applications in taxation

KEY POINT

The use of artificial intelligence (AI) in tax research, such as ChatGPT, is becoming increasingly important in tax practice. Practitioners must exercise caution to make certain that answers to tax questions are correct.

ADDITIONAL COMMENT

The Volunteer Income Tax Assistance (VITA) program sponsored by the IRS is aimed at taxpayers who need help with their federal return but cannot afford to pay for the assistance. Many college students put their knowledge to work through VITA programs.

TAX RETURN PREPARATION

To prepare tax returns, most tax practitioners purchase tax preparation software from companies such as Commerce Clearing House or Intuit. This software allows the preparation of accurate and professional-looking tax returns. A word of caution, however, is in order. As with any computer software, the preparation of tax returns using the computer requires as much knowledge and expertise from the preparer as doing the returns by hand. A recent trend in tax return preparation is the **electronic filing** of tax returns, i.e., a "paperless" tax return. Taxpayers send their returns electronically to the IRS for processing, thereby saving enormous amounts of paper and, perhaps, reducing human error.

TAX PLANNING APPLICATIONS

Performing tax planning for clients involves the evaluation of alternative courses of action. This evaluation process can be very time-consuming because of the tax calculations necessary to arrive at an optimal solution. The computer has become an essential tool in this process because of the speed with which the tax calculations can be made. Many tax professionals now use sophisticated software to perform tax planning for their clients. A prime example of the use of the computer in tax planning has been in deciding whether a taxpayer should invest in a Roth Individual Retirement Account (Roth IRA) or a regular IRA (see Chapters I:7 and I:18 for more details on IRAs). There are many factors to consider, including current and projected tax rates, current and projected level of income, jurisdictional issues, etc. With the computer, a tax professional can vary the assumptions and create a number of alternatives within a relatively short period of time. To perform this task by hand would require an enormous commitment of time. The field of data analytics is increasingly used in tax practice. As with most aspects of life, the impact of the computer on tax planning has been highly significant and will only increase in the future.

TAX RESEARCH APPLICATIONS

Computerized information retrieval systems are used in tax research and are rapidly replacing books as the principal source of tax-related information. Most commercial research services are offered on the internet. The principal Internet services are RIA's *Checkpoint* and CCH's *Tax Research Network*. These commercial Internet services contain a wide range of materials available to tax researchers who subscribe to the service. In addition, the IRS has a home page (www.irs.gov) that taxpayers can access for forms, publications, and other related materials. All of the major accounting firms and many other tax organizations have home pages that allow users to access a myriad of tax information. In addition to traditional tax research sources, artificial intelligence is increasingly used to conduct tax research. Artificial intelligence is a very powerful tool for tax research. However, due to the complex nature of tax research, care must be taken when evaluating AI-generated output.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:1-1 The Supreme Court in 1895 ruled that the income tax was unconstitutional because the tax needed to be apportioned among the states in proportion to their populations. Why would the requirement of proportionality be so difficult to administer?

I:1-2 Why was pay-as-you-go withholding needed in 1943?

I:1-3 Congressman Patrick indicates that he is opposed to tax proposals that call for a flat tax rate because the structure would not tax those individuals who have the ability to pay the tax. Discuss the position of the congressman, giving consideration to tax rate structures (e.g., progressive, proportional, and regressive) and the concept of equity.

I:1-4 The governor of your state stated in a recent political speech that he has never supported any income tax increases as the tax rates have remained at the same level during his entire term of office. Yet, you believe that you are paying more tax this year than in previous years even though your income has not increased. How can both you and the governor be correct? In other words, is it possible for the government to raise taxes without raising tax rates?

I:1-5 Carmen has computed that her average tax rate is 16% and her marginal tax rate is 24% for the current year. She is considering whether to make a charitable contribution to her church before the end of the tax year. Which tax rate is of greater significance in measuring the tax effect for her decision? Explain.

I:1-6 Why are the gift and estate taxes called wealth transfer taxes? What is the tax base for computing each of these taxes?

I:1-7 Cathy, who is single, makes gifts of $50,000 to each of her two adult children.

- **a.** Who is primarily liable for the gift tax on the two gifts, Cathy or the two children?
- **b.** If Cathy has never made a taxable gift in prior years, is a gift tax due on the two gifts?

I:1-8 Carlos inherits 100 shares of Allied Corporation stock from his father. The stock cost his father $8,000 and had a $25,000 FMV on the date of his father's death in 2025. The alternate valuation date was not elected. If Carlos sells the Allied Corporation stock for $27,000, what would be his taxable gain on the sale?

I:1-9 Most estates are not subject to the federal estate tax.

- **a.** Why is this the case?
- **b.** Do you believe most estates should be subject to the federal estate tax?

I:1-10 Indicate which of the following taxes are generally progressive, proportional, or regressive:

- **a.** State income taxes
- **b.** Federal estate tax
- **c.** Corporate state franchise tax
- **d.** Property taxes
- **e.** State and local sales taxes

I:1-11 Carolyn operates a consulting business as a sole proprietor (unincorporated). Carolyn has been approached by one of her major clients to become an employee. If she accepts the new job, she would no longer operate her consulting business. From the standpoint of paying Social Security taxes, would Carolyn's Social Security taxes increase or decrease if she becomes an employee? Why? (Assume Carolyn will earn less than $200,000.)

I:1-12 The three different levels of government (federal, state, and local) must impose taxes to carry out their functions. For each of the types of taxes below, discuss which level of government primarily uses that type of tax.

- **a.** Property taxes
- **b.** Excise taxes
- **c.** Sales taxes
- **d.** Income taxes
- **e.** Employment taxes

I:1-13 A "good" tax structure has five characteristics.

- **a.** Briefly discuss the five characteristics.
- **b.** Using the five characteristics, evaluate the following tax structures:
  1. Federal income tax
  2. State sales tax
  3. Local ad valorem property tax

I:1-14 Two commonly recognized measures of the fairness of an income tax structure are "horizontal equity" and "vertical equity."

- **a.** Discuss what is meant by horizontal equity and vertical equity as it pertains to the income tax.

b. Why is it so difficult to design a "fair" tax structure?

I:1-15 The primary objective of the federal income tax law is to raise revenue. What are its secondary objectives?

I:1-16 If the objectives of the federal tax system are multifaceted and include raising revenues, providing investment incentives, encouraging certain industries, and meeting desired social objectives, is it possible to achieve a simplified tax system? Explain.

I:1-17 Distinguish between *taxpaying entities* and *flow-through entities* from the standpoint of the federal income tax law.

I:1-18 Sally and Tom are married, have three young children, and file a joint return in 2025. If they have adjusted gross income (AGI) of $140,000 and itemized deductions of $22,000, what is their taxable income for 2025? Alternatively, what is their taxable income if the itemized deductions are $32,000 rather than $22,000?

I:1-19 The Bruin Corporation, a C corporation, is owned 100% by John Bean and had taxable income in 2025 of $500,000. John is also an employee of the corporation. In December 2025, the corporation has decided to distribute $400,000 to John and has asked you whether it would be better to distribute the money as a dividend or salary. John, a single taxpayer, is in the 37% marginal tax bracket. How would you respond to Bruin Corporation? Consider only income taxes for this problem, and ignore the net investment income tax.

I:1-20 Discuss what is meant by the term "double taxation" of corporations. Develop an example of double taxation using a corporation and shareholder.

I:1-21 Limited liability companies (LLCs) are very popular today as a form of organization. Assume a client asks you to explain what this type of organization is all about. Prepare a brief description of the federal income tax aspects of LLCs.

I:1-22 For flow-through entities, such as partnerships, how does the tax law use partner basis adjustments to prevent double taxation of partnership income?

I:1-23 Partnerships and S corporations are flow-through entities. In connection with filing annual tax returns, these entities must prepare Schedule K-1s. What is Schedule K-1, what is its purpose, and who receives the form?

I:1-24 The PDQ Partnership earned ordinary income of $150,000 in 2025. The partnership has three equal partners, Pete, Donald, and Quint. Quint, who is single, uses the standard deduction, and has other income of $15,000 (not connected with the partnership) in 2025. He receives a $30,000 distribution from the partnership during the year. What is Quint's taxable income in 2025?

I:1-25 Why is a thorough knowledge of sources of tax law so important for a professional person who works in the tax area?

I:1-26 The Internal Revenue Code is the most authoritative source of income tax law. In trying to resolve an income tax question, however, a tax researcher also consults administrative rulings (Treasury Regulations, Revenue Rulings, etc.) and court decisions. Why wouldn't the tax researcher just consult the IRC since it is the highest authority? Similarly, why is there a need for administrative rulings and court decisions?

I:1-27 Congressional committee reports are an important source of information concerning the legislative enactment of tax law.

a. Name the three Congressional committee reports that are issued in connection with a new tax bill.

b. Of what importance are Congressional committee reports to tax practitioners?

I:1-28 What is the primary service function provided by the National Office of the IRS?

I:1-29 What types of taxpayers are more likely to be audited by the IRS?

I:1-30 Anya is concerned that she will be audited by the IRS.

a. Under what circumstances is it possible that the IRS will review each line item on her tax return?

b. Is it likely that all items on Anya's return will be audited?

I:1-31 **a.** What does the term "hazards of litigation" mean in the context of taxation?

b. Why would the IRS or a taxpayer settle or compromise a case based on the "hazards of litigation"?

I:1-32 If a taxpayer files his or her tax return and receives a tax refund from the IRS, does this mean that the IRS believes the return is correct and will not be subject to a future audit?

I:1-33 What is the statute of limitations for transactions involving:

a. Fraud (e.g., failure to file a tax return)

b. Disallowance of tax deduction items

c. The omission of rental income that is greater than 25% of the taxpayer's reported gross income

I:1-34 In reference to tax research, what is meant by *the best possible defensibly correct solution*?

I:1-35 The profession of tax practice involves four principal areas of activity. Discuss these four areas.

I:1-36 Many tax professionals have moved into the field of financial planning for their clients.

a. How do taxes impact financial planning for a client?

b. Why do tax professionals have a perfect opportunity to perform financial planning for their clients?

I:1-37 Is the principal goal of tax planning to absolutely minimize the amount of taxes that a taxpayer must pay?

I:1-38 Explain how a computer can assist a tax practitioner in tax planning activities and making complex tax calculations.

PROBLEMS

I:1-39 *Tax Rates.* Latesha, a single taxpayer, had the following income and deductions for the tax year 2025:

INCOME:	Salary	$100,000
	Business income from sole proprietorship	25,000
	Interest income from taxable bonds	10,000
	Interest income from tax-exempt bonds	5,000
	TOTAL INCOME	$140,000
DEDUCTIONS:	Business expenses	$ 9,500
	Itemized deductions	20,000
	TOTAL DEDUCTIONS	$ 29,500

a. Compute Latesha's taxable income and federal tax liability for 2025 (round to dollars and ignore the qualified business income deduction and self-employment taxes for this problem).
b. Compute Latesha's marginal, average, and effective tax rates.
c. For tax planning purposes, which of the three rates in Part b is the most important?

I:1-40 *Tax Rates.* Based on the amounts of taxable income below, compute the federal income tax payable in 2025 on each amount assuming the taxpayers are **married filing a joint return**. Also, for each amount of taxable income, compute the average tax rate and the marginal tax rate.
a. Taxable income of $30,000.
b. Taxable income of $100,000.
c. Taxable income of $425,000.
d. Taxable income of $800,000.

I:1-41 *Marginal Tax Rate.* Jill and George are married and file a joint return. They expect to have $520,000 of taxable income in 2025 year and are considering whether to purchase a personal residence that would provide additional tax deductions of $40,000 for mortgage interest and real estate taxes.
a. What is their marginal tax rate for purposes of making this decision?
b. What is the tax savings if the residence is acquired?

I:1-42 *Gift Tax.* Betty, a married taxpayer, makes the following gifts during the current year (2025): $20,000 to her church, $100,000 to her daughter, and $40,000 to her husband. What is the amount of Betty's taxable gifts for the current year (assuming she does not elect to split the gifts with her spouse)?

I:1-43 *Estate Tax.* Clay, who was single, died in 2025 and has a gross estate valued at $8.5 million. Six months after his death, the gross assets are valued at $9 million. The estate incurs funeral and administration expenses of $125,000. Clay had debts amounting to $150,000 and bequeathed all of his estate to his children. During his life, Clay made no taxable gifts.
a. What is the amount of Clay's taxable estate?
b. What is the tax base for computing Clay's estate tax?
c. What is the amount of estate tax owed if the tentative estate tax (before credits) is $3,235,800?
d. Alternatively, if, six months after his death, the gross assets in Clay's estate declined in value to $7.5 million, can the administrator of Clay's estate elect the alternate valuation date? What are the important factors that the administrator should consider as to whether the alternate valuation date should be elected?
e. How would your answer change in parts a, b, and c if Clay's gross estate was $18.5 million rather than $8.5 million and the tentative estate tax before credits was $7,235,800?

I:1-44 *Comparison of Tax Entities.*
a. Keith Thomas and Trent Brooks began a new consulting business on January 1, 2025. They organized the business as a C corporation, KT, Inc. During 2025, the corporation was successful and generated revenues of $2 million. KT had operating expenses of $800,000 before any payments to Keith or Trent. During 2025, KT paid dividends to Keith and Trent in the amount of $350,000 each. Assume that Keith's wife earned $130,000 from her job, they file a joint return, have itemized deductions of $40,000, and have no children. Compute the total tax liability of KT, Inc. and Keith and his wife for 2025. Ignore the net investment income tax.

b. Instead of organizing the consulting business as a C corporation, assume Keith and Trent organized the business as a limited liability company, KT, LLC. KT made a distribution of $350,000 each to Keith and Trent during 2025. Compute the total tax liability of KT, LLC and Keith for 2025. Ignore any additional tax on net investment income, and ignore the qualified business income deduction.

I:1-45 ***Partnership Income.*** Howard Gartman is a 40% partner in the Horton & Gartman Partnership. During 2025, the partnership reported the total items below (100%) on its Form 1065:

Ordinary income	$180,000
Qualified dividends	10,000
Long-term capital loss	(12,000)
Long-term capital gain	28,000
Charitable contributions	4,000
Cash distributions to partners	150,000

Howard and his wife Dawn, who file a joint return, also had the following income and deductions from sources not connected with the partnership:

Income	
Dawn's salary	$80,000
Qualified dividends	3,000
Deductions	
Mortgage interest	13,000
Real estate taxes	6,000
State and local income taxes	3,000
Charitable contributions	3,000

Howard and Dawn have two children. During 2025, Dawn had $12,000 in federal income taxes withheld from her salary, and Howard made four estimated tax payments of $2,500 each ($10,000 total). Compute Howard and Dawn's Federal income tax liability for 2025, and determine whether they have a balance due or a tax refund. Ignore the child tax credits, the self-employment taxes, and the qualified business income deduction.

I:1-46 ***Interest and Penalties.*** In 2025, Paul, who is single, has a comfortable salary from his job as well as income from his investment portfolio. However, he is habitually late in filing his federal income tax return. He did not file his 2025 income tax return until December 4, 2026 (due date was April 15, 2026) and no extensions of time to file the return were filed. Below are amounts from his 2025 return:

Taxable income	$138,138
Total tax liability on taxable income	26,000
Total federal tax withheld from his salary	18,000

Paul sent a check with his return to the IRS for the balance due of $8,000. He is relieved that he has completed his filing requirement for 2025 *and* has met his financial obligation to the government for 2025.

Has Paul met *all* of his financial obligations to the IRS for 2025? If not, what additional amounts will Paul be liable to pay to the IRS?

I:1-47 ***IRS Audits.*** Which of the following individuals is most likely to be audited?

a. Connie has a $20,000 net loss from her unincorporated business (a cattle ranch). She also received a $200,000 salary as an executive of a corporation.

b. Craig has AGI of $20,000 from wages and uses the standard deduction.

c. Dale fails to report $120 of dividends from a stock investment. His taxable income is $40,000 and he has no other unusually large itemized deductions or business expenses. A Form 1099 is reported to the IRS.

I:1-48 ***Statute of Limitations.*** In April 2025, Dan is audited by the IRS for the year 2023. During the course of the audit, the agent discovers that Dan's deductions for business travel are unsubstantiated and a $600 deficiency assessment is proposed for the tax year 2023. The agent also examined some prior year returns. The agent discovers that Dan failed to report $40,000 of gross business income on his 2021 return. His gross income in 2021 was $60,000. The agent also discovers that Dan failed to file a tax return in 2016.

Will the statute of limitations prevent the IRS from issuing a deficiency assessment for 2023, 2021, or 2016? Explain.

TAX STRATEGY AND CRITICAL THINKING PROBLEM

I:1-49 Pedro Bourbone is the founder and owner of a highly successful small business and, over the past several years, has accumulated a significant amount of personal wealth. His portfolio of stocks and bonds is worth nearly $8,000,000, owns real estate worth $6,000,000, and generates income from dividends and interest of nearly $320,000 per year. With his salary from the business and his dividends and interest, Pedro has taxable income of approximately $700,000 per year and is clearly in the top individual marginal tax bracket. Pedro is married and has three children, ages 16, 14, and 12. Neither his wife nor his children are employed and have no income. Pedro has come to you as his CPA to discuss ways to reduce his individual tax liability as well as to discuss the potential estate tax upon his death. You mention the possibility of making gifts each year to his children. Explain how annual gifts to his children will reduce both his income during lifetime and his estate tax at death.

CASE STUDY PROBLEM

I:1-50 Rick Cabela, a high income client, has contacted you for advice regarding two new proposed business ventures and other tax planning ideas. Rick already operates a highly successful consulting business that earns approximately $2,000,000 net after expenses, and he reports this amount on his personal income tax return. Below are the details:

- Rick is considering the purchase of several apartment buildings for rental purposes. He believes the apartments would generate a tax loss of approximately $100,000 in each of the first three years, then operate profitably thereafter. Rick would like to use the tax losses for the first three years to reduce his personal income taxes.
- Rick is also considering investment in a blueberry farm. He intends to purchase some farmland and turn it into a blueberry farm. The costs in the first year would be the land, equipment, blueberry plants, and labor to develop the farm. In years 2–4, labor costs and maintenance would be the primary financial outlays. No revenue would be earned until year 5 when Rick believes the farm will be very profitable, generating net profits of approximately $100,000 per year. With the substantial cash outlays in the first four years and very little revenue, Rick believes the tax losses would reduce his personal income taxes. Assume the farm is a valid business and Rick materially participates in the activity of the farm.
- Because of his high income, Rick's income tax liability is very high. He read in a financial journal that the contribution of appreciated stock to a charitable organization is a good idea for tax purposes. He has some stock in Apple Co. for which he paid $10,000 several years ago, and the shares are now worth $200,000.

For each of the situations above, what are the principal tax issues that Rick should consider?

TAX RESEARCH PROBLEM

I:1-51 Read the following two cases and explain why the Supreme Court reached different conclusions for cases involving similar facts and issues:

- *CIR v. Court Holding Co.*, 33 AFTR 593, 45-1 USTC ¶9215 (USSC, 1945)
- *U.S. v. Cumberland Public Service Co.*, 38 AFTR 978, 50-1 USTC ¶9129 (USSC, 1950)

CHAPTER

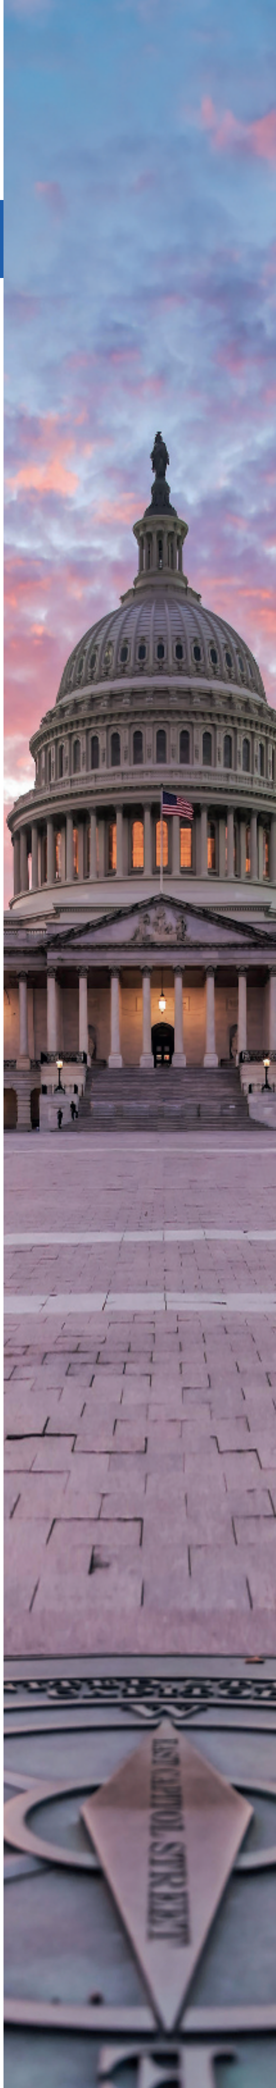
2

DETERMINATION OF TAX

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1 Use the tax formula to compute an individual's taxable income
2 Determine the amount of deductions from adjusted gross income
3 Calculate the income tax for individuals
4 Explain the basic income tax rules relating to business entities
5 Explain the basic income tax rules of capital gains and losses
6 Describe tax planning considerations for various tax matters
7 Describe compliance and procedural matters for filing tax returns



James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Formula for Individual Income Tax...2-2
Deductions from Adjusted Gross Income...2-7
Determining the Amount of Tax...2-20
Business Income and Business Entities...2-28
Treatment of Capital Gains and Losses...2-31
Tax Planning Considerations...2-32
Compliance and Procedural Considerations...2-35

Each year, individuals file over 163 million federal income tax returns. This tax is imposed "on the taxable income of every individual."[1] The amount of tax actually owed by an individual taxpayer is determined by applying a complex set of rules that together make up the income tax law. To understand the income tax, it is necessary to study the basic formula on which the income tax computation is based. Therefore, this chapter introduces the income tax formula and begins the development of its components. Because the income tax formula constitutes the basis of the income tax, most of the remainder of this book is an expansion of the formula. In addition to individuals, about eight million corporations and five million partnerships file returns each year. These entities are also discussed in this chapter. The tax return statistics in this chapter are based on IRS Publication 1304 published 4/2024.

FORMULA FOR INDIVIDUAL INCOME TAX

OBJECTIVE 1

Use the tax formula to compute an individual's taxable income

BASIC FORMULA

Most individuals compute their income tax by using the formula illustrated in Table I:2-1. The formula itself appears rather simple. However, the complexity of the income tax results from the intricate rules that must be applied to arrive at the amounts that enter into the formula.

The tax formula is incorporated into the income tax form. The tax formula illustrated in Table I:2-1 can be compared with Form 1040, which is reproduced in Figure I:2-1 (see pages I:2-8 and I:2-9). Some differences exist between the tax formula below and Form 1040. For example, taxpayers generally are not required to report exclusions (nontaxable income) on their tax returns. One exception, however, does require taxpayers to disclose tax-exempt interest income. A number of separate schedules are used to report various types of income, and some of these types of income are, in turn, detailed on yet additional schedules and forms. For example, Schedule 1 reports unemployment compensation received, the net profit or loss from a sole proprietorship, and certain other types of income (see Figure I:2-2, on page I:2-10). The net profit or loss from a sole proprietorship is calculated on Schedule C, where gross income from the business is reduced by related expenses (these expenses are classified as deductions for adjusted gross income, which is discussed later in this chapter). Also, the federal government uses Form 1040 to collect other taxes, such as the self-employment tax. This tax is discussed in Chapter I:14, and a

ADDITIONAL COMMENT

The IRS estimated taxpayers would spend an average of 4 hours completing and submitting Form 1040 for 2024. Recordkeeping and other related activities increased the estimate to 13 hours, and additional forms and schedules added even more time.

▼ TABLE I:2-1
Tax Formula for Individuals

Income from whatever source derived	$ xxx,xxx
Minus: Exclusions (income that is not taxable)	(xxx)
Gross income (income that is taxable)	$ xx,xxx
Minus: Deductions for adjusted gross income	(xxx)
Adjusted gross income (AGI)	$ x,xxx
Minus: Deductions from adjusted gross income:	
Greater of itemized deductions or the standard deduction	(xxx)
Qualified business income deduction (2018–2025)	(xxx)
Taxable income	$ x,xxx
Times: Tax rate or rates (from tax table or tax rate schedule)	× .xx
Gross tax (income tax before credits)	$ xx
Minus: Tax credits	(x)
Net tax liability	$ xx
Minus: Prepayments	(x)
Balance due or refund	$ xx

ADDITIONAL COMMENT

Comedian Jay Leno's explanation as to why the IRS calls it Form 1040 was, "For every $50 you earn, you get $10 and they get $40."

TYPICAL MISCONCEPTION

The federal income tax rate structure for individuals is progressive, where the marginal tax rate increases as the tax base increases (Chapter I:1). For example, if an individual's last dollar of taxable income is in the 22% tax bracket, it does not mean that all their taxable income is taxed at 22%. Instead, some of it is taxed at 10%, some at 12%, and only the last portion of taxable income is taxed at 22%.

---

[1] Sec. 1.

line on Schedule 2 (Form 1040) includes it. The main reason the tax formula and Form 1040 differ is administrative convenience. It is easier if taxpayers do not disclose income that is not taxable, it is simpler to report business income on a separate schedule, and it is convenient to collect other taxes on the same tax form.

The formula includes terms such as *gross income, exclusions, adjusted gross income, taxable income, gross tax,* and *tax credits*. These and other terms are defined below.

DEFINITIONS

Income. The term **income** includes both taxable and nontaxable income. Although the term is not specifically defined in the tax law, it includes income from any source.[2] Its meaning is close to that of the term **revenue**. However, it does not include a "return of capital." Thus, in the case of the sale of property, only the gain, not the entire sales proceeds, is viewed as income. This view extends to the sale of inventory, where gross profit is viewed as income, as opposed to the sale price.

Exclusion. Not all income is taxable. An **exclusion** is any item of income that the tax law says is not taxable. Congress, over the years, has specifically excluded certain types of income from taxation for various social, economic, and political reasons. Chapter I:4 discusses specific exclusions and the reasons for their existence. Table I:2-2 contains a sample of the major exclusions from gross income.

Gross Income. **Gross income** is income reduced by exclusions. In other words, it is income from taxable sources and is reported on the return (excluded income generally need not be disclosed). Section 61(a) of the Internal Revenue Code (IRC) contains a partial list of items of gross income. The items listed in Sec. 61(a) are shown in Table I:2-3. Note, however, that Sec. 61(a) states that, unless otherwise provided, "gross income means all income from whatever source derived, including (but not limited to)" the listed items of income. Thus, even though an item is omitted from the list does not necessarily mean that the item is excluded. For example, illegal income, although omitted from the list, is taxable.[3]

ADDITIONAL COMMENT

One common exclusion, interest on state and local government bonds, must be reported on the tax return in amount only. It is not added to the other income items. For 2021, this reported tax-exempt interest totaled $56 billion.

▼ TABLE I:2-2
Major Exclusions

- Gifts and inheritances
- Life insurance proceeds
- Welfare and certain other transfer payments
- Certain scholarships and fellowships
- Certain payments for injury and sickness:
  - Personal physical injury settlements
  - Worker's compensation
  - Medical expense reimbursements
- Certain employee fringe benefits:
  - Health plan premiums
  - Group term life insurance premiums (limited)
  - Meals and lodging
  - Employee discounts
  - Dependent care
- Certain foreign-earned income
- Interest on state and local government bonds
- Certain interest of Series EE bonds
- Certain improvements by lessee to lessor's property
- Alimony and separate maintenance payments (agreements executed after 2018)
- Child support payments
- Property settlements pursuant to a divorce
- Gain from the sale of a personal residence (limited)
- Qualified distributions from Roth retirement plans

---

[2] Sec. 61(a).

[3] *U.S. v. Manley S. Sullivan,* 6 AFTR 6753, 1 USTC ¶236 (USSC, 1927).

▼ TABLE I:2-3
Gross Income Items Listed in Sec. 61(a)

Compensation for services, including fees, commissions, fringe benefits, and similar items
Gross income derived from business
Gains derived from dealings in property
Interest
Rents
Royalties
Dividends
Annuities
Income from life insurance and endowment contracts
Pensions
Income from discharge of indebtedness
Distributive share of partnership gross income
Income in respect of a decedent
Income from an interest in an estate or trust

Deductions for and from Adjusted Gross Income. In general, taxpayers may deduct expenses that are specifically allowed by the tax law. Allowable deductions include business and investment expenses generally, along with personal expenses that are specifically provided for in the IRC, such as charitable contributions. Most purely personal expenses are not deductible.

Deductions fall into two categories for individual taxpayers: deductions *for* adjusted gross income and deductions *from* adjusted gross income. In general, **deductions for adjusted gross income** are expenses connected with a trade or business. Also, contributions to certain retirement plans fall into this category. Many **deductions from adjusted gross income** are personal expenses that Congress has chosen to allow. This classification scheme, however, is not always followed. For example, interest expense on student loans is not a business expense, but Congress allows it to be deducted for adjusted gross income. Another example is the qualified business income deduction, which is deducted from AGI despite being related to business income (this deduction was briefly discussed in Chapter I:1). Table I:2-4 contains a partial list of deductions *for* adjusted gross income that is taken from Sec. 62. Deductions for adjusted gross income are discussed further in Chapter I:6.

ADDITIONAL COMMENT

For 2021, 52% of individual income tax returns had AGI under $50,000, and 8% had AGI over $200,000.

ADDITIONAL COMMENT

Deductions for AGI sometimes are referred to as “above-the-line” deductions.

Adjusted Gross Income. **Adjusted gross income** (**AGI**) is a measure of income that falls between gross income and taxable income. AGI is important because it is used in numerous other tax computations, especially to impose limitations on exclusions, deductions, and credits. For example, AGI is used to establish a floor for the medical expense deduction and a ceiling for the charitable contribution deduction.

TYPICAL MISCONCEPTION

It is easy to confuse an exclusion with a deduction. An exclusion is an income item that is not taxable, whereas a deduction is an expense that is subtracted in arriving at taxable income. Both have the effect of reducing taxable income.

Deductions from Adjusted Gross Income. Section 62 lists deductions *for* AGI (see Table I:2-4). Thus, any allowable deduction not listed in Sec. 62 is a deduction *from* AGI. The deductions *from* adjusted gross income are (1) itemized deductions or the standard deduction and (2) the qualified business income deduction.[4] A discussion of the standard deduction is included later in this chapter. Itemized deductions and the qualified business income deduction are discussed further in Chapter I:8 of this text.

ADDITIONAL COMMENT

For 2021, 9% of individual income tax returns claimed itemized deductions. This percentage, however, was 5% for returns reporting less than $100,000 of AGI and 40% for returns reporting $200,000 or more of AGI.

Itemized Deductions and the Standard Deduction. As mentioned above, taxpayers generally cannot deduct personal expenses.[5] Congress, however, allows taxpayers to deduct specified personal expenses, such as charitable contributions, home mortgage interest, and medical expenses.

---

[4] Sec. 63.

[5] Sec. 262.

▼ TABLE I:2-4
Partial List of Deductions for Adjusted Gross Income (Sec. 62)

Trade and business deductions
Reimbursed employee expenses
Losses from the sale or exchange of property
Deductions attributable to rents and royalties
Contributions to retirement plans (Keoghs and traditional IRAs)
Penalties forfeited because of premature withdrawal of funds from time savings accounts
*One-half of self-employment taxes paid
*Health insurance costs incurred by a self-employed person
Jury duty pay remitted to an individual's employer
Interest on student loans
Contributions to health savings accounts

*Though not listed in Sec. 62, one-half of self-employment taxes and health insurance costs of self-employed persons are defined by Secs. 164(f) and 162(l), respectively, as trade or business deductions, thereby allowing them to deduct these amounts for AGI.

ADDITIONAL COMMENT

Tax rate schedules, the standard deduction, and certain other amounts are adjusted annually for inflation. Because of "rounding conventions," not every amount changes each year.

HISTORICAL NOTE

In 1986, when taxpayers were required merely to list their dependents' names, 77 million dependents were claimed. In 1987, when taxpayers were also required to list their dependents' Social Security numbers to help the IRS identify those improperly claimed, the number of dependents claimed decreased to 70 million.

Taxpayers have the choice of claiming either itemized deductions or the standard deduction. The amount of the standard deduction varies depending on the taxpayer's filing status, age, and vision. As a practical matter, for most taxpayers, the standard deduction is greater than the total itemized deductions. Taxpayers with small amounts of deductible expenses do not itemize and, in fact, do not have to keep records of itemized deductions. The relationship between itemized deductions and the standard deduction is discussed later in this chapter.

Personal and Dependency Exemptions. Prior to 2018, individuals generally were allowed to deduct exemptions for themselves, as well as exemptions for dependents. For 2017, each of these deductions was $4,050. The Tax Cuts and Jobs Act of 2017 suspends these deductions for 2018 through 2025, making them zero for such years.

Non-Itemizer Charitable Contributions Deduction. For 2021 only, an individual who claimed the standard deduction could deduct *from* AGI up to $300 of cash charitable contributions ($600 if married filing jointly). For 2020 only, such a non-itemizing individual could deduct *for* AGI up to $300 of cash charitable contributions. This deduction is not allowed in 2022 and later years.

Qualified Business Income Deduction. Taxpayers other than C corporations generally may deduct from AGI 20% of qualified business income.[6] Individuals may claim this **qualified business income deduction** whether they claim itemized deductions or the standard deduction. Qualified business income generally includes income from a flow-through entity, such as a partnership or S corporation, as well as income from a sole proprietorship. For higher-income taxpayers, qualified business income does not include income from accounting, consulting, financial services, and certain other activities. A limitation on the deduction applies, based on the qualified business' W-2 wages and unadjusted basis of property. Chapter I:8 discusses in further detail these and other aspects of the qualified business income deduction.

HISTORICAL NOTE

The highest marginal tax rate currently is 37% but has been higher in the past. For example, it was 50% in 1985, 70% in 1980, and 94% in 1945.

Taxable Income. **Taxable income** is AGI reduced by deductions *from* AGI. It is the amount of income that is taxed.

Tax Rates and Gross Tax. Tax rates are the percentage rates, set by Congress, at which income is taxed. There are seven tax rates ranging from 10% to 37%.

10%, 12%, 22%, 24%, 32%, 35%, and 37%

Taxpayers compute their tax by applying the percentage rates found in the tax rate schedules to taxable income. However, most taxpayers simply look in a tax table to find their **gross tax**. These two alternatives are discussed in more detail later in this chapter. Certain types of income are taxed at special rates. For example, qualified dividends and many long-term capital gains are taxed at reduced rates (this is discussed later in this chapter). The gross tax is the amount of tax determined by this process.

---

[6] Sec. 199A. The qualified business income deduction is allowed for 2018–2025.

▼ TABLE I:2-5
Partial List of Tax Credits and Prepayments

Refundable tax credits:

- Earned income credit
- Child tax credit (in some cases)
- American Opportunity credit (partially)

Nonrefundable tax credits:

- Adoption expense credit
- Credit for the elderly and disabled
- Foreign tax credit
- Child and dependent care credit
- Business energy credit
- General business credit
- Child tax credit (in some cases) and credit for other dependents
- American Opportunity credit (partially) and Lifetime Learning credit

Prepayments of tax:

- Withholding from wages and back-up withholding
- Estimated tax payments
- Overpayment of prior year's tax that taxpayer applies to current year tax
- Payments made with extension request

Credits and Prepayments. **Tax credits** are the amounts that the taxpayer subtracts from the gross tax to arrive at the net tax liability. **Refundable tax credits** are allowed to reduce a taxpayer's tax liability to zero and, if some credit still remains, they are refundable (paid) by the government to the taxpayer. **Nonrefundable tax credits** are allowances that have been created by Congress for various social, economic, and political reasons, such as the child and dependent care credit. Nonrefundable tax credits are subtracted from the tax, and they may reduce the tax liability to zero. However, if the nonrefundable credits exceed the tax liability, none of the excess will be paid to the taxpayer. In some cases, however, excess credits can carry back or over to be applied in other tax years.

Prepayments of tax are amounts the taxpayer pays to the government before filing the income tax return. For example, an employer may withhold income tax from an employee's paychecks and remit it to the government on behalf of the employee. Prepayments of tax are subtracted from the net tax liability to arrive at the net tax due or refund due. Table I:2-5 contains a partial list of tax credits and prepayments of tax, and they are covered in detail in Chapter I:14. The individual income tax return (Form 1040) combines prepayments of tax and refundable tax credits to determine the balance due or refund.

SELF-STUDY QUESTION

If a taxpayer is in the 24% marginal tax bracket, would he or she prefer $100 of tax credits or $300 of tax deductions?

ANSWER

The taxpayer would prefer the $100 of tax credits. The $300 of deductions will result in a tax savings of $72 ($300 × 0.24), whereas the $100 of credits would result in a tax savings of $100.

TAX FORMULA ILLUSTRATED

The following example illustrates the tax formula and Form 1040.

EXAMPLE I:2-1 ▶ The following facts relate to John A. and Anne B. Smith, who are married and file a joint return for 2024. Emma is their 9-year-old dependent daughter.

Salaries (Forms W-2, box 1)	$118,000
Interest Income:	
Taxable	4,000
Exempt	500
Traditional Individual Retirement Account (IRA) contributions	14,000
Itemized deductions	30,000
Child tax credit	2,000
Federal income taxes withheld from salaries (Forms W-2)	8,900

ADDITIONAL COMMENT

This example pertains to 2024 because tax forms for that year were the latest available at the time this edition went to print.

Using the tax formula, their tax is computed as follows:

Income:		
	Salaries	$118,000
	Taxable interest	4,000
	Tax-exempt interest	500
	Total	$122,500
Minus:	Exclusion:	
	Tax-exempt interest	(500)
Gross income		$122,000
Minus:	Deductions for AGI:	
	Traditional IRA contributions	(14,000)
Adjusted gross income		$108,000
Minus:	Deductions from AGI:	
	Itemized deductions	(30,000)
Taxable income		$ 78,000
Gross tax (2024 tax table)		$ 8,899*
Minus:	Credits:	
	Child tax credit	(2,000)
Net tax liability		$ 6,899
Minus:	Prepayments of tax:	
	Federal income taxes withheld	(8,900)
Tax refund		$ 2,001

*The 2024 tax rate schedule yields a tax of $8,896. This small variance results from the ranges in the tax table. ◄

The taxpayers report this information on Form 1040 and Schedule 1 (see Figures I:2-1 and I:2-2). Note that Form 1040 reports only some of the above amounts, such as AGI and the refund. Other amounts are detailed in other forms and schedules, such as the reporting in Schedule 1 of the deduction for the traditional IRA contributions. Figures I:2-1 and I:2-2 do not show Schedules A and B, which the taxpayers would also complete to report the details of their itemized deductions and taxable interest.

DEDUCTIONS FROM ADJUSTED GROSS INCOME

OBJECTIVE 2

Determine the amount of deductions from adjusted gross income

ITEMIZED DEDUCTIONS

Itemized deductions are claimed only if the total of such deductions exceeds the standard deduction. Here, consideration is given to which expenses may be itemized and the relationship between itemized deductions and the standard deduction.

Congress allows individuals to itemize specified personal expenses, including medical expenses, state and local income taxes and property taxes, home mortgage interest, and charitable contributions. A partial list of itemized deductions is found in Table I:2-6 (see page I:2-9).

ADDITIONAL COMMENT

For 2021, the 15 million taxpayers who itemized claimed $660 billion in deductions. Taxes paid comprised 18% of the total, interest paid was 25%, and charitable contributions were 40%.

Congress imposes various restrictions on the extent to which these items can be deducted:

- Medical expenses: Only the portion exceeding 7.5% of AGI is deductible.
- State and local taxes: Maximum amount deductible is $10,000 ($5,000 if married filing separately).
- Home mortgage interest: Only the interest on up to $750,000 of loans is deductible ($1 million for debt incurred before December 16, 2017).
- Charitable contributions: Maximum amount deductible is 60% of AGI (50% after 2025).

These restrictions are discussed in more detail in Chapter I:8.

▼ TABLE I:2-6
Partial List of Itemized Deductions

- Medical expenses (portion exceeding 7.5% of adjusted gross income)
- Certain taxes (generally limited to $10,000):
  - State and local income or general sales taxes
  - State and local real estate and personal property taxes
- Residential interest and investment interest (limited)
- Charitable contributions (limited)
- Casualty and theft losses from a federally declared disaster

EXAMPLE I:2-2 ► For 2025, John and Jane are married, file a joint tax return, and have $175,000 of AGI. They paid $18,100 of medical expenses, $14,000 of state and local income taxes and property taxes, and $20,000 of cash charitable contributions. They may deduct $4,975 [$18,100 − (0.075 × $175,000)] of their medical expenses and only the first $10,000 of their state and local taxes. They may deduct all $20,000 of their charitable contributions because it is less than $105,000 (0.60 × $175,000). Their total itemized deductions are $34,975 ($4,975 + $10,000 + $20,000). ◄

Schedule 1 (Form 1040) 2024

FIGURE I:2-2 ▶ Schedule 1 (Form 1040) (continued)

STANDARD DEDUCTION

The standard deduction is claimed if it exceeds the total amount of itemized deductions. The **standard deduction** is an amount set by Congress. It varies from year to year depending on the taxpayer's filing status, age, and vision (filing status is discussed later in the chapter).

Filing Status	*Standard Deduction*	
	2024	*2025*
Married couple filing jointly	$29,200	$30,000
Surviving spouse	29,200	30,000
Head of household	21,900	22,500
Single (unmarried individual other than surviving spouse or head of household)	14,600	15,000
Married individual filing separately	14,600	15,000

KEY POINT

The dollar amount of the standard deduction usually increases each year because it is adjusted for inflation.

For 2025, a married taxpayer's or surviving spouse's standard deduction is increased by $1,600 ($1,550 for 2024) if he or she is elderly or blind ($3,200 if the taxpayer is elderly *and* blind) or has a spouse who is elderly or blind (for a maximum possible increase of $6,400 for a married couple). If a head of household or single taxpayer is elderly or blind, his or her standard deduction is increased by $2,000 ($1,950 for 2024) and $4,000 if the taxpayer is elderly *and* blind. Thus, for 2025, a single taxpayer, age 65 and not blind, is entitled to a $17,000 ($15,000 + $2,000) standard deduction. Two special rules relating to age and blindness are noted below.

ADDITIONAL COMMENT

Of all individual returns filed for 2021, 88% claimed the standard deduction. This percentage, however, is lower for higher-income individuals.

- The increase in the standard deduction for elderly taxpayers is available if the taxpayer has attained age 65 before the end of the tax year. For purposes of this requirement, a taxpayer is considered to be age 65 on the day before his or her sixty-fifth birthday. Thus, a taxpayer whose sixty-fifth birthday is on January 1 of a year is deemed to have reached age 65 on December 31 of the preceding year. The adjustment is allowed on the final return of a deceased taxpayer only if he or she reached age 65 before death.
- The IRC defines blindness as corrected vision in the better eye of no better than 20/200 or a field of no greater than 20 degrees. Vision is determined as of the last day of the tax year or, in the case of a deceased taxpayer, as of the date of death.

The standard deduction simplifies the computation of taxable income. As previously noted, for most taxpayers the standard deduction is greater than total itemized deductions. Those taxpayers do not itemize and, in fact, do not even have to keep records of itemized deductions.

Who actually itemizes and who does not? High-income taxpayers are more likely to itemize than low-income taxpayers simply because they incur more expenses that can be itemized. Another characteristic of taxpayers who generally itemize their deductions are individuals who own their homes and incur home mortgage expenses and property taxes, both of which are allowed as itemized deductions.

EXAMPLE I:2-3 ▶ In 2025, Joan is single and has $200,000 of AGI. She is a homeowner who pays $7,000 of property taxes on her home and $19,000 of interest on her $500,000 home mortgage. She also makes $11,000 of charitable contributions. Her taxable income is computed as follows:

Adjusted gross income		$200,000
Minus: Itemized deductions:		
Property taxes	$ 7,000	
Home mortgage interest	19,000	
Charitable contributions	11,000	(37,000)
Taxable income		$163,000

Joan claims her $37,000 of itemized deductions because they are greater than her $15,000 standard deduction. ◀

EXAMPLE I:2-4 ▶ Assume the same facts as in Example I:2-3 except Joan is not a homeowner. Thus, she has no property taxes or home mortgage interest but does pay rent of $1,900 per month for an apartment. Her taxable income is computed as follows:

Adjusted gross income	$200,000
Minus: Standard deduction	(15,000)
Taxable income	$185,000

Joan claims a $15,000 standard deduction because it exceeds her itemized deductions of $11,000. Rent paid for a personal apartment is not deductible. ◀

Loss of the Standard Deduction. Congress decided that some taxpayers should not be permitted to use the standard deduction as they possibly would receive an unintended tax benefit.[7] The standard deduction is unavailable to three categories of taxpayers:

- An individual filing a return for a period less than twelve months because of a change in accounting period.
- A married taxpayer filing a separate return in instances where the other spouse itemizes.
- Nonresident aliens (individuals who are not U.S. residents and also are not U.S. citizens).

To illustrate why Congress does not permit certain taxpayers to claim the standard deduction, consider what could happen if a married couple files separate returns, where one spouse claims all their itemized deductions while the other uses the standard deduction.

EXAMPLE I:2-5 ▶ For 2025, Clay and Joy, a married couple, have incomes of $70,000 and $68,000, respectively. Their itemized deductions total $17,500. They would claim a $30,000 standard deduction on a joint return. If Clay filed a separate return and claimed all the itemized deductions, his itemized deductions of $17,500 would be greater than the $15,000 standard deduction. If Joy could claim the standard deduction on her return, their total deductions would equal $32,500 ($17,500 + $15,000). The law, however, requires that either they both itemize or they both use the standard deduction. ◀

Limitation on the Standard Deduction. A special rule applies to any individual who is a dependent of someone else, such as his or her parents. For 2025, a dependent's standard deduction is limited to the greater of (1) the dependent's earned income plus $450 (also $450 for 2024) or (2) $1,350 ($1,300 for 2024). The purpose of this limitation is to prevent parents from shifting unearned income, such as interest and dividends, to their children and thereby avoid paying tax on such income. Without this rule, children could use the standard deduction to offset interest and dividends.

EXAMPLE I:2-6 ▶ Webb and Beth are married, in the 37% marginal tax rate bracket, and have one son, Vincent, age 15. Vincent has no income and is claimed as a dependent by his parents. Webb and Beth transfer stocks and bonds that earn $3,000 in dividends and interest to Vincent. Their goal is to shift the $3,000 of income to Vincent to take advantage of his standard deduction. However, since Vincent is claimed as a dependent by his parents on their return, Vincent's standard deduction is limited to $1,350, i.e., the *greater* of $1,350 or $450 (his $0 earned income plus $450). ◀

EXAMPLE I:2-7 ▶ Assume the same facts as in Example I:2-6 except Vincent has a part-time job and earns $9,000 in wages. Vincent's standard deduction would be $9,450 ($9,000 + $450). Alternatively, if Vincent's wages were $18,000, his standard deduction would be $15,000 (the amount that normally applies for a single individual). ◀

DEPENDENCY REQUIREMENTS

For many decades prior to 2018, individuals generally could deduct personal and dependency exemptions. For example, in 2017, an individual could deduct $4,050 for himself or herself (two $4,050 amounts for a married couple filing jointly), as well as an additional $4,050 for each dependent. The Tax Cuts and Jobs Act of 2017 suspended this deduction for 2018 through 2025, making it zero. Despite being unable to deduct an exemption for a dependent for such years, it is nevertheless important to determine whether someone qualifies as the taxpayer's dependent, such as his or her child. Qualification as a dependent can affect the taxpayer's filing status and whether a child tax credit (or credit for other dependents) can be claimed, which are discussed later in the chapter. It also can affect several other tax return items, such as a deduction for the dependent's medical expenses.

ADDITIONAL COMMENT

One should forsake any preconceived notions as to what constitutes a dependent before examining the dependency tests.

---

[7] Sec. 63(c)(6).

SELF-STUDY QUESTION

Beth's mother, who is a U.S. citizen, has moved to France to spend her retirement years. She has retained her U.S. citizenship, but she is now a resident of France. Is it possible for Beth to claim her mother as a dependent?

ANSWER

Yes, the mother need only be a U.S. citizen.

To qualify as a dependent, an individual must meet the definition of either a **qualifying child** or a **qualifying relative**. Additional requirements must be met for a taxpayer to claim a qualifying child or qualifying relative as a dependent:

- The qualifying child or qualifying relative meets a citizenship test.
- The qualifying child or qualifying relative meets a separate return test.
- The taxpayer is not a dependent of someone else (e.g., if Alex is a dependent of Blair, Alex cannot claim anyone as a dependent).

Additional requirements also must be met, depending on whether the dependent is a qualifying child or a qualifying relative.

Requirements for All Dependents. The requirements applicable to both qualifying children and qualifying relatives are:

Citizenship. Dependents must be U.S. citizens[8] or nationals,[9] or residents of the U.S., Canada, or Mexico[10] for some part of the year.

Joint Return. Married dependents cannot file joint returns. However, a married individual can qualify as a dependent if he or she files a joint return solely to claim a refund of tax withheld (i.e., there is no tax on the joint return and there would have been no tax on two separate returns).[11]

Additional Requirements for Qualifying Children. One type of dependent is a *qualifying child*. The following additional requirements must be met to be a qualifying child:

- A relationship test.
- An age test.
- An abode test.
- A support test.

Relationship Test. Eligible children include the taxpayer's children (including natural, adopted, foster, and stepchildren) and the taxpayer's siblings (including half-siblings and step-siblings) along with descendants of any of the above. A child is adopted if the child has been legally adopted or has been legally placed in a home for adoption.

ADDITIONAL COMMENT

However, for purposes of the child tax credit discussed later in this chapter, the qualifying child must be under age 17.

Age Test. A qualifying child must be under age 19, a full-time student under age 24, or a permanently and totally disabled child.[12] A child is considered to be a student if he or she is in full-time attendance at a qualified educational institution during at least five months of the year. To be full-time, a student must carry the number of hours or courses the educational institution requires a student to take to be considered full-time.

Abode Test. A qualifying child must have the same principal abode as the taxpayer for more than half of the year. A noncustodial parent meets this requirement if the custodial parent agrees in writing.

Support Test. A qualifying child may not provide more than one-half of his or her own support during the year. Support is discussed below in connection with qualifying relatives. There is no requirement that the taxpayer provide more than one-half of a qualifying child's support, only that the qualifying child cannot provide more than one-half of his or her own support. This can be important in situations such as divorces where one spouse provides support, but the other has custody.

---

[8] U.S. citizens living in foreign countries can claim adopted children as dependents even if the children are not U.S. citizens.

[9] A U.S. national is an individual born in an outlying possession such as American Samoa.

[10] A U.S. resident is an individual who is a lawful permanent resident of the U.S. or who meets a formulaic substantial presence test (Sec. 7701(b)).

[11] Rev. Rul. 54-567, 1954-2 C.B. 108 and Rev. Rul. 65-34, 1965-1 C.B. 86. The theory is that the taxpayer is filing a claim for refund and not actually filing a tax return.

[12] As noted, taxpayers attain age 65, for purposes of the additional standard deduction, on the day before the anniversaries of their births. As a result, an individual whose birthday is January 1 is considered to be age 65 in the year prior to the individual's 65th birthday. A child whose 19th birthday falls on January 1 is considered to be under the age 19 in the previous year. The rule also is followed for purposes of determining whether the child is under age 24, and is used in connection with age 17 threshold associated with the child tax credit. Rev. Rul. 2003-72, 2003-2 C.B. 346.

EXAMPLE I:2-8 ▶ Keith and Barbara file a joint return and have one son, Jeff, age 28. Because of a temporary illness, Jeff had to quit his job in June and moved back home to live with his parents. Keith and Barbara provided 70% of Jeff's support. Jeff earned $18,000. Jeff is not a qualifying child. Although he meets the relationship, abode, and support tests, he fails the age test. ◀

Additional Requirements for Qualifying Relatives. The other type of dependent is a *qualifying relative*. The following additional requirements must be met to be a qualifying relative:

- Relationship test.
- Gross income test.
- Support test.
- Not a qualifying child.

Relationship Test. Qualifying relatives must either be related to the taxpayer or reside in the taxpayer's household for the entire year. The term "qualifying relative" is misleading because individuals who live with the taxpayer do not actually have to be related to the taxpayer. The relationship between the taxpayer and the dependent, however, cannot violate local law.[13] Individuals who meet the relationship test for a qualifying child, such as the taxpayer's children, siblings, and descendants of children and siblings, also meet the relationship test for a qualifying relative. However, a person who meets *all* the tests for a qualifying child is deemed to be in that status rather than that of a qualifying relative. The relationship test for a qualifying relative also includes the taxpayer's parents and their ancestors and siblings, the taxpayer's stepparents, and specified in-laws (mother, father, brother, sister, son, and daughter). As a result, a child who is not a qualifying child may be claimed as a dependent if he or she is a qualifying relative. For example, a taxpayer's 24-year-old son is a qualifying relative if he meets the support and gross income tests discussed below even though he is not a qualifying child because he fails the age test.

EXAMPLE I:2-9 ▶ Jesse provides support for three people: Tina (his friend, who is unrelated to Jesse and lives with him for the entire year), Judy (his cousin, who lives in another state), and Vicki (his daughter, who lives in her own home). Tina and Vicki, but not Judy, meet the relationship test for a qualifying relative. Although Tina is not related to Jesse, she resides in his household for the entire year. Judy does not meet the test; a cousin is not one of the relatives included for this test, and she does not live with Jesse. As Jesse's daughter, Vicki does meet the test; the fact that she does not live with Jesse is irrelevant. ◀

On a joint return, the qualifying relative needs to be related to only one spouse.[14] Once established, a relationship is not terminated by death or divorce.

EXAMPLE I:2-10 ▶ Ken and Lisa support Lisa's mother and claim her as a dependent on a joint return. Following Lisa's death, Ken continues to support Lisa's mother. Lisa's mother continues to be Ken's mother-in-law and can be claimed as a dependent. ◀

Gross Income Test. For 2025, the qualifying relative's gross income must be less than $5,200 ($5,050 for 2024). The statutory definition of gross income is used in applying this limitation. Therefore, nontaxable scholarships, tax-exempt bond interest, and nontaxable Social Security benefits are not considered, but salary, taxable interest, and rental income are considered in deciding whether the person meets this test.

EXAMPLE I:2-11 ▶ Jim is age 22 and a full-time college student. He lives with his cousin, Kelly, for the entire year, and she provides more than one-half of Jim's support. Jim earns $8,000 from a summer job. Jim meets the relationship test for a qualifying relative, and he also meets the support test for a qualifying relative. Nevertheless, Jim is not Kelly's qualifying relative, as he does not meet the gross income test. Alternatively, if Kelly is Jim's sister, he would be Kelly's qualifying child. Qualifying children do not have to meet the gross income test. ◀

---

[13] Sec. 152(f)(3). Qualification as a dependent has been disallowed where the relationship constituted "cohabitation" and was illegal in the state (*Cassius L. Peacock*, III, PH T.C. Memo ¶78,030, 37 TCM 177).

[14] Reg. Sec. 1.152-2(d).

Support Test. The taxpayer must normally provide more than one-half of a qualifying relative's financial support during the year. Support includes amounts spent by the taxpayer, the dependent, and other individuals. Welfare[15] and Social Security benefits[16] spent on support count even if they are excluded from gross income. A scholarship received by a son, daughter, stepchild, or eligible foster child does not count as support.

EXAMPLE I:2-12 ▶ Tarer provided $6,000 of support for his mother, Mary. Tarer's sister provided $2,000. Mary spent $9,000 of her savings for her own support. Because Mary provided over one-half of her own support, she cannot be claimed as a dependent. ◀

EXAMPLE I:2-13 ▶ George's father received Social Security benefits of $13,200, of which $3,600 were deposited into a savings account. He spent the remaining $9,600 on food, clothing, and lodging. George spent $11,200 to support his father. George meets the support test because the amount saved is not counted in the support test until the year it is withdrawn and used for support. ◀

REAL-WORLD EXAMPLE

A TV set bought by a parent for his 12-year-old child and set up in her bedroom was considered support. A power lawn mower, however, bought by a parent of a 13-year-old child was not considered support. The parent had assigned the child the job of mowing the lawn, and the power mower was intended to make the job more palatable. The lawn mower was considered a family item that benefits all members of the household. (Rev. Rul. 77-282, 1977-2 C.B. 52.)

Support includes amounts spent for food, clothing, shelter, medical and dental care, education, and the like.[17] Support is not limited to these items.[18] Support does not include the value of services rendered by the taxpayer to the dependent.[19] Also, the IRS and the courts have excluded various other expenses from support.[20]

Generally, the amount of support equals the cost of the item, but in the case of support provided in a noncash form, such as lodging, the amount of support equals the fair market value or fair rental value. The cost of an item such as a television or an automobile is included in support if the item actually is support.[21]

EXAMPLE I:2-14 ▶ Zoe's mother lives with her. Zoe purchased clothing for her mother costing $1,600 and provided her with a room that Zoe estimates she could have rented for $5,600. Zoe spent $5,000 for groceries she shared with her mother and $2,400 for utilities. In addition, Zoe purchased a television for $550 that she placed in the living room. Zoe and her mother both used the television. Zoe's support for her mother, at a minimum, includes:

Clothing	$1,600
Rental value of room	5,600
Food	2,500
Total	$9,700

Whether a portion of the utilities could be included in support would depend on whether the rental rate for the room included utilities. The fact that the mother used the television set probably would not be sufficient to cause its cost to be viewed as support. On the other hand, if the television set was a gift to the mother, was placed in her room, and was used exclusively by her, the cost probably would qualify as support. ◀

If a taxpayer contributes a lump sum for the support of two or more individuals, the amount is allocated among the individuals on a pro rata basis unless proof exists to the contrary.[22]

EXAMPLE I:2-15 ▶ Jaime pays rent of $12,600 for an apartment occupied by his aunts Alice, Beth, and Cindy. Alice spends $5,600 toward her own support, Beth spends $2,800, and Cindy spends $3,500. Jaime is assumed to have provided $4,200 of support for each aunt. Thus, assuming the other tests are met, Beth and Cindy are Jaime's qualifying relatives, but not Alice. ◀

[22] Rev. Rul. 64-222, 1964-2 C.B. 47 and Rev. Rul. 72-591, 1972-2 C.B. 84.

EXAMPLE I:2-16 ▶ Paul and Mary have three children and are unclear whether they can claim their children as dependents. Information on the children is as follows:

- Peter, age 25, who served in the military immediately after high school, is a full-time college student. He worked part-time earning $3,200 and provided 20% of his own support.
- Mark, age 22, graduated from college in May (he was a full-time student for five months of the year), and accepted a job in June. He lived with his parents for the entire year, earned $28,000, and provided 70% of his own support.
- Ruth, age 18, graduated from high school in May, and moved into an apartment immediately after graduation. She earned $5,500 from a job and provided 30% of her own support for the year.

Paul and Mary provide all the support not provided by the children. The first step is to determine whether any of the children are qualifying children. In this case, none of the children qualify for the following reasons. Peter is over age 23. Mark provided more than 50% of his own support. Ruth did not live with her parents for more than one-half of the year. The second step is to determine whether any of the children are qualifying relatives. Peter is a qualifying relative as he meets the relationship, gross income, and support tests. Mark fails both the gross income and support tests, and Ruth fails the gross income test. Thus, only Peter can be claimed as a dependent. ◀

Tie-Breaker Rules for Dependency. More than one person can meet the requirements to claim someone as a dependent. Tie-breakers decide who claims the dependent in such situations, as follows:

- First, taxpayers who meet the requirements to claim the dependent under the qualifying child rules have priority over individuals who meet the requirements for other relatives.
- The next priority provides that parents have priority over other individuals.
- Finally, if neither of the first two tie-breakers apply, the third tie-breaker specifies that the taxpayer with the highest AGI claims the dependent.

Consider a niece who lives with three aunts who contribute equal amounts to her support. Assuming other requirements are met, all three aunts satisfy the requirements to claim the niece as a dependent under the qualifying child rule. Taxpayers who meet the requirements to claim a dependent under the qualifying child rules have priority over individuals who meet the requirements for other relatives. This first tie-breaker, however, would not determine who the niece is a dependent of because each aunt meets the qualifying child requirement. Moving to the second tie-breaker, parents have priority over other individuals. Again, the tie-breaker will not determine which aunt the niece is a dependent of because they are not the niece's parent. Thus, in this case, the niece is a dependent of the aunt with the greatest AGI. In cases involving two parents, their child generally is a dependent of the parent with whom the child resided for the longer period of time during the year. If the child spent equal amounts of time with each parent, the child is a dependent of the parent with the higher AGI.

Two provisions can override the normal operation of dependency rules:

- Form 2120 (Multiple Support Declaration) can enable a taxpayer to claim a dependent in situations where the taxpayer does not provide over one-half of the dependent's support. This can be very important when several individuals contribute to the support of an individual who otherwise is not a qualifying relative because no one provided more than one-half of the individual's support.
- Form 8332 (Release/Revocation of Release of Claim to Exemption for Child by Custodial Parent) can enable a noncustodial parent to claim his or her child as a dependent.

Multiple Support Agreements. Sometimes, a group of people collectively provide over one-half of an individual's support, but no one person provides over one-half of it. In this case, eligible members of the group may designate one group member to claim the individual as a qualifying relative. Each eligible member (other than the taxpayer claiming the qualifying relative) must agree in writing to this designation. The taxpayer claiming the qualifying relative must complete Form 2120 (shown in Figure I:2-3). An eligible member is one who contributes more than 10% of the qualifying relative's support and meets all other requirements for claiming the individual as a qualifying relative, including the relationship test.[23]

EXAMPLE I:2-17 ▶ John T. Abel lives alone. His support comes from the following sources:

Andy (son)	$ 600
Gabe (son)	4,200
Mable (daughter)	3,000
Betty (friend)	4,200
Total	$12,000

Either Gabe or Mable can claim John as a qualifying relative if the other agrees in writing. Andy cannot claim John as a qualifying relative because he did not provide over $1,200 (0.10 × $12,000) of John's support. Betty cannot claim him as a qualifying relative because she is not related to John and he does not live with her. For this reason, Andy and Betty need not agree in writing. Form 2120 is included in the return of the taxpayer claiming John as a qualifying relative. A completed Form 2120 is illustrated in Figure I:2-3. ◀

A multiple support agreement cannot be used to pass qualification as a dependent from a person for whom the dependent is a qualifying child to a person for whom the dependent is a qualifying relative.[24]

[23] Sec. 152(c).

[24] Sec. 152(d)(1)(D).

ADDITIONAL COMMENT

Form 8332 may be completed each year by the custodial parent to relinquish the right to claim the child as a dependent for only that year, or it may be completed once, relinquishing the right for all future years.

Parental Release. The child of divorced or separated parents generally is a dependent of the custodial parent. However, the child is a dependent of the noncustodial parent if the custodial parent signs a completed Form 8332. The signed form is attached to the noncustodial parent's return for each year the child is claimed as a dependent.[25] In the case of a divorce or separation, the custodial parent probably would be reluctant to relinquish the right to claim the child as a dependent. A noncustodial parent, however, might be able to negotiate to obtain this right in exchange for increased child support payments.

EXAMPLE I:2-18 ▶ Hal and Pam obtain a divorce under the terms of which Pam receives custody of their son. Hal is ordered to pay $600 per month of child support. In the absence of a written agreement to the contrary, Pam may claim their son as a dependent. ◀

EXAMPLE I:2-19 ▶ Assume the same facts as in Example I:2-18 except Pam negotiates child support payments of $800 per month and agrees in writing to allow Hal to claim their son as a dependent. The written agreement will enable Hal to do so. ◀

EXAMPLE I:2-20 ▶ Andy and Beth obtain a divorce under the terms of which they share custody of their daughter. The divorce decree does not specify who is to claim their daughter as a dependent. Whoever has custody for the greater part of the year claims her as a dependent unless they agree otherwise in writing. If they share custody equally, the parent with the higher AGI claims the dependent. ◀

The rules for claiming dependents are summarized in Topic Review I:2-1.

CHILD TAX CREDIT AND CREDIT FOR OTHER DEPENDENTS

ADDITIONAL COMMENT

Two quite different credits have similar names: the **child tax credit** and the child and dependent care credit. Chapter I:14 discusses the child and dependent care credit.

Individuals may claim a $2,000 credit for each qualifying child under age 17 plus a $500 credit for each other dependent.[26] Recall from earlier in the chapter that a credit reduces the tax rather than taxable income, so it reduces the tax dollar-for-dollar. Recall also that a qualifying child is one type of dependent. The credit is reduced by $50 for each $1,000 (or fraction thereof) by which the taxpayer's AGI exceeds $200,000 ($400,000 for married filing jointly).[27] The amount of the credit and the phase-out thresholds are not indexed for inflation. To claim this credit, the taxpayer must provide the dependent's Social Security number.

EXAMPLE I:2-21 ▶ Jane and Bill are married and file jointly. They have two qualifying children under age 17, and $100,000 of AGI. They may claim a $4,000 ($2,000 × 2) child tax credit. The credit is not reduced because their AGI does not exceed $400,000. ◀

TOPIC REVIEW I:2-1

Dependency Requirements

- A qualifying child (QC) must (1) be the taxpayer's child or sibling (or a descendent of either), (2) be under 19, a full-time student under 24, or disabled, (3) live with the taxpayer for more than half the year, and (4) not provide more than one-half of their own support.
- A qualifying relative (QR) must (1) be related to the taxpayer or reside in the taxpayer's household for the entire year, (2) have gross income less than $5,200 (2025), (3) receive over one-half of their support from the taxpayer, and (4) not be a qualifying child.
- Additional requirements: (1) the QC or QR meets a citizenship test, (2) the QC or QR meets a separate return test, and (3) the taxpayer is not a dependent of someone else.

---

[25] In the case of divorces prior to 2008, the noncustodial parent can substitute a copy of pages from the divorce decree that allows the noncustodial parent to claim the child as a dependent.

[26] Sec. 24.

[27] For this purpose, AGI is modified by adding any amounts excluded from gross income under Secs. 911, 931, and 933, which relate to certain foreign earned income and possession's income.

EXAMPLE I:2-22 ▶ Assume the same facts as in Example I:2-21, except the couple's AGI is $405,000. Their AGI exceeds $400,000 by $5,000, so their credit is reduced by $250 ($50 × 5). They are allowed a $3,750 ($4,000 − $250) child tax credit. ◀

EXAMPLE I:2-23 ▶ Assume the same facts as in Example I:2-22, except the couple's AGI is $405,001. Their AGI exceeds $400,000 by $5,001, so their credit is reduced by $300 ($50 × 6). A sixth $50 reduction applies because the additional $1 of AGI is a fraction thereof. The couple is allowed a $3,700 ($4,000 − $300) child tax credit. ◀

EXAMPLE I:2-24 ▶ Martha is not married, has $80,000 of AGI, and has three dependents: (1) a qualifying child born on January 23, 2009, (2) a qualifying child born on April 11, 2005, and (3) a qualifying relative born on October 15, 1950. The two qualifying children are ages 16 and 20 at the end of 2025; the qualifying relative's age is irrelevant. Martha's total credit is $3,000: $2,000 for the first qualifying child, $500 for the second qualifying child, and $500 for the qualifying relative. ◀

The child tax credit is partially refundable. For 2025, its refundability is limited to the lesser of (1) 15% of the taxpayer's earned income in excess of $2,500 or (2) $1,700 per qualifying child under age 17 (if the taxpayer has one or two qualifying children). The credit for other dependents is nonrefundable.

EXAMPLE I:2-25 ▶ Georgia's two qualifying children under age 17 entitle her to a child tax credit of $4,000 for 2025. Her salary is $26,700, and income tax before credits is $420. The credit offsets all $420 of Georgia's income tax before credits. The refundability of the remaining $3,580 ($4,000 − $420) of the credit is limited to the lesser of $3,630 (15% × ($26,700 − $2,500)) or $3,400 (2 × $1,700). Georgia thus will receive a refund of $3,400, plus any other refundable credits and prepayments. ◀

ADDITIONAL COMMENT

For 2021 only, the child tax credit was $3,600 for each qualifying child under age 6 and $3,000 for each qualifying child age 6–17. The credit was fully refundable. Other special rules also applied.

If the taxpayer has three or more qualifying children under age 17, the limitation on the credit's refundability is increased (but not decreased) to the excess of the taxpayer's Social Security tax paid over the taxpayer's earned income credit for the year. See Chapter I:14 in the *Individuals* volume for more detail regarding this credit.

DETERMINING THE AMOUNT OF TAX

OBJECTIVE 3

Calculate the income tax for individuals

After taxable income is computed, the next step is to determine the gross tax. Most individuals determine the amount of gross tax by looking in the tax table. (See page T-2 after Chapter I:18 in *Individuals* volume or after Chapter C:15 in the *Comprehensive* volume.) This method allows the taxpayer to arrive at the gross tax without the need for multiplication and, therefore, simplifies the computation and reduces the number of errors. Individuals are required to use the tax table unless taxable income equals or exceeds the maximum income in the table (currently $100,000), or if the taxpayer files a short period return on account of a change in the annual accounting period.

Taxpayers who cannot use the tax table instead use the tax rate schedule (located after Chapter I:18 and in the Quick Reference section of the text). Taxpayers using the tax rate schedule must actually compute the tax.

EXAMPLE I:2-26 ▶ Liz is single and has taxable income of $48,210. Liz's tax is determined by reference to the tax table for single taxpayers. (At the time of this writing, the 2024 tax table was the most recent available.) The tax from the table is $5,663. ◀

EXAMPLE I:2-27 ▶ Jack and Pam are married, file a joint tax return, and have taxable income of $105,000 for 2025. They use the tax rate schedule to compute their tax. The tax is computed as follows:

Tax on $96,950	$11,157
Tax on remaining $8,050 at 22%	1,771
Gross tax	$12,928

◀

FILING STATUS

There are seven tax brackets applicable to individual taxpayers: 10%, 12%, 22%, 24%, 32%, 35%, and 37%. These rates are progressive in that, as taxable income increases, the taxpayer moves into higher tax brackets. The income level at which higher tax brackets begin depends on the taxpayer's filing status. There are five different filing statuses but only four rate schedules and/or tax tables because married couples filing jointly and certain surviving spouses use the same rate schedule or tax table. The five filing statuses are as follows:

- Married filing jointly
- Surviving spouse
- Head of household
- Single
- Married filing separately

Before 1948, one rate schedule was used by all taxpayers. Married couples often filed separate returns to have more income taxed at lower rates. This treatment was deemed to be unfair because various states allocated income between spouses differently. Some states used a community property law system while other states used a common law system. Today, only a few states continue to use the community property law system.[28]

In general, community property law allocates community income equally between the spouses, regardless of which spouse actually earns the income. In other states, income belongs to the spouse who produces the income. With a progressive tax system, placing income on one return instead of two can result in a much greater tax. For this reason, couples residing in noncommunity property states often paid more tax than their counterparts who resided in community property states. In 1948, Congress developed the joint-rate schedule to rectify this problem. Unmarried taxpayers who headed families felt they also should receive tax relief because they shared their incomes with their families. So, in 1957, Congress created a rate schedule for heads of households. Below is a discussion of who is covered by each filing status.

KEY POINT

Currently the highest tax rates for a given amount of taxable income are generally those for single and married filing separately, and the lowest are those for married filing jointly and surviving spouse.

SELF-STUDY QUESTION

If Congress were to adopt a truly proportional tax system, would it be necessary to have the four different tax rate schedules?

ANSWER

No, in a proportional tax system, there is no need for different rate schedules because all taxable income would be taxed at the same rate.

MARRIED FILING JOINTLY

Married couples may elect to file joint income tax returns.[29]

- To file a joint return, a couple must be legally married as of the last day of the tax year (for most individuals, this day is December 31). Common law marriages are recognized. An annulled marriage is viewed as never having been valid.
- The couple's marriage must be lawful and must be recognized by any U.S. state, possession, or territory.[30]
- Except in the case of death, spouses who file joint tax returns must have the same tax year-end.
- Both spouses must be U.S. citizens or residents. An exception allows a joint return if the nonresident alien spouse agrees to report all of his or her income on the return.[31]

STOP & THINK

Question: Some couples who marry find that their tax liabilities increase even if their combined taxable incomes remain unchanged, but many couples find that their tax liabilities decrease or do not change. Explain why the structure of the tax rate schedules produces these outcomes.

Solution: Couples who marry ordinarily change from two returns where incomes are taxed using the rate schedule for single individuals and/or heads of households to one

---

[28] Several states had either adopted or had begun to adopt community property laws to reduce the federal income taxes paid by their residents. After the joint rate schedule was created, states without a tradition of community property law returned to common law. For a more detailed discussion of community property states, see pages I:3-6 and I:3-7.

[29] Sec. 6013.

[30] Reg. Sec. 301.7701-18. The tax law does not treat a civil union, domestic partnership, or other similar relationship as a marriage unless the law of a U.S. state, possession, or territory denominates it as a marriage.

[31] Sec. 6013(g). Ordinarily, nonresident aliens are taxed only on U.S.-source income. Permitting a couple to take advantage of the lower tax rates on a joint return while reporting only one spouse's income would result in an unintended tax benefit.

ADDITIONAL COMMENT

Since marital status for the entire year is determined on the last day of the tax year, some couples actually plan for their wedding to occur on December 31 or January 1. In general, if only one person has income, the wedding should take place on December 31. If both have income, a January 1 wedding is better (for tax purposes).

return where the combined incomes are taxed using the married filing joint rate schedule. For example, the first $11,925 of a single individual's taxable income is taxed at 10%, and the next $35,225 ($48,475 – $11,925) is taxed at 12%. These tax bracket widths are $17,000 and $47,850 for a head of household and $23,850 and $73,100 for a married couple filing jointly. The effect of marriage on a couple's combined tax thus depends on their filing statuses before marriage, as well as the extent to which their combined income is attributable to each spouse.

Case 1: Individual #1 was single, with $80,000 of taxable income. Individual #2 was a head of household, with $79,000 of taxable income. Assuming their combined taxable incomes do not change when they marry, the taxable income in the 10%, 12%, and 22% tax brackets as unmarried individuals versus a married couple filing jointly, as well as their total tax, is as follows (due to rounding, some of the total tax amounts may differ slightly from the tax on total taxable income obtained from the tax rate schedule):

	If unmarried					
	Individual #1		*Individual #2*		*Married filing jointly*	
Tax bracket	*Amount in tax bracket*	*Tax*	*Amount in tax bracket*	*Tax*	*Amount in tax bracket*	*Tax*
10%	$11,925	$ 1,193	$17,000	$ 1,700	$ 23,850	$ 2,385
12%	36,550	4,386	47,850	5,742	73,100	8,772
22%	31,525	6,936	14,150	3,113	62,050	13,651
	$80,000	$12,515	$79,000	$10,555	$159,000	$24,808

The individuals' taxes increase $1,738 ($24,808 – $12,515 – $10,555) when they marry. This increase occurs because $62,050 of taxable income is in the 22% tax bracket when they are married but only $45,675 ($31,525 + $14,150) when they are unmarried (taxable income in the 10% and 12% tax brackets decreases $5,075 and $11,300, respectively).

Case 2: Assume the same facts as Case 1, except Individual #2 was single. The taxes for Individual #1 if unmarried and for the couple if married are still $12,515 and $24,808, respectively. Individual #2's tax if unmarried is $12,293. The total tax if they are unmarried is $24,809 ($12,515 + $12,294), which is the same as when they are married. This occurs because the widths of the 10% and 12% tax brackets for married couples filing jointly are twice those for single individuals, so the same amounts of taxable income fall in those brackets whether they are married or not.

Case 3: Individual #1 was single, with $20,000 of taxable income. Individual #2 was single, with $75,000 of taxable income. The taxable income in the 10%, 12%, and 22% tax brackets as unmarried individuals versus a married filing jointly, as well as their total tax, is as follows (assuming their combined taxable incomes do not change when they marry):

	If unmarried					
	Individual #1		*Individual #2*		*Married filing jointly*	
Tax bracket	*Amount in tax bracket*	*Tax*	*Amount in tax bracket*	*Tax*	*Amount in tax bracket*	*Tax*
10%	$11,925	$1,193	$11,925	$ 1,193	$23,850	$ 2,385
12%	8,075	969	36,550	4,386	71,150	8,538
22%	-0-	-0-	26,525	5,836	-0-	-0-
	$20,000	$2,162	$75,000	$11,415	$95,000	$10,923

The individuals' taxes decrease $2,654 ($10,923 – $2,162 – $11,415) when they marry. This decrease occurs because when they are unmarried $26,525 of taxable income is taxed at 22% (taxable income in the 12% tax bracket increases $26,525), but when they are married zero taxable income is taxed at 22%.

SURVIVING SPOUSE

A widow or widower can file a joint return for the year his or her spouse dies if the widow or widower does not remarry. For the two years after the year of death, the widow or widower can file as a surviving spouse only if he or she meets specific conditions. The **surviving spouse** (sometimes called a qualifying widow or widower) must[32]

- Have not remarried as of the year end in which surviving spouse status is claimed.
- Be a U.S. citizen or resident.
- Have qualified to file a joint return in the year of death.
- Have at least one dependent son or daughter[33] living at home during the entire year, and the taxpayer must pay over half of the expenses of the home.

KEY POINT

The surviving spouse provision entitles the taxpayer to the lower joint return tax rate schedule and to the higher joint return standard deduction.

For the year of death, a joint return can be filed. On the joint return, the income of the deceased spouse (earned before death) and the survivor are both reported. For the two years following death, surviving spouse status can be claimed only if the conditions outlined above are met. Only the surviving spouse's income is reported. What the two filing statuses have in common is that in both instances, the taxpayer can use the more favorable joint rate schedule and standard deduction amount.

EXAMPLE I:2-28 ▶

Connie and Carl are married and have no dependents. Carl dies in 2025. Connie can file a joint return for 2025 with Carl even though he did not live the entire year. Alternatively, separate returns can be filed for Connie and Carl applying the rate schedule for married individuals filing separately.

For subsequent years, Connie would file as a single taxpayer. On the other hand, if Connie and Carl had a dependent child, Connie could file as a surviving spouse for 2026 and 2027 (if she also meets the other surviving spouse criteria). ◀

STOP & THINK

Question: Most recently-widowed individuals do not qualify for surviving spouse status. Why?

Solution: Most individuals are widowed late in life after their children are grown and have left home. As having a dependent child is a requirement for surviving spouse status, these individuals do not qualify for the special lower tax rate. Such individuals may ordinarily file a joint return in the year of the spouse's death.

HEAD OF HOUSEHOLD

A second rate schedule or tax table is available to a head of household. The head of household rates increase more rapidly than those applicable to married taxpayers filing jointly and surviving spouses, but more slowly than those applicable to single taxpayers. To claim head of household status, a taxpayer must meet all of the following conditions:[34]

- Be unmarried as of the last day of the tax year. Exceptions apply to individuals married to nonresident aliens[35] and to abandoned spouses.[36] An individual cannot claim head of household status in the year his or her spouse died. Such an individual's filing status is married filing jointly or married filing separately.
- Not be a surviving spouse.
- Be a U.S. citizen or resident.
- Pay over half of the costs of maintaining as his or her home a household in which a dependent lives for more than half of the tax year. An exception permits a taxpayer who maintains a household in which a qualifying child[37] lives for more than half of the tax year to claim head of household status when the qualifying child is not the taxpayer's dependent. This situation comes into play in the case of divorced parents when the noncustodial

---

[32] Sec. 2(a).

[33] Includes an adopted child or a stepchild, but not a foster child.

[34] Sec. 2(b).

[35] Specifically, this refers to an individual married to a nonresident alien if he or she meets the remaining head of household requirements.

[36] Abandoned spouse rules are discussed under a separate heading later in this chapter.

[37] Qualifying child has the same meaning as is associated with dependents except that the child cannot be married and must be a U.S. citizen, resident or national.

parent claims the child as a dependent. A second exception permits a taxpayer to claim head of household status if he or she maintains a separate household for a dependent parent. This enables the parent to continue living in his or her own home.

EXAMPLE I:2-29 ▶ Brad and Ellen divorce. Ellen receives custody of their child, and Brad is ordered by the court to pay child support of $6,000 per year. Ellen agrees in writing to allow Brad to claim their child as a dependent. If Ellen maintains the home in which she and her child live, she can claim head of household status even though the child is Brad's dependent. ◀

As noted, the taxpayer must pay over half of the costs of maintaining the household. These expenses include property taxes, mortgage interest, rent, utility charges, upkeep and repairs, property insurance, and food consumed on the premises. Such costs do not include clothing, education, medical treatment, vacations, life insurance, transportation, or the value of services provided by the taxpayer.[38]

SINGLE TAXPAYER

An unmarried individual who does not qualify as a surviving spouse or a head of household must file as a single taxpayer. The tax rates progress more rapidly than those that apply to other unmarried taxpayers. Note that a single taxpayer is not necessarily someone who is not married; a head of household and a surviving spouse also are not married.

EXAMPLE I:2-30 ▶ Becky, an unmarried taxpayer with no dependents, files her first tax return. She will file as a single taxpayer. ◀

KEY POINT

Several disadvantages are associated with the filing of separate returns by married individuals. For example, a taxpayer may lose all or part of the benefits of the deduction for individual retirement accounts, the child care credit, and the earned income credit.

MARRIED FILING SEPARATELY

Married individuals who choose to file separate returns must use the separate rate schedule. The rates on this schedule increase more rapidly than other individual rate schedules. The implications of joint returns versus separate returns are discussed later in this chapter.

EXAMPLE I:2-31 ▶ On December 31, Rose marries Joe. Because they were married before the year ended, they may elect to file jointly. Alternatively, they may file separate returns with each using the rate schedule applicable to separate returns. ◀

ADDITIONAL COMMENT

Although married couples can file jointly or separately, most of them file jointly. Doing so is simpler, and it usually results in the same or less tax than filing separately.

The filing requirements for individuals are summarized in Topic Review I:2-2.

ABANDONED SPOUSE

A married individual might be unable to file jointly with his or her spouse because that spouse has deserted the individual. Without any special rule, such an abandoned spouse's filing status would be married filing separately, resulting in higher taxes. Congress has provided relief for taxpayers in this situation if they can meet certain conditions. A married individual can claim head of household status if the following criteria are met:[39]

- The taxpayer lived apart from his or her spouse for the last six months of the year.
- The taxpayer pays over half the cost of maintaining a household in which the taxpayer and a dependent son or daughter live for over half of the year.[40]
- The taxpayer is a U.S. citizen or resident.

The requirement that the taxpayer have a dependent child is met even if the taxpayer who is otherwise qualified to claim the child as a dependent signs an agreement that allows the child's noncustodial parent to do so.[41]

KEY POINT

An abandoned spouse is often thought of as a person in dire financial condition. If no relief were granted, this person could be required to use the married filing separately tax rate schedule, which contains the highest rates.

---

[38] Reg. Sec. 1.2-2(d).

[39] Secs. 2(c) and 7703(b).

[40] Includes adopted child, stepchild, and foster child.

[41] Sec. 152(e).

WHAT WOULD YOU DO IN THIS SITUATION?

Jane Brown married Jim four years ago. Two years ago, Jim lost his job. After looking for work for several months, Jim left town to look for work, and Jane has not heard from him since. Jim's brother told Jane that he had heard that Jim lived in Texas, but a friend said he heard that Jim had been killed in an automobile accident.

Jane went back to school and completed a program as a medical technician. She returned to work this year, and she earned $35,000. She has asked you to prepare her tax return this year. She has asked you whether she should file as a single taxpayer, married person filing separately, or as a married person filing jointly. Because she has had a low income until recently, she has taken no legal steps to resolve her status. What should she do?

EXAMPLE I:2-32 ▶ In October, Bob and Gail decide to separate. Gail supports their children after the separation and pays the costs of maintaining their home. Gail cannot claim abandoned spouse status because Bob did not live apart from her for the last six months of the year. If she had obtained a divorce before the end of the year, she could have filed as a head of household. In the absence of a divorce, Gail must file a separate return, unless both Bob and Gail agree to file a joint return. ◀

EXAMPLE I:2-33 ▶ Assume the same facts as in Example I:2-32 except Gail continues to support her children and pay household expenses during the next year. She can file as a head of household even if she has not obtained a divorce. ◀

CHILDREN WITH UNEARNED INCOME

A child may own investments that generate unearned income, such as interest and dividends. Because the child owns the investments, the unearned income is taxed to him or her. If the child's tax bracket is lower than his or her parents' tax bracket, there is an opportunity to reduce the family's aggregate income taxes by transferring some of the parents' investments to the child. This opportunity is enhanced when some or all of the child's unearned income is offset by the standard deduction. However, the so-called "kiddie tax," discussed below, limits this tax avoidance opportunity.

EXAMPLE I:2-34 ▶ Jen is 10 years old and has no income. Her parents have taxable income that is in the 37% tax bracket. Their investments include corporate bonds that generate $10,000 of interest per year. If Jen's parents transfer ownership of the bonds to her, the $10,000 is taxed to Jen rather than her parents. Jen's taxable income is $8,650 because she can claim a $1,350 standard deduction, and this amount of taxable income is in the 10% tax bracket. If the kiddie tax did not limit this tax avoidance opportunity, the family's aggregate tax would be $2,835 less (($10,000 × 37%) − ($8,650 × 10%)).[42] ◀

TOPIC REVIEW I:2-2

Filing Status and Requirements

FILING STATUS	MUST MAINTAIN HOUSEHOLD	MUST HAVE DEPENDENT	MARITAL STATUS	MUST BE CITIZEN	TAX RATES
Married filing jointly	No requirement	No	Married	Yes	Lowest rates, but two incomes are combined
Surviving spouse	Yes	Yes, son or daughter	Widowed in prior or second prior year	Yes	Uses same schedule as married couple filing joint return
Head of household	Yes	Generally, yes	Generally, unmarried	Yes	Intermediate tax rates
Single	No requirement	No	Unmarried	No	Highest tax rates for unmarried taxpayers
Married filing separately	No requirement	No	Married	No	Highest tax rates

---

[42] Jen's parents also would avoid the 3.8% tax on net investment income (see Chapter I:5), but they might incur gift tax on the transfer of the bonds to Jen (see Chapter I:1).

KEY POINT

The kiddie tax does not apply if unearned income does not exceed $2,700. If the investments generating the unearned income have a 4% return, net unearned income will be zero if the investments are worth less than $67,500 ($2,700 ÷ 4%).

The tax law requires certain children with unearned income to calculate their tax in a special way. For 2025, the kiddie tax generally applies to a child whose unearned income is greater than $2,700 and who falls into one of the following categories (ages are determined at the end of the year):

- Under age 18.
- Age 18 and the child's earned income is less than or equal to one-half of his or her total support.
- Age 19 through 23, the child is a full-time student, and the child's earned income is less than or equal to one-half of his or her total support.

EXAMPLE I:2-35 ▶

Tim was born on January 23, 2007. In 2025, he receives $3,400 of interest and $8,000 of wages from a part-time job. Tim provides $10,000 of his own support, and his parents provide $5,000 of his support. The kiddie tax does not apply to Tim because he is age 18 at the end of the year and his $8,000 of earned income exceeds $7,500 (½ × ($10,000 + $5,000)). His student status is irrelevant because he is not age 19 through 23.

Tim's parents cannot claim him as a dependent; he is not their qualifying child or qualifying relative because he provides more than one-half of his own support. Tim thus may claim a $15,000 standard deduction, which exceeds his AGI of $11,400 ($3,400 + $8,000). His taxable income and tax are zero. ◀

EXAMPLE I:2-36 ▶

Assume the same facts as in Example I:2-35, except Tim's parents provide $11,000 of his support. The kiddie tax applies to Tim because he is age 18 and his $8,000 of earned income is less than $10,500 (½ × ($10,000 + $11,000)).

If Tim's parents can claim him as a dependent, his standard deduction is limited to the greater of $8,450 ($8,000 + $450) or $1,350. Tim's taxable income is $2,950 ($11,400 − $8,450). The calculation of the tax on this $2,950 is discussed below. ◀

Under the kiddie tax, the tax imposed on the child's taxable income is determined as follows:[43]

1. Compute the child's taxable income in the normal fashion for dependents, as discussed earlier in this chapter.
2. Compute the child's **net unearned income:**

ADDITIONAL COMMENT

If the child's itemized deductions directly connected with the production of the unearned income are less than or equal to $1,350, step 2 simplifies to unearned income less $2,700 (not less than zero).

Unearned income (described below)	$xxx
Less: Statutory deduction of $1,350	(xxx)
Less: Greater of a. $1,350 of standard deduction, or b. Itemized deductions directly connected with the production of the unearned income	(xxx)
Equals: Net unearned income (not less than zero)	$xxx

3. Compute the child's tax:

Net unearned income times marginal tax rate of child's parents[44]	$xx
Plus: Taxable income exceeding net unearned income, times child's tax rate	xx
Equals: Child's total income tax	$xx

Unearned income is the child's investment income, including dividends, taxable interest, capital gains, rents, and royalties. It does not include earned income, such as wages and salaries.[45]

---

[43] Sec. 1(g).

[44] If adding the child's net unearned income to the parents' taxable income would cause their taxable income to reach a higher tax bracket, multiple marginal tax rates would apply for this step. If the parents have multiple children subject to the kiddie tax, this step applies to the children's aggregate net unearned incomes, with the resulting tax allocated to such children in proportion to their net unearned incomes.

[45] Sec. 1(g)(4).

EXAMPLE I:2-37 ▶ Assume the same facts as in Example I:2-36, where Tim has $3,400 of interest income and $8,000 of wages and is subject to the kiddie tax. Assume his parents are married, file jointly, and have taxable income of $140,000. Tim's tax is calculated as follows:

1. Compute Tim's taxable income:

Wages	$ 8,000
Interest income	3,400
Adjusted gross income	$ 11,400
Standard deduction (see Example I:2-36)	(8,450)
Taxable income	$ 2,950

2. Compute Tim's net unearned income:

Unearned income (interest)	$ 3,400
Statutory deduction of $1,350	(1,350)
$1,350 of standard deduction	(1,350)
Net unearned income (not less than zero)	$ 700

3. Compute Tim's tax. His parents' taxable income of $140,000 is in the 22% tax bracket, so Tim's net unearned income is taxed at 22%. The remainder of his taxable income is taxed at 10% because it falls entirely within that tax bracket:

Tax on net unearned income: $700 × 22%	$154
Tax on taxable income exceeding net unearned income: ($2,950 − $700) × 10%	225
Total income tax	$379

If Tim were not subject to the kiddie tax, his tax would be $295 ($2,950 × 10%). The additional $84 of tax he incurs because of the kiddie tax is due to his $700 of net unearned income being taxed at 22% rather than 10%. ◀

EXAMPLE I:2-38 ▶ Assume the same facts as in Example I:2-34, where Jen is 10 years old, her parents' taxable income is in the 37% tax bracket, and they own corporate bonds that generate $10,000 of interest per year. If her parents transfer the bonds to Jen, the kiddie tax applies to her because her $10,000 of unearned income exceeds $2,700 and she is under age 18. Assuming Jen is a dependent, her tax is calculated as follows:

1. Taxable income: $10,000 − $1,350 = $8,650.
2. Net unearned income: $10,000 − $1,350 − $1,350 = $7,300.
3. Tax on net unearned income: $7,300 × 37% $2,701

Tax on net unearned income: $7,300 × 37%	$2,701
Tax on taxable income exceeding net unearned income: ($8,650 − $7,300) × 10%	135
Total income tax	$2,836

The kiddie tax increases Jen's tax by $1,971 ($2,836 − ($8,650 × 10%)) because her $7,300 of net unearned income is taxed at 37% rather than 10%. ◀

As discussed in more detail on page I:2-32 and in Chapters I:3 and I:5, an individual's dividend income and long-term capital gains generally are taxed at lower rates than other income. These lower tax rates also apply for the kiddie tax. For 2025, such income for a single individual generally is tax-free if taxable income is not over $48,350, at 15% if taxable income is over $48,350 but not over $533,400, and at 20% if taxable income is over $533,400. For a married couple filing jointly, these dollar thresholds are $96,700 and $600,050.

EXAMPLE I:2-39 ▶ Assume the same facts as in Example I:2-38, except the $10,000 is qualified dividend income rather than interest income. Jen's taxable income is still $8,650, and her net unearned income is still $7,300. Because her parents' taxable income is in the 37% tax bracket, it exceeds $600,050. Of Jen's taxable income, $7,300 is taxed at 20%, and $1,350 ($8,650 − $7,300) is tax-free. Jen's total tax is $1,460 ($7,300 × 20%). ◀

Parents of a child subject to the kiddie tax may elect to include the child's dividend and interest income on their own return.[46] This rule eliminates the need to file a tax return for the child. To be eligible for the election, the child's gross income must come solely from dividends and interest, and such income must not exceed $13,500 for 2025 ($13,000 for 2024). Furthermore, there can be no withholding or estimated payment using the child's Social Security number. Parents use Form 8814, Parents' Election to Report Child's Interest and Dividends.

STOP & THINK

Question: Jane and Bill have three dependent children (ages 13, 15, and 17). Jane operates a retail business and Bill farms. They earn over $200,000 each year. Can they reduce their family's taxes by employing their children in their businesses?

Solution: Yes, assuming the compensation they pay their children is reasonable. Although all three children are under age 18, none of them will be subject to the kiddie tax if each child's unearned income is less than $2,700. The compensation that Jane and Bill pay to their children would be earned income and thus would not trigger the kiddie tax for them.

The children may be able to perform a variety of services. They may be assigned chores on the farm, such as feeding livestock, milking, gathering eggs, or operating equipment. In the retail business, they can be assigned tasks such as filing, answering phones, stocking shelves, making deliveries, and operating cash registers. Jane and Bill can deduct as a business expense the reasonable compensation paid to their children, which reduces Jane and Bill's taxable income. Each child is taxed on the earned income he or she receives, but it is partially or wholly offset by his or her standard deduction. Even if it is larger than the standard deduction, it will be taxed at the child's marginal tax rate, which is less than that of Jane and Bill.

ADDITIONAL MEDICARE TAX AND NET INVESTMENT INCOME TAX

An additional 0.9% tax applies to earned income over $200,000 ($250,000 for married couples). An additional 3.8% tax applies to the lesser of investment income (including interest, capital gains, and dividends) or AGI in excess of $200,000 ($250,000 for married couples). These thresholds are not adjusted for inflation. The 0.9% Additional Medicare Tax is discussed in more detail in Chapter I:14, and the 3.8% net investment income tax is discussed in more detail in Chapter I:5.

BUSINESS INCOME AND BUSINESS ENTITIES

OBJECTIVE 4

Explain the basic income tax rules relating to business entities

How business income is reported depends on the type of entity. Sole proprietors report their business income on Schedule C of Form 1040 (Schedule F in the case of farmers). The income is taxed on the proprietor's Form 1040 along with the taxpayer's other income. For 2021, 18% of individual tax returns reported income or loss on Schedule C.

Corporations are divided into two groups: C corporations and S corporations. **C corporations**, also called **regular corporations**, are treated as taxable entities for tax purposes and pay income taxes on the corporation's taxable income. Shareholders are taxed on dividends they receive from a C corporation but are not taxed on the corporation's

---

[46] Sec. 1(g)(7).

▼ TABLE I:2-7
Tax Formula for C Corporations

Income from whatever source derived	$xxx
Minus: Exclusions (income that is not taxable)	(xxx)
Gross income (income that is taxable)	$xxx
Minus: Deductions	(xxx)
Taxable income	$xxx
Times: Tax rate (21%)	×.21
Gross tax (income tax before credits)	$xxx
Minus: Tax credits	(xx)
Net tax liability	$xxx
Minus: Prepayments	(xx)
Balance due or refund	$xxx

KEY POINT

The tax formula for C corporations differs from the tax formula for individuals in several important respects. The corporate tax formula does not include adjusted gross income, itemized deductions, the standard deduction, or the qualified business income deduction.

undistributed income. Lower tax rates apply to dividends received by individual taxpayers. See Chapter I:3. Approximately 1.7 million corporations file the regular corporate return, Form 1120, each year.

The tax formula for C corporations is presented in Table I:2-7. A major difference between the formulas for individual and corporate taxpayers is that corporations have only one category of deductions. Personal expenses do not come into consideration. Therefore, corporations do not report itemized or standard deductions. Unlike for individuals, the tax rate schedule for C corporations is not progressive. Instead, a flat 21% tax rate applies.

The second group of corporations, **S corporations**, generally are not treated as taxable entities for tax purposes. They are referred to as flow-through entities. S corporation shareholders are required to report their respective shares of the S corporation's income on their individual tax returns even if the income is not distributed. All shareholders must consent to the S corporation election when it is made. S corporations must also meet a series of conditions, such as having no foreign shareholders. S corporations report ordinary income and special items separately, and shareholders in turn report their respective shares of the ordinary income and of each special item. More than five million corporations file S corporation returns, Form 1120-S, each year.

In one sense, there is no formula to compute an S corporation's taxable income because the corporation normally does not pay a tax. S corporations do file returns, but the returns are more informational in nature, much like the returns of a partnership. A residual income total, known as ordinary income, is computed on the return. Special items, such as capital gains and losses and charitable contributions, are kept separate from ordinary income. This separation is important because every item that would receive special treatment on a shareholder's return is passed through to the shareholder with its status intact. Each shareholder reports his or her share of the ordinary income and his or her share of each special item. Losses pass through and generally can be deducted by shareholders up to their respective bases in the corporation's stock. Losses are also subject to other rules, such as the passive activity loss rules (discussed in Chapter I:9) and the at-risk rules (discussed in Chapter C:9 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*).

Partnerships, like S corporations, are flow-through entities for tax purposes. Partners report their respective shares of the partnership's income on their tax returns even if the income is not distributed. More than four million partnerships file returns, Form 1065, each year. Like S corporations, partnerships report ordinary income and special items separately, and the partners report their respective shares of the ordinary income and of each special item. Losses also pass through and generally can be deducted by partners on their returns, subject to certain limitations.

EXAMPLE I:2-40 ▶ Jane is starting a business and is considering alternative organizational forms. She anticipates the business will earn $450,000 operating income annually before subtracting the $150,000 salary it will pay her and the $8,000 of charitable contributions it will make. Other distributions to her from the business will be $10,000.

Jane is single, has $27,000 of ordinary income from other sources, and has $18,000 of itemized deductions other than charitable contributions. Compare the income tax for 2025 if she organizes the business as a sole proprietorship, an S corporation, and a C corporation. Ignore payroll and other taxes. Assume her business' employees have W-2 wages that are large enough to allow Jane a full 20% qualified business income (QBI) deduction. Assume also that the business is not a specified service business (if it were, her QBI deduction could be reduced; see Chapter C:9).

	Sole Proprietorship	*S Corporation*	*C Corporation*
Business Income:			
Operating income before subtracting Jane's salary	$450,000	$450,000	$450,000
Salary paid to Jane		(150,000)	(150,000)
Charitable contributions			(8,000)
Net business income	$450,000	$300,000	$292,000
Corporate income tax			$ 61,320
Jane's Income:			
Net business income (above)	$450,000	$300,000	
Salary from business (above)		150,000	150,000
Distributions from business[a]			10,000
Ordinary income from other sources	27,000	27,000	27,000
Adjusted gross income	$477,000	$477,000	$187,000
Itemized deductions	(26,000)[b]	(26,000)[b]	(18,000)
Qualified business income deduction	(90,000)[c]	(60,000)[d]	
Taxable income	$361,000	$391,000	$169,000
Jane's income tax	$ 95,897	$106,397	$ 32,507
Total income tax	$ 95,897	$106,397	$ 93,827

[a] For the C corporation organizational form, distributions generally are called dividends.
[b] $8,000 charitable contributions made by business plus $18,000 other itemized deductions.
[c] $450,000 × 0.20.
[d] $300,000 × 0.20.

TAX STRATEGY TIP

With the S corporation organizational form, Jane could increase her QBI deduction by having the corporation reduce the amount of salary it pays her. If reduced below a reasonable amount, however, the IRS could challenge this strategy.

With a sole proprietorship, the business is not a separate entity; its activities are Jane's activities. Jane thus reports the $450,000 income from her business on Schedule C (Form 1040), and she deducts the $8,000 charitable contributions as part of her itemized deductions on Schedule A. No separate return is filed for the sole proprietorship. The salary is disregarded since the business is not a separate entity from Jane. She is allowed a 20% QBI deduction for the $450,000.

If the business is organized as a corporation and an S election is made, two income tax returns are filed: a Form 1120-S for the corporation and a Form 1040 for Jane. Because of the S election, the corporation pays no income tax. Items reported on the Form 1120-S "flow through" the corporation and are reported by Jane on her Form 1040. The corporation deducts the $150,000 salary when computing its income, but it is taxable to Jane. She also reports the remaining $300,000 of the corporation's income on her return and deducts the $8,000 charitable contributions as part of her itemized deductions. She is allowed a 20% QBI deduction for the $300,000.

If the business is organized as a corporation and an S election is not made, it is a C corporation that is taxed as a separate entity. The corporation files a Form 1120 on which it deducts the $150,000 salary and $8,000 charitable contributions, and it pays $61,320 (21% × $292,000) tax on the remaining income. The corporation cannot deduct the $10,000 dividend it pays. Jane reports on her Form 1040 the $150,000 salary and $10,000 dividend distributed by the corporation, but she is not allowed any QBI deduction for the business' income. Jane is taxed on the $10,000 dividend, and it is coming from income on which the corporation is taxed. However, a special provision reduces this "double tax" by taxing Jane on the dividends at 15%

instead of the higher rate that otherwise would apply. (See Chapter I:3.) As a result, the tax on her dividend is $1,500 (15% × $10,000), and the tax on her remaining income of $159,000 ($169,000 − $10,000) is $31,007 (using the tax rate schedule). Her total tax is $32,507. The total tax for the corporation and Jane is $93,827.

As shown, the total current income taxes will be lower if Jane organizes her business as a C corporation, even though the $10,000 dividend is taxed twice and no QBI deduction is allowed. This lower tax occurs because the income retained by the corporation is taxed at the corporation's 21% tax rate instead of Jane's higher marginal tax rate if it flowed through to her return. This tax savings will be reduced (and possibly reversed) in the future if the corporation distributes the retained income as a dividend or if Jane sells her C corporation stock at a gain. If the plans are to distribute the retained income in the near future, it is desirable to organize the business as a sole proprietorship so the distribution can be made without any future tax. This would also be the case if the business is organized as an S corporation, but Jane's QBI deduction will be smaller due to the salary the business will pay her.

Self-employment taxes and Social Security taxes should also be considered when selecting an organizational form for a new business. Although detailed consideration of these taxes is found in Chapter I:14, it is noted here that the self-employment tax, which generally applies to the sole proprietorship and partnership forms of doing business, would be greater than the Social Security tax, which would apply only to the wages paid to Jane if she were to choose the S or C corporation organizational forms. Given the facts in this case, Jane might judge a sole proprietorship less favorably when these taxes are taken into consideration. Jane should also consider other taxes (e.g., state and local taxes) and nontax factors, such as liability protection, before making a final decision. ◀

The detailed rules of C corporations are covered in Chapter I:16, while S corporations and partnerships are covered in Chapter I:17 of the *Individuals* volume. All three are covered more extensively in the *Corporations*, *Partnerships, Estates & Trusts* volume and the *Comprehensive* volume.

TREATMENT OF CAPITAL GAINS AND LOSSES

OBJECTIVE 5

Explain the basic income tax rules of capital gains and losses

Long-term capital gains generally have been accorded favored tax treatment since 1922. Favored tax treatment essentially means that they are taxed at a lower rate than is ordinary income. A purpose of the special rules is to distinguish capital appreciation from gains attributable to ordinary business transactions and speculation. This goal is accomplished by defining capital assets to not include certain business property (e.g., inventory and trade receivables) and by requiring taxpayers to hold capital assets for minimum time periods to benefit from the lower rates available to capital gains.

The discussion below is intended as a brief introduction to capital gains and losses. A detailed discussion of this topic is contained in Chapter I:5.

DEFINITION OF CAPITAL ASSETS

A **capital gain** or **capital loss** is the gain or loss from the sale or exchange of a capital asset. Unfortunately, the tax law merely states what is not a capital asset. In other words, **capital assets** are assets other than those listed in Sec. 1221. A detailed discussion is found in Chapter I:5. Here we simply note the categories of properties included on the list, which are thereby excluded from capital asset status, are inventory, trade receivables, certain properties created by the efforts of the taxpayer (such as works of art), depreciable business property and business land, and certain government publications. All other assets are considered capital assets and include investment property (such as stocks and bonds) and personal-use property (such as a personal residence or an automobile). As noted, a purpose of the rules applicable to capital gains and losses is to distinguish capital appreciation from gains derived from ordinary business operations. The profit from the sale of inventory and trade receivables is viewed as business profit as opposed to capital appreciation. Thus, a gain realized by an artist on the sale of one of his or her own works is ordinary income from personal services. However, gain from the sale of artwork held as an investment or for personal use would be treated as a capital gain.

TAX TREATMENT OF GAINS AND LOSSES

Capital gains and losses are divided into long-term (associated with property held over one year) and short-term (associated with property held one year or less). A single individual's 2025 net long-term capital gain generally is tax-free if taxable income is not over $48,350, at 15% if taxable income is over $48,350 but not over $533,400, and at 20% if taxable income is over $533,400. The 0%, 15%, and 20% rates apply to other filing statuses, but the dollar thresholds differ (e.g., $96,700 and $600,050 for married filing jointly; $64,750 and $566,700 for head of household; see the Quick Reference section of the text). An additional 3.8% tax that applies to investment income, including capital gains and interest, received by higher-income taxpayers is discussed above. A net short-term capital gain is taxed at the same rate as ordinary income.

On the other hand, individuals who suffer capital losses can deduct (i.e., net) them only against capital gains plus up to $3,000 of other income. A net capital loss in excess of $3,000 can be carried over and offset against future capital gains or, subject to the $3,000 limitation, deducted from other income.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 6

Describe tax planning considerations for various tax matters

SHIFTING INCOME BETWEEN FAMILY MEMBERS

Because of the progressive tax system, families often can reduce their overall taxes by **shifting income** to family members who are in lower tax brackets.

EXAMPLE I:2-41 ▶ Mary, who is in the 37% tax bracket, shifted $5,000 of income to her 25-year-old son, Steve, by making a gift of a $50,000 corporate bond yielding 10%. Steve had no income as he suffered a business loss. In absence of the shift, 37% of the income would have gone for taxes. There is no tax on Steve's return because the income is offset by his loss. ◀

EXAMPLE I:2-42 ▶ Farouk, who is in the 37% tax bracket, shifted $2,000 of interest income to his 25-year-old daughter, Dana, who is in the 10% tax bracket. The tax savings from the shift is $540 [(0.37 × $2,000) − (0.10 × $2,000)]. ◀

ADDITIONAL COMMENT

All 50 states have enacted laws that simplify the procedures for making gifts to minors. This type of law, which in most states is called the Uniform Gifts to Minors Act, is especially important when making gifts of securities.

As noted earlier in this chapter, a special tax calculation applies to many individuals under age 24 who have net unearned income. Hence, a shifting of income to young children is often an ineffective method of minimizing tax because of this "kiddie tax."

Shifting income must be distinguished from assigning income. Earned income is taxed to the person who produces it. Income from property is taxed to the person who owns the property. Ordering income to be paid to another is an assignment of income that does not change who is taxed on the income (Chapter I:3). Normally, in the case of income from property, ownership of the property must be transferred in order to shift the income.

EXAMPLE I:2-43 ▶ John owns stock in Valley Corporation. John orders the corporation to pay this year's dividends to his daughter. John will be taxed on the income even though he has assigned it to another person. ◀

EXAMPLE I:2-44 ▶ Kay owns stock in Valley Corporation. Kay gives the stock to her 25-year-old son. Future dividends on Valley stock will be taxed to the son instead of to Kay. ◀

Individuals often are unwilling to give property away completely. As a result, personal preference may limit the amount of tax planning that is possible.

SPLITTING INCOME

Splitting income consists of creating additional taxable entities, especially corporations, to reduce an individual's effective tax rate.

EXAMPLE I:2-45 ▶ Tom is a taxpayer in the 37% tax bracket and is involved in a variety of businesses. One business has been producing $20,000 of income per year for several years. Tom incorporates the business. The tax rate for C Corporations is 21%. Thus, the tax on the income is reduced by $3,200 [(0.37 × $20,000) − (0.21 × $20,000)]. ◀

The creation of a new corporate entity to split income is not always desirable because the corporation's income will be taxed to the shareholder as a dividend if it is distributed. In addition, if income is allowed to accumulate in a corporation indefinitely, it may be subject to the personal holding company tax or accumulated earnings tax.[47]

KEY POINT

The ability to maximize itemized deductions by the timing of expenditures is somewhat limited. The most significant itemized deduction that lends itself to such a strategy is charitable contributions. Prepaid interest is not deductible until accrued.

MAXIMIZING ITEMIZED DEDUCTIONS

Timing expenditures properly often can increase deductions. In general, cash-basis taxpayers deduct expenses in the year paid. If itemized deductions are less than the standard deduction, the taxpayer will receive no tax benefit from itemized deductions. A taxpayer in that situation could defer some payments or accelerate others to maximize expenses in one year, thereby creating a sufficient amount of deductions in that year. This strategy is sometimes referred to as "bunching."

EXAMPLE I:2-46 ▶ Valerie and Chris are a married couple who file jointly for 2025. They normally have $9,000 of cash charitable contributions and $20,500 of other itemized deductions each year. Their $29,500 total itemized deductions are less than their $30,000 standard deduction, so they do not obtain any tax benefit from their charitable contributions. If they pay in 2025 the $9,000 of charitable contributions they otherwise would pay in 2026, they would have total 2024 itemized deductions of $38,500 (($9,000 × 2) + $20,500). They thus would obtain a tax benefit from $8,500 ($38,500 − $30,000) of their charitable contributions. Their 2026 itemized deductions would be only $20,500, so they would still claim the standard deduction for that year. ◀

Medical expenses are deductible only to the extent they exceed 7.5% of a taxpayer's AGI. In situations where medical expenses are just under the AGI threshold, taxpayers may be able to create a deduction by bunching such expenses in one year.

EXAMPLE I:2-47 ▶ Sophie expects her 2025 AGI to be $120,000 and that she will be claiming itemized deductions. In December 2025, when year-to-date medical expenses for herself and her dependent children are $8,800, Sophie receives a $2,000 bill from her dentist that is due by January 15, 2026. If she waits until January to pay the bill, her 2025 medical expense deduction will be zero ($8,800 ≤ 0.075 × $120,000). If she pays the bill before the end of 2025, her 2025 medical expense deduction will be $1,800 [$8,800 + $2,000 + (0.075 × $120,000)]. Sophie thus increases her 2025 deductions by $1,800 by bunching her medical expenses.[48] ◀

FILING JOINT OR SEPARATE RETURNS

Factors to Be Considered. In general, married couples may file either joint or separate returns. As noted earlier, if one spouse has significantly more than half of their combined income, filing separately will increase the couple's total income tax. Because of the potential tax saving from a joint return and because it is simpler to prepare one return than two, most married couples file jointly.

It should be noted that the joint return is not always preferred. Separate returns may result in increased deductions. Because only one spouse's income is reported on a separate return, medical expenses are more likely to exceed the 7.5% of adjusted gross income floor if one spouse incurs most of the medical expenses.

One significant impact of the joint return is the joint income tax liability. Both spouses may be liable for taxes owed on a joint return. This feature could be a major problem if a couple separates or divorces after filing a return.

EXAMPLE I:2-48 ▶ Jim and Pat file a joint return. They are both informed as to the relevant information pertaining to the return. The next year they separate, and Jim moves out of town without leaving a forwarding address. The IRS audits their joint return and disallows $400 of charitable contributions deducted on the original return. Pat may be held responsible for the additional taxes owed. The IRS does not have to attempt to locate Jim to collect the tax. ◀

---

[47] These two taxes are discussed briefly in Chapter I:16 and extensively in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts.*

[48] Sophie should also consider the effect on her 2025 medical expense deduction, but this effect could be zero (such as her medical expenses being much less in 2026 than in 2025). For a discussion of restrictions on the deductibility of prepaid medical expenses, see Chapter I:8.

Innocent Spouse Provision. When married couples file a joint return, each spouse generally is liable for the entire tax and any penalties imposed.[49] This is the case even if all the income was earned by one spouse. This rule could prove unfair in some instances, especially where one spouse concealed information from the other. For that reason, the IRC contains an **innocent spouse** provision. An innocent spouse is relieved of the liability for tax on unreported income if:

- The amount is attributable to erroneous items of the other spouse.
- The innocent spouse did not know and had no reason to know that there was such an understatement of tax.
- Under the circumstances, it would be inequitable to hold the innocent spouse liable for the understatement.
- The innocent spouse elects relief within two years after the IRS begins collection activities.[50]

ETHICAL POINT

Because innocent spouse rules are strict, it may sometimes be safer to file a separate return than run the risk of being held responsible for the acts of another.

EXAMPLE I:2-49 ▶ Dan and Joy file a joint return. Dan traveled much of the time, and Joy had little information as to his whereabouts or income. Joy worked with her own salary being the sole source of her support. Their return was audited by the IRS. The audit disclosed that Dan had not reported income from a job he had held for several months during the year. In this situation, Joy may be able to use the innocent spouse provision to avoid being held liable for the tax on the unreported income. ◀

The election is permitted when the innocent spouse was aware of the understatement but did not know or have reason to know the extent of the understatement. Relief is limited to the portion of the understatement attributable to the "unknown" amounts.

Separate Liability Election. Couples who file joint returns and are subsequently divorced, widowed, or separated may make a separate liability election. An electing spouse is liable only for the portion of any understatement attributable to him or her.

EXAMPLE I:2-50 ▶ Al and Ann divorce after filing a joint return. An IRS examination of the return reveals $20,000 of unreported income attributable to Al and $10,000 of unallowable deductions attributable to Ann. Together, these amounts result in an understatement of their tax by $9,000. If Ann can establish that she was unaware of Al's unreported income, she can make a separate liability election. She will be liable only for $3,000 of tax as she is responsible for only one third of the understatement. The allocation would not be different if only part of the deductions were disallowed because of an AGI floor. ◀

The election must be made within two years after the IRS begins collection efforts. The election may be made by both spouses. The election is invalid if the spouse responsible for the errors transfers assets to the "innocent" spouse in an effort to avoid payment.

Electing to Change to a Joint Return. In general, spouses who file separate returns for a given year may elect to change to a joint return by filing an amended joint return. This change is permitted after the due date of the original returns but must occur within three years of the due date including extensions. Taxpayers may not change from a joint return to separate returns after the due date.[51]

---

[49] Sec. 6013(d)(3).

[50] Sec. 6015(b).

[51] Reg. Sec. 1.6013-1(a). However, a couple who filed a joint return but whose marriage is later annulled must file amended returns as single individuals (Rev. Rul. 76-255, 1976-2 C.B. 40).

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 7

Describe compliance and procedural matters for filing tax returns

WHO MUST FILE

In general, an individual must file an income tax return if his or her gross income equals or exceeds his or her standard deduction, including the additional standard deduction due to age.[52] The fact that the individual owes no tax does not mean that a return need not be filed because the filing requirement is based on gross income, not taxable income or tax liability. Recall from earlier in the chapter that gross income is income from taxable sources.[53] For 2025, the gross income filing thresholds are as follows:

	Under Age 65	*65 or Older*
Single	$15,000	$17,000
Married, filing jointly[a]	30,000	33,200[b]
Married, filing separately	5	5
Head of household	22,500	24,500
Surviving spouse	30,000	31,600

[a] $5, regardless of age, if the individual did not live with his or her spouse at the end of the year (or on the date his or her spouse died).
[b] $30,750 if one of the spouses is under age 65 and the other is age 65 or older.

KEY POINT

A taxpayer may be required to file an income tax return but still have no tax liability.

ADDITIONAL COMMENT

An individual may file an income tax return even when not required to do so. For example, a single individual may have a good-faith belief that 2025 gross income is less than $15,000. By filing an income tax return and starting the statute of limitations, the individual limits the amount of time the IRS can audit the return.

An individual is required to file an income tax return in three situations, even if gross income is less than the applicable amount shown above:

- Taxpayers who can be claimed as a dependent by another must file if they have either unearned income over $1,350 or total gross income over the standard deduction.
- Taxpayers who owe the 0.9% Additional Medicare Tax or the 3.8% Net Investment Income Tax (these are briefly discussed earlier in the chapter).
- Taxpayers with net self-employment income of $400 or more.

EXAMPLE I:2-51 ▶ Mary is age 64 and single. Her income is comprised of $8,000 of Social Security benefits and $17,000 of taxable pension benefits. As is discussed in Chapter I:3, the $8,000 is fully excluded from gross income in this case. Mary's $17,000 gross income is at least $15,000, so she is required to file an income tax return. ◀

EXAMPLE I:2-52 ▶ Assume the same facts as in Example I:2-51, except Mary's taxable pension benefits are $13,000. Mary's total income of $21,000 ($13,000 + $8,000) is at least $15,000, but her gross income of $13,000 is not. Mary is not required to file an income tax return. ◀

DUE DATES AND EXTENSIONS

Tax returns for individuals and C corporations generally are due on the fifteenth day of the fourth month following the close of the tax year, which for calendar year taxpayers is April 15.[54] Returns for partnerships and S corporations are due on the fifteenth day of the third month following the close of the tax year, which for calendar year entities is March 15.[55] A due date that falls on a Saturday, Sunday, or a holiday is automatically extended to the next day that is not a Saturday, Sunday, or holiday.[56] As noted, individuals are required to file only if their gross income exceeds prescribed thresholds. Partnerships and corporations, however, are required to file even if they have no gross income.

Individuals may obtain an automatic extension of six months by filing Form 4868 (Application for Automatic Extension of Time to File U.S. Individual Income Tax Return).

---

[52] Sec. 6012.

[53] For this purpose, excluded foreign earned income and the gain excluded from the sale of a principal residence are treated as gross income (Sec. 6012(c)). These exclusions are discussed in Chapters I:4 and I:12.

[54] Sec. 6072(a). The tax return due date for a C corporation with a June 30 year-end is the fifteenth day of the third month following the close of the tax year (i.e., September 15) until tax years beginning after 2025.

[55] Sec. 6072(b).

[56] Sec. 7503. A holiday is a legal holiday in the District of Columbia (or a legal holiday of the state of the IRS office the taxpayer is required to file the return).

Partnerships and S corporations also may obtain an automatic six-month extension by filing Form 7004 (Application for Automatic Extension of Time to File Certain Business Income Tax, Information, and Other Returns). C corporations also file Form 7004 to obtain an extension, but it is six or seven months, depending on the fiscal year-end.[57]

An extension to file a return is not an extension to pay any taxes owed. Taxpayers must project their tax liability to the best of their ability and remit with the extension any amount that has not been prepaid through withholding or estimated payments. Interest and penalty may apply to amounts paid after the regular due date. See Chapter C:15 in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for more on payment requirements.

	Individuals	*Partnerships & S corporations*	*C corporations*
Returns	Form 1040	Forms 1065, 1120-S	Form 1120
Return due date, generally	15th day of 4th month	15th day of 3rd month	15th day of 4th month
Automatic extension, generally	Form 4868 (6 months)	Form 7004 (6 months)	Form 7004 (6 or 7 months)

ADDITIONAL COMMENT

Most Form 1040s are filed electronically, but a small percentage of them are filed on paper.

ADDITIONAL COMMENT

Some items affect several forms and schedules beyond the ones on which they are reported. For example, an individual who is allowed to deduct depreciation expense for his or her sole proprietorship reports it on Form 4562. This expense carries to Schedule C, and the net profit or loss that it affects there carries to Schedule 1 before being reflected on Form 1040. A net profit or loss on Schedule C also carries to Schedule SE (self-employment tax), which carries through Schedules 1 and 2 before being reflected on Form 1040.

FORM 1040

Individuals use Form 1040 to calculate and report their federal income tax. In addition to the individual's name, address, and Social Security number (for both individuals, if they are a married couple filing jointly), the form asks for filing status and information pertinent to the individual's standard deduction and dependents.

Form 1040 continues for several dozen more lines, on which the individual reports details about his or her gross income, deductions, and other items affecting the additional tax due or refund. Some of these amounts carry to Form 1040 from other forms and schedules, where the individual reports further details. For example, Schedules 1, 2, and 3 report the following:

- Schedule 1 reports sources of income not reported on Form 1040, such as the net profit or loss from a sole proprietorship and the net profit or loss from farming. Details for some of these additional sources of income are reported on further schedules, such as Schedules C and F. Schedule 1 also reports various deductions for AGI, such as those for student loan interest and contributions to traditional IRAs.
- Schedule 2 reports the alternative minimum tax and the excess advance premium tax credit repayment, both of which are discussed in Chapter I:14. It also reports various other taxes imposed on the taxpayer, such as the 10% penalty on early withdrawals from 401(k) accounts and the self-employment tax (which are discussed in Chapters I:7 and I:14).
- Schedule 3 reports various nonrefundable tax credits, such as the child care credit and education credits (which are discussed in Chapter I:14). It also reports any tax paid when requesting an automatic extension of time to file the income tax return.

Individuals age 65 or older may file Form 1040-SR instead of Form 1040. The two forms are very similar, but Form 1040-SR contains a chart that reflects the larger standard deduction such individuals are allowed.

SYSTEM FOR REPORTING INCOME

There is a significant and expanding relationship between computers, tax returns, the taxpayer identification system, and information returns. The IRS keeps records based on taxpayer identification numbers. Individual taxpayers report information based on Social

---

[57] For further discussion of the tax return due date and extension period for C corporations, see Chapter C:3 in the *Comprehensive* and *Corporations, Partnerships, Estates & Trusts* volumes or Chapter I:16 in the *Individuals* volume.

Security numbers, whereas employer identification numbers (EIN) are used by corporations, other taxpayers, and tax-exempt entities. Individuals who employ others have both a Social Security number and an employer identification number.

Employers, banks, stockbrokers, savings and loans, and so on report payments they make to others along with the payee's identification number. The IRS matches much of the reported information with tax returns, using the taxpayer identification number as the cross-reference. The need for accurate information returns is obvious. Some major information returns are listed below:

Form	*Type of Payment*	*Threshold*[58]
W-2	Wages and salaries	$600
1099-B	Proceeds from broker transactions (e.g., sales of securities)	All
1099-DIV	Dividends and distributions	10
1099-G	Certain government payments (e.g., unemployment compensation, state income tax refunds)	10
1099-INT	Interest income	10
1099-K	Payment card and third party network transactions	600
1099-MISC	Miscellaneous income	Varies
1099-NEC	Nonemployee compensation	600
1099-R	Distributions from retirement plans	10

This information reporting system makes it more difficult for taxpayers to avoid IRS detection if they omit income from their returns. In some cases, an information form is required even if the income amount is less than the applicable threshold. For example, a W-2 is required if the employer withheld any income, Social Security, or Medicare tax, even if wages are less than $600.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:2-1 **a.** The tax law refers to gross income, yet the term gross income is not found on Form 1040. Explain.
b. Why is it important to understand the concept of gross income even though the term is not found on Form 1040?

I:2-2 Explain the distinction between income and gross income.

I:2-3 **a.** Explain the distinction between a deduction and a credit.
b. Which is worth more, a $200 deduction or a $200 credit?
c. Explain the difference between refundable and nonrefundable credits.

I:2-4 List the conditions that must be met in order to claim qualifying children and qualifying relatives as dependents. Briefly explain each one.

I:2-5 **a.** Briefly explain the concept of support.
b. If a taxpayer provides 50% or less of another person's support, is it possible for the taxpayer to claim that person as a dependent? Explain.
c. Does support include the value of an automobile? Explain.

I:2-6 Under what circumstances must a taxpayer use a tax rate schedule instead of a tax table?

I:2-7 **a.** What determines if an individual must file a tax return?
b. Is an individual required to file a tax return if he or she owes no tax?

I:2-8 Many homeowners itemize deductions while many renters claim the standard deduction. Explain.

I:2-9 Tax rules are often very precise. For example, a taxpayer must ordinarily provide "over 50%" of another person's support in order to claim that person as a qualifying relative. Why is the threshold "over 50%" as opposed to "50% or more?"

I:2-10 What is the normal due date for the tax return of calendar year taxpayers? What happens to the due date if it falls on a Saturday, Sunday, or holiday?

I:2-11 Sometimes taxpayers may not be able to file their tax returns by the normal due date. Are extensions available? How long are the extensions? Do extensions enable taxpayers to delay paying the tax they owe?

---

[58] Form generally is required if payments for the year equal or exceed the threshold.

I:2-12 Can tax-exempt income qualify as support? Explain.

I:2-13 Can a scholarship qualify as support?

I:2-14 Explain the purpose of the multiple support agreement.

I:2-15 Summarize the rules that explain which parent claims their children as dependents in cases of divorce.

I:2-16 What conditions must be met by a married couple before they can file a joint return?

I:2-17 Explain what is meant by the phrase *maintain a household*.

I:2-18 Under what circumstances, if any, can a married person file as a head of household?

I:2-19
a. Explain the principal difference in the tax treatment of an S corporation and a C corporation.
b. Why would a C corporation be used if an S corporation is generally exempt from tax?

I:2-20 Income earned by C corporations is taxed twice, once when the income is earned and again when it is distributed. If so, how is it possible that operating a business as a C corporation can reduce taxes.

I:2-21
a. What assets are excluded from capital asset status?
b. Are net long-term capital gains given favorable tax treatment?
c. What is the significance of an asset being classified as a capital asset?
d. Are capital losses deductible?

I:2-22 Is there any tax advantage for an individual who has held an appreciated capital asset for eleven months to delay the sale of the asset? Explain.

I:2-23
a. Explain the difference between income splitting and income shifting.
b. Why are taxpayers interested in shifting income from one tax return to another within the same family or economic unit?
c. Is there a relationship between the tax on unearned income of children and taxpayers who attempt to shift income?

I:2-24
a. Who is liable for additional taxes on a joint return?
b. Why is this so important?

I:2-25 Can couples change from joint returns to separate returns? Separate to joint?

ISSUE IDENTIFICATION QUESTIONS

I:2-26 Sam was born on January 6, 2006. During 2024, he is a full-time student (high school for January–May; college for August–December). Sam lived with his mother from the beginning of the year until May 1, when he moved in with his grandmother because his mother was arrested and jailed for a drug offense (Sam lost contact with his father many years ago). On August 1, Sam moved into his own apartment, where he lived for the rest of the year. Sam's mother provided all his support until her arrest, his grandmother provided 60% of his support while Sam lived with her, and his grandfather provided 70% of Sam's support while Sam lived in his apartment (Sam's grandparents divorced several years ago). What issues must be considered when determining who can claim Sam as a dependent for 2024?

I:2-27 Carmen and Carlos, who have filed joint tax returns for several years, separated this year. Carlos works in construction and is often paid in cash. Carlos says he only worked a few weeks this year and made $11,000. In prior years, he made approximately $35,000 per year, and Carmen is surprised that his income is so low this year. Carmen received a salary of $38,000 as a medical laboratory technician. They have no dependents and claim the standard deduction. What tax issues should Carmen and Carlos consider?

I:2-28 Jane and Bill have lived in a home Bill inherited from his parents. Their son Jim lives with them. Bill and Jane obtain a divorce during the current year. Under the terms of the divorce, Jane receives possession of the home for a period of five years and custody of Jim. Bill is obligated to furnish over one-half of the cost of the maintenance, taxes, and insurance on the home and pay $6,000 of child support per year. Bill lives in an apartment. What tax issues should Jane and Bill consider?

PROBLEMS

I:2-29 ***Computation of Tax.*** The following information relates to two married couples who each file jointly:

	Smiths	*Millers*
Wages and salaries	$50,000	$115,000
Taxable interest income	0	1,000
Deductible IRA contributions	0	14,000
Itemized deductions	5,000	33,000
Child tax credit	0	4,000
Withholdings	1,730	5,200

Compute the 2025 tax due or refund due for each couple.

I:2-30 ***Computation of Taxable Income.*** Tom is a single individual who claims the standard deduction. During 2025, he receives $10,000 of wages and $540 of dividends.

a. Compute Tom's taxable income assuming he is not a dependent of another individual.
b. Compute Tom's taxable income assuming he is a dependent of another individual.

I:2-31 ***Joint Versus Separate Returns.*** Carl has $75,000 of salary and $13,500 of itemized deductions. Carol has $95,000 of salary and $17,100 of itemized deductions. They are married and under age 65.

a. Compute their taxable incomes if they file separately and Carol claims itemized deductions on her return.
b. Compute their taxable income if they file jointly. Assume their total itemized deductions equals the sum of their separate itemized deductions.

I:2-32 ***Dependency Requirements.*** Wes and Tina are a married couple and provide financial assistance to several persons during the current year. For the situations below, determine whether the individuals qualify as Wes and Tina's dependents. In all of the situations below, assume that any dependency tests not mentioned have been met.

a. Brian is age 24 and Wes and Tina's son. He is a full-time student and lives in an apartment near campus. Wes and Tina provide over 50% of his support. Brian works as a waiter and earned $8,000.
b. Same as Part a except that Brian is a part-time student.
c. Sherry is age 22 and Wes and Tina's daughter. She is a full-time student and lives in the college dormitory. Wes and Tina provide over 50% of her support. Sherry works part-time as a bookkeeper and earned $7,500.
d. Same as Part c except that Sherry is a part-time student.
e. Granny, age 82, is Tina's grandmother and lives with Wes and Tina. During the current year, Granny's only source of income was her Social Security of $12,000 (the Social Security is wholly tax-exempt in this situation). Granny uses her income to pay for 40% of her total support; Wes and Tina provide the remainder of Granny's support.

I:2-33 ***Dependency Requirements.*** John and Carole file a joint return and have three children: Jack, David, and Kristen. All three children live at home the entire year. Below is information about each of the children for 2025:

- Jack (age 23): graduated from college last year and will start medical school next year. This year, Jack worked sparingly as he studied for the medical school entrance exam, but did earn $6,200. John and Carole provided 80% of Jack's support during the year.
- David (age 20): a full-time student at State U., earned $6,400 from a part-time job, and provided 40% of his own support.
- Kristen (age 15): a full-time student in high school, had no gross income, and provided none of her own support.

a. Based on the above facts, which of the children can be claimed as dependents by John and Carole this year?
b. How would your answer to Part a change if Jack began medical school in August of this year?
c. How would your answer to Part a change if Jack earned $3,000 rather than $6,200?
d. How would your answer to Part a change if David was a part-time student rather than a full-time student?
e. How would your answer to Part a change if David provided 60% of his own support rather than 40%?

I:2-34 ***Dependency Requirements, Child Tax Credit, and Filing Status.*** Robert provides more than half of the support for his daughter, Jane, and her two children. Jane earned $20,000. Robert, whose AGI is $160,000, paid the rent of $11,000 on Jane's apartment and provided an additional $15,000 support. Jane is age 30, her children are age 7 and age 4, and the children live with Jane. Robert is not married.

a. Can Robert claim Jane as a dependent?
b. Can Jane claim her children as dependents?
c. Who is entitled to the child tax credit?

I:2-35 *Dependency Requirements.* Juan helps support his mother Maria, his son Jose, and a niece Norma. How many dependents can Juan claim given these additional facts?

Maria lives with Juan. She receives $12,000 of Social Security benefits, which she uses to pay for food, clothing, medical expenses, and other living expenses (the Social Security is wholly tax-exempt in this situation). Juan provides Maria's room, which has a rental value of $5,000, and pays an additional $4,000 toward her support.

Jose, age 12, lives with his mother, Linda. Juan pays $12,000 per year child support, and Linda provides an additional $4,000 of support.

Norma, age 20, is a part-time college student who lives in an apartment. She earned $6,000 working part-time and received a scholarship of $2,000. Norma's father provided $4,000 toward her support, and Juan provided $7,000.

I:2-36 *Multiple Support Agreements.* Anna, age 65, who lives with her unmarried son, Mario, received $7,000, which was used for her support during the year. The sources of support were as follows:

Social Security benefits	$1,500
Mario	2,600
Caroline, an unrelated friend	800
Doug, Anna's son	500
Elaine, Anna's sister	1,600
Total	$7,000

The Social Security benefits are wholly tax-exempt in this situation. Assume a multiple support agreement (Form 2120) is properly filed.

a. Who is eligible to claim Anna as a qualifying relative?
b. If Mario wants to claim Anna as a qualifying relative, who must agree to it?
c. If Mario claims Anna as a qualifying relative, what is his standard deduction?

I:2-37 *Dependency Requirements and Child Tax Credit: Divorced Parents.* Joe and Joan divorce during the current year. Joan receives custody of their three children. Joe agrees to pay $5,000 of child support for each child.

a. Assuming no written agreement, who claims their children as dependents, and who claims the child tax credit for them? Explain.
b. Would it make any difference if Joe could prove that he provided over one-half of the support for each child?

I:2-38 *Form 1040 Schedules.* Determine which of Schedules 1 through 3 the taxpayer(s) will file with Form 1040 for each case:

a. Abby and Bert are married, file a joint tax return, and have two qualifying children (ages 4 and 8). Their only income is $70,000 of salaries and wages, from which $4,500 of federal income taxes are withheld. They claim the standard deduction and child care credit.
b. Celeste is a full-time college student and a qualifying child of her parents. Her only income is $7,500 of wages from a part-time job. She claims the standard deduction.
c. Donna and Ernie (ages 64 and 67) are married, file a joint tax return, and have no dependents. Donna receives a $125,000 salary for the year, and Ernie receives $45,000 of taxable pension benefits. Federal income taxes of $30,000 are withheld. Donna and Ernie have $10,000 of qualified dividends and a $4,000 long-term capital gain from their investments. They claim itemized deductions rather than the standard deduction.
d. Fiona is age 12 and a dependent of her parents. Her only income is $25,000 of taxable interest from bonds she inherited from a grandparent. She made $3,100 of estimated tax payments.

I:2-39 *Dependency Requirements, Child Tax Credit, and Credit for Other Dependents.* How many dependents does the taxpayer have, assuming the people involved are U.S. citizens? What amount of credit may be claimed for the taxpayer's dependents?

a. Andrew supports his cousin Mary, who does not live with him. Mary has no income and is single.
b. Bob and Ann are filing a joint return. Bob provided over one-half of his father's support. The father received Social Security benefits of $6,000 and taxable interest income of $800 (the Social Security benefits are wholly tax-exempt in this situation). The father is single and does not live with them.
c. Clay provides 60% of his single daughter's support. She earned $3,000 while attending school during the year as a full-time student. She is 22 years old.

d. Dave provided 30% of his mother's support and she provided 55% of her own support. Dave's brother provided the remainder. The brother agreed to sign a multiple support agreement.
e. Zoe and Walt are married and file jointly. They provide 60% of the support for their daughter (age 19 and a full-time student) and 100% of the support for their son (age 15), both of whom live with Zoe and Walt for the entire year. Their daughter has $6,700 of wages from a part-time job, and their son has no income.

I:2-40 ***Dependents, Child Tax Credit, and Divorce.*** Juan and Maria, who have two young children, are in the process of obtaining a divorce. Juan expects to have $250,000 of income each year while Maria expects to have $180,000 of income each year. Assume the children will live with Maria after the divorce and that Juan will pay child support.
a. What advice can you provide them regarding the child tax credit?
b. What advice can you provide regarding tax rate schedules?

I:2-41 ***Marriage and Taxes.*** Bill and Mary plan to marry in December 2025. Bill's salary is $132,000 and he owns his residence. His itemized deductions total $25,400. Mary's salary is $107,000. Her itemized deductions total only $13,200 as she does not own her residence.
a. What will their 2025 tax be if they marry before year-end and file a joint return?
b. What will their combined 2025 taxes be if they delay the marriage until 2026?
c. What factors contribute to the difference in taxes?

I:2-42 ***Filing Requirement.*** Which of the following taxpayers must file a 2025 return?
a. Amy, age 19 and single, has $8,050 of wages, $800 of interest, and $350 of self-employment income.
b. Betty, age 67 and single, has a taxable pension of $9,100 and Social Security benefits of $6,200 (the Social Security benefits are wholly tax-exempt in this situation).
c. Chris, age 15 and single, is a dependent of his parents. Chris has wages of $3,800 and interest of $700.
d. Dawn, age 15 and single, is a dependent of her parents. She has wages of $425 and interest of $1,600.
e. Doug, age 25, and his wife are separated. He earned $5,000 while attending school during the year.

I:2-43 ***Head of Household.*** In the following situations, indicate whether the taxpayer qualifies as a head of household (all individuals are U.S. citizens).
a. Allen is divorced from his wife. He maintains a household for himself and his dependent mother.
b. Beth is divorced from her husband. She maintains a home for herself and supports an elderly aunt who lives in a retirement home.
c. Cindy was widowed last year. She maintains a household for herself and her dependent daughter, who lived with her during the year.
d. Dick is not divorced, but lived apart from his wife for the entire year. He maintains a household for himself and his dependent daughter. He does not receive any financial support from his wife.

I:2-44 ***Filing Status.*** For the following independent situations, determine the filing status for the years in question (all individuals are U.S. citizens).
a. Wayne and Celia had been married for 24 years before Wayne died in an accident in 2023. Celia and her son, Wally, age 21 in 2023, continued to live at home through 2026. Wally worked part-time (earning $9,800 each year) and attended the university on a part-time basis. Celia provided more than 50% of Wally's support for all four years. What is Celia's filing status for 2023, 2024, 2025, and 2026?
b. Juanita is an unmarried parent who maintained a household for her unmarried son Josh, age 19. Josh worked full-time and earned $16,000. Juanita provided approximately 40% of Josh's support but provided all the expenses of maintaining the household. What is Juanita's filing status?
c. Gomer and Gertrude are married and have one dependent son. In April, Gomer left Gertrude a note informing her that he needed his freedom and he was leaving her. As of December, Gertrude had not seen nor heard a word from Gomer since April. Gertrude fully supported her son and completely maintained the household. What is Gertrude's filing status assuming she was still legally married?

I:2-45 *Computation of Additional Tax Due or Refund.* Jim and Pat are married, file jointly, and have one dependent (12-year-old qualifying child). Jim receives a $92,000 salary. Pat is self-employed. Her sole proprietorship's revenues are $98,000, and its expenses are $48,000. Jim and Pat each make a $7,000 deductible contribution to a traditional IRA. Their itemized deductions are $26,000. Federal income taxes of $6,800 are withheld from Jim's paychecks, and Pat makes $3,000 of estimated tax payments. Determine the additional tax due or refund when Jim and Pat file their 2025 income tax return. Ignore any self-employment tax.

I:2-46 *Itemized versus Standard Deduction.* Jan, a single taxpayer, has adjusted gross income of $250,000, medical expenses of $10,000, home mortgage interest of $3,000, and property taxes of $2,000. Should she itemize or claim the standard deduction?

I:2-47 *Kiddie Tax.* Lucy is 17 years old and a dependent of her parents. She receives $9,000 of wages from a part-time job and $10,400 of taxable interest from bonds she inherited. Her parents are married, file jointly, and have $240,000 of taxable income. Determine Lucy's taxable income and tax.

I:2-48 *Computation of Additional Tax Due or Refund.* John and Georgia are married, file jointly, and have three dependents (qualifying children ages 13, 16, and 18). They have salaries of $130,000, a capital loss of $8,000, and tax-exempt interest income of $1,000. They paid home mortgage interest of $10,000, state income taxes of $4,000, property taxes of $2,800, medical expenses of $3,000, and charitable contributions of $5,000. Federal income taxes of $11,000 were withheld from their paychecks. Compute the additional tax due or refund they have when filing their tax return.

I:2-49 *Kiddie Tax.* In 2025, Morgan is single, is a full-time student, and lives with her parents. She receives $4,000 of taxable interest income from some bonds she inherited. Determine whether the kiddie tax applies to Morgan for each situation.

a. Morgan is age 17, and the $4,000 is her only income.
b. Assume the same facts as in part a, except Morgan is age 18.
c. Morgan is age 21. She also receives $8,000 of wages, which is greater than one-half of her total support.
d. Assume the same facts as in part c, except the wages are less than one-half of her total support.
e. Morgan is age 20 and a part-time student. She also receives $7,500 of wages, which is less than one-half of her total support.

I:2-50 *Kiddie Tax.* In 2025, Eli is single, age 16, and a dependent of his parents. They are married, file jointly, and have taxable income of $350,000. Eli does not have any itemized deductions. Determine his tax for each situation.

a. Eli's only income is $9,000 of taxable interest income.
b. Eli's income is comprised of $9,000 of taxable interest income and $7,700 of wages.
c. Eli's only income is $9,000 of qualified dividends.

I:2-51 *Income of Business Entities.* Georgia owns all of Peach Corporation's stock. Peach pays her a $70,000 salary, which reduces its before-tax profit to $30,000. Peach distributes all of its after-tax income to its shareholder, Georgia.

Georgia is married, and her spouse receives $90,000 of salary from an unrelated employer. They file jointly, have $31,000 of itemized deductions, and have no dependents. Compute the total income tax that is paid. Ignore payroll taxes.

a. Peach is an S corporation.
b. Peach is a C corporation.
c. How would the total income tax change in parts a and b if Peach does not distribute any of its after-tax profit to Georgia?

I:2-52 *Child Tax Credit.* Lana, an unmarried taxpayer with AGI of $204,400, has three qualifying children, all under age 17. What is the amount of her child tax credit?

I:2-53 *Capital Gains and Losses.* Bob and Anna are in the 37% tax bracket for ordinary income and the 20% bracket for capital gains (ignore the 3.8% additional tax on investment income for higher-income taxpayers.) They have owned several blocks of stock for many years. They are considering the sale of two blocks of stock. The sale of one block would produce a gain of $10,000. The sale of the other would produce a loss of $15,000. For purposes of this problem, ignore any restrictions on deductions or credits based on AGI. They have no other gains or losses this year. Determine their additional tax (or tax savings) and carryover (if applicable) for each situation.

a. What will be the impact on their taxes if they only sell the block of stock that produces a loss?

b. What will be the impact on their taxes if they only sell the block of stock that produces a gain?
c. What will be the impact on their taxes if they sell both blocks of stock?

I:2-54 ***Timing of Deductions.*** Virginia is a cash-basis, calendar-year taxpayer. Her salary is $90,000, and she is single. She plans to purchase a residence in 2026. She anticipates her property taxes and interest will total $8,100. Each year, Virginia contributes approximately $4,000 to charity. Her other itemized deductions total approximately $6,500 for each year. Determine her tax for 2025 and 2026 for each situation. Assume that 2026 tax rates and standard deductions are the same as for 2025.
a. Virginia contributes $4,000 to charity in each year.
b. Virginia contributes $8,000 to charity in 2025 but makes no contributions in 2026.
c. Virginia makes no contributions in 2025 but contributes $8,000 in 2026.
d. Alternative c results in a lower tax than either a or b. Why?

I:2-55 ***Computation of Tax.*** Maria is a single taxpayer. Her salary is $51,000. Maria realized a short-term capital loss of $5,000. Her itemized deductions total $4,000.
a. Compute Maria's adjusted gross income.
b. Compute her taxable income.
c. Compute her tax liability.

I:2-56 ***Income Shifting and Kiddie Tax.*** Ralph and Tina are married, file jointly, and have $500,000 of taxable income. They transfer ownership of corporate bonds to Pam, their single daughter. There is $14,000 of interest on the corporate bonds in the current year. In each of the following cases, determine the amount of tax the family saves in the current year because Pam owns the bonds rather than Ralph and Tina. Assume Pam claims the standard deduction.
a. Pam is age 12 and a dependent of her parents. Her only gross income is the $14,000 of interest.
b. Pam is age 25 and not a dependent of her parents. Her gross income is comprised of the $14,000 of interest and $35,000 of wages.

I:2-57 ***Filing Status.*** Gail and her husband have a son when her husband dies unexpectedly on January 1, 2025. Gail asks you, her tax professional, how her husband's death affects her taxes. Determine Gail's income tax each year from 2025 through 2029, assuming her only income is her $150,000 annual salary, her itemized deductions are $24,000 annually, and she has not remarried. Assume also that the tax rate schedules and standard deduction amounts for 2025 also apply in subsequent years.
a. The son was born on April 15, 2012, is Gail's dependent each year, and lives with Gail for all of each year.
b. The son was born on April 15, 2001, is not Gail's dependent each year, and lives with Gail for all of each year.

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:2-58 Jack is starting a business that he expects to produce $190,000 of income this year before compensating Jack for his services. He has $22,000 of other income and itemized deductions totaling $20,000. He wants to know whether he should incorporate or operate the business as a proprietorship. If a corporation is formed, he wants to know whether he should make an S election. If he incorporates, the corporation will pay Jack a salary of $100,000. He expects to distribute an additional $7,500 of corporate profits to himself each year. Jack is single.

Required: Which organizational form, proprietorship, S corporation, or C corporation, will produce the lowest total current income tax liability for Jack and his business? Ignore payroll and other taxes.

I:2-59 Andrea, who is a head of household and in the 37% tax bracket, is interested in reducing her taxes. She is considering several alternatives. For each alternative listed below, indicate how much tax for 2025, if any, she would save? (For this problem, ignore the additional 3.8% tax.)
a. Give $2,000 to a charity. Assume she itemizes.
b. Give $2,000 to a charity. Assume she does not itemize.
c. Make a gift of bonds valued at $8,000 yielding $600 of interest annually to her 15-year-old daughter who has no other income.
d. Sell the bonds from part c for $8,000 and buy tax-exempt bonds yielding $300.

I:2-60 Nell and Nick are married, have a 2-year-old child (Toni), and are in the 35% tax bracket. They heard that taxes could be reduced by shifting income to children. Nell and Nick ask you, their tax adviser, whether this is feasible for them and whether there is a limit on the amount of income they can shift to Toni. They have some corporate bonds yielding 4.8% interest they could transfer to her. Determine the maximum amount of the bonds Nell and Nick could transfer to Toni while still reducing the family's total taxes.

TAX FORM/RETURN PREPARATION PROBLEMS

I:2-61 Zachary L. (SSN 123-45-6789) and Cici K. Mao (SSN 987-65-4321) reside at 520 Chestnut Street, Philadelphia, Pennsylvania 19106. They are both under 65 years old and have one dependent (their son, Oliver, age 4, SSN 111-22-3333). They do not wish to take advantage of the presidential election campaign check-off. Other relevant information includes:

Zachary's salary as a manager	$40,000
Cici's salary as a teacher	45,000
Interest (taxable)	58
Withholding (Forms W-2)	5,600

Zachary and Cici are married, file jointly, and claim the standard deduction. They do not have any transactions involving digital assets. Complete their Form 1040 and Schedule 8812 for 2024.

I:2-62 John R. Lane (SSN 111-44-6666) lives at 1010 Ipsen Street, Yorba Linda, California 90102. John, a single taxpayer, age 66, provided 60% of his cousin's support. The cousin lives in Arizona. He wants to take advantage of the presidential election campaign check-off. John was employed as an accountant before he retired during the year. Other relevant information includes

Salary	$50,000
Pension (all taxable)	41,000
Taxable interest income	240
Deductible contribution to IRA	6,500
Withholdings (Form W-2)	12,100

John's itemized deductions total $11,000. John does not have any transactions involving digital assets. Complete Form 1040-SR and Schedule 1 for 2024. Assume any estimated tax penalty is zero.

I:2-63 Tracy M. Kidwell (SSN 433-33-3333) is single, 12 years old, and a dependent of her parents. She resides at 600 S. Maestri Place, New Orleans, LA 70130. Tracy's only income is $9,000 of taxable interest, she does not have any itemized deductions, and she had no withholdings and made no estimated tax payments. Tracy's parents (Kelly S. and James R. Kidwell) are married, file jointly, and list Kelly's name first on their return (SSN 433-33-1111). Their taxable income is $132,000 (none of which is qualified dividends or long-term capital gains). Tracy does not have any transactions involving digital assets. Prepare Forms 1040 and 8615 for Tracy for 2024. Assume any estimated tax penalty is zero.

CASE STUDY PROBLEMS

I:2-64 Bala and Ann purchased as investments three identical parcels of land over a several-year period. Two years ago they gave one parcel to their daughter, Kim, who is now age 16. They have an offer from an investor who is interested in acquiring all three parcels. The buyer is able to purchase only two of the parcels now, but wants to purchase the third parcel two or three years from now, when he expects to have available funds to acquire the property. Because they paid different prices for the parcels, the sales will result in different amounts of gains and losses. The sale of one parcel owned by Bala and Ann will result in a $20,000 gain and the sale of the other parcel will result in a $28,000 loss. The sale of the parcel owned by Kim will result in a $19,000 gain. Kim has no other income and does not expect any significant income for several years. Bala and Ann, however, are in the 37% tax bracket. They do not have any other capital gains this year. Which two properties would you recommend that they sell this year? Why?

I:2-65 Larry and Sue separated at the end of the year. Larry has asked Sue to sign a joint income tax return for the year because he feels that the tax will be lower on a joint return. Larry and Sue both work. Sue received a salary of $25,000 and Larry's salary was $20,000. Larry works as a waiter at a local restaurant and received tips. The restaurant asked Larry to indicate the amount of tips he received so that they could report the information to the IRS. Larry reported to the employer that the tips amounted to $3,000, but Sue believes that the amount was probably $6,000 to $10,000. They do not have enough expenses to itemize. Sue has asked you what are the advantages and risks of filing a joint return.

TAX RESEARCH PROBLEMS

I:2-66 Ed provides all the support for his stepdaughter, her husband, and their child since his wife's death three years ago. Ed promised his late wife that he would support her daughter from a former marriage and her daughter's husband until they both finished college. They live in another state, and have no gross income. Which of the three individuals can Ed claim as dependents?

A partial list of research sources is

- Sec. 152
- Reg. Sec. 1.152-2
- *Desio Barbetti,* 9 T.C. 1097 (1947)

I:2-67 Bob and Sue were expecting a baby in January, but Sue was rushed to the hospital in December. She delivered the baby but it died the first night. Can Bob and Sue claim the baby as a dependent?

Research sources include Rev. Rul. 73-156, 1973-1 C.B. 58.

I:2-68 Larry has severe vision problems and, in the past, he has claimed the additional standard deduction available to blind taxpayers. This year Larry's doctor prescribed a new type of contact lens that greatly improved his vision. Naturally, Larry was elated, but unfortunately new problems developed. He suffered severe pain, infection, and ulcers from wearing the new lens. The doctor recommended that he remove the lens and after several weeks his eyes healed. The doctor told him that he could wear the contacts again, but only for brief time periods, or the problems would recur. Can Larry claim the additional standard deduction available to blind taxpayers?

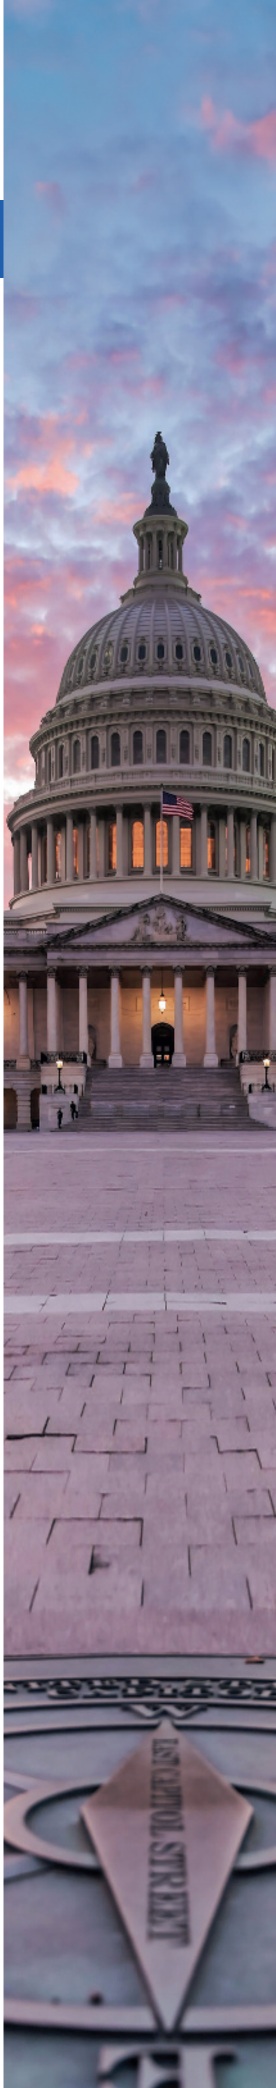
CHAPTER

3

GROSS INCOME: INCLUSIONS



LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Explain the difference between the economic, accounting, and tax concepts of income
2. Explain the principles used to determine who is taxed on a particular item of income
3. Determine when a particular item of income is taxable under both the cash and accrual methods of reporting
4. Apply the rules of Sec. 61(a) to determine whether items such as compensation, dividends, alimony, and pensions are taxable
5. Describe tax planning considerations for inclusions of gross income
6. Describe compliance and procedural considerations for gross income

CHAPTER OUTLINE

Economic, Accounting, and Tax Concepts of Income...3-2
To Whom Is Income Taxable?...3-6
When Is Income Taxable?...3-8
Items of Gross Income: Sec. 61(a)...3-13
Tax Planning Considerations...3-27
Compliance and Procedural Considerations...3-30

Computation of an individual's income tax liability begins with the determination of income. Although the meaning of the term *income* has long been debated by economists, accountants, tax specialists, and politicians, there is no universally accepted definition.

The Sixteenth Amendment to the Constitution gave Congress the power to tax "income from whatever source derived." To ensure the constitutionality of the income tax, this phrase is incorporated in Sec. 61(a), where *gross income* is defined as follows: "Except as otherwise provided . . . . gross income means all income from whatever source derived."

This chapter examines the concept of income for the purpose of determining what items of income are taxable. Chapter I:4 considers items of income that are excluded from gross income. As noted in Chapter I:2, many provisions in the tax law are created by a process of political compromise. Thus, there is no single explanation of why certain items are taxable and others are not. For this reason, determining whether a particular item of income is taxable often proves difficult.

ECONOMIC, ACCOUNTING, AND TAX CONCEPTS OF INCOME

OBJECTIVE 1

Explain the difference between the economic, accounting, and tax concepts of income

ECONOMIC CONCEPT

Economists define *income* as the amount an individual could consume during a period and remain as well off at the end of the period as he or she was at the beginning of the period. Economists include in income both the wealth that flows to an individual and changes in the value of the individual's store of wealth. Or, more simply, income equals consumption plus the change in wealth.

EXAMPLE I:3-1 ▶ Alice earned a salary of $40,000. She consumed $30,000 of food, clothing, housing, medical care, and other goods and services. Assets owned by Alice were worth $100,000 at the beginning of the year. Her assets, including $10,000 of salary that was saved, were worth $115,000 at the end of the year. Her liabilities did not change during the year. Alice's economic income is $45,000 [$30,000 + ($115,000 − $100,000)]. ◀

Under the economist's definition, unrealized gains, as well as gifts and inheritances, are income. Furthermore, the economist adjusts for inflation when measuring income. An individual has no income to the extent that an increase in the measured value of property is caused by a decrease in the value of the measuring unit. In other words, inflation does not increase wealth and, therefore, does not cause an individual to be better off.

ACCOUNTING CONCEPT

Accountants usually measure income when it is *realized* in a transaction. Values measured by transactions are relatively objective as accountants recognize (i.e., report) income, expenses, gains, and losses that have been realized as a result of a completed transaction. Accountants believe that the economic concept of income is too subjective to be used as a basis for financial reporting and, therefore, have traditionally used historical costs in measuring income instead of using unconfirmed estimates of changes in market value. In accounting, the meaning of the term *realization* is critical to the income measurement process. *Realization* generally results upon the occurrence of two events: (1) a change in the form or substance of a taxpayer's property (or phrased another way, a severance of the economic interest in the property) and (2) a transaction with a second party. Realization occurs when a taxpayer sells property. Conversely, the mere increase in value of property owned by a taxpayer will not result in the realization of income because there has been no change in the form of the property and no transaction with a second party.

EXAMPLE I:3-2 ▶ Assume the same facts as in Example I:3-1. The amount consumed by Alice, the increase in the value of the property owned by her, and inflation are all ignored by the accountant in measuring her income. Only when she sells or otherwise disposes of the assets that have increased in value will the accountant recognize the gain. Thus, Alice's accounting income is $40,000. ◀

TAX CONCEPT OF INCOME

The income tax law essentially adopts the accountant's concept of income rather than the economist's. The reasons for this relate to matters of administrative convenience and the wherewithal-to-pay concept. However, as we will see later, there are many differences between income for tax purposes and accounting income.

In general, three conditions must be met for amounts to be taxable.

- There must be economic benefit. The economic benefit is not limited to cash payments. Employees who receive a company's stock, rather than cash, are receiving an economic benefit. Taxpayers benefit even if they direct that payments be made to other persons. As a result, employees cannot avoid being taxed on their earnings by ordering that their salaries be paid directly to creditors or family members.
- The income must be realized. In general, realization occurs when the earning process is complete and a transaction with another party takes place that permits an objective measure of the income. This objective measurement increases "administrative convenience" which is discussed below. Unlike financial accounting, there are many exceptions that result in income being reported when the taxpayer receives payment even if that is at a time other than when the earning process is complete. These exceptions result in taxes being owed when the taxpayer has the "wherewithal to pay" (see below). Taxpayers who use the "cash method" of reporting, discussed later in the chapter, are normally taxed when payment is received.
- The income must be recognized. Some items of income are not taxable because of special provisions in the tax law. For example, certain real estate exchanges and corporate reorganizations are not taxable because of statutory nonrecognition rules. In such cases, the taxpayer receives a lower basis in **replacement property**, and that often means the income is recognized when the replacement property is sold. The tax law also contains exclusions that exempt specific types of income such as scholarships, inheritances, and municipal bond interest. Within statutory limitations, taxpayers are never taxed on such items of income.

Administrative Convenience. The economic concept of income is considered to be too subjective to be used in determining taxable income. The need for objectivity in taxation is evident. If taxpayers were required to report increases in value as income, some individuals would certainly understate values to reduce their tax liabilities. The IRS and even the most honest taxpayer often would disagree over values and, as a result, the tax system would be extremely difficult to administer. The disputes over valuation issues would be frequent and the courts would be burdened with added litigation. This problem is evidenced by the few situations where valuations are required in the determination of tax. For example, taxpayers who contribute property to charity usually can deduct the value of the property. The courts are continuously having to resolve disputes between taxpayers and the IRS over the value of such contributions. Furthermore, in the case of certain large contributions of property, taxpayers are required to attach to their returns appraisals of the contributed property. Penalties apply to taxpayers who substantially overvalue contributions.

In some instances, objectivity is achieved at the price of equity. For example, a taxpayer who owns land that has substantially declined in value generally cannot recognize the decline in value until it is realized through a disposition of the land. Similarly, an increase in value, no matter how large, is not taxed until a sale or exchange of the property has occurred. A taxpayer with a modest salary may feel that it is unfair that he or she is taxed on the salary while another person is not taxed on unrealized gains amounting to millions of dollars. As noted above, however, it would be practically impossible to fairly and consistently administer an income tax law that was based on values.

KEY POINT

Section 446(a) states that taxable income shall be computed under the method of accounting on the basis of which the taxpayer regularly computes his or her income in keeping his or her books. This provision would seem to require that tax accounting rules would conform to financial accounting rules. However, as will be seen later in this and other chapters, there are many differences.

Wherewithal to Pay. The wherewithal-to-pay concept holds that a tax should be collected when the taxpayer is in the best position to pay the tax. A taxpayer who sells property and collects the cash is in a better position to pay the tax than a taxpayer who owns property that is merely increasing in value without a sale.

This concept is the rationale for several tax provisions. For example, the tax law allows a taxpayer who sells property on the installment basis to report the gain as the installment payments are collected, rather than at the time of the sale. Losses, on the other hand, cannot be reported on the installment basis, as the wherewithal-to-pay is not an issue. The concept is also used to justify differences between the tax law and financial accounting principles. Prepaid income is not income from an accounting standpoint until it is earned. The tax law, however, takes the position that prepaid income is subject to taxation at the time it is collected, rather than as it is earned. At the time of collection, the taxpayer clearly has the cash available to pay the tax. If the tax were deferred until the income is earned, the taxpayer may no longer have the cash.

KEY POINT

Congress has not adopted any particular concept or theory of income for tax purposes. Except as specifically limited by statute, the definition of income is broad and general.

Gross Income Defined. Section 61(a) provides the following general definition and listing of income items:

> General Definition. Except as otherwise provided in this subtitle, gross income means all income from whatever source derived, including (but not limited to) the following items:
>
> 1. Compensation for services, including fees, commissions, fringe benefits, and similar items
> 2. Gross income derived from business
> 3. Gains derived from dealings in property
> 4. Interest
> 5. Rents
> 6. Royalties
> 7. Dividends
> 8. Annuities
> 9. Income from life insurance and endowment contracts
> 10. Pensions
> 11. Income from discharge of indebtedness
> 12. Distributive share of partnership gross income
> 13. Income in respect of a decedent
> 14. Income from an interest in an estate or trust
>
> Note: Alimony and separate maintenance payments are included on this list through December 31, 2018.

SELF-STUDY QUESTION

Why should taxpayers who are using the cash method of accounting be required to include in gross income the value of property or services received?

ANSWER

If taxpayers were not required to include the value of property or services received in gross income, many taxpayers would arrange their financial affairs so that they would receive property or services instead of cash.

This definition certainly is not all-inclusive. For example, it does not indicate whether specific items of income such as property insurance settlements, gambling winnings, or illegal income are taxable. One point is apparent: The phrase *[e]xcept as otherwise provided* means that all sources of income are presumed to be taxable unless there is a specific exclusion in the income tax law. The IRS does not have to prove that an item of income is taxable. Rather, the taxpayer must prove that the item of income is excluded. Thus, gambling winnings and illegal income are taxable simply because no specific provisions in the tax law exclude such amounts from taxation. As we shall see, life insurance proceeds and certain other insurance proceeds are specifically excluded from gross income.

Form of Receipt. Gross income is not limited to amounts received in the form of cash. According to Reg. Sec. 1.61-1(a), income may be “realized in any form, whether in money, property, or services.” The important question is whether the taxpayer receives an economic benefit. This rule covers barter transactions which are direct exchanges of property and services. Each party to the transaction is taxed on the value of the property or services received in the exchange. In general, the cost basis of property given up in a barter transaction can be subtracted from the value of the property received in arriving at the taxable amount.

EXAMPLE I:3-3 ▶ King Corporation transfers 1,000 shares of its stock to its president. The stock has no restrictions and is part of the president's compensation. The president must include the value of the stock in gross income. ◀

EXAMPLE I:3-4 ▶ Ali, an attorney, performs legal services for Paul, a painter, in exchange for Paul's promise to paint Ali's residence. Each taxpayer realizes income equal to the value of services received. Thus, Ali must report income in an amount equal to the value of the painting services provided by Paul. Paul must report the value of Ali's legal services. These amounts, assuming an arm's-length transaction, should be the same. ◀

EXAMPLE I:3-5 ▶ USA Corporation distributes an automobile to Vicki, a shareholder, in lieu of a cash dividend. Vicki must report the value of the automobile as dividend income. ◀

EXAMPLE I:3-6 ▶ Len has fallen behind on loan payments due to a bank. The bank obtains a court order requiring Len's employer to pay part of Len's wages directly to the bank. Len will be taxed on the full wages even though a portion goes directly to the bank. ◀

EXAMPLE I:3-7 ▶ Wayne borrowed $3,000 from his employer. The employer awarded year-end bonuses to other employees but told Wayne that the debt was being forgiven in lieu of a bonus. Wayne must include the $3,000 in income. ◀

STOP & THINK

Question: As noted, income is taxable even if it is paid in a form other than cash. What problems does this produce for the IRS and taxpayers?

Solution: Two major problems are created: valuation and enforcement. First, it is necessary to determine the market value of property and services when income is received in a form other than cash. Determining values can be difficult. Second, enforcement by the IRS is made much more difficult because such income is not documented by canceled checks, credit card receipts, or other records. Thus, as demonstrated in Example I:3-4 above, many of these so-called traded services are not reported as income. This evasion of income represents billions of lost tax revenues to the government.

Indirect Economic Receipt. As indicated earlier, the taxability of income often depends on whether the taxpayer receives an economic benefit. In general, if a taxpayer benefits from an item, it is taxable. Frequently, employers make expenditures that incidentally or indirectly benefit employees. For example,

- Security guards patrol an employer's plant, protecting both the employer's property and the employees. The employees receive an indirect benefit for the protection provided by the security guards.
- An employer requires employees to undergo an annual checkup, the cost of which is paid by the employer.
- An employer provides protective clothing worn by employees while on the job.
- A shipping company provides sleeping accommodations to sailors while ships are at sea.
- A company requires certain employees to wear shoes manufactured by the company and provide regular reports on the quality of the shoes.

It is now well-established that taxpayers may exclude such indirect benefits from gross income. This judicially-developed rule holds that a benefit is excludible if it is made in order to serve the business needs of the employer and the benefit to the employee is secondary and incidental.

Congress also has established rules dealing with situations where expenditures are made primarily to benefit employees. While expenditures made by employers that primarily benefit employees are generally taxable, there are instances whereby such expenditures are not taxable. These rules, which are discussed in Chapters I:4 and I:7, permit employees to exclude certain fringe benefits (such as employee discounts) from gross income.

TO WHOM IS INCOME TAXABLE?

OBJECTIVE 2

Explain the principles used to determine who is taxed on a particular item of income

Once it is established that income is taxable, it is necessary to determine to whom it is taxable. Although such determinations are usually easy, there are circumstances where income is not necessarily taxed to the person who receives it. If physical receipt of income was the only test, a family might reduce or eliminate its income tax by having income paid to children and other members who are in low tax brackets or have no tax liability.

ASSIGNMENT OF INCOME

In 1930, the Supreme Court held in a landmark case, *Lucas v. Earl,* that an individual is taxed on the earnings from his or her personal services.[1] Specifically, the Supreme Court held that a husband was taxed on the earnings from his law practice, even though he had signed a legally enforceable agreement with his wife that the earnings would be shared equally. An agreement to assign income does not permit a person to avoid being taxed on the income. The Court used the previously developed analogy that likens income to the fruit and capital to the tree.[2] Accordingly, the fruit (income) could not be attributed to a tree other than the one on which it grew.

In 1940, the Supreme Court, in *Helvering v. Horst,* extended the assignment of income doctrine to income from property.[3] In this case, the taxpayer detached interest coupons from bonds and gave the coupons to his son. The son collected the interest and reported it on his own return. The Supreme Court held that the taxpayer was taxed on the interest income because he owned the bonds. This holding leads to a basic rule that the income from property is taxed to the owner of the property. To transfer the income from property, the taxpayer must transfer ownership of the property itself.[4]

Although married couples may file joint returns today, this privilege did not become available until 1948. Assignment of income is an issue today when other individuals such as parents and children are involved, and it can still be an issue when married couples file separate returns.

KEY POINT

The law makes a clear distinction between an assignment of income and an assignment of income-producing property. The income is taxable to the assignor in the former case, but where there is a bona fide gift of property the income is taxable to the assignee.

ADDITIONAL COMMENT

The community property states are generally located in the western or southwestern United States. Generally these states were settled by immigrants from France and Spain, and their state laws reflect this fact. The common law is derived from English common law.

ALLOCATING INCOME BETWEEN MARRIED PEOPLE

How income is allocated between a husband and wife depends on the state of residence. Forty-one states follow a common law property system, whereas nine states[5] use a community property system. Under common law, income is generally taxed to the individual who earns the income, either through labor or capital. For example, if a spouse holds stock separately in his or her name, that spouse will be taxed on all of the dividends received from the separately owned stock. Generally, the only **joint income** in a common law state is income from jointly owned property.[6]

In community property states, income may be either separate or community. **Community income** is considered to belong equally to the spouses. In all community property states, the income from the personal efforts of either spouse is considered to belong

ADDITIONAL COMMENT

Community property laws are sometimes difficult to generalize. Depending on the specific law within a community property state, one-half of estimated taxes paid by one spouse may or may not be used by the other spouse on a separate return.

---

[1] *Lucas v. Earl,* 8 AFTR 10287, 2 USTC ¶496 (USSC, 1930).

[2] The analogy had been used some ten years earlier in *Eisner v. Myrtle H. Macomber,* 3 AFTR 3020, 1 USTC ¶32 (USSC, 1920). The court originally used the analogy in efforts to distinguish income from capital.

[3] *Helvering v. Horst,* 24 AFTR 1058, 40-2 USTC ¶9787 (USSC, 1940).

[4] A series of rather specific rules allocates income between the former and current owner when income-producing property is transferred. For example, in the case of bonds transferred by gift, the IRS has ruled that interest must be allocated based on the number of days the bonds were held by each owner during the interest period (Rev. Rul. 72-312, 1972-1 C.B. 22). A similar allocation must be made if bonds are sold (Rev. Rul. 72-224, 1972-1 C.B. 30).

[5] The states are Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Texas, Washington, and Wisconsin. Residents of Alaska may elect to be subject to community property law.

[6] Historically, tenancy by the entirety, a form of joint ownership between spouses, allocated all income to the husband. Today, the laws of many states allocate income from property held in tenancy by the entirety equally between the spouses.

equally to the spouses. Furthermore, income from community property is considered to be community income. Thus, if a wife's salary is used to purchase stock, subsequent dividends are community income.

Couples can have separate property even in community property states. **Separate property** consists of all property owned before marriage and gifts and inheritances acquired after marriage. Whether income from separate property is community or separate depends on the state. In Idaho, Louisiana, Texas, and Wisconsin income from separate property is community income. In Arizona, California, Nevada, New Mexico, and Washington, such income is separate income.

EXAMPLE I:3-8

A husband and wife file separate returns. The husband's salary is $40,000 and the wife's salary is $48,000. The wife received $1,000 of dividends on stock she had inherited from her parents. Interest of $1,200 was received on bonds that were purchased from the husband's salary. They received $2,600 in rent from farm land that they purchased jointly. The income would be allocated, depending on the state of residence, as follows:

California (Community Property State)	*Husband*	*Wife*
Salary	$44,000	$44,000
Dividends		1,000
Interest	600	600
Rent	1,300	1,300
Total	$45,900	$46,900
Texas (Community Property State)		
Salary	$44,000	$44,000
Dividends	500	500
Interest	600	600
Rent	1,300	1,300
Total	$46,400	$46,400
Pennsylvania (Common Law State)		
Salary	$40,000	$48,000
Dividends		1,000
Interest	1,200	
Rent	1,300	1,300
Total	$42,500	$50,300

These rules are important when couples file separate returns. The community income rules can prove to be a problem if one spouse conceals income from the other. Normally, each spouse is expected to report one-half of all community income. This treatment is inequitable if one spouse is not aware that the community income was earned. Special rules excuse an innocent spouse who fails to report community income on a separate return, provided that the spouse had no knowledge or reason to know of the item and, as a result, the inclusion of the community income would be inequitable.[7] A corresponding provision permits the IRS to include the entire amount in the income of the other spouse.[8]

STOP & THINK

Question: Income in a common law state is taxed differently than a community property income. As noted, the Supreme Court, in *Lucas v. Earl,* decided that a husband was taxed on all his income even though he agreed to share that income with his wife. Nevertheless, community income in a community property state is divided equally between husbands and wives even if one spouse earned all of the income. Why the tax distinction?

Solution: Lucas v. Earl dealt with a case in a common law state where the husband was legally entitled to the income, but decided to divide it with his wife. In community property states, couples are legally obligated to share their incomes. The federal income tax law respects the different property law systems of the states and taxes the income of persons based on state law.[9] It would be unfairly burdensome to tax individuals on income to which they never had any legal right.

---

[7] Sec. 66(b).

[8] Sec. 66(c).

INCOME OF MINOR CHILDREN

As noted earlier, whether a husband or wife is taxed on income is determined by state law. However, earnings of a minor child are taxed to the child regardless of the state's property law system. Therefore, earnings of a child from either personal services (compensation) or from property (dividends, interest, rents, etc.) are taxed to the child, not the child's parents. As noted in Chapter I:2, the unearned income of a child under age 24 may be taxed at higher rates. In the case of spouses, the spouse who has a legal right to such income determines who is taxed on it. In the case of children, however, the individual who earns the income is the individual who is taxed on it.

WHEN IS INCOME TAXABLE?

OBJECTIVE 3

Determine when a particular item of income is taxable under both the cash and accrual methods of reporting

The year in which income is taxed depends on the taxpayer's accounting method. The three primary overall accounting methods are the **cash receipts and disbursements method**, the **accrual method**, and the **hybrid method**. While taxpayers have the right to choose a method of accounting, the chosen method still must clearly reflect income as determined by the IRS. The IRS has the power to change the accounting method used by a taxpayer if, in the opinion of the IRS, the method being used does not clearly reflect income. Under this authority, the IRS determined that businesses with inventories had to use the accrual method, but created a hodgepodge of exceptions for small businesses.[10] Taxpayers (other than tax shelters) whose average gross receipts for the three prior years do not exceed $31 million in 2025 ($30 million in 2024) have the option of electing the cash method.[11] Also, businesses without inventories, such as professional service partnerships, can use the cash method regardless of size. This change simplifies accounting for millions of small and medium sized businesses. Also, the tax liability coincides with cash inflow.

KEY POINT

Neither the IRC nor the Regulations define the terms *accounting* and *accounting method*.

Once an accounting method has been adopted, it cannot be changed without permission of the IRS. See Chapter I:11.

ADDITIONAL COMMENT

Taxpayers engaged in more than one trade or business may use a different method of accounting for each separate trade or business.

CASH METHOD

The *cash receipts and disbursements method* of accounting is used by most individual taxpayers and many small businesses. (See Chapter I:11 for a more complete discussion of who is permitted to use the cash method.) Under this method, income is reported in the year the taxpayer actually or constructively receives the income rather than in the year the income is earned. The income can be received by the taxpayer or the taxpayer's agent and be in the form of cash, other property, or services.[12] In the case of property or services, the amount included in income is the value of the property or services. An accounts receivable or other unsupported promise to pay is considered to have no value under the cash method and, as a result, no income is recognized until the receivable is collected. Topic Review I:3-1 summarizes when various types of income are reported.

ADDITIONAL COMMENT

The use of the cash receipts and disbursements method of accounting gives the taxpayer some control over the timing of the recognition of income and deductions. It also has the advantage of simplicity.

The fact that prepaid income is usually taxed when received, rather than when earned, often results in a mismatching of income and expenses.

EXAMPLE I:3-9 ▶ In December of the current year, Troy, who owns an apartment building, collects the first and last months' rent from a new tenant. Troy must report two months' rent in the current year. The

---

[9] See *Burns Poe v. H. G. Seaborn*, 9 AFTR 576, 2 USTC ¶611 (USSC, 1930). In 2010, the IRS Chief Counsel concluded that the rule also applies to same-sex California couples who enter into domestic partnership agreements based on the fact that California community property law applies to such couples (CCA 201021050).

[10] Taxpayers whose annual gross receipts for the three prior years did not exceed $1 million ($10 million if the taxpayer's principal business was not the sale of inventory) were allowed to use the cash method. Reg. Sec. 1.446-1(c)(2)(I) and Rev. Proc. 2002-28, 2002-1 C. B. 815 modified by Rev. Proc. 2012-20 I.R.B. 700. In addition, Sec. 448 required C corporations (and partnerships with corporate partners, tax shelters, and certain trusts) to use the accrual method of accounting, but exempted qualified personal service corporations, certain farms, and entities with average gross receipts under $5 million from the requirement.

[11] Sec. 448.

[12] An agent can be an employee, relative, or other person authorized to receive the income.

TOPIC REVIEW I:3-1

When Income Is Taxable

Item	Cash Basis	Accrual Basis
Compensation	Year actually or constructively received.	Year earned or year received if prepaid.
Interest	Year actually or constructively received.	Year accrued or year received if prepaid.
Discount on Series E or EE Bonds	Choice of reporting interest as it accrues or at maturity.	Year accrued.
Dividends	Year actually or constructively received.	Year actually or constructively received.
Rent	Year actually or constructively received (does not apply to a deposit).	Year accrued or year received if prepaid (year accrued if services are associated, e.g., in a hotel or motel) (does not apply to a deposit).
Services (maintenance contracts, dance lessons, etc.)	Year actually or constructively received.	Year accrued or year received if prepaid except that a taxpayer may report the income as it accrues if all the services are to be performed by the end of the next tax year.
Sale of goods	Year actually or constructively received.	Year of sale or year cash is received if prepaid except may elect to report in year of sale if goods are not on hand, amount received is less than cost of item, and same accounting method is used for financial accounting.
Subscriptions (newspapers, magazines, etc.)	Year actually or constructively received.	Year earned or year cash is received, if prepaid, except may elect to report income as newspaper, etc., is published.
Memberships (automobile clubs, etc.)	Year actually or constructively received.	Year earned or year received if prepaid (certain nonstock corporations may elect to report prepaid amounts over the membership period, if the period covers three years or less).
Sale of property (other than stock)	Year actually or constructively received.	Year transaction is completed (e.g., the close of escrow in case of sale of real estate).
Sale of stock	Year transaction is executed.	Year transaction is executed.

actual expenses associated with the last month's rental are not incurred until the last month. However, Troy must report two months' income this year, but may only deduct one month's expenses. ◀

ADDITIONAL COMMENT

There is no recognized doctrine of constructive payment.

REAL-WORLD EXAMPLE

Paul Hornung, a former football player with the Green Bay Packers, was awarded an automobile in 1961 for being the outstanding player in the NFL championship game, but he did not actually receive it until 1962. He attempted to invoke the constructive receipt doctrine and report the income in 1961. The court held that he could not claim constructive receipt because the car was not set aside in the year of the award. *Paul v. Hornung*, 47 T.C. 428 (1967).

Reporting prepaid income can have harsh results because it is not offset by related deductions. If the income is taxed before the expenses are incurred, the taxpayer may not have enough cash to pay the expenses when they are incurred.[13] This burden is mitigated, in part, by Treasury Regulations and Revenue Procedures discussed in this chapter (e.g., the treatment of prepaid income, page I:3-11).

Constructive Receipt. As noted, a cash-basis taxpayer must report income in the year in which it is actually or constructively received. Constructive receipt means that the income is made available to the taxpayer so that he may draw upon it at any time. However, income is not constructively received if the taxpayer's control of its receipt is subject to substantial limitations or restrictions. **Constructive receipt doctrine** prevents taxpayers from deferring income that is otherwise available by merely "turning their backs" on it. A taxpayer cannot defer income recognition by refusing to accept payment until a later taxable year.

---

[13] This mismatching of income and expenses affects both cash and accrual basis taxpayers.

Examples of constructive receipt where taxpayers are required to report taxable income even though no cash is actually received include:

- A check received after banking hours[14]
- Interest credited to a bank savings account[15]
- Bond interest coupons that have matured but have not been redeemed[16]
- Salary available to an employee who does not accept payment[17]

An amount is not considered to be constructively received if:

- It is subject to substantial limitations or restrictions.
- The payer does not have the funds necessary to make payment.
- The amount is unavailable to the taxpayer.

EXAMPLE I:3-10 ▶ Beth owns an ordinary life insurance policy with a cash surrender value. She need not report any income as the cash surrender value increases because the requirement that she cancel the policy in order to collect the cash surrender value constitutes a substantial restriction. If she cancels the policy, she reports as income the difference between the cash surrender value collected and net premiums paid. ◀

EXAMPLE I:3-11 ▶ Cathy has received a paycheck from her employer but has been told to hold the check until the employer has sufficient funds to cover the payroll. Cathy need not report the amount of the check as income until funds are deposited to the employer's account. ◀

EXAMPLE I:3-12 ▶ Dan sold land for $100,000 in December with payment due the following February. During the negotiations, the buyer offered to pay cash. Because the parties did not agree to a cash transaction, there was no constructive receipt in December. Under the terms of the sale, funds were not available at the time of sale. Thus, Dan is permitted to defer the recognition of income until the funds become available the following year. ◀

Exceptions. There are exceptions to the basic rule that cash-basis taxpayers report income when it is actually or constructively received.

- The interest on Series E and Series EE U.S. savings bonds need not be reported until the final maturity date, which varies but may be as long as forty years after the date of issue, and can be deferred even longer if the bonds are exchanged within one year of the final maturity date for Series HH U.S. savings bonds.[18] Many taxpayers purchase bonds that mature after retirement when the taxpayers expect to be in a lower tax bracket.

EXAMPLE I:3-13 ▶ Tenisha purchases a Series EE U.S. savings bond for $2,500 that will mature in 10 years. The bond pays no interest until maturity when it will be worth $5,000. Tenisha is not required to report any interest income for tax purposes until the bond matures. At maturity, when Tenisha receives the $5,000, she will report $2,500 of interest income. If she desires to defer the interest further, she could exchange her Series EE bond for a Series HH bond within one year. ◀

- Special rules also apply to farmers and ranchers. Farmers may report crop insurance proceeds in the year following receipt if the crop would have ordinarily been sold in the following year. Ranchers who sell livestock on account of a drought, flood, or other weather related condition may delay reporting income until the following year if they can establish that the livestock sale would otherwise have taken place in a later tax year.[19] These rules help taxpayers avoid a bunching of income into one year.
- Small and medium taxpayer exception for inventories. As noted above, taxpayers who have average annual gross receipts of $31 million or less for the prior three years are exempt from maintaining inventories and may use the cash method. The ruling was widely interpreted to mean that small taxpayers did not need to account for inventories and could deduct

[15] Reg. Sec. 1.451-2(b).

[16] Ibid.

[17] *James J. Cooney*, 18 T.C. 883 (1952).

[18] Series E bonds were issued prior to 1980; Series EE bonds were issued after 1979. The interest on the Series HH bonds is taxable as received.

[19] Recognizing the volatile nature of farming and ranching, Congress established a special averaging technique for farmers and ranchers. Electing farmers and ranchers compute their tax on the average income for the current and three preceding years. Sec. 1301.

the amount of their purchases in the year of payment. However, the IRS subsequently issued Rev. Proc. 2001-10, whereby it was clarified that the small taxpayer exception will only allow small taxpayers to deduct purchases of inventory in the year of purchase if (1) the inventory purchases are paid for by the end of the year and (2) the inventory is actually sold in such year. This ruling limits the exception with respect to inventories.

EXAMPLE I:3-14 ▶

The Cheryl Corporation begins a new retail business in the current year and has sales of $400,000. The corporation has year-end accounts receivable of $15,000 and purchases $240,000 of merchandise during the year. At year-end, the corporation has not paid for $30,000 of the merchandise it had purchased and has $50,000 of inventory on hand. The corporation pays operating expenses of $140,000 during the year. The corporation's income computed under both methods is as follows:

	Accrual		*Cash*	
Sales		$400,000		$385,000
Purchases	$240,000		$210,000	
Ending inventory	50,000		20,000*	
Cost of sales		190,000		190,000
Gross profit		210,000		195,000
Expenses		140,000		140,000
Net income		$ 70,000		$ 55,000

*$50,000 − $30,000 = $20,000

The difference between the accrual and cash methods is that the sales are not reported under the cash method until such sales are actually collected. Thus, the corporation does not include year-end receivables in this year's income. The year-end receivables will be reported when the receivables are collected in later taxable years.

As can be seen above, the cost of sales under both the accrual and cash methods are the same. This is because under Rev. Proc. 2001-10, taxpayers may not deduct inventory unless it is both paid for and sold. Since $30,000 was not paid for by year-end, it is not deductible and the purchases under the cash method are $30,000 less than under the accrual method. The ending inventory under the cash method is the physical inventory of $50,000 reduced by the $30,000 of inventory on hand that has not been paid for by year-end. ◀

ACCRUAL METHOD

Taxpayers using the accrual method of accounting generally report income in the year it is earned. Income is considered to have been earned when all the events have occurred that fix the right to receive the income and when the amount of income can be determined with reasonable accuracy.[20] The *Tax Cuts and Jobs Act* changed the all events test to require that income be reported no later than the year it is included on financial statements. In the case of a sale of property, income normally accrues when title passes to the buyer.[21] Income from services accrues as the services are performed.

REAL-WORLD EXAMPLE

The Ninth Circuit Court of Appeals has held that "markers" customers gave to a gambling casino to evidence their indebtedness to the casino required accrual even though the receivables were legally unenforceable under state law. The court found that there need only be a "reasonable expectancy" that payment would be made. *Flamingo Resort, Inc. v. U.S.,* 50 AFTR 2d 82-502, 82-1 USTC ¶9136 (9th Cir., 1982).

Prepaid Income. A major exception to the normal operation of the accrual method is the rules applicable to the receipt of prepaid income. Prepaid income is generally taxable in the year of receipt. For example, if a lender receives January interest in the preceding December, it is taxable in the year received, whether the lender uses the cash or accrual method. This treatment, of course, differs from financial accounting, where the interest would be reported as it accrues.

Two important exceptions to the general rule are worth noting. Accrual-basis taxpayers may defer recognizing income in the case of certain advance payments for *goods* and in the case of certain advance payments for *services* to be rendered. A taxpayer may defer advance payments for goods (inventory) if the taxpayer's method of accounting for the sale is the same for tax and financial accounting purposes.[22]

---

[20] Reg. Sec. 1.451-1(a).

[21] Regulation Sec. 1.446-1(c)(1)(ii), however, does permit taxpayers the right to accrue income from the sale of inventory when the goods are shipped, when the product is delivered or accepted, or when title passes, as long as the method is consistently used.

[22] Sec. 451.

Taxpayers may defer payments for future services to the year following the year in which the payment is received.[23] Revenue relating to services provided in the year payment is received is reported currently. Revenue relating to future years is reported in the year following the year of receipt even if the payments relate to multiple future years. The rule can be applied to a variety of services such as Internet service, dance lessons, maintenance contracts (but not warranties included in the sales price of a product), membership fees, and rent (if services are associated with the rent, such as a hotel or motel). The rule is available when service and products are provided together. The rule does not apply to rent (if services are not associated with the rent), insurance premiums, interest, or warranty contracts included in the price of a product.

EXAMPLE I:3-15 ▶ Bear Corporation, a publicly held, accrual-basis taxpayer that uses the calendar year as its tax year, sells computer courses under contracts ranging from three months to two years. When income is reported depends on the length of the contract and the month in which the contract is sold. Assume that Bear sells three contracts on July 1. One is for three months costing $90, a second is for one year costing $300, and the third for two years costing $500. The $90 charged for the three month contract is reported currently as all services are provided currently. One-half of $300 charged for the one-year contract is reported currently and one-half is reported next year as one-half of the services are provided currently and one-half will be provided next year. One-fourth of the $500 charged for the two-year contract is reported this year and the balance is reported next year. This is because Sec. 451 does not permit income to be deferred beyond the end of the year following the year in which payment is received.

	Year Includible in Gross Income	
Length of Contract	*Current Year*	*Next Year*
3 months	$ 90	
12 months	150	$150
24 months	125	375

◀

REAL-WORLD EXAMPLE

A dance studio using the accrual method was required to include in taxable income all advance payments for lessons in the form of cash and negotiable notes, plus contract installments due but remaining unpaid at year end. *Mark E. Schlude v. CIR,* 11 AFTR 2d 751, 63-1 USTC ¶9284 (USSC, 1963).

HYBRID METHOD

The *hybrid method* of accounting is a combination of the cash and accrual methods. Under the hybrid method, some items of income or expense are reported under the cash basis and others are reported under the accrual method. The method is most often encountered in small businesses that maintain inventories and are required to use the accrual method of accounting for purchases and sales of goods. Such businesses often prefer to use the cash method of reporting for other items because the cash method is simpler and may provide greater flexibility for tax planning. A taxpayer using the hybrid method of accounting would use the accrual method with respect to purchases and sales of goods but would use the cash method in computing all other items of income and expenses.

STOP & THINK

Question: Taxpayers who are eligible to use the cash method often choose the cash method of reporting income over the accrual method. Why is the cash method generally more favorable for income tax purposes?

Solution: Taxpayers who have the option frequently choose the cash method over the accrual method because it is simpler, offers greater tax planning opportunity, and results in taxes being owed when income is actually received. The cash method is simpler because taxpayers are not required to make the complex accruals associated with the accrual method. Planning opportunities are greater because cash basis taxpayers can deduct expenses when paid, thereby allowing taxpayers to control their tax liability. Under the accrual method, prepaid expenses are not deductible when paid, but must be deducted over the periods benefitted. Finally, cash basis taxpayers do not have to pay taxes until they receive the money. Under the accrual method, income is reported when it is earned even if it has not been received. As a result, accrual basis taxpayers sometimes have to pay the tax before they actually receive the income they have earned.

---

[23] Sec. 451(c).

ITEMS OF GROSS INCOME: SEC. 61(a)

OBJECTIVE 4

Apply the rules of Sec. 61(a) to determine whether items such as compensation, dividends, alimony, and pensions are taxable

Section 61(a), quoted earlier in this chapter, states that gross income includes, but is not limited to, fourteen specifically listed types of income. Several of these items are discussed below.

COMPENSATION

Compensation is payment for personal services. It includes salaries, wages, fees, commissions, tips, bonuses, and specialized forms of compensation such as director's fees, jury fees, and marriage fees received by clergymen. What the compensation is called, how it is computed, the form and frequency of payment, and whether the compensation is subject to withholding is of little significance. Similarly, the fact that the services are part-time, one-time, seasonal, or temporary is immaterial.

There are exclusions, however, for a variety of employer-provided fringe benefits such as group term life insurance premiums, health and accident insurance premiums, employee discounts, contributions to retirement plans, and education benefits. In addition, there is a limited exclusion applicable to foreign-earned income. Both fringe benefits and the foreign-earned income exclusion are discussed in Chapter I:4.

ADDITIONAL COMMENT

Salaries and wages constituted 63.7% of total AGI reported in 2022.

BUSINESS INCOME

The term *gross income* usually refers to the total amount received from a particular source. In the case of businesses that provide services (e.g., accounting and law), the gross business income is the total amount received. In the case of manufacturing, merchandising, and mining, however, gross income is total sales less the cost of goods sold. Thus, gross income for tax purposes is comparable to gross profit for financial accounting purposes.

The cost of goods sold is, in effect, treated as a return of capital. Chapter I:4 discusses a well-established tax concept that a return of capital is not income and, therefore, cannot be subject to the income tax. Chapter I:11 discusses how inventories are valued.

SELF-STUDY QUESTION

A retail company had sales of $1,000,000 and the following costs: goods sold, $400,000, salaries, $200,000, and rent and other expenses, $100,000. What is the company's gross income?

ANSWER

The gross income is $600,000. The sales figure is reduced by the cost of goods sold.

GAINS FROM DEALINGS IN PROPERTY

Gains realized from property transactions are included in gross income unless a nonrecognition rule applies. As is true with business inventories, taxpayers may deduct the cost of property in order to arrive at the gain from a property transaction.[24] The tax law contains over 30 nonrecognition rules, which allow taxpayers to postpone the recognition of gains and losses from certain types of property transactions. In a few instances, these rules allow taxpayers to permanently exclude gains from gross income.[25]

Losses are not offset against gains in computing gross income. Rather, most losses are deductions *for* adjusted gross income. Furthermore, net capital losses for individuals are subject to provisions that limit the amount that can be deducted from other income to $3,000 per year. Losses from the sale or disposition of an asset held for personal use are not deductible.

INTEREST

Interest is compensation for the use of money. Taxable interest includes interest on bank deposits, corporate bonds, mortgages, life insurance policies, tax refunds, most U.S. government obligations,[26] and foreign government obligations.[27] Nontaxable interest is discussed below.

TYPICAL MISCONCEPTION

It is sometimes mistakenly assumed that interest paid on federal obligations such as Treasury bonds, notes, and bills will also qualify for tax exemption.

Tax-Exempt Interest. Since the inception of the federal income tax in 1913, interest on obligations of states, territories, and U.S. possessions and their political subdivisions has been tax exempt.[28] Bonds issued by school districts, port authorities, toll road commissions, counties, and fire districts have been held to be tax exempt. In addition, Sec. 501(c)(3) organizations may issue up to $225 million of tax-exempt bonds. Such organizations include private universities, hospitals, churches, and similar nonprofit organizations.

---

[24] Note that *business income* and *gains from dealings in property* are overlapping terms. The gross profit from the sale of inventory is actually both business income and a gain from a property transaction. Typically, however, the phrase *gains from dealings in property* may be assumed to mean gains from dealings in property other than inventory, so as to avoid confusion.

[25] For example, Sec. 121 allows taxpayers to exclude a limited amount of gain from a sale of a personal residence.

[26] The interest on many federal obligations issued before March 1, 1942 is tax exempt.

[27] Reg. Sec. 1.61-7.

[28] Sec. 103(a)(1).

ADDITIONAL COMMENT

Many tax advisers consider the exclusion of interest on municipal bonds to be one of the few remaining tax shelters. As a result, municipal bond funds have flourished in recent years.

ADDITIONAL COMMENT

The doctrine of intergovernmental immunity also results in most states exempting from taxation income received from U.S. obligations.

As noted above, this exclusion does not extend to interest paid on most U.S. government obligations or foreign government obligations, nor does the exclusion exempt from taxation gains from the sale of state or local government bonds or interest on tax refunds paid by state and municipal governments.

There has always been some uncertainty as to whether the federal government could tax interest on state and local government obligations. The basic question is whether taxing these obligations would violate the doctrine of intergovernmental immunity in that the tax would reduce the ability of state and local governments to finance their operations because taxable bonds usually pay a higher rate of interest than tax-exempt bonds. The belief that taxing state and local government interest is unconstitutional is no longer widely held. While there have been efforts to tax interest on state and local bonds, the only changes have been to limit the use of bonds for private activities,[29] federally insured loans,[30] and arbitrage.[31]

SELF-STUDY QUESTION

Young parents, whose annual income is currently $50,000, begin a regular program of purchasing Series EE savings bonds for their 8-year-old daughter's college education. Is there any risk that when the bonds are redeemed the interest income will not be excludable?

ANSWER

Yes, the parents' income may increase over the years to such an extent that the interest exclusion will not be available.

Series EE Savings Bond Exclusion. Taxpayers may purchase and eventually redeem Series EE bonds tax-free if they use the proceeds to pay certain college expenses for themselves, a spouse, or dependents.[32]

To qualify for the exclusion:

- The bonds must be purchased after 1989 by an individual who is age 24 or older at the time of the purchase.
- The bonds must be purchased by the owner and cannot be a gift to the owner.
- The receipts from the bond redemption must be used for tuition and fees, which are first reduced by tax-exempt scholarships, veterans benefits, Hope and Lifetime Learning credits, and other similar amounts.[33]
- Married couples living together must file a joint return to obtain the exclusion.

The full amount of interest is excluded only if the combined amount of principal and interest received during the year does not exceed the net qualified educational expenses (tuition and fees reduced by exempt scholarships, etc.), and the taxpayer's 2025 modified adjusted gross income is not over $99,500 ($149,250 for married individuals filing a joint return). The exclusion is fully phased-out for taxpayers whose 2025 modified AGI is more than $114,500 ($179,250 for married individuals filing a joint return).[34]

If the net qualified education expenses are less than the total principal and interest, a portion of the interest is excluded based on the ratio of the qualified educational expenses to the total principal and interest. The tentative exclusion is equal to

$$\text{Series EE interest} \times \frac{\text{Net qualified educational expenses}}{\text{Series EE interest} + \text{Principal}}$$

EXAMPLE I:3-16 ▶ In 2025, Lois redeems Series EE bonds and receives $6,000, consisting of $1,875 of interest and $4,125 of principal. Assume that the net qualifying education expenses total $4,800. Lois's educational expenses equal 80% of the total amount received ($4,800 ÷ $6,000). Thus, her exclusion is limited to $1,500 (0.80 × $1,875). ◀

---

[29] Interest from state and local bonds issued for private activities such as the construction of sports facilities, convention centers, and industrial park sites is taxable. A limited amount of tax-exempt bonds can be issued each year by a state for "qualified" private activities such as airport construction, redevelopment, and student loans. The limit is the greater of $225 million or $75 per resident (Sec. 146(d)). Though exempt from regular income tax, interest from these "qualified" private activity bonds is subject to the alternative minimum tax (see Chapter I:14).

[30] Sec. 149(b).

[31] Sec. 148. Interest from state or local government bonds issued for the purpose of using the proceeds to buy higher-yield investments is taxable. Such bonds are called arbitrage bonds.

[32] Sec. 135(c).

[33] The exclusion is not permitted for amounts paid for sports, games, or hobbies unless they are part of a degree program (Sec. 135(c)(2)(B)).

[34] Each of these amounts is adjusted annually for inflation. In 2024, the phase-out started at $96,800 ($145,200 on joint returns) and ended at $111,800 ($175,200 on joint returns).

ADDITIONAL COMMENT

According to forecasts by the College Board, a child born today will require about $240,000 for a four-year college education. If interest rates are around 6.5%, one would have to save about $500 a month until the child entered school to be able to pay this amount.

As noted, the amount of the exclusion is further reduced if modified adjusted gross income exceeds a $99,500 threshold ($149,250 for married individuals filing a joint return). Modified adjusted gross income includes the interest from education savings bonds and certain otherwise excludable foreign income.[35] The reduction is computed as follows:

$$\text{Otherwise excludable amount} \times \frac{\text{Excess modified AGI}}{\$15{,}000\ (\$30{,}000 \text{ for joint filers})}$$

EXAMPLE I:3-17 ▶ Assume the same facts as in Example I:3-16 and that Lois is single and has other adjusted gross income of $102,625, making her total AGI $104,500 ($102,625 + $1,875). Lois's otherwise available exclusion of $1,500 is reduced by $500 to $1,000. This reduction is computed by dividing the excess modified AGI of $5,000 ($104,500 – $99,500) by $15,000 and multiplying the result by $1,500. ◀

One difficulty with the rules is that the phase-out of the exclusion is based on income in the year the bonds are redeemed, not the year they are purchased. As a result, some taxpayers who purchase bonds anticipating an exclusion find they are ineligible for the exclusion when the bonds are redeemed.

RENTS AND ROYALTIES

Amounts received as rents or royalties are included in gross income. As noted earlier, prepaid rent is taxable when received. Security deposits, which are refundable to tenants upon the expiration of a lease, are not included in gross income. The deposit is included in gross income only if it is not refunded upon the expiration of the lease.

EXAMPLE I:3-18 ▶ In December 2025, Buddy rents an apartment to Gary. Buddy receives the first and last months' rent plus a security deposit of $500. Buddy must include in 2025 gross income both the first and last months' rent. Assume that Gary moves out of the apartment in 2027 and Buddy keeps $300 of the security deposit to cover repairs costing $200 and five days' unpaid rent, which amounts to $100. In 2027, Buddy would include the $300 in gross income and could deduct $200 for repairs. ◀

Royalties from copyrights, patents, and oil, gas, and mineral rights are all taxable as ordinary income. **Royalties** are proceeds paid to an owner by others who do business under some right belonging to the owner. Amounts received by a lessor to cancel, amend, or modify a lease also are taxable.

STOP & THINK

Question: Financial accounting contains extensive rules distinguishing "operating leases" from "capital leases." The IRC has no such rules. While the tax law does require the capitalization of leases that are in substance a purchase of the asset, most authority relating to the distinction comes from court cases. Why doesn't the tax law include specific rules relating to leased property?

Solution: The financial accounting rules that require businesses to capitalize some leases were established because of concern that long-term lease commitments represented unrecorded liabilities. Unrecorded liabilities distort a company's balance sheet, but may not distort reported income. Since the tax law is concerned with the reporting of income rather than the balance sheet, neither Congress nor the Treasury Department has seen the need to adopt leasing rules like those in financial accounting.

Improvements by Lessees. Improvements made by a lessee that increase the value of leased property are included in the lessor's income only if the improvements are made in lieu of paying rent or if rent is reduced because of the improvements. In such situations, the lessor must include the fair market value (FMV) of the improvement in gross income when it is made to the property.[36]

---

[35] Specifically, modified adjusted gross income includes amounts that qualify for the foreign earned income exclusion (Sec. 911), the exclusion for possession's income (Sec. 931), and the exclusion for income from Puerto Rico (Sec. 933). The limitation is determined after taking the partial exclusion for Social Security benefits and railroad retirement (Sec. 86), claiming the allowable deduction for retirement contributions (Sec. 219), and applying the passive loss limitation (Sec. 469).

[36] Reg. Sec. 1.109-1.

EXAMPLE I:3-19 ▶ Rita rents an apartment to Anna. The apartment normally would rent for $1,000 per month, but Rita agrees to accept $400 per month for the first year if Anna builds a block wall around the property. Rita estimates that she would have to pay someone $6,000 to build the wall. Rita is accepting reduced rent and must report gross income of $6,000 when the wall is added to the property. The $6,000 could be added to Rita's basis in the property and should qualify as a depreciable asset. ◀

Improvements not made in lieu of rent are not income to the lessor. No adjustment is made to the lessor's basis in the property and, therefore, no depreciation is allowable. Gain or loss is recognized only when the property is disposed of.[37] Whether the improvements are in lieu of rent depends on the intent of the parties. This determination is based on the facts of the particular situation. The rental rate, the terms of the rental agreement, and whether the improvements have an estimated useful life exceeding the term of the lease may all be indications of intent.

ADDITIONAL COMMENT

Shareholders of closely held corporations generally do not want to receive dividends from their corporations. The reason? They are taxed as ordinary income and the corporation does not receive a tax deduction for the payments.

DIVIDENDS

Dividends are included in shareholder gross income. The result is a so-called double tax because corporations are taxed on income they earn, and shareholders are taxed when the income is distributed as dividends.

As noted in the previous chapter many corporations avoid the problem of "double taxation" by making S elections which result in the corporations and their shareholders being taxed much like partnerships. Other important provisions reduce the tax burden on dividends:

- C Corporation receiving dividends from other domestic C Corporations may claim a "dividends received deduction" that reduces, and in some cases eliminates, the second corporate tax on the income. The amount of the dividend received deduction is generally 50% of dividends received by a corporation owning less than 20% of the distributing domestic corporation, 65% of dividends received by a corporation owning at least 20% but less than 80% of the distributing domestic corporation, and 100% of the dividends received by a domestic corporation owning 80% or more of the distributing domestic corporation. This rule is discussed more in Chapter I:16 and in depth in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* text and the *Comprehensive* volume.
- The *Tax Cuts and Jobs Act* fundamentally changed the tax treatment of foreign dividends. Congress adopted a territorial tax system allowing domestic corporations to claim a 100% dividend received deduction for dividends received from 10% or greater foreign subsidiaries with only foreign earnings. This change recognized that host countries tax income earned locally. The dividend received deduction is prorated in the case of foreign subsidiaries with both domestic and foreign source earnings.

EXAMPLE I:3-20 ▶ Alpha Corp. receives a $1,000 dividend from Beta, its wholly owned domestic subsidiary, and a $1,000 dividend from Gamma, its wholly owned foreign subsidiary. The dividend from Beta qualifies for the 100% dividend received deduction because Alpha meets the 80% ownership threshold. The dividend received deduction would be 65% or $650 if Alpha owned between 20% and 80% of Beta's stock, and would be 50% or $500 if Alpha owned less than 20% of Beta's stock.

The deduction for the dividends from Gamma depends on the source of Gamma's accumulated earnings. The deduction is 100% or $1,000 if all of Gamma's accumulated earnings are from foreign sources, but the deduction is $400 if only 40% of Gamma's accumulated earning are from foreign sources. ◀

ADDITIONAL COMMENT

Beginning in 2013, higher-income taxpayers (AGI greater than $200,000 for single or $250,000 for married filing jointly) have to pay an additional 3.8% tax on net investment income. Net investment income generally includes interest, dividends, rents, and capital gains.

- Lower tax rates apply to qualified dividends received by individuals. There is no tax on qualified dividends received by single taxpayers with taxable income of less than

---

[37] Reg. Sec. 1.1019-1.

$48,350 in 2025 (see the Quick Reference section of the text for taxable income amounts for other filing statuses). Dividends received by single taxpayers with taxable income greater than $48,350 and less than or equal to $533,400 are taxed at 15%. Dividends received by single taxpayers with taxable income over $533,400 are taxed at 20%. These lower rates apply only to stock that meets a special 60-day holding period. In general, these rates apply to dividends received from a domestic corporation. Dividends received by individuals from foreign corporations are taxed at regular rates unless covered by treaty.

EXAMPLE I:3-21 ▶ Georgia has taxable income of $65,000 and is in the 22% tax bracket in 2025. She owns 10% of Orange Corporation, an S corporation with $20,000 of income. The corporation distributes $1,000 to Georgia. She receives a $500 dividend from Red Corporation, a U.S. corporation, and $300 from Blue Corporation, a foreign corporation. Georgia will include $2,800 in gross income. This includes her share of Orange Corporation's income or $2,000 (10% × $20,000) along with $500 she received from Red Corporation and $300 she received from Blue Corporation. As Orange Corporation made an S-election, she must include in gross income her share of the corporation's income even though only part of it is distributed. The tax rate that applies to the $2,000 depends on the nature of the income earned by Orange Corporation. For example, part or all of the income could be treated as capital gains or dividend income if Orange earned those types of income while income from operations would be taxed at Georgia's higher tax rate of 22%. The dividend from Red Corporation qualifies for the favorable 15% tax rate as Georgia's taxable income is between $48,350 and $533,400. The dividend from Blue Corporation will be taxed at Georgia's regular tax rate of 22% as it was paid by a foreign corporation. ◀

EXAMPLE I:3-22 ▶ Celeste is a single taxpayer in 2025 with a salary of $61,750, qualified dividend income of $3,000, and itemized deductions of $16,000. Her taxable income is:

Adjusted gross income	$64,750
Itemized deductions	(16,000)
Taxable income	$48,750

Her taxable income excluding dividends is $45,750 ($48,750 – $3,000), and is taxed at regular rates. The special tax rate of 0% on dividends for single taxpayers ends at $48,350. As a result, $2,600 ($48,350 – $45,750) of Celeste's dividends are tax free, and the balance of the dividends or $400 ($3,000 – $2,600) is taxed at 15%.

Tax on ordinary income of $45,750 using rate schedule	$ 5,252
$2,600 of dividend income is tax free	–0–
Tax on $400 of dividend income at 15%	60
Gross tax	$ 5,312

◀

Dividends Defined. Distributions to shareholders are taxable as dividends only to the extent they are made from either the corporation's current earnings and profits (a concept similar, although not identical, to current year's net income for financial accounting purposes) or accumulated earnings and profits (a concept similar, although not identical, to beginning of the year retained earnings).[38] Earnings and profits are discussed in Chapter I:16 and in greater depth in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* text and the *Comprehensive* volume. Distributions in excess of current and accumulated earnings and profits are treated as a nontaxable recovery of capital. Such distributions reduce the shareholder's basis in the stock. Distributions in excess of the basis of the stock are classified as capital gains.

EXAMPLE I:3-23 ▶ Liz is the sole shareholder in Atlantic Corporation and has owned the stock for five years. The basis of her stock is $50,000. Atlantic distributes $40,000 to Liz. Accumulated earnings and profits at the beginning of the year equal $25,000, and current earnings and profits equal $10,000. Liz will report $35,000 of taxable dividend income and a nontaxable return of capital equal to $5,000. In addition, Liz must reduce her basis in the stock by $5,000. Alternatively, if the distribution to Liz were $100,000, she would report $35,000 of taxable dividend income, $50,000 as a nontaxable return of capital, and a $15,000 long-term capital gain. ◀

---

[38] Sec. 316(a). The federal income tax became effective on March 1, 1913. Thus, income accumulated before that date can still be distributed on a tax-exempt basis.

Stock Dividends. A **stock dividend** is a distribution by a corporation to its shareholders of the corporation's own stock. In 1920, the Supreme Court held that simple stock dividends could not be taxed because they were not income.[39] More precisely, income had not been realized because there was no real change in the taxpayer's interest or the risks faced by the taxpayer. Over the years, however, the exclusion for stock dividends has been narrowed. If a shareholder has the option of receiving either cash or stock, the shareholder is taxed even if he or she opts to receive stock. The option to receive cash constitutes constructive receipt of the cash. Today, many other features of a stock dividend may cause it to be taxed. For example, a distribution in which preferred stock is distributed to some common shareholders and common stock is distributed to others is taxable.[40] The recipient of a taxable stock dividend includes the value of the stock received in gross income, and that amount becomes the basis of the shares received.

A nontaxable stock dividend has no effect on a shareholder's income in the year received. The basis of the old shares is allocated between the old shares and the new shares. Furthermore, the holding period for the new shares starts on the same date as the holding period of the old.

ADDITIONAL COMMENT

Many mutual funds do not want their shareholders to have a large tax bill on the undistributed capital gains allocated among the shareholders. Some mutual funds will sell stocks in the portfolio that can be sold at a loss to offset gains incurred earlier in the year.

EXAMPLE I:3-24 ▶ Carol purchases 100 shares of Mesa Corporation stock for $1,100 (or $11 per share). Carol receives 10 shares of Mesa stock as a nontaxable stock dividend. After the dividend, Carol owns 110 shares of stock with a total basis of $1,100 (or $10 per share). All of the stock is assumed to have been acquired at the time of the original purchase. ◀

Capital Gain Dividends. A **capital gain dividend** is a distribution by a regulated investment company (commonly called a *mutual fund*) of capital gains realized from the sale of investments in the fund. Such dividends also include any undistributed capital gains allocated to shareholders by such companies.[41] Capital gain dividends are long-term regardless of how long the shareholder has owned the stock of the regulated investment company.

Constructive Dividends. In many corporations, the same individuals are both shareholders and employees. A corporation may not deduct dividends paid to shareholders but is permitted to deduct reasonable compensation. Questions are often raised as to whether amounts reported as compensation are really disguised dividends. If an amount called compensation is unreasonably high, it will be disallowed and reclassified as a dividend.[42] Often the reasonableness of compensation is determined by comparing the compensation paid to the employee-shareholders with amounts paid to others performing similar services.

REAL-WORLD EXAMPLE

In the 1989 trial of Leona Helmsley, the billionaire hotel queen, it was disclosed that she had billed her companies for millions of dollars in personal items. The items ranged from a $12.99 girdle to a $1 million limestone-and-marble pool enclosure at her estate. She was sentenced to four years in prison and fined $7.1 million. The amounts paid to her by her companies represented constructive dividends.

EXAMPLE I:3-25 ▶ Carmen owns 100% of the stock in Florida Corporation and receives a $400,000 salary for serving as president. The corporation reports no taxable income and pays no dividends. Presidents of similar companies received salaries ranging from $75,000 to $160,000. The IRS probably would disallow a portion of Carmen's salary as unreasonable resulting in the corporation owing tax. The disallowed portion would be treated as a dividend. ◀

ADDITIONAL COMMENT

In one case, the taxpayer, who was also the president and principal shareholder, diverted cash from vending and pinball machines at his truck stops/restaurants to his personal use. The IRS's position was that these diverted cash amounts were a constructive dividend. *Hagaman v. CIR.,* 69 AFTR 2d 92-906 (6th Cir., 1992).

Constructive dividends are not limited to shareholder-employee compensation payments but may include situations where the shareholder also is a landlord (e.g., property is rented to the corporation at an amount greater than its fair rental value). A shareholder also may receive a constructive dividend because of a creditor or vendor relationship. It is not necessary that a dividend be formally declared or that distributions be in proportion to stock holdings. **Constructive dividends** are often distributions that are intended to result in a deduction to the corporation and taxable income (such as compensation) to the shareholder.[43] Other constructive dividends are intended to produce a nonreportable benefit to the shareholder,[44] or even result in a deduction to the corporation without income to the shareholder.[45]

[40] Reg. Sec. 1.305-4.

[41] Sec. 852(b).

[42] Sec. 162(a)(1).

ALIMONY AND SEPARATE MAINTENANCE PAYMENTS

The *Tax Cuts and Jobs Act* fundamentally changed the tax treatment of divorce settlements. Alimony payments covered by this law are neither taxable nor deductible. The rules apply to divorce and separate maintenance agreements entered into after December 31, 2018. The prior rules continue to apply to earlier divorces and separations.

Payments made pursuant to a divorce or legal separation are classified as alimony, child support, and property settlements. Property settlements and child support have never been taxable to the recipient nor deductible by the payer. Alimony payments covered by prior law are taxable to the recipient and deductible for AGI by the payer.

Example I:3-26 demonstrates the significant difference in taxation that can occur when a payment is classified as either alimony or a property settlement.

EXAMPLE I:3-26 ▶

Helen earns $500,000 and, as a result of her divorce, which was finalized in 2018, she is required to pay William $250,000. If the payment is a property settlement, Helen cannot deduct any of the $250,000 payment and William is not required to include the payment in his income. However, if the $250,000 is alimony, because the prior law applies, Helen can deduct the full amount in computing her adjusted gross income. William reports the $250,000 as alimony income. ◀

ADDITIONAL COMMENT

Child-support payments are not treated as alimony and are neither deductible by the payer spouse nor includible in income of the payee spouse.

ADDITIONAL COMMENT

If any amount specified in the divorce instrument will be reduced due to the happening of a contingency relating to a child or reduced at a time that can clearly be associated with such contingency, the amount of the reduction is treated as child support.

Prior tax law had rather specific rules that distinguished alimony, child support, and property settlements. Under prior law, in order to be treated as **alimony**, payments had to meet all of the following requirements:[46]

- Be made in cash (not property)
- Be made pursuant to a divorce, separation, or a written agreement between the spouses
- Terminate at the death of the payee
- Not be designated as being other than alimony (e.g., child support)
- Be made between people who are living in separate households

These rules are summarized in Topic Review I:3-2. Certain aspects of these rules will be discussed further.

A **property settlement** is a division of property pursuant to a divorce. In general, each spouse is entitled to the property brought into the marriage and a share of the property accumulated during marriage.[47] A division of property does not result in any income to either spouse, nor does either spouse receive a tax deduction. The basis of property received by either spouse as a result of the divorce or separation remains unchanged.

ETHICAL POINT

Tax consultants who advise divorcing couples may face an ethical dilemma because advice that benefits one spouse may be detrimental to the other, and because of the need to maintain confidential client relationships.

EXAMPLE I:3-27 ▶

As a result of a divorce, Dawn receives stock that she purchased with her former husband during their marriage for $12,000. At the time of the divorce, the stock was worth $14,000. Neither Dawn nor her former husband reports income from the transfer of the stock because the stock was acquired as a property settlement. If Dawn subsequently sold the stock for $15,000, she would report a $3,000 gain. ◀

---

[43] Other examples include excessive royalties (*Peterson & Pegau Baking Co.*, 2 B.T.A. 637 (1925)) and rent (*Limericks, Inc. v. CIR*, 36 AFTR 649, 48-1 USTC ¶9146 (5th Cir., 1948)).

[44] Examples include bargain sales of corporate assets to shareholders (*J. E. Timberlake v. CIR*, 30 AFTR 583, 42-2 USTC ¶9822 (4th Cir., 1942)), redemptions of a shareholder's stock (Sec. 302), and loans to shareholders that are actually dividends (*George Blood Enterprises, Inc.*, 1976 PH T.C. Memo ¶76,102, 35 TCM 436).

[45] Examples include paying an employee's personal expenses (*The Lang Chevrolet Co.*, 1967 PH T.C. Memo ¶67,212, 26 TCM 1054) and purchasing assets for an employee's use (*Joseph Morgenstern*, 1955 PH T.C. Memo ¶55,086, 14 TCM 282).

[46] Before 1942, alimony was not deductible (*Gould v. Gould*, 3 AFTR 2958, 1 USTC ¶13 (USSC, 1917)). The original rules were revised in 1984 and again in 1986. Prior rules apply to earlier divorces unless both spouses elect to apply current rules.

[47] How the property accumulated during marriage is divided may be determined by an agreement of the parties, or if they are unable to agree, on a basis of state law.

TOPIC REVIEW I:3-2

Tax Rules for Alimony

TREATMENT OF RECIPIENT

The recipient of alimony covered by prior law must include the amounts received in gross income. Property settlements and child support payments are not taxable.

TREATMENT OF PAYOR

The payer of alimony covered by prior law may deduct amounts paid *for* adjusted gross income. Property settlements and child support payments are not deductible.

APPLICABLE TO

Payments must be pursuant to a divorce, separation, or a written agreement between spouses entered into prior to 2019.

REQUIREMENTS

Spouses must be living in separate households. Payments must be in the form of cash paid to (or for the benefit of) a spouse or former spouse. Payments must terminate at the death of the payee. Payments may not be designated as being other than alimony (such as child support or a property settlement).

RECAPTURE

If the amount of payments declines in the second or third year, a portion of the early payments may have to be recaptured as income by the payer. The payee may deduct the same recaptured amount.

One unusual rule found in the prior law that relates to alimony is the so-called *recapture provision*. This provision was established to prevent a large property settlement that might take place after a divorce from being disguised as alimony so as to produce a deduction for the payer. In essence, the concept of recapture in connection with a divorce means that the payer of the alimony (who has taken a deduction for such amounts in prior years) must report the recapture amount in his or her income. The payee (who has reported the income in prior years) receives a deduction for the recaptured amount. This recapture occurs because the payments that originally were reported as alimony are being reclassified as property settlements.

EXAMPLE I:3-28 ▶ As a result of their separation, Mary agrees to pay Tom $20,000 per year. The payments are to cease if Tom remarries. In the year after the agreement is reached, Tom remarries and Mary discontinues the payments. No recapture is required because the payments are contingent on the remarriage of the recipient and the payments have been discontinued because of the occurrence of this contingency. ◀

PENSIONS AND ANNUITIES

ADDITIONAL COMMENT

The three largest sources of non-wage income in 2022, in rank order, were capital gains, rental partnership income, and pensions and annuities.

An **annuity** is a series of regular payments that will continue for a fixed period of time or until the death of the recipient. Taxpayers occasionally purchase annuities from insurance companies to provide a source of funds during retirement years. The insurance company may agree to make payments to the insured for the remainder of the insured's life. The retired individual is assured of a steady flow of funds for life. The price paid for the annuity represents its cost. The insured taxpayer is permitted to recover this cost tax-free.

Individuals receiving an annuity are permitted to exclude their cost, but are taxed on the remaining portion of the annuity. The following steps can be followed to determine the nontaxable portion of the annuity:

ADDITIONAL COMMENT

The expected return is limited to amounts receivable as an annuity. It does not include amounts that may be paid after death, nor does it include anticipated dividends.

- Determine the **expected return multiple**. This multiple is the number of years that the annuity is expected to continue and may be a stated term, say ten years, or it may be for the remainder of the taxpayer's life. In the latter situation, the expected return multiple (life expectancy) is determined by referring to a table (see Table I:3-1) developed by the IRS.
- Determine the **expected return**. This return is computed by multiplying the amount of the annual payment by the expected return multiple.

▼ TABLE I:3-1
Ordinary Life Annuities (One Life) Expected Return Multiple

Age	Multiple	Age	Multiple	Age	Multiple
5	76.6	42	40.6	79	10.0
6	75.6	43	39.6	80	9.5
7	74.7	44	38.7	81	8.9
8	73.7	45	37.7	82	8.4
9	72.7	46	36.8	83	7.9
10	71.7	47	35.9	84	7.4
11	70.7	48	34.9	85	6.9
12	69.7	49	34.0	86	6.5
13	68.8	50	33.1	87	6.1
14	67.8	51	32.2	88	5.7
15	66.8	52	31.3	89	5.3

17	64.8	54	29.5	91	4.7
18	63.9	55	28.6	92	4.4
19	62.9	56	27.7	93	4.1
20	61.9	57	26.8	94	3.9
21	60.9	58	25.9	95	3.7
22	59.9	59	25.0	96	3.4
23	59.0	60	24.2	97	3.2
24	58.0	61	23.3	98	3.0
25	57.0	62	22.5	99	2.8
26	56.0	63	21.6	100	2.7
27	55.1	64	20.8	101	2.5
28	54.1	65	20.0	102	2.3
29	53.1	66	19.2	103	2.1
30	52.2	67	18.4	104	1.9
31	51.2	68	17.6	105	1.8
32	50.2	69	16.8	106	1.6
33	49.3	70	16.0	107	1.4
34	48.3	71	15.3	108	1.3
35	47.3	72	14.6	109	1.1
36	46.4	73	13.9	110	1.0
37	45.4	74	13.2	111	.9
38	44.4	75	12.5	112	.8
39	43.5	76	11.9	113	.7
40	42.5	77	11.2	114	.6
41	41.5	78	10.6	115	.5

Source: Reg. Sec. 1.72-9, Table V.

Note: This table should be used if any or all investments were made on or after July 1, 1986. If all investments were made before July 1, 1986, use Reg. Sec. 1.72-9, Table I (not shown).

- Determine the **exclusion ratio.** This ratio is computed by dividing the investment in the contract (its cost) by the expected return (from above).
- Determine the **current year's exclusion.** This exclusion is computed by multiplying the exclusion ratio (from above) times the amount received during the year.

ADDITIONAL COMMENT

If payments are paid other than monthly, the number of anticipated payments is adjusted accordingly. Thus, if payments are made quarterly, the number from the table is divided by three.

EXAMPLE I:3-29 ▶

David, age 65, purchases an annuity for $28,800. Under the terms of the annuity, David is to receive $300 per month ($3,600 per year) for the rest of his life.

- The expected return multiple is 20.0. The multiple is obtained from Table I:3-1.
- The expected return is $72,000 (20.0 × $3,600).
- The exclusion ratio is 0.400 ($28,800 ÷ $72,000).
- The exclusion is $1,440 (0.400 × $3,600). ◀

After the entire cost of an annuity has been recovered, the full amount of all future payments is taxable. On the other hand, if an individual dies before recovering the entire cost, the remaining unrecovered cost can be deducted as an itemized deduction on that individual's final return. Insurance companies and businesses with retirement plans compute the taxable portion of annuities and report the amounts to recipients on Form 1099.

Qualified Retirement Plan Annuities. Distributions from pensions and other qualified retirement plans are commonly paid in the form of an annuity. Both the employer and the employee often contribute funds to these plans. The employee's cost is limited to after-tax amounts contributed by the employee, usually through withholding. The employee's cost does not include employer contributions or pretax contributions made by the employee to Sec. 401(k) and similar plans.

KEY POINT

The simplified method is used only for annuity distributions from qualified retirement plans. All other annuity distributions are taxed in accordance with the general rules above.

Simplified Method. A simplified method is now used to determine the taxable portion of an annuity paid from a qualified retirement plan. Under the simplified method, the nontaxable portion of each annuity payment is equal to the employee's after-tax investment in the annuity divided by the number of anticipated payments as determined from the following table:

Age of Primary Annuitant on the Start Date	*Number of Anticipated Payments*
55 and under	360
56–60	310
61–65	260
66–70	210
71 and over	160

EXAMPLE I:3-30 ▶ Jack, age 62, retires, and receives a $1,000 per month annuity from his employer's qualified pension plan. Jack contributed $65,000 to the plan prior to his retirement. Under the simplified method, Jack would exclude $250 per month as a return of capital. This is calculated by dividing $65,000 by 260 anticipated payments. ◀

ADDITIONAL COMMENT

Unlike other retirement plans, all contributions made to Roth plans are from after-tax income. When all Roth requirements are met, distributions are tax-free. See Chapter I:7.

Plan Comparison. Plans that involve a combination of pre- and after-tax contributions are taxed less favorably than plans that have only pretax or only after-tax contributions because income earned on after-tax contributions is taxed when distributed to retired employees. For that reason, many employers today have two separate plans, one with only pretax contributions and a second with only after-tax contributions (like the Roth plan). The result is that all distributions from the pretax plan are taxable, whereas no qualified distributions from the Roth plan are taxable.

KEY POINT

Under current law, a taxpayer must generally pay tax on a portion of each withdrawal made before the normal starting date of the annuity.

Advance Payments. Many pensions contain provisions that allow taxpayers to withdraw amounts before the normal starting date. Under current law, an amount withdrawn from a pension before the starting date is considered to be in part a recovery of the employee's contributions and in part a recovery of the employer's contributions.[48] After all contributions have been withdrawn, additional withdrawals are fully taxable.

EXAMPLE I:3-31 ▶ Dick, age 45 and in good health, withdrew $2,000 from a pension plan during the current year. No exception exempts Dick from the 10% penalty. Dick had made $40,000 of after-tax contributions to the plan, and his employer had contributed $60,000. Dick must include $1,200 (0.60 × $2,000) in income. Because no exception applies, Dick must also pay an additional penalty of $120 (0.10 × $1,200). The penalty is not deductible by Dick. ◀

ADDITIONAL COMMENT

In addition to being subject to the regular income tax, any amount withdrawn may also be subject to a 10% nondeductible penalty. The penalty is not applicable to taxpayers who are age 591/2 or older. Other exceptions to the early withdrawal penalty are discussed in Chapter I:7.

INCOME FROM LIFE INSURANCE AND ENDOWMENT CONTRACTS

The face amount of life insurance received because of the death of the insured is not taxable. If the proceeds are left with the insurance company and as a result earn interest, the interest payments are taxable. (See Chapter I:4 for a detailed discussion of life insurance and endowment contracts.)

---

[48] Sec. 72(e).

INCOME FROM DISCHARGE OF INDEBTEDNESS

In general, the forgiveness of debt is a taxable event. The person who owed the money must report the amount forgiven as income unless one of several exceptions found in the tax law applies. These exceptions are discussed in Chapter I:4.

INCOME PASSED THROUGH TO TAXPAYER

Generally, entities are subject to income tax based on the amount of taxable income. Corporations, as an example, are subject to income taxation. As noted, certain types of entities are not subject to income taxation as their income is taxed directly to their owners rather than to the entities. Such entities are referred to as "flow-through entities." Section 61 specifically lists three such instances: the distributive share of a partnership's income, income in respect of a decedent, and income from an interest in an estate or trust. Though not mentioned in Sec. 61, similar treatment is accorded S corporations, Regulated Investment Companies, and Real Estate Investment Trusts. In each case, the income that is produced by the entities merely flows through to the owners or beneficiaries of such entities. The rules can be summarized as follows:

KEY POINT

The pass-through of income by a partnership can create a situation known as phantom income. In this situation, a partner is required to report income on his or her individual tax return, but the partner may not have received a cash distribution from the partnership.

- Each partner reports his or her share of a partnership's income and deducts his or her share of the partnership's expenses. The income and deductions are reported by the partners whether or not any amount is actually distributed by the partnership during the year. The partnership's income and deductions retain their tax status.
- S corporations are taxed much like partnerships. Each shareholder in the corporation is taxed on his or her proportionate share of the corporation's income whether or not the income is actually distributed.
- Regulated Investment Companies (RICs) and Real Estate Investment Trusts (REITs) are also flow through entities. RICs, which include both mutual funds and exchange traded funds, invest in securities and are required to distribute their income to shareholders who are taxed on the distributions. REITs invest in real estate and real estate loans. They too must distribute their income to investors who are taxed on the income. The distributions (dividends, interest, rents, and gains) retain their tax status when reported by RIC and REIT investors.
- Income in respect of a decedent is income earned by an individual before death that is paid to another after the death. For example, salary earned by a husband before his death in an automobile accident may be paid to his widow. The recipient, in this case the widow, is taxed on the income if it has not been taxed to the decedent before his death.
- Income earned by estates and trusts is subject to taxation.[49] However, income distributions to beneficiaries are deductible by estates and trusts and are taxable to the beneficiaries. Thus, a trust with $20,000 of income that distributes $15,000 to its beneficiary is taxed on $5,000, while $15,000 is taxed to the beneficiary. Because of this approach estates and trusts are sometimes referred to as semi-flow-through or hybrid entities. The income taxation of estates and trusts is covered more fully in *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

OTHER ITEMS OF GROSS INCOME

The preceding discussions considered items of gross income specifically listed in Sec. 61(a). However, the fact that an item of income is listed in Sec. 61(a) does not necessarily cause it to be taxable. Rather, the condition that causes an item of income to be taxable is that it is not specifically excluded. Some items of gross income not mentioned in Sec. 61(a) are discussed below.

---

[49] Note the distinction between income in respect of a decedent and the income of an estate. Income in respect of a decedent is the income earned before death that was never taxed to the decedent. An example would be interest that was accrued but unpaid at death. Income of an estate is income earned after death that is paid to the estate. An example would be interest that accrues after the decedent's death.

PRIZES, AWARDS, GAMBLING WINNINGS, AND TREASURE FINDS

In general, prizes, awards, gambling winnings, and treasure finds are taxable.[50] Winnings in contests, competitions, and quiz shows are taxable.[51] The amount to be included in gross income is the fair market value of the goods or services received. Total gambling winnings must be included in gross income.[52] This includes proceeds from lotteries, raffles, sweepstakes, and the like. Gambling losses (up to the amount of the current year's winnings) are allowable as an itemized deduction.[53] The Regulations state that a treasure find constitutes gross income to the extent of its value in the year in which it is reduced to undisputed possession.[54]

EXAMPLE I:3-32 ▶ Several years ago, Colleen purchased a used piano at an auction for $100. In the current year, she finds $4,500 of currency hidden in the piano. Colleen must report the $4,500 as income in the current year.[55] ◀

REAL-WORLD EXAMPLE

An accountant collected from a client money that was to be used to pay the client's taxes. Then the accountant appropriated the money for his own use. The accountant was held to have received unreported income. *Richard A. Reeves,* 1977 PH T.C. Memo ¶ 77,114, 36 TCM 500.

ILLEGAL INCOME

Income from illegal activities is taxable.[56] Some people find this part of the tax law surprising, but this fact serves as the basis for many criminal convictions given that few criminals report their illegal income. For example, Al Capone was convicted of income tax evasion, not bootlegging or other crimes. It is not necessary to prove that an individual had illegal income, but merely that the individual had income that was not reported.

Individuals have used varied defenses against this rule. One taxpayer was successful in convincing the Supreme Court that he should not be taxed on embezzlement gains because he had an unconditional obligation to repay the amount embezzled,[57] but the Supreme Court reversed this position in a later case.[58] The court concluded that although an obligation to repay existed, the taxpayer had no "consensual recognition" (intent) to repay. In addition to embezzlement of funds, the courts have held that a kidnapper's ransom was taxable,[59] along with profits from bookmaking,[60] card playing,[61] forgery,[62] stealing,[63] bank robbery,[64] sale of narcotics,[65] illegal sale of liquor,[66] and bribes.[67] (See Chapter I:6 for a discussion of related deductions.)

ADDITIONAL COMMENT

Welfare payments are not normally required to be included in gross income. However, if the welfare payments are fraudulently received under state or federal assistance programs, they must be included in the recipient's gross income.

UNEMPLOYMENT COMPENSATION

For many years, unemployment compensation was excluded from gross income. In 1978, Congress changed the law to fully tax unemployment compensation because these benefits are a substitute for taxable wages.

SOCIAL SECURITY BENEFITS

Social Security benefits were excluded from gross income until 1984. Between 1984 and 1993, up to 50% of Social Security benefits were taxable. Beginning in 1994, up to 85% of Social Security benefits may be taxable. Under Sec. 86, the portion of Social Security benefits that are taxable depends on the taxpayer's provisional income and filing status. *Provisional income* is computed using the following formula:

---

Adjusted gross income (excluding Social Security benefits)		$xx,xxx
Plus:	Tax-exempt interest	x,xxx
	Excluded foreign income	x,xxx
	50% of Social Security benefits	x,xxx
Provisional income		$xx,xxx

REAL-WORLD EXAMPLE

The requirement that tax-exempt income be included in determining the taxable portion of Social Security benefits has been challenged on the basis that such provision is unconstitutional. However, the court held that this provision placed only an indirect burden on the governmental unit that issued the tax-exempt bonds, which was not protected by the intergovernmental immunity doctrine. *H.J. Goldin v. Baker,* 59 AFTR 2d 87-444, 87-1 USTC ¶9128, (2nd Cir., 1987).

Married Filing Separately. In the case of married couples who live together but file separately, taxable Social Security benefits are equal to the lesser of:

- 85% of Social Security benefits, or
- 85% of provisional income

Married Filing Jointly. For married couples filing jointly, the computation of the taxable portion of Social Security benefits is as follows:

- If provisional income is $32,000 or less, no Social Security benefits are taxable.
- If provisional income is over $32,000 (but not over $44,000), taxable Social Security benefits equal the lesser of:
  50% of the Social Security benefits, or
  50% of the excess of provisional income over $32,000
- If provisional income is over $44,000, taxable Social Security benefits are equal to the lesser of:
  85% of the Social Security benefits, or
  85% of provisional income over $44,000, plus the lesser of (1) $6,000 or (2) 50% of Social Security benefits

Single Taxpayers. For single taxpayers (and married persons living separately), the computation of the taxable portion of Social Security benefits is as follows:

- If provisional income is $25,000 or less, no Social Security benefits are taxable.
- If provisional income is over $25,000 (but not over $34,000), taxable Social Security benefits are equal to the lesser of:
  50% of the Social Security benefits, or
  50% of the excess of provisional income over $25,000
- If provisional income is over $34,000, taxable Social Security benefits are equal to the lesser of:
  85% of the Social Security benefits, or
  85% of provisional income over $34,000, plus the lesser of (1) $4,500 or (2) 50% of Social Security benefits

EXAMPLE I:3-33 ► Holly is a single taxpayer with a taxable pension of $22,000, tax-exempt interest of $10,000, and Social Security benefits of $8,000. Her provisional income is $36,000, determined as follows:

Adjusted gross income		$22,000
Plus:	Tax-exempt interest	10,000
	50% of Social Security benefits	4,000
Provisional income		$36,000

The taxable Social Security benefits are equal to $5,700, which is the lesser of $6,800 (0.85 × $8,000) or $5,700 ($1,700* + the lesser of $4,500 or $4,000**).

*($36,000 provisional income − $34,000 threshold) × 0.85.
**50% of the Social Security benefits. ◄

The result of the computation excludes from gross income the Social Security benefits received by lower-income individuals but taxes a portion (up to 85%) of the benefits received by taxpayers with higher incomes. As the thresholds are not adjusted for inflation, an increasing number of retirees are finding that a portion of their Social Security benefits is taxable.

The term **Social Security benefits** refers to basic monthly retirement and disability benefits paid under Social Security and also to tier-one railroad retirement benefits. It does not include supplementary Medicare benefits that cover the cost of doctors' services and other medical benefits.

INSURANCE PROCEEDS AND COURT AWARDS

In general, insurance proceeds and court awards are taxable. Two exceptions are accident and health insurance benefits and the face amount of life insurance. (See Chapter I:4 for a discussion of these benefits.)

Insurance proceeds or court awards received because of the destruction of property are included in gross income only to the extent that the proceeds exceed the adjusted basis of the property. Involuntary conversion provisions permit taxpayers to avoid being taxed if they reinvest the proceeds in a qualified replacement property.[68] If the proceeds are less than the property's adjusted basis, they reduce the amount of any deductible loss. Proceeds of insurance guarding against loss of profits because of a casualty are taxable.[69] Similarly, if a taxpayer had to sue a customer to collect income owed to the taxpayer, the amount collected is taxable just as it would have been had the taxpayer collected the income without going to court.

EXAMPLE I:3-34 ▶ Gulf Corporation's factory was destroyed by fire. Gulf Corporation collected insurance of $400,000, which equaled the building's basis, and $250,000 for the profits lost during the time the company was rebuilding its factory. The $400,000 is not taxable because it constitutes a recovery of the basis of the factory. The $250,000 is taxable because it represents lost income. Recall that the income would have been taxable had it been earned by the company from regular operations. ◀

Although few exclusions are designed specifically for insurance proceeds or court awards, such amounts may be covered by other, more general exclusions. For example, Sec. 104(a)(2) excludes "damages (other than punitive damages) received... on account of personal physical injuries or sickness." Thus, amounts collected because of physical injury suffered in an automobile accident are excluded (see Chapter I:4).

RECOVERY OF PREVIOUSLY DEDUCTED AMOUNTS

On occasion, a taxpayer may deduct an amount in one year but recover the amount in a subsequent year. In general, the amount recovered must be included in the gross income in the year it is recovered. Cash-basis taxpayers encounter this situation more often than accrual-basis taxpayers because their expenses are generally deductible in the year they are paid. If the amount was overpaid, the taxpayer can anticipate a refund.

EXAMPLE I:3-35 ▶ During 2025, Cindy's employer withheld $1,000 from her wages for state income taxes. She claimed the $1,000 as an itemized deduction on her 2025 federal income tax return. Her itemized deductions totaled $20,000. On her 2025 state income tax return, her state income tax was only $800. As a result, Cindy received a $200 refund from the state in April 2026. Because Cindy deducted the full $1,000 in 2025, she must report the $200 refund as income on her 2026 federal income tax return. ◀

Tax Benefit Rule. As noted above, a taxpayer who recovers an amount deducted in a previous year must report as gross income the amount recovered. The amount recovered need not be included in income, however, if the taxpayer received no tax benefit. A tax benefit occurs only if the deduction reduced the tax for the year.[70] Chapter I:8 provides a more detailed discussion of the tax benefit rule.

---

[68] The involuntary conversion provisions are discussed in Chapter I:12.

[69] *Oppenheim's Inc. v. Kavanagh,* 39 AFTR 468, 50-1 USTC ¶9249 (D.C.-Mich., 1950).

[70] Sec. 111.

EXAMPLE I:3-36 ▶ In 2025, Jack's employer withheld $1,200 from his wages for state income tax. Jack claimed the $1,200 as an itemized deduction on his 2025 federal income tax return. Because of a variety of losses incurred by Jack, he reported a negative taxable income of $32,000 during 2025. The state refunded the $1,200 during 2026. Jack will not have to report the $1,200 as gross income on his federal return. Jack received no tax benefit from the deduction, as he would have owed no federal income tax in 2025 even without the deduction. ◀

Taxpayers who itemize may deduct either state and local income taxes or state and local sales taxes, but not both. Taxpayers anticipating a refund of state and local income taxes may wish to consider deducting state and local sales taxes.

Note that a limitation of $10,000 ($5,000 for separate filers) applies to the itemized deduction for state and local taxes. Taxpayers do not have to report a tax refund as income to the extent the deduction is disallowed because of the limitation. The deduction for state and local taxes is discussed further in Chapter I:8.

REAL-WORLD EXAMPLE

An attorney collected fees from clients of his employer. Because the attorney and his employer were engaged in a dispute over ownership of the money, he deposited the disputed amount in a trust account. The attorney was taxable on the amounts in the year received because he had control over the funds under the claim of right doctrine. *Edward J. Costello, Jr.,* 1985 PH T.C. Memo ¶85,571, 50 TCM 1463.

CLAIM OF RIGHT

Sometimes taxpayers receive disputed amounts. For example, a contractor may receive payment on a job when the quality of the work is being questioned by the customer, a salesperson may receive commissions when there is a question as to whether the sales are final, or a litigant may receive a court award even though the case is on appeal. Under the claim of right doctrine, the recipient of a disputed amount must include the amount received in gross income as long as the use of the funds is unrestricted.

EXAMPLE I:3-37 ▶ Jane wins a court case against a customer requiring the customer to pay her $10,000. The customer is unhappy with the result of the case and indicates that he plans to appeal, but pays the $10,000 to avoid interest on the amount in the event he loses the appeal. Jane must include the $10,000 in gross income even though she will have to repay the amount if she loses the appeal. ◀

EXAMPLE I:3-38 ▶ Assume the same facts as in Example I:3-37 except that the $10,000 is placed in escrow by the court awaiting the outcome of the appeal. Jane does not have to report the amount as she does not have use of the funds. ◀

Of course, taxpayers may be required to repay the disputed amount in a subsequent year. Such taxpayers may deduct the previously reported amount in the year of repayment. The taxes saved from such a deduction, however, may be considerably less than the original tax. If the repayment is over $3,000, taxpayers have the option of reducing the current tax by the tax paid in the prior year or years on the repaid amount.[71]

EXAMPLE I:3-39 ▶ Assume the same facts as in Example I:3-37, except that after reporting the disputed $10,000 Jane loses the appeal and must repay the $10,000 to her customer. If Jane was in the 25% tax bracket when she reported the disputed amount, she would have paid a $2,500 (0.25 × $10,000) tax on the disputed amount. If she were in the 15% bracket when she made the repayment, she would recover only $1,500 by deducting the $10,000. Because the amount exceeds $3,000, Jane has the option of determining her current year's tax by deducting from the tax she would otherwise pay the $2,500 tax she paid in the earlier year. This credit is allowed in lieu of receiving a $10,000 deduction. ◀

TAX PLANNING CONSIDERATIONS

OBJECTIVE 5

Describe tax planning considerations for inclusions of gross income

SHIFTING INCOME

A family can reduce its taxes by shifting income from family members who are in high tax brackets (e.g., parents) to family members who are in low tax brackets (e.g., children). Assignment of income rules prevent shifting from being done by merely redirecting the payment. Thus, a father cannot avoid a tax on his salary by ordering his employer to pay the salary to his daughter. Nevertheless, income can be shifted by transferring ownership of the property. For example, children may own stock in the family business. Dividends on the stock are taxed to the children. In the case of a child under age 24, however, the parents' (as opposed to the child's) tax rate often applies to unearned income in excess of $2,700. Series EE bonds may prove useful to avoid the kiddie tax because the interest is deferred until the bond is redeemed or matures. The maturity date, of course, may be after the child reaches age 24. Another shifting technique is for the child to work for the family business and be paid a reasonable salary. Such income is taxed at the child's tax rate, even if the child is under 24 years old, and can be offset by the child's own standard deduction.

---

[71] Sec. 1341.

Shifting of income is constrained by several factors. As noted, the assignment of income doctrine limits transfers. Reasonableness limitations constrain compensation and other payments. Furthermore, outright gifts of property are subject to gift taxes. Also, individuals are reluctant to transfer wealth to children for a variety of personal reasons. However, the tax saving potential of shifting income is often so great as to prompt many well-to-do families to use available shifting techniques.

DIVORCE SETTLEMENTS

Divorce settlements have significant financial implications. Alimony payments covered by prior law are deductible by the payer and taxable to the recipient.

EXAMPLE I:3-40 ▶ Tony, who is in the 37% tax bracket, makes alimony payments of $40,000 to his former wife. If prior law applies, Tony will save $14,800 (0.37 × $40,000) a year in federal income taxes. The amount of tax that his former wife must pay depends on her tax bracket. Her tax might be as high as Tony's or as little as zero if deductions offset her income. On the other hand, if the payments are covered by the new law, Tony cannot deduct the payments, and his former wife reports no income. ◀

ADDITIONAL COMMENT

In 2018, $13.6 billion of alimony paid was reported as a deduction, while only $11.3 billion was reported as taxable income. No doubt this difference is one reason Congress changed the alimony rules.

It is important that individuals paying alimony covered by the new law understand that the payments are made from after tax income.

PREPAID INCOME

As explained earlier in this chapter, prepaid income is generally taxable when received. This accelerated recognition of income may be a significant disadvantage to the taxpayer if the related expenses are incurred in a later tax year. Thus, tax planning for prepaid amounts is essential.

EXAMPLE I:3-41 ▶ Phil owns an apartment complex and requires tenants to pay the first and last months' rent before they move in. Rita, on the other hand, owns an apartment complex and requires tenants to pay the first month's rent and a refundable deposit (which equals one month's rent). Although the full amount received by Phil is taxable when it is received, only one-half of the amount received by Rita is taxable when it is received. Rita is required to refund the deposit, assuming the tenant vacates leaving the property in good condition and having paid all rent. Therefore, the deposit is not taxable. ◀

Taxpayers receiving advance payments in connection with services may be able to meet the requirements of Rev. Proc. 2004-34 (discussed earlier in the chapter); taxpayers receiving advance payments associated with the sale of merchandise may be able to meet the requirements of Reg. Sec. 1.451-5 (also discussed in this chapter). Also, special rules exist for subscription income, membership fees, crop insurance proceeds, and drought sales of livestock, all of which allow taxpayers to defer recognizing income.

TAXABLE, TAX-EXEMPT, OR TAX-DEFERRED BONDS

Which should a taxpayer choose: taxable bonds, tax-exempt bonds, or tax-deferred bonds? The answer depends on the relative interest rates and the taxpayer's current and future tax brackets. *Taxable bonds* yield the highest return, but the interest is taxable. **Tax-exempt bonds** yield a lower return. **Tax-deferred bonds** generally yield a return somewhere close to that of taxable bonds. Interest on U.S. Series EE savings bonds is tax exempt if it is used for educational purposes and if other requirements of Sec. 135 are met (see the discussion earlier in this chapter). If these conditions are not met, the tax is deferred until the bonds are redeemed. The taxpayer may be in a lower bracket when the tax is eventually paid, and in the meantime, the interest that will eventually go to pay taxes is earning additional income.

The decision between taxable and exempt bonds is a rather easy one if the risk of the investments is assumed to be approximately equal. A taxpayer should invest in exempt bonds instead of taxable bonds if the interest on the exempt bonds is greater than the interest on the taxable bonds multiplied by 1 minus the taxpayer's marginal tax bracket (expressed as a decimal). Stated in a formula, this means invest in tax-exempt bonds if

$$\begin{array}{l}\text{Return on the}\\ \text{tax-exempt bonds}\end{array} > \begin{array}{l}\text{Return on the}\\ \text{taxable bonds}\end{array} \times (1 - \text{Marginal tax bracket})$$

EXAMPLE I:3-42 ▶ Robert's marginal tax bracket is 37% and he is trying to decide between tax-exempt bonds, which pay 6% interest, and taxable bonds paying 8% interest. Robert should invest in the exempt bonds because 6% is greater than 5.04% [0.08 × (1 − 0.37)]. ◀

Comparison of taxable bonds or exempt bonds to tax-deferred bonds is more complicated. As noted, the advantages of the tax-deferred bonds are twofold. First, the taxpayer may be in a lower tax bracket when the tax is paid (e.g., taxpayers who plan to redeem the bonds after retirement). Second, the amount that will eventually go to pay the tax earns income until the tax must be paid. Although the computation is not covered here, it is noted that taxpayers who anticipate that they will be in lower tax brackets and who plan to leave funds invested for several years may benefit from choosing Series EE U.S. savings bonds over taxable bonds. See Chapter I:18 in the *Individuals* text for a further discussion of taxable, tax-exempt, and tax-deferred investments.

REPORTING SAVINGS BOND INTEREST

It may be desirable to purchase Series EE bonds in the child's name despite the fact that such interest is subject to the kiddie tax (see Chapter I:2). This is because there is no income tax as long as the child's annual income is less than $1,350. However, even if a child is not otherwise required to file a return, it is necessary to report interest on Series EE bonds annually by filing a tax return.[72] Taxpayers who have not been reporting savings bond interest annually may change to annual reporting, but are required to report both current and previously accrued interest in the year of the change.[73]

Taxpayers who report savings bond interest annually are allowed to change to the deferral method without IRS approval.[74] This is particularly useful where the decision to report interest currently was made before the imposition of the kiddie tax. Taxpayers who make this election are bound by it for five years.

DEFERRED COMPENSATION ARRANGEMENTS

Deferred compensation plans can be used as a means of avoiding the constructive receipt of income. Although income is normally taxable when the funds become available to the taxpayer, an advance contractual agreement can produce different results. Corporate executives, professional athletes, and others often sign agreements providing for compensation to be paid at future dates. Such agreements can produce tax savings because the recipients expect to be in a lower tax bracket. Because the arrangements are advance contractual agreements, the deferral of income does not constitute taxpayers "turning their backs" on the income.

EXAMPLE I:3-43 ▶ Alonzo, a 35-year-old professional basketball player, signs a contract specifying that he will be paid $400,000 per year for ten years even if he does not play. Because of his age, both Alonzo and the team recognize that he will probably play for one or two more years. If the agreement had specified that he was to receive a salary of $1,300,000 per year for two years, most of the income would have been taxed at the highest rates. By spreading the amount over a longer period, Alonzo pays tax at lower rates on much of the income. Alonzo is compensated for the delayed payment by receiving a larger total amount [i.e., $4 million ($400,000 × 10 years) versus $2.6 million ($1.3 million × 2 years)]. ◀

[74] Rev. Proc. 97-37, 1997-2 C.B. 455.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 6

Describe compliance and procedural considerations for gross income

Congress promised taxpayers that the 2017 Tax Cuts and Jobs Act would produce a shorter and simpler Form 1040. The revised Form 1040 is shorter. The new form is shorter in length than the old form (a full front page and two-thirds of a back page, down from two full pages). For some, compliance is simpler because the larger standard deduction means fewer taxpayers need to itemize.

Taxpayers with only the most common types of income (wages, interest, dividends, retirement income, and social security benefits) report their income directly on the shortened Form 1040. Taxpayers with other types of income, however, must complete a Schedule 1, Additional Income and Adjustments to Income. These taxpayers transfer the total from Schedule 1 to Form 1040. Schedule 1 is also where adjustments to income such as IRA contributions and a self-employed person's health insurance premiums are deducted. Previously, these deductions were taken on Form 1040.

As before, a few types of income are first reported on special schedules where related deductions are taken. For example, business income and related business expenses are reported on Schedule C. The resulting net business income or loss is transferred to Schedule 1 and then to Form 1040.

Topic Review I:3-3 summarizes the procedures for reporting income and related deductions. This reporting process is illustrated in Example I:3-44.

TOPIC REVIEW I:3-3

Reporting of Income

TYPE OF INCOME	REPORTED ON	RELATED DEDUCTIONS
Wages, salaries, tips, etc.	Form 1040	Not deductible
Interest	Form 1040 (if less than $1,500), otherwise Schedule B	Schedule A (investment interest expense, for example)
Dividends	Form 1040 (if less than $1,500), otherwise Schedule B	Schedule A (investment interest expense, for example)
Retirement income (IRA distributions, pensions, etc.)	Form 1040	Not deductible
Social security benefits	Form 1040 (instructions contain a worksheet)	Not deductible
Refunds of state and local income taxes	Schedule 1	State and local taxes are deducted on Schedule A
Alimony	Schedule 1 (if covered by prior law, otherwise not taxable)	Not deductible
Business income or (loss)	Schedule C (net amount is transferred to Schedule 1)	Schedule C
Capital gain distributions	Form 1040	Schedule A (investment interest, for example)
Other capital gains or (losses)	Schedule D (net amount is transferred to Form 1040)	Schedule A (investment interest, for example)
Supplemental gain or (loss)	Form 4797 (net amount is transferred to Schedule 1)	Form 4797 (ordinary loss)
Rents, royalties, partnerships, S corporations, estates, trusts	Schedule E (net amount is transferred to Schedule 1)	Schedule E
Farm income or (loss)	Schedule F (net amount is transferred to Schedule 1)	Schedule F
Unemployment compensation	Schedule 1	Not deductible

EXAMPLE I:3-44 ▶ John J. Alexander has several items of income and related deductions for 2024:

Salary (from Form W-2)		$130,000
Taxable interest income		300
Exempt interest income		200
Dividends:	Ford Motor Co. (qualifying dividend)	1,150
	Omaha Mutual Fund (qualifying dividend)	430
	Capital gain distribution: Omaha Mutual Fund	50
Rental income (depreciation, interest, repairs, and other related expenses total $9,000)		11,000
Deductible alimony payments (date of agreement: March 3, 2017)		6,000
IRA contribution		3,000
Qualified business income deduction		400
Standard deduction		14,600
Federal income withheld from wages		20,000

John did not have any transactions involving virtual currency, and had no foreign bank accounts or trusts.

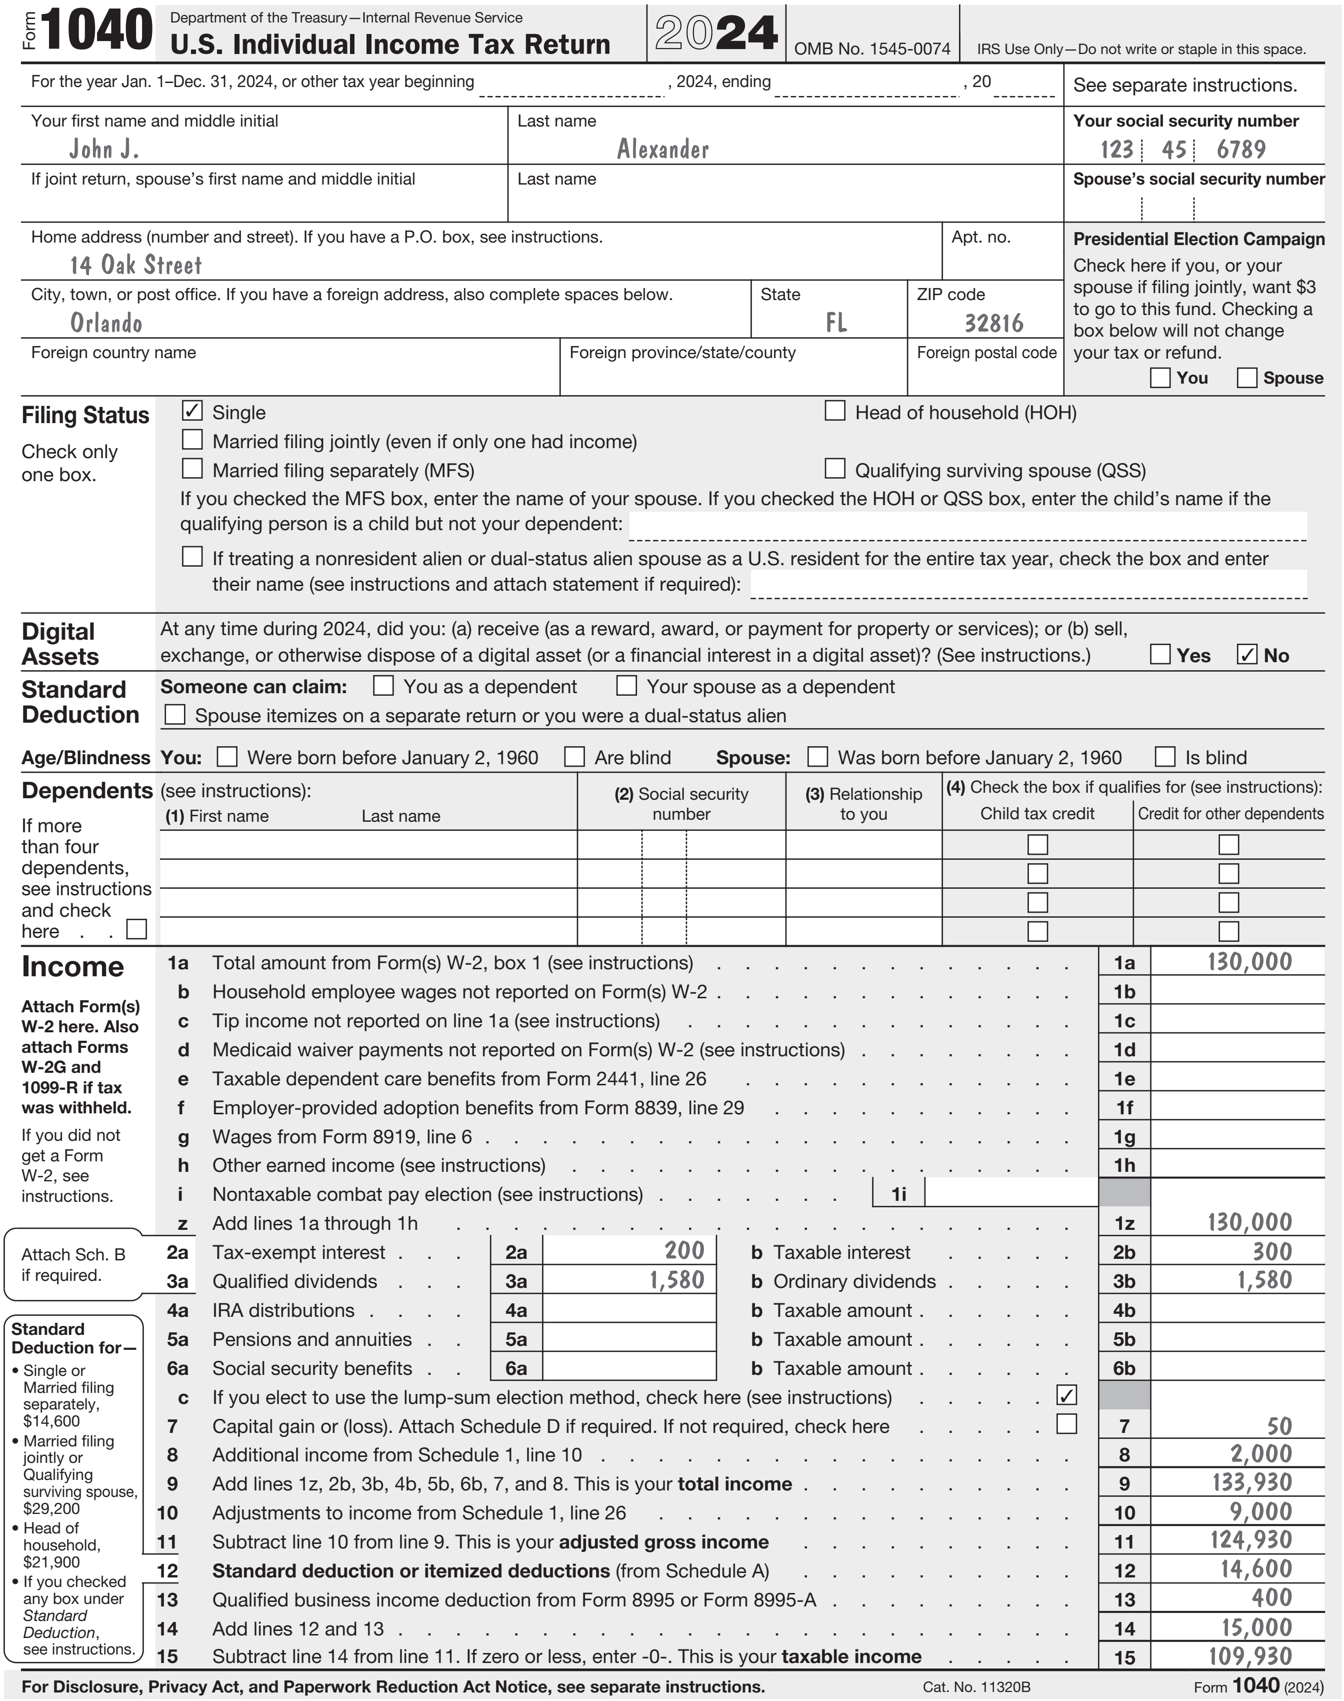
John's tax computation can be summarized as follows:

Total income:	
Salary	$130,000
Taxable interest	300
Dividends	1,580
Capital gain	50
Rent (net)	2,000
Total income	$133,930
Deductions for adjusted gross income:	
Alimony	(6,000)
IRA contribution	(3,000)
Adjusted gross income	$124,930
Deductions from adjusted gross income:	
Standard deduction	(14,600)
Qualified business deduction	(400)
Taxable income	$109,930
Total tax:	
Tax on dividends and capital gains (0.15 × $1,630)	$245
Tax on remaining income of $108,300, computed using Tax Rate Schedule for Single Taxpayers	19,035
Total tax	$ 19,280

Figures I:3-1 through I:3-4 illustrate how John would report these items of income and deductions on 2024 forms. John's salary is entered directly on Form 1040 along with his interest (because the interest is less than $1,500). His dividend income, however, is first entered on Schedule B and then the total is transferred to Form 1040 because the amount exceeds $1,500. John's capital gain distribution is entered directly on Form 1040. The rental income is reported first on Schedule E (not illustrated) and then the net amount is transferred to Schedule 1. John's total income from taxable sources is $133,930. Alimony and the IRA contribution are deducted on Schedule 1 resulting in an adjusted gross income of $124,930. After subtracting the qualified business deduction and the standard deduction, John is left with taxable income of $109,930. His tax totals $19,280, consisting of a $245 tax on dividends and capital gains (0.15 × ($1,580 + $50)] and a $19,035 tax on his remaining income ($108,300), which is computed using the Tax Rate Schedule for Single Taxpayers. ◀

KEY POINT

The amount labeled "total income" on line 9 of Form 1040 is not gross income, adjusted gross income, or taxable income.



Form **1040** Department of the Treasury—Internal Revenue Service
U.S. Individual Income Tax Return **2024** OMB No. 1545-0074 IRS Use Only—Do not write or staple in this space.

For the year Jan. 1–Dec. 31, 2024, or other tax year beginning ______, 2024, ending ______, 20 ___ See separate instructions.

Your first name and middle initial John J.	Last name Alexander	**Your social security number** 123 45 6789
If joint return, spouse's first name and middle initial	Last name	**Spouse's social security number**
Home address (number and street). If you have a P.O. box, see instructions. 14 Oak Street	Apt. no.

Income

Attach Form(s) W-2 here. Also attach Forms W-2G and 1099-R if tax was withheld.

If you did not get a Form W-2, see instructions.

1a	Total amount from Form(s) W-2, box 1 (see instructions)				1a	130,000
b	Household employee wages not reported on Form(s) W-2				1b	
c	Tip income not reported on line 1a (see instructions)				1c	
d	Medicaid waiver payments not reported on Form(s) W-2 (see instructions)				1d	
e	Taxable dependent care benefits from Form 2441, line 26				1e	
f	Employer-provided adoption benefits from Form 8839, line 29				1f	
g	Wages from Form 8919, line 6				1g	
h	Other earned income (see instructions)				1h	
i	Nontaxable combat pay election (see instructions)	1i				
z	Add lines 1a through 1h				1z	130,000
2a	Tax-exempt interest	2a	200	**b** Taxable interest	2b	300
3a	Qualified dividends	3a	1,580	**b** Ordinary dividends	3b	1,580
4a	IRA distributions	4a		**b** Taxable amount	4b	
5a	Pensions and annuities	5a		**b** Taxable amount	5b	
6a	Social security benefits	6a		**b** Taxable amount	6b	
c	If you elect to use the lump-sum election method, check here (see instructions) ☑					
7	Capital gain or (loss). Attach Schedule D if required. If not required, check here ☐				7	50
8	Additional income from Schedule 1, line 10				8	2,000
9	Add lines 1z, 2b, 3b, 4b, 5b, 6b, 7, and 8. This is your **total income**				9	133,930
10	Adjustments to income from Schedule 1, line 26				10	9,000
11	Subtract line 10 from line 9. This is your **adjusted gross income**				11	124,930
12	**Standard deduction or itemized deductions** (from Schedule A)				12	14,600
13	Qualified business income deduction from Form 8995 or Form 8995-A				13	400
14	Add lines 12 and 13				14	15,000
15	Subtract line 14 from line 11. If zero or less, enter -0-. This is your **taxable income**				15	109,930

Attach Sch. B if required.

Standard Deduction for—
- Single or Married filing separately, $14,600
- Married filing jointly or Qualifying surviving spouse, $29,200
- Head of household, $21,900
- If you checked any box under *Standard Deduction*, see instructions.

SCHEDULE B (Form 1040)

Department of the Treasury
Internal Revenue Service

Interest and Ordinary Dividends

Attach to Form 1040 or 1040-SR.

Go to *www.irs.gov/ScheduleB* for instructions and the latest information.

OMB No. 1545-0074

2024

Attachment Sequence No. **08**

Name(s) shown on return: John J. Alexander

Your social security number: 123-45-6789

Part I Interest

(See instructions and the Instructions for Form 1040, line 2b.)

Note: If you received a Form 1099-INT, Form 1099-OID, or substitute statement from a brokerage firm, list the firm's name as the payer and enter the total interest shown on that form.

			Amount
1	List name of payer. If any interest is from a seller-financed mortgage and the buyer used the property as a personal residence, see the instructions and list this interest first. Also, show that buyer's social security number and address:	1	
2	Add the amounts on line 1	2	
3	Excludable interest on series EE and I U.S. savings bonds issued after 1989. Attach Form 8815	3	
4	Subtract line 3 from line 2. Enter the result here and on Form 1040 or 1040-SR, line 2b	4	

Note: If line 4 is over $1,500, you must complete Part III.

Part II Ordinary Dividends

(See instructions and the Instructions for Form 1040, line 3b.)

Note: If you received a Form 1099-DIV or substitute statement from a brokerage firm, list the firm's name as the payer and enter the ordinary dividends shown on that form.

			Amount
5	List name of payer:	5	
	Ford Motor Company		1,150
	Omaha Mutual Fund		430
6	Add the amounts on line 5. Enter the total here and on Form 1040 or 1040-SR, line 3b	6	1,580

Note: If line 6 is over $1,500, you must complete Part III.

Part III Foreign Accounts and Trusts

Caution: If required, failure to file FinCEN Form 114 may result in substantial penalties. Additionally, you may be required to file Form 8938, Statement of Specified Foreign Financial Assets. See instructions.

You must complete this part if you (**a**) had over $1,500 of taxable interest or ordinary dividends; (**b**) had a foreign account; or (**c**) received a distribution from, or were a grantor of, or a transferor to, a foreign trust.

		Yes	**No**
7a	At any time during 2024, did you have a financial interest in or signature authority over a financial account (such as a bank account, securities account, or brokerage account) located in a foreign country? See instructions		X
	If "Yes," are you required to file FinCEN Form 114, Report of Foreign Bank and Financial Accounts (FBAR), to report that financial interest or signature authority? See FinCEN Form 114 and its instructions for filing requirements and exceptions to those requirements		
b	If you are required to file FinCEN Form 114, list the name(s) of the foreign country(-ies) where the financial account(s) is (are) located:		
8	During 2024, did you receive a distribution from, or were you the grantor of, or transferor to, a foreign trust? If "Yes," you may have to file Form 3520. See instructions		X

For Paperwork Reduction Act Notice, see your tax return instructions. Cat. No. 17146N **Schedule B (Form 1040) 2024**

FIGURE I:3-5 ▶ Schedule B Interest and Ordinary Dividends

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:3-1 What phrase is found in both the Sixteenth Amendment to the Constitution and Sec. 61(a)? Why does the phrase appear in both locations?

I:3-2 Contrast the accounting and economic concepts of income.

I:3-3 Why does the tax concept of income more closely resemble the accounting concept of income than the economic concept?

I:3-4 Explain the meaning of the term *wherewithal to pay* as it applies to taxation.

I:3-5 If a loan is repaid, the lender does not have to include the principal portion of the payment in gross income. There is no exclusion in the tax law that permits taxpayers to omit such amounts from gross income. How can this be explained?

I:3-6 A landlord who receives prepaid rent is required to report that amount as gross income when the payment is received. Why would Congress choose to do this? What problem does this create for the taxpayer?

I:3-7 Office space is often rented without carpet, wall covering, or window covering. Furthermore, many rental agreements specify that these improvements cannot be removed by a tenant if removal causes any damage to the property. What issue does this raise?

I:3-8 Does the fact that an item of income is paid in a form other than cash mean it is nontaxable? Explain.

I:3-9 Explain the significance of *Lucas v. Earl* and *Helvering v. Horst*.

I:3-10 Under present-day tax law, community property rules are followed in allocating income between husband and wife. Is this consistent with *Lucas v. Earl*? Explain.

I:3-11 Ricardo owns a small unincorporated business. His 15-year-old daughter Jane works in the business on a part-time basis and was paid wages of $3,000 during the current year. Who is taxed on the child's earnings: Jane or her father? Explain.

I:3-12 **a.** Define the term *constructive receipt*. Explain its importance.
b. Explain three restrictions on the concept of constructive receipt.

I:3-13 What change did the Tax Cuts and Jobs Act make to the tax treatment of dividends received by U. S. corporations from foreign subsidiaries?

I:3-14 When is income considered to be earned by an accrual-basis taxpayer?

I:3-15 **a.** Explain the difference between the treatment of prepaid income under the tax law and under financial accounting.
b. Why are the two treatments so different?
c. What problem does this treatment create for taxpayers?

I:3-16 Under what conditions is an accrual-basis taxpayer allowed to defer reporting amounts received in the advance of the delivery of goods?

I:3-17 Under what conditions is an accrual-basis taxpayer allowed to defer reporting advance payments received for services?

I:3-18 **a.** Is the interest received from government obligations taxable? Explain.
b. What impact does the fact that some bond interest is tax exempt have on interest rates?
c. Is an investor always better off buying tax-exempt bonds? Explain.

I:3-19 Corporations are taxed on the income they earn, and shareholders are taxed on the dividends they receive. What provisions in the tax law reduce this "double tax" burden?

I:3-20 Explain the relationship between dividends and earnings and profits.

I:3-21 On what basis did the Supreme Court in *Eisner v. Macomber* decide that stock dividends are nontaxable?

I:3-22 What is the significance of a constructive dividend?

I:3-23 What change did the Tax Cuts and Jobs Act of 2017 make to the tax treatment of alimony?

I:3-24 **a.** Are items of income not listed in Sec. 61 taxable? Explain.
b. Because there is no specific exclusion for unrealized income, why is it not taxable?
c. Can income be realized even when a cash-method taxpayer does not receive cash?
d. Does a cash basis taxpayer realize income upon the receipt of a note?

I:3-25 **a.** Briefly explain the tax benefit rule.
b. Is a taxpayer required to report the reimbursement of a medical expense by insurance as income if the reimbursement is received in the year following the year of the expenditure?

I:3-26 What opportunities are available for a taxpayer to defer the recognition of certain types of prepaid income? That is, what advice could you give someone who wishes to defer the reporting of prepaid income?

I:3-27 Taxpayers who deduct an expense one year but recover it the next year are required to include the recovered amount in gross income. The tax benefit rule provides relief if the original deduction did not result in any tax savings. Does this rule provide relief to taxpayers who are in a higher tax bracket in the year they recover the previously deducted expense?

I:3-28 George, a wealthy investor, is uncertain whether he should invest in taxable or tax-exempt bonds. What tax and nontax factors should he consider?

I:3-29 Do you agree or disagree with the following statement: A taxpayer should not have to report income when debt is forgiven because the taxpayer receives nothing. Explain.

I:3-30 Jack and June are retired and receive $10,000 of social security benefits and taxable pensions totaling $25,000. They have been offered $20,000 for an automobile that they restored after they retired. They did most of the restoration work themselves and the sale will result in a gain of $12,000. What tax issues should Jack and June consider?

ISSUE IDENTIFICATION QUESTIONS

I:3-31 State Construction Company is owned equally by Andy, Bill, and Charlie. Andy works in the corporation full-time, and Bill and Charlie work elsewhere. Andy's employment contract with State specifies a $50,000 annual salary. This year, Andy felt that the company could expand if it purchased more equipment, and he offered to delay receiving $20,000 of his salary so the funds could be used to purchase the equipment. Bill and Charlie agreed, and State purchased the equipment. State is expected to have enough cash to pay Andy by early March of next year. What tax issues should Andy consider?

I:3-32 Lisa and her daughter Jane are equal shareholders in Lisa's Flooring, Inc. Lisa founded the corporation and was the sole owner for over twenty years. The company is very successful and Lisa has accumulated a fairly large estate. When Jane turned age 25 last year, Lisa gave her half of the corporation's stock. The gift was properly reported on Lisa's gift tax return. Both Lisa and Jane now work full-time for the corporation. Lisa received a salary of $55,000 per year before Jane started working for the company. After Jane started working, Lisa reduced her salary to $15,000 and started paying Jane a salary of $50,000. Lisa indicates that she still makes most major decisions in the company, but she hopes that Jane will play a more important role as she becomes more familiar with the company. What tax issues should Lisa and the corporation consider?

I:3-33 Larry's Art Gallery sells oil paintings, lithographs, and bronzes to collectors and corporations. Customers often come to Larry looking for special pieces. In order to meet customer needs, Larry often accepts orders and then travels looking for the desired item, which he purchases and delivers to the customer. The pieces are expensive, and Larry requires customers to demonstrate their sincerity by providing deposits. If it turns out that the item costs more than expected, Larry contacts the buyer and asks for additional funds. If the item costs less than expected, Larry refunds the excess amount. Also, Larry sometimes returns amounts he received in advance because he is unable to find what the customer wants. What tax issues should Larry's Art Gallery consider?

PROBLEMS

I:3-34 ***Noncash Compensation.*** For each of the following items, indicate whether the individual taxpayer must include any amount in gross income.

a. Employees of Eastside Bookstore are given their birthdays off with pay.
b. Westside Hardware, Inc., gave each employee 10 shares of Westside stock worth $100 per share in lieu of a cash bonus.
c. Employees of Northside Manufacturing were allowed to take home the company's old computers when the company purchased new ones.

I:3-35 ***Constructive Receipt.*** Which of the following constitutes constructive receipt in the current year ended December 31?

a. A salary check received at 6:00 p.m. on December 31, after all the banks have closed.
b. A rent check received on December 30 by the manager of an apartment complex. The manager normally collects the rent for the owner. The owner was out of town.
c. A paycheck received on December 29 that was not honored by the bank because the employer's account did not have sufficient funds.
d. A check received on December 30. The check was postdated January 2 of the following year by a customer who said he hoped to have the money by then.
e. A check received on January 2. The check had been mailed on December 30 of the prior year.

I:3-36 ***Cash and Accrual Methods.*** Carmen opens a retail store. Her sales during the first year are $600,000, of which $30,000 has not been collected at year-end. Her purchases are $400,000. She still owes $20,000 to her suppliers, and at year-end she has $50,000 of inventory on hand. She incurred operating expenses of $160,000. At year-end she has not paid $15,000 of the expenses.

a. Compute her net income from the business assuming she elects the accrual method.
b. Compute her net income from the business assuming she elects the cash method.
c. Would paying the $15,000 she owes for operating expenses before year-end change her net income under accrual method of reporting? under the cash method?

I:3-37 ***Series EE Bond Interest.*** In 2017, Harry and Mary purchased Series EE bonds, and in 2025 redeemed the bonds, receiving $500 of interest and $1,500 of principal. Their income from other sources totaled $30,000. They paid $2,200 in tuition and fees for their dependent daughter. Their daughter is a qualified student at State University.

a. How much of the Series EE bond interest is excludable?
b. Assuming that the daughter received a $1,000 scholarship, how much of the interest is excludable? Ignore any tax credits that might be available.
c. Assuming the daughter received the $1,000 scholarship and that the parents' income from other sources is $154,750 how much of the interest is excludable?

I:3-38 ***Alimony.*** As a result of their divorce, Fred agreed to pay alimony to Tammy of $20,000 per year. The payments are to cease in the event of Fred's or Tammy's death or in the event of Tammy's remarriage. In addition, Tammy is to receive their residence, which cost them $100,000 but is worth $140,000.

a. How will the $20,000 payments be treated by Fred and Tammy if covered by prior law?
b. How will the payments be treated if the divorce is covered by new law?
c. What is Tammy's basis in the residence?
d. What role would a tax adviser play in a divorce?

I:3-39 ***Constructive Dividend.*** Brad owns a successful corporation that has substantial earnings and profits. During the year, the following payments were made by the corporation:

a. Salary of $250,000 to Brad. Officers in other corporations performing similar services receive between $50,000 and $85,000.
b. Rent of $25,000 to Brad. The rent is paid in connection with an office building owned by Brad and used by the corporation. Similar buildings rent for about the same amount.
c. Salary of $5,000 to Brad's daughter, who worked for the company full-time during the summer and part-time during the rest of the year while she attended high school.
d. Alimony of $40,000 to Brad's former wife. Although Brad was personally obligated to make the payments, he used corporation funds to make the payments.

Discuss the likelihood of these payments being treated as constructive dividends. If a payment is deemed to be a constructive dividend, indicate how such a payment will be treated.

I:3-40 ***Constructive Dividend.*** Which of the following would likely be a constructive dividend?

a. An unreasonable salary paid to a shareholder.
b. An unreasonable salary paid to the daughter of a shareholder.
c. A sale of a corporation's asset to a shareholder at fair market value.
d. A payment by a corporation of a shareholder's debts.
e. A payment by a corporation of a shareholder's personal expenses.

I:3-41 ***Prepaid Rent.*** Stan rented an office building to Clay for $3,000 per month. On December 29, 2024, Stan received a deposit of $4,000 in addition to the first and last months' rent. Occupancy began on January 2, 2025. On July 15, 2025, Clay closed his business and filed for bankruptcy. Stan had collected rent for February, March, and April on the first of each month. Stan had received May rent on May 10, but collected no payments afterwards. Stan withheld $800 from the deposit because of damage to the property and $1,500 for unpaid rent. He refunded the balance of the deposit to Clay. What amount would Stan report as gross income for 2024? for 2025?

I:3-42 ***Rental Income.*** Ed owns Oak Knoll Apartments. During the year, Fred, a tenant, moved to another state. Fred paid Ed $1,000 to cancel the two-year lease he had signed. Ed subsequently began renting the unit to Wayne in the same year. Wayne paid the first and last months' rents of $800 each and a security deposit of $500. Ed also owns a building that is used as a health club. The club has signed a fifteen-year lease at an annual rental of $17,000. The owner of the club requested that Ed install a swimming pool on the property. Ed declined to do so. The owner of the club finally constructed the pool himself at a cost of $15,000. Which of these amounts must Ed include in gross income during the current year?

I:3-43 ***Gross Income.*** Susan's salary is $44,000 and she received dividends of $600. She received a statement from SJ partnership indicating that her share of the partnership's income was $4,000. The partnership distributed $1,000 to her during the year and $600 after year-end. She won $2,000 in the state lottery and spent $50 on lottery tickets. Which amounts are taxable?

I:3-44 ***Interest Income.*** Holly inherited $10,000 of City of Atlanta bonds in February. In March, she received interest of $500, and in April she sold the bonds at a $200 gain. Holly redeemed Series EE U.S. savings bonds that she had purchased several years ago. The accumulated interest totaled $800. Holly received $300 of interest on bonds issued by the City of Quebec, Canada. What amount, if any, of gross income must Holly report?

I:3-45 ***Annuity Income.*** Tim retired during the current year at age 58. He purchased an annuity from American National Life Company for $40,000. The annuity pays Tim $500 per month for life.

a. Compute Tim's annual exclusion.

b. How much income will Tim report each year after reaching age 84?

I:3-46 ***Pension Income.*** Beth retires when she turns 65. She begins receiving a monthly pension of $300 from her employer's qualified retirement plan. While employed, Beth contributed $13,000 to the plan.

a. Beth uses the simplified method to compute her exclusion. Why?

b. Compute her monthly exclusion.

c. How much gross income does she report in the first year if she receives 12 monthly checks?

I:3-47 ***Social Security Benefits.*** Dan and Diana file a joint return. Dan earned $31,000 during the year before losing his job. Diana received Social Security benefits of $5,000.

a. Determine the taxable portion of the Social Security benefits.

b. What is the taxable portion of the Social Security benefits if Dan earned $46,000?

I:3-48 ***Social Security Benefits.*** Lucia is a 69-year-old single individual who receives a taxable pension of $10,000 per year and Social Security benefits of $7,000. Lucia is considering the possibility of selling stock she has owned for years and using the funds to purchase a summer home. She will realize a gain of $20,000 when she sells the stock, which has been paying $1,000 of dividends each year. Lucia says her brother recommended that she sell half of the stock this year and half next year because selling all of the stock at once would affect the tax treatment of her Social Security benefits.

a. Compute her AGI under the assumption she sells all of the stock now after receiving $1,000 dividends from the stock.

b. Repeat the computation under the assumption she sells only half of the stock this year and also receives $1,000 dividends from the stock.

I:3-49 ***Social Security Benefits.*** Bob is a single individual and received a salary of $27,000 before he retired in October of this year. After he retired, he received Social Security benefits of $3,000 during the year.

a. What amount, if any, of the Social Security benefits are taxable for the year?

b. Would the answer be different if Bob also had $1,000 of tax-exempt interest?

c. What if he had had $10,000 of tax-exempt interest?

I:3-50 ***Adjusted Gross Income.*** Amir, who is single, retired from his job this year. He received a salary of $25,000 for the portion of the year that he worked, tax-exempt interest of $3,000, and dividends from domestic corporations of $2,700. On September 1, he began receiving monthly pension payments of $1,000 and Social Security payments of $600. Assume an exclusion ratio of 40% for the pension. Amir owns a duplex that he rents to others. He received rent of $12,000 and incurred $17,000 of expenses related to the duplex. He continued to actively manage the property after he retired from his job. Compute Amir's adjusted gross income.

I:3-51 ***Court Awards and Insurance Settlements.*** What amount, if any, must be included in gross income by the following taxpayers?

a. Ann received $2,000 from her insurance company when her automobile which cost $3,000 was stolen.

b. Barry received $3,000 from his brother. Barry had initiated a lawsuit against his brother in an effort to recover $3,000 he had previously loaned to him. The brother paid Barry back before the case was tried, and Barry dropped the lawsuit.
c. Carry, an accountant, sued a client in order to collect her fee for doing tax work. Would Carry's accounting method make any difference?
d. Dave has incurred $6,000 of medical expenses so far this year. He paid $400 of the expenses himself. His insurance company paid $4,000 of the expenses. The hospital is suing Dave and the insurance company for the balance, $1,600.

I:3-52 ***Claim of Right.*** USA Corporation hired Jesse to install a computer system for the company and paid him $8,000 for the work. USA soon realized that there were problems with the system and asked Jesse to refund the payment. At the end of the year the dispute had not been resolved. Jesse is in the 24% tax bracket in the year he did the original work. During the next year, when he is in the 12% tax bracket, Jesse refunds the $8,000 to USA.
a. Is the original payment taxable to Jesse when he receives it?
b. What options are available to Jesse when he repays the $8,000?
c. What option would have been available to Jesse if he had been asked to repay only $2,000?

I:3-53 ***Tax Planning.*** Bart and Kesha, who are in the 37% tax bracket, are interested in reducing their taxes. They are currently considering several alternatives. For each, indicate how much tax, if any, they would save.
a. Make a gift of bonds valued at $5,000 that yield $400 per year interest to their 24-year-old daughter, who has no other income.
b. Sell the bonds from Part a rather than give them to their daughter, and buy tax-exempt bonds that pay 6%. Assume the bonds can be sold for an amount equal to their basis of $5,000.
c. Give $1,000 cash to a charity. Assume they itemize deductions and ignore any phase-out of itemized deductions.
d. Pay their daughter a salary of $10,000 for services rendered in their unincorporated business.

I:3-54 ***Series EE Bond Interest and Kiddie Tax.*** Ken and Lynn paid $5,000 to purchase Series EE bonds in the name of their 11-year-old son. The son has no other income, and they are in the 24% tax bracket. The taxable interest this year will be $400 if an election is made to accrue the interest on an annual basis.
a. Will the child owe any tax on the bond interest?
b. Does the son need to file a tax return?
c. What are the current and future tax consequences of annual gifts to their son?

COMPREHENSIVE PROBLEMS

I:3-55 Matt and Sandy reside in a community property state. Matt left home in April 2025 because of disputes with his wife, Sandy. Subsequently, Matt earned $15,000. Before leaving home in April, Matt earned $3,000. Sandy was unaware of Matt's whereabouts or his earnings after he left home. The $3,000 earned by Matt before he left home was spent on food, housing, and other items shared by Matt and Sandy. Matt and Sandy have one child, who lived with Sandy after the husband left home.
a. Is any portion of Matt's earnings after he left home taxable to Sandy?
b. What filing status is applicable to Sandy if she filed a return?
c. How much income would Sandy be required to report if she filed?
d. Is Sandy required to file?

I:3-56 Gary earned $97,000 as an executive. Gary, who is single, supported his half sister, who lives in a nursing home. His half sister had no income during the year. Gary received the following interest: $400 on City of Los Angeles bonds, $200 on a money market account, and $2,100 on a loan made to his brother.

Gary spent one week serving on a jury and received $50.

Gary received a refund of federal income taxes withheld during the prior year of $1,200 and a state income tax refund of $140. Gary had itemized deductions last year of $18,000 which included $1,000 of state income taxes.

Gary received qualified dividends from Ace Corporation of $1,000 and from Tray Corporation of $1,400. Gary's itemized deductions equal $19,700, and withholding for federal income taxes is $14,000. Compute Gary's tax due or refund due.

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:3-57 Kamal owns a restaurant that operates as an S corporation. The business earns $100,000 per year after paying Kamal a salary of $50,000. Kamal and his wife Padma report the income from the restaurant on their joint tax return. Kamal and Padma are in the process of obtaining a divorce. Kamal anticipates that he will pay Padma $30,000 per year following the divorce.

a. How will the $30,000 payments be taxed?

b. Would there be any advantage to giving Padma a 30% stock interest in the corporation in lieu of alimony?

I:3-58 Assume that it is December 31, and that Jake is considering making a $1,000 charitable contribution. Jake currently is in the 37% tax bracket, but expects that his tax bracket will be 24% next year. How much more will the deduction for the contribution be worth if it is made today compared to next year?

TAX FORM/RETURN PREPARATION PROBLEMS

I:3-59 Sally W. Emanual, a teacher, had the following dividends and interest during 2024:

Acorn Corporation bond interest		$ 700
City of Boston bonds interest		1,000
Camp Bank interest		1,250
Jet Corporation dividend (qualified)		1,300
North Mutual fund		
Capital gain distribution	100	
Ordinary dividend (qualified)	150	
Nontaxable distribution	200	450
Blue Corporation foreign dividend		250

Additional information pertaining to Sally Emanual includes

Salary	$70,000
Rent income	12,000
Expenses related to rent income	14,000
Pension benefits	7,000
Taxable alimony paid to Sally	4,000

The taxable portion of the pension is $7,000. Sally actively participates in the rental activity. Other relevant information includes

Address: 430 Rumsey Place, West Falls, California 92699
Occupation: Credit manager
Social Security number: 123-45-6789
Marital status: Single
Date of divorce: January 10, 2017

Complete Sally's Schedule 1, Schedule B and compute her taxable income on Form 1040. Assume Schedule E has already been prepared. Also assume that Sally had no transactions involving digital assets and had no foreign bank accounts or trusts.

I:3-60 ***Short Tax Form.*** Anne Banks is a single, 60-year old retired teacher who does not itemize. Her only income is reported to her on the Form 1099-R provided by her retirement plan and the Form 1099-DIV provided by her broker. These forms are found in Figures I:3-6 and I:3-7. Complete her Form 1040. Assume that she had no transactions involving digital assets during the year.

CASE STUDY PROBLEMS

I:3-61 Jim and Linda are your tax clients. They were divorced in 2018, and the divorce decree stated that Jim was to make monthly payments to Linda. The court designated $300 per month as alimony and $200 per month as child support, or a total of $6,000 per year. Jim has been unemployed for much of the year and paid Linda $2,000 that he said was for child support. In addition, Jim transferred the title to a three-year-old automobile with a $4,000 FMV and basis of $7,000 in exchange for her promise not to pursue any claim she has against him for the unpaid child support and alimony. Does Linda have to report any alimony and is Jim entitled to an alimony deduction? Draft a memo for the file that discusses the tax consequences for both Jim and Linda.

I:3-62 John and Mary have two small children and are looking for ways to help fund the children's college education. They have heard that Series EE bonds are a tax-favored way of saving and have requested your opinion on the tax consequences. They have asked your opinion regarding the relative advantages of purchasing Series EE bonds in their names versus the children's names. John and Mary have indicated that they expect to have a high level of income in the future and that their children may receive other income sources from future inheritances. Prepare a client memo making recommendations about the tax consequences of Series EE bond investments for John and Mary.

I:3-63 Lee and Jane have been your firm's clients for most of the twenty years they have been married. Recently Lee came to you and said that he and Jane are obtaining a divorce, and he wants you to help him with some of the tax and financial issues that may come up during the divorce. The next day, Jane called asking you for the same assistance. What ethical issues do you see in this case? What possible conflicts may arise if you represent both Lee and Jane?

TAX RESEARCH PROBLEM

I:3-64 William owns a building that is leased to Lester's Machine Shop. Lester requests that William rewire the building for new equipment Lester plans to purchase. The wiring would cost about $4,000, but would not increase the value of the building because its only use is in connection with the specialized equipment. Rather than lose Lester as a lessee, William agrees to forgo one month's rent of $1,000 if Lester will pay for the wiring. Because Lester does not want to move, he agrees. What amount, if any, must William include in gross income?

CHAPTER

4

GROSS INCOME: EXCLUSIONS

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Determine whether an item is income
2. Determine which major statutory exclusions are available to a taxpayer
3. Describe tax planning considerations for exclusions of gross income
4. Describe compliance and procedural considerations for exclusions of gross income

James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Items That Are Not Income...4-2
Major Statutory Exclusions...4-4
Tax Planning Considerations...4-23
Compliance and Procedural Considerations...4-24

Chapter I:3 discussed items that must be included in gross income. This chapter considers items excluded from gross income. Under Sec. 61(a), all items of income are taxable unless specifically excluded. Taxpayers who wish to avoid being taxed have two basic alternatives. One approach is to establish that the item is not income. If an item is not income (e.g., if it is a return of capital), it is not subject to the income tax. The second approach is to establish that a specific exclusion applies to the item of income.

EXAMPLE I:4-1 ▶ Matt borrowed $10,000 from the bank. Although Matt received $10,000, it is not income because he is obligated to repay the amount borrowed. No specific statutory authority states that borrowed funds are excluded from taxation. Presumably, the fact that borrowed funds are not income is considered to be both fundamental and obvious. ◀

KEY POINT

Given the broad definition of *income,* it often is difficult to establish that an item is not income.

EXAMPLE I:4-2 ▶ Sheila enrolled in State University. The university awarded her a $6,500 tuition scholarship because of her high admission test scores and grades. As is discussed later in the chapter, Sec. 117 excludes tuition scholarships from gross income, so Sheila does not need to report the $6,500 as gross income. ◀

The major source of exclusions are those specific items contained in the IRC. These exclusions have evolved over the years and were enacted by Congress for a variety of reasons, including social and economic objectives.

Another source of exclusions are referred to as *administrative exclusions*. Exclusions exist because specific provisions in the Internal Revenue Code allow them. While the IRS has no authority to create exclusions, the IRS does have the authority to interpret the meaning of the Code. A liberal interpretation of the statute by the IRS may result in a broad definition of what constitutes an exclusion, and such a broad definition may reasonably be termed an administrative exclusion. For example, Sec. 102 excludes gifts received from gross income. The IRS has followed the practice of excluding certain welfare benefits from gross income, presumably because such benefits may be viewed as gifts.[1] The IRS could take the position that welfare benefits are not gifts. That position would no doubt be challenged in the courts.

REAL-WORLD EXAMPLE

Grants made to Native Americans by the federal government under the Indian Financing Act of 1974 to expand Native American–owned economic enterprises are excludable from gross income. Rev. Rul. 77-77, 1977-1 C.B. 11.

The term *judicial exclusions* should be considered in the same vein. Although the courts cannot create exclusions, they can interpret the statute and decide whether a particular item is covered by a statutory exclusion.

ITEMS THAT ARE NOT INCOME

OBJECTIVE 1

Determine whether an item is income

As noted above, some items are not income and, therefore, are not subject to the income tax. In addition to amounts obtained by a loan (discussed above), four other items are not considered income:

- Unrealized income
- Self-help income
- Rental value of personal-use property
- Gross selling price of property (as opposed to the profit or gain earned on the sale)

UNREALIZED INCOME

TYPICAL MISCONCEPTION

It is sometimes erroneously assumed that severance pay, embezzlement proceeds, gambling winnings, hobby income, prizes, rewards, and tips are not taxable.

Unrealized income generally is not taxed. Thus, owners of appreciated property are not taxed on their unrealized gains.

This issue of the taxability of unrealized income was addressed almost 100 years ago in *Eisner v. Macomber,* where the Supreme Court held that a stock dividend cannot be taxed because the taxpayer had "received nothing that answers the definition of income within the meaning of the Sixteenth Amendment."[2] An ordinary stock dividend does not alter the existing proportionate ownership interest of any stockholder, nor does it increase the value of the individual's holdings. In effect, the Court concluded that realization must occur before income is recognized. Although narrowed by subsequent legislation and litigation, ordinary stock dividends continue to be excluded from gross income even today. Perhaps more important, *Eisner v. Macomber* established realization as a criterion for the recognition of income.

---

[1] For example, see Rev. Rul. 57-102, 1957-1 C.B. 26, which excludes from gross income public assistance payments to blind persons.

SELF-HELP INCOME

Although self-help income is considered as income by economists, it is not recognized as income by the IRS or by the courts. Taxpayers commonly benefit from activities such as painting their own homes or repairing their own automobiles. If a taxpayer hires someone else to do the work, the taxpayer has to earn income, pay tax on the income, and use the after-tax income to pay for the work. In either case, the taxpayer receives the same economic benefit, but the economic benefit derived from self-help is not included in the taxpayer's gross income.

This situation should be contrasted with taxable exchanges of services. A mechanic might agree to repair a painter's automobile in exchange for the painter's promise to paint the mechanic's home. In this instance, when the parties exchange services, each party realizes income equal to the value of the services received.

TYPICAL MISCONCEPTION

When a taxpayer purchases an older house and remodels the kitchen or makes other improvements, there is a tendency to assume correctly that the taxpayer has no income from this activity, but it is often incorrectly assumed that the basis of the house can be increased by the value of the taxpayer's labor.

STOP & THINK

Question: The discussion referred to an exchange of services between two individuals, such as a painter and a mechanic. How can a taxable barter transaction be distinguished from an act of friendship which is repaid?

Solution: When one person helps another without any promise of repayment, the act of kindness does not represent an exchange and is not taxable. Friends help one another from time to time without contractual reciprocity. Such acts are not taxable. The distinction between a taxable barter exchange and acts of friendship is not always easy to make.

RENTAL VALUE OF PERSONAL-USE PROPERTY

Taxpayers are not taxed on the rental value of personally owned property. For example, taxpayers who own their own home receive the economic benefit of occupancy without being taxed on the rental value of the property. It would be very difficult to keep records and value benefits obtained from self-help and the personal use of property. For that reason, no significant effort has ever been made to tax such benefits.[3]

ADDITIONAL COMMENT

The tax situation of a homeowner is quite different than that of someone who lives in an apartment. The failure to include the rental value of the home as income in addition to the deduction of mortgage interest and property taxes favors homeowners.

SELLING PRICE OF PROPERTY

If property is sold at a gain, the gain and not the entire sales price is taxable. Because the basic principle is almost universally accepted, the Supreme Court has never had to rule directly on whether the entire sale proceeds could be taxed. The IRS and the courts seemed to accept the basic principle even before the rule became part of the statute.[4] The primary reason for this principle (often referred to as the "recovery of capital" principle) is that a portion of the selling price represents a return of capital to the seller.

---

[2] 3 AFTR 3020, 1 USTC ¶32 (USSC, 1920).

[3] In 1928, the government tried unsuccessfully to tax the value of produce grown and consumed by a farmer (*Homer P. Morris,* 9 B.T.A. 1273 (1928)). The court stated, "To include the value of such products [would be to] in effect include in income something which Congress did not intend should be so regarded." The court did not explain how or why it reached this conclusion. In 1957, the IRS successfully disallowed the deduction of expenses incurred in raising such produce (*Robert L. Nowland v. CIR,* 51 AFTR 423, 57-1 USTC ¶9684 (4th Cir., 1957)).

[4] Section 202(a) of the Revenue Act of 1924 is the predecessor of current Sec. 1001(a), which states that only the gain portion of the sale proceeds is included in gross income. S. Rept. No. 398, 68th Cong., 1st Sess., p. 10 (1924) states that Sec. 202(a) sets forth general rules to be used in the computation of gain or loss. The Senate report further states that the provision "merely embodies in the law the present construction by the Department and the courts of the existing law."

MAJOR STATUTORY EXCLUSIONS

OBJECTIVE 2

Determine which major statutory exclusions are available to a taxpayer

While Congress has created statutory exclusions for a variety of reasons, most exclusions have been enacted for reasons of social policy or reasons of incentive. The concept of social policy, that is, a concept of social generosity or benevolence, has prompted the government to exclude items such as:

- Gifts and inheritances (Sec. 102)
- Life insurance proceeds (Sec. 101)
- Public assistance payments
- Qualified adoption expenses (Sec. 137)
- Payments for personal physical sickness and injury (Sec. 104)
- Discharge of indebtedness during bankruptcy or insolvency (Sec. 108)
- Gain on sale of personal residence (Sec. 121)
- Partial exclusion for Social Security benefits (Sec. 86)

Other exclusions may be explained in terms of economic incentive, that is, the government's desire to encourage (or not discourage) a particular type of behavior.

- Awards for meritorious achievement (Sec. 74(b))
- Various employee fringe benefits (Secs. 79, 105, 106, 125, 129, 132)
- Partial exclusion for scholarships (Sec. 117)
- Foreign-earned income (Sec. 911)
- Interest on state and local government obligations (Sec. 103)

ADDITIONAL COMMENT

Tax expenditure estimates measure the decreases in individual and corporate income tax liabilities that result from provisions in income tax laws and regulations that provide economic incentives or tax relief to particular kinds of taxpayers.

Other reasons may exist for some of the exclusions listed above. For example, one reason income from the discharge of indebtedness during bankruptcy is excluded from gross income is the fact that such taxpayers would be unlikely to have the resources needed to pay the tax. (See Chapter I:3 for a discussion of tax-exempt interest and Social Security benefits, and Chapter I:12 for the treatment of gain on the sale of a personal residence.)

GIFTS AND INHERITANCES

Congress has excluded the value of gifts and inheritances received from gross income since the inception of the income tax in 1913. Section 102 excludes the value of property received during the life of the donor (***inter vivos*** **gifts**) and transfers at death (**testamentary gifts**—bequests, devises, and inheritances).[5] The recipient of such property is taxed on the income produced by the property after the transfer.[6] It should be noted that a donor, under the assignment of income doctrine, cannot avoid the income tax by making a gift of income. To avoid paying tax on income, a donor must make a gift of the underlying property.

TYPICAL MISCONCEPTION

Some people still believe that gifts above the gift exclusion amount ($19,000 for 2025) are taxable to the donees. They are not since the Code specifically exempts all gifts, regardless of the amount. The donor may, however, depending on the circumstances, pay a gift tax.

EXAMPLE I:4-3 ▶ Stan owns stock in a corporation and orders the corporation to pay dividends on the stock to his daughter. Even though his daughter receives the dividends, Stan must include the dividends in his gross income. Stan could avoid being taxed on future dividends by giving the stock to his daughter. ◀

---

[5] Although excluded from gross income, such transfers may be subject to the gift tax or the estate tax which are imposed on the transferor. These separate taxes are, in part, the result of a debate over the question of whether gifts and inheritances actually are income. The answer is quite different if one defines the basic economic unit to be the family rather than the individual. Gifts (and inheritances) within a family merely move existing wealth from one person to another without changing the family's wealth. Nevertheless, the recipient of a gift does individually benefit.

[6] Reg. Sec. 1.102-1(b).

It is often difficult to distinguish gifts, which are not included in the recipient's gross income, from other transfers, which are taxable. Gifts sometimes closely resemble prizes and awards.[7]

EXAMPLE I:4-4 ▶ Tina received a free automobile for being the ten millionth paying guest at an amusement park. The automobile is not considered a gift but a prize and is taxable to Tina. ◀

Also, some payments made to employees by employers may resemble gifts.

EXAMPLE I:4-5 ▶ At Christmas, Red Corporation paid $500 cash to each employee who had been with the company for more than five years. These payments are not considered gifts for tax purposes and are taxable to the employees. ◀

REAL-WORLD EXAMPLE

Amounts received by a dealer from players in the operation of a gambling casino were not excludable as gifts even though impulsive generosity or superstition may be the dominant motive. The amounts were similar to tips, which are taxable. *Louis R. Tomburello,* 86 T.C. 540 (1986).

Whether a transfer is a gift depends on the intent of the donor. Gifts are motivated by love, affection, kindness, sympathy, generosity, admiration, or similar emotions. In the two preceding examples, the transfers were made for business motives and not necessarily for donative reasons. Thus, the automobile is a taxable prize, and the amounts paid to employees represent taxable awards for services rendered, but see the discussion of Sec. 274 later in this chapter.

Transfers of money or property between family members frequently create classification problems. For example, assume a father, who owns a business, hires his 10-year-old son to work in the business. Is the payment to the son a salary (and, therefore, deductible by the business) or is it really just a gift from the father to the son? The answer depends on the fair market value of the services performed by the son. If the son actually performs services that are commensurate with the salary paid, the payment may properly be classified as a salary. On the other hand, if the son is paid an amount that exceeds the value of the services, the excess amount will be treated as a gift.

LIFE INSURANCE PROCEEDS

Life insurance proceeds paid to a beneficiary because of the insured person's death generally are not taxable.[8] The exclusion applies whether the proceeds are paid in a lump sum or in installments. Amounts received in excess of the face amount of the policy usually are taxable as interest.

EXAMPLE I:4-6 ▶ Buddy is the beneficiary of a $100,000 insurance policy on his mother's life. Upon her death, he elects to receive $13,000 per year for ten years instead of the lump sum. He receives $10,000 per year tax-free ($100,000 ÷ 10), but the remaining $3,000 per year is taxable as interest. ◀

EXAMPLE I:4-7 ▶ Assume the same facts as in Example I:4-6, except that Buddy elects to receive the full $100,000 face amount upon his mother's death. None of the $100,000 is taxable. ◀

The exclusion exists because life insurance benefits closely resemble inheritances, which are not taxable.

There is one exception that may result in a portion of the face amount of a life insurance policy being included in gross income.[9] The life insurance exclusion generally is not available if the insurance policy is obtained by the beneficiary in exchange for valuable consideration from a person other than the insurance company. For example, an individual may purchase an existing life insurance policy for cash from another individual. In this situation, the exclusion for death benefits is limited to the consideration paid plus the premiums or other sums subsequently paid by the buyer.

---

[7] Recall that under Sec. 74 (discussed in Chapter I:3) most prizes and awards are taxable.

[8] Sec. 101(a).

[9] Sec. 101(a)(2).

EXAMPLE I:4-8 ▶ Kwame is the owner and beneficiary of a $100,000 policy on the life of his father. Kwame sells the policy to his brother Anwar for $10,000. Anwar subsequently pays premiums of $12,000. Upon his father's death, Anwar must include $78,000 [$100,000 − ($10,000 + $12,000)] in gross income. However, if Kwame gave the policy to his brother, all of the proceeds would be excluded from gross income because the gift of the policy does not constitute valuable consideration. ◀

ADDITIONAL COMMENT

The proceeds of a life insurance policy payable to named beneficiaries can be excluded from the federal estate tax when the decedent does not possess any incidents of ownership. This provision and the exclusion from gross income of life insurance proceeds underscore the favored position of life insurance.

The proceeds are excludable under the general exclusion for life insurance proceeds if the beneficiary's basis is found by reference to the transferor's basis (as would be true in the case of a gift), or if the policy is transferred to the insured, the insured's partner, a partnership that includes the insured, or a corporation in which the insured is a shareholder or officer.

Surrender or Sale of Policy. The exclusion for life insurance is available for amounts payable by reason of the death of the insured. In general, if a life policy is sold or surrendered for a lump sum before the death of the insured, the amount received is taxable to the extent that the amount received exceeds the net premiums paid.[10] On the other hand, no loss is recognized if a life insurance policy is surrendered before maturity and premiums paid exceed the cash surrender value.[11]

"Accelerated death benefits" may be excluded from gross income. Accelerated death benefits include payments made to a terminally ill person and periodic payments made to a chronically ill person. A person is terminally ill if a physician certifies that he is reasonably likely to die within 24 months. A person is chronically ill if he has a disability requiring long-term care (e.g., nursing home care). In general, the exclusion for periodic payments made to a chronically ill person is limited to the greater of $420 per day for 2025 ($410 for 2024), or the actual cost of such care. The exclusion covers amounts received from the insurance provider or from a "viatical settlement provider" (i.e., person in the business of providing accelerated death benefits).

EXAMPLE I:4-9 ▶ Harry has been diagnosed with cancer and is expected to live less than a year. Harry is covered by a life insurance policy with a $100,000 face amount. The insurance company offers terminally ill individuals the option of receiving 75% of the policy face amount. If Harry accepts the settlement, the amount he receives is excludable from gross income because he is terminally ill. ◀

EXAMPLE I:4-10 ▶ Mary suffered a severe stroke and has been admitted to a nursing home, where she is expected to remain for the rest of her life. She is certified by a licensed health care practitioner as being a "chronically ill individual." Her nursing home expenses amount to $330 per day. Mary has elected to receive $350 per day from a $1,000,000 face amount life insurance policy as accelerated death benefits. Because she is a chronically ill individual, Mary may exclude the full amount she receives as it is less than the daily limitation of $420 (for 2025) established by law. ◀

Dividends on Life Insurance and Endowment Policies. Dividends on life insurance and endowment policies are normally not taxable because they are considered to be a partial return of premiums paid. The dividends are taxable to the extent that the total dividends received exceed the total premiums paid. Also, if dividends are left with the insurance company and earn interest, the interest is taxable.

---

[10] Sec. 72(e)(2). A 10% penalty may apply when distributions are made before the recipient reaches age 59½ (see Sec. 72(q)).

[11] *London Shoe Co. v. CIR*, 16 AFTR 1398, 35-2 USTC ¶9664 (2nd Cir., 1935).

AWARDS FOR MERITORIOUS ACHIEVEMENT

ADDITIONAL COMMENT

Notice that, to exclude awards for meritorious achievement, the award must not come into the possession of the taxpayer.

As noted in Chapter I:3, prizes and awards generally are taxable. An exception is applicable to awards and prizes made for religious, charitable, scientific, educational, artistic, literary, or civic achievement if the recipient:

- Was selected without action on his or her part to enter the contest or the proceeding,
- Does not have to perform substantial future services as a condition to receiving the prize or award, and
- Designates that the payor is to pay the amount of the award to either a government unit or a charitable organization.[12]

The recipient of such an award sometimes would owe no tax if he or she collected the proceeds and then contributed the proceeds to a charity because the gift would qualify as a deductible charitable contribution. However, the exclusion changes AGI and thereby affects other computations. Also, this rule is beneficial in situations where the taxpayer could not deduct the full amount of the award because of the limitation on the charitable contributions deduction (e.g., 60% of AGI; see Chapter I:8) or in the case of a small award to a taxpayer who does not itemize.

SCHOLARSHIPS AND FELLOWSHIPS

ADDITIONAL COMMENT

Athletic scholarships for fees, books, and supplies awarded by a university to students who are expected, but not required, to participate in a particular sport can be excludable.

KEY POINT

The exclusion for scholarships does not include amounts received for room, board, and laundry.

Subject to certain limitations, scholarships are excluded from gross income.[13] A scholarship is an amount paid or allowed to a student, whether an undergraduate or graduate, to aid degree-seeking individuals.

The exclusion for scholarships is limited to the amount of the scholarship used for *qualified tuition and related expenses*. Qualified tuition and related expenses typically include tuition and fees, books, supplies, and equipment required for courses of instruction at an educational organization. The value of services and accommodations supplied, such as room, board, and laundry, are not excluded. The exclusion for scholarships extends to salary paid for services rendered as part of a comprehensive student work-learning-service program.[14]

EXAMPLE I:4-11 ▶

Becky is a degree-seeking student at State University. She receives $20,000 of scholarships for the current year, using $12,000 of them for qualified tuition, books, and supplies and $8,000 of them for room and board. In addition, Becky works part-time on campus and earns $6,000, which covers the rest of her room and board and other expenses. Becky is taxed on the $8,000 of the scholarships spent for room and board and the $6,000 she earns from her part-time job. She is not taxed on the $12,000 of the scholarships spent for qualified tuition, books, and supplies. ◀

DISTRIBUTIONS FROM QUALIFIED TUITION PROGRAMS

ADDITIONAL COMMENT

QTPs are often referred to as *529 plans* because Sec. 529 of the Internal Revenue Code contains many of the rules pertaining to their federal income tax treatment.

Congress established *qualified tuition programs* to assist students with education costs. Amounts contributed to a qualified tuition program (QTP) on behalf of a designated beneficiary are not deductible, but they grow tax-free. Amounts may be withdrawn tax-free by the beneficiary as long as the amounts are used for qualified higher education expenses. Such expenses include tuition, books, fees, supplies, equipment, expenses incurred to meet the student's special needs, and room and board.[15] QTPs can also be used for elementary and secondary education, but the exclusion is limited to $10,000 per student per year and only covers tuition. Wealthy individuals may fund QTPs as there is no income limitation. Although parents and grandparents are the most frequent donors, anyone can fund a QTP.

---

[12] Sec. 74.

[13] Sec. 117.

[14] Scholarships may need to be reviewed to determine whether the amount constitutes compensation. A "scholarship" awarded to the winner of a televised beauty pageant by a profit-making corporation was ruled to be compensation for performing subsequent services for the corporation (Rev. Rul. 68-20, 1968-1 C.B. 55). An employer-paid "scholarship" was held to be compensation in a situation where the employee was on leave and was required to return to work after finishing the degree (*Richard E. Johnson v. Bingler,* 23 AFTR 2d 69-1212, 69-1 USTC ¶9348 (USSC, 1969)). However, in Ltr. Rul. 9526020 (September 10, 1995) the IRS ruled that grants to law students are not taxable even if they are conditioned upon the students agreeing to practice upon graduation in public, nonprofit, or other low paying sectors.

A QTP must be maintained either by a state government or by a private educational institution. Plans may acquire mutual funds and similar investments. State plans (but not private plans) may provide for the purchase of credit for future tuition in lieu of investments.

Contributions to a QTP may be distributed tax-free. The portion of a distribution that is treated as a contribution is determined under annuity rules discussed in Chapter I:3. The income portion of a QTP distribution may be excluded to the extent it is used for qualified higher education expenses.[16] Any additional distributed income is included in the beneficiary's gross income and is subject to a 10% penalty.[17]

Donors can change the designated beneficiary to another member of the original beneficiary's family without tax consequences. Family members include the beneficiary's spouse, individuals who meet the relationship test for a qualifying relative (and their spouses), and first cousins.

EXAMPLE I:4-12 ▶ For each of his two young children, David contributes $10,000 to a state-established qualified tuition program. There is no gift tax as the amounts are less than the $19,000 (for 2025) annual per donee gift tax exclusion. Current and future qualified contributions grow tax-free. Future distributions of income are tax exempt as long as the amounts do not exceed the beneficiary's qualified higher education expenses. Excess distributions are taxable and subject to a 10% penalty. ◀

PAYMENTS FOR INJURY AND SICKNESS

Sec. 104(a)(2) excludes from gross income the "amount of any damages (other than punitive damages) received…on account of personal physical injuries or physical sickness." Thus, for example, a taxpayer may exclude an insurance settlement for physical injury that resulted from an automobile accident. Section 104(a) does not cover amounts awarded for nonphysical injuries (such as a damaged reputation or libel) except that taxpayers may exclude reimbursements for medical expenses related to nonphysical injuries.

EXAMPLE I:4-13 ▶ After she was denied a promotion, Jane sued her employer claiming sex discrimination. She was awarded $5,000 to cover the medical bills she incurred because of the related emotional distress, $20,000 to punish her employer for discrimination, and $10,000 to compensate her for lost wages. The $5,000 awarded to cover medical bills is excluded from gross income, but not the amounts awarded as punitive damages or lost wages. ◀

The exclusion under Sec. 104(a) applies to damages received because of emotional distress in only two situations: (1) when the payments are for medical expenses related to the emotional distress, and (2) when the payments are for emotional distress *attributable* to a physical injury (including physical injury suffered by another person).

---

[15] Room and board is a qualified higher education expense only if the beneficiary is at least a half-time student.

[16] The amount of the QTP exclusion is reduced by the tax-free portion of scholarships the beneficiary receives (Sec. 529(c)(3)(B)(v)). It is also reduced by the qualified higher education expenses taken into account for the American Opportunity and Lifetime Learning credits, which are discussed in Chapter I:14.

[17] Funds can be rolled over from a QTP to its beneficiary's Roth IRA without tax or 10% penalty, starting in 2024 and subject to limitations (Sec. 529(c)(3)(E)). See Chapter I:7 for detailed discussion of Roth IRAs.

Sometimes, victims are awarded amounts that are intended to punish the guilty party. These so-called punitive damages are taxable even when they are awarded for physical injuries.

EXAMPLE I:4-14 ▶ Mary was injured in an automobile accident caused by another driver. Mary's daughter, Sarah, was in the automobile, but she was not physically injured. The other driver's insurance company was required by a court to pay Mary $10,000 to cover medical bills relating to her injuries, $5,000 to compensate her for emotional distress caused by the injuries, and $15,000 of punitive damages. Sarah was paid $3,000 to compensate her for distress caused by her witnessing her mother's injuries. Only the $15,000 of punitive damages are taxable to Mary as the other amounts are compensatory damages related to her physical injuries. Sarah's damage award of $3,000 is also excludable. ◀

Sec. 104(a)(3) excludes from gross income amounts collected under an accident and health insurance policy purchased by the taxpayer, even if the benefits are a substitute for lost income. In addition, Sec. 101 specifies that benefits received under a qualified long-term care insurance contract may be excluded from gross income, but limits the exclusion to the greater of $420 per day for 2025 ($410 for 2024) or the actual cost of such care. Such policies pay for nursing home and other types of long-term care. If the benefits exceed the actual cost of such care but are less than $420 per day, no portion of the benefits is taxable.

EXAMPLE I:4-15 ▶ Chuck purchased a disability income policy from an insurance company. Chuck subsequently suffered a heart attack. Under the terms of the policy, Chuck received $2,500 per month for the five months he was unable to work. The amounts received are not taxable, even though the payments are a substitute for the wages lost due to the illness. ◀

This exclusion is not applicable if the accident and health benefits are provided by the taxpayer's employer.[18]

EXAMPLE I:4-16 ▶ Assume the same facts as in Example I:4-15 except that Chuck's employer paid the premiums on the policy. The amounts received by Chuck are taxable. ◀

EXAMPLE I:4-17 ▶ After a serious stroke, Ruth moved into a nursing home. She was in the nursing home for 140 days. Nursing home charges, physician fees, and other related expenses totaled $53,800.

Under her long-term care insurance contract, Ruth received reimbursements of $55,200. The reimbursements are not includible in Ruth's gross income because the amounts are less than the allowed exclusion amount of $58,800 (140 days × $420). This exclusion applies even though she was reimbursed more than her actual costs. Alternatively, if the reimbursements had been $60,900, she would be required to report $2,100 ($60,900 − $58,800) as gross income. ◀

If the cost of the coverage is shared by the employer and the taxpayer, a portion of the benefits is taxable. For example, if the employer paid one-half of the premiums, one-half of the benefits would be taxable. The principal reason for the different tax treatment is that employer-paid coverage represents a tax-free employee fringe benefit, whereas employee-paid premiums are from after-tax dollars.

---

[18] A limited credit is available to taxpayers who receive such benefits. See Chapter I:14 for a discussion of the credit for the elderly and disabled.

In the case of an award intended to reimburse the taxpayer for medical expenses, it follows that the taxpayer cannot deduct the reimbursed medical expenses.[19] If the award exceeds the actual expense, it is not taxable except in the case of employer-financed accident and health insurance and in the case of excess long-term care discussed above.[20]

State worker's compensation laws establish fixed amounts to be paid to employees suffering specific job-related injuries. Section 104(a)(1) specifically excludes worker's compensation from gross income, even though the payments are intended, in part, to reimburse injured workers for loss of future income and even if the injuries are nonphysical.

EMPLOYEE FRINGE BENEFITS

In general, employee compensation is taxable regardless of the form it takes. Nevertheless, the tax law encourages certain types of fringe benefits by allowing an employer to deduct the cost of the benefit, by permitting the employee to exclude the benefit from gross income, or by permitting both the employer deduction and an employee exclusion. Employee fringe benefits subject to special rules include employee insurance, Sec. 132 benefits, meals and lodging, dependent care, and cafeteria plans. These fringe benefits are discussed below.

ADDITIONAL COMMENT

Many companies provide health care benefits to retired employees. However, due to mounting medical insurance bills, a rising retiree population, and an FASB rule that requires firms to recognize the associated liability, a number of companies are requiring retired workers to pick up a larger portion of their medical costs.

Employer-Paid Insurance. Employers commonly provide group insurance coverage for employees. In general, employers may deduct the premiums paid for life, health, accident, and disability insurance. Normally an employee does not have to include in gross income premiums paid on his or her behalf for health, accident, and disability insurance. Special rules applicable to life insurance premiums are discussed below.

Benefits received from medical, health, and group term life insurance coverage generally are excluded from an employee's gross income. Benefits received from a disability policy are normally taxable, but may qualify for the credit for the elderly and disabled (see Chapter I:14). The tax treatments of employer-financed and taxpayer-financed insurance coverage are compared in Topic Review I:4-1.

The rules relating to accident and health insurance are more generous than those for some other types of benefits. Under Sec. 106, employers can deduct insurance premiums and employees need not include the premiums in gross income.

STOP & THINK

Question: How does the *Affordable Care Act* (commonly called ObamaCare) impact employer provided health insurance?

Answer: The law made a number of changes in the tax rules affecting employee health insurance. The rules penalize larger employers who fail to provide adequate employee health benefits. The act created several new taxes and changed others.

The act mandates that employers report the cost of health insurance benefits provided to employees on employee W-2's, although this amount is *not* included in employee gross income. The law limits the amount that can be contributed to a flexible spending plan for health care ($3,300 for 2025). A credit helps small employers with the cost of providing employees with health insurance coverage.

Industry specific taxes apply to tanning salons, medical device manufacturers, insurance companies, and pharmaceutical companies. Other taxes apply to high income individuals and large employers who do not provide employee coverage.[21]

These and a number of other taxes help subsidize health insurance costs for lower and middle income individuals.

---

[19] See Chapter I:3 for a discussion of the reimbursement of an expense deducted in a preceding year.

[20] Sec. 105(a).

[21] A payroll tax of 0.9% applies to earned income over $200,000 ($250,000 for married couples). High income taxpayers also face a 3.8% tax on investment income, such as interest, capital gains, and dividends.

TOPIC REVIEW I:4-1

Treatment of Insurance

	Premiums Paid by	
	Employer	*Employee*
Medical and health Premiums	Premiums not included in employee's gross income. Premiums deductible by employer.	Premiums deductible as medical expense subject to 7.5% of AGI limitation (if employee claims itemized deductions).
Benefits	Excluded from employee's gross income except when benefits exceed actual expenses.	Excluded from gross income.
Disability Premiums	Premiums not included in employee's gross income. Premiums deductible by employer.	Not deductible.
Benefits	Included in employee's gross income. May qualify for credit for elderly and disabled.	Excluded from gross income.
Life insurance Premiums	Included in employee's gross income (except for limited exclusion applicable to group term life insurance). Premiums deductible by employer (assuming employer is not the beneficiary).	Not deductible.
Benefits	Excluded from gross income.	Excluded from gross income.

Some employers provide self-insured accident and health plans to employees. Under such plans, the employer pays employee medical expenses directly. Such plans are called Health Reimbursement Arrangements and often supplement health insurance.

Both insured and self-insured plans are subject to nondiscrimination requirements. *Discrimination* is defined in terms of an eligibility test (whether a sufficient number of non-highly compensated employees are covered) and benefits (whether non-highly compensated employees receive benefits comparable to highly compensated employees). Highly compensated employees include the five highest-paid officers, greater-than-10% shareholders, and highest-paid 25% of other employees. If a plan discriminates in favor of highly compensated employees, these employees must include in gross income any medical reimbursements they receive that are not available to other employees.

KEY POINT

The nondiscrimination requirements for self-insured accident and health plans are designed to ensure that such plans do not discriminate against rank-and-file workers.

In general, life insurance premiums paid by an employer on an employee's behalf are deductible by the employer and are includable in the employee's gross income.[22] A limited exception is applicable to group term life insurance coverage. In general, premiums attributable to the first $50,000 of group term life insurance coverage may be excluded from an employee's gross income.[23] To qualify group term life insurance premiums for the exclusion, broad coverage of employees is required. Though somewhat different, the rules may be compared to those associated with self-insurance coverage.[24] The amount of coverage can vary between employees as long as the coverage bears a uniform relationship to each employee's compensation.

---

[22] If the employer is the beneficiary of the policy, the employee receives no economic benefit and, as a result, need not include the premiums in gross income. Such premium payments are not deductible by the employer. Subsequent benefits are not included in the employer's gross income.

[23] Sec. 79(a).

[24] For example, the rules refer to "key employees" as opposed to highly compensated employees. The term *key employee* is somewhat narrower in scope.

▼ TABLE I:4-1
Uniform One-Month Group Term Premiums for $1,000 of Life Insurance Coverage

Employee's age	Premiums
Under 25	$0.05
25 to 29	.06
30 to 34	.08
35 to 39	.09
40 to 44	.10
45 to 49	.15
50 to 54	.23
55 to 59	.43
60 to 64	.66
65 to 69	1.27
70 and above	2.06

EXAMPLE I:4-18 ▶ Data Corporation provides group term life insurance coverage for each full-time employee. The coverage is equal to one year's compensation. The arrangement constitutes a qualified group term life insurance plan. ◀

TYPICAL MISCONCEPTION

Many individuals erroneously believe that all life insurance coverage provided by employers is tax exempt.

In the case of coverage that exceeds $50,000, employees must include in gross income the amount established by the Regulations. (See Table I:4-1.)

EXAMPLE I:4-19 ▶ USA Corporation provides Joy, age 61, with $150,000 of group term life insurance coverage. Joy must include in gross income $792, an amount determined by reference to Table I:4-1 [($100,000/$1,000 × $.66) × 12 = $792]. ◀

The amount that must otherwise be included in an employee's gross income is reduced by any premiums paid by the employee.

If group term life insurance coverage discriminates in favor of key employees, each key employee must include in gross income the greater of the premiums paid on his or her behalf or the amount determined based on Table I:4-1 without any exclusion for the first $50,000 of coverage.

STOP & THINK

Question: Does the fact that employers can provide health insurance and group term life insurance to employees on a tax-favored basis mean that such benefits should be provided to all employees? Explain.

Solution: No. Providing such benefits to all employees may be inefficient. Some employees have other health coverage (e.g., coverage through a spouse's employer). Employees with no dependents may not want life insurance coverage. As a result, employers who provide all employees with such benefits may be spending money on coverage that some employees neither want nor need. A cafeteria plan, discussed later in this chapter, is often a more efficient option. Such plans permit employees to choose either cash or tax-favored benefits from a list. This does have significant social and economic implications. As the cost of health insurance increases, more employees, especially those with lower incomes, choose cash salary over health insurance coverage. This contributes to the number of individuals who do not have health insurance. Further, under the Affordable Care Act, larger employers face penalties if employees are not covered by health insurance.

TOPIC REVIEW I:4-2

Summary of Sec. 132 Fringe Benefits

Section	Benefit	May Be Made Available To	Comments
132(b)	No-additional-cost (e.g., telephone, unused hotel rooms for hotel employees, unused airline seats for airline employees)	Employees, spouses, dependents, and retirees	The services must be of the same types that are sold to customers and in the line of business in which the employee works. Discrimination is prohibited.
132(c)	Qualified employee discounts	Employees, spouses, dependents, and retirees	Discounts on services limited to 20%. Discounts on merchandise are limited to the employer's gross profit percentage. No discount is permitted on real estate, stock, or other investment type property. Discrimination is prohibited.
132(d)	Working condition (e.g., outplacement and professional memberships)	Employees	Discrimination is permitted. Special rules apply to tuition reductions for employees of educational institutions and to an auto salesperson's demonstrator.
132(e)	De minimis (e.g., free coffee, holiday turkeys, or use of company eating facilities)	Employees	Eating facilities must be made available on a nondiscriminatory basis. Employer deduction only for 50% of the net cost.
132(f)	Qualified transportation fringes (e.g., transit passes, tokens, and parking)	Employees	Limited exclusion for parking and transportation fringes. Discrimination is permitted. No employer deduction for the net cost.
132(j)(4)	Recreation and athletic facilities (e.g., gyms, pools, saunas, and tennis courts)	Employees, spouses, dependents, and retirees	No employer deduction for the net cost.
132(j)(8)	Educational assistance	Employees and former employees	Discrimination is prohibited. Only covers job-related education and training.

ADDITIONAL COMMENT

The nondiscrimination rules do not apply to working condition fringe benefits. For example, if a corporation makes bodyguards available only to key officers, the working condition fringe benefit exclusion would still apply.

Section 132 Fringe Benefits. It has become common for employers to provide employees with such diverse benefits as free parking, membership in professional organizations, and small discounts on products sold by the employer. Section 132 lists several types of fringe benefits that may be excluded from an employee's gross income (see Topic Review I:4-2). Benefits covered by Sec. 132 include:

- No-additional-cost benefits (e.g., a hotel employee's use of a vacant hotel room)
- Qualified employee discounts (e.g., discounts on merchandise sold by the employer)
- Working condition benefits (e.g., membership fees in professional organizations paid by an employer)
- De minimis benefits (e.g., coffee provided by the employer)
- An exclusion of $325 per month for 2025 ($315 for 2024) is available for employer-financed public transportation, use of commuter highway vehicles, and parking.
- Athletic facilities (e.g., employer-owned exercise equipment used by employees)
- Job-related education and training. See Chapter I:7 for a discussion of what constitutes "job-related" education and training. Chapter I:7 also discusses the possible deduction by employees of unreimbursed job-related education costs.

One reason some benefits are exempt is that taxing each individual employee would require keeping records of what would often be small amounts. Instead, Congress has chosen to limit employer deductions for some benefits beginning in 2018. Employers can no longer deduct expenses associated with employee transportation, parking, recreational facilities, and de minimis benefits except that employers can deduct one-half of the net cost of operating employee eating facilities.

No-additional-cost benefits are limited to services, as opposed to property. Common examples of no-additional-cost benefits include the use of vacant hotel rooms by hotel employees and standby tickets provided to airline employees. The employer may not incur substantial additional costs, including forgone revenue, in providing the services to the employee. Thus, a hotel may allow employees to stay in vacant hotel rooms even though the hotel incurs additional utility and laundry costs as a result of the stay. However, the hotel cannot allow the employees to stay in lieu of paying guests. No-additional-cost benefits are limited to services provided to employees, their spouses, dependent children, and to retired and disabled employees. The term employee includes partners who perform services for a partnership. In addition, the benefits may be extended, on a reciprocal basis, to employees of other companies in the same line of business.

SELF-STUDY QUESTION

Western Airlines and Central Airlines have a reciprocal agreement that permits employees of the other airline to travel for free on a standby basis. Stan, an employee of Western Airlines, takes a free flight on Central Airlines that would have cost $800. What is Stan's income?

ANSWER

None, reciprocal agreements with regard to no-additional-cost services are permitted.

Employers may permit employees to purchase goods and services at a discount from the price charged regular customers. In the case of services, the discount is limited to 20% of the price charged regular customers. In the case of property, the discount is limited to the company's gross profit percent. No discounts are permitted on real property or investment property (e.g., houses or stocks). Further, the discounts must be from the same line of business in which the employee works. The discounts may be provided to the same persons as no-additional-cost benefits except that the discounts may not be provided on a reciprocal basis to employees of companies in the same line of business.

Discrimination is prohibited with respect to certain benefits. The benefits must be made available to employees in general rather than to highly compensated employees only. (See Topic Review I:4-2 for specific rules.)

Employee Awards. As noted earlier, it is often difficult to distinguish between gifts and awards. The de minimis rule mentioned above permits employers to make small gifts such as a holiday turkey or a watch at retirement without the employee having to include the value of the gift in gross income. The employer is entitled to a deduction for the cost of such gifts.

Section 74 provides a similar rule for **employee achievement awards** and **qualified plan awards.**[25] Such awards must be in the form of tangible personal property other than cash and must be based on safety records or length of service. Employee achievement awards are limited to $400 for any one employee during the year. Furthermore, the awards must be presented as part of a meaningful presentation and awarded under circumstances that do not create a significant likelihood of the payment being disguised compensation. Qualified plan awards must be granted under a written plan and may not discriminate in favor of highly compensated employees. The average cost of qualified plan awards is limited to $400, but individual awards can be as large as $1,600.

- An award for length of service cannot qualify under the IRC if it is received during the employee's first five years of employment or if the employee has received a length-of-service award during the year or any of the preceding four years.
- No more than 10% of an employer's eligible employees may receive an excludable safety achievement award during any year. Eligible employees are employees whose positions involve significant safety concerns.

EXAMPLE I:4-20 ▶ Each year, USA Corporation presents length-of-service awards to employees who have been with the company five, ten, fifteen, or twenty years. The presentations are made at a luncheon sponsored by the company and include gifts such as desk clocks, briefcases, and watches, none of which cost more than $400. The awards, which qualify as employee achievement awards, are deductible by USA Corporation and are not taxable as income to USA's employees. ◀

---

[25] Sec. 74(c). The definitions and requirements for employee achievement awards and qualified plan awards are contained in Sec. 274(j). It provides that tangible personal property shall not include cash, cash equivalents, gift cards, gift coupons or gift certificates (other than arrangements conferring only the right to select and receive tangible personal property from a limited array of such items pre-selected or pre-approved by the employer), or vacations, meals, lodging, tickets to theater or sporting events, stocks, bonds, other securities, and other similar items.

Gifts to employees that do not qualify as employee achievement awards or qualified plan awards can be excluded by the employee only if the awards can be excluded as de minimis amounts under Sec. 132(e).

Meals and Lodging. Section 119 provides a limited exclusion for the value of meals and lodging that are provided to employees at either no cost or a reduced cost.

- Meals provided by an employer may be excluded from an employee's gross income if they are furnished on the employer's premises and for the convenience of the employer.
- Lodging provided by an employer may be excluded from an employee's gross income if it is furnished on the employer's premises and for the convenience of the employer, and the employee is required to accept the lodging as a condition of employment.

REAL-WORLD EXAMPLE

Many university presidents are furnished with personal residences, the value of which they can generally exclude from gross income.

REAL-WORLD EXAMPLE

A brewery provided houses on the business premises to officers. The value of the houses was excludable because it was important to have the officers available for around-the-clock operations of the business. *Adolph Coors Co.,* 1968 PH T.C. Memo ¶68, 256, 27 TCM 1351.

The requirement that meals and lodging be furnished on the premises of the employer refers to the employee's place of employment.[26]

The convenience of the employer test considers whether a substantial noncompensatory business reason exists for providing the meals or lodging. Thus, the test is met if the owner of an apartment complex furnishes a unit to the manager of the complex because it is necessary to have the manager present on the premises even when he or she is off duty.

The value of lodging cannot be excluded from gross income unless the employee is required to accept the lodging as a condition of employment. This requirement is not met if the employee has a choice of accepting the lodging or receiving a cash allowance. Furthermore, meal allowances do not qualify for the exclusion if the employer does not actually provide the meal.[27] Section 132 (discussed earlier in this chapter) provides a de minimis exception. Some employers provide supper money to employees who must work overtime. If such benefits are occasionally provided to employees, the amount is excludable from the employees' gross income.

EXAMPLE I:4-21 ▶ A hospital maintains a cafeteria that is used by employees, patients, and visitors. Employees are provided free meals while on duty in order to be available for emergency calls. Since the meals are provided on the employer's premises and for the convenience of the employer, the value of the meals is excluded from the employees' gross income. ◀

EXAMPLE I:4-22 ▶ A state highway patrol organization provides its officers with a daily meal allowance to compensate them for meals eaten while they are on duty. Officers typically eat their meals at the restaurant of their choice. Because the officers receive cash instead of meals, the amount provided must be included in the officers' gross income. ◀

EXAMPLE I:4-23 ▶ A large corporation requires five of its employees to work overtime two evenings each year when the company takes inventory. The corporation gives each of the employees a small amount to cover the cost of the dinner for the two evenings. The amounts constitute supper money and are excluded from the employees' gross income. ◀

Section 119 provides that if employees can exclude the value of meals from gross income, the employer can deduct one-half the cost of the meal.[28] Further, if more than half of the employees who receive meals meet the "convenience of the employer" test, then all employees who receive meals can exclude the value from gross income.

Meals and Entertainment. As noted previously, employees can exclude from gross income the value of certain meals consumed on the employer's premises. That leaves open the question of whether an employee must include in gross income the value of meals consumed elsewhere if the employer either pays for the meal or reimburses the employee. If an employer pays for employee entertainment or reimburses an employee for the cost of entertainment, must the employee include the value of the entertainment in gross income?

---

[26] Reg. Sec. 1.119-1(c)(1).

[27] *CIR v. Robert J. Kowalski,* 40 AFTR 2d 77-6128, 77-2 USTC ¶9748 (USSC, 1977).

[28] Prior to 2018, employers could deduct the full cost of such meals. Effective 2026, none of the cost of such meals will be deductible.

EXAMPLE I:4-24 ▶ Joe is a sales representative for Eagle Corporation. Joe treats Wayne to lunch and a round of golf. Joe and Wayne discuss the possibility of Wayne opening an Eagle retail outlet during lunch and while playing golf. Wayne subsequently signs a contract and opens an Eagle Corporation store. Joe is not entitled to any deduction for meals and entertainment even though the expenses are employment related. Eagle can deduct none of the cost of golf and typically only one-half of the cost of the meal if it reimburses Joe. ◀

In general, an employee is not required to include a reimbursement in gross income if the expenses are job related and the employee is required to provide an accounting to the employer. The amounts are taxable to the employee, however, if they represent compensation for services.

EXAMPLE I:4-25 ▶ To reward Joe (from Example I:4-24) for his success, Eagle Corporation gives him four concert tickets worth a total of $250 and a $200 gift card. The $450 is compensation for services and is taxable to Joe. ◀

Employee Death Benefits. Employers sometimes may make payments to the family or friends of deceased employees. In some instances, the payments might be viewed as a gift made for reasons such as the financial need of the family, kindness, or charity. Alternatively, the amount might constitute a payment of compensation based on the past services of the deceased employee. Gifts are, of course, excluded from gross income, whereas compensation is taxable. The treatment of payments made to the family or other beneficiaries of the employee's estate is determined by the following rules:

- Payments for past services (such as bonuses, accrued wages, and unused vacation pay) are taxable as income to the family and are deductible by the employer. The important issue is whether the employee would have received this amount had he or she lived. If the employer was legally obligated to make the payment at the time of the employee's death, the payments are taxable to the recipient.
- Other amounts may be either taxable compensation or excludable gifts depending on the facts and circumstances. If the amount is a gift, it is not deductible by the employer. If the amount is taxable income to the deceased employee's family, it is deductible by the employer.

In determining whether the amount is taxable, the courts have considered factors such as whether the employer derived benefit from the payment, whether the employee had been fully compensated, and whether the payment was made to the family and not to the estate. The Supreme Court stated, "The most critical consideration [in determining whether a transfer is a gift] is the transferor's 'intention'."[29] Although the case did not deal with death benefits, it did establish the importance of motive in determining whether a payment is a gift. Thus, the transfer should be made for reasons such as kindness, sympathy, generosity, affection, or admiration.

It should be noted that it is more difficult to establish that a payment is a gift in situations where the payments are made to persons owning stock in the corporation making the payment. Such payments may be construed as constructive dividends, which are not deductible by the corporation but are taxable income to the recipients.[30]

ADDITIONAL COMMENT

The $5,000 limit was placed on the exclusion for dependent care assistance programs because it was thought to be inequitable to provide an unlimited dependent care exclusion but a limited child care credit for people who pay their own child care expenses.

Dependent Care. **Dependent care assistance programs** are employer-financed programs that provide care for an employee's children or other dependents. An employee may exclude up to $5,000 of assistance each year ($2,500 for a married individual filing a separate return). The care must be of a type that, if paid by the employee, would qualify for the dependent care credit. Furthermore, the credit is scaled down if the employee receives

[29] *CIR v. Mose Duberstein*, 5 AFTR 2d 1626, 60-2 USTC ¶9515 (USSC, 1960).

[30] *Ernest L. Poyner v. CIR*, 9 AFTR 2d 1151, 62-1 USTC ¶9387 (4th Cir., 1962).

WHAT WOULD YOU DO IN THIS SITUATION?

National Boats manufactures pleasure boats sold to consumers. The boats range in price from $40,000 to $1,500,000. Jake is the president of National Boats. The company provides Jake with one of its more expensive boats. The company pays for fuel, insurance, and other costs and deducts these expenses along with depreciation on the boat. The company states that Jake is responsible for testing and for demonstrating the boat to possible customers. Jake has had the same boat for two years, and the company plans to provide him with a new boat next month.

You asked Jake how often he uses the boat. He indicated that he uses it once or twice each month on weekends, except during the winter. You asked him who accompanies him, and what types of testing he conducts. He seemed reluctant to answer the question, but acknowledged that his family often accompanies him on the boat, and said that he tests it during ordinary operations to determine how it performs. He added that potential customers who have also accompanied him included neighbors and friends. What tax issues do you see?

benefits under the employer's plan. (See Chapter I:14 for a discussion of the child and dependent care credit.) The program cannot discriminate in favor of highly compensated employees or their dependents.[31]

KEY POINT

The classification of an employee as highly compensated is made on the basis of the facts and circumstances of each case. Any officers and shareholders owning more than 5% of the stock are classified as highly compensated employees.

Adoption Expenses. Congress provides tax benefits for qualified adoption expenses in the form of a tax credit (see Chapter I:14) or an exclusion for amounts paid pursuant to the employer's written adoption assistance plan. For 2025, an employee may exclude from gross income up to $17,280 ($16,810 for 2024) of qualified expenses paid by an employer in connection with the adoption of a child under age 18.[32] The exclusion is phased out for employees with modified adjusted gross income between $259,190 and $299,190 for 2025 (between $252,150 and $292,150 for 2024).

ADDITIONAL COMMENT

The Sec. 132 education exclusion discussed earlier is not subject to a dollar limitation, but covers only training related to the employee's work.

Educational Assistance. Under Sec. 127 educational assistance plans, employers pay employee education expenses. Employees may exclude from gross income annual payments of up to $5,250. The exclusion applies to payments for tuition, fees, books, supplies, and equipment for undergraduate courses or graduate courses, as well as other training. In addition, the CARES Act of 2020 (part of COVID relief legislation) added student loan repayments by an employer to the list of eligible educational assistance payments. This change in the definition of eligible educational assistance applies for payments made before 2026.

ADDITIONAL COMMENT

While the main benefit of a cafeteria plan is to offer tax-free choices to employees, the plan must also offer at least one taxable benefit.

Cafeteria Plans. Cafeteria plans are plans that offer employees the option of choosing cash or statutory nontaxable fringe benefits (such as group term life insurance, medical insurance, adoption expenses, and child care). If the employee chooses cash, the cash is taxable. However, if the employee chooses a statutory nontaxable fringe benefit, the value of the benefit is excluded from gross income.[33] In other words, the fact that the employee could have chosen cash does not cause the fringe benefit to be taxed. The plan cannot discriminate in favor of highly compensated employees or their dependents or spouses.[34] Employer plans may specify what benefits are offered and may limit the amount of benefits individual employees may receive.

ADDITIONAL COMMENT

Some plans supplement wages; others are wage reduction plans. In supplemental wage plans, employer funds are used to pay fringe benefits. In the case of wage reduction plans, employees elect to receive reduced wages in exchange for the fringe benefits. In both cases, employees receive benefits without being taxed on them.

Cafeteria plans that allow employees to use funds to pay medical expenses are called Flexible Spending Accounts. Typically, the plans supplement medical insurance, and funds are used to pay dental bills and other medical expenses not covered by regular insurance. In general, employees annually elect to set aside funds to pay medical expenses, and the employer pays the expenses using the set-aside funds. One problem with the agreements is that they are binding for one year. As a result, the employee loses the funds if the actual medical expenses are less than the amount set aside. Rules permit employees to carry over up to $660 from 2025 to 2026 ($640 from 2024 to 2025). Employers, on the other hand, are obligated to pay expenses

---

[31] Sec. 129.

[32] Sec. 137.

[33] Long-term care insurance (sometimes called nursing home insurance) can be offered to employees on a tax-favored basis, but that benefit cannot be offered as part of a flexible spending account.

[34] Sec. 125.

ADDITIONAL COMMENT

One benefit that was often used in the past was interest-free loans to employees. Under present law, interest must generally be imputed on interest-free loans. (See Chapter I:11 for a detailed discussion of rules applicable to interest-free loans.)

up to the agreed amount even if the full amount has not yet been withheld from the employee's wages. Thus, the employer may lose money if an employee terminates employment after incurring the designated amount of medical expenses but before the full amount is withheld.

Advantage of Fringe Benefits. The major advantage of taking fringe benefits that are excluded from gross income (such as those described above) in lieu of a cash payment is the fact that employees do not have to use after-tax income to obtain the product or service.

EXAMPLE I:4-26 ▶ Dan, an employee of Central Corporation, has a $40,000 life insurance policy and pays the premiums out of his salary. Since his salary is taxable, the premiums are paid on an after-tax basis. Kay, an employee for Western Corporation, is covered by a $40,000 group term life insurance policy financed by Western Corporation. Western Corporation pays the premiums on the policy. Because the premiums are excludable, Kay does not have to report the premiums as income. ◀

EXAMPLE I:4-27 ▶ John's employer offers a cafeteria plan, which allows him to set aside part of his salary for health insurance premiums and medical expense reimbursements. John elects to reduce his $75,000 salary by $8,000 ($7,000 for health insurance premiums and $1,000 for medical expense reimbursements). His salary is treated as being $67,000 ($75,000 – $8,000) for federal income tax purposes; the $8,000 is excluded from John's gross income.

During the year, the plan reimburses John for $800 of medical expenses that are not covered by health insurance. The reimbursement is excluded from John's gross income. The $200 ($1,000 – $800) balance that John elected for medical expense reimbursements but did not use carries over to the next year. Alternatively, if John had $1,150 of medical expenses that were not covered by health insurance, he would receive a $1,000 reimbursement and would have to pay the other $150 from his own funds (i.e., after-tax dollars). ◀

The maximum amount that employees can elect to contribute tax-free to a flexible spending account for health care benefits is $3,300 for 2025 ($3,200 for 2024). The limitation does not apply to an elective wage reduction for an employee's share of medical insurance premiums but does apply to reimbursements for dental bills, co-pays, and other medical expenses paid directly by an employee.

STOP & THINK

Question: Employers and employees both pay FICA taxes on salaries. Fringe benefits such as health insurance are exempt from both income taxes and FICA taxes. What is the tax effect of an employee's decision to elect health insurance coverage in exchange for a reduced salary?

Solution: The employee's income and FICA taxes are both lowered. The employer is permitted an income tax deduction for either the salary payment or the payment of the health insurance premium. The employer's FICA tax is reduced because the health insurance benefit also is exempt from that tax.

Availability of Tax-Favored Fringe Benefits to Business Owners. The exclusion for many fringe benefits is only available to employees (and in some cases spouses, dependents, and retirees). Many tax-favored fringe benefits are unavailable to proprietors and partners. As a result, a partnership can provide $50,000 of group-term life insurance to employees on a tax-favored basis but cannot provide the benefit on a tax-favored basis to its partners. Other fringe benefits that cannot be offered to proprietors or partners on a tax-favored basis include cafeteria plans, disability insurance, medical reimbursements, achievement awards, adoptions assistance, on-premises lodging, moving expense, and commuting and parking benefits (other than de minimis).[35]

Special rules apply to health insurance premiums and retirement plan contributions for proprietors and partners. The owners deduct these payments for AGI. This results in a self-employment tax on the amounts, but no income tax.

---

[35] Benefits that can be offered to proprietors and partners on a tax-favored basis include de minimis benefits, no additional cost fringe benefits, dependent care assistance, educational assistance, discounts, on-premises meals, and working condition fringes.

Shareholders, as such, are ineligible for tax-favored fringe benefits. In most cases, employees of C corporations are eligible for tax-favored fringe benefits based on their wages even if they own stock. This is not true, however, for S corporation employees who own more than 2% of the corporation's stock. They are treated much like partners and proprietors with respect to fringe benefits. Health insurance premiums and retirement plan contributions made for these S corporation employee-shareholders are wages for income tax purposes. Like partners and proprietors, these S corporation employees-shareholders can deduct the amounts for AGI. Unlike partners and proprietors, the amounts are not subject to FICA or self-employment taxes.

The fact that fringe benefits provided to employee-shareholders of C corporations are treated more favorably than benefits provided to the owners of other businesses is an incentive for businesses to operate as C corporations.

FOREIGN-EARNED INCOME EXCLUSION

ADDITIONAL COMMENT

Many U.S. embassies and consulates in foreign countries provide income tax assistance.

ADDITIONAL COMMENT

Foreign-earned income does not include amounts paid to an employee of the U.S. government or any U.S. government agency or instrumentality.

The income of U.S. citizens is generally subject to the U.S. income tax even if the income is derived from sources outside the United States. The foreign income of U.S. citizens often is taxed by the host country, potentially leading to a substantial double tax on the same income. The double tax is mitigated by a **foreign tax credit**. Subject to limitations, U.S. citizens may subtract from their U.S. income tax liability the income taxes they pay to foreign countries. (See Chapter I:14 for a discussion of the foreign tax credit.)

In the case of foreign-earned income, individuals have available the alternative option of excluding the first $130,000 for 2025 ($126,500 for 2024) of foreign-earned income from gross income.[36] The *exclusion* is available in lieu of the foreign tax credit. If both a husband and wife have foreign-earned income, each may claim an exclusion. Community property rules are ignored in determining the amount of the exclusion. Thus, if only one spouse has foreign-earned income, only one exclusion is available. The principal reasons for the exclusion are to encourage U.S. businesses to operate in foreign countries and to hire U.S. citizens and resident aliens to manage the businesses. The hope is that such operations will improve the balance of payments. Taxpayers who elect the exclusion in one year may switch to the foreign tax credit in any subsequent year. Taxpayers who change from the exclusion to the credit may not reelect the exclusion before the sixth tax year after the tax year in which the change was made.[37] The IRS can waive the six-year limitation in special situations (such as an individual employee changing the location of his or her foreign employment).

TYPICAL MISCONCEPTION

A taxpayer must be present in one or more foreign countries for 330 days during a period of twelve consecutive months, rather than 330 days during a calendar year.

Foreign-earned income includes an individual's earnings from personal services rendered in a foreign country. The place where the services are performed determines whether earned income is foreign or U.S. source income. If an individual is engaged in a trade or business in which both personal services and capital are material income-producing factors, no more than 30% of the net profits from the business may be excluded.[38] Furthermore, pensions, annuities, salary paid by the U.S. government, and deferred compensation do not qualify for the exclusion.[39]

To qualify for the foreign-earned income exclusion, the taxpayer must either be a bona fide resident of one or more foreign countries for an entire taxable year, or be present in one or more foreign countries for 330 days during a period of 12 consecutive months.[40] The exclusion limitation for a year must be prorated if the taxpayer is not present in, or a resident of, a foreign country or countries for the entire year.

EXAMPLE I:4-28 ▶ Sondra is given a temporary assignment to work in foreign country T. She arrives in T on October 19, 2025, and leaves on October 1, 2026. Although Sondra does not establish a permanent residence in T, she is present in T for at least 330 days out of a twelve-month period beginning on October 20, 2025. Thus, 73 days fall in 2025 and the rest in 2026. Sondra's exclusion for 2025 is limited to $26,000 [(73 ÷ 365) × $130,000]. She may exclude $26,000 or the income she earns in foreign country T during 2025, whichever is less. Sondra also may claim the foreign earned income exclusion in 2026 for the number of qualified days during the year. ◀

---

[36] Sec. 911(b)(2).

[37] Sec. 911(e)(2).

[38] Sec. 911(d)(2)(B).

[39] Sec. 911(b)(1)(B).

[40] Sec. 911(d).

Housing costs in foreign countries are often higher than in the United States. In such situations, employees may be able to increase their exclusion while self-employed individuals may be able to deduct a portion of their housing costs. Specifically, the exclusion (deduction) is available for housing costs that exceed 16% of the foreign earned income exclusion limitation or $20,800 (0.16 × $130,000) for 2025 ($20,240 for 2024). Because the maximum housing cost exclusion is 30%, the amount that can be excluded for housing costs under this rule generally is limited to $18,200 (0.14 × $130,000) for 2025 ($17,710 for 2024). The IRS provides higher amounts for cities with high cost-of-living. Further, the housing exclusion must be reduced if the taxpayer does not incur cost for the entire year.

EXAMPLE I:4-29 ▶ Wayne resides and is employed in Country X for all of 2025, earning a $200,000 salary. His housing costs are $58,000 for the year. Wayne can exclude $148,200 ($130,000 + $18,200) from gross income. If the housing costs had been $36,000, Wayne's foreign earned income exclusion would have totaled $145,200 [$130,000 + ($36,000 − $20,800)]. ◀

Taxpayers who exclude a portion, but not all foreign earned income, are subject to a special tax computation. The result of the computation is to apply higher tax rates to the taxable portion of the foreign earned income. (This computation is beyond the scope of this text.) Americans employed abroad are often subject to income and payroll taxes imposed by the host country. Americans employed abroad by foreign companies are generally exempt from FICA taxes while Americans employed abroad by American companies remain subject to FICA taxes except in instances where a tax treaty between the U.S. and the host country subjects Americans to comparable host country taxes.

INCOME FROM THE DISCHARGE OF A DEBT

If debt of a taxpayer is cancelled or forgiven, the taxpayer may have to include the cancelled amount in gross income. It is important to distinguish a debt cancellation from a gift, a bequest, or a renegotiation of the purchase price.

EXAMPLE I:4-30 ▶ Farouk loaned his daughter $4,000 to help her purchase an automobile. Several months after she purchased the automobile, but before she repaid the $4,000, Farouk's daughter married. Farouk told his daughter that he was "tearing up" the $4,000 note as a wedding present. In this instance, the amount forgiven would constitute an excludable gift and would not be taxable as income to the daughter. ◀

EXAMPLE I:4-31 ▶ Clay purchased a used automobile from a dealer for $6,000. He paid $2,000 down and agreed to pay the balance of $4,000 over three years. After Clay purchased the automobile, he determined that it was defective. Clay tried to return the automobile, but the automobile dealer refused. Clay threatened to sue the dealer. To resolve the problem, the dealer offered to reduce the balance due on the purchase-money debt from $4,000 to $2,500. Clay agreed. The transaction constitutes a reduction in the purchase price of the automobile. Clay will not recognize any income, but must reduce the basis in his automobile from $6,000 to $4,500. ◀

EXAMPLE I:4-32 ▶ Blue Corporation issued bonds for $1,000 when interest rates were low. After a few years, interest rates increased and the bond value declined to $850. Blue Corporation purchased the bonds on the open market. Blue will recognize $150 of income from the discharge of indebtedness. ◀

EXAMPLE I:4-33 ▶ Indy Coal Company has seen its business decline during the past two years. The Company has a significant amount of bank debt that was incurred over the years to fund its coal operations. In order to maintain its operations, Indy entered into an agreement with the bank whereby the bank agreed to cancel 50% of Indy's debt. Assuming Indy was solvent at the time of the cancellation, Indy must report the discharge of indebtedness as gross income. ◀

STOP & THINK

Question: In Example I:4-33, the bank agreed to cancel 50% of Indy Coal Company's debt. Why would a lender agree to unilaterally cancel a borrower's debt?

Solution: A bank might cancel a portion of a borrower's debt in order to protect the remaining portion of the debt. If the debt forced the company into bankruptcy, the bank may collect little or none of the debt. If the cancellation would help stabilize Indy, the bank may be able to collect at least 50% of the debt. Further, if Indy becomes a viable company in the years ahead, the bank will have a good customer to earn profits in the future.

The enforceability of a debt under state law may also determine whether the forgiveness results in income. For example, one case held that the forgiveness of a gambling debt was not included in gross income where the debt was unenforceable under state law.[41]

Discharge in Bankruptcy and Insolvency. Section 61(a)(12) indicates that gross income includes income from the discharge of an indebtedness. Section 108, on the other hand, provides for the following exceptions where the discharge of an indebtedness is not taxable:

- The discharge occurs in bankruptcy.
- The discharge occurs when the taxpayer is insolvent.

These exceptions are intended to allow a "fresh start" for bankrupt and other financially troubled taxpayers. Since a taxpayer is not required to include the discharge in gross income, he is required to reduce certain tax attributes. For example, if the taxpayer has a net operating loss carryover, the NOL carryover must be reduced by the excluded discharge.

If a debt is reduced during bankruptcy proceedings, the taxpayer recognizes no income even if the reduction in debt exceeds the available tax attributes. In the case of an insolvent taxpayer, no income is recognized as long as the taxpayer is insolvent after the reduction in debt takes place. A taxpayer is insolvent if the debts owed by the taxpayer exceed the FMV of assets owned. Thus, an insolvent taxpayer reduces the tax attributes to the point of solvency. From that point on, any reduction in debt results in the recognition of income even if all tax attributes have not been offset.

Student Loan Forgiveness. Under Sec. 108(f)(2), the discharge of certain student loans is excluded from gross income if the discharge is contingent on the individual's performing certain public services. The loans must have been made by governmental, educational, or charitable organizations, and the loan proceeds must have been used to pay the cost of attending an educational institution or used to refinance outstanding student loans. Further, the loan forgiveness must be contingent upon the individual's working for a specified time period in certain professions, and the services must normally be performed for someone other than the lender.

ADDITIONAL COMMENT

Also excludable is the income from the cancellation of a student loan pursuant to a provision under which part of the debt is discharged due to working for a period of time in certain professions for a broad class of employers.

EXAMPLE I:4-34 ▶ Lee borrowed $60,000 from the federal government to attend medical school. Under the terms of the loan, $20,000 of debt is forgiven for each year she practices medicine in designated low-income neighborhoods. Lee does not have to include the debt forgiveness in gross income. ◀

The discharge of student loans on account of the student's death is not taxable.

Home Mortgage Forgiveness. Through 2025, homeowners can exclude debt forgiveness on their **principal residence** of up to $750,000 under Sec. 108(a)(1)(E). This provision applies only to mortgages acquired in connection with the acquisition or improvement of a taxpayer's principal residence. Taxpayers are required to reduce the basis of their residence by the amount of the exclusion.

---

[41] *David Zarin v. CIR*, 66 AFTR 2d 90-5679, 90-2 USTC ¶50,530 (3rd Cir., 1990).

EXCLUSION FOR GAIN FROM SMALL BUSINESS STOCK

Investing in small businesses is risky. To encourage investment, Congress enacted a 100% exclusion for gains realized by noncorporate taxpayers on the sale or exchange of small business stock held over five years.[42]

For each issuer of qualified small business stock, there is a limit on the amount of gain a taxpayer may exclude. The amount of gain eligible for the exclusion may not exceed the greater of $10 million, reduced by amounts previously excluded for gains on the company's stock, or ten times the taxpayer's aggregate adjusted basis of the stock disposed of during the year.[43]

EXAMPLE I:4-35 ▶ In 2014, Martha pays $3 million cash to Penmoken Corporation to acquire some of its common stock, which is qualified small business stock. In 2025, she sells the stock for $16.1 million, thus realizing a gain of $13.1 million ($16,100,000 − $3,100,000). Martha held the Penmoken stock for more than five years, so the sale qualifies for the qualified small business stock exclusion. Her exclusion is limited to $30 million (greater of $10 million or ten times her $3 million basis), so she can exclude all $13.1 million of the realized gain. ◀

A corporation may issue qualified small business stock only if the corporation is a C corporation that is not an excluded corporation with an aggregate adjusted basis of not more than $50 million of gross assets, and at least 80% of the value of its assets must be used in the active conduct of one or more qualified trades or businesses.[44]

The 100% exclusion only applies to stock acquired after September 27, 2010. The small business stock exclusion is 50% (60% for certain empowerment zone businesses) for stock acquired after August 10, 1993 and before February 18, 2009 and is 75% for stock acquired after February 17, 2009 and before September 28, 2010. Any gain remaining after the 50% and 75% exclusions is taxed at a rate not greater than 28%.

EXAMPLE I:4-36 ▶ Assume the same facts as in Example I:4-35 except that Martha acquired the stock in 2005. She can exclude one-half of her gain ($6,550,000). Martha's exclusion would be 75% of her gain ($9,825,000) if she had acquired the stock in February 2010. ◀

Taxpayers do not have to recognize any gain if they reinvest the proceeds from the sale of small business stock in stock in another small business corporation within 60 days. The stock must have been held for over six months. This is important for investors who do not meet the five-year holding period requirement and for investors who acquired stock during the periods covered by the 50% and 75% exclusions. The basis of the stock must be reduced by the amount of the unrecognized gain.

OTHER EXCLUSIONS

The tax law contains other exclusions that are either covered elsewhere in the text or are of limited application. Table I:4-2 lists several such exclusions.

---

[42] §1202(a).

[43] Sec. 1202(b)(1). If the taxpayer transferred property to the corporation in exchange for stock, the taxpayer's basis for the stock for purposes of this exclusion is treated as being no less than the property's fair market value (Sec. 1202(i)(1)(B)). This rule can affect the maximum exclusion if the property's transfer qualified for Sec. 351 treatment. (Sec. 351 is discussed in Chapter I:16.)

[44] Secs. 1202(d) and (e). Excluded corporations are those engaged in providing professional services (e.g., law and health), financial services (e.g., banking and insurance), hospitality (e.g., hotels and restaurants), farming, and mining and oil and gas production.

▼ TABLE I:4-2
Other Exclusions

Section	Applies to	Comments
121	Gain from sale of personal residence	Taxpayers may exclude up to $250,000 ($500,000 in the case of a married couple filing a joint return) of gain from the sale of a personal residence. (See Chapter I:12 for a detailed discussion of this provision.)
101(h)	Annuities paid to survivors of public safety officers	Annuities paid to survivors of public safety officers, such as firefighters and police officers, killed in the line of duty are excluded.
104(a)	Military disability pay	Military personnel may exclude disability pay, combat pay (noncommissioned personnel only), and housing allowances.
112	Combat pay	
134	Military housing allowance	
107	Housing allowance for ministers	Ministers may exclude either the rental value of their homes or a rental allowance if provided in connection with their religious duties.
119	Campus housing	A limited exclusion is provided to employees of educational institutions when they are provided with on-campus housing.
108(a)(1)(D)	Qualified real property business debt discharge	A limited exclusion of income related to the cancellation of real property business indebtedness by taxpayers other than C corporations.
131	Foster care payments	Certain allowances received by foster care providers are excluded from gross income.
139F	Wrongful incarceration	Former prisoners may exclude monetary awards received for wrongful incarceration.
162(o)	Rural letter carrier's allowance	Rural letter carriers may exclude the "equipment maintenance allowance" they receive for the use of their personal automobiles in delivering the mail. They receive no deduction for the use of their automobiles.
408A(d)	Roth IRA distributions	Qualified distributions from Roth IRAs are excluded from gross income (see Chapter I:7 for a detailed discussion of the provisions).
530(d)	Coverdell education savings account distributions	Qualified distributions from Coverdell education savings accounts are excluded from gross income (see Chapter I:7 for a detailed discussion of this provision).
988(e)	Personal foreign currency gains	Individuals are excused from recognizing gain on the disposition of foreign currency in any personal transaction, provided that the gain does not exceed $200.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 3

Describe tax planning considerations for exclusions of gross income

EMPLOYEE FRINGE BENEFITS

The tax law encourages certain forms of fringe benefits by allowing an employer to deduct the cost of the benefit while permitting the employee to exclude the benefit from gross income. This deduction does not represent an income tax advantage to the employer because compensation, whether in the form of cash or nontaxable fringe benefits, is deductible if reasonable in amount. (Under new provisions, there are minor exceptions that are not deductible by the employer such as employee transportation and athletic facilities.) While employees receive the greatest income tax benefit from the exclusion of fringe benefits from gross income, employers can realize a small benefit because some fringe benefits are not subject to Social Security and Medicare taxes.

EXAMPLE I:4-37 ▶

USA Company has decided to offer $20,000 of group term life insurance coverage for each of its employees at an average annual premium cost of $100 per employee. Tim, an employee of USA Corporation, is in the 22% tax bracket. Because USA is offering a nontaxable fringe benefit, Tim will owe no additional income tax. If Tim had received a salary increase of $100, he would have had to pay an additional income tax of $22 (0.22 × $100). The remaining $78 of after-tax income would probably not have been sufficient to obtain the same amount of life insurance coverage. ◀

ADDITIONAL COMMENT

A case can be made for the desirability of encouraging employers to provide health insurance and other fringe benefits. However, these provisions may contribute to increases in the cost of insurance and medical care.

Excluding fringe benefits from gross income favors employees who are subject to higher tax rates.

EXAMPLE I:4-38 ▶ Assume the same facts as in Example I:4-37 except that Tim is in the 37% tax rate. Tim would save $37 (0.37 × $100) of taxes by receiving the group term life insurance coverage instead of the $100 salary increase. ◀

ADDITIONAL COMMENT

Fringe benefits offered by potential employers are important consideration factors when weighing total compensation packages.

It is not always desirable for employers to offer nontaxable fringe benefits. Some employees are not interested in certain benefits. For example, in the case of married couples where both spouses are employed, it is not necessary for both employers to provide medical insurance coverage for both spouses. Alternatively, single employees may not feel the need for group term life insurance, and employees with no children are uninterested in employer-provided child care.

To avoid providing fringe benefits that are unneeded or unwanted, many employers have turned to cafeteria plans. Under cafeteria plans, employees may select from a list of nontaxable fringe benefits. On the other hand, employees who so choose may receive cash in lieu of some or all of the nontaxable benefits. Thus, each employee selects what he or she wants most. One common result is that high-tax-rate employees select the nontaxable fringe benefits, whereas other employees choose to receive cash.

SELF-HELP INCOME AND USE OF PERSONALLY OWNED PROPERTY

As noted earlier in this chapter, self-help income and income derived from the use of personal property are not taxable. Thus, self-help income and personal ownership of property are favored by the tax system. Taxpayers who rent their personal residences cannot deduct rental payments, but taxpayers who own their residences do not pay rent and may deduct interest and real estate taxes as itemized deductions. Thus, the tax law encourages ownership of personal residences.

Effective tax planning necessitates weighing the tax incentives with other nontax factors. Taxpayers with little accumulated funds may find it difficult to purchase a residence despite the availability of tax incentives. Taxpayers who move frequently may find that transaction costs such as real estate commissions and other closing costs are greater than the tax benefits obtained from home ownership. Other factors such as the personal preference of the taxpayer and anticipated inflation rates must also be considered.

Self-help income must be viewed in the same way. Taxpayers who are deciding whether to paint their own residences or hire someone else to do it must consider factors such as personal preference and the amount of income that could be produced if the time were spent working at an activity that produces taxable income.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 4

Describe compliance and procedural considerations for exclusions of gross income

Taxpayers are usually not required to disclose excluded income on their tax returns. For example, a taxpayer who receives a tax-exempt scholarship need not disclose that income on his or her tax return. An exception is provided for tax-exempt interest and Social Security benefits, which must be disclosed on the tax return. If a taxpayer's only income is from tax-exempt sources, the taxpayer need not file a tax return. Whether an individual must file a return is based on the amount of the individual's gross income for the year (see Chapter I:2).

This chapter considers the taxability of various fringe benefits. The rules regarding the need for an employer to withhold federal income taxes or to report a payment on an employee's Form W-2 (Statement of Income Tax Withheld on Wages) closely parallel the gross income rules. (See Chapter I:14 for a discussion of these reporting requirements.) In general, if a fringe benefit is nontaxable, employers do not withhold from the benefit, nor do they report the benefit on the employee's W-2 at year-end. On the other hand, if the

ADDITIONAL COMMENT

Taxpayers filing Form 1040 are asked to report any tax-exempt interest income on line 2a.

benefit is taxable, it is subject to withholding and is reported on the employee's W-2 at year-end. Thus, employers do not withhold for nontaxable meals and lodging provided to employees.[45] Similarly, no withholding is required for the following fringe benefits if they are nontaxable: scholarships and fellowships covered by Sec. 117, dependent care covered by Sec. 129, and miscellaneous fringes covered by Sec. 132.[46]

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:4-1 What is meant by the terms *administrative exclusion* and *judicial exclusion*?

I:4-2 There is no specific statutory exclusion for welfare benefits. Nevertheless, the IRS has ruled that such benefits are not taxable. Is this within the authority of the IRS?

I:4-3 What was the issue in the tax case *Eisner v. Macomber*? Why is the case important?

I:4-4 Most exclusions exist for one of two reasons. What are those reasons? Give examples of exclusions that exist for each.

I:4-5
a. If a gift of property is made, who is taxed on income produced by the property?
b. How can interfamily gifts reduce a family's total tax liability?

I:4-6
a. What role does intent play in determining whether a transfer is a gift and therefore not subject to the income tax?
b. Are tips received by employees from customers excludable from gross income as gifts? Explain.

I:4-7 What is the tax significance of the face amount of a life insurance policy?

I:4-8 What conditions must be met for an award to qualify for an exclusion under Sec. 74?

I:4-9 Which of the requirements for the Sec. 74 awards exclusion most severely limits its use? Does the exclusion benefit taxpayers more if they itemize their deductions or use the standard deduction?

I:4-10
a. Define the term *scholarship* as it is used in Sec. 117.
b. If a scholarship covers room and board, is it excludable?
c. If an employer provides a scholarship to an employee who is on leave of absence, is that scholarship taxable?
d. Is the amount paid by a university to students for services excludable from the students' gross income?

I:4-11 What special rules are applicable to non-degree candidates who receive scholarships?

I:4-12 Is the personal injury exclusion found in Sec. 104 limited to physical injury? Explain.

I:4-13 Answer the following questions relative to employer-financed medical and health, disability, and life insurance plans.
a. May employers deduct premiums paid on employee insurance?
b. Do employees have to include such premiums in gross income?
c. Are benefits paid to the employee included in the employee's gross income?

I:4-14 Special rules are applicable in situations where group term life insurance coverage exceeds $50,000. How are key employees treated?

I:4-15
a. What are the seven major types of fringe benefits covered by Sec. 132?
b. What tax advantage is offered relative to such benefits?
c. Are such benefits available to employees only or may the benefits also be offered to spouses, dependents, and retirees?
d. Is discrimination prohibited relative to Sec. 132 benefits?
e. What is the tax impact on the employer and employees if an employer's plan is discriminatory?

I:4-16 What conditions must be met if an employee is to exclude meals and lodging furnished by an employer?

I:4-17 The president and vice president of USA Corporation receive benefits that are unavailable to other employees. These benefits include free parking, payment of monthly expenses in a local club, discounts on products sold by the corporation, and payment of premiums on a whole life insurance policy. Which of the benefits must be included in the gross income of the president and vice president?

---

[45] Reg. Sec. 31.3401(a)-1(b)(9).

[46] See Sec. 3401 for withholding requirements for numerous special situations.

I:4-18 Are the same fringe benefits that are available to employees also available to self-employed individuals?

I:4-19 If an employee takes a customer to lunch and discusses business, can the employee deduct the cost of the meal? Explain.

I:4-20 Are income distributions from a qualified state tuition program taxable?

I:4-21 What types of income qualify for the foreign-earned income exclusion?

I:4-22 Are taxpayers who claim the foreign-earned income exclusion entitled to deduct expenses incurred in producing that income? Explain.

I:4-23 **a.** Why is it important to distinguish debt cancellation from a gift, bequest, or renegotiation of a purchase price?

b. What happens to the basis of an asset if the taxpayer renegotiates its purchase price?

I:4-24 **a.** Under what conditions is the discharge of indebtedness not taxable?

b. If a father forgives a daughter's debt to him, is she required to include such amount in her gross income?

I:4-25 Bankrupt and insolvent taxpayers do not recognize income if debt is discharged. They must, however, reduce specified tax attributes. What is involved?

I:4-26 Are partners and proprietors at a disadvantage with respect to fringe benefits? Explain.

I:4-27 Why are cafeteria plans helpful in the design of an employee benefit plan that provides nontaxable fringe benefits?

I:4-28 Both high-income and low-income employees are covered by cafeteria plans. Under such plans, all employees may select from a list of nontaxable fringe benefits or they may elect to receive cash in lieu of these benefits.

a. Which group of employees is more likely to choose nontaxable fringe benefits in lieu of cash? Explain.

b. Is this result desirable from a social or economic point of view? Explain.

ISSUE IDENTIFICATION QUESTIONS

I:4-29 Luke, who retired this year, lives in a four-plex owned by Julie. Luke's income decreased when he retired, and he now has difficulty paying his rent. Julie offered to reduce Luke's rent if he would agree to mow the lawn, wash windows, and provide other maintenance services. Luke accepted, and Julie reduced the monthly rental from $650 to $300. What are the tax issues that should be considered by Luke and Julie?

I:4-30 Mildred worked as a maid for 27 years in the home of Larry and Kay. When she retired, they presented her with a check for $25,000, indicating that it was a way of showing their appreciation for her years of loyal service. What tax issues should Mildred and her employer consider?

I:4-31 Troy Department Stores offers employees discounts on merchandise carried in the store. Newly hired employees receive a 10% discount. The discount rate increases 1% each year until employees have 20 years of service when the discount rate is capped at 30%. What tax issues should Troy and the employees consider?

I:4-32 Jerry works in the human resources department of Ajax Corporation. One of his responsibilities is to interview prospective employees. Two or three days each week, Jerry takes a prospective employee and fellow employees to lunch, and Ajax reimburses him for the cost of the meals. What tax issues should Jerry and Ajax Corporation consider?

PROBLEMS

I:4-33 *Self-Help Income.* In which of the following situations would the taxpayer realize taxable income?

a. A mechanic performs work on his own automobile. The mechanic would have charged a customer $400 for doing the same work.

b. A mechanic repairs his neighbor's personal automobile. In exchange, the neighbor, an accountant, agrees to prepare the mechanic's tax return. The services performed are each worth $200.

c. A mechanic repairs his daughter's automobile without any charge.

I:4-34 *Excludable Gifts.* Which of the following would be includable in gross income?
a. Alice appeared on a TV quiz show and received a prize of $5,000.
b. Bart received $500 from his employer because he developed an idea that reduced the employer's production costs.
c. Chuck borrowed $500 from his mother in order to finance his last year in college. Upon his graduation, Chuck's mother told him he did not have to repay the $500. She intended the $500 to be a graduation present.

I:4-35 *Life Insurance Proceeds.* Don is the beneficiary of a $50,000 insurance policy on the life of his mother, Anna. To date, Anna has paid premiums of $16,000. What amount of gross income must be reported in each of the following cases?
a. Anna elects to cancel the policy and receives $20,000, the cash surrender value of the policy.
b. Anna dies and Don receives the face amount of the policy, $50,000.
c. Anna dies and Don elects to receive $15,000 per year for four years.

I:4-36 *Transfer of Life Insurance.* Ed is the beneficiary of a $20,000 insurance policy on the life of his mother. Because Ed needs funds, he sells the policy to his sister, Amy, for $6,000. Amy subsequently pays premiums of $9,000.
a. How much income must Amy report if she collects the face value of the policy upon the death of her mother?
b. Would Amy have to report any income if her brother had given her the policy? Assume the only payment she made was $9,000 for the premiums.

I:4-37 *Settlement of Life Insurance Policy.* Sue is age 73 and has a great deal of difficulty living independently as she suffers from severe rheumatoid arthritis. She is covered by a $400,000 life insurance policy, and her children are named as her beneficiaries. Because of her health, Sue decides to live in a nursing home, but she does not have enough income to pay her nursing home bills, which are expected to total $42,000 per year. The insurance company offers disabled individuals the option of either a reduced settlement on their policies or an annuity. Given Sue's age and health, she has the option of receiving $3,200 per month or a lump sum payment of $225,000. To date, Sue has paid $80,000 in premiums on the policy.
a. How much income must Sue report if she chooses the lump sum settlement?
b. How much income must Sue report if she elects the annuity?
c. How much income would Sue have to report if her nursing home bills amounted to only $36,000 per year?

I:4-38 *Insurance Policy Dividends.* Hank carries a $100,000 insurance policy on his life. Premiums paid over the years total $8,000. Dividends on the policy have totaled $6,000. Hank has left the dividends on the policy with the insurance company. During the current year, the insurance company credited $600 of interest on the accumulated dividends to Hank's account.
a. How much income is Hank obligated to report in connection with the policy?
b. Would it make any difference if the accumulated dividends equaled $9,000 instead of $6,000?

I:4-39 *Prizes and Awards.* For each of the following, indicate whether the amount is taxable:
a. Peggy won $4,000 in the state lottery.
b. Jane won a $500 prize for her entry in a poetry contest.
c. Linda was awarded $2,000 when she was selected as "Teacher of the Year" by the local school district.

I:4-40 *Scholarships.* For each of the following, indicate the amount that must be included in the taxpayer's gross income:
a. Larry was given a $1,500 tuition scholarship to attend Eastern Law School. In addition, Eastern paid Larry $4,000 per year to work part-time in the campus bookstore.
b. Marty received a $10,000 football scholarship for attending Northern University. The scholarship covered tuition, room and board, laundry, and books. Four thousand dollars of the scholarship was designated for room and board and laundry. It was understood that Marty would participate in the school's intercollegiate football program, but Marty was not required to do so.
c. Western School of Nursing requires all third-year students to work twenty hours per week at an affiliated hospital. Each student is paid $10 per hour. Nancy, a third-year student, earned $10,000 during the year.

I:4-41 *Research Grant.* Otto is a biology professor at State University. The university gave Otto a sabbatical leave to study the surface of the flatworm. During the year, he received a salary of $50,000, which is less than his regular salary of $56,000. Otto also received a grant to cover expenses associated with the study. The grant was $2,000, as were his related expenses. Otto also incurred memberships and other employment related expenses totaling $1,000. How much must Otto include in gross income?

I:4-42 *Payments for Personal Injury.* Determine which of the following payments for sickness and injury must be included in the taxpayer's gross income.

a. Pat was injured in an automobile accident. The other driver's insurance company paid him $2,000 to cover medical expenses and a compensatory amount of $4,000 for pain and suffering.

b. A newspaper article stated that Quincy had been convicted of tax evasion. Quincy, in fact, had never been accused of tax evasion. He sued and won a compensatory settlement of $4,000 from the newspaper.

c. Rob, who pays the cost of a commercial disability income policy, fell and injured his back. He was unable to work for six months. The insurance company paid him $1,800 per month during the time he was unable to work.

d. Steve fell and injured his knee. He was unable to work for four months. His employer-financed disability income policy paid Steve $1,600 per month during the time he was unable to work.

e. Ted suffered a stroke. He was unable to work for five months. His employer continued to pay Ted his salary of $1,700 per month during the time he was unable to work.

I:4-43 *Employee Benefits.* Ursula is employed by USA Corporation. USA Corporation provides medical and health, disability, and group term life insurance coverage for its employees. Premiums attributable to Ursula were as follows:

Medical and health	$3,600
Disability	300
Group term life (face amount is $40,000)	200

During the year, Ursula suffered a heart attack and subsequently died. Before her death, Ursula collected $14,000 as a reimbursement for medical expenses and $5,000 of disability income. Upon her death, Ursula's husband collected the $40,000 face value of the life insurance policy.

a. What amount can USA Corporation deduct for premiums attributable to Ursula?

b. How much must Ursula include in income relative to the premiums paid?

c. How much must Ursula include in income relative to the insurance benefits?

d. How much must Ursula's widower include in income?

I:4-44 *Group Term Life Insurance.* Data Corporation provides nondiscriminatory group term life insurance coverage for the entire year for its employees. Information for the current year is as follows:

Employee	*Age*	*Key Employee*	*Coverage*	*Actual Premiums*
Andy	62	yes	$200,000	$4,000
Bob	52	yes	40,000	700
Cindy	33	no	80,000	600
Damitria	33	no	40,000	300

a. How much may Data Corporation deduct for group term life insurance premiums?

b. How much income must be reported by each employee?

I:4-45 *Life Insurance Proceeds.* Joe is the beneficiary of a life insurance policy taken out by his father several years ago. Joe's father dies, and Joe has the option of receiving the $100,000 face value of the policy in cash or receiving annual payments of $1,000 per month for the rest of his life. Joe is now 65. Joe's father paid $32,000 in premiums over the years.

a. How much must Joe include in gross income this year if he accepts the $100,000 face amount?

b. Assume Joe elects to receive the annual payments. What is his life expectancy, using Table I:3-1?

c. What is his annual exclusion?

d. How much must he report as income each year?

I:4-46 *Employee Benefits.* Al flies for AAA Airlines. AAA provides its employees with several fringe benefits. Al and his family are allowed to fly on a space-available basis on AAA Airline. Tickets used by Al and his family during the year are worth $2,000. AAA paid for a subscription to two magazines published for pilots. The subscriptions totaled $80. The airline paid for Al's meals and lodging while he was away from home overnight in connection with his job. Such meals and lodging cost AAA $10,000. Although Al could not eat while flying, he was allowed to drink coffee provided by the airline. The coffee was worth about $50. AAA provided Al with free parking, which is valued at $100 per month. The airline treated Al and his family to a one-week all-expenses-paid vacation at a resort near his home. This benefit was awarded because of Al's outstanding safety record. The value of the vacation was $2,300. Which of these benefits are taxable to Al?

I:4-47 ***Employee Benefits.*** Jet Corporation is involved in the purchase and rental of several large apartment complexes. Questions have been raised about the treatment of several items pertaining to Jet Corporation and its employees. Jet Corporation employs a manager for each complex. The manager is required to occupy a unit in the complex in order to be available at all hours. The average rental value of the units is $12,000 per year. The corporation's president finds that it is beneficial to the corporation if he entertains bankers and others with whom Jet does business. He does such entertaining about once each month and the corporation pays the cost. Business is discussed at the meals. The cost for the year of such entertaining was $1,500, and about one-third of the cost was attributable to meals consumed by the president.

Each year as the company closes its books, the controller and certain other members of the accounting staff must work overtime. The company pays each employee supper money totaling $25 during this period.

The corporation's vice president is expected to travel on business-related matters to visit various properties owned by the corporation. Because of the distances involved, the vice president must stay away from home several nights. Total meals and lodging incurred on the trips total $3,000, most of which is attributable to the vice president himself.

Which amounts are deductible by the corporation? Which are taxable to the employee?

I:4-48 ***Death Benefits.*** After a brief illness, Bill died. Bill's employer paid $20,000 to his widow. The corporation sent along a letter with the check indicating that $5,000 represented payment for Bill's accrued vacation days and back wages. The balance was being awarded in recognition of Bill's many years of loyal service. The company was obligated to pay the accrued vacation days and back wages, but the balance was discretionary.

a. Is the employer entitled to deduct the $20,000 paid to Bill's widow?
b. Is Bill's widow required to include the $20,000 in her gross income?

I:4-49 ***Foreign-Earned Income Exclusion.*** For each of the following cases, indicate the amount of the foreign-earned income exclusion. (Disregard the effect of exemptions for certain allowances under Sec. 912.)

a. Sam, a U.S. citizen, is an assistant to the ambassador to Spain. Sam lives and works in Spain. His salary of $90,000 is paid by the U.S. government.
b. Jim, a U.S. citizen, owns an unincorporated oil drilling company that operates in Argentina, where he resides. The business is heavily dependent on equipment owned by Jim. His profit for the year totaled $100,000.
c. Ken, a U.S. citizen, works for a large Japanese corporation. Ken is employed in the United States, but must travel to Japan several times each year. During the current year, he spent sixty days in Japan. This is typical of most years. His salary is $95,000.

I:4-50 ***Foreign-Earned Income Exclusion.*** On January 5, 2025, Rita left the United States for Germany, where she had accepted an appointment as vice president of foreign operations. Her employer, USA Corporation, told her the assignment would last about two years. Rita decided not to establish a permanent residence in Germany because her assignment was for only two years. Her salary for the year is $306,300. Rita incurred travel, transportation, and other related expenses totaling $6,000, none of which are reimbursed.

a. What is Rita's foreign-earned income exclusion?
b. How much may she deduct for travel and transportation?

I:4-51 ***Discharge of Debt.*** During bankruptcy, USA Corporation debt was reduced from $780,000 to $400,000. USA Corporation's assets are valued at $500,000. USA's NOL carryover was $400,000.

a. Is USA Corporation required to report any income from the discharge of its debts?
b. Which tax attributes are reduced and by how much? Assume USA does not make any special elections when reducing its attributes.

I:4-52 ***Discharge of Debt.*** Old Corporation has suffered losses for several years, and its debts total $500,000; Old's assets are valued at only $380,000. Old's creditors agree to reduce

Old's debts by one-half in order to permit the corporation to continue to operate. Old's NOL carryover is $150,000.

a. What impact does the reduction in debt have on Old's NOL?

b. Is Old required to report any income?

I:4-53 *Court and Insurance Awards.* Determine whether the following items represent taxable income.

a. As the result of an age discrimination suit, Pat received a cash settlement of $40,000. One-half of the settlement represented wages lost by Pat as a result of the discrimination and the balance represented an award based on personal injury.

b. Matt sued the local newspaper for a story that reported he was affiliated with organized crime. The court awarded him $50,000 of libel damages.

c. Pam was injured in an automobile accident and received $10,000 from an employer-sponsored disability policy. In addition, her employer-financed medical insurance policy reimbursed her for $15,000 of medical expenses.

I:4-54 *Cafeteria Plan.* Jangyoun is a married taxpayer with a dependent 4-year-old daughter. His employer offers a cafeteria plan under which he can choose to receive cash or, alternatively, choose from certain fringe benefits. These benefits include health insurance that costs $9,000 and child care that costs $2,600. Assume Jangyoun is in the 32% tax bracket.

a. How much income tax will Jangyoun save if he chooses to participate in the employer's health insurance plan? Assume that he does not have sufficient medical expenses to itemize his deductions.

b. Would you recommend that Jangyoun participate in the employer's health insurance plan if his wife's employer already provides comparable health insurance coverage for the family?

c. Would you recommend that Jangyoun participate in the employer-provided child care option if he has the alternative option of claiming a child care credit of $480?

I:4-55 ***Exclusion of Gain from Small Business Stock.*** In 2013, Charlie paid $2.8 million cash to Venice Corporation to acquire some of its common stock, which is qualified small business stock. In 2025, he sells the stock for $11.2 million.

a. How much gain must Charlie include in his 2025 gross income?

b. Suppose Charlie acquired the Venice stock in 2021. How much gain must he include in his 2025 gross income?

c. For part b, can Charlie avoid recognizing gain by purchasing replacement stock?

d. Suppose Charlie paid $900,000 cash in 2013 to acquire the Venice stock. How much gain must he include in his 2025 gross income?

COMPREHENSIVE PROBLEM

I:4-56 Pat was divorced from her husband in 2015. During the current year, she received alimony of $18,000 and child support of $4,000 for her 11-year-old son, who lives with her. Her former husband had asked her to sign an agreement allowing him to claim their son as a dependent, but she declined to do so. After the divorce, she accepted a position as a teacher in the local school district. During the current year, she received a salary of $32,000. The school district paid her medical insurance premiums of $6,900 and provided her with group term life insurance coverage of $40,000. The premiums attributable to her coverage equaled $160. During her marriage, Pat's parents loaned her $8,000 to help with the down payment on her home. Her parents told her this year that they understand her financial problems and that they were cancelling the balance on the loan, which was $5,000. They did so because they wanted to help their only daughter.

Pat received dividends from National Motor Company of $4,600 and interest on State of California bonds of $2,850.

Pat had itemized deductions of $9,600. Compute her taxable income for 2025.

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:4-57 Sally owns a small C corporation that has provided health insurance coverage for Sally and the company's three other employees. The insurance coverage for Sally and the three employees is individual coverage, not family coverage. Sally's own family coverage is through a separate private policy. She pays the premiums out of after-tax dollars. Sally's salary is $40,000 and the salary for the other three employees averages $30,000. The premiums on the health insurance policy average $5,000 per employee per year. The provider recently informed Sally that the premiums will increase to $8,000 per employee. The spouses of her two married employees have coverage through their employers. The third employee has announced that he will marry soon and would very much like to have family health insurance coverage. The insurance provider says that family coverage will approximately double the premiums. Sally is finding the cost of providing medical insurance coverage particularly burdensome for her small business. What planning suggestions can you offer?

I:4-58 Maria was planning to paint the interior of her apartment over a three-day weekend. Her employer asked her to work all three days and will pay her $600 overtime. She called a professional painter who offered to do the job for $500. He is willing to use the paint she has already purchased. Maria is in the 32% tax bracket. Will she be better off financially to work the overtime and pay the painter or to turn down the overtime and do the work herself? What other factors should she consider?

I:4-59 Ellen is a single individual who is considering two job offers. Ellen considers both accounting firms to be equally desirable in terms of the opportunities for long-term career growth. But the companies have significantly different compensation and benefits packages. She has come to you for a recommendation. Below is a summary of the benefits packages offered by each firm.

In addition to salary, Mahindra and Associates (a well-established public accounting firm with several offices and high-profile clients) also offers several additional fringe benefits to its employees. In particular, Ellen believes that the high-quality health insurance coverage is an attractive benefit. In addition, she believes that she will also take advantage of the educational assistance that the firm provides, as she hopes to pursue an additional graduate degree. Below are the specifics of the compensation and benefits:

Salary	$73,000
Health insurance coverage	
Annual estimated premiums	7,700
(Employer pays 100% of premiums)	
Educational assistance:	
Maximum benefit	8,000

The other firm that Ellen is considering, Glenmark and Associates (a relatively new firm with one office that focuses on new technology companies), offers a higher salary, but their fringe benefits are not as attractive. Below are the specifics of their compensation and benefits:

Salary	$80,000
Health insurance coverage	
Annual estimated premiums	8,100
(Employer pays 70% of premiums/employee pays 30% of premiums)	
Educational assistance:	
Maximum benefit	3,500

The health insurance plans offered by Mahindra and Glenmark are similar in terms of coverage, out-of-pocket costs, etc. (In other words, the quality of coverage is the same under each plan.)

Ellen believes that her actual tuition costs for the graduate classes will be $9,500.

Determine which offer is best for Ellen to accept, assuming that she will be in the 22% marginal tax bracket.

TAX FORM/RETURN PREPARATION PROBLEMS

I:4-60 ***Short Tax Form.*** A. J. Paige, Social Security number 111-22-3333, is the vice president of marketing (Australia) for International Industries, Inc. (III). III is headquartered at 123 Main Street, Los Angeles, California 92601. A. J., who is single, accepted the position and became a resident of Australia on July 8, 2023. Her business address is 242 Main Street, Westview, Australia. Westview is not designated as a high housing cost city. A. J.'s visa permits her to stay in Australia indefinitely. Her only trips to the United States in 2024 were for vacations (August 2 to 16 and December 21 to 28). A. J.'s contract specifies that her appointment is to last indefinitely, but states that III is to pay her $5,000 per year to cover the cost of two vacation trips to the United States. Her salary is $175,000, out of which she pays rent on an apartment of $42,500 per year. A. J. has no family or residence in the United States. She paid an income tax in Australia. All dollar amounts are U.S. dollars. Complete a Form 2555 for 2024.

I:4-61 Alice Johnson, Social Security number 222-23-3334, is a single taxpayer and is employed as a secretary by State University of Florida. She has the following items pertaining to her income tax return for 2024:

- Received a $30,000 salary from her employer, who withheld $4,200 federal income tax.
- Received a gift of 1,000 shares of Ace Corporation stock with a $100,000 FMV from her mother. She also received $4,000 of cash dividends from the Ace Corporation. The dividends are qualified dividends.
- Received $1,000 of interest income on bonds issued by the City of Tampa.
- Received a regular stock dividend (nontaxable under Sec. 305) of 50 shares of Ace Corporation stock with a $5,000 FMV.
- Alice's employer paid $2,000 of medical and health insurance premiums on her behalf.
- Received $13,000 alimony from her ex-husband. They divorced on August 1, 2017.
- State University provided $60,000 of group term life insurance. Alice is 42 years old, not a key employee, and employed by State University for all of 2024. The table in the text is applicable.
- Received a $1,000 cash award from her employer for being designated the Secretary of the Year.
- Total itemized deductions are $10,000.
- Alice did not have any transactions involving digital assets.
- Alice wants any overpayment to be refunded to her.

Complete Form 1040 and accompanying schedules for Alice Johnson's 2024 return.

CASE STUDY PROBLEMS

I:4-62 Able Corporation is a closely held company engaged in the manufacture and retail sales of automotive parts. Able maintains a qualified pension plan for its employees but has not offered nontaxable fringe benefits.

You are a tax consultant for the company who has been asked to prepare suggestions for the adoption of an employee fringe benefit plan. Your discussions with the client's chief financial officer reveal the following:

- Employees currently pay their own premiums for medical and health insurance.
- No group term life insurance is provided.
- The company owns a vacant building that could easily be converted to a parking garage.
- Many of the employees purchase automobile parts from the company's retail outlets and pay retail price.
- The president of the corporation would like to provide a dependent care assistance program under Sec. 129 for its employees.

Required: Prepare a client memo that recommends the adoption of an employee fringe benefit program. Your recommendations should discuss the pros and cons of different types of nontaxable fringe benefits.

I:4-63 Jay Corporation owns several automobile dealerships. This year, the corporation initiated a policy of giving the top salesperson at each dealership a free vacation trip to Florida. The president believes that this is an effective sales incentive. The cost of the vacations is deductible by the corporation as compensation paid to employees, and is taxable to the recipients. Nevertheless, the president objects to reporting the value of the vacations as income on the W-2s of the recipients and to withholding taxes from wages for the value of the trips. He feels that this undermines the effectiveness of the incentive. What are the implications of this behavior for the corporation and the president?

TAX RESEARCH PROBLEMS

I:4-64 Ann is a graduate student at State University. State University awarded her a $2,000 scholarship. In addition, Ann works as a half-time teaching assistant in her department at State University. She is paid $14,000 per year and her tuition is waived. The salary is equal to that paid other part-time instructors. Her tuition would be $16,000 were it not for the waiver. Ann paid $500 for her books and supplies, and she incurred living expenses of $20,000. Determine how much gross income Ann must report.

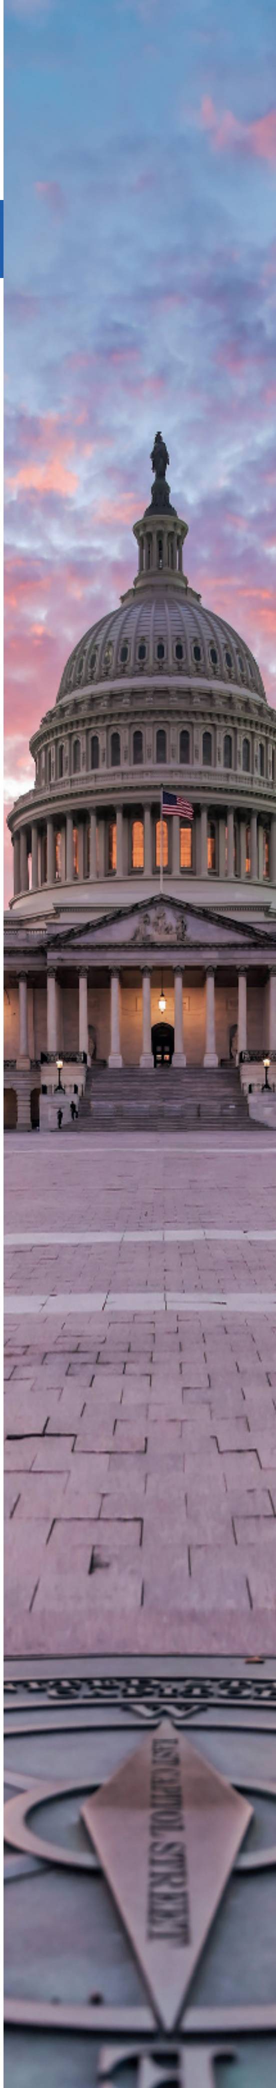
PROPERTY TRANSACTIONS: CAPITAL GAINS AND LOSSES



LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Determine the realized gain or loss from the sale or other disposition of property
2. Determine the basis of property
3. Distinguish between capital assets and other assets
4. Understand how capital gains are taxed for noncorporate taxpayers
5. Understand how capital gains are taxed for corporate taxpayers
6. Recognize when a sale or exchange has occurred
7. Determine the holding period for an asset when a sale or disposition occurs
8. Describe tax planning opportunities for property transactions
9. Describe compliance and procedural considerations for property transactions

James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Determination of Gain or Loss...5-3
Basis Considerations...5-5
Definition of a Capital Asset...5-13
Tax Treatment for Capital Gains and Losses of Noncorporate Taxpayers...5-16
Tax Treatment of Capital Gains and Losses: Corporate Taxpayers...5-22
Sale or Exchange...5-22
Holding Period...5-29
Tax Planning Considerations...5-32
Compliance and Procedural Considerations...5-33

Gross income includes "gains derived from dealings in property,"[1] and certain "losses from sale or exchange of property"[2] are allowed as deductions from gross income to determine adjusted gross income. All recognized gains and losses must eventually be classified either as *capital* or *ordinary*. Except for a brief time in the mid-to-late 1980s, **long-term capital gains** (**LTCGs**) of individual taxpayers have consistently been taxed at lower rates than ordinary gains or **short-term capital gains** (**STCGs**).[3] This preferential treatment of capital gains, more precisely LTCGs, has been a much debated topic for many years. A discussion of the reasoning for imposing lower tax rates on LTCGs is provided near the end of this chapter.

The preferential treatment of capital gains has fluctuated widely over the years. For example, in the early 1980s, taxpayers were allowed to deduct 60% of the gain. In 1991, net capital gains were taxed at a maximum rate of 28%, then reduced to 20% for most taxpayers in 1997. Congress started applying different rates to different types of LTCG in 2001, i.e., an LTCG due to the sale of a collectible has a maximum rate of 28% while an LTCG due to the sale of stock has a maximum rate of 15% or 20%. Thus, depending on the political persuasion of the government, tax rates on net capital gains have yo-yoed up and down. A significant change in the rates for adjusted net capital gains occurred in 2003 when the rates were reduced from 20% to 15% for most taxpayers (5% for lower income taxpayers). For tax years beginning after 2007, the rate is zero instead of 5%.[4] With the maximum ordinary tax rate for individuals being 37% today, individuals can benefit by having a gain classified as LTCG rather than as ordinary gain or STCG. Thus, much planning is performed to attempt to arrange one's affairs to take advantage of the lower capital gain rates.

As explained later, LTCG may be subject to one of five different rates [0%, 15%, 20%, 25%, or 28%] depending on what type of asset is sold and the taxpayer's regular tax rate.

Capital losses must be offset against capital gains, and net capital losses are subjected to restrictions on their deductibility. Thus, most taxpayers prefer to have losses classified as ordinary instead of capital.

Most property transactions have tax consequences to the taxpayer. For example, when a sale, exchange, or abandonment occurs, the taxpayer must determine the realized gain or loss, the portion of the realized gain or loss that must be recognized (if any), and the character of the gain or loss. This chapter focuses on determining the realized gain or loss and the portion of the recognized gain or loss classified as capital or ordinary. When classifying a recognized gain or loss (i.e., the gain or loss actually reported on the taxpayer's tax return), three important questions must be considered:

- What type of property has been sold or exchanged?
- When has a sale or exchange occurred?
- What is the holding period for the property?

In this chapter, these three questions are considered as well as difficulties associated with determining the basis of the property sold or exchanged and the amount of realized gains or losses.

HISTORICAL NOTE

A preferential tax rate on capital gains was included in the tax law from 1921 until 1987. A modest preferential rate was reintroduced in 1991, with capital gains for noncorporate taxpayers being subject to a maximum 28% tax rate and ordinary income being subject to a maximum tax rate of 31%. The rates were reduced in 1997 and reduced again in 2003.

ADDITIONAL COMMENT

For a discussion of the justification of preferential tax rates for LTCGs (see page I:5-30).

ADDITIONAL COMMENT

During 2010, many taxpayers sold capital assets to recognize LTCG taxed at 15% because the rates were expected to increase to 20% or even higher.

---

[1] Sec. 61(a)(3).

[2] Sec. 62(a)(3).

[3] See page I:5-29 and below for a discussion of the holding period for capital assets. A capital gain or loss is long-term or short-term depending on the length of time the asset has been held by the taxpayer.

[4] Sec. 1(h)(1)(B).

DETERMINATION OF GAIN OR LOSS

OBJECTIVE 1

Determine the realized gain or loss from the sale or other disposition of property

REALIZED GAIN OR LOSS

To determine the **realized gain or loss**, the amount realized from the sale or exchange of property is compared with the adjusted basis of that property. A gain is realized when the amount realized is greater than the basis, and a loss is realized when the amount realized is less than the basis of the property.[5]

EXAMPLE I:5-1 ▶ Jack sells an asset with an adjusted basis of $10,000 to Judy for $14,000. Because the amount realized is greater than the basis, Jack has a realized gain of $4,000 ($14,000 − $10,000). ◀

Despite the fact that most transfers of property involve a sale, gains and losses may also be realized on certain other types of dispositions of property, such as exchanges, condemnations, casualties, thefts, bond retirements, and corporate distributions. However, gains and losses are generally not realized when property is disposed of by gift or bequest.

EXAMPLE I:5-2 ▶ Alice owns land held for investment with a basis of $20,000. The land is taken by the city by right of eminent domain, and she receives a payment of $30,000 for the land. This condemnation is treated as a sale or disposition for income tax purposes, and Alice's realized gain is $10,000 ($30,000 − $20,000). ◀

EXAMPLE I:5-3 ▶ Two years ago, Bob purchased stock of a newly formed corporation for $10,000. During the current year, he receives a $12,000 distribution, constituting a return of capital, from the corporation. This distribution is treated as a sale. Therefore, Bob has a realized gain of $2,000 ($12,000 − $10,000). Bob's basis for the stock is now zero because his basis of $10,000 has been recovered. ◀

There must be an identifiable event for a sale or other disposition to occur. Mere changes in the value of property are not normally recognized as a disposition for purposes of determining a realized gain or loss.

Many reasons exist for not taxing unrealized gains and losses that arise due to a mere change in value. The Treasury Regulations state that "A loss is not ordinarily sustained prior to the sale or other disposition of the property, for the reason that until such sale or other disposition occurs there remains the possibility that the taxpayer may recover or recoup the adjusted basis of the property."[6] Because of administrative difficulties associated with determining fair market value (FMV), disputes with the Internal Revenue Service (IRS) would be greatly increased if unrealized gains were taxed and unrealized losses were allowed as deductions. In addition, payment of tax on income is generally required only when a taxpayer has the wherewithal to pay the tax (e.g., the taxpayer has received cash from the sale or other disposition of property and can therefore pay the tax on the gain).

STUDY AID

Students should pay close attention to the technical terms used in tax law. For example, the similar sounding terms of "realized gain" and "recognized gain" are often different dollar amounts when an asset is sold.

Amount Realized. The **amount realized** from a sale or other disposition of property is the sum of any money received, the FMV of all other property received, and any debt assumed by the buyer.

EXAMPLE I:5-4 ▶ Tony sells land to Rita for $15,000 in cash and a machine having a $3,000 FMV. Tony's amount realized is $18,000 ($15,000 + $3,000). ◀

---

[5] Sec. 1001(a).

[6] Reg. Sec. 1.1001-1(c)(1).

The determination of FMV is a question of fact and often creates considerable controversy between taxpayers and the IRS. **Fair market value (FMV)** is "the price at which property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell."[7] The FMV of the asset given in the exchange may be easier to determine than the FMV of the property received. In those cases, the FMV of the property given may be used to measure the amount realized. If a buyer assumes the seller's liability or takes the property subject to the debt, the courts have included the amount of the liability when determining the amount realized.[8]

EXAMPLE I:5-5 ▶ Anna exchanges land subject to a liability of $20,000 for $35,000 of stock owned by Mario. Mario takes the property subject to the liability. The amount realized by Anna is $55,000 ($35,000 + $20,000 liability assumed by Mario). If Anna's adjusted basis for the land exchanged is $42,000, her realized gain is $13,000 ($55,000 − $42,000). ◀

In the above example, Anna receives stock with a $35,000 FMV and is relieved of a $20,000 debt. Mario's taking the property subject to the debt is equivalent to providing Anna with cash of $20,000. Thus, the amount realized by Anna is $55,000.

Generally, selling expenses such as sales commissions and advertising incurred in order to sell or dispose of the property reduce the amount realized.

EXAMPLE I:5-6 ▶ Doug sells stock of Briggs Corporation, with a basis of $10,000, for $17,000. Doug pays a sales commission of $300. The amount realized by Doug is $16,700 ($17,000 − $300), and his realized gain is $6,700 ($16,700 − $10,000). ◀

TYPICAL MISCONCEPTION

The difference between the assumption of a liability and the taking of the property subject to the debt is sometimes confusing. The latter means that the lender can satisfy the debt only by repossessing the property. In the former case, where the buyer assumes the debt, the lender can satisfy the debt by repossessing the property and by going after other assets of the buyer.

Adjusted Basis. The initial basis of property depends on how the property is acquired (e.g., by purchase, gift, or inheritance). Most property is acquired by purchase and therefore its initial basis is the cost of the property. However, if property is acquired from a decedent, its basis to the estate or heir is its FMV either at the date of death or, if the alternate valuation date is elected, six months from the date of death. The rules for determining the adjusted basis are discussed in subsequent sections of this chapter. Once the initial basis is determined, it may be adjusted upward or downward. Capital additions (also called capital expenditures) are expenditures that add to the value or prolong the life of property or adapt the property to a new or different use. Capital additions increase the basis. Capital recoveries, such as the deductions for casualty losses, cost recovery, and depreciation, reduce the basis. A property's adjusted basis can be determined by the following equation:

Initial basis
+ Capital additions (e.g., new porch for a building)
− Capital recoveries (e.g., depreciation deduction)
= Adjusted basis

ETHICAL POINT

The taxpayer may have lost records relating to the basis of the assets acquired many years earlier. In that case, the CPA can accept estimates of the missing data made by the taxpayer.

Capital expenditures are distinguished from expenditures that are deductible as ordinary and necessary business expenses. For example, the cost of repairing a roof may be a deductible expense, whereas the cost of replacing a roof is a capital addition. It is sometimes difficult to determine whether an item is a capital expenditure or a business expense. Because of the preference for an immediate tax deduction, taxpayers normally prefer to classify expenditures as expenses rather than capital expenditures.

EXAMPLE I:5-7 ▶ Ellen pays $2,500 for a major overhaul of an automobile used in her trade or business. The $2,500 is capitalized as part of the automobile's cost rather than deducted as a repair expense. ◀

Capital recoveries reduce the adjusted basis. The most common form of capital recovery is the deduction for depreciation or cost recovery. As discussed in Chapter I:10, the modified accelerated cost recovery system (MACRS) is mandatory for most tangible depreciable property placed in service after 1986, although "100% expensing" is available for many assets placed in service after September 27, 2017, and before January 1, 2024. The **accelerated cost recovery system** (**ACRS**) applies to most property placed in service after December 31, 1980, and before 1987.

---

[7] *CIR v. Homer H. Marshman*, 5 AFTR 2d 1528, 60-2 USTC ¶9484 (6th Cir., 1960).

[8] *Beulah B. Crane v. CIR*, 35 AFTR 776, 47-1 USTC ¶9217 (USSC, 1947).

EXAMPLE I:5-8 ▶ Jeremy paid $100,000 for equipment two years ago and has claimed depreciation deductions of $37,000 for the two years. The cost of repairs during the same period was $6,000. At the end of the two-year period, the property's adjusted basis is $63,000 ($100,000 − $37,000). The amount spent for repairs does not affect the basis. ◀

ADDITIONAL COMMENT

In addition to depreciation, other capital recoveries that reduce the adjusted basis of property include depletion, amortization, corporate distributions that are a return of basis, compensation or awards for involuntary conversions, deductible casualty losses, insurance reimbursements, and cash rebates received by a purchaser.

Recovery of Basis Doctrine. The **recovery of basis doctrine** states that taxpayers are allowed to recover the basis of an asset without being taxed because such amounts are a return of capital that the taxpayer has invested in the property. If a taxpayer receives a $12,000 return of capital distribution from a corporation when the taxpayer's basis for its investment in the corporation's stock is $10,000, the first $10,000 received represents a recovery of basis and the $2,000 excess amount is treated as a gain realized on a sale or exchange of the stock. In many cases, basis is recovered in the form of a deduction for depreciation, cost recovery, or a casualty loss.

TYPICAL MISCONCEPTION

It is sometimes incorrectly believed that all realized gains and losses are recognized for tax purposes. Although most realized gains are recognized, some realized losses are not. For example, losses on the sale or exchange of property held for personal use are not recognized.

RECOGNIZED GAIN OR LOSS

Realized gain or loss represents the difference between the amount realized and the adjusted basis when a sale or exchange occurs. The amount of gain or loss actually reported on the tax return is the *recognized gain or loss*. In some instances, gain or loss is not recognized due to special provisions in the tax law (e.g., a gain or loss may be deferred or a loss may be disallowed).

Losses are generally deductible if they are incurred in carrying on a trade or business, incurred in an activity engaged in for profit, and casualty and theft losses. Realized losses on the sale or exchange of assets held for personal use are not recognized for tax purposes. Therefore, a taxpayer who incurs a loss on the sale or exchange of a personal-use asset does not fully recover the basis. As explained in Chapter I:9, realized losses on personal-use assets may be recognized to some extent if the property is disposed of by casualty or theft.

EXAMPLE I:5-9 ▶ Ralph purchases a personal residence for $60,000. Deductions for depreciation are not allowed because the asset is not used in a trade or business or held for the production of income. If Ralph sells the house for $55,000, the realized loss of $5,000 is a capital loss but not deductible. He recovers only $55,000 of his original $60,000 basis. ◀

BASIS CONSIDERATIONS

OBJECTIVE 2

Determine the basis of property

COST OF ACQUIRED PROPERTY

In most cases, the basis of property is its cost. **Cost** is the amount paid for the property in cash or the FMV of other property given in the exchange. Any costs of acquiring the property and preparing the property for use are included in the cost of the property.

EXAMPLE I:5-10 ▶ Penny purchases equipment for $15,000, pays delivery costs of $300, and installation costs of $250. The cost of the equipment is $15,550. ◀

Funds borrowed and used to pay for an asset are included in the cost. Obligations of the seller that are assumed by the buyer increase the asset's cost.

EXAMPLE I:5-11 ▶ Peggy purchases an asset by paying cash of $40,000 and signs a note payable to the seller for $60,000. She also assumes a $2,000 lien against the property. Her basis for the asset is $102,000 and the amount realized by the seller is $102,000. ◀

Uniform Capitalization Rules. For financial accounting purposes, businesses must capitalize certain costs in connection with inventory, such as direct materials, direct labor, and overhead. For many years, businesses had a degree of flexibility with respect to capitalizing or expensing certain costs for tax purposes. However, the tax law now mandates one set of capitalization rules applicable to all taxpayers and all types of activities. These uniform capitalization rules, which apply principally to inventory, are provided in Sec. 263A and discussed in Chapter I:11.

ADDITIONAL COMMENT

The sales tax is a good example of a tax that would be paid in connection with the acquisition of property.

The uniform capitalization rules also affect property other than inventory if the property is used in a taxpayer's trade or business or in an activity engaged in for profit. Taxes paid or accrued in connection with the acquisition of property are included as part of the cost of the acquired property. Taxes paid or accrued in connection with the disposition of property reduce the amount realized on the disposition.[9]

EXAMPLE I:5-12 ▶ The Compact Corporation owns and operates a funeral home. The corporation purchases a hearse for $90,000 and pays sales taxes of $8,600. The cost basis for the hearse is $98,600. ◀

Capitalization of Interest. Interest on debt paid or incurred during the production period to finance production expenditures incurred to construct, build, install, manufacture, develop, or improve real or tangible personal property must be capitalized.[10] The real or tangible personal property must have "a long useful life, an estimated production period exceeding two years, or an estimated production period exceeding one year and a cost exceeding $1,000,000."[11] Property has a long useful life if it is real property or property with a class life of at least 20 years. The production period starts when "production of the property begins and ends when the property is ready to be placed in service or is ready to be held for sale."[12]

EXAMPLE I:5-13 ▶ The Indiana Corporation started construction of an $8 million motel on July 1, 2024, and borrowed an amount equal to the motel's construction costs. The motel is completed and ready for service on October 1, 2025. Interest incurred for the construction loan for the period from July 1, 2024, through October 1, 2025, is included in the motel's cost. The capitalized interest cost is depreciated over the motel's thirty-nine-year recovery period (see Chapter I:10). ◀

ADDITIONAL COMMENT

If a stockholder leaves his or her stock with a broker in street name, the stockholder can specifically identify the shares sold by simply informing the broker which shares he or she wishes to sell. The date basis of the shares sold should appear on the confirmation from the broker.

Identification Problems. In most cases, the adjusted basis of property sold is easily identified. However, problems arise when property is homogenous in nature such as when an investor owns several blocks of common stock of the same corporation purchased on different dates at different prices. The Regulations require the taxpayer to adequately identify the particular stock sold or exchanged.[13] Many investors allow brokers to hold their stock in street name (i.e., the brokerage firm holds title to the stock certificates) and thus do not make a physical transfer of securities. Such investors need to provide specific instructions to the broker as to which securities should be sold. If the stock sold or exchanged is not adequately identified, the first-in, first-out (FIFO) method must be used to identify the stock. With the FIFO method, the stock sold or exchanged is presumed to come from the first lot or lots acquired.

EXAMPLE I:5-14 ▶ Judy purchased 300 shares of the Gustavel Corporation stock last year:

Month Acquired	*Size of Block*	*Basis*
January	100 shares	$4,000
May	100	5,000
October	100	6,000

In March of the current year, Judy sells 120 shares of the stock for $5,160. If Judy specifically identifies the stock sold as being all of the stock purchased in October and 20 shares purchased in May, her realized loss is $1,840 [$5,160 − ($6,000 + $1,000)]. ◀

ADDITIONAL COMMENT

It appeared that Congress was going to disallow the use of the specific identification method and require use of only FIFO, but the change was not included in the final version of the 2017 Tax Cuts and Jobs Act. The change was viewed as being a source of revenue for the government.

---

[9] Sec. 164(a).

[10] Sec. 263A(f).

[11] Sec. 263A(f)(1)(B).

[12] Sec. 263A(f)(4)(B).

[13] Reg. Sec. 1.1012-1(c)(1).

If Judy does not specifically identify the stock sold, the FIFO method is used, and her realized gain is $160 [$5,160 − ($4,000 + $1,000)].

Owners of shares of mutual funds have more choices when determining the basis of shares sold. In addition to FIFO and specific identification, they may use an average cost method.[14]

EXAMPLE I:5-15 ▶ Colin purchased 100 shares of Bluejay Mutual Fund on May 10, 2023, for $1,000, and has been reinvesting dividends. On December 20, 2025, he sells 115 shares.

ADDITIONAL COMMENT

Because of the difficulty and complexity of tracking basis of shares in a mutual fund, the average cost method is widely used by taxpayers.

	Amount	*No. of Shares*
Purchased May 10, 2023	$1,000	100
Reinvested Dividend Nov. 1, 2023	125	10
Reinvested Dividends Nov. 1, 2024	140	7
Reinvested Dividends Nov. 1, 2025	185	8
	1,450	125
		$11.60 Average Cost

His basis for the 115 shares sold is $1,225 with FIFO, $1,334 (115 × $11.60) with average cost and could be as high as $1,350 with specific identification. Note that if he sells the shares obtained with the reinvested dividends in 2025, part of the gain or loss is short-term. ◀

PROPERTY RECEIVED AS A GIFT: GIFTS AFTER 1921

The basis of property received as a gift is generally the same as the donor's basis.[15] If the FMV of the property at time of the gift is less than the donor's basis, the donee may have to use one basis if the property is subsequently disposed of at a gain and another if the property is disposed of at a loss. As discussed later in this chapter, the basis may be increased by a portion or all of the gift tax paid because of the transfer.

ADDITIONAL COMMENT

Upon receipt of property from a relative, one should inquire as to its basis at that time. It might be years later that the asset is sold and the information about the donor's basis may be lost or forgotten.

Current rules for determining the donee's basis for property received as a gift are a function of the relationship between the FMV of the property at the time the gift is made and the donor's basis. If the FMV is equal to or greater than the donor's basis, the donee's basis is the same as the donor's basis for all purposes. However, if the FMV is less than the donor's basis, the donee has a dual basis for the property, that is, a basis for loss and a basis for gain. If the donee later transfers the property at a loss, the donee's basis is the property's FMV at the time of the gift (basis for loss). However, if the donee transfers the property at a gain, the donee's basis is the same as the donor's basis (basis for gain).

EXAMPLE I:5-16 ▶ Kevin makes a gift of property held for investment with a basis of $350 to Janet when it has a $425 FMV. If Janet sells the property for $450, she has a realized gain of $100 ($450 − $350). If Janet sells the property for $330, she has a realized loss of $20 ($330 − $350). Because the FMV of the property at the time of the gift is more than the donor's basis, the donee's basis is $350 for determining both gain and loss. ◀

The following example illustrates the scenario when a taxpayer has a dual basis. The property is received as a gift when the FMV is less than the donor's basis, so the basis for determining a gain is different from the basis for determining a loss.

EXAMPLE I:5-17 ▶ Chuck makes a gift of property held for investment with a basis of $600 to Maggie when the property has a $500 FMV. Maggie's basis for the property is $600 if the property is sold at a gain (i.e., for more than $600), but the basis is $500 if the property is sold at a loss (i.e., for less than $500). If the property is sold for $500 or more but not more than $600, no gain or loss is recognized. ◀

The dual basis rules were designed to prevent tax-avoidance schemes. Taxpayers are prevented from shifting unrealized losses to another taxpayer by making gifts of such "loss" property. For example, a low-income taxpayer who owns property that has depreciated in value might transfer the property by gift to a high-income taxpayer who would receive greater tax benefit from the deduction of the loss upon the subsequent sale of the property. The loss basis rules prevent the donee from recognizing a loss on the sale of the property because the basis for loss is the lesser of the donor's basis or FMV on the date of the gift.

---

[14] For mutual fund investors, the IRS has authorized the use of FIFO, specific identification, or two average cost basis methods if only a portion of the fund shares is redeemed or sold. (See Reg. Sec. 1.1012-1(e) and Chapter I:17.)

[15] Sec. 1015(a).

ADDITIONAL COMMENT

If Maggie in Example I:5-17 sells the land for $750, she has a $150 gain. If she sells the land for $400, she has a $100 loss, and there is no gain or loss if she sells the land for $560.

TAX STRATEGY TIP

Donors generally should not make gifts of property that have declined in value below original cost. Since the donee's basis will be the property's FMV, the loss will never be recognized.

KEY POINT

No gift tax can be added to the basis of the property if the donor's basis is greater than the FMV of the property.

Effect of Gift Tax on Basis. If the donor pays a gift tax on the transfer of property, the donee's basis may be increased. This increase occurs only if the FMV of the property exceeds the donor's basis on the date of the gift. For taxable gifts after 1976, the increase in the donee's basis is equal to a pro rata portion of the gift tax attributable to the unrealized appreciation in the property. The amount of the addition to the donee's basis is determined as follows:[16]

$$\text{Gift tax paid} \times \frac{\text{FMV at time of the gift} - \text{Donor's basis}}{\text{Amount of the gift}}$$

The amount of the gift is the FMV of the property less the amount of the annual exclusion which is $19,000 in 2025.[17]

EXAMPLE I:5-18 ▶ During the current year, Cindy makes one gift of property with a $29,000 basis to Jessie when the property has a $69,000 FMV. Cindy pays a gift tax of $18,500. The amount of the gift is $50,000 ($69,000 − $19,000). Thus, 80% [($69,000 − $29,000)/$50,000] of the gift tax is added to Jessie's basis. Jessie's basis for the property for determining both gain and loss is $43,800 [$29,000 + (0.80 × $18,500)]. ◀

EXAMPLE I:5-19 ▶ During the current year, Sally makes a gift of property with a basis of $50,000 to Troy when the property has a $40,000 FMV. Sally pays a gift tax of $9,000. Troy's basis for the property is not affected by the gift tax paid by Sally because the FMV is less than the donor's basis at the time of the gift. Troy's basis for the property is $50,000 to determine gain and $40,000 to determine loss. ◀

STOP & THINK

Question: Pete wants to make a gift of either ABC common stock (basis of $44,000 and FMV of $50,000) or XYZ common stock (basis of $73,000 and FMV of $50,000) to his nephew. Pete and his nephew have the same tax rate. Which stock should he give to his nephew?

Solution: Pete should give the ABC stock to his nephew because the nephew's basis for determining a gain or loss is $44,000 plus a portion of any gift tax Pete pays. The nephew's basis for XYZ common stock is $50,000 to determine a loss and $73,000 to determine a gain. If the nephew sells XYZ stock for less than $73,000, no loss is recognized and thus some of the basis is not used. Note that Pete would have a $23,000 loss if he sells the XYZ stock for $50,000. Furthermore, the nephew's basis for the XYZ stock is not increased if Pete has to pay a gift tax on the $35,000 taxable gift ($50,000 − $15,000).

PROPERTY RECEIVED FROM A DECEDENT

The basis of property received from a decedent who died in a year other than 2010 is the FMV of the property at the date of the decedent's death or an alternate valuation date (AVD).[18] This provision can result in either a step up (increase) or step down (decrease) in basis, but it is frequently described as the stepped-up basis rule. For decedents dying in 2010, the estate tax was repealed (see the discussion of Carryover Basis Rules below).

EXAMPLE I:5-20 ▶ Patrick inherited property having an $8 million FMV on the date of his sister's death in 2025. The decedent's basis in the property is $3.6 million. The executor of the estate does not elect the AVD. Patrick's basis for the property is $8 million. ◀

EXAMPLE I:5-21 ▶ Dianna inherited property having an $8 million FMV at the date of the decedent's death in 2025. The decedent's basis in the property is $9.2 million. The AVD is not elected. Dianna's basis for the property is $8 million. ◀

---

[16] Sec. 1015(d)(6).

[17] Sec. 1015(d)(2) and Sec. 2503(b). The annual exclusion allowed for each donee was $15,000 in 2018, $16,000 in 2019–2022, $17,000 in 2023 and $18,000 in 2024. See Chapter I:1 for a limited discussion of the annual exclusion and Chapter C:12 of the *Corporations, Partnerships, Estates & Trusts* and *Comprehensive* volumes for a more detailed discussion.

[18] Sec. 1014(a).

REAL-WORLD EXAMPLE

The AVD was used in valuing the estates of many individuals owning large portfolios of common stocks who died shortly before the stock market crash in October 1987.

Instead of using the FMV on the date of death to determine the estate tax, the executor of the estate may elect to use the FMV on the AVD. The AVD is generally six months after the date of death. If the AVD is elected, the basis for all of the assets in the estate is their FMV on that date unless the property is distributed by the estate to the heirs or is sold before the AVD. If the AVD is used, property distributed or sold after the date of the decedent's death and before the AVD has a basis equal to its FMV on the date of distribution or the date of disposal.[19]

If the estate is small enough that an estate tax return is not required, the value of the property on the AVD may not be used.[20] An estate tax return must be filed if an individual dies in 2025 and the gross estate plus any previous taxable gifts exceeds $13,990,000.

EXAMPLE I:5-22 ▶ Marilyn inherited all of the property owned by an individual who died in April 2025, when the property had a $100,000 FMV. The value of the property six months later was $90,000. Because of the size of the estate, no estate tax was due. The AVD may not be used, and Marilyn's basis for the property is $100,000. Note that Marilyn does not want the AVD to be used because her basis would be $90,000 instead of $100,000. ◀

As noted above, the basis of the property to the estate and the heirs can be affected if the AVD is used to value the estate's assets. The AVD may be elected only if the value of the gross estate and the amount of estate tax after credits are reduced as a result of using the AVD.[21] This means that the aggregate value of the assets determined by using the AVD may be used only if the total value of the assets decreased during the six-month period.

EXAMPLE I:5-23 ▶ Helmut inherited all of the property owned by an individual who died in March 2025 when the FMV of the property was $5.8 million. Six months after the date of death, the property had a $5.95 million FMV. The property is distributed to Helmut in December. Use of the AVD is not permitted because the value of the gross estate has increased. Therefore, his basis in the property is $5.8 million, the FMV on the date of death. ◀

An executor may elect to use the AVD to reduce the estate taxes owed by the estate. However, the income tax basis of the property included in the estate is also reduced for heirs who inherit the property.

EXAMPLE I:5-24 ▶ Michelle inherited property with a $6.2 million FMV at the date of the decedent's death in 2025. The FMV of the property on the AVD (six months after the date of the decedent's death) is $5.74 million. The executor of the estate elects to use $5.74 million to value the property for estate tax purposes, and Michelle's basis for the property is thus $5.74 million instead of $6.2 million. ◀

Carryover Basis Rules-Special Rule for 2010. In 2001, Congress eliminated the estate tax for individuals dying in 2010; however, the estate tax was scheduled to return in 2011 and be higher than the estate tax in 2009. Most tax professionals did not expect the estate tax to actually be eliminated for the year 2010, but Congress did not take action to reinstate the estate tax retroactively until December of 2010. Congress reinstated the estate tax for 2010 and future years, but estates of individuals dying in 2010 may elect to use the provisions in effect for 2010 and not have the estate tax apply.

ADDITIONAL COMMENT

At least five billionaires, including George Steinbrenner of the New York Yankees, died in 2010, and their estates were probably not subject to the estate tax.

The existence of the estate tax has implications for the basis of property transferred to others when one dies. For 2010, a modified carryover basis rule applies if the estate elects to not have the estate tax apply. A taxpayer who inherits the property will take the lesser of the decedent's basis or FMV at time of death, but the basis may be increased if the asset is appreciated. The basis may not be increased to more than the FMV, and the total amount of increase is limited to $1.3 million plus any unused built-in loss or NOL carryover. A surviving spouse may receive an additional $3 million adjustment.

If Patrick's sister in Example 5-20 died in 2010, an estate tax is due unless the estate elected to have the estate tax not apply. Because the exemption equivalent in 2010 was $5 million or less, the estate would probably have elected to pay no estate tax. If so, Patrick's basis for the inherited property is $4.9 million ($3,600,000 + $1,300,000). Patrick's basis is $7.9 million if the decedent was his spouse ($3,600,000 + $1,300,000 + $3,000,000). If the election is not made and the estate tax applies, Patrick's basis is the $8,000,000 FMV.

---

[19] Sec. 2032(a).

[20] Rev. Rul. 56-60, 1956-1 C.B. 443. For a decedent dying in 2011 and 2012, Sec. 6018(a) requires an estate tax return to be filed if the gross estate exceeds $5 million ($3.5 million in 2009, $2 million in 2006–2008 and $1.5 million for decedents dying in 2004 or 2005).

[21] Credits available include the unified transfer tax credit and possibly credits for gift taxes, foreign death taxes, and the credit for taxes on prior transfers.

Dianna's basis in Example 5-21 is $8 million even if the death occurred in 2010. The estate would elect to have the estate tax not apply and avoid any estate tax liability, but the basis is the same under the stepped-up basis rules and the carryover basis rules because the decedent's basis in the property is greater than its FMV.

Community Property. If the decedent and the decedent's spouse own property under community property laws,[22] one-half of the property is included in the decedent's gross estate and its basis to the surviving spouse is its FMV.[23] The surviving spouse's one-half share of the community property is also adjusted to FMV.[24] In effect, the surviving spouse's share of the community property is considered to have passed from the decedent.

EXAMPLE I:5-25 ▶ Matt and Jane, a married couple, live in Texas, a community property state, and jointly own land as community property that cost $110,000. The land has an $800,000 FMV when Jane dies, leaving all of her property to Matt. His basis for the entire property is $800,000. ◀

In a common law state, one-half of the jointly owned property is included in the decedent's estate and is adjusted to its FMV. The survivor's share of the jointly held property is not adjusted.

EXAMPLE I:5-26 ▶ Barry and Maria, a married couple, live in Iowa, a common law state, and jointly own land that cost $200,000. The property has a $700,000 FMV when Barry dies, leaving all of his property to Maria. Her basis for the land is $450,000 [$100,000 + (0.50 × $700,000)]. ◀

PROPERTY CONVERTED FROM PERSONAL USE TO BUSINESS USE

ADDITIONAL COMMENT

It is important to estimate the FMV of property at the time the property is converted from personal use to business use.

Often, taxpayers who own personal-use assets convert these assets to an income-producing use or for use in a trade or business. When this conversion occurs, the property's basis must be determined. The basis for computing depreciation is the lower of FMV or the adjusted basis of the property when the asset is transferred from personal use to an income-producing use or for use in a trade or business.[25] This rule prevents taxpayers from obtaining the benefits of depreciation to the extent that the property has declined in value during the period that it is held for personal use.

EXAMPLE I:5-27 ▶ Olga owns a boat that cost $2,000 and is used for personal enjoyment. At a time when the boat has a $1,400 FMV, Olga transfers the boat to her business of operating a marina. The basis for depreciation is $1,400 because the FMV is less than Olga's adjusted basis at the time of conversion to business use. The $600 decline ($2,000 − $1,400) that occurred while Olga used the boat for personal use may not be deducted as depreciation. ◀

REAL-WORLD EXAMPLE

A taxpayer sold a personal residence to a purchaser, and the purchaser rented the property from the taxpayer until financing could be secured. The rental agreement was executed simultaneously with the sales agreement and was incidental to the sale. The taxpayer was not permitted to recognize any loss on the sale because the property was never converted to rental property. *Henry B. Dawson,* 1972 PH T.C. Memo 31 TCM 5.

If the boat's FMV in Example I:5-27 is more than $2,000, the basis for depreciation is $2,000 because the FMV is higher than its adjusted basis at the time the asset is transferred to business use.

If a personal-use asset is transferred to business use when its FMV is less than its adjusted basis, the basis for determining a loss on a subsequent sale or disposition of the property is its FMV on the date of the conversion to business use less any depreciation taken after the transfer to business use.[26]

EXAMPLE I:5-28 ▶ Susanna purchased a personal residence in 2010 for $100,000 and converted the property to rental property in 2014 when its FMV was $96,000. Assume depreciation of $20,700 has been deducted after the conversion in 2014, and the property is sold for $71,000. The basis of the property is $75,300 ($96,000 − $20,700), and her loss on the sale is $4,300 ($71,000 − $75,300). ◀

The rule for determining basis, that is, lower of adjusted basis or FMV, applies only to the sale of converted property at a loss. The basis for determining gain is its adjusted basis when converted less depreciation taken after the transfer to business use.

EXAMPLE I:5-29 ▶ Assume the same facts as in Example I:5-28, except the property is sold for $81,000 instead of $71,000. The basis of the property is $79,300 ($100,000 − $20,700) and her gain is $1,700 ($81,000 − $79,300). ◀

---

[22] Community property states are Arizona, California, Idaho, Louisiana, New Mexico, Nevada, Texas, and Washington. Wisconsin has a marital property law that is basically the same as community property.

[23] Sec. 1014(a).

[24] Sec. 1014(b)(6).

[25] Reg. Sec. 1.167(g)-1.

[26] Reg. Sec. 1.165-9(b)(2).

Without the rule for determining basis of personal-use property converted to business property, taxpayers would have an incentive to convert nonbusiness assets that have declined in value to business use before selling the asset to convert nondeductible losses into deductible losses.

EXAMPLE I:5-30

Craig owns a personal-use asset with a basis of $80,000 and a $50,000 FMV. If he sells the asset for its FMV, the $30,000 loss ($50,000 − $80,000) is not deductible because losses on the sale of personal-use assets are not deductible. If Craig converts the asset to business use and then immediately sells the asset for $50,000, no loss is realized because the basis of the asset for purposes of determining loss is $50,000, the FMV when property was converted.

REAL-WORLD EXAMPLE

A taxpayer purchased a group of lots and allocated the total cost evenly among the lots. The court, however, held that more cost should be allocated to the waterfront lots than to the interior lots. *Biscayne Bay Islands Co.,* 23 B.T.A. 731 (1931).

ALLOCATION OF BASIS

When property is obtained in one transaction and portions of the property are subsequently disposed of at different times, the basis of the property is allocated to the different portions of the property. Gain or loss is computed at the time of disposal for each portion. If a taxpayer purchases a 20-acre tract of land and later sells the entire tract, an allocation of basis is not needed. However, if the taxpayer divides the property into smaller tracts of land for resale, the cost of the 20-acre tract must be allocated among the smaller tracts of land.

Basket Purchase. If more than one asset is acquired in a single purchase transaction (i.e., a basket purchase), the cost must be apportioned to the various assets acquired. The allocation is based on the relative FMVs of the assets.

EXAMPLE I:5-31

Kelly purchases a duplex for $400,000 to use as a rental property. The land has a $75,000 FMV, and the building has a $325,000 FMV. Kelly's bases for the land and the building are $75,000 and $325,000, respectively.

SELF-STUDY QUESTION

If Kelly in Example I:5-31 paid $4,000 for the cost of a title search and other costs that must be capitalized, what is the basis of the land and building?

ANSWER

Land $75,750
Building $328,250

Because no depreciation deduction is allowed for land, taxpayers tend to favor a liberal allocation of the total purchase price to the building. Appraisals or other measures of FMV may be used to make the allocation.

Common Costs. As in the case of financial accounting, common costs incurred to obtain or prepare an asset for service must be capitalized and allocated to the basis of the individual assets.

EXAMPLE I:5-32

Priscilla acquires three machines for $60,000, which have FMVs of $30,000, $20,000, and $10,000, respectively. Costs of delivery amount to $2,000, and costs to install the three machines amount to $1,000. The total installation and delivery costs of $3,000 are allocated to the three machines based on their FMVs.

The allocation of the $3,000 of common costs occurs as follows:

$$\text{Machine No. 1: } \frac{\$30{,}000 \text{ FMV}}{\$30{,}000 + \$20{,}000 + \$10{,}000} \times \$3{,}000 = \$1{,}500$$

$$\text{Machine No. 2: } \frac{\$20{,}000 \text{ FMV}}{\$30{,}000 + \$20{,}000 + \$10{,}000} \times \$3{,}000 = \$1{,}000$$

$$\text{Machine No. 3: } \frac{\$30{,}000 \text{ FMV}}{\$30{,}000 + \$20{,}000 + \$10{,}000} \times \$3{,}000 = \$500$$

The bases for each of the three machines are $31,500, $21,000, and $10,500, respectively.

Nontaxable Stock Dividends Received. If a nontaxable stock dividend is received, a portion of the basis of the stock on which the stock dividend is received is allocated to the new shares received from the stock dividend.[27] The cost basis of the previously acquired shares is reduced by the amount of basis allocated to the stock dividend shares. If the stock received as a stock dividend is the same type as the stock owned before the dividend, the total basis of the stock owned before the dividend is allocated equally to all shares now owned.

---

[27] Sec. 307(a).

EXAMPLE I:5-33 ▶ Wayne owns 1,000 shares of Bell Corporation common stock with a $44,000 basis. Wayne receives a nontaxable 10% common stock dividend and now owns 1,100 shares of common stock. The basis for each share of common stock is now $40 ($44,000 ÷ 1,100). ◀

If the stock received as a stock dividend is not the same type as the stock owned before the dividend, the allocation is based on relative FMVs.

EXAMPLE I:5-34 ▶ Stacey owns 500 shares of Montana Corporation common stock with a $60,000 basis. She receives a nontaxable stock dividend payable in 50 shares of preferred stock. At time of the distribution, the common stock has a $40,000 FMV ($80 × 500 shares), and the preferred stock has a $10,000 FMV ($200 × 50 shares). After the distribution, Stacey owns 50 shares of preferred stock with a basis of $12,000 [($10,000 ÷ $50,000) × $60,000]. Thus, $12,000 of the basis of the common stock is allocated to the preferred stock and the basis of the common stock is reduced from $60,000 to $48,000. ◀

KEY POINT

Corporations issue stock rights to shareholders so that the shareholders will be able to maintain their same proportional ownership in the corporation. This is called the preemptive right.

Nontaxable Stock Rights Received. Stock rights represent rights to acquire shares of a specified corporation's stock at a specific exercise price when certain conditions are met. The exercise price is usually less than the market price when the stock rights are issued. Stock rights may be distributed to employees as compensation, and they are often issued to shareholders to encourage them to purchase more stock, thereby providing more capital for the corporation.

If the FMV of nontaxable stock rights received is less than 15% of the FMV of the stock, the basis of the stock rights is zero unless the taxpayer elects to allocate the basis between the stock rights and the stock owned before distribution of the stock rights.[28]

EXAMPLE I:5-35 ▶ Tina owns 100 shares of Bear Corporation common stock with a $27,000 basis and a $50,000 FMV. She receives 100 nontaxable stock rights with a total FMV of $4,000. Because the FMV of the stock rights is less than 15% of the FMV of the stock (0.15 × $50,000 = $7,500), the basis of the stock rights is zero unless Tina elects to make an allocation. ◀

REAL-WORLD EXAMPLE

In 1993, United States Cellular Corporation issued one right for each common share held. Each whole right entitled the holder to buy one common share for $33.

If, Tina, in the example above, elects to allocate the basis of $27,000 between the stock rights and the stock, the basis of the rights is $2,000 ([$4,000 ÷ $54,000] × $27,000) and the basis of the stock is $25,000 ([$50,000 ÷ $54,000] × $27,000).

The decision to allocate the basis affects the gain or loss realized on the sale or disposition of the stock rights because the basis of the rights is zero unless an allocation is made. Furthermore, the basis of any stock acquired by exercising the rights is affected by whether or not a portion of the basis is allocated to the rights. The basis of stock acquired by exercising the stock rights is the amount paid plus the basis of the stock rights exercised.

EXAMPLE I:5-36 ▶ George receives 10 stock rights as a nontaxable distribution, and no basis is allocated to the stock rights. With each stock right, George may acquire one share of stock for $20. If he exercises all 10 stock rights, the new stock acquired has a basis of $200 ($20 × 10 shares). If George sells all 10 stock rights for $135, he has a realized gain of $135 ($135 − $0). ◀

If the FMV of a nontaxable stock right received is equal to or greater than 15% of the FMV of the stock, the basis of the stock owned before the distribution must be allocated between the stock and the stock rights.

EXAMPLE I:5-37 ▶ Helen owns 100 shares of NMO common stock with a $14,000 basis and a $30,000 FMV. She receives 100 stock rights with a total FMV of $5,000. Because the FMV of the stock rights is at least 15% of the FMV of the stock, the $14,000 basis must be allocated between the stock rights and the stock. The basis of the stock rights is $2,000 [($5,000 ÷ $35,000) × $14,000] and the basis of the stock is $12,000 [($30,000 ÷ $35,000) × $14,000]. ◀

A recipient of stock rights generally has three courses of action. The stock rights can be sold or exchanged, in which case the basis allocated to the stock rights, if any, is used to determine gain or loss. The stock rights may be exercised, and any basis allocated to the rights is added to the purchase price of the acquired stock. The stock rights may be allowed to expire, in which case no loss is recognized, and any basis allocated to the rights is reallocated back to the stock. If the stock rights received in the above example expire without being exercised, Helen does not recognize a loss and the basis of her 100 shares of common stock is $14,000.

Property basis rules are highlighted in Topic Review I:5-1.

---

[28] Sec. 307(b)(1).

TOPIC REVIEW I:5-1

Property Basis Rules

METHOD ACQUIRED	BASIS OF THE ACQUIRED PROPERTY
1. Acquired by direct purchase	1. Basis includes the amount paid for the property, costs of preparing the property for use, obligations of the seller assumed by the buyer, and liabilities to which the property is subject.
2. Acquired as a gift. (a) FMV on the date of the gift is equal to or greater than the donor's basis (b) FMV on the date of the gift is less than the donor's basis	2. (a) The donee's basis is the same as the donor's basis plus a pro rata portion of the gift tax attributable to the property's unrealized appreciation at the time of the gift. (b) The donee's gain basis is the donor's basis and the loss basis is FMV. No increase for any gift tax paid.
3. Received from a decedent* (a) AVD is not elected (b) AVD is elected	3. (a) The basis is its FMV on the date of death. (b) The basis of nondistributed property is its FMV on the AVD. If the property is distributed or sold before this date, its basis is FMV on the date of sale or distribution.
4. Converted from personal to business use	4. The basis for a loss (as well as for depreciation) is the lesser of its adjusted basis or FMV at date of conversion. The basis for a gain is its adjusted basis at date of conversion.
5. Nontaxable stock dividend	5. Basis of the stock dividend shares includes a pro rata portion of the adjusted basis of the underlying shares owned.
6. Nontaxable stock right	6. If the FMV of the rights is less than 15% of the stock's FMV, the basis of the rights is zero unless an election is made to allocate basis. Basis of the underlying stock is allocated to the rights based on the respective FMVs of the stock and rights.

* Special rules apply to decedents dying in 2010.

DEFINITION OF A CAPITAL ASSET

OBJECTIVE 3

Distinguish between capital assets and other assets

Instead of defining capital assets, Sec. 1221 provides a list of properties that are **not** capital assets. Thus, a capital asset is any property owned by a taxpayer *other* than the types of property specified in Sec. 1221. Property that is not a capital asset includes the following:

1. Inventory or property held primarily for sale to customers in the ordinary course of a trade or business.
2. Property used in the trade or business and subject to the allowance for depreciation provided in Sec. 167 or real property used in a trade or business. (As explained in Chapter I:13, these properties are referred to as *Sec. 1231 assets* if held by the taxpayer more than one year.)
3. Accounts or notes receivable acquired in the ordinary course of a trade or business for services rendered or from the sale of property described in item 1.
4. Supplies of a type regularly used or consumed in the ordinary course of a trade or business.
5. Other assets including
   a. A letter, memorandum, or similar property held by a taxpayer for whom such property was prepared or produced.
   b. A patent, invention, model or design, secret formula or process, copyright; a literary, musical, or artistic composition; a letter or memorandum; or similar property held by a taxpayer whose personal efforts created such property or whose basis in the property for determining a gain is determined by reference to the basis of such property in the hands of one who created the property or one for whom such property was prepared or produced.
   c. A U.S. government publication held by a taxpayer who receives the publication by any means other than a purchase at the price the publication is offered for sale to the public.
   d. A U.S. government publication held by a taxpayer whose basis in the property for determining a gain is determined by reference to the basis of such property in the hands of a taxpayer in item 5c (e.g., certain property received by gift).

TYPICAL MISCONCEPTION

It is common in financial accounting classes to include property used in a trade or business in the definition of a capital asset. For example, factory buildings, machinery, trucks, and office buildings would be defined as capital assets. However, such items are not capital assets for tax purposes.

ADDITIONAL COMMENT

When one sells or disposes of crypto, gains and losses are treated as capital gains and losses.

6. Any hedging transaction clearly identified as a hedge before the close of the day it was acquired, originated, or entered into.

EXAMPLE I:5-38 ▶ Maxine owns a building used in her business. Other business assets include equipment, inventory, and accounts receivable. None of the assets are classified as capital assets. ◀

Chapter I:13 provides an in-depth discussion of business assets such as buildings, land, and equipment. Although these items are not capital assets, Sec. 1231 provides in many cases that the gain on the sale or exchange of such an asset is eventually taxed as LTCG.

EXAMPLE I:5-39 ▶ Eric owns an automobile held for personal use and also owns a copyright for a book he has written. Because the copyright is held by the taxpayer whose personal efforts created the property, it is not a capital asset. The automobile held for personal use is a capital asset. ◀

By analyzing Examples I:5-38 and I:5-39, one can conclude that the classification of an asset is often determined by its use. An automobile used in a trade or business is not a capital asset but is a capital asset when held for personal use. Examples of assets that qualify as capital assets include a personal residence, land held for personal use, and investments in stocks and bonds. In addition, certain types of assets are specifically given capital asset status, such as patents, franchises, etc. These and other special assets are discussed later in this chapter.

Recently, Congress made a major change for self-created musical works. Pursuant to Sec. 1221(b)(3), a taxpayer whose personal efforts created such property may now make an election to treat the sale or exchange of musical compositions or copyrights in self- created musical works as a sale or exchange of a capital asset. Because of the change, musicians who sell self-created musical compositions are in a much better tax position than other artists who sell their self-created works.

SELF-STUDY QUESTION

Doug owns a personal residence, an automobile, 100 shares of Ford Motor Company, and a poem he wrote for his girlfriend. Which of these assets are capital assets?

ANSWER

All of the items are capital assets except the poem, which is a literary composition that Doug created. If Doug gives the poem to his girlfriend, the poem is still not a capital asset.

INFLUENCE OF THE COURTS

In *Corn Products Refining Co.*, the Supreme Court rendered a landmark decision when it determined that the sale of futures contracts related to the purchase of raw materials resulted in ordinary rather than capital gains and losses.[29] The Corn Products Company, a manufacturer of products made from grain corn, purchased futures contracts for corn to ensure an adequate supply of raw materials. Delivery of the corn was accepted when needed for manufacturing operations, and unneeded contracts were later sold. Corn Products contended that any gains or losses on the sale of the unneeded contracts should be capital gains and losses because futures contracts are customarily viewed as security investments, which qualify as capital assets. The Supreme Court held that these transactions represented an integral part of the business for the purpose of protecting the company's manufacturing operations and the gains and losses should, therefore, be ordinary in nature.

Although the *Corn Products* doctrine has been interpreted as creating a nonstatutory exception to the definition of a capital asset when the asset is purchased for business purposes, the Supreme Court ruled in the 1988 *Arkansas Best Corporation* case that the motivation for acquiring assets is irrelevant to the question of whether assets are capital assets. Arkansas Best, a bank holding company, sold shares of a bank's stock that had been acquired for the purpose of protecting its business reputation. Relying on the *Corn Products* doctrine, the company deducted the loss as ordinary. The Supreme Court ruled that the loss was a capital loss because the stock is within the broad definition of the term **capital asset** in Sec. 1221 and is outside the classes of property that are excluded from capital-asset status.[30] *Arkansas Best* apparently limits the application of *Corn Products* to hedging transactions that are an integral part of a taxpayer's system of acquiring inventory.

ADDITIONAL COMMENT

Many music stars such as Stevie Nicks, Bob Dylan, and David Bowie have started selling their music publishing catalogs. Bruce Springsteen's sale of his publishing and recorded music rights for $550 million is the largest known deal for an individual artist. Buyers believe that such assets are recession-proof and see opportunities for placing songs in ads, films, etc. ("Pop Stars Ramp Up Deals for Catalog Rights," *Wall Street Journal*, January 13, 2022, page B1.)

ETHICAL POINT

A CPA should not prepare or sign a tax return for a client unless the position or issue has (1) a realistic possibility of being sustained on its merits or (2) is not frivolous and is adequately disclosed in the return.

OTHER IRC PROVISIONS RELEVANT TO CAPITAL GAINS AND LOSSES

A number of IRC sections provide special treatment for certain types of assets and transactions. For example, loss on the sale or exchange of certain small business stock that qualifies as Sec. 1244 stock is treated as an ordinary loss rather than a capital loss to the extent of $50,000 per year ($100,000 if the taxpayer is married and files a joint return).[31]

---

[29] *Corn Products Refining Co. v. CIR*, 47 AFTR 1789, 55-2 USTC ¶9746 (USSC, 1955).

[30] *Arkansas Best Corporation v. CIR*, 61 AFTR 2d 88-655, 88-1 USTC ¶9210 (USSC, 1988).

ADDITIONAL COMMENT

For purposes of Sec. 1236, a **security** is defined as any share of stock in any corporation, note, bond, debenture, or evidence of indebtedness, or any evidence of an interest in or right to subscribe to or purchase any of the above.

Dealers in Securities. Normally, a security dealer's gain on the sale or exchange of securities is ordinary income. Section 1236 provides an exception for dealers in securities if the dealer clearly identifies that the property is held for investment. This act of identification must occur before the close of the day on which the security is acquired, and the security must not be held primarily for sale to customers in the ordinary course of the dealer's trade or business at any time after the close of the day of purchase.

EXAMPLE I:5-40 ▶ Allyson, a dealer in securities, purchases Cook Corporation stock on April 8, and identifies the stock as being held for investment on that date. Four months later, Allyson sells the stock. Any gain or loss recognized due to the sale is capital gain or loss. ◀

Once a dealer clearly identifies a security as being held for investment, any loss on the sale or exchange of the security is treated as a capital loss.

EXAMPLE I:5-41 ▶ Kris, a dealer in securities, purchases Boston Corporation stock and clearly identifies the stock as being held for investment on the date of purchase. Eight months later, the security is removed from the investment account and held as inventory. If the security is later sold at a gain, the gain is an ordinary gain. However, if the stock is sold at a loss, the loss is a capital loss. ◀

Securities dealers must use the mark-to-market method for their inventory of securities. This method requires that securities be valued at FMV at the end of each taxable year. Dealers in securities recognize gain or loss each year as if the security is sold on the last day of the tax year. Gains and losses are generally treated as ordinary rather than capital. Gains or losses due to adjustments in subsequent years or resulting from the sale of the security must be adjusted to reflect gains and losses already taken into account when determining taxable income.[32]

EXAMPLE I:5-42 ▶ Jim Spikes, a dealer in securities and calendar-year taxpayer, purchases a security for inventory on October 10, 2025, for $10,000 and sells the security for $18,000 on July 1, 2026. The security's FMV on December 31, 2025, is $15,000. Jim recognizes $5,000 of ordinary income in 2025 and $3,000 of ordinary income in 2026. ◀

Real Property Subdivided for Sale. A taxpayer who engages in regular sales of real estate is considered to be a dealer, and any gain or loss recognized is ordinary gain or loss rather than capital gain or loss. A special relief provision is provided in Sec. 1237 for nondealer, noncorporate taxpayers who subdivide a tract of real property into lots (two or more pieces of real property are considered to be a tract if they are contiguous). Part or all of the gain on the sale of the lots may be treated as a capital gain if the following provisions of Sec. 1237 are satisfied:

ADDITIONAL COMMENT

The conversion of an apartment building into condominiums does not qualify under Sec. 1237, even if the property has been held for five years and no substantial improvements have been made.

- During the year of sale, the noncorporate taxpayer must not hold any other real property primarily for sale in the ordinary course of business.
- Unless the property is acquired by inheritance or devise, the lots sold must be held by the taxpayer for a period of at least five years.
- No substantial improvement may be made by the taxpayer while holding the lots if the improvement substantially enhances the value of the lot.[33]
- The tract or any lot may not have been previously held primarily for sale to customers in the ordinary course of the taxpayer's trade or business unless such tract at that time was covered by Sec. 1237.

The primary advantage of Sec. 1237 is that potential controversy with the IRS is avoided as to whether a taxpayer who subdivides investment property is a dealer. Section 1237 does not apply to losses. Such losses are capital losses if the property is held for investment purposes, or ordinary losses if the taxpayer is a dealer.

---

[31] Secs. 1244(a) and (b). (See Chapter I:9 for additional discussion on small business corporation stock losses.)

[32] Sec. 475. The mark-to-market rule also applies to some securities that are not inventory, but does not apply to any security that is held for investment and certain other transactions (see Sec. 475(b)).

[33] Certain improvements are not treated as substantial under Sec. 1237(b)(3) if the lot is held for at least ten years.

If the Sec. 1237 requirements are satisfied, all gain on the sale of the first five lots may be capital gain. Starting in the tax year during which the sixth lot is sold, 5% of the selling price for all lots sold in that year and succeeding years is ordinary income.

EXAMPLE I:5-43 ▶ Jean subdivided a tract of land held as an investment into seven lots, and all requirements of Sec. 1237 were satisfied. The lots have a FMV of $10,000 each and a basis of $4,000. Jean incurred no selling expenses and sold four lots in 2024 and three lots in 2025. In 2024, all of the $24,000 [four lots × ($10,000 – $4,000)] gain was capital gain. In 2025, the year in which the sixth lot is sold, $1,500 of the gain is ordinary income [0.05 × ($10,000 × three lots)], and the remaining $16,500 {[three lots × ($10,000 – $4,000)] – $1,500} gain is capital gain. ◀

EXAMPLE I:5-44 ▶ Assume the same facts as in the above example, except that all seven lots are sold in 2025. The amount of ordinary income recognized is $3,500 [0.05 × ($10,000 × seven lots)], and the remaining $38,500 {[seven lots × ($10,000 – $4,000)] – $3,500} gain is capital gain. ◀

ADDITIONAL COMMENT

If a taxpayer sells any lots from a tract and does not sell any others for a period of five years, the remaining property is considered a new tract.

Based on Examples I:5-43 and I:5-44, the advantage of selling no more than five lots in the first year should be apparent. Expenditures incurred to sell or exchange the lots are also treated favorably because they are first applied against the portion of the gain treated as ordinary income. Because selling expenses (e.g., commissions) are often equal to or greater than 5% of the selling price, this offset against ordinary income may result in the elimination of the ordinary income portion of the gain. Selling expenses in excess of the gain taxed as ordinary income reduce the amount realized on the sale or exchange.

Nonbusiness Bad Debt. Bad debt losses from nonbusiness debts are deductible only as short-term capital losses (STCLs),[34] regardless of when the debt occurred. A nonbusiness bad debt is deductible only in the year in which the debt becomes totally worthless.

EXAMPLE I:5-45 ▶ Two years ago, Alice loaned $4,000 to a friend. During the current year, the friend declares bankruptcy and the debt is entirely worthless. Assuming that Alice has no other gains and losses from the sale or exchange of capital assets during the year, she deducts $3,000 in determining adjusted gross income (AGI) and has an STCL carry forward of $1,000. ◀

TAX TREATMENT FOR CAPITAL GAINS AND LOSSES OF NONCORPORATE TAXPAYERS

OBJECTIVE 4

Understand how capital gains are taxed for noncorporate taxpayers

To recognize capital gain or loss, it is necessary to have a sale or exchange of a capital asset. Once it is determined that a capital gain or loss has been realized and is to be recognized, it is necessary to classify the gains and losses as either short-term or long-term. If the asset is held for one year or less, the gain or loss is classified as a short-term capital gain (STCG) or a **short-term capital loss (STCL)**. If the capital asset is held for more than one year, the gain or loss is classified as a long-term capital gain (LTCG) or **long-term capital loss (LTCL)**.[35]

ADDITIONAL COMMENT

The rates for long-term capital gains have been lower than rates for ordinary income for many years. However, preferential rates for qualified dividends were enacted in 2003. Qualified dividends are now taxed at a maximum 15% or 20% rate, the same as for long-term capital gains which are ANCG.

CAPITAL GAINS

The first step in determining the taxability of capital gains is to calculate *net capital gains* (NCG), which is defined as the excess of net long-term capital gain over net short-term capital loss.[36] All capital gains are not taxed at the same rate. So, depending on the type of property, NCG could be taxed at zero, 15%, 20%, 25%, or 28%. Once NCG has been determined, a portion or all of NCG may be classified as *adjusted net capital gain* (ANCG) which is subject to the lower rates of zero, 15%, or 20%.

---

[34] Sec. 166(d)(1)(B). Also, see discussion of bad debts in Chapter I:9.

[35] While the Taxpayer Relief Act of 1997 reduced the rates for most LTCGs, it increased the required holding period to more than 18 months to be eligible for the lower rates of 10% and 20%. During the last few months of 1997, gain resulting from the sale of a capital asset might be taxed at many different rates depending on whether or not the holding period is one year or less, more than one year but not more than 18 months, or more than 18 months. These changes in the law dramatically increased the complexity associated with the taxation of capital gains. The 1998 Restructuring and Reform Act eliminated the more than 18-month holding period requirement for tax years ending after 1997 and returned to the more-than-one-year requirement to be LTCG.

[36] Sec. 1222(11).

STATE INCOME TAXES

Most states use the same rates for income from investments as used for other income, although about 20% of the states do grant some type of preferential tax treatment.

To compute NCG, first determine all STCGs, STCLs, LTCGs, LTCLs, and then net gains and losses as described below.

Net Short-Term Capital Gain. If total STCGs for the tax year exceed total STCLs for that year, the excess is defined as net short-term capital gain (NSTCG). As discussed later, NSTCG may be offset by net long-term capital loss (NLTCL).

EXAMPLE I:5-46 ▶ Hal has two transactions involving the sale of capital assets during the year. As a result of those transactions, he has an STCG of $4,000 and an STCL of $3,000. Hal's NSTCG is $1,000 and his AGI increases by $1,000. His gross income increases by $4,000, and he is entitled to a $3,000 deduction for AGI. ◀

Net Long-Term Capital Gain. If the total LTCGs for the tax year exceed the total LTCLs for that year, the excess is defined as net long-term capital gain (NLTCG). As indicated earlier, a NCG exists when NLTCG exceeds net short-term capital loss (NSTCL).

EXAMPLE I:5-47 ▶ Clay has two transactions involving the sale of capital assets during the year. As a result of the transactions, he has an LTCG of $5,000 and an LTCL of $3,000. Clay has an NLTCG and a net capital gain of $2,000. His AGI increases by $2,000. ◀

EXAMPLE I:5-48 ▶ Linda has four transactions involving the sale of capital assets during the year. As a result of the transactions, she has an STCG of $5,000, an STCL of $7,000, an LTCG of $10,000, and an LTCL of $2,000. After the initial netting of short-term and long-term gains and losses, Linda has an NSTCL of $2,000 ($7,000 − $5,000) and an NLTCG of $8,000 ($10,000 − $2,000). Because the NLTCG exceeds the NSTCL by $6,000 ($8,000 − $2,000), her NCG is $6,000. ◀

Lower Rates for Adjusted Net Capital Gain (ANCG). The tax rate that applies to a noncorporate taxpayer's ANCG can be zero, 15% or 20%. Prior to the Tax Cuts and Jobs Act effective for 2018, it was easy to determine when the different rates applied. Taxpayers with a rate of 15% or less used a zero rate while taxpayers whose rate was greater than 15% but less than 39.6% used 15%. Taxpayers with a 39.6% rate used 20%.

Congress now uses seven different percentage rates (10, 12, 22, 24, 32, 35, and 37) with the Tax Cuts and Jobs Act but wanted to retain the maximum preferential rates on ANCG and qualified dividends. Breakpoints comparable to income which would have been taxed at less than 25% before the Tax Cuts and Jobs Act are determined. Refer to Table I:5-1 below and note that the preferential rate is zero for taxpayers filing a joint return (and a surviving spouse) with taxable income equal to or less than $96,700. When the taxable income is more than $96,700 but not more than $600,050, the preferential rate is 15%. The preferential rate becomes 20% when taxable income exceeds $600,050.[37]

EXAMPLE I:5-49 ▶ Carolina is single with taxable income of $150,000 without considering the sale of Micron common stock during 2025 for $25,000. The stock was purchased three years ago for $14,000 and is her only sale of a capital asset during the year. Her NCG which is ANCG is $11,000 taxed at 15%. To compute her total tax for 2025, ordinary rates are applied to the $150,000, and then the tax on ANCG (15% × $11,000) is added. ◀

EXAMPLE I:5-50 ▶ Assume the same facts as in Example I:5-49 except Carolina's taxable income without the capital gain is $30,000. The $11,000 ANCG is taxed at a rate of zero because her $41,000 taxable income is less than $48,350.

▼ TABLE I:5-1
Preferential Rates for Adjusted Net Capital Gain (ANCG) and Qualified Dividends

LTCG Rate	Single	Filing Jointly*	Head of Household
0%	Up to $48,350	Up to $96,700	Up to $64,750
15%	> $48,350 but ≤ $533,400	> $96,700 but ≤ $600,050	> $64,750 but ≤ $566,700
20%	Over $533,400	Over $600,050	Over $566,700

*The corresponding amounts if married filing separately are half of the amounts for filing jointly. The preferential rate is zero for taxable income up to $48,350 if married filing separately.

The breakpoint amounts in Table I:5-1 are adjusted annually for inflation.

---

[37] Sec. 1(h).

LEGISLATIVE UPDATE

The American Tax Relief Act of 2012 retained tax relief of the zero and 15% rates provided by the Bush administration but increased the preferential tax rate to 20% of ANCG for those taxpayers with the highest marginal tax rate, then 39.6%.

This change was a compromise between President Obama and most Democrats in Congress who advocated for higher tax rates on taxpayers with higher incomes and most Republicans who opposed any income tax increases.

Computation of the tax for Carolina becomes more complicated if the ANCG causes the taxable income to exceed $48,350. If her taxable income is $50,000 including $11,000 of ANCG, her tax is determined as follows:

Tax on $39,000 (taxable income without the ANCG)	$4,441.50	[$1,192.50 + ($27,075 × 12%)]
+ Tax on $9,350 ($48,350 − $39,000) of the ANCG at zero	0	($9,350 × 0%)
+ Tax on $1,650 ($11,000 − $9,350) at 15% because taxable income is > $48,350	$247.50	($1,650 × 15%)
Total tax	$4,689	

◀

EXAMPLE I:5-51 ▶ The Danecks file a joint return with taxable income of $800,000 which includes ANCG of $100,000 and no other investment income. Their tax is determined by adding the tax on $700,000 where marginal tax rate is 37% to $20,000 (20% × $100,000). They are also subject to the 3.8% Medicare tax of $3,800 (3.8% × $100,000) on investment income discussed later in the chapter. ◀

SELF-STUDY QUESTION

Mary sells common stock for a gain of $10,000 on December 29, 2024. The settlement date, or date that Mary will receive the proceeds from the stockbroker, is January 2, 2025. Will Mary report the gain on her 2024 or 2025 tax return?

ANSWER

Mary is required to report the gain in the year of the sale (2024). Losses are also recognized in the year of sale.

ADJUSTED NET CAPITAL GAINS (ANCG)

When computing ANCG, one has to consider that four different types of LTCGs may exist:

1. Collectibles gain
2. Part of the gain (generally 50%) resulting from the sale or exchange of qualified small business stock as defined in Sec. 1202
3. Unrecaptured Sec. 1250 gain[38]
4. All other LTCGs

It is the fourth group of LTCGs that receives the preferential rates of zero, 15%, or 20%. The other three groups receive preferential treatment but not at the zero, 15%, or 20% rate. The first two gains above are referred to as 28% rate gain because the maximum rate for those gains is 28%; the maximum rate for unrecaptured Sec. 1250 gain is 25%. Unrecaptured Sec. 1250 gain, taxed at a maximum 25% rate, generally occurs when a building is sold. For the second and third types of LTCG, the special provisions only apply to gains. Net losses from sale of Sec. 1202 stock are treated as normal LTCLs, and one cannot have a loss connected with an unrecaptured Sec. 1250 gain.

KEY POINT

Collectibles gain, as explained below, is the net of LTCG and LTCL from the sale of collectibles. Sec. 1202 stock is qualified small business stock designed to encourage investment in small businesses.

ANCG is defined as NCG less the first three gains listed above. However, the computation of ANCG is tricky because one has to consider the impact of net capital losses, both short-term and long-term. Taxpayers are permitted to offset capital losses against capital gains. But, as discussed above, there are four different types of LTCG. So, if a taxpayer has both LTCG and capital losses, the capital losses are first offset within the category (collectibles, Sec. 1202 stock, etc.), then any excess loss is offset against the highest rate LTCG category first and works down to the lowest rate category (i.e., 28% rate gain first, then 25%, then 20% or 15%). This topic is discussed in more detail on the next page.

ADDITIONAL COMMENT

Derek Jeter, former New York Yankees star, started a venture capital–backed platform for sports card collectors to capitalize on the booming market for sports memorabilia. A 1952 mint condition Mickey Mantle baseball card, purchased in 1991 for $50,000, sold in 2022 for $12.6 million. Source: "Jeter Starts Trading-Card Platform," *Wall Street Journal,* September 10–11, 2022, B10.

When a taxpayer has no capital losses and no qualified dividends, ANCG is NCG reduced by the first three types of LTCG listed above. Many taxpayers will not have the first three types of LTCG and therefore, NCG and ANCG will often be the same amount.

EXAMPLE I:5-52 ▶ During 2025, Charles, who is single and his tax rate exceeds 12% and is less than 35%, sold two publicly-traded stocks. The first stock resulted in an LTCG of $10,000 while the second stock resulted in an LTCG of $15,000. These were his only transactions involving capital assets during the year. Charles' NCG and ANCG is $25,000 and this gain is subject to a maximum tax rate of 15%. ◀

Given the information about Charles' tax rate, one can determine that his taxable income is more than $48,475 and less than $250,525, so Table I:5-1 can be used to find the 15% preferential rate. Note that he could have taxable income of $533,400, and his preferential rate is still 15%.

EXAMPLE I:5-53 ▶ Assume in the example above that Charles also had a gain on the sale of a building that resulted in an unrecaptured Sec. 1250 gain of $50,000. Charles has NCG of $75,000 and ANCG of $25,000. The $50,000 gain is taxed at a maximum rate of 25% while the $25,000 of ANCG is taxed at a maximum rate of 15%. ◀

Collectibles Gain. Gains resulting from the sale of collectibles such as artwork, rugs, antiques, stamps and most coins are taxed at a maximum rate of 28%.

---

[38] Sec. 1(h)(4).

EXAMPLE I:5-54 ▶

Danny, who is single and has a tax rate of 32% purchased Bowling common stock and antique chairs three years ago for investment. He sells the assets during the current year and has a gain of $8,000 on the sale of the stock and $10,000 on the sale of the antique chairs. His NLTCG is $18,000, and his NCG is $18,000. His ANCG is $8,000 since $10,000 of the NCG is a collectibles gain. His tax on the capital gains is $4,000 [(15% × $8,000) + (28% × $10,000)]. ◀

SELF-STUDY QUESTION

Eliza, who is single, has taxable income of $60,000 including a $1,200 LTCG due to the sale of her baseball card collection. Does she receive preferential tax treatment?

ANSWER

No. Her marginal tax rate is 22% which is less than the maximum 28% rate that applies to collectibles gain. If her taxable income is $260,000, she saves $84 [(35% − 28%)($1,200)].

Sec. 1202 Gain. Sec. 1202 provides that noncorporate taxpayers may exclude a portion of the gain resulting from the sale or exchange of qualified small business stock (QSBS) issued after August 10, 1993, if the stock is held for more than five years. The exclusion depends on when the stock was acquired, as follows:

Date QSBS Acquired	*Exclusion Percentage*
Prior to February 18, 2009	50%
February 18, 2009–September 27, 2010	75%
After September 27, 2010	100%

Since the QSBS must be held for five years, the 100% exclusion did not apply to any sales of Sec. 1202 stock before 2015. A corporation may have QSBS only if the corporation is a C corporation and at least 80% of the value of its assets must be used in the active conduct of one or more qualified trades or businesses.[39]

If the excluded gain on QSBS is either 50% or 75%, the remaining gain is generally taxed at a maximum rate of 28%. However, the amount of any gain eligible for the exclusion may not exceed the greater of $10,000,000 or ten times the aggregate basis of the qualified stock. Thus, if gain on the sale of QSBS is $11.4 million and $5 million of the gain is excluded, $5 million of the gain is taxed at 28% and the remaining $1.4 million gain is taxed at 15% or 20%.

EXAMPLE I:5-55 ▶

Raef purchased $200,000 of newly issued Monona common stock on October 1, 2008. On December 15, 2025, he sells the stock for $4 million, resulting in a $3.8 million gain. He excludes $1.9 million of the gain, and the remaining $1.9 million of gain is Sec. 1202 gain taxed at a maximum rate of 28%. Alternatively, if Raef purchased the Monona stock on July 11, 2010, and sold it in 2025, he could exclude $2.85 million ($3.8 × 0.75) of the gain. ◀

EXAMPLE I:5-56 ▶

Matthew, whose tax rate is 35% and 15% for ANCG, has the following capital gains in 2025:

STCG	$10,000
LTCG (artwork)	12,000
LTCG (stock of AT&T)	17,000
LTCG (QSBS acquired in 2006)	200,000

Matthew may exclude $100,000 of the $200,000 Sec. 1202 gain. His NCG is $129,000 ($12,000 + $17,000 + $100,000). His ANCG is $17,000. The increase in his tax is $37,410 [35%($10,000) + 28%($12,000) + 15%($17,000) + 28%($100,000)]. ◀

ADDITIONAL COMMENT

If Raef's gain on the Sec. 1202 stock purchased in 2008 in Example I:5-55 is $12 million, he excludes $5 million, $5 million of the gain is taxed at 28%, and $2 million is taxed at 20%, given that Raef's tax rate would probably be 37%.

CAPITAL LOSSES

To have a capital loss, one must sell or exchange the capital asset for an amount less than its adjusted basis. As in the case of capital gains, the one-year period is used to determine whether the capital loss is short-term or long-term.

Net Short-Term Capital Loss. If total STCLs exceed total STCGs for the tax year, the excess is defined as a net short-term capital loss (NSTCL). As indicated above, the NSTCL is first offset against any NLTCG to determine net capital gain. If NSTCL exceeds NLTCG, the capital loss may be offset, on a dollar-for-dollar basis, against a noncorporate taxpayer's ordinary income for amounts up to $3,000 in any one year.[40]

EXAMPLE I:5-57 ▶

Bob has gross income of $60,000 before considering capital gains and losses. If Bob has an NLTCG of $10,000 and an NSTCL of $15,000, he has $5,000 of NSTCL in excess of NLTCG and may deduct $3,000 of the losses from gross income. Assuming no other deductions for AGI, Bob's AGI is $57,000 ($60,000 − $3,000). ◀

ADDITIONAL COMMENT

A husband and wife filing a joint return may use capital losses carried forward from years when they were single. Also, a divorced couple may use capital losses carried forward from a joint return year to their single returns.

In the above example, $10,000 of Bob's NSTCL is used to offset the $10,000 of NLTCG, and $3,000 of the NSTCL is used to reduce ordinary income. However, $2,000 of the loss is not used. This net capital loss is carried forward for an indefinite number of years.[41] The loss retains its original character and will be treated as an STCL occurring in the subsequent year. If a taxpayer dies with an unused capital loss carryover, it expires.

---

[39] Sec. 1202.

[40] Sec. 1211(b). A $1,500 limitation applies to a married individual filing a separate return.

EXAMPLE I:5-58 ► Last year, Milt had an NSTCL of $8,000 and an NLTCG of $2,600. The netting of short-term and long-term gains and losses resulted in a $5,400 excess of NSTCL over NLTCG, and $3,000 of this amount was offset against ordinary income. Milt's NSTCL carryforward is $2,400. During the current year he sells a capital asset and generates an STCG of $800. His NSTCL is $1,600 ($2,400 − $800), and the loss is less than $3,000 and offset against $1,600 of ordinary income. ◄

Net Long-Term Capital Loss. If total LTCLs for the tax year exceed total LTCGs for the year, the excess is defined as net long-term capital loss (NLTCL). If there is both an NSTCG and an NLTCL, the NLTCL is initially offset against the NSTCG on a dollar-for-dollar basis. If the NLTCL exceeds the NSTCG, the excess is offset against ordinary income on a dollar-for-dollar basis up to $3,000 per year.

EXAMPLE I:5-59 ► In the current year, Gordon has an NLTCL of $9,000 and an NSTCG of $2,000. He must use $2,000 of the NLTCL to offset the $2,000 NSTCG, and then use $3,000 of the $7,000 ($9,000 − $2,000) NLTCL to offset $3,000 of ordinary income. Gordon's carryforward of NLTCL is $4,000 [$9,000 − ($2,000 + $3,000)]. This amount is treated as an LTCL in subsequent years. ◄

If an individual has both NSTCL and NLTCL, the NSTCL is offset against ordinary income first, regardless of when the transactions occur during the year.

EXAMPLE I:5-60 ► In the current year, Beth has an NSTCL of $2,800 and an NLTCL of $2,000. The entire NSTCL is offset initially against $2,800 of ordinary income. Because capital losses may offset only $3,000 of ordinary income, $200 of NLTCL is used to offset $200 ($3,000 − $2,800) of ordinary income. The NLTCL carryover to the next year is $1,800 ($2,000 − $200). ◄

TAX STRATEGY TIP

Taxpayers who have realized capital gains during the tax year should consider selling securities with a loss during the same year. The losses can be offset against the gains and tax savings result.

Capital Losses Applied to Capital Gains by Groups. Taxpayers separate their LTCGs and LTCLs into three tax rate groups: (1) 28% group, (2) 25% group, and (3) the 15% or 20% group. The 28% group includes capital gains and losses when the capital asset is a collectible held more than one year and part of the gain from the sale of QSBS held for more than five years. The 25% group consists of unrecaptured Sec. 1250 gain discussed in Chapter I:13, and there are no losses for this group. The 15% or 20% group includes capital gains and losses when the holding period is more than one year and the capital asset is not a collectible or Sec. 1202 small business stock.

When a taxpayer has NSTCL and NLTCG, the NSTCL is first offset against NLTCG from the 28% group, then the 25% group, and finally the 15% or 20% group. This treatment of NSTCL is favorable for taxpayers. Note that a taxpayer could have NLTCLs in one group, except the 25% group, and NLTCGs in another group. A net loss from the 28% group is first offset against gains in the 25% group then net gains in the 15% or 20% group. A net loss from the 15% or 20% group is first offset against net gains in the 28% group and then gains in the 25% group.[42]

EXAMPLE I:5-61 ► Leroy, whose tax rate is 32%, has NSTCL of $20,000, a $25,000 LTCG from the sale of a rare stamp held 16 months and an $18,000 LTCG from the sale of stock held for three years. The $20,000 NSTCL is offset against $20,000 of the collectibles gain in the 28% group. Leroy's NCG is $23,000 and his ANCG is $18,000. Leroy's tax liability increases by $4,100 [($5,000 × 28%) + ($18,000 × 15%)]. ◄

EXAMPLE I:5-62 ► Elizabeth, whose tax rate is 32%, has a $32,000 LTCL from the sale of stock held for four years and the following capital gains:

NSTCG	$40,000
LTCG from sale of collectible	$30,000
LTCG in the 25% group (unrecaptured Sec. 1250 gain)	$10,000

The $32,000 LTCL is offset first against all of the $30,000 LTCG in the 28% group (collectibles) and then $2,000 against the unrecaptured Sec. 1250 gain. Her NLTCG is $8,000 taxed at 25% while her $40,000 NSTCG is taxed at her ordinary income rate of 32%. ◄

ADDITIONAL COMMENT

If Elizabeth in Example I:5-62 also had a $9,000 LTCG from the sale of stock held for more than one year, she would only be able to offset $23,000 of the LTCG in the 28% group.

---

[41] Sec. 1212(b) and Reg. Sec. 1.1212-1(b).

[42] Notice 97-59, I.R.B. 1997-45.

STOP & THINK

Question: Srinija has a salary of $100,000. If she sells a non-personal use asset during the year and has a $40,000 loss, why is it important that the asset not be a capital asset?

Solution: Only $3,000 of a $40,000 capital loss is used as a deduction to reduce her gross income each year. Her AGI is $97,000 if the asset is a capital asset, and she has a $37,000 capital loss carryforward. All of the $40,000 loss is used to reduce her gross income if the asset is not a capital asset, lowering her AGI to $60,000. It is possible that Srinija might not care whether or not the asset is a capital asset if she has capital gains that could be reduced by capital losses. If the asset is a personal-use asset, the loss is not deductible regardless of whether or not it is a capital asset.

KEY POINT

The lower rates made taxpayers more interested in having capital gain income instead of ordinary income. Investors preferences for growth stocks as opposed to stocks with high dividends increased.

KEY POINT

After NCG is reduced by the sum of (1) unrecaptured Sec. 1250 gain (taxed at a maximum rate of 25%) and (2) 28% rate gain (net collectibles and Sec. 1202 gains), any positive amount is increased by qualified dividend income to determine ANCG.

Tax Treatment for Net Capital Gain and Qualified Dividends. Congress eliminated preferential tax rates on NCG in 1986 by making the maximum ordinary income rate equal to the rate on net capital gains at 28%. However, this equality was short-lived as Congress, in 1991, increased the maximum ordinary income rate to 31% but left the NCG rate at 28%.[43] This newly-created preferential treatment for NCG's only applied to taxpayers whose tax rate exceeded 28%. The change in 1997 to rates as low as 10% benefited all noncorporate taxpayers if they held the capital asset for more than one year.

Legislation in 2003 which reduced the tax rate on qualified dividends to **zero** after 2007 and 15% as of January 1, 2003, dramatically changed investor preferences.[44] The current rate on qualified dividends is zero, 15% or 20%, following the same taxable income breakpoints for ANCG provided in Table I:5-1. This significant reduction of tax rates for dividend income has resulted in an increased interest in stocks with high dividends.

Taxpayers who own mutual funds must recognize their share of capital gains even if no distributions are received. Many mutual fund shareholders reinvest their distributions instead of withdrawing assets from the mutual fund. Mutual funds must classify the gains as short-term or long-term, and long-term gains will need to be separated by rate groups. When shareholders of a mutual fund recognize their share of capital gains when no distribution is actually received, the basis for their shares is increased.

EXAMPLE I:5-63 ▶ Eunice, whose tax rate is 32%, is a shareholder of Canyon Mutual Fund. The basis for her shares is $23,000. At the end of the current year, she received a statement from Canyon indicating her share of the following: qualified dividend income, $200; STCG, $300; 28% rate gain, $1,000; and ANCG of $1,500. The increase in her taxes as a result of her ownership of the mutual shares is $631 [($200 × 15%) + ($300 × 32%) + ($1,000 × 28%) + ($1,500 × 15%)]. The basis for her shares of Canyon Mutual Fund is increased to $26,000. ◀

ADDITIONAL COMMENT

Prior to 2003, noncorporate taxpayers preferred to have LTCG instead of dividend income.

The 3.8% Net Investment Income Tax (NIIT). The Affordable Care Act, which requires most U.S. citizens and legal residents to have health insurance, added a new Medicare tax on certain taxpayers' net investment income. Investment income includes interest, dividends, NSTCG, NLTCG, rental, and royalty income. Starting in 2013, individuals are subject to a 3.8% surtax on the lesser of net investment income (NII) or the excess of modified AGI (MAGI) over a certain threshold amount.

MAGI is the sum of AGI plus the net foreign earned income excluded, and NII is gross investment income less allocable investment expenses. The threshold amount is $200,000 for individuals (single or head of household) or $250,000 for married couples (and surviving spouse). The threshold amounts are not indexed for inflation.

EXAMPLE I:5-64 ▶ The Robinsons file a joint return in 2025 with $325,000 of MAGI which includes $100,000 of net investment income. They must pay the additional 3.8% Medicare tax on $75,000 (lesser of net investment income or $325,000 less $250,000 threshold). ◀

EXAMPLE I:5-65 ▶ Pablo is single and a dentist with MAGI of $800,000 and taxable income of $730,000. MAGI includes LTCG of $220,000 from sale of Google stock and qualified dividend income of $60,000. Pablo's NIIT is $10,640 (3.8% × $280,000). Because his taxable income is more than $533,400 his income tax rate on the LTCG and dividend income is 20%, however, his total tax rate for the tax-favored income is 23.8% after considering the additional 3.8% Medicare tax. ◀

ADDITIONAL COMMENT

Estates and certain trusts may be required to pay the new 3.8% Medicare tax on NII.

---

[43] For years prior to 1990, a myriad of rules have applied. Prior to 1987, noncorporate taxpayers received a deduction from gross income equal to 60% of the taxpayer's net capital gain. For years 1987–1990, net capital gains were subject to tax at ordinary income rates.

[44] Sec. 1(h)(11).

TAX TREATMENT OF CAPITAL GAINS AND LOSSES: CORPORATE TAXPAYERS

OBJECTIVE 5

Understand how capital gains are taxed for corporate taxpayers

Most topics covered in this chapter concerning capital gains and losses, including the classification of an asset as a capital asset, rules for determining holding periods, and the procedure for offsetting capital losses against capital gains, apply to both corporate and noncorporate taxpayers. However, a major difference is that the lower tax rates of zero, 15%, 20%, 25%, and 28% on net capital gain for noncorporate taxpayers do not apply to corporations. A second significant difference relates to the treatment of capital losses: Unlike the noncorporate taxpayer who may deduct up to $3,000 of capital losses from ordinary income, corporations may offset capital losses only against capital gains. Corporate taxpayers may carry capital losses back to each of the three preceding tax years (the earliest of the three tax years first and then to the next two years) and forward for five years to offset capital gains in such years. When a corporate taxpayer carries a loss back to a preceding year or forward to a following year, the loss is treated as an STCL.[45]

SELF-STUDY QUESTION

In Example I:5-64, what is the Robinsons' net investment income tax if their MAGI is $382,000?

ANSWER

$3,800 (3.8% × $100,000)

EXAMPLE I:5-66 ▶ The Peach Corporation has income from operations of $200,000, a NSTCG of $40,000, and a NLTCL of $56,000 during the current year. The $40,000 NSTCG is offset by $40,000 NLTCL. The remaining $16,000 of NSTCL may not be offset against the $200,000 of other income but may be carried back three years and then forward five years to offset capital gains arising in these years. If Peach has NLTCG and/or NSTCG in the previous three years, a refund of taxes paid during those years will be received during the current year. ◀

HISTORICAL NOTE

The House of Representatives proposed a reduction in corporate net capital gains in 1997, but the proposal was rejected.

TYPICAL MISCONCEPTION

Because the carryover for net operating losses is 20 years, it is sometimes erroneously assumed that the carryover for corporate capital losses is also 20 years instead of five years.

Unlike individual taxpayers, corporations do not receive any preferential rate reductions for net capital gains. Corporations are taxed on ordinary income and LTCG at a flat rate of 21% starting in 2018.

Topic Review I:5-2 summarizes the principal differences in the tax treatment of capital gains and losses for corporate and noncorporate taxpayers.

TOPIC REVIEW I:5-2

Comparison of Corporate and Noncorporate Taxpayers: Capital Gains and Losses

	NONCORPORATE	CORPORATE
A statutory maximum tax rate applicable to net capital gain	Yes, 0%, 15%, 20%, 25%, and 28%	No
Offset of net capital losses against ordinary income	Yes, up to $3,000	No
Carryback of capital losses	No	Yes, three years as STCLs
Carryforward of capital losses	Yes, indefinitely	Yes, five years as STCLs

SALE OR EXCHANGE

OBJECTIVE 6

Recognize when a sale or exchange has occurred

As previously indicated, capital gains and losses result from the sale or exchange of capital assets. Although Sec. 1222 does not define a sale or an exchange, a **sale** is generally considered to be a transaction where one receives cash or the equivalent of cash, including the assumption of one's debt. An **exchange** is a transaction where one receives a reciprocal transfer of property, as distinguished from a transaction where one receives only cash or a cash equivalent.[46]

EXAMPLE I:5-67 ▶ Two years ago, Bart acquired 100 shares of Alaska Corporation common stock for $12,000 to hold as an investment. Bart sells 50 shares of the stock to Sandy for $10,000 and transfers the other 50 shares to Gail in exchange for land that has a $10,000 FMV. In each transaction, Bart realizes a $4,000 ($10,000 − $6,000) LTCG due to the sale or exchange of a capital asset. The transfer to Sandy qualifies as a sale, and the transfer to Gail qualifies as an exchange. ◀

To qualify as a sale or exchange, the transaction must be bona fide. Transactions between related parties such as family members are closely scrutinized. For example, a sale of property on credit to a relative may be a disguised gift if there is no intention of collecting the debt. If this is the case, a subsequent bad debt deduction due to the debt's worthlessness is disallowed. In some instances, the Code specifically states that a particular transaction or event either qualifies or does not qualify for sale or exchange treatment. For example, the holder of an option who fails to exercise such an option treats the lapse of the option as a sale or exchange.[47] However, abandonment of property is generally not deemed to be a sale or exchange.[48]

---

[45] Sec. 1212(a).

[46] Reg. Sec. 1.1002-1(d).

WORTHLESS SECURITIES

ADDITIONAL COMMENT

The worthlessness of a security is treated as a sale or exchange so that the taxpayer is not forced to arrange for someone to buy the security for a token amount.

If a security that is a capital asset becomes worthless during the year, Sec. 165(g)(1) specifies that any loss is treated as a loss from the sale or exchange of a capital asset on the last day of the tax year. The term includes stock, a stock option, and "a bond, debenture, note or certificate, or other evidence of indebtedness, issued by a corporation or by a government or political division thereof, with interest coupons or in registered form."[49] Whether a security has become worthless during the year is a question of fact, and the taxpayer has the burden of proof to show evidence of worthlessness.[50]

EXAMPLE I:5-68 ▶ Charlotte purchased $40,000 of bonds issued by the Jet Corporation in March 2024. In February 2025, Jet is declared bankrupt, and its bonds are worthless. Charlotte has an LTCL of $40,000 because the bonds have become worthless and are deemed to have been sold on the last day of 2025. The more-than-one-year holding period requirement is satisfied by the last day of 2025. ◀

REAL-WORLD EXAMPLE

A corporation owned 76% of the stock of another company. The corporation later acquired the remaining 24% of the stock, allegedly for the purpose of avoiding interference by minority shareholders. Later the corporation claimed an ordinary loss on the worthless stock because it owned at least 80% of the stock. The Court treated the loss as a capital loss because the acquisition of the remaining stock was without a business purpose. *Hunter Mfg. Co.*, 21 T.C. 424 (1953).

Securities in Affiliated Corporations. If the security that becomes worthless is a security in a domestic affiliated corporation owned by a corporate taxpayer, the worthless security is not considered a capital asset. Thus, a corporate taxpayer's loss due to owning worthless securities in an affiliated corporation is treated as an ordinary loss. Because capital losses are of only limited benefit to corporate taxpayers, the classification of the loss as ordinary is preferable.

To qualify as an affiliated corporation, the parent corporation must own at least 80% of the voting power of all classes of stock and at least 80% of each class of nonvoting stock. The subsidiary corporation must be engaged in the active conduct of an operating business as opposed to being a passive investment company (i.e., more than 90% of its aggregate gross receipts must be from sources other than passive types of income such as royalties, dividends, and interest).[51]

EXAMPLE I:5-69 ▶ Ace Corporation owns 80% of all classes of stock issued by the same Jet Corporation described in Example I:5-68. Jet Corporation is actively engaged in an operating business and has no income from passive investments before being declared bankrupt. Ace's loss from its worthless stock investment is an ordinary loss instead of a capital loss because Jet is an affiliated corporation. Ace owns at least 80% of all classes of Jet's stock and more than 90% of Jet's gross receipts are from sources other than passive types of income. ◀

RETIREMENT OF DEBT INSTRUMENTS

Generally, the collection of a debt is not a sale or an exchange. However, if a debt instrument is retired, amounts received by the holder are treated as being received in an exchange.[52] Debt instruments include bonds, debentures, notes, certificates, and other evidences of indebtedness.

EXAMPLE I:5-70 ▶ In 2020 the Rocket Corporation issued $50,000 of five-year, interest-bearing bonds that were purchased by Elaine as an investment for $49,800. Elaine receives $50,000 at maturity in 2025. Retirement of the debt instrument is an exchange, and the $200 gain is an LTCG.[53] ◀

Although Congress has provided that retirements of debt instruments are treated as exchanges, Congress is not willing to allow taxpayers to convert large amounts of potential ordinary interest income into capital gain by purchasing debt instruments at a substantial discount. As illustrated in Example I:5-70, a small amount of bond discount is sometimes converted to capital gain. However, if the discount is large enough to be classified as original issue discount, the discount must be amortized and included in gross income for each day the debt instrument is held for both cash and accrual method taxpayers. Original issue discount (OID) is defined as "the excess (if any) of the stated redemption price at maturity over the issue price."[54]

---

[47] Sec. 1234(b) and Reg. Sec. 1.1234-1(b).

[48] Reg. Secs. 1.165-2 and 1.167(a)-8.

[49] Sec. 165(g)(2).

[50] *Minnie K. Young v. CIR*, 28 AFTR 365, 41-2 USTC ¶9744 (2nd Cir., 1941).

[51] Sec. 165(g)(3).

[52] Sec. 1271(a).

[53] If Rocket Corporation issued the bonds with the intention of calling the bonds before maturity, Sec. 1271(a)(2) treats the gain as ordinary income.

EXAMPLE I:5-71 ▶ On January 1, 2025, Connie purchases $100,000 of the City Corporation's newly issued bonds for $85,000. The bonds mature in 20 years. In 2025 and in subsequent years Connie must annually recognize as interest income a portion of the $15,000 of OID. ◀

The OID is considered to be zero if the amount of discount "is less than ¼ of 1% of the stated redemption price at maturity, multiplied by the number of complete years to maturity."[55] In Example I:5-70, the $200 discount is not OID because it is less than $625 (0.0025 × $50,000 × 5 years). If Connie pays more than $95,000 for the bonds in Example I:5-71, the OID is zero.

ADDITIONAL COMMENT

Two different types of bonds are sold at a discount: original issue discount (OID) bonds and market discount bonds. OID bonds are issued at a discount, whereas market discount bonds have market discount resulting from a rise in interest rates after the issuance of the bonds.

Original Issue Discount. Instead of spreading the OID ratably over the life of the bond, amortization of the discount is based on an interest amortization method called the **constant interest rate method.** The total amount of interest income is determined by multiplying the interest yield to maturity by the adjusted issue price. With this method of amortizing discount, the amount of OID amortized increases for each year the bond is held. In the above example, Connie recognizes a larger amount of interest income in 2026 than in 2025 due to amortization of the OID.

The daily portion of the OID for any accrual period is "determined by allocating to each day in any accrual period its ratable portion to the increase during such accrual period in the adjusted issue price of the debt instrument."[56] The increase in the adjusted issue price for any accrual period is shown below.

$$\begin{array}{l}\text{increase in}\\ \text{the adjusted}\\ \text{issue price}\end{array} = \left[\begin{array}{l}\text{Adjusted issue}\\ \text{price at the}\\ \text{beginning of}\\ \text{the accrual}\\ \text{period}\end{array} \times \begin{array}{l}\text{Yield}\\ \text{to}\\ \text{maturity}\end{array}\right] - \begin{array}{l}\text{Interest}\\ \text{payments}\\ \text{during the}\\ \text{accrual}\\ \text{period}\end{array}$$

EXAMPLE I:5-72 ▶ On June 30, 2025, Fred purchases a 10%, $10,000 corporate bond for $9,264. The bond is issued on June 30, 2025, and matures in five years. Interest is paid semiannually, and the effective yield to maturity is 12% compounded semiannually. In 2025, Fred recognizes interest income of $556, as illustrated in Table I:5-2. The adjusted issue price as of January 1, 2026, is $9,320. This is the sum of the issue price plus any amounts of OID includible in the income of any holder since the date of issue. ◀

KEY POINT

The owner of an OID bond is normally required to accrue interest income each year regardless of the owner's method of accounting.

If a debt instrument is sold or exchanged before maturity, part of the OID is included in the seller's income. The amount to be included depends on the number of days the debt instrument is owned by the seller within the accrual period.

EXAMPLE I:5-73 ▶ Assume the same facts as in the above example, except that Fred sells the corporate bond to Carolyn on February 24, 2028 (the 55th day in the accrual period). Fred must include $23 [(55 days ÷ 181 days in the accrual period) × $75] of accrued interest for the period of January 1, 2028, to February 24, 2028, in income for 2028. Fred's basis for the bond increases by $23. Thus, his basis for determining a gain or loss is $9,603 ($9,580 + $23). (For simplification, ignore the impact of leap years.) ◀

Market Discount Bonds Purchased After April 30, 1993. The sale or exchange of a market discount bond may result in part or all of the gain being classified as ordinary

---

[54] Sec. 1273(a)(1).

[55] Sec. 1273(a)(3).

[56] Sec. 1272(a)(3).

▼ TABLE I:5-2
Computation for Interest Income in Examples I:5-72 and I:5-73

	Interest Received (1)	Amortization of Original Issue Discount (2)	Interest Income (3) = (1) + (2)	Taxpayer's Basis for the Bond
6-30-25				$ 9,264
12-31-25	$ 500	$ 56[a]	$ 556	9,320[b]
6-30-26	500	59	559	9,379
12-31-26	500	63	563	9,442
6-30-27	500	67	567	9,509
12-31-27	500	71	571	9,580
6-30-28	500	75	575	9,655
12-31-28	500	79	579	9,734
6-30-29	500	84	584	9,818
12-31-29	500	89	589	9,907
6-30-30	500	93[c]	593	10,000
	$5,000	$736	$5,736	

[a] 6% × $9,264 − $500 = $56.
[b] $9,264 + $56 = $9,320.
[c] This figure is adjusted for rounding.

income.[57] A market discount bond is a bond that is acquired in the bond market at a discount. Market discount is the excess of the stated redemption price of the bond at maturity over the taxpayer's basis for such bond immediately after it is acquired.

EXAMPLE I:5-74 ▶ On January 1, Stephanie purchased $100,000 of 8%, 20-year bonds for $82,000. The bonds were issued at par by the Solar Corporation two years ago on January 1. The bonds are market discount bonds. ◀

Similar to OID, there is a de minimis rule for determining market discount. Market discount is zero if the discount is less than ¼ of 1% of the stated redemption price of the bond at maturity multiplied by the number of complete years to maturity.[58] If Stephanie paid $95,500 or more for the Solar Corporation bonds in Example I:5-74, the bonds would not be market discount bonds.[59]

Gain realized on disposition of the market discount bond is ordinary income to the extent of the accrued market discount.[60] The ratable accrual method (straight line method computed on a daily basis) is used to determine the amount of the accrued market discount recognized as ordinary income.[61] The market discount is allocated on the basis of the number of days the taxpayer held the bond relative to the number of days between the acquisition date and maturity date.

EXAMPLE I:5-75 ▶ Assume the same facts as in the above example except Stephanie sells the bonds to Smith three years later for $86,400 on January 1st. $3,000 ($\frac{3}{18}$ × $18,000) of the $4,400 ($86,400 − $82,000) gain is ordinary income and the remaining gain is LTCG. If Stephanie sold the bond for more than $82,000 but less than $85,000, all of the gain is ordinary income. The entire $18,000 gain is ordinary income if the bond is held to maturity. ◀

---

[57] Ordinary income treatment for accrued market discount does not apply to owners of taxable market discount bonds issued on or before July 18, 1984, if the bonds were acquired before May 1, 1993. Owners of tax-exempt bonds are not required to accrue market discount if the bonds were acquired before May 1, 1993 (regardless of the issue date).

[58] Sec. 1278(a)(2)(C).

[59] $100,000 × .25% × 18 years = $4,500.

[60] Sec. 1276(a)(1).

[61] Sec. 1276(b)(1). A taxpayer may elect to use the constant interest rate method (see Sec. 1276(b)(2)).

OPTIONS

The owner of an option to buy property may sell the option, exercise the option, or allow the option to expire. If the option is exercised, the amount paid for the option is added to the purchase price of the property acquired.[62]

EXAMPLE I:5-76 ▶

On August 5, 2025, Len pays $600 for an option to acquire 100 shares of O-Joy Corporation common stock for $80 per share at any time before December 20, 2025. Len exercises the option on November 15, 2025, and pays $8,000 for the stock. Len's basis for the 100 shares of O-Joy is $8,600 ($8,000 + $600), and the stock's holding period begins on November 15, 2025. ◀

ADDITIONAL COMMENT

An option is a contract in which the owner of property agrees with a potential buyer that the potential buyer has the right to buy the property at a fixed price within a certain period of time.

When an option is sold or allowed to expire, a sale or exchange has occurred and gain or loss is therefore recognized.[63] The character of the underlying property determines whether the gain or loss from the sale or expiration of the option is capital or ordinary in nature. If the optioned property is a capital asset, the option is treated as a capital asset and capital gain or loss is recognized on the sale or exchange.

EXAMPLE I:5-77 ▶

On March 2, 2025, Holly pays $270 for an option to acquire 100 shares of Arkansas Corporation stock for $30 per share at any time before December 10, 2025. As a result of an increase in the market value of the Arkansas stock, the market price of the option increases and Holly sells the option for $600 on August 2, 2025. Because the Arkansas stock is a capital asset in the hands of Holly, the option is a capital asset and she must recognize an STCG of $330 ($600 − $270). ◀

EXAMPLE I:5-78 ▶

On October 12, 2024, Mary paid $400 for an option to acquire 100 shares of Portland Corporation stock for $50 per share at any time before February 19, 2025. The price never exceeds $50 before February 19, 2025, and Mary does not exercise the option. Because the option expires, Mary recognizes an STCL of $400 in 2025. ◀

SELF-STUDY QUESTION

Marc writes a call option on stock owned by him and receives $800 on November 1, Y2. The value of the stock declines and the option is allowed to expire on February 15, Y3. When does Marc recognize the $800 gain?

ANSWER

Marc recognizes the STCG in Y3 when the transaction is completed.

Transactions in which taxpayers purchase or write options to buy (calls) are quite common today. An investor who anticipates that the market value of a stock or security (e.g., common stock) will increase during the next few months may purchase a call option instead of actually buying the stock. As indicated above, the tax treatment for the option depends on whether the call is exercised, sold, or expires. Someone, however, must be willing to write a call on the stock. Typically an owner of the same stock will write a call option. The writer of the call receives a payment for granting the right to purchase the stock at a fixed price within a given period of time.

If the call is exercised, the writer of the call adds the amount received for the call to the sales price to determine the amount realized.[64] If the call is not exercised within the given time period and thus expires, the writer retains the amount received for the option and recognizes an STCG in the year the call expires. The gain is short-term even if the option is written and held for more than a year.

EXAMPLE I:5-79 ▶

Sam owns 100 shares of Madison Corporation common stock, which he purchased on May 1, 2018, for $4,000. On November 8, 2025, Sam writes a call that gives Joan, an investor, the option to purchase Sam's 100 shares of Madison stock at $60 per share any time before April 19, 2026. The current market price of Madison stock is $56 per share, and Sam receives $520 for writing the call. If the call is exercised, Sam has an LTCG of $2,520 [($6,000 + $520) − $4,000] in the year the call is exercised. If the call is not exercised and expires on April 19, 2026, Sam must recognize an STCG of $520 in 2026. ◀

EXAMPLE I:5-80 ▶

Assume the same facts as in Example I:5-79, and consider the tax treatment for Joan, the holder of the call. If Joan exercises the call, the basis of the stock is $6,520 ($6,000 + $520). If she does not exercise the call, an STCL of $520 is recognized. If Joan sells the call, the amount received is compared with her basis in the call ($520) to compute Joan's gain or loss. ◀

KEY POINT

Note that Sam in Example I:5-79 did not have to recognize gross income when he received $520 on November 8.

---

[62] Rev. Rul. 58-234, 1958-1 C.B. 279.

[63] Sec. 1234(a).

[64] Rev. Rul. 58-234, 1958-1 C.B. 279.

PATENTS

To encourage technological progress and to clarify whether a transfer of rights to a patent is capital gain or ordinary income, Congress created Sec. 1235, which allows the holder of a patent to treat the gain resulting from the transfer of all substantial rights in a patent as LTCG. This tax treatment is more favorable than that accorded to producers of artistic and literary works, who receive ordinary rather than capital gain from the sale of their works.

KEY POINT

A copyright held by a taxpayer whose personal efforts created it is omitted from the definition of a capital asset. However, a patent can be considered a capital asset. In effect, the tax law could be said to favor individuals whose efforts lead to scientific or technological advancement.

Requirements for Capital Gain Treatment. Section 1235 provides that the transfer of all substantial rights to a patent by the holder of the patent is treated as a sale or exchange of a capital asset that has been held long-term. Thus, LTCG is recognized on the transfer of a patent regardless of its holding period or the character of the asset. Favorable long-term capital gain treatment applies even if the transferor of the patent receives periodic payments contingent on the productivity, use, or disposition of the property transferred.[65]

EXAMPLE I:5-81 ▶ Clay purchased a patent for a small utensil used to peel shrimp earlier this year. He transfers all rights to the patent to a manufacturing company. Clay receives $100,000 plus 40 cents per utensil sold. Because Sec. 1235 applies, the total of the lump-sum payment and the royalty payments received less his cost basis for the patent is recognized as an LTCG. ◀

Substantial Rights. The principal requirement in Sec. 1235 is that the holder must transfer all substantial rights to the patent. The Regulations state that the circumstances of the whole transaction should be considered in determining whether all substantial rights to a patent have been transferred.[66] All substantial rights have not been transferred if the patent rights of the purchaser are limited geographically within the country of issuance or the rights are for a period less than a patent's remaining life.

EXAMPLE I:5-82 ▶ Bruce, an inventor, transfers one of his U.S. patents on a manufacturing process to a manufacturer located in Utah. The manufacturer's rights to use the patent are limited to the state of Utah. Because the use of the patent is limited to a geographical area, all substantial rights have not been transferred, and Sec. 1235 does not apply. Payments received for the use of the patent are royalties and taxed as ordinary income. ◀

Definition of a Holder. Long-term capital gain treatment applies only to a holder of the patent rights. For purposes of Sec. 1235, a holder is an individual whose efforts created the property or an individual who acquires the patent rights from the creator for valuable consideration before the property covered by the patent is placed in service or used. Furthermore, the acquiring individual may not be related to the creator or be the creator's employer.

Prior to the Tax Cuts and Jobs Act, Congress had a clear distinction between a patent and other intangible assets held by their creators. Most intangible assets such as a copyright were not capital assets in the hands of their creator or a taxpayer who obtained his or her basis from the creator. Starting in 2018, patents have been added to the list of self-created intangible assets that are not capital assets; thus the benefits of Section 1235 may be more limited today.

Section 1235 may not be used by corporate taxpayers because corporations are not permitted to be classified as holders. Although a partnership is not permitted to be a holder, individual partners may qualify as holders to the extent of the partner's interest in the patent owned by the partnership.

EXAMPLE I:5-83 ▶ Joy purchases a patent from Martin, whose efforts created the patent. The purchase occurs before the property is placed in service or used. Joy and Martin are unrelated individuals, and Joy is not Martin's employer. For purposes of Sec. 1235, both Joy and Martin qualify as holders. ◀

ADDITIONAL COMMENT

The scope of Sec. 1253 is very broad. A franchise "includes an agreement which gives one of the parties to the agreement the right to distribute, sell, or provide goods, services, or facilities within a specified area."

FRANCHISES, TRADEMARKS, AND TRADE NAMES

Before the enactment of Sec. 1253, significant uncertainty existed as to whether the transfer of a franchise, trademark, or trade name should be treated as a sale or exchange or as a licensing agreement. If the transfer is tantamount to a sale of the property, payments received should be treated by the transferor as a return of capital and capital gain, and the transferee should be required to capitalize and amortize such payments. However, if the transfer represents a licensing agreement, the transferor should recognize ordinary income and the transferee should receive an ordinary deduction for such payments.

---

[65] Sec. 1235(a).

[66] Reg. Sec. 1.1235-2(b).

Section 1253, which applies to the granting of a franchise, trademark, or trade name, as well as renewals and transfers to third parties, attempts to resolve the uncertainty by stating, "A transfer of a franchise, trademark, or trade name shall not be treated as a sale or exchange of a capital asset if the transferor retains any significant power, right, or continuing interest with respect to the subject matter of the franchise, trademark, or trade name."[67]

Examples of some rights that are to be considered a "significant power, right, or continuing interest"[68] include the right to:

- Disapprove of any assignment.
- Terminate the agreement at will.
- Prescribe standards of quality for products, product services, and facilities.
- Require the exclusive selling or advertising of the transferor's products or services.
- Require the transferee to purchase substantially all of its supplies and equipment from the transferor.

If the transferor does not retain any significant power, right, or continuing interest in the property, the transferor treats the transfer as a sale of the franchise and has the benefits of capital gain treatment. However, any amounts received that are contingent on the productivity, use, or disposition of such property must be treated as ordinary income by the transferor.

REAL-WORLD EXAMPLE

Shaquille O'Neal, a well-known former professional basketball player, has obtained a trademark on his nickname, Shaq. The trademark covers products such as athletic shoes, cake decorations, bathroom tissue, bathtub toys, and kites.

EXAMPLE I:5-84 ▶ Rose, who owns a franchise with a basis of $100,000, transfers the franchise to Ruth and retains no significant power, right, or continuing interest. Rose receives a $250,000 down payment when the agreement is signed and annual payments for five years equal to 10% of all sales in excess of $2,000,000. Rose has a capital gain of $150,000 with respect to the initial payment, but all of the payments received during the next five years will be ordinary income because they are contingent payments. ◀

Under Sec. 1253, the transferee may deduct payments that are contingent on the productivity, use, or disposition of such property as business expenses. Generally, other payments are capitalized and amortized over a period of 15 years.[69] In practice, payments received for the transfer of a franchise are generally treated as ordinary income to the transferor and are deductible by the transferee because in most franchise agreements the transferor desires to maintain significant powers, rights, or continuing interests in the franchise operation. Also, in many instances the payments are, in part, predicated on the success of the franchised business and are, therefore, established as contingent payments.

LEASE CANCELLATION PAYMENTS

A lease arrangement may be terminated before the lease period expires, and a lease cancellation payment may be made as consideration for the other party's agreement to terminate the lease. Either a lessor or a lessee may receive such a payment because the payment is normally made by the person who wants to cancel the lease. The tax treatment may differ significantly depending on which party is the recipient.

REAL-WORLD EXAMPLE

A taxpayer sold a building with the purchaser paying $500,000 and the lessee of the building paying $60,000 under a separate agreement to cancel the lease. The $60,000 was treated as ordinary income because no "sale or exchange" of the property occurred with respect to the lessee's $60,000 payment. *Gary Gurvey v. U.S.*, 57 AFTR 2d 86-1062, 86-1 USTC ¶9260 (D.C. Ill., 1986).

Payments Received by Lessor. The Supreme Court has ruled that lease cancellation payments received by a lessor are treated as ordinary income on the basis that the payments represent a substitute for rent.[70] Lease cancellation payments are included in the lessor's income in the year received, even if the lessor uses an accrual method.[71]

Payments Received by Lessee. Payments received by a lessee for canceling a lease are considered amounts received in exchange for the lease.[72] If the lease is a capital asset, any gain or loss is a capital gain or loss.

---

[67] Sec. 1253(a). Section 1253(e) prevents the basic Sec. 1253 rules from applying to the transfer of a professional sports franchise.

[68] Sec. 1253(b)(2).

[69] Sec. 197(a).

[70] *Walter M. Hort v. CIR*, 25 AFTR 1207, 41-1 USTC ¶9354 (USSC, 1941).

[71] *Farrelly-Walsh, Inc.*, 13 B.T.A. 923 (1928).

[72] Sec. 1241.

EXAMPLE I:5-85 ▶ Jim has a three-year lease on a house used as his personal residence. The lessor has an opportunity to sell the house and has agreed to pay $1,000 to Jim to cancel the lease. Assuming that Jim has no basis in the lease, the gain of $1,000 is capital gain because the lease is a capital asset. ◀

HOLDING PERIOD

OBJECTIVE 7

Determine the holding period for an asset when a sale or disposition occurs

The length of time an asset is held before it is disposed of (i.e., the **holding period**) is an important factor in determining whether any gain or loss resulting from the disposition of a capital asset is treated as long-term or short-term. To be classified as a long-term capital gain or loss, the capital asset must be held more than one year.[73] To determine the holding period, the day of acquisition is excluded and the disposal date is included.[74]

If the date of disposition is the same date as the date of acquisition, but a year later, the asset is considered to have been held for only one year. If the property is held for an additional day, the holding period is more than one year.

EXAMPLE I:5-86 ▶ Arnie purchased a capital asset on April 20, 2024, and sells the asset at a gain on April 21, 2025. The gain is classified as an LTCG. If the asset is sold on or before April 20, 2025, the gain is an STCG. ◀

ADDITIONAL COMMENT

When determining the holding period for marketable securities, it is important to use the "trade" dates, not the "settlement" dates.

The fact that all months do not have the same number of days is not a factor in determining the one-year period. Acquisitions made on the last day of any month must be held until the first day of the thirteenth subsequent month in order to have been held for more than one year.

EXAMPLE I:5-87 ▶ Alford sells stock held as an investment and recognizes a gain. If the capital asset was purchased on May 31, 2024, the gain is LTCG if the asset is sold on or after June 1, 2025. If sold on or before May 31, 2025, the gain is STCG and the lower preferential rates do not apply. ◀

ADDITIONAL COMMENT

The Securities and Exchange Commission requires investors who purchase or sell securities to deliver the funds to pay for the securities or deliver the certificates to be sold within two days of when the order is placed.

PROPERTY RECEIVED AS A GIFT

If a person receives property as a gift and uses the donor's basis to determine the gain or loss from a sale or exchange, the donor's holding period is added to the donee's holding period.[75] In other words, the donee's holding period includes the donor's holding period. If, however, the donee's basis is the FMV of the property on the date of the gift, the donee's holding period starts on the day after the date of the gift. This situation occurs when the FMV is less than the donor's basis on the date of the gift and the property is subsequently sold at a loss.

EXAMPLE I:5-88 ▶ Cindy receives a capital asset as a gift from Marc on July 4, 2025, when the asset has a $4,000 FMV. Marc acquired the property on April 12, 2025, for $3,400. If Cindy sells the asset after April 12, 2026, any gain or loss is LTCG or LTCL. Cindy's basis is the donor's cost because the FMV of the property is higher than the donor's basis on the date of the gift. Because Cindy takes Marc's basis, Marc's holding period is included. ◀

EXAMPLE I:5-89 ▶ Roy receives a capital asset as a gift from Diane on September 12, 2025, when the asset has a $6,000 FMV. Diane acquired the asset on July 1, 2024, for $6,500. If the asset is sold at a gain (i.e., for more than $6,500), Roy's holding period starts on July 2, 2024, because the donor's basis of $6,500 is used by Roy to compute the gain. If the asset is sold at a loss (i.e., for less than $6,000), Roy's holding period does not start until the day after the date of the gift, September 13, 2025, because Roy's basis is the $6,000 FMV. The FMV is used to compute the loss because it is less than the donor's basis on the date of the gift. ◀

ADDITIONAL COMMENT

The provision permitting the holding period of property received from a decedent to be deemed to be long-term is a rule of convenience. It is not necessary to try to determine when the decedent actually acquired the property.

PROPERTY RECEIVED FROM A DECEDENT

The holding period of property received from a decedent is always deemed to be long-term. If the person who receives the property from the decedent sells the property within one year after the decedent's death, the property is considered to be held for more than one year regardless of how long the property is actually held.[76]

---

[73] Sec. 1222. A six-month holding period was applied to property acquired after June 27, 1984 and before January 1, 1988.

[74] *H. M. Hooper*, 26 B.T.A. 758 (1932), and Rev. Rul. 70-598, 1970-2 C.B. 168.

[75] Sec. 1223(1) and Reg. Sec. 1.1223-1(b).

EXAMPLE I:5-90 ▶ The executor of Paul's estate sells certain securities for $41,000 on September 2, 2025, which were valued in the estate at their FMV of $40,000 on June 5, 2025, the date of Paul's death. The estate has an LTCG of $1,000 because the securities are considered to have been held long-term. ◀

NONTAXABLE EXCHANGES

In a nontaxable exchange, the basis of the property received is determined by taking into account the basis of the property given in the exchange. If the properties are capital assets or Sec. 1231 assets, the holding period of the property received includes the holding period of the surrendered property.[77] In essence, the holding period of the property given up in a tax-free exchange is tacked on to the holding period of the property received in the exchange.

ADDITIONAL COMMENT

The like-kind exchange rules under Sec. 1031 allow taxpayers to trade certain types of business and investment properties with no tax consequences arising from the exchange. Like-kind exchanges are discussed in Chapter I:12.

RECEIPT OF NONTAXABLE STOCK DIVIDENDS AND STOCK RIGHTS

If a shareholder receives nontaxable stock dividends or stock rights, the holding period of the stock received as a dividend or the stock rights received includes the holding period for the stock owned by the shareholder.[78] However, if the stock rights are exercised, the holding period for the stock purchased begins with the date of exercise.

EXAMPLE I:5-91 ▶ As a result of owning Circle Corporation stock acquired three years ago, Paula receives nontaxable stock rights on June 5, 2025. Any gain or loss on the sale of the rights is long-term, regardless of whether any basis is allocated to the rights, because the holding period of the rights includes the holding period of the stock. ◀

EXAMPLE I:5-92 ▶ Assume the same facts as in the example above, except that the stock rights are exercised on August 20, 2025. The holding period for the newly acquired Circle stock begins on the date of exercise. ◀

STOP & THINK

Question: Carter owns 500 shares of Okoboji, Inc. (current market price of $310) with a basis of $101,500 (11.42857%) acquired three years ago. In May of the current year, she receives 500 stock rights and exercises those rights that entitle her to purchase 500 shares of Okoboji at $300 per share. The current market price of the stock right is $40 per right. She plans to sell the 500 shares obtained by exercising the stock rights in January when she expects the market price to be $400 per share. Why should she elect to allocate basis to the stock rights?

Solution: If she does not allocate basis, her STCG will be $50,000 ($200,000 − $150,000). If she allocates basis to the stock rights, the basis of the 500 shares obtained when she exercises the rights is $161,600 ($150,000 + $11,600), and her STCG will be $38,400 ($200,000 − $161,600). The addition to basis is 11.428579% of $101,500. Note that Carter might benefit by waiting a few months before selling because the gain might then be LTCG. She could of course sell the original 500 shares and have an LTCG.

JUSTIFICATION FOR PREFERENTIAL TREATMENT OF NET CAPITAL GAINS

Preferential treatment for capital gains was first created by the Revenue Act of 1921, which became effective on January 1, 1922. Despite almost continuous controversy concerning the need for preferential treatment, some form of preferential treatment for capital gains has existed since 1922. The range of controversy concerning the need for preferential tax treatment for capital gains is wide. Some maintain that capital gains do not represent income and should not be taxed, whereas others maintain that capital gains are no different from any other type of income and should be taxed accordingly.[79] A few of the most common arguments are discussed below.

HISTORICAL NOTE

In part the preferential treatment of net capital gains was repealed in the Tax Reform Act of 1986 because Congress believed that the reduction of individual tax rates on such forms of capital income as business profits, interest, dividends, and short-term capital gains eliminated the need for a reduced rate for net capital gains.

[76] Sec. 1223(11).

[77] Sec. 1223(1).

[78] Sec. 1223(5) and Reg. Sec. 1.1223-1(e).

[79] Walter J. Blum, "A Handy Summary of the Capital Gains Argument," *Taxes—The Tax Magazine*, 35 (April 1957), pp. 247–66.

MOBILITY OF CAPITAL

Without some form of preferential treatment, taxpayers who own appreciated capital assets may be unwilling to sell or exchange the asset if high tax rates exist, despite the presence of more attractive investment opportunities. In essence, the taxpayer may be "locked in" to holding an appreciated capital asset instead of shifting resources to more profitable investments.

EXAMPLE I:5-93 ▶

Carmen owns Missouri Corporation stock with a $4,000 basis and a $20,000 FMV. She anticipates that the future after-tax annual return will be 10% on the Missouri stock and 12% on Kansas Corporation stock that has a similar level of risk. Assume her marginal tax rate is 35% (without consideration of favorable capital gain rates). Without preferential treatment of capital gains, Carmen will have to pay a tax of $5,600 ($16,000 × 0.35) on the sale of the Missouri stock and will have only $14,400 ($20,000 − $5,600) to invest in the Kansas stock. With a 12% return, she will receive an investment return of only $1,728 ($14,400 × 0.12), as compared with $2,000 ($20,000 × 0.10) if she maintains the investment in the Missouri stock. ◀

ADDITIONAL COMMENT

"Historically, the first time the federal government taxed capital gains at all was during the Civil War when a short-lived income tax was in effect." (From "Not Income at All," *Wall Street Journal*, August 2, 2007, page A11.)

While the payment of any tax due to the sale of an asset creates somewhat of a "locked-in" effect, the effect can be reduced by lowering the tax rate. The "locked-in" effect is even stronger for older taxpayers if the basis of inherited property is FMV at time of death. A lower tax rate on net capital gain should reduce the taxpayers unwillingness to sell the asset and allow for more mobility of capital. For a brief period in the 1990s, both the top ordinary income rate and the rate on net capital gain were 28%. Today, the top income tax rate on ordinary income is 37% and 20% on adjusted net capital gain in addition to a possible 3.8% net investment income tax.

MITIGATION OF THE EFFECTS OF INFLATION AND THE PROGRESSIVE TAX SYSTEM

Because the tax laws do not generally reflect the effect of changes in purchasing power due to inflation, the sale or exchange of a capital asset may produce inequitable results. In fact, taxes may have to be paid even where a transaction results in an inflation-adjusted loss.

EXAMPLE I:5-94 ▶

Beverly purchased a capital asset nine years ago for $100,000. If the asset is sold today for $180,000 and the general price level has increased by 100% during the nine-year period, Beverly will have a taxable gain of $80,000, despite suffering an inflation-adjusted loss of $20,000 [$180,000 sale price − ($100,000 × 200%)]. ◀

ADDITIONAL COMMENT

The American Assembly at Columbia University, in its final report on *Reforming and Simplifying the Federal Tax System* issued in 1985, recommends that capital gains be taxed as ordinary income if they are adjusted for inflation.

With a progressive tax system, the failure to adjust for inflation creates an even greater distortion. However, it should be noted that this distortion applies to all assets, not just capital assets.

LOWERS THE COST OF CAPITAL

By reducing the tax rate on capital gains, investors are more willing to provide businesses with capital and the cost of capital is reduced. A lower cost of capital encourages capital formation to create more jobs and improve our competitive position in the global economy. Reducing the cost of capital is particularly important for the formation and growth of small business.

PROVIDES CONGRESS WITH A METHOD OF AFFECTING TAXPAYER'S BEHAVIOR

In addition to lowering tax rates on certain net capital gains to affect behavior, Congress may help small businesses attract capital by allowing taxpayers to exclude LTCG in certain cases such as when taxpayers sell Sec. 1202 stock.

The 2017 Tax Cuts and Jobs Act included a new federal incentive to help economically distressed communities attract investment. Taxpayers may reinvest capital gain income in a Qualified Opportunity Fund investment and defer and possibly exclude part of the reinvested capital gain. If the investment is held for at least ten years, gain earned after the reinvestment may be excluded.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 8

Describe tax planning opportunities for property transactions

SELECTION OF PROPERTY TO TRANSFER BY GIFT

Many tax reasons exist for making gifts of property, although the donor may incur a gift tax liability if the gift is a taxable gift. For example, taxpayers may give income-producing property to a taxpayer subject to a lower tax rate, or property expected to appreciate in the future may be given away to reduce estate taxes. Individuals may annually give property of $19,000[80] or less to a donee without making a taxable gift.[81]

EXAMPLE I:5-95 ▶ Maya, who is single, owns marketable securities with a $6,200 basis and $10,400 FMV. She makes gifts of the marketable securities to Phil and cash of $19,000 to Roy. Because of the $19,000 annual exclusion per donee, Maya's gifts are not taxable gifts. ◀

EXAMPLE I:5-96 ▶ Harry, who is single and has never made a taxable gift, makes a gift of land in 2025 with a $1,639,000 basis and a $16,219,000 FMV to Rita. Harry's taxable gift is $16,200,000 ($16,219,000 − $19,000), and he incurs a gift tax liability. Rita's basis is $1,639,000 + 90% of the gift tax paid by Harry [($16,219,000 − $1,639,000)/$16,200,000 = 90%]. ◀

Individuals often reduce future estate taxes by making gifts. By using the annual exclusion, an individual may reduce future estate taxes and avoid the gift tax.

EXAMPLE I:5-97 ▶ Christine owns only one asset in 2025—cash of $16.2 million—and has no liabilities. In December of 2025, she gifted $19,000 to each of her five grandchildren. Because of the $19,000 annual exclusion per donee, Christine's gifts were not taxable gifts. By making the gifts, she reduced her potential gross estate by $95,000 (5 × $19,000). ◀

ADDITIONAL COMMENT

A husband and wife can each make a $19,000 gift to their daughter in 2025, enabling her to receive a total of $38,000 annually without the parents having a taxable gift.

The selection of which property to give is important if one is attempting to reduce future estate taxes. It is generally preferable to make gifts of properties that are expected to significantly increase in value during the postgift period before the donor's death. Any increases in value after the date of the gift are not included in the donor's gross estate.

EXAMPLE I:5-98 ▶ In 1999, Hal owned Sun Corporation stock with a $100,000 FMV and Union Corporation stock with a $100,000 FMV. Hal expected the Sun stock to increase in value at a moderate rate and the Union stock to increase at a substantial rate. In 1999, Hal made a gift of the Union stock to Dana. Hal's taxable gift in 1999 was $90,000 ($100,000 − $10,000 annual exclusion in 1999). Hal dies in the current year when the FMVs of the Sun and Union stocks are $180,000 and $425,000, respectively. The postgift appreciation of $325,000 ($425,000 − $100,000) is not included in Hal's gross estate. By giving the Union stock instead of the Sun stock in 1999, Hal reduces his gross estate by $245,000. ◀

Gifts are often made for income tax purposes to shift income to other family members who are in a lower income tax bracket than the donor.

EXAMPLE I:5-99 ▶ In 2025, Anne has a marginal tax rate of 32% and owns Atlantic Corporation bonds, which have a $10,000 basis and $16,000 FMV. The bonds pay interest of $1,900 per year. If Anne gives the bonds to her dependent child, the interest income is shifted to the child. If the child has no other income, the child's taxable income is $550 ($1,900 − $1,350 standard deduction), and the child's marginal tax rate is 10%. The gift results in an annual income tax savings to the family unit of $553 [(0.32 × $1,900) − (0.10 × $550)]. The rate of tax that is imposed may be a special higher rate (see Chapter I:2) if the child is less than 18 years old (possibly less than 24 years old) and has net unearned income, which is normally unearned income minus $2,700.

In addition to shifting the interest income, Anne has also shifted a potential gain of $6,000. The child's basis for the bonds is $10,000 because the donee takes the donor's basis when the FMV of the property at the time of the gift is greater than the donor's basis. No gain is recognized by Anne when the gift is made, and a future sale of the property by the child may be taxed at a lower income tax rate. ◀

---

[80] The annual exclusion was $13,000 in 2009–2012, $14,000 in 2013–2017, $15,000 in 2018–2021, $16,000 in 2022, $17,000 in 2023, and $18,000 in 2024.

[81] Sec. 2503(b).

ADDITIONAL COMMENT

In Example I:5-99, Anne may also reduce the 3.8% Medicare tax on net investment income.

Although gifts of appreciated property may generate desirable income tax benefits, it is not usually advantageous to make a gift of property that has a basis greater than its FMV because the donee's basis for determining a loss is the FMV. The excess of the donor's basis over the FMV at the time of the gift may never generate any tax benefit for the donor or the donee. Therefore, the donor should sell the asset and make a gift of the proceeds if the loss on the sale is deductible.

EXAMPLE I:5-100 ▶ Bob owns Red Corporation stock with an $18,000 basis and $15,000 FMV, which is held as an investment. Bob wishes to make a graduation gift of the marketable securities to Angela, although he expects her to sell the stock and purchase a car. If Angela sells the stock for $15,000, no gain or loss is recognized because her loss basis for the stock is $15,000. In addition, no loss is recognized by Bob on the gift of the stock to Angela. Instead of giving the stock, Bob should sell it to recognize a $3,000 capital loss and then give the proceeds from the sale to Angela. ◀

SELF-STUDY QUESTION

Doug owns IBM Corporation shares, which have a $50,000 FMV and basis of $75,000. Doug makes a telephone call to his stockbroker and sells the IBM shares a few hours before he dies. Calculate the tax savings associated with the sale if Doug's tax rate is 35% and he has no other capital gains or losses.

ANSWER

Doug saves $1,050 ($3,000 × 0.35) because the loss is limited to $3,000, and the unused capital loss of $22,000 is lost.

The effect of gift taxes paid by the donor on the donee's basis for property received is another reason why it may be more advantageous to give appreciated property rather than property with a basis greater than its FMV. A portion of the gift taxes paid as a result of giving appreciated property is added to the property's basis. However, payment of gift taxes due to the gift of property that has a basis greater than its FMV does not result in an increase in the donee's basis.

SELECTION OF PROPERTY TO TRANSFER AT TIME OF DEATH

An integral part of gift and estate planning is the selection of property to be transferred to family members and others both during the taxpayer's lifetime and upon death. Usually, taxpayers find it advantageous to retain highly appreciated property in their estates and transfer such property at death to the taxpayer's heirs because the basis of the inherited property will be increased to its FMV at the date of death (or six months from the date of death if the alternate valuation date is elected). Of course, the impact of gift and estate taxes also play a major role in this planning process.

Investment and business assets that have declined in value (i.e., the FMV is less than the basis) should normally be sold before death to obtain an income tax deduction for the loss. If the property is not sold or otherwise disposed of before death, the basis of the inherited property is reduced to its FMV.

EXAMPLE I:5-101 ▶ Paul owns two farms of similar size and quality. Each farm has a $500,000 FMV. Paul's basis for the first farm is $100,000, and his basis for the second farm is $430,000. Eventually, Paul plans for both farms to be owned by Amy. However, he would like to transfer ownership of one farm now and retain the other farm until his death. Paul should make a gift of the second farm and transfer the first farm to Amy upon his death because the second farm has appreciated less in value. When Paul dies and devises the first farm to Amy, she will have a basis for the property equal to its FMV at the date of death even though Paul's basis is only $100,000. ◀

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 9

Describe compliance and procedural considerations for property transactions

DOCUMENTATION OF BASIS

The importance of being able to determine and document the basis of assets acquired by a taxpayer cannot be overemphasized. Accurate records of asset acquisitions, dispositions, and adjustments to basis are essential. When more than one asset is acquired at the same time, the amount paid must be allocated among the assets acquired based on their relative FMVs. Subsequent adjustments to basis, such as those due to capital improvements and depreciation deductions, must be documented.

KEY POINT

Many taxpayers do not maintain adequate records that can be used to document the basis of their most important asset, their personal residence. For example, taxpayers can increase the basis of their residence if they have the driveway paved or add a new room or porch.

Because the basis of property can be determined by reference to another person's basis for that asset (e.g., gifts), taxpayers should be particularly aware of obtaining documentation for that basis at the time of the transfer. In the case of a gift, the taxpayer's basis may be affected by any gift tax paid by the donor. A copy of the donor's gift tax return is useful in documenting the upward adjustment to the donor's basis in determining the donee's basis.

Taxpayers who inherit property may use the decedent's federal Estate Tax Return (Form 706) to determine the FMV at the time of the decedent's death or FMV as of the alternate valuation date. There have always been issues when the one who inherits the property wants to use a basis higher than the fair market value used to determine the estate tax. Taxpayers had some success using a different value than the value used for the estate tax before Congress added a requirement that the basis used must be consistent with the value used for determining the estate tax.[82]

Brokerage firms must report an investor's cost basis in any shares purchased after January 1, 2011 to the IRS when securities are sold. Brokers have been required for many years to report the amount of sales proceeds but must now also provide the basis. The broker will apply a FIFO rule when selecting the securities sold unless the taxpayer notifies the broker that other securities are being sold. If a taxpayer owns securities purchased at different prices and on different dates, the taxpayer may specifically identify those stocks deemed to be sold and thus may affect the amount of the gain or loss and if the gain or loss in ST or LT.

REPORTING OF CAPITAL GAINS AND LOSSES ON SCHEDULE D

KEY POINT

Schedule D refers to 28% gain which is NCG taxed at a maximum rate of 28% (collectible gain and part of the Sec. 1202 gain).

Capital gains and losses are reported by individuals on Schedule D, which is then attached to Form 1040. Part I is used to report short-term capital gains and losses, and Part II is used to report long-term capital gains and losses. Part III is a summary of Parts I and II.

Capital gains due to installment sales are first reported on a separate form before being included on Schedule D. The taxpayer's share of capital gains and losses from partnerships, S corporations, and fiduciaries is reported in Parts I and II on lines 5 and 12. The carryover of capital losses is also included in Parts I and II on lines 6 and 14.

EXAMPLE I:5-102 ▶

Virgil Brady, a single taxpayer, uses the following information to prepare his Schedule D for 2024. Virgil received $8,000 of qualified dividends during the year. He sold 200 shares of Tennis Corporation stock for $13,000 on June 20, 2024. The shares were purchased on October 2, 2023, for $8,700. He has an STCL carryforward from 2023 of $8,200. He sold a piano for $4,000 on May 30, 2024. The piano was purchased on April 12, 2014, for $2,500 and used by his two sons. Virgil also sold 500 shares of Golf Corporation stock for $18,000 on November 30, 2024. He had purchased the stock on April 1, 2020, for $10,000.

Virgil has STCG of $4,300 that is offset by $8,200 of STCL carryforward on line 6. His NSTCL of $3,900 ($8,200 − $4,300) is shown on line 7. His $1,500 LTCG as a result of the sale of the piano (not a collectible) and his $8,000 LTCG from the sale of the Golf Corporation stock are on lines 8b and 10. Thus, Virgil has an NLTCG of $9,500. He has ANCG of $5,600 ($9,500 − $3,900).

Because Virgil has ANCG of $5,600 and no 28% rate gains or unrecaptured Sec. 1250 gains, he computes his tax on the Qualified Dividends and Capital Gain Tax Worksheet. The preferential treatment for dividends and capital gains saves Virgil $1,224 [(24% − 15%)($8,000 + $5,600)] of federal income taxes in 2024.

Virgil's taxable income including the above dividends and capital gains is $120,000. ◀

REAL-WORLD EXAMPLE

Artwork inherited by a married couple was originally valued at $12 million for estate taxes based on a blockage discount. The IRS determined that the undiscounted value was $36 million and the discounted value was $14 million. The taxpayers consented to the $14 million value but later used $36 million as the basis for the artwork after the statute of limitations had expired for the estate tax. The 9th Circuit Court of Appeals agreed with the IRS that the correct basis should be $14 million. *Janis v. Commissioner* 461 F.3d 1080 (CA-9, 2006).

The following pages include the Schedule D (Figure I:5-1), Form 8949 (Figure I:5-2), and a worksheet that taxpayers use to compute their tax if they have no 28% rate gains or unrecaptured Section 1250 gains (Figure I:5-3). For Virgil in the above example, both stock transactions were reported on Form 1099-B with basis reported to the IRS.

Taxpayers such as Virgil use the Qualified Dividends and Capital Gain Tax Worksheet if they either have qualified dividends or ANCG *and* do not have any 28% rate gain property or unrecaptured Section 1250 gain. This worksheet applies the lower preferential tax rates of zero, 15%, or 20% for qualified dividends and ANCG. The following series of forms includes the completed worksheet for Virgil for 2024.

Schedule D (Form 1040) 2024 Page 2

Part III **Summary**

16 Combine lines 7 and 15 and enter the result **16** 5,600

- If line 16 is a **gain,** enter the amount from line 16 on Form 1040, 1040-SR, or 1040-NR, line 7. Then, go to line 17 below.
- If line 16 is a **loss,** skip lines 17 through 20 below. Then, go to line 21. Also be sure to complete line 22.
- If line 16 is **zero,** skip lines 17 through 21 below and enter -0- on Form 1040, 1040-SR, or 1040-NR, line 7. Then, go to line 22.

17 Are lines 15 and 16 **both** gains?
☐ **Yes.** Go to line 18.
☐ **No.** Skip lines 18 through 21, and go to line 22.

18 If you are required to complete the **28% Rate Gain Worksheet** (see instructions), enter the amount, if any, from line 7 of that worksheet **18**

19 If you are required to complete the **Unrecaptured Section 1250 Gain Worksheet** (see instructions), enter the amount, if any, from line 18 of that worksheet **19**

20 Are lines 18 and 19 both zero or blank and you are not filing Form 4952?
☐ **Yes.** Complete the **Qualified Dividends and Capital Gain Tax Worksheet** in the instructions for Form 1040, line 16. **Don't** complete lines 21 and 22 below.

☐ **No.** Complete the **Schedule D Tax Worksheet** in the instructions. **Don't** complete lines 21 and 22 below.

21 If line 16 is a loss, enter here and on Form 1040, 1040-SR, or 1040-NR, line 7, the **smaller** of:

- The loss on line 16; or
- ($3,000), or if married filing separately, ($1,500) } . . . . **21** ( )

Note: When figuring which amount is smaller, treat both amounts as positive numbers.

22 Do you have qualified dividends on Form 1040, 1040-SR, or 1040-NR, line 3a?

☐ **Yes.** Complete the **Qualified Dividends and Capital Gain Tax Worksheet** in the instructions for Form 1040, line 16.

☐ **No.** Complete the rest of Form 1040, 1040-SR, or 1040-NR.

Internal Revenue Service

Sales and Other Dispositions of Capital Assets

File with your Schedule D to list your transactions for lines 1b, 2, 3, 8b, 9, and 10 of Schedule D.

Go to *www.irs.gov/Form8949* for instructions and the latest information.

OMB No. 1545-0074

2024

Attachment Sequence No. **12A**

Name(s) shown on return: Virgil Brady

Social security number or taxpayer identification number

Before you check Box A, B, or C below, see whether you received any Form(s) 1099-B or substitute statement(s) from your broker. A substitute statement will have the same information as Form 1099-B. Either will show whether your basis (usually your cost) was reported to the IRS by your broker and may even tell you which box to check.

Part I **Short-Term.** Transactions involving capital assets you held 1 year or less are generally short-term (see instructions). For long-term transactions, see page 2.

Note: You may aggregate all short-term transactions reported on Form(s) 1099-B showing basis was reported to the IRS and for which no adjustments or codes are required. Enter the totals directly on Schedule D, line 1a; you aren't required to report these transactions on Form 8949 (see instructions).

You *must* check Box A, B, *or* C below. Check only one box. If more than one box applies for your short-term transactions, complete a separate Form 8949, page 1, for each applicable box. If you have more short-term transactions than will fit on this page for one or more of the boxes, complete as many forms with the same box checked as you need.

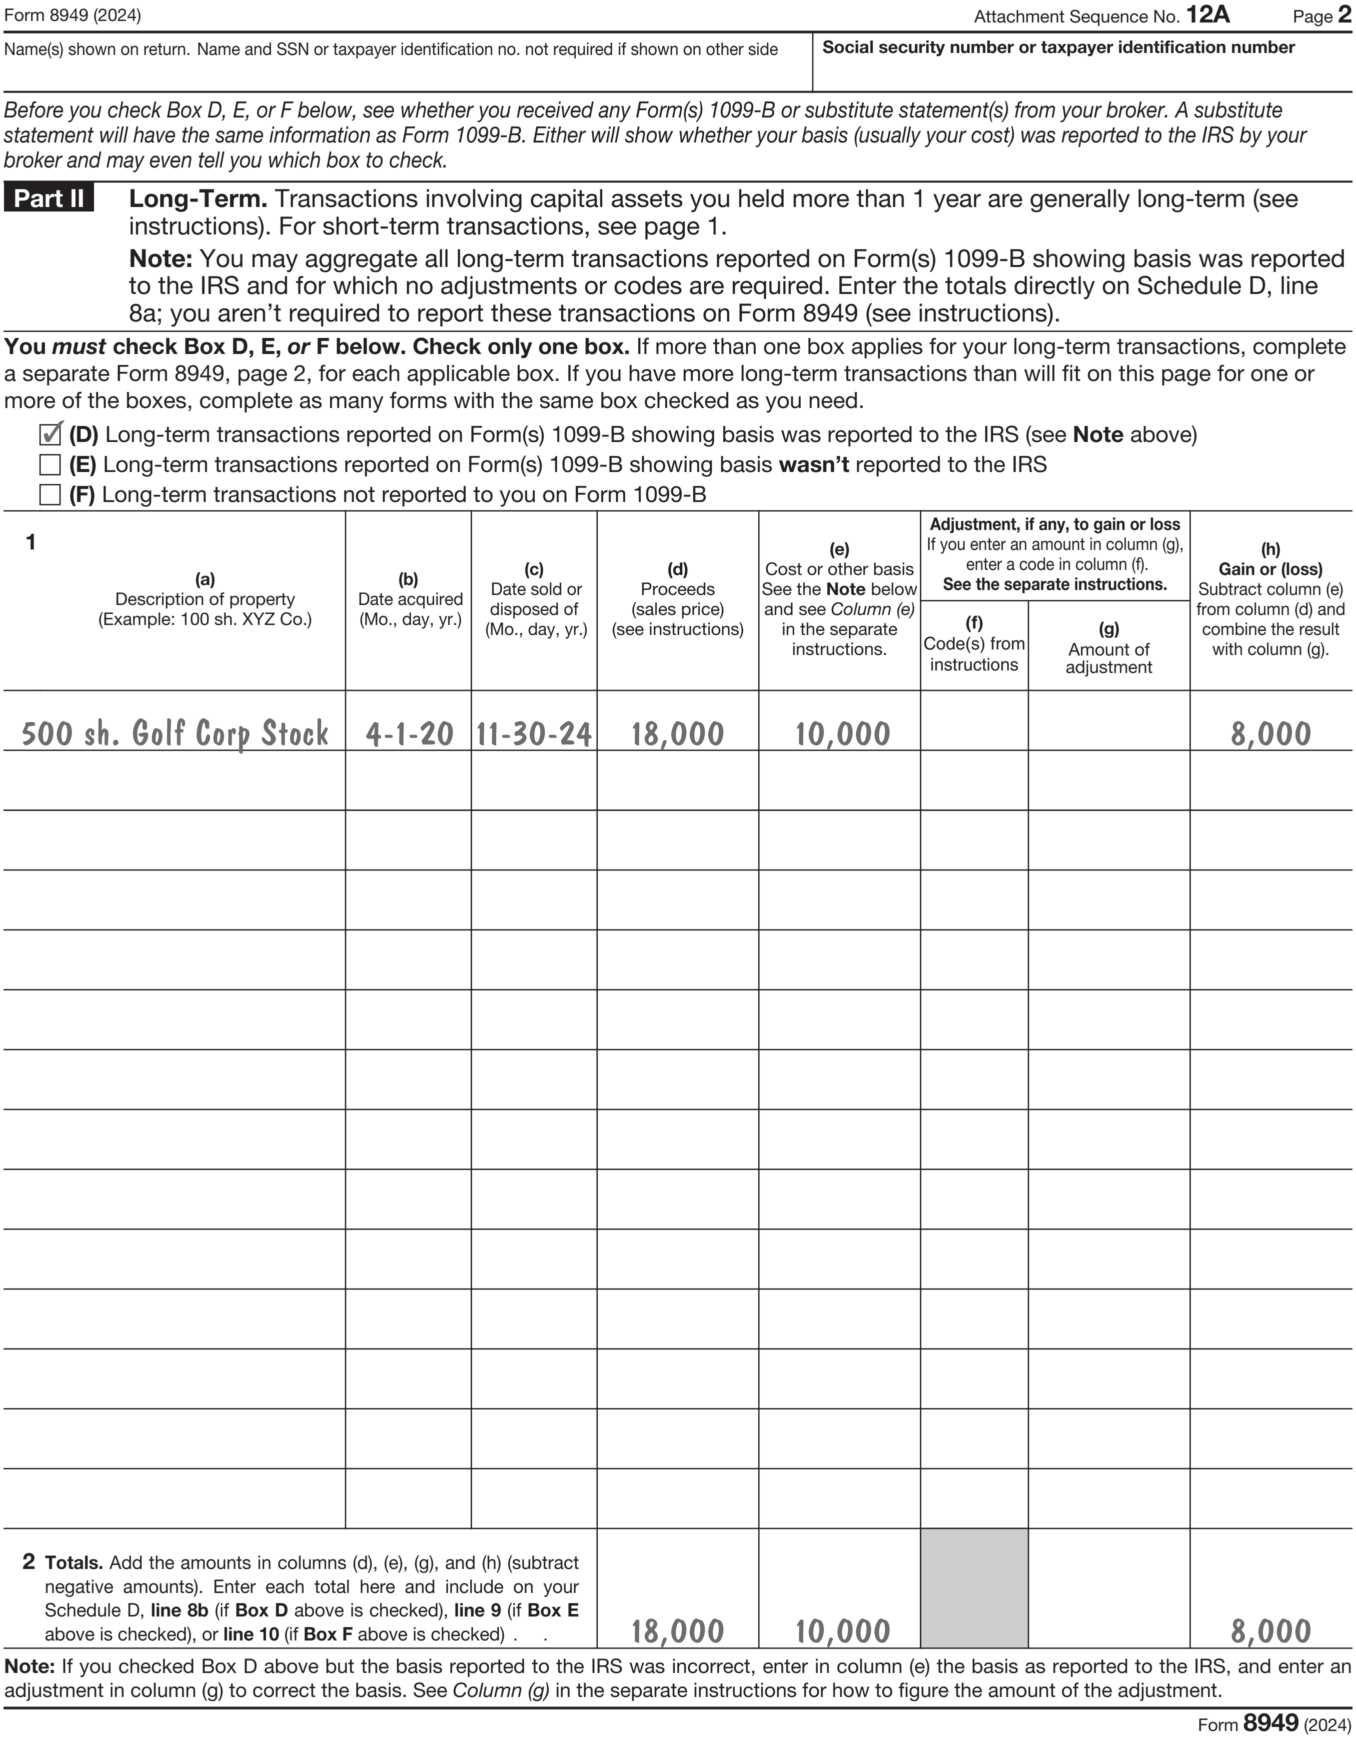
☑ **(A)** Short-term transactions reported on Form(s) 1099-B showing basis was reported to the IRS (see **Note** above)
☐ **(B)** Short-term transactions reported on Form(s) 1099-B showing basis **wasn't** reported to the IRS
☐ **(C)** Short-term transactions not reported to you on Form 1099-B

1					**Adjustment, if any, to gain or loss** If you enter an amount in column (g), enter a code in column (f). **See the separate instructions.**		
(a) Description of property (Example: 100 sh. XYZ Co.)	**(b)** Date acquired (Mo., day, yr.)	**(c)** Date sold or disposed of (Mo., day, yr.)	**(d)** Proceeds (sales price) (see instructions)	**(e)** Cost or other basis See the **Note** below and see *Column (e)* in the separate instructions.	**(f)** Code(s) from instructions	**(g)** Amount of adjustment	**(h)** **Gain or (loss)** Subtract column (e) from column (d) and combine the result with column (g).
800 sh. Tennis Corp.	10-2-23	6-20-24	13,000	8,700			4,300
2 Totals. Add the amounts in columns (d), (e), (g), and (h) (subtract negative amounts). Enter each total here and include on your Schedule D, **line 1b** (if **Box A** above is checked), **line 2** (if **Box B** above is checked), or **line 3** (if **Box C** above is checked) . .			13,000	8,700			4,300

Note: If you checked Box A above but the basis reported to the IRS was incorrect, enter in column (e) the basis as reported to the IRS, and enter an adjustment in column (g) to correct the basis. See *Column (g)* in the separate instructions for how to figure the amount of the adjustment.

For Paperwork Reduction Act Notice, see your tax return instructions. Cat. No. 37768Z Form **8949** (2024)

FIGURE I:5-2 ▶ Part I of Form 8949 for Example I:5-102



Form 8949 (2024) Attachment Sequence No. **12A** Page **2**

Name(s) shown on return. Name and SSN or taxpayer identification no. not required if shown on other side	**Social security number or taxpayer identification number**

Before you check Box D, E, or F below, see whether you received any Form(s) 1099-B or substitute statement(s) from your broker. A substitute statement will have the same information as Form 1099-B. Either will show whether your basis (usually your cost) was reported to the IRS by your broker and may even tell you which box to check.

Part II **Long-Term.** Transactions involving capital assets you held more than 1 year are generally long-term (see instructions). For short-term transactions, see page 1.

Note: You may aggregate all long-term transactions reported on Form(s) 1099-B showing basis was reported to the IRS and for which no adjustments or codes are required. Enter the totals directly on Schedule D, line 8a; you aren't required to report these transactions on Form 8949 (see instructions).

You *must* check Box D, E, *or* F below. Check only one box. If more than one box applies for your long-term transactions, complete a separate Form 8949, page 2, for each applicable box. If you have more long-term transactions than will fit on this page for one or more of the boxes, complete as many forms with the same box checked as you need.

☑ **(D)** Long-term transactions reported on Form(s) 1099-B showing basis was reported to the IRS (see **Note** above)
☐ **(E)** Long-term transactions reported on Form(s) 1099-B showing basis **wasn't** reported to the IRS
☐ **(F)** Long-term transactions not reported to you on Form 1099-B

1 (a) Description of property (Example: 100 sh. XYZ Co.)	**(b)** Date acquired (Mo., day, yr.)	**(c)** Date sold or disposed of (Mo., day, yr.)	**(d)** Proceeds (sales price) (see instructions)	**(e)** Cost or other basis See the **Note** below and see *Column (e)* in the separate instructions.	**Adjustment, if any, to gain or loss** If you enter an amount in column (g), enter a code in column (f). **See the separate instructions.**		**(h)** **Gain or (loss)** Subtract column (e) from column (d) and combine the result with column (g).
					(f) Code(s) from instructions	**(g)** Amount of adjustment	
500 sh. Golf Corp Stock	4-1-20	11-30-24	18,000	10,000			8,000
2 Totals. Add the amounts in columns (d), (e), (g), and (h) (subtract negative amounts). Enter each total here and include on your Schedule D, **line 8b** (if **Box D** above is checked), **line 9** (if **Box E** above is checked), or **line 10** (if **Box F** above is checked) . .			18,000	10,000			8,000

Note: If you checked Box D above but the basis reported to the IRS was incorrect, enter in column (e) the basis as reported to the IRS, and enter an adjustment in column (g) to correct the basis. See *Column (g)* in the separate instructions for how to figure the amount of the adjustment.

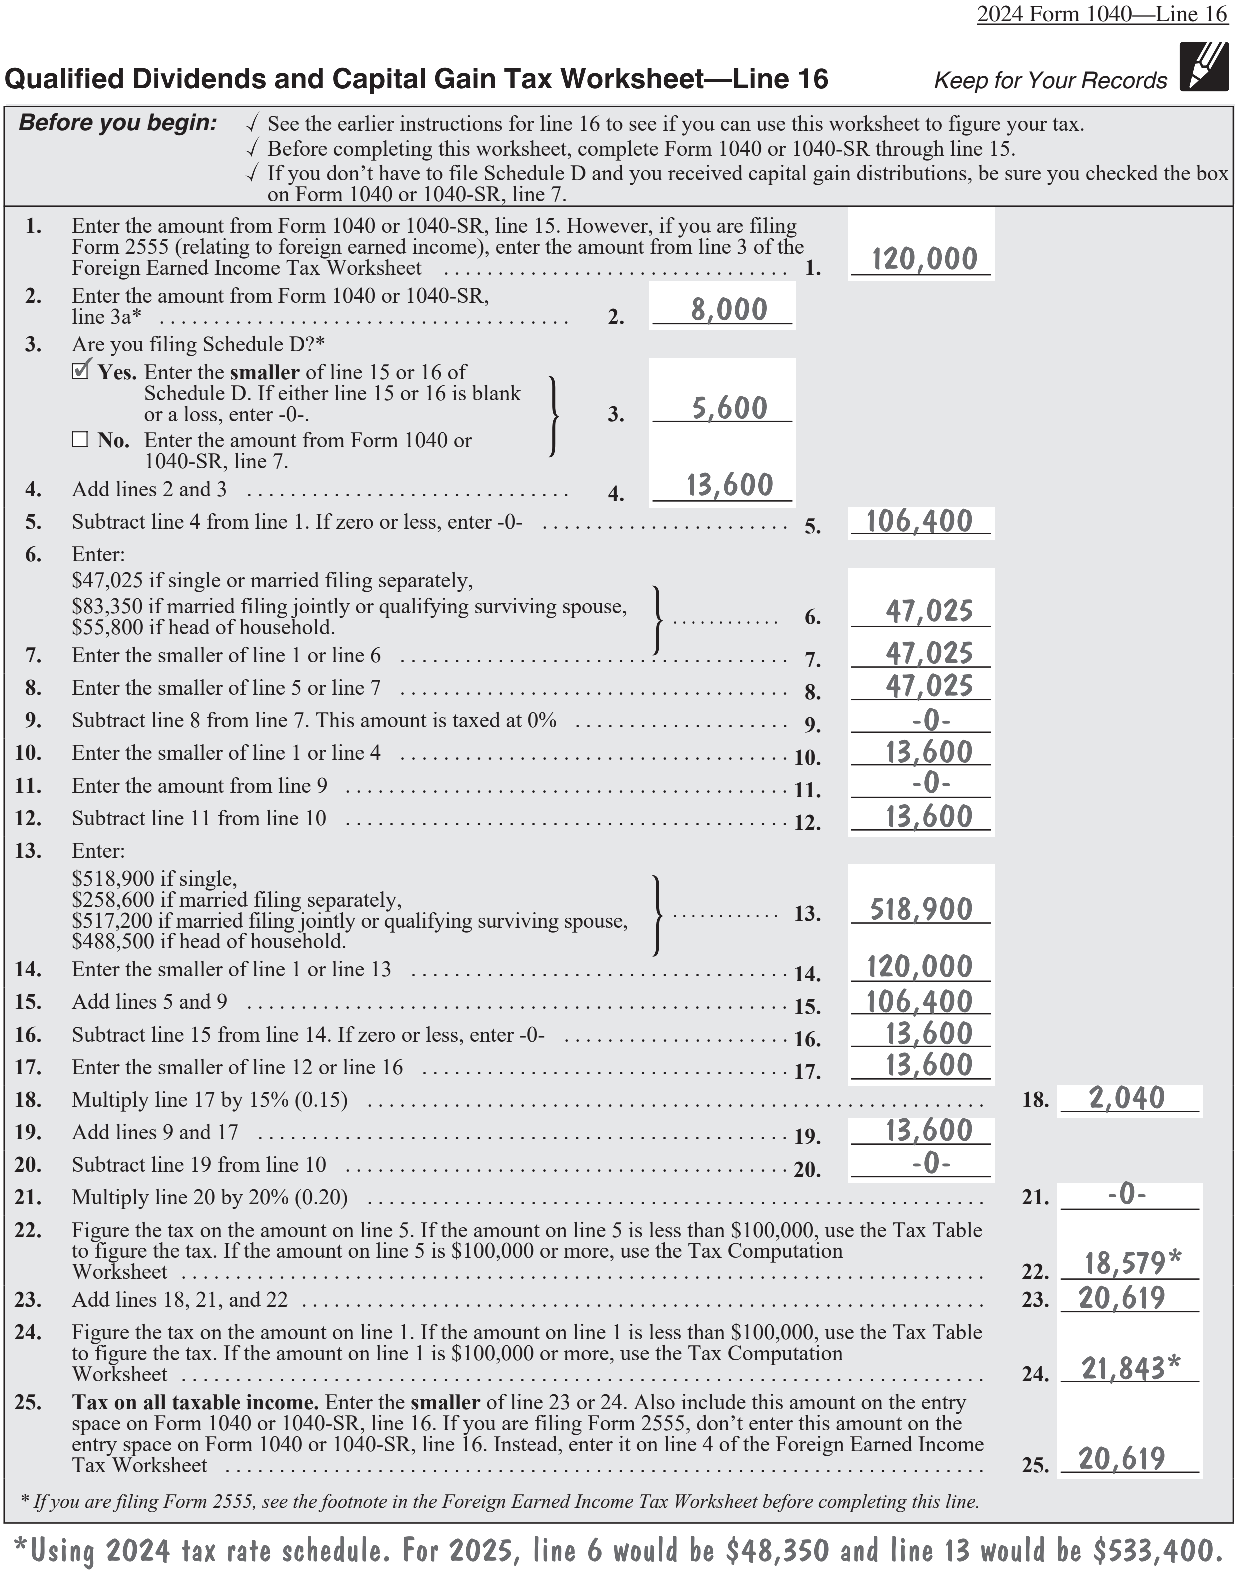
☐ **(D)** Long-term transactions reported on Form(s) 1099-B showing basis was reported to the IRS (see **Note** above)
☐ **(E)** Long-term transactions reported on Form(s) 1099-B showing basis **wasn't** reported to the IRS
☑ **(F)** Long-term transactions not reported to you on Form 1099-B

1 (a) Description of property (Example: 100 sh. XYZ Co.)	**(b)** Date acquired (Mo., day, yr.)	**(c)** Date sold or disposed of (Mo., day, yr.)	**(d)** Proceeds (sales price) (see instructions)	**(e)** Cost or other basis See the **Note** below and see *Column (e)* in the separate instructions.	**Adjustment, if any, to gain or loss** If you enter an amount in column (g), enter a code in column (f). **See the separate instructions.** **(f)** Code(s) from instructions	**(g)** Amount of adjustment	**(h)** **Gain or (loss)** Subtract column (e) from column (d) and combine the result with column (g).
Piano	4-12-14	5-3-24	4,000	2,500			1,500
2 **Totals.** Add the amounts in columns (d), (e), (g), and (h) (subtract negative amounts). Enter each total here and include on your Schedule D, **line 8b** (if **Box D** above is checked), **line 9** (if **Box E** above is checked), or **line 10** (if **Box F** above is checked) . .			4,000	2,500			1,500

Note: If you checked Box D above but the basis reported to the IRS was incorrect, enter in column (e) the basis as reported to the IRS, and enter an adjustment in column (g) to correct the basis. See *Column (g)* in the separate instructions for how to figure the amount of the adjustment.

Form **8949** (2024)

FIGURE I:5-2 ▶ Part II (Cont'd) of Form 8949 for Example I:5-102



2024 Form 1040—Line 16

Qualified Dividends and Capital Gain Tax Worksheet—Line 16 *Keep for Your Records*

Before you begin:
- ✓ See the earlier instructions for line 16 to see if you can use this worksheet to figure your tax.
- ✓ Before completing this worksheet, complete Form 1040 or 1040-SR through line 15.
- ✓ If you don't have to file Schedule D and you received capital gain distributions, be sure you checked the box on Form 1040 or 1040-SR, line 7.

1. Enter the amount from Form 1040 or 1040-SR, line 15. However, if you are filing Form 2555 (relating to foreign earned income), enter the amount from line 3 of the Foreign Earned Income Tax Worksheet **1.** 120,000

2. Enter the amount from Form 1040 or 1040-SR, line 3a* **2.** 8,000

3. Are you filing Schedule D?*
☑ **Yes.** Enter the **smaller** of line 15 or 16 of Schedule D. If either line 15 or 16 is blank or a loss, enter -0-.
☐ **No.** Enter the amount from Form 1040 or 1040-SR, line 7. } **3.** 5,600

4. Add lines 2 and 3 . . . . . **4.** 13,600

5. Subtract line 4 from line 1. If zero or less, enter -0- **5.** 106,400

6. Enter:
$47,025 if single or married filing separately,
$83,350 if married filing jointly or qualifying surviving spouse,
$55,800 if head of household. } **6.** 47,025

7. Enter the smaller of line 1 or line 6 . . . . . **7.** 47,025

8. Enter the smaller of line 5 or line 7 . . . . . **8.** 47,025

9. Subtract line 8 from line 7. This amount is taxed at 0% . . . . . **9.** -0-

10. Enter the smaller of line 1 or line 4 . . . . . **10.** 13,600

11. Enter the amount from line 9 . . . . . **11.** -0-

12. Subtract line 11 from line 10 . . . . . **12.** 13,600

13. Enter:
$518,900 if single,
$258,600 if married filing separately,
$517,200 if married filing jointly or qualifying surviving spouse,
$488,500 if head of household. } **13.** 518,900

14. Enter the smaller of line 1 or line 13 . . . . . **14.** 120,000

15. Add lines 5 and 9 . . . . . **15.** 106,400

16. Subtract line 15 from line 14. If zero or less, enter -0- **16.** 13,600

17. Enter the smaller of line 12 or line 16 . . . . . **17.** 13,600

18. Multiply line 17 by 15% (0.15) **18.** 2,040

19. Add lines 9 and 17 . . . . . **19.** 13,600

20. Subtract line 19 from line 10 . . . . . **20.** -0-

21. Multiply line 20 by 20% (0.20) . . . . . **21.** -0-

22. Figure the tax on the amount on line 5. If the amount on line 5 is less than $100,000, use the Tax Table to figure the tax. If the amount on line 5 is $100,000 or more, use the Tax Computation Worksheet **22.** 18,579*

23. Add lines 18, 21, and 22 . . . . . **23.** 20,619

24. Figure the tax on the amount on line 1. If the amount on line 1 is less than $100,000, use the Tax Table to figure the tax. If the amount on line 1 is $100,000 or more, use the Tax Computation Worksheet **24.** 21,843*

25. **Tax on all taxable income.** Enter the **smaller** of line 23 or 24. Also include this amount on the entry space on Form 1040 or 1040-SR, line 16. If you are filing Form 2555, don't enter this amount on the entry space on Form 1040 or 1040-SR, line 16. Instead, enter it on line 4 of the Foreign Earned Income Tax Worksheet **25.** 20,619

* *If you are filing Form 2555, see the footnote in the Foreign Earned Income Tax Worksheet before completing this line.*

*Using 2024 tax rate schedule. For 2025, line 6 would be $48,350 and line 13 would be $533,400.

FIGURE I:5-3 ▶ Qualified Dividends and Capital Gain Tax Worksheet for Example I:5-102

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:5-1 What problem may exist in determining the amount realized for an investor who exchanges common stock of a publicly traded corporation for a used building? How is the problem likely to be resolved?

I:5-2 In 2014, Ellen purchased a house for $150,000 to use as her personal residence. She paid $30,000 and borrowed $120,000 from the local savings and loan company. In 2016, she paid $20,000 to add a room to the house. In 2018, she paid $2,400 to have the house painted and $1,200 for built-in bookshelves. As of January 1 of the current year, she has reduced the $120,000 mortgage to $108,300. What is her basis for the house?

I:5-3 Vincent pays $20,000 for equipment to use in his trade or business. He pays sales tax of $800 as a result of the purchase. Must the $800 sales tax be capitalized as part of the purchase price?

I:5-4 Sergio owns 200 shares of Palm Corporation common stock, purchased during the prior year: 100 shares on July 5, for $9,000; and 100 shares on October 15, for $12,000. When Sergio sells 50 shares for $8,000 on July 18 of the current year, he does not identify the particular shares sold. Determine the amount and character of the gain.

I:5-5 On October 21 of the current year, David receives stock of Western Corporation as a gift from his grandfather, who acquired the stock on January 20, 1996. Under what conditions would David's holding period start on?

a. October 22 of the current year?

b. January 21, 1996?

I:5-6 Jim inherits stock (a capital asset) from his brother, who died in March 2025, when the property had a $20.7 million FMV. This property is the only property included in his brother's gross estate and there is a taxable estate. The FMV of the property as of the alternate valuation date was $20.3 million.

a. Why might the executor of the brother's estate elect to use the alternate valuation date to value the property?

b. Why might Jim prefer the executor to use FMV at time of the death to value the property?

c. If the marginal estate tax rate is 40% and Jim's marginal income tax rate is 24% and his rate on ANCG is 15%, which value should the executor use?

I:5-7 Martha owns 500 shares of Columbus Corporation common stock at the beginning of the year with a basis of $82,500. During the year, Columbus declares and pays a 10% nontaxable stock dividend. What is her basis for each of the 50 shares received?

I:5-8 Mario owns 2,000 shares of Nevada Corporation common stock at the beginning of the year. His basis for the stock is $38,880. During the year, Nevada declares and pays a stock dividend. After the dividend, Mario's basis for each share of stock owned is $18. What is the percentage dividend paid by Nevada?

I:5-9 A corporate taxpayer plans to build a $6 million office building during the next 18 months. How must the corporation treat the interest on debt paid or incurred during the production period?

I:5-10 Andy owns an appliance store where he has merchandise such as refrigerators for sale. Roger, a bachelor, owns a refrigerator, which he uses in his apartment for personal use. For which individual is the refrigerator a capital asset?

I:5-11 Why did the Supreme Court rule in the *Corn Products* case that a gain due to the sale of futures contracts is ordinary income instead of capital gain?

I:5-12 When is the gain on the sale or exchange of securities by a dealer in securities classified as capital gain?

I:5-13 In 2002, Florence purchased 30 acres of land. She has not used the land for business purposes or made any substantial improvements to the property. During the current year, she subdivides the land into 15 lots and advertises the lots for sale. She sells four lots at a gain.

a. What is the character of the gain on the sale of the four lots?

b. Explain how the basis of each lot would be determined.

I:5-14 Amy has LTCGs taxed at different tax rates, 15%, 25% and 28%. She also has NSTCLs that amount to less than her NLTCG. The procedure for offsetting the NSTCL against the LTCGs is favorable to her. Explain.

I:5-15 Four years ago, Susan loaned $7,000 to her friend Joe. During the current year, the $7,000 loan is considered worthless. Explain how Susan should treat the worthless debt for tax purposes.

I:5-16 Why did the Supreme Court rule in *Arkansas Best* that the stock of a corporation purchased by the taxpayer to protect the taxpayer's business reputation was a capital asset?

I:5-17 The effective income tax rate on gain of $1 million resulting from the sale of qualified small business stock obtained in 2005 in an initial public offering and held more than five years is 14%. Do you agree or disagree? Explain.

I:5-18 Nancy and the Minor Corporation own bonds of the East Corporation. Minor Corporation owns 80% of the stock of East Corporation. East Corporation has declared bankruptcy this year, and bondholders will receive only 26% of the face value of the debt. Explain why the loss is a capital loss for Nancy but an ordinary loss for the Minor Corporation.

I:5-19 On January 1 of the current year, the Orange Corporation issues $500,000 of 11%, 20-year bonds for $480,000. Determine the amount of original issue discount, if any.

I:5-20 Today, Juanita purchases a 15-year, 7% bond of the Sunflower Corporation issued four years ago at par. She purchases the bond as an investment at a discount from the par value. If she sells the bonds two years from now, explain why some or all of the gain may be ordinary income.

I:5-21 Judy just obtained a patent on a new product she has developed. Bell Corporation wishes to market the product and will pay 12% of all future sales of the product to Judy. How can she be sure that the payments received will be treated as a long-term capital gain?

I:5-22 When is the transferor of a franchise unable to treat the transfer as a sale or an exchange of a capital asset?

I:5-23 How does a lessor treat payments received for canceling a lease?

I:5-24 What is the first day that an individual could sell a capital asset purchased on March 31, 2025, and have a holding period of more than one year?

I:5-25 Phil, a cash-basis taxpayer, sells the following marketable securities, which are capital assets during 2025. Determine whether the gains or losses are long-term or short-term. Also determine the net capital gain and adjusted net capital gain for 2024.

Capital Asset	*Basis*	*Date Acquired*	*Trade Date in 2024*	*Sales Price*
A	$40,000	Feb. 10, 2024	Aug. 12	$52,000
B	20,000	Dec. 5, 2024	May 2	17,000
C	30,000	Apr. 9, 2023	Dec. 10	37,400

I:5-26 How might the current treatment of capital losses discourage an individual investor from purchasing stock of a high-risk, start-up company?

I:5-27 An individual taxpayer has realized a $40,000 loss on the sale of an asset that had a holding period of eight months. Explain why the taxpayer may be indifferent as to whether the asset is a capital asset.

I:5-28 If Pam transfers an asset to Fred and the asset is subject to a liability that is assumed by Fred, how does Fred's assumption of the liability affect the amount realized by Pam? How does Fred's assumption of the liability affect his basis for the property?

ISSUE IDENTIFICATION QUESTIONS

I:5-29 Mr. and Mrs. Pickens purchased a used piano in Y1 for their young son who had started taking piano lessons. In Y8 while cleaning the piano, Mrs. Pickens discovered $4,800 of old currency. They exchanged the old currency for new currency. Identify the tax issues involved in this situation.

I:5-30 Lisa and John are in the business of breeding beavers to produce fur for sale. They recently purchased a pair of breeding beavers for $30,000 from XUN, Inc., and agreed to pay interest at 10% each year for five years. After the five-year period, they could pay the debt by delivering seven beavers to XUN, Inc., provided that each beaver was at least nine months old. Identify the tax issues involved in this situation.

I:5-31 Mike, a real estate broker in California, recently inherited a farm from his deceased uncle and plans to sell the farm to the first available buyer. His uncle purchased the property 12 years ago for $600,000. The FMV of the farm on the date of the uncle's death was $500,000. Mike sells the farm for $520,000 seven months after his uncle's death. What tax issues should Mike consider?

I:5-32 Sylvia, a dentist with excellent skills as a carpenter, started the construction of a house that she planned to give to her son as a surprise when he returned from military service overseas. She began construction on March 23, 2024, and finished the house on July 10, 2025, at a total cost of $70,000. Her son is expected to be home on September 1, 2025.

On July 30, 2025, Roscoe offered Sylvia $245,000 for the house and Sylvia considered the offer to be so attractive that she accepted it. She decided that she could purchase a suitable home for her son for about $200,000. What tax issues should Sylvia consider?

PROBLEMS

I:5-33 ***Amount Realized.*** Tracy owns a nondepreciable capital asset held for investment. The asset was purchased for $250,000 six years earlier and is now subject to a $75,000 liability. During the current year, Tracy transfers the asset to Tim in exchange for $94,000 cash and a new automobile with a $50,000 FMV to be used by Tracy for personal use; Tim assumes the $75,000 liability. Determine the amount of Tracy's LTCG or LTCL.

I:5-34 ***Basis of Property Received as a Gift.*** Doug receives a duplex as a gift from his uncle. The uncle's basis for the duplex and land is $90,000. At the time of the gift, the land and building have FMVs of $40,000 and $80,000, respectively. No gift tax is paid by Doug's uncle at the time of the gift.

a. To determine gain, what is Doug's basis for the land?
b. To determine gain, what is Doug's basis for the building?
c. Will the basis of the land and building be the same as in Parts a and b for purposes of determining a loss?

I:5-35 ***Sale of Property Received as a Gift.*** During the current year, Stan sells a tract of land for $800,000. The property was received as a gift from Maxine on March 10, 1995, when the property had a $310,000 FMV. The taxable gift was $300,000 because the annual exclusion was $10,000 in 1995. Maxine purchased the property on April 12, 1980, for $110,000. At the time of the gift, Maxine paid a gift tax of $12,000. In order to sell the property, Stan paid a sales commission of $16,000.

a. What is Stan's realized gain on the sale?
b. How would your answer to Part a change, if at all, if the FMV of the gift property was $85,000 as of the date of the gift?

I:5-36 ***Sale of Asset Received as a Gift.*** Bud received 200 shares of Georgia Corporation stock from his uncle as a gift on July 20, 2024, when the stock had a $45,000 FMV. His uncle paid $30,000 for the stock on April 12, 2008. The taxable gift was $45,000, because his uncle made another gift to Bud for $20,000 in January and used the annual exclusion. The uncle paid a gift tax of $1,500.

Without considering the transactions below, Bud's AGI is $45,000 in 2025. No other transactions involving capital assets occur during the year. Analyze each transaction below, independent of the others, and determine Bud's AGI in each case.

a. He sells the stock on October 12, 2025, for $48,000.
b. He sells the stock on October 12, 2025, for $28,000.
c. He sells the stock on December 16, 2025, for $42,000.

I:5-37 ***Basis of Property Converted from Personal Use.*** Irene owns a truck costing $15,000 and used for personal activities. The truck has a $9,600 FMV when it is transferred to her business, which is operated as a sole proprietorship.

a. What is the basis of the truck for determining depreciation?
b. What is Irene's realized gain or loss if the truck is sold for $5,000 after claiming depreciation of $4,000?

I:5-38 ***Sale of Assets Received as a Gift and Inherited.*** Daniel receives 400 shares of A&M Corporation stock from his aunt on May 20, 2025, as a gift when the stock has a $60,000 FMV. His aunt purchased the stock in 2016 for $42,000. The taxable gift is $60,000 because she made earlier gifts to Daniel during 2025 and used the annual exclusion. She paid a gift tax of $9,300 on the gift of A&M stock to Daniel.

Daniel also inherited 300 shares of Longhorn Corporation preferred stock when his uncle died on November 12, 2024, when the stock's FMV was $30,000. His uncle purchased the stock in 2003 for $27,600. Determine the gain or loss on the sale of A&M and Longhorn stock on December 15, 2025, under each alternative situation below.

a. A&M stock was sold for $62,600, and Longhorn stock was sold for $30,750.
b. A&M stock was sold for $58,200, and Longhorn stock was sold for $28,650.
c. Assume the same as in Part a except his aunt purchased A&M stock for $71,000 and his uncle purchased Longhorn stock for $31,200.

I:5-39 ***Personal-Use Property Converted to Rental Property.*** Tally owns a house that she has been living in for eight years. She purchased the house for $245,000 and the FMV today is $200,000. She is moving into her friend's house and has decided to convert her residence to rental property. Assume 20% of the property's value is allocated to land.

a. What is the basis of the house for depreciation?
b. If she claims depreciation of $15,000 and sells the property six years later for $260,000 (20% allocated to land), determine the gain on the sale of the building and gain on the sale of the land.
c. How much of the gain is due to depreciation?
d. If the FMV is $290,000 when she converts the house to rental property instead of $200,000, what is the basis of the house for depreciation?

I:5-40 ***Stock Rights.*** Kathleen owns 500 shares of Buda Corporation common stock which was purchased on March 20, 2011, for $48,000. On October 10 of the current year, she receives a distribution of 500 stock rights. Each stock right has a $20 FMV and the FMV of the Buda common stock is $100 per share. With each stock right, she may acquire one share of Buda common stock for $95.

a. How much gross income must Kathleen recognize?
b. What is the basis of each stock right received?
c. If she sells the 500 stock rights for $10,600, what is her gain?
d. If she exercises the 500 stock rights on November 10, what is the basis of the 500 shares she receives and when does the holding period for those shares start?

I:5-41 ***Stock Rights.*** Martha Lou owns 100 shares of Blain Corporation common stock. She purchased the stock on July 25, 2002, for $4,000. On May 2 of the current year, she receives a nontaxable distribution of 100 stock rights. Each stock right has a $10 FMV, and the FMV of the Blain common stock is $70 per share. With each stock right, Martha Lou may acquire one share of Blain common for $68 per share. Assuming that she elects to allocate basis to the stock rights, answer the following:

a. What is the basis allocated to the stock rights?
b. If she sells the stock rights on June 10 for $1,080, determine the amount and character of the recognized gain?
c. If she exercises the stock rights on May 14, what is the basis of the 100 shares purchased and when does the holding period start?
d. If she does not elect to allocate basis to the stock rights, determine the amount and character of the gain if she sells the stock rights on June 10 for $1,080?

I:5-42 ***Real Property Subdivided for Sale.*** Beth acquired only one tract of land seven years ago as an investment. In order to sell the land at a higher price, she decides to subdivide it into 20 lots. She pays for improvements such as clearing and leveling, but the improvements are not considered to be substantial. Each lot has a basis of $2,000, and a selling price of $6,000. Selling expenses of $480 were incurred to sell two lots last year. This year, ten lots are sold, and selling expenses amount to $1,900. How much ordinary income and capital gain must be recognized in the prior and current year?

I:5-43 ***Marginal Tax Rates.*** Mr. and Mrs. Dunbar have taxable income of $260,000 without considering the following sales. Consider the following independent cases where capital gains are recognized and determine the marginal tax rate for the capital gain in each case. Ignore the effect of increasing AGI on deductions.

CASE A: $10,000 gain from sale of Storm Lake common stock held for seven months.
CASE B: $10,000 gain from sale of antique clock held for six years.
CASE C: $10,000 gain from sale of Ames preferred stock held for three years.

I:5-44 ***Netting Gains and Losses.*** Trisha, who is single, sells the following capital assets in 2025 with gains and losses as shown:

Asset	*Gain or (Loss)*	*Holding Period*
A	$15,000	15 months
B	7,000	20 months
C	(3,000)	14 months

Her taxable income is $300,000 without considering the three sales.

a. Determine Trisha's increase in income tax liability as a result of the three sales. All assets are stock held for investment. Ignore the effect of increasing AGI on deductions and phase-out amounts.
b. Determine her increase in income tax liability if the holding period for asset B is 8 months.
c. Determine her increase in income tax liability if the holding periods are the same as in Part a but asset B is an antique clock.
d. Determine her increase in income tax liability if her taxable income is $700,000.

I:5-45 ***Computing the Tax.*** Donna files as a head of household in 2025 and has taxable income of $110,000, including the sale of a stock held as an investment for two years at a gain of $20,000. Only one asset was sold during the year and Donna does not have any capital loss carryovers.

a. What is the amount of Donna's tax liability?
b. What is the amount of Donna's tax liability if the stock is held for 11 months?

I:5-46 ***Computing the Tax.*** Mr. and Mrs. Sedlock file a joint return and have taxable income of $425,000 without considering the following information below. Determine the increase in their income tax liability for the following independent fact situations.

a. They have a STCG of $20,000 and a LTCL of $12,000.

b. They have a LTCG of $30,000 due to the sale of a collectible and a LTCG of $9,000 due to the sale of General Motors stock.

c. Same as Part b except they also have a STCL of $4,400.

I:5-47 ***Computing the Sales Price.*** An investor in a 32% tax bracket and a 15% rate on ANCG owns land that is a capital asset with a $50,000 basis and a holding period of three years. The investor who is single wishes to sell the asset at a price high enough so that he will have $120,000 in cash after paying the income taxes.

a. What is the minimum price the investor could accept?

b. What is the minimum price the investor could accept if all the gain is subject to the Medicare tax on net investment income?

I:5-48 ***Capital Gains and Losses.*** Consider the four independent situations below for an unmarried individual, and analyze the effects of the capital gains and losses on the individual's AGI. For each case, determine AGI after considering the capital gains and losses.

	Situation 1	*Situation 2*	*Situation 3*	*Situation 4*
AGI (excluding property transactions)	$40,000	$50,000	$60,000	$70,000
STCG	6,000	2,000	5,000	6,000
STCL	2,000	5,000	4,000	15,000
LTCG	3,500	15,000	10,000	9,000
LTCL	2,500	4,000	12,000	4,000

I:5-49 ***Capital Losses.*** To better understand the rules for offsetting capital losses and how to treat capital losses carried forward, analyze the following data for an unmarried individual for the period 2022 through 2025. No capital loss carryforwards are included in the figures. For each year, determine AGI and the capital losses to be carried forward to a later tax year.

	2022	*2023*	*2024*	*2025*
AGI (excluding property transactions)	$40,000	$50,000	$60,000	$70,000
STCG	4,000	5,000	7,000	10,000
STCL	9,000	3,000	5,000	12,000
LTCG	6,000	10,000	2,200	6,000
LTCL	5,000	21,000	1,000	9,500
AGI (including property transactions)	________	________	________	________
STCL to be carried forward	________	________	________	________
LTCL to be carried forward	________	________	________	________

I:5-50 ***Character of Loss.*** The Michigan Corporation owns 20% of the Wolverine Corporation. The Wolverine stock was acquired eight years ago to ensure a steady supply of raw materials. Michigan also owns 30% of Spartan Corporation and 85% of Huron Corporation. Stock in both corporations was acquired more than ten years ago for investment purposes. During the current year, Wolverine, Spartan, and Huron are deemed bankrupt, and the stocks are considered worthless. Describe how Michigan should treat its losses.

I:5-51 ***Original Issue Discount.*** On December 31, 2024, Phil purchased $20,000 of newly issued bonds of Texas Corporation for $16,568. The bonds are dated December 31, 2024. The bonds are 9%, 10-year bonds paying interest semiannually on June 30 and December 31. The bonds are priced to yield 12% compounded semiannually.

a. What is the amount of the original issue discount?

b. For the first semiannual period, what is the amount of the original issue discount Phil must recognize as ordinary income?

c. What is the total amount of interest income Phil must recognize in 2025?

d. What is Phil's basis for the bonds as of December 31, 2025?

I:5-52 On January 1, 2023, Swen paid $184,000 for $200,000 of the 8%, 20-year bonds of Penn Corporation, issued on January 1, 2019, at par. The bonds are held as an investment. Determine the gain and the character of the gain if the bonds are sold on January 1, 2025, for

a. $191,000

b. $185,750

c. $183,000

I:5-53 ***Capital Gains and Losses.*** During 2025, Gary, who is single, receives a $90,000 salary and has no deductions for AGI. In 2024, Gary had a $5,000 STCL and no other capital losses or capital gains. Consider the following sales and determine Gary's AGI for 2025.

- An automobile purchased in 2020 for $20,500 and held for personal use is sold for $7,000.
- On April 10, 2025, stock held for investment is sold for $21,000. The stock was acquired on November 20, 2024, for $9,300.

I:5-54 ***Call Options.*** On February 10, 2025, Gail purchases 20 calls on Red Corporation for $250 per call. Each call represents an option to buy 100 shares of Red stock at $42 per share any time before November 25, 2025. Compute the gain or loss recognized, and determine whether the gain or loss is long-term or short-term for Gail in the following situations:

a. The 20 calls are sold on May 15, 2025, for $310 per call.
b. The calls are not exercised but allowed to expire.
c. The calls are exercised on July 15, 2025, and the 2,000 shares of Red Corporation stock are sold on July 20, 2026, for $50 per share.

I:5-55 ***Call Writing.*** Dan owns 500 shares of Rocket Corporation common stock. The stock was acquired two years ago for $30 per share. On October 2, 2025, Dan writes five calls on the stock, which represent options to buy the 500 shares of Rocket at $75 per share. For each call, Dan receives $210. The calls expire on June 22, 2026. Consider the following transactions and describe the tax treatment for Dan:

a. The five calls are exercised on December 4, 2025.
b. The calls are not exercised and allowed to expire.

I:5-56 ***Corporate Capital Gains and Losses.*** Determine the taxable income for the Columbia Corporation for the following independent cases:

Case	*Income from Operations*	*STCG (NSTCL)*	*NLTCG (NLTCL)*
A	$110,000	$30,000	$44,000
B	100,000	(50,000)	65,000
C	80,000	(37,000)	30,000
D	90,000	(15,000)	(9,000)

I:5-57 ***Original Issue Discount.*** On January 1, 2024, Sean purchased an 8%, $100,000 corporate bond for $92,277. The bond was issued on January 1, 2024, and matures on January 1, 2029. Interest is paid semiannually, and the effective yield to maturity is 10% compounded semiannually. On July 1, 2025, Sean sells the bond for $95,949. A schedule of interest amortization for the bond is shown in Table I:5-3.

a. How much interest income must Sean recognize in 2024?
b. How much interest income must Sean recognize in 2025?
c. How much gain must Sean recognize in 2025 on the sale of the bond?

▼ TABLE I:5-3
Interest Amortization for Problem I:5-57

	Interest Received (1)	Amortization of Discount (2)	Interest Income (3) = (1) + (2)
6-30-24	$4,000	$614	$4,614
12-31-24	4,000	645	4,645
6-30-25	4,000	677	4,677
12-31-25	4,000	711	4,711
6-30-26	4,000	747	4,747
12-31-26	4,000	783	4,783
6-30-27	4,000	823	4,823
12-31-27	4,000	864	4,864
6-30-28	4,000	907	4,907
12-31-28	4,000	952	4,952

I:5-58 *Capital Gains and Losses.* Martha has $40,000 AGI without considering the following information. During the year, she incurs an LTCL of $10,000 and has a gain of $14,000 due to the sale of a capital asset held for more than a year.

a. If the $14,000 gain is not properly classified as an LTCG (i.e., is improperly treated as an ordinary gain), determine Martha's AGI.
b. If the $14,000 gain is properly classified as an LTCG, determine her AGI.
c. If Martha has a $2,500 STCL carryover from earlier years, how would the answers to Parts a and b be affected?

I:5-59 *Capital Gains and Losses.* Without considering the following capital gains and losses, Charlene, who is single, has taxable income of $660,000 and a marginal tax rate of 37%. During the year, she sold stock held for nine months at a gain of $10,000; stock held for three years at a gain of $15,000; and a collectible asset held for six years at a gain of $20,000. Ignore the effect of the gains on any threshold amounts.

a. What is her taxable income and the increase in her income tax liability after considering the three gains?
b. In addition to the above three sales, assume that she sells another asset and has an STCL of $14,000. What is her taxable income and the increase in her tax liability after considering the four transactions?
c. In addition to the above three sales in Part a, assume that she sells another collectible asset held seven years as an investment and has a $27,000 capital loss. What is her taxable income and the increase in her tax liability after considering the four transactions?
d. Determine her Medicare tax on net investment income in (a) if all of the $660,000 of taxable income is due to salary.

I:5-60 *Corporate Capital Gains and Losses.* In 2020, the Ryan Corporation sold a capital asset and incurred a $40,000 LTCL that was carried forward to subsequent years. That sale was the only sale of a capital asset that Ryan made until 2025, when Ryan sells a capital asset and recognizes an STCG of $53,000. Without considering the STCG from the sale, Ryan's taxable income is $250,000.

a. Determine the corporation's NSTCG for 2025.
b. Determine the corporation's 2025 taxable income.
c. If the sale of the asset in 2020 had occurred in 2019, determine the corporation's 2025 taxable income.

COMPREHENSIVE PROBLEM

I:5-61 Betty incurs the following transactions during the current year. Without considering the transactions, her 2025 AGI is $92,000. Analyze the transactions and answer the following questions:

- On March 10, 2025, she sells a painting for $2,000. Betty is the artist, and she completed the painting in 2020. Her basis for the painting is $50.
- On June 18, 2025, she receives $28,500 from the sale of stock purchased by her uncle in 2010 for $10,000, which she inherited on February 20, 2025, as a result of her uncle's death. The stock's FMV on that date is $30,000.
- On July 30, 2025, she sells land for $25,000 that was received as a gift from her brother on April 8, 2025, when the land's FMV was $30,000. Her brother purchased the land for $43,000 on October 12, 2017. No gift tax was paid.

a. What is her NSTCL or NSTCG?
b. What is her NLTCL or NLTCG?
c. What is Betty's AGI?
d. What is her capital loss carryforward to the next year?

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:5-62 Dale, who files a joint return, purchased Blue Corporation stock four years ago for $1,000 as an investment. He intended to hold the stock until funds were needed to help pay for his daughter's college education. Today the stock has a $6,500 FMV and Dale decides to sell the stock and give the proceeds, less any taxes paid on the sale, to Tammy, his 16-year-old daughter who is a junior in high school. Dale's marginal tax rate is 32%. Tammy has no other gross income and receives more than half of her support from Dale.

a. What advice would you give to Dale?
b. What is the cash savings if Dale follows your advice?

I:5-63 Calvin, whose tax rate is 35% and 15% for ANCG, is considering two alternative investments on January 1, 20Y1. He can purchase $100,000 of 10% bonds due in five years or purchase $100,000 of Hobbes, Inc. common stock. The bonds are issued at par, pay interest annually on December 31, and mature at the end of five years. Interest received can be reinvested at 10%. Assume that he knows with relative certainty that the value of the stock will increase 8% each year (i.e., the value of the Hobbes stock will be $108,000 at the end of 20Y1) and the interest and principal for the bonds will be paid as scheduled. On December 31, 20Y5, he will sell the stock or receive the bond principal plus the last interest payment. Which alternative should Calvin select if he wants to have the greater amount of money as of January 1, 20Y6? Provide supporting information for your answer.

I:5-64 On December 20 of the current year, Winneld has decided to sell all of the stock that she owns and reinvest the proceeds in state of Minnesota bonds. Without considering the sales, her taxable income is expected to exceed $550,000 this year and in future years. Information about the stocks are provided below:

Corporation	*FMV*	*Basis*	*Holding Period*
Viking, Inc.	$190,000	$140,000	7 months
Twins, Inc.	200,000	255,000	4 years
Timberwolves, Inc.	382,000	300,000	3 years

She is willing to sell some of the stock this year and the remaining stock next year if it is more advantageous to spread the sales over two years. Assume that the FMV of the stock will not change during the next 30 days, and ignore the effect of a sale on threshold amounts.

Determine the increase in her income tax for each of the following alternatives (a, b, & c) and advise Winneld, who is single.

a. Sell all stock this year.
b. Sell Twins and Timberwolves this year and Viking in March of next year.
c. Sell Viking and Twins this year and Timberwolves in March of next year.
d. Determine her Medicare tax on net investment income in Part a if she has no investment income before selling all the stock.

I:5-65 Dallas, whose tax rate is 35% and 15% for ANCG, has recognized an STCL of $11,000 and an LTCG of $10,200 due to the sale of stock. In late December, he is considering the sale of an antique chair held for investment that would result in an LTCG of $5,000. If he sells the chair this year, what is the increase in his tax liability as a result of the sale? Ignore the phase out rules.

I:5-66 It is August 20, 2025, and Andy, whose tax rate is 32%, owns stock of Wendys and stock of Dublin. The FMV of each stock is $10,000, and the commission to sell either stock is $15.

Andy has no other sales or exchanges during the year, and he wants to sell either his stock of Wendys or Dublin. His expectation about future price increases is the same for either company. Under what circumstances will it make a difference which stock he sells?

	Basis	*Date of Purchase*
Wendys	$12,800	February 7, 2023
Dublin	12,798	March 8, 2025

TAX FORM/RETURN PREPARATION PROBLEMS

I:5-67 ***Short Tax Form.*** Given the following information for Jane Cole, complete Schedule D of Form 1040 through Part III.

- Stock options, which she purchases on February 14 of the current year for $850, expire on October 1. Basis was reported by the brokerage company to the IRS.
- On July 1, she sells for $4,500 her personal-use automobile acquired on March 31, 2015, for $18,000.
- On August 16, she sells for $3,100 her stock of York Corporation purchased as an investment on February 16, for $1,600. Basis was reported by the brokerage company to the IRS.
- On March 15, she sells for $5,600 an antique ring, a gift from her grandmother on January 10, 2010, when its FMV was $1,600. The ring was purchased by her grandmother on April 2, 1984, for $1,800.
- She has an STCL carryover of $250 from last year.

I:5-68 Spencer Duck (SSN 000-22-1111) is single and his eight-year-old son, Mitch, lives with him nine months of the year in a rented condominium at 321 Hickory Drive in Ames, Iowa. Mitch lives with his mother, Spencer's ex-wife, during the summer months. His mother provides more than half of Mitch's support and Spencer has agreed to allow her to claim Mitch as her dependent. Spencer has a salary of $67,000 and itemized deductions of $4,000. Taxes withheld during the year amount to $5,080. Spencer received a K-1 from a partnership indicating that his share of the partnership STCL is $200. On July 14 of the current year, he sold the following assets:

- Land was sold for $35,000. The land was received as a property settlement on January 10, 2011, when the land's FMV amounted to $30,000. His ex-wife's basis for the land, purchased on January 10, 2003, was $18,600.
- A personal-use computer acquired on March 2 last year for $4,000 was sold for $2,480.
- A membership card for a prestigious country club was sold for $8,500. The card was acquired on October 10, 2005, for $6,000.
- Marketable securities held as an investment were sold for $20,000. The securities were inherited from his uncle, who died on March 10 of the current year when FMV of the securities was $21,000. The uncle purchased the securities on May 10, 1991, for $10,700.

In addition to the above sales, Spencer received a $100 refund of state income taxes paid last year. Spencer used the standard deduction last year to compute his tax liability. He had no transactions involving virtual currency. All of the appropriate 1099 forms were received, but the brokerage company did not provide the basis information. Prepare Form 1040 and Schedule D for the current year.

CASE STUDY PROBLEMS

I:5-69 As a political consultant for an aspiring politician, you have been hired to evaluate the following statements that pertain to capital gains and losses. Evaluate the statement and provide at least a one-paragraph explanation of each statement. As you prepare your answer, consider the fact that the aspiring politician does not have much knowledge about taxation.

a. The tax on capital gains is considered a voluntary tax.

b. High-income taxpayers receive the most benefit from preferential treatment for capital gains.

I:5-70 Your client, Apex Corporation, entered into an agreement with an executive to purchase his personal residence at its current FMV in the event that his employment is terminated by the company during a five-year period. The executive's job was terminated before the end of the five-year period and Apex acquired the house for $500,000. Due to a downturn in the real estate market, a $200,000 loss was incurred by the company upon the resale of the house. The chief financial officer of Apex insists that the loss be characterized as ordinary, based on the *Corn Products* doctrine. Your research into this matter reveals that the weight of authority heavily favors capital loss treatment (i.e., case law based on facts identical to the above issue held that the loss was capital rather than ordinary). You therefore conclude that the client's position does not have a realistic possibility of being sustained administratively or judicially on its merits if challenged by the IRS. What responsibility do you have as a tax practitioner relative to preparing the client's tax return and rendering continuing tax consulting services to the client? (See the Section *Statements on Standards for Tax Services* in Chapter I:1 for a discussion of these issues.)

TAX RESEARCH PROBLEMS

I:5-71 Tom Williams is an equal partner in a partnership with the Kansas Corporation. Williams, an inventor, produced a new process while working for the partnership, which has been patented by the partnership. Before making any use of the patent, the partnership entered into a contract granting all rights to use the process for the life of the patent to the Mason Manufacturing Co.

The time between receiving the patent and entering into the contract with Mason amounted to eight months. Mason agreed to pay 0.3% of all sales revenue generated by products produced as a result of the process. If Mason fails to make payments on a timely basis, Mason's right to use the process is forfeited and the agreement between the partnership and Mason is canceled. Will any of the proceeds collected qualify as LTCG under Sec. 1235?

A partial list of research sources is

- Reg. Sec. 1.1235-2
- *George N. Soffron,* 35 T.C. 787 (1961)

I:5-72 Lynette, a famous basketball player, is considering the possibility of transferring the sole right to use her name to promote basketball shoes produced and sold by the NIK Corporation. NIK will pay $2 million to obtain the right to use Lynette's name for the next 40 years. NIK may use the name on the shoes and as a part of any of the company's advertisements for basketball shoes. If Lynette signs the contract and receives the $2 million payment, will she have to recognize capital gain or ordinary income?

A partial list of research sources is

- Sec. 1221
- Rev. Rul. 65-261, 1965-2 C.B. 281

I:5-73 Jack, a tenured university professor, has been a malcontent for many years at Rockport University. The university has recently offered to pay $200,000 to Jack if he will relinquish his tenure position and resign. Jack is of the opinion that tenure is an intangible capital asset and the $200,000 received for release of the tenure should be a long-term capital gain. Explain why you agree or disagree.

I:5-74 Web Baker was hired three years ago by the Berry Corporation to serve as CEO for the company. As part of his employment contract, the corporation had agreed to purchase his residence at FMV in the event the company decided to fire him. Last year, Berry, unsatisfied with Web's performance, fired him and purchased the residence for $350,000. Berry immediately listed the house with a real estate agency. Soon after the purchase, the real estate market in the area experienced a serious decline, especially in higher-priced homes. Berry sold the house this year for $270,000 and paid selling expenses of $12,000. How should the Berry Corporation treat the $92,000 loss?

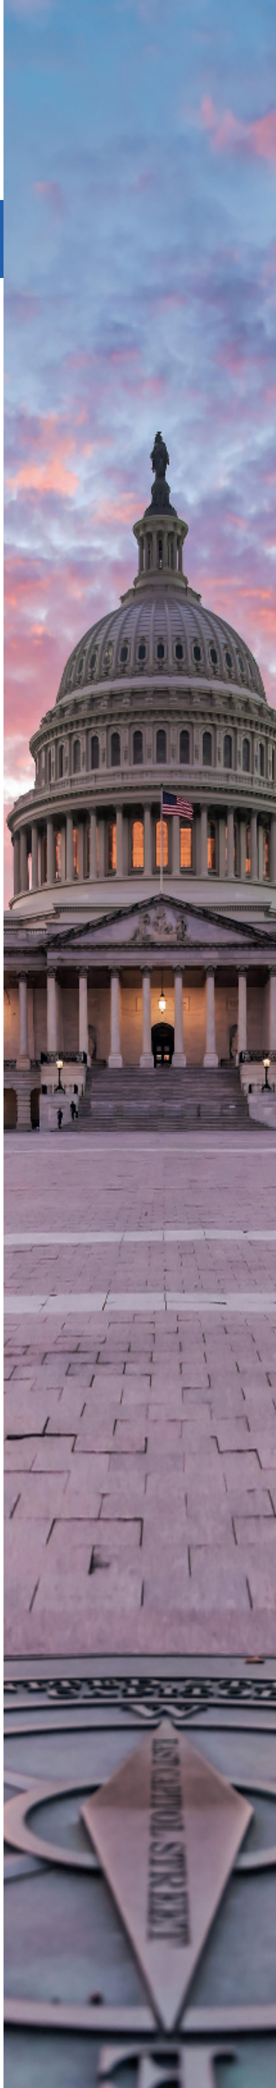
CHAPTER

6

DEDUCTIONS AND LOSSES



LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Distinguish between deductions *for* and *from* AGI
2. Discuss the criteria for deducting business and investment expenses
3. Describe the restrictions for deducting expenses
4. List the substantiation requirements for deducting travel and entertainment expenses
5. Explain the timing of deductions under both the cash and accrual methods of accounting
6. Discuss special disallowance rules for certain deductions
7. Describe tax planning considerations for deductions and losses
8. Describe compliance and procedural considerations for deductions and losses

CHAPTER OUTLINE

Classifying Deductions as For Versus From Adjusted Gross Income (AGI)...6-3
Criteria for Deducting Business and Investment Expenses...6-4
General Restrictions on the Deductibility of Expenses...6-9
Substantiation Requirements...6-18
When an Expense Is Deductible...6-18
Special Disallowance Rules...6-23
Tax Planning Considerations...6-35
Compliance and Procedural Considerations...6-37

The next five chapters address deductions. As you recall from Chapters I:3 and I:4, the IRC uses the "all-inclusive" approach when dealing with items of income; that is, gross income includes all items of income unless the income item is specifically excluded by statute. In contrast, unless the IRC specifically provides a deduction, a taxpayer may not deduct an expenditure or expense. For example, a taxpayer who makes a donation to a charity during the year may deduct the donation only because the IRC specifically allows the deduction of charitable contributions under Sec. 170.

Chapter I:6 discusses the general requirements for the deductibility of taxpayer expenditures and losses. Some of these requirements apply to all taxpayers while others apply only to individuals. Chapter I:7 discusses business expenses and employee compensation. Chapter I:8 deals with itemized deductions for individual taxpayers. Chapter I:9 covers two major areas that apply to all taxpayers: the deductibility of losses and bad debts. Chapter I:10 discusses tax depreciation, amortization, and depletion.

As mentioned above, a taxpayer can only deduct an expenditure if the IRC specifically allows the deduction (legislative grace). However, the IRC cannot possibly specify *every* deductible expense that a taxpayer might incur. Therefore, the IRC contains a framework for analyzing the nature of an expenditure. If the expenditure meets the criteria developed in the framework, the taxpayer generally can deduct the item unless specific disallowance or limitation provisions apply. This framework provides three general categories of deductions:

(1) Expenses incurred in connection with a **trade or business** (Sec. 162);
(2) Expenses incurred by an individual in connection with the **production of income** (Sec. 212);
(3) Other types of expenses that fall within specific provisions of the IRC, such as certain types of interest expense, taxes, bad debts, and other expenditures by individuals for personal items.

The first two categories of deductions (business expenses and production of income expenses) are for expenditures the taxpayer incurs in connection with a profit-motivated activity. Here again, the IRC does not attempt to specify every conceivable type of deductible business or investment expense. Instead, the IRC establishes general guidelines that a taxpayer must meet in order to deduct an expense as either a business or investment deduction. In this case, a taxpayer may deduct any expense incurred in connection with a trade or business or for the production of income if the expense (1) falls within the general guidelines and (2) the tax law does not specifically exclude or limit the expense from deductibility. For example, although the law does not specifically state that a taxpayer can deduct expenditures for utilities that the taxpayer incurs in a profit-motivated business, the taxpayer can deduct these business expenses under Sec. 162 as long as the expenses meet the general guidelines of Sec. 162 and they are not subject to a specifically stated limitation or exclusion from deductibility. These general guidelines are discussed later in this chapter.

Section 212, which applies only to individuals, allows an individual to deduct expenses that the individual incurs for the:

- Production or collection of income
- Management, conservation, or maintenance of property held for the production of income
- Determination, collection, or refund of any tax

As explained later in this chapter, the general guidelines that the taxpayer must meet in order to deduct expenses incurred in both of these two types of activities require that the expenses must be ordinary, necessary, and reasonable in the context of the activity in which they are incurred. Furthermore, if the taxpayer incurs a loss in either of these types of activities, the amount of the deduction may be limited.

Section 262 also provides a general rule that prohibits individuals from deducting personal, living, or family expenses. However, the tax law does allow individuals to deduct certain personal expenditures or losses. For example, an individual taxpayer may deduct losses incurred in a federally declared disaster on personal use assets (subject to certain limitations). Individual taxpayers may deduct personal expenditures for certain types of interest, taxes, and retirement savings if the expenditures meet strict requirements. Chapters I:7, I:8, and I:9 discuss deductions and losses for personal expenditures.

CLASSIFYING DEDUCTIONS AS FOR VERSUS FROM ADJUSTED GROSS INCOME (AGI)

OBJECTIVE 1

Distinguish between deductions for AGI and from AGI

As mentioned in Chapter I:2, the tax formula for individuals divides allowable business, investment, and personal deductions into the following two categories:

- Deductions subtracted from gross income in order to calculate adjusted gross income (*for* AGI deductions); and
- Deductions subtracted from AGI to calculate taxable income (*from* AGI deductions).

Though *from* AGI deductions typically are itemized deductions, a deduction *from* AGI is worth noting: the qualified business income deduction (Sec. 199A). This provision is covered in more detail in Chapter I:2.

In defining adjusted gross income, Sec. 62 specifically identifies deductions *for* AGI. All other deductions for individuals are deductions *from* AGI. The more common *for* AGI deductions include the following, subject to certain limitations.

KEY POINT

Most *for* AGI deductions are either expenses the taxpayer incurs in a trade or business or certain investment activities. Most of the deductible personal expenses are deductible *from* AGI.

ADDITIONAL COMMENT

While reimbursed employee business expenses are listed in Sec. 62 as a deduction for AGI, in cases where the employee needs to account to their employer for the expenses, neither the reimbursement nor the expenses are typically reported on the income tax return. See Chapter I:7.

- All allowable expenses incurred in an individual's trade or business
- Losses from the sale or exchange of trade, business, or investment property
- Expenses attributable to the production of rent or royalty income
- Contributions to certain pension, profit-sharing, or retirement plan arrangements
- Penalties paid to a financial institution because of the early withdrawal of funds from a certificate of deposit or time savings account
- Cash payments made to a qualified Health Savings Account or Archer Medical Savings Account
- Interest paid on qualified education loans (student loan interest)
- Professional fees and out-of-pocket expenses ($300 indexed for inflation) incurred by eligible educators
- One-half of the self-employment tax imposed on self-employed individuals and 100% of health insurance costs paid by such individuals
- Reimbursed employee business expenses
- Certain business expenses incurred by performing artists as well as employees of a state or a political subdivision thereof[1]

Two *for* AGI deductions, broadly allowed before the Tax Cuts and Jobs Act (2017), continue to be allowed under restricted circumstances. The deduction for the amount of alimony paid continues for alimony paid under divorce agreements finalized before 2019. The deduction for moving expenses, after 2017 and through 2025, is limited to taxpayers who are active duty Armed Forces members who move under military orders (Section 217(k)).

For individuals, the distinction between deductions *for* AGI and *from* AGI is critical for two reasons. First, as explained in Chapter I:2, the tax formula allows individuals to deduct the greater of the standard deduction or the total of the *from* AGI (itemized) deductions in arriving at taxable income. Thus, an individual does not benefit from deductions *from* AGI if the total deductible amount for the year does not exceed the standard deduction. Deductions *for* AGI, on the other hand, reduce AGI (and consequently taxable income) even if the taxpayer uses the standard deduction in computing taxable income.

---

[1] Sections 62, 162(l) and 164(f). Other deductions *for* AGI include deductions for depreciation and depletion for life tenants and income beneficiaries of property, reforestation expenses, required repayments of supplemental unemployment compensation benefits, certain expenses incurred for clean-fuel vehicles and refueling property, jury duty pay the taxpayer remits to an employer, attorney's fees the taxpayer pays out of awards in certain types of lawsuits, and certain trade or business expenses incurred by members of an Armed Forces unit.

EXAMPLE I:6-1 ▶ Brad, a single 40-year-old individual with no dependents, incurs $6,000 of deductible expenses and earns $75,000 in gross income during 2025. If the expenses are all deductions from AGI, Brad will report taxable income of $60,400 (i.e., Brad receives a $15,000 standard deduction). Brad receives no direct tax benefit from the expenses because they do not exceed the standard deduction. However, if the $6,000 of expenses are all deductions for AGI, Brad reports taxable income of $54,400 (a $6,000 for AGI deduction in addition to the $14,600 standard deduction).

	Deductions from AGI	*Deductions for AGI*
Gross income	$75,000	$75,000
Minus: For AGI deductions	0	(6,000)
AGI	$75,000	$69,000
Minus: Standard deduction	(15,000)	(15,000)
Taxable income	$60,000	$54,000 ◀

The second important reason for the proper classification of deductions is that AGI acts as a limit on the amount of *from* AGI itemized deductions that can be taken. This limitation operates in various ways as described below.

- Individuals may deduct certain itemized deductions such as medical expenses and certain, casualty losses only to the extent the particular expense exceeds a prescribed percentage of AGI. For example, a taxpayer may deduct medical expenses only to the extent the medical expenses exceed 7.5% of the individual's AGI for the year. Individual taxpayers must first reduce allowable casualty losses on personal-use property by $100 per casualty event. After this reduction, an individual may deduct casualty losses only to the extent that the sum exceeds 10% of the individual's AGI.
- AGI also acts as a limit on the deductibility of certain itemized deductions by placing a limit on the total amount of the deduction. For example, in general the deduction for cash charitable contributions may not exceed 60% of the taxpayer's AGI (through 2025).

Deductions *for* AGI are reported in two places on the tax return. First, some deductions *for* AGI appear on lines 11–24 of Schedule 1 of Form 1040. These deductions include such items as individual retirement account contributions, one-half of self-employment taxes, and student loan interest. Second, other deductions appear on separate schedules, including Schedule C (Profit or Loss from Business), Schedule E (Supplemental Income or Loss), or Schedule F (Profit or Loss from Farming). The net profit or loss from these schedules carries over to the front page of Form 1040 as part of gross income. Thus, the deductions on these schedules are deductions *for* AGI. Figure I:2-1 in Chapter I:2, contains the front page of Form 1040 and Schedule 1.

CRITERIA FOR DEDUCTING BUSINESS AND INVESTMENT EXPENSES

OBJECTIVE 2

Discuss the criteria for deducting business and investment expenses

A taxpayer may deduct business and investment expenses only if certain requirements are met. Under these requirements, deductible business or investment expenses must be:

- Related to a profit-motivated activity of the taxpayer (i.e., a business or investment activity rather than a personal expenditure),
- Ordinary,
- Necessary,
- Reasonable in amount,
- Properly documented (discussed later in the chapter under the heading Proper Substantiation Requirement), and
- An expense of the taxpayer (not someone else's expense).

As discussed later in this chapter under the heading General Restrictions on the Deductibility of Expenses, even if the expense meets the requirements for deductibility above, taxpayers may not deduct expenditures meeting certain other criteria. Thus, generally, a taxpayer cannot deduct an expenditure if it is:

- A capital expenditure,
- An expense related to tax-exempt income,
- Illegal or in violation of public policy, or
- Specifically disallowed by the tax law.

Further discussion of these criteria and related matters follows.

BUSINESS OR INVESTMENT ACTIVITY

Deductible expenditures generally originate from a profit-motivated activity. Section 162 provides all taxpayers with a deduction for their business expenses. Additionally, under Sec. 212, individuals can deduct expenses they incur for the production of income or for the maintenance and conservation of income-producing property (an investment activity). Thus, the requirement of an activity being profit-motivated is really two-pronged: (1) a determination of whether an expenditure originates from an activity engaged in for profit and (2) a distinction between a trade or business and an investment activity.

REAL-WORLD EXAMPLE

A taxpayer attempted to deduct competitive bass fishing costs as a business expense, but the court concluded that there was no profit motive. Although the taxpayer maintained adequate business records, the taxpayer had a history of promptly ending unprofitable business ventures. His unwillingness to cease tournament bass fishing despite continued losses over several years suggested the lack of a profit motive. Moreover, the taxpayer's lifelong love of fishing suggested that the taxpayer engaged in the activity for personal pleasure rather than for profit. *Thomas W. and Pamela A. Hill,* T.C. Summary Opinion 2006-120.

Activity Engaged in for Profit. This first part of the test classifies the expense as resulting from either a profit-motivated activity or a personal activity. For individuals, classifying expenses as either profit-motivated or personal can be quite difficult. For example, is the activity of coin collecting a hobby that is personal in nature, a profit-motivated business, or an investment activity? No single objective test is available. Rather, a tax advisor must examine all the facts and circumstances surrounding the activity in which the taxpayer incurs expenses in order to make this distinction. The section in this chapter entitled Hobby Losses discusses these factors in more detail, as well as other issues dealing with the determination of whether or not a particular activity is profit-motivated.

Trade or Business Versus Investment Classification. The second part of the profit-motive test involves the determination of whether a particular activity is a trade or business of the taxpayer or only an investment. This distinction is important only to individuals since corporations are assumed to be engaged in a business. It is important to individuals for several reasons. First, if an individual realizes a loss on the sale of an asset that the individual used in a business, the individual may be able to deduct the loss as an ordinary loss.[2] On the other hand, if the taxpayer realizes a loss on the sale of an investment asset, the loss is treated as a capital loss, which may face limited deductibility. Second, this distinction may control whether an expense of the activity is a deduction *for* AGI or a deduction *from* AGI. In general, expenses incurred in a trade or business are deductions *for* AGI whereas investment expenses, other than those incurred to produce rents and royalties, are not deductible.[3]

EXAMPLE I:6-2 ▶ Robin is a self-employed financial consultant. She meets daily with a variety of clients to discuss their investments. Because she must keep abreast of the latest market quotes and strategies, Robin subscribes to several trade publications and quote services. Robin may deduct the expenses incurred for the publications and services as deductions for AGI because she incurred them in her consulting business. ◀

---

[2] Under Sec. 1231, the exact treatment depends on the total gains and losses from such property for the year. See Chapter I:13 for a discussion of Sec. 1231.

[3] The Tax Cuts and Jobs Act of 2017 repealed any deductions considered miscellaneous itemized deductions subject to the 2% floor for years 2018–2025.

In contrast, though formerly allowed as deductions from AGI, expenses incurred by an individual in an investment activity, other than those incurred to produce rents and royalties, are not deductible (see Chapter I:8).

EXAMPLE I:6-3 ▶ Steve is a wealthy attorney who invests in the stock market and keeps abreast of the latest market quotes and strategies by subscribing to several trade publications. Steve generally spends an hour or two each day studying this information and analyzing his portfolio. The subscription expenses are not deductible because Steve incurred the expenses in an investment (rather than a business) activity and the expenses do not relate to the production of rents and royalties. ◀

ADDITIONAL COMMENT

A trade or business is an activity with a profit motive and some type of economic activity. An investment activity requires a profit motive but does not require economic activity.

Despite these important differences in treatment, the distinction between an investment activity and a trade or business is not always clear. The IRC and the Treasury Regulations do not provide a precise definition of what constitutes a trade or business. Judicial law, however, does provide some guidelines. In one of the first cases dealing with the issue, the Supreme Court stated that a trade or business involves "holding one's self out to others as engaged in the selling of goods or services."[4]

Later, another Supreme Court case emphasized that one must examine all the surrounding facts and circumstances to determine the underlying nature of an activity.[5] In that case, the taxpayer owned a large portfolio of stocks, bonds, and real estate. The taxpayer's holdings were so large that he rented offices and hired employees to help him manage the properties. The Court, however, regarded these activities as investment activities despite the size of the holdings and the amount of work and effort involved because the taxpayer merely kept records and collected interest and dividends from his securities. Other cases, however, indicate that a taxpayer who invests in stocks and bonds may be considered to be in a business if he or she frequently buys and sells securities in order to make a short-term profit on the daily swings in the market.

Legal and Accounting Fees. Taxpayers may generally deduct legal and accounting fees incurred in the regular conduct of a trade or business or for the production of rent or royalty income. These deductions are *for* AGI. Legal and accounting fees incurred in the determination or collection of taxes are *for* AGI deductions if paid to prepare a taxpayer's Schedule C (Profit or Loss from Business), Part I of Schedule E (Supplemental Income and Loss, which is used to report rental and royalty income), and Schedule F (Farm Income and Expenses).[6] All other legal and accounting fees incurred by an individual are not deductible in years 2018–2025 (see footnote 3). A filled-in Schedule C and copies of Schedule E and Schedule F are provided in Appendix B.

Taxpayers may not deduct legal fees they incur in connection with the purchase of property. Instead, taxpayers must capitalize these expenses by adding them to the cost of the property. Likewise, taxpayers generally may not deduct legal expenses they incur for personal purposes.

EXAMPLE I:6-4 ▶ During the current year, Lia pays legal and accounting fees for the following:

Services rendered with regard to a contract dispute in Lia's business	$ 8,000
Services rendered in resolving a federal tax deficiency relating to Lia's business	2,500
Tax return preparation fees:	
Allocable to preparation of Schedule C	1,600
Allocable to preparation of Schedules A and B and to the remainder of Form 1040	400
Legal fees incident to a divorce	1,200
Total	$13,700

Lia may deduct $12,100 ($8,000 + $2,500 + $1,600) *for* AGI because these legal expenses are associated with Lia's business. Lia may not deduct the remaining $400 of tax preparation fees. The legal fees incident to the divorce are not deductible. ◀

[6] Rev. Rul. 92-29, 1992-1 C.B. 20.

ORDINARY EXPENSE

A business or investment expense must also be an **ordinary expense** in order for a taxpayer to be able to deduct the expense. Neither Sec. 162 nor Sec. 212 provides either a definition or an application of this requirement. The Treasury Regulations under Sec. 212 indicate that for an expense to be ordinary it must be reasonable in amount and it must bear a reasonable and close connection to the income-producing activity or property. Also, case law has held that for an expense to be ordinary it must be customary or usual in the context of a particular industry or business community.[7] Thus, an expenditure may be ordinary in the context of one type of business, but not in the context of another.

EXAMPLE I:6-5 ▶

Ahmed purchases a plot of land, on which there is an old vacant warehouse. In the long run, Ahmed anticipates making a long-term profit from the investment because the value of the land is expected to appreciate eventually due to commercial development in the area. In the short run, Ahmed plans to rent storage space in the warehouse. During the current year (first year of ownership), although he is unable to rent the warehouse, Ahmed incurs the following expenses:

Expenses	*Amount*
Property taxes	$1,000
Interest	4,000
Insurance	800
Utilities	200

All of these expenditures qualify as ordinary deductible rental expenses under Sec. 212 because they bear a reasonable and proximate relationship to the rental income Ahmed expects to obtain. However, Ahmed might not be able to deduct them all in the current year because of the passive loss limitations explained in Chapter I:9. ◀

ADDITIONAL COMMENT

A General Accounting Office report finds that tax cheating is widespread among self-employed taxpayers. These workers represent only 13% of all taxpayers, but account for approximately 40% of all underreported individual income. The report identified truckers as one of the least compliant groups.

EXAMPLE I:6-6 ▶

For many years, Hank has been an officer in Green Corporation, which is engaged in the grain business. Green Corporation purchases its grain from various suppliers. Last year, Green Corporation went bankrupt and was relieved from having to pay off its debts to its suppliers. In the current year, Hank enters into a contract to act as a commissioned agent to purchase grain for Green Corporation. To reestablish a relationship with suppliers whom Hank knew previously, Hank decides to pay off as many of Green Corporation's debts as he can. Hank is under no legal obligation to do so. Hank's payments are not ordinary. Rather, they are extraordinary expenditures made for goodwill to establish Hank in a new trade or business, and they must be capitalized. ◀

An expense may be ordinary with respect to a taxpayer even though that taxpayer encounters it only once.

EXAMPLE I:6-7 ▶

For several years, Health for You, Inc., has been engaged in the business of making and selling dietary supplements. Health for You, Inc., does most of the advertisements, orders, and deliveries of the supplements through the mail. During the current year, the post office judged that some of the advertisements were false. As a result, a fraud order is issued under which the post office stamps "Fraudulent" on all letters addressed to or from Health for You, Inc., and then returns them to the senders. In an unsuccessful suit to prevent the post office from continuing this practice, Health for You, Inc. expends $50,000 in lawyer's fees. These fees are ordinary business expenses because Health For You, Inc. incurred them in an action that a taxpayer normally or ordinarily would have taken under these circumstances. ◀

REAL-WORLD EXAMPLE

A corporation made payments to an individual who was a 50% shareholder in the corporation. The corporation made these payments to the individual to prevent him from interfering in the management of the business and damaging the corporation's reputation. The Tax Court held that these payments were necessary business expenses. *Fairmont Homes, Inc.,* 1983 PH T.C. Memo ¶83,209, 45 TCM 1340.

The Supreme Court has also indicated that the term *ordinary* in this context refers to an expenditure that is currently deductible rather than an expenditure that must be capitalized.[8]

NECESSARY EXPENSE

In addition to being ordinary, a deductible investment or business expense must also be a **necessary expense**. The Supreme Court has indicated that an expense is considered necessary if it is “appropriate and helpful” in the taxpayer’s business.[9] To meet this appropriate or helpful standard, an expenditure need not be necessary in the sense that it is indispensable. Rather, the test is whether a reasonable or prudent businessperson would incur the same expenditure under similar circumstances.

---

[7] *Thomas H. Welch v. Helvering,* 12 AFTR 1456, 3 USTC ¶1164 (USSC, 1933) and *Deputy v. Pierre S. DuPont,* 23 AFTR 808, 40-1 USTC ¶9161 (USSC, 1940).

[8] *CIR v. S. B. Heininger,* 31 AFTR 783, 44-1 USTC ¶9109 (USSC, 1943). See also *CIR v. Walter F. Tellier,* 17 AFTR 2d 633, 66-1 USTC ¶9319 (USSC, 1966).

EXAMPLE I:6-8 ▶ The expenditures in Example I:6-6 (the payment of debts from a former business) and Example I:6-7 (the payment of legal fees) are both necessary because they are appropriate and helpful in each case. However, the expenditure in Example I:6-6 is not ordinary and, therefore, is not deductible. The expenditure in Example I:6-7 is deductible because it meets both tests. ◀

REASONABLE EXPENSE

Section 162 and case law provide that in order to be deductible the business or investment expense must be reasonable.[10] A classic setting in which meeting the reasonable standard may be difficult involves a closely-held C corporation and its payment of a salary to an individual who is both a shareholder and an employee. In this situation, a controlling shareholder of a C corporation may receive a payment characterized as salary that the IRS asserts is too large for the services the individual employee rendered.

EXAMPLE I:6-9 ▶ Central Corporation pays Brian, the controlling shareholder and an employee of Central Corporation, an annual salary of $650,000. Based on several factors, such as the size of Central Corporation’s total operations, Brian’s duties as an employee, and a comparison of salary received by officers of comparably sized corporations, the IRS contends that Brian’s salary should be no higher than $300,000. If Central successfully defends the $650,000 salary, the corporation is able to deduct the full amount as salary expense. If Central Corporation’s defense is not successful, the IRS will treat the excess over $300,000 as a dividend (not deductible) to the extent of Central Corporation’s earnings and profits. In either event, Brian must take the full $650,000 into income. (See the Tax Planning Considerations section in this chapter for a discussion of the use of a payback agreement in these situations.) ◀

KEY POINT

The IRS also applies the reasonable standard in determining whether a salary paid to the owner of an S corporation is too low. This may occur if the owner is attempting to avoid the payment of employment taxes.

KEY POINT

Since the Sec. 162(m) compensation deduction limit applies only to publicly-held corporations, privately-held corporations are faced with the general reasonable standard which looks at the particular facts and circumstances.

The reasonable standard for compensation expense in Section 162(a)(1) was expanded in 1993 with the addition of Sec. 162(m), which limited to $1,000,000, the deduction for compensation paid by public corporations to “covered employees.” The addition of this bright-line standard was linked to public awareness of substantial growth in executive pay in ways not always aligned with observed executive performance.

The Tax Cuts and Jobs Act of 2017 changed provisions in Sec. 162(m) in the following three ways.

- For years after 2017, covered employees include the principal executive officer (CEO), principal financial officer (CFO), and the three officers (other than the CEO and CFO) included in the group of the five highest compensated officers for the tax year.
- Before 2018, the Sec. 162(m) deduction limit did not apply to performance-based compensation. After 2017, the “$1 million limit” is more stringent in that it includes performance-based compensation (Sec. 162(m)(4)).
- After 2018, the definition of “publicly held corporation” is defined to include any corporation a) considered an issuer required to register its securities with the Securities and Exchange Commission or b) required to comply with the reporting requirements imposed by the Securities and Exchange Commission.

The tests for determining whether a business or investment expense is deductible are summarized in Topic Review I:6-1.

EXPENSES AND LOSSES INCURRED DIRECTLY BY THE TAXPAYER

Generally, taxpayers may not take a deduction for a loss or expense of another person. This requirement attempts to prevent taxpayers from engaging in manipulative schemes.

---

[9] *Thomas H. Welch v. Helvering*, 12 AFTR 1456, 3 USTC ¶1164 (USSC, 1933).

[10] *Botany Worsted Mills v. United States*, 49 S. Ct.. 129 (1929).

TOPIC REVIEW I:6-1

Tests for Deductibility as a Business or Investment Expense

TEST	APPLICATION
Ordinary	► Based on the facts and circumstances. ► Reasonable and close relationship to the activity. ► Customary or usual in context of the industry. ► Need not be encountered by the taxpayer more than once.
Necessary	► Based on the facts and circumstances. ► Appropriate and helpful. ► Need not be indispensable. ► Would a reasonable or prudent businessperson incur the same expense?
Reasonable	► Based on the facts and circumstances. ► Applies to all business and investment expenses. ► Compensation paid to an owner-employee of a small corporation is the most commonly contested area. ► Compensation in excess of $1 million payable by a publicly-held corporation to its key executives is not deductible.

EXAMPLE I:6-10 ► Juanita owns 60% of Top Clothes, Inc. As CEO of Top Clothes, Juanita travels extensively. This year Top Clothes purchases a business jet to facilitate Juanita's travel. In addition to her business travel, Juanita also uses the jet to take several family vacations. In general, Top Clothes may not take a deduction for Juanita's personal expenses. In order for the business to deduct these amounts, Juanita and the corporation must follow one of two procedures: (1) Juanita must report as additional compensation an amount that represents the use of the jet for her vacations, or (2) Juanita must reimburse for the use of the jet for her vacations. However, even if Juanita follows one of these procedures, the amount Top Clothes, Inc. may deduct for Juanita's private use of the jet may be limited. ◄

This general rule requiring the taxpayer to directly incur the expense applies to all types of expenditures, whether incurred in a trade or business, an investment activity, or a personal activity for which deductions are allowed. There is one exception: under Sec. 213 taxpayers may take a deduction for medical expenses paid on behalf of a dependent. Individuals may also deduct medical expenses that they pay for a person who would qualify as a dependent except for failing to meet certain other tests (see Chapter I:2). For example, under Sec. 152, the dependent's gross income must be less than the exemption amount to qualify as a qualifying relative, but for Sec. 213 this requirement is disregarded.

EXAMPLE I:6-11 ► In June of last year, Terry Thompson, a newly minted nurse practitioner, accepted a position to work for 24 months as a contractor with a large medical practice in Nashville, TN. The practice requires him to have his own malpractice insurance coverage for the first 60 days, though afterwards, the practice will obtain coverage for Terry with a policy rider on their own malpractice policy. Terry is unable to afford the 60-day premium of $448, and his brother Malcolm paid the premium for him. Terry's Form 1099 reports he earned $39,075 last year working for the medical practice. Because he did not bear the $448 premium cost, Terry cannot deduct the $448 in premiums against the income he earned. ◄

GENERAL RESTRICTIONS ON THE DEDUCTIBILITY OF EXPENSES

OBJECTIVE 3

Describe the restrictions for deducting expenses

As mentioned earlier on page I:6-5, certain types of expenditures are not deductible. These types of expenditures fall within the categories discussed below.

CAPITALIZATION VERSUS EXPENSE DEDUCTION

General Capitalization Requirements. Under Sec. 162 a taxpayer may currently deduct ordinary, necessary, and reasonable business expenses that the taxpayer incurs for the operation and maintenance or repair of tangible property the taxpayer uses in a business. However, under Sec. 263, expenditures that (1) provide a permanent improvement or "betterment" that increases the value of any property, or (2) "restore" the property are considered **capital expenditures**, which generally must be capitalized and deducted over time in the form of depreciation. In addition, taxpayers must capitalize the cost of goodwill purchased in connection with the acquisition of the assets of a going concern.[11] (See Chapter I:10 for a discussion of the amortization of goodwill.)

Although taxpayers may depreciate or amortize certain business assets (buildings, machinery, equipment, furniture and fixtures, purchased goodwill, and customer lists), other assets, such as land, stock, and partnership interests, are neither depreciable nor amortizable. Taxpayers must wait until they sell these assets to recover the cost of the assets. Though these two categories appear distinct, for some cases, it is difficult to ascertain whether an asset is eligible for depreciation or amortization. For example, the Tax Court has held that antique violin bows and an antique bass violin are depreciable property, overriding the IRS's arguments that they should not be depreciable because they were actually appreciating in value and it was impossible to determine their useful life.[12]

As mentioned above, expenditures that only keep an asset in a normal operating condition are deductible as repair expense if they do not provide a permanent improvement that increases the value of the property or restore the property to its normal usage. Distinguishing between a currently deductible expenditure and a capital expenditure can be very difficult. This difficulty has caused a lot of uncertainty and controversy for taxpayers. For example, in an old Tax Court case, the court held that expenditures incurred in replacing support beams and floor joists to shore up a sagging floor were deductible, whereas the court held that the cost of placing a new floor over an old one was a capital expenditure.[13] Regulations under Sec. 162 and Sec. 263 provide more guidance for taxpayers.[14] These regulations contain many examples that can help taxpayers and their advisors distinguish the proper tax treatment of these expenditures. In any event, a tax advisor must examine all of the facts and circumstances in light of the guidance contained in these new regulations to determine whether any particular expenditure constitutes a deductible repair expense or an asset that should be capitalized.

ADDITIONAL COMMENT

Some provisions permit taxpayers to depreciate or amortize capital expenditures over a relatively short period of time. For example, there is a rapid write-off available for pollution control facilities under Sec. 169 and for organization costs of corporations under Sec. 248.

Election to Deduct Currently. Taxpayers may elect a current deduction for certain capital expenditures. Taxpayers often prefer a current deduction over capitalizing and depreciating an asset because of the time value of money. Some expenditures that taxpayers may elect to deduct currently[15] include: cost of fertilizers incurred by farmers, cost of soil and water conservation incurred by farmers, intangible drilling costs incurred in drilling oil and gas wells, costs for tertiary injectants, costs for certain mining development projects, costs incurred to remove architectural and transportation barriers to the handicapped and elderly, and costs of routine maintenance activities on the property that does not improve the asset.

Using Sec. 179 a taxpayer may elect to currently deduct a limited amount of capital expenditures for tangible property the taxpayer purchases to use in a trade or business. Additionally, taxpayers can elect to currently take a "bonus depreciation deduction" for certain qualified property the taxpayer purchases and places into service during the year instead of depreciating the full cost of the property over its depreciable life. This bonus depreciation deduction is phased out between 2023 and 2026. See Chapter I:10 for a discussion of the rules and limitations of these deductions.

BOOK-TO-TAX ACCOUNTING COMPARISON

Although for tax purposes a taxpayer may elect to deduct these capital expenditures, for book purposes capital expenditures must still be capitalized and depreciated or amortized. This difference in treatment gives rise to a book-tax adjustment on Schedule M-1 or M-3 of a corporation's Form 1120 or a partnership's Form 1065.

CIR*, 69 AFTR 2d 92-694, 92-1 USTC ¶50,113 (USSC, 1992), where expenses incurred by a corporation that was the target of a "friendly" takeover were held to be nondeductible capital expenditures because they provided long- term benefits to the corporation. In this case, the Supreme Court held that these long-term benefits do not need to be associated with a specific identifiable asset.

[13] *Standard Fruit Product Co.*, 8 TCM 733 (1949).

[14] Reg. Sec. 1.162-4 and Reg. Sec. 1.263(a).

[15] See Secs. 180, 175, 263(c), 193, 616, 190, and 174, respectively.

Capitalization of Deduction Items. The exceptions mentioned above provide a current deduction for expenditures that are normally capital in nature. Conversely, Section 266 provides for the capitalization of certain expenses that are normally deductible. Section 266 is elective and applies to the following items:

- Interest and employment taxes incurred in transporting and installing personalty (as opposed to realty) up to the time when the taxpayer first puts the property into use.
- Annual property taxes, interest on a mortgage, and other carrying charges incurred on unimproved and unproductive real estate.
- Annual property taxes, interest, employment taxes, and other necessary expenses incurred for the development, improvement, or construction of real property, prior to the time construction is completed. For these expenses to be capitalized, the real property may be either improved or unimproved, productive or unproductive. After construction is completed, these types of expenses must be deducted when incurred.

A taxpayer may make a new election each year to capitalize the expenses on unimproved and unproductive real estate each year.

EXAMPLE I:6-12 ▶ Over the last two years, Nancy paid property taxes of $5,000 on a plot of land. Last year, the land was vacant and unproductive. In 2025, Nancy uses the land as a parking lot, generating $7,000 in income. Nancy can elect to capitalize the taxes paid last year because the property is both unimproved and unproductive. In 2025, however, the land is productive, and Nancy cannot elect to capitalize the taxes. Because the expenses relate to the production of rental income, Nancy can deduct them *for* AGI. ◀

For the development or construction of real property, if the taxpayer makes the election to capitalize the other expenses incurred during the development or construction period, the election remains in effect until the end of the construction period. However, a taxpayer may make the election on each new project separately.

EXAMPLE I:6-13 ▶ During the current year, Development, Inc. begins construction of an office building and a hotel. Development, Inc. incurs $20,000 in property taxes during the construction of the office building and $12,000 for the hotel. An election to capitalize the taxes on the office building does not bind Development, Inc. to make the same election with respect to the taxes on the hotel. ◀

If a taxpayer elects for a given property to capitalize this type of expense under Sec. 266, the expense increases the taxpayer's basis in the property. If the property is depreciable, the taxpayer may deduct the expenses as depreciation deductions over the asset's useful life. Taxpayers would want to make this election if they have large net operating loss (NOL) carryovers, or if they expect to be in a significantly higher tax bracket in future years and thus estimate that the benefit of the deduction will be greater in the future.

Under Sec. 263A, certain taxpayers must capitalize certain costs into inventory instead of taking a current deduction. (See Chapter I:11 for a discussion of inventories.)

SELF-STUDY QUESTION

Alpha, Inc., borrows $100,000 at a 10% rate of interest and invests the $100,000 in exempt bonds yielding 8%. Alpha is in the 21% tax bracket. Calculate what Alpha's cash flow on these transactions would be on an after-tax basis if Alpha could deduct these expenses.

ANSWER

Alpha, Inc., has $8,000 of exempt income and $10,000 of interest expense. Cash flows would be equal to ($2,000) since there is no tax benefit for the interest. If the interest expense were deductible, its after-tax cost would be $7,900 ($10,000 – $2,100). Alpha's cash flow would be $100 ($8,000 – $7,900), allowing Alpha to make money on an unsound investment.

EXPENSES RELATED TO EXEMPT INCOME

Under Sec. 265, taxpayers may not deduct any expense allocated or related to tax-exempt income. The purpose of this disallowance is to prevent the taxpayer from receiving a double tax benefit.

The IRC specifically disallows interest expense on debt the taxpayer incurs in order to purchase or hold tax-exempt securities. Thus, the disallowance depends on the taxpayer's intended use of the loan proceeds. Intent is generally determined by an examination of all the facts and circumstances surrounding the transaction rather than a mere statement of intent. Intent to hold tax-exempt securities is shown if the tax-exempt securities are used as collateral in securing a loan.[16] If an individual who holds tax-exempt securities later incurs some debt, no disallowance will occur if the debt is incurred to finance items for which an interest deduction may be taken (e.g., a mortgage on a personal residence). However, if a taxpayer incurs the debt to finance an investment, a deduction for a portion of the interest is generally disallowed. Even though the debt is not incurred to hold tax-exempt securities, the deductibility of interest may still be limited. For example, if a taxpayer incurs interest on personal debt, this interest is not deductible unless the loan qualifies as home acquisition indebtedness. (See Chapter I:8 for a discussion of limitations on the deductibility of personal interest.)

---

[16] Rev. Proc. 72-18, 1972-1 C.B. 740 and Rev. Proc. 87-53, 1987-2 C.B. 669. See also *Wisconsin Cheeseman, Inc. v. U.S.*, 21 AFTR 2d 383, 68-1 USTC ¶9145 (7th Cir., 1968).

EXAMPLE I:6-14 ▶

Asian, Inc. has invested $80,000 in Gold Corporation stock, $120,000 in real estate, and $50,000 in tax-exempt municipal bonds. During the current year, Asian borrows $70,000 for the purpose of investing in a limited partnership. For the year, the company pays $6,000 interest on the loan. Under these circumstances, the IRS will presume that Asian, Inc. has incurred a portion of the debt in order to hold the tax-exempt securities and will disallow a portion of the deduction for interest expense. Asian may overcome that presumption if it can show that it could not have sold the tax-exempt securities. Merely showing that the sale of the bonds would result in a loss will not overcome this presumption. ◀

BOOK-TO-TAX ACCOUNTING COMPARISON

For a corporation, tax-exempt income and related expenses are included in the calculation of net income. For tax purposes, they are excluded from gross income resulting in a permanent book-tax difference that must be reported on schedule M-1 or M-3.

REAL-WORLD EXAMPLE

A subcontractor involved with the construction of a new shopping mall made kickbacks to the supervisor of the primary contractor. The kickbacks were deductible because they were not illegal, and the kickbacks were also ordinary and necessary because the subcontractor would not have been able to continue to work if the kickbacks had not been made. *Raymond Bertolini Trucking Co. v. CIR,* 54 AFTR 2d 84-5413, 1984-2 USTC ¶9591 (6th Cir., 1984).

EXPENDITURES CONTRARY TO PUBLIC POLICY

Taxpayers may not deduct certain expenditures, if the payment itself is illegal or if the payment is a penalty or fine resulting from an illegal act. These nondeductible expenses generally fall within one of the following categories: illegal payments to government officials or employees; other illegal payments; kickbacks, rebates, and bribes under Medicare and Medicaid; payments of fines and penalties; and payment of treble damages under the federal antitrust laws.

Bribes and Kickbacks. Under Sec. 162(c)(1), any illegal bribe or kickback payment to any official or employee of a government is not deductible. This applies to payments made to federal, state, local, and foreign government officials and employees; and officials and employees of an agency of a government.

EXAMPLE I:6-15 ▶

During February of the current year, Road Corporation enters into a contract with the State of Iowa to construct a five-mile stretch of a new highway. Under the terms of the contract, Road Corporation must complete the project by October 22 of the current year. If it is not completed and accepted by Iowa on or before that date, Iowa will fine Road Corporation $5,000 per day for every day after October 22 until the project is accepted. By October 20, the project foreman realizes that the company will not make the deadline if it complies with all the requirements imposed by the state inspector assigned to the project. To avoid the fine, the foreman arranges for the inspector to "look the other way" on several of the requirements in exchange for a payment of $8,000. Because this payment constitutes an illegal bribe to a state government official, the payment is not deductible. On the other hand, assume Road Corporation does not pay the bribe and that it finishes the project four days after the deadline. In this case, Road Corporation must pay $20,000 in fines. These fines are not imposed because of an illegal act. Thus, Road Corporation can deduct the $20,000 as an ordinary and necessary business expense. ◀

Taxpayers may not deduct illegal payments to officials or employees of a foreign government if the payment is unlawful under the Foreign Corrupt Practices Act of 1977, unless such payments constitute a normal way of doing business in that country. In all cases, the burden rests on the government to prove the illegality of the payment.

If a taxpayer makes illegal bribes, kickbacks, and other illegal payments to people other than a government official or employee, the payments are nondeductible if they are illegal under a federal law that subjects the payor to a criminal penalty or loss of the privilege of doing business. In addition, illegal payments under a state law imposing the same penalties are nondeductible, but only if the state generally enforces its law. Here, the definition of a kickback includes a payment for referring a client, patient, or customer.

ETHICAL POINT

A CPA discovers that a client included fines and penalties in a miscellaneous expense section of a previously filed tax return. The CPA should recommend the filing of an amended return. However, the CPA is not obligated to inform the IRS, and the CPA may not do so without the client's permission, except where required by law.

The courts and the IRS have made a distinction between a nondeductible illegal kickback and a rebate on the purchase of an item. If the seller pays a rebate directly to the purchaser, it is an adjustment to the selling price and, as such, is an *exclusion* (rather than a deduction) from gross income.[17] The distinction between the two payments seems to be that the seller and purchaser negotiate the rebate as part of the selling price.

Section 162(c)(3) specifically disallows a deduction for any kickback, rebate, or bribe under Medicare and Medicaid. Disallowed amounts include payments made by physicians or by suppliers and providers of goods and services who receive payment under the Social Security Act or a federally funded state plan. Unlike payments to foreign government or nongovernment employees and officials, these payments need not be illegal under federal or state law.

STOP & THINK

Question: Queen, Inc., is engaged in the ship and boat repair business. Since competition in this industry is intense, Queen generally kicks back approximately 10% of any repair bill to any ship captain who brings the ship to Queen for repairs. Queen's customers include individual owners of large ocean-going yachts and fishing boats and government vessels owned by state, federal, and foreign governments. During the current year, Queen paid $80,000 in kickbacks to the captains of privately-owned yachts and boats, $40,000 to the owners of privately-owned commercial ships, and $100,000 to the captains of state, federal, and foreign government vessels. The crews of these government vessels are government employees. What is the proper tax treatment of these payments?

Solution: The $80,000 in kickbacks paid directly to the owners of the privately-owned yachts and boats and the $40,000 in kickbacks paid to private owners of commercial ships are treated as merely a rebate in the price of the services and reduce Queen's gross income, unless the payments could result in the imposition of a criminal penalty or loss of the privilege of doing business. The kickbacks paid to the captains of the state and federal vessels are not deductible because they are paid to employees of state and federal governments. Any portion of the $100,000 paid to the captains of the foreign vessels is not deductible if the payments are unlawful under the Foreign Corrupt Practices Act.

BOOK-TO-TAX ACCOUNTING COMPARISON

In the financial statements of a corporation, fines and penalties are reported as operating expenses in calculating book net income. Because these items are not tax deductible, the result is a permanent book-tax difference.

Fines and Penalties. Section 162(f) of the IRC also disallows a deduction for the payment of any fine or penalty paid to a government because of the violation of a law. Sec. 162(f) specifically includes as nondeductible fines and penalties amounts paid to or at the direction of a government or governmental entity because of a law violation or investigation into law violation. Fines and penalties include payments to nongovernmental entities that have regulatory powers or that perform an essential government function. Finally, payments made as a result of a suit or agreement must be reported by the controlling employee with the total amount segregated into any amount paid for restitution and any amount paid to become compliant with the law.

Specifically excluded (allowed as deduction) are payments made as restriction for damages, made to become complaint with the law violated, ordered by a court in a setting in which the government is not a party, and payments otherwise considered deduction as taxes. Furthermore, the IRC disallows a deduction for two-thirds of any payment the taxpayer makes for damages resulting from a conviction (or a guilty or no-contest plea) in an action regarding a criminal violation of the federal antitrust laws.[18]

While settlement payments to avoid litigation are deductible if related to the taxpayer's business, Sec. 162(q) prohibits deduction of payments or settlements (including associated legal fees) if subject to nondisclosure and based on sexual harassment or sexual abuse.

---

[17] Rev. Rul. 82-149, 1982-2 C.B. 56.

[18] Sec. 162(g).

EXAMPLE I:6-16 ▶ During the current year, the United States files criminal and civil actions against Allen, the president of Able Corporation, and Betty, the president of Bell Corporation, for conspiring to fix and maintain prices of electrical transformers. Both Allen and Betty enter pleas of no contest, and the appropriate judgments are entered. Subsequent to this action, Circle Corporation sues both Able and Bell Corporations for treble damages of $3,000,000. In settlement, Able and Bell Corporations each pay Circle Corporation $750,000. For these damage settlements, Able and Bell Corporations may each deduct $250,000 ($500,000 or $\frac{2}{3}$ × $750,000 is disallowed). ◀

Expenses Relating to an Illegal Activity. Interestingly, although the payment of an illegal bribe or kickback and the payment of a fine or penalty as the result of an illegal act are both nondeductible, other expenses incurred in an illegal business activity are generally deductible if they are ordinary, necessary, and reasonable and the taxpayer reports the income from the illegal activity.[19]

EXAMPLE I:6-17 ▶ Acme, Inc., owns and operates a small financial services business involved in the sale of securities and the lending of money. Acme often sells securities to customers in other states. However, because Acme has not registered the business with the appropriate state or federal authorities, the operation of the business is illegal. During the current year, Acme incurs the following expenses:

Interest	$ 20,000
Salaries	140,000
Depreciation	7,000
Printing	5,000
Bribe to employee of state securities commission	12,000
Total	$184,000

If Acme reports the income from this activity, the deductible expenses for the year total $172,000. The illegal bribe paid of $12,000 to the government employee is not deductible. ◀

REAL-WORLD EXAMPLE

Though more than one-half of U.S. states have laws allowing legal use of marijuana, its use remains prohibited under U.S. federal law. To date, the IRS position that Section 280E applies to cannabis business has been upheld in case law.

One exception to this general rule exists. Section 280E disallows a deduction for expenses (other than cost of goods sold) incurred in an illegal business of trafficking or dealing in drugs.

OTHER EXPENDITURES SPECIFICALLY DISALLOWED

The IRC also specifically disallows deductions for certain other expenses, even though they might meet all the requirements mentioned previously. These include political contributions and lobbying expenses and, in certain situations, business start-up expenses.

Political Contributions and Lobbying Expenses. Political contributions and lobbying expenses constitute one general category of disallowed expenses. Taxpayers may not deduct expenditures made in connection with the following:

- Influencing legislation
- Participating or intervening in any political campaign of any candidate for public office
- Attempting to influence the general public with respect to elections, legislative matters, or referendums
- Communicating directly with the President, Vice President, and certain other federal employees and officials

Sec. 162(e) also denies a deduction for contributions to tax-exempt organizations that carry on lobbying activities if a principal purpose of the contribution is to obtain a deduction for what otherwise would have been disallowed. Furthermore, the IRC disallows payments made for advertising in a convention or any other program if any part of the proceeds of the publication will directly or indirectly benefit a specific political party or candidate.[20]

For administrative convenience, the deduction disallowance does not apply to any in-house expenditure attributable to such activities as long as the total of such expenditures for the taxable year does not exceed $2,000. If total in-house expenditures exceed $2,000, the entire amount is disallowed. Sec. 162(e)(3) specifies that in-house expenditures include amounts incurred to influence legislation via communication with a legislator or government official (or employee of either if employee may participate in legislative efforts). In-house expenditures are expenses incurred directly by the taxpayer and do not include amounts paid to a professional lobbyist or dues that are allocable to lobbying. Additionally, the deduction disallowance does not apply to taxpayers engaged in the business of lobbying.

---

[19] *CIR v. Neil Sullivan, et al.*, 1 AFTR 2d 1158, 58-1 USTC ¶9368 (USSC, 1958).

[20] Sec. 276(a). Nondeductible political contributions also include payments for admission to a dinner or program where the proceeds will benefit a party or candidate, or admission to an inaugural ball, party, or concert if the activity is identified with a political party or candidate.

EXAMPLE I:6-18 ▶ Kensey & Associates is a large New York law firm. It is not in the lobbying business. During the year, the firm spends $6,000 to send some of its employees to Washington, D.C., to testify before a Congressional subcommittee with regard to proposed changes in the Social Security taxes imposed on employers. Such changes directly affect the firm's business because they affect the amount of taxes it must pay on behalf of its employees. The firm's ordinary and necessary expenses incurred with respect to the trip are not deductible because the expenses were incurred to influence legislation and they exceed the $2,000 de minimis exception. ◀

Business Interest Expense Limitation. In general, business interest expense is allowed as a deduction for AGI. However, Sec. 163(j) limits this deduction.[21] The deduction cannot exceed the following:

1. business interest income, plus
2. 30% of adjusted taxable income (must not be negative).

Adjusted taxable income is measured as taxable income excluding:

- business interest income,
- business interest expense,
- nonbusiness income and gains,
- nonbusiness deductions and losses, and
- net operating losses.[22]

Business interest expense disallowed by this limit is carried forward (indefinitely). In the next tax year, the disallowed amount is treated as if an expense in that tax year.

Notably, this limit does not apply to small businesses as determined by the gross receipts test (Sec. 448(c) average annual gross receipts do not exceed $48,000,000 for the prior 3 year period).

EXAMPLE I:6-19 ▶ Robin Martin operates a successful business in which he works as an energy property developer. In the three preceding years, average gross receipts for this business were $28,000,000.

- For 2023, Robin Martin reported net business profit of $21,000, including a deduction for interest expense of $29,000 and depreciation expense of $5,000. The adjusted taxable income amount equals $50,000 ($21,000 + $29,000). The interest expense deduction is limited to $15,000 ($50,000 × 30%), so $14,000 of the year's interest expense is disallowed but may be carried forward.
- His 2024 net taxable profit from this business equals $58,000, including deductions for $39,000 of interest expense on a business loan and $8,000 of depreciation expense. Robin's adjusted taxable income equals $97,000 ($58,000 + $39,000). The interest expense deduction is limited to $29,100 ($97,000 × 30%), with the excess $9,900 of disallowed interest expense carried forward. ◀

Business Startup Costs. Generally, business start-up expenses are capitalized and not deducted. However, unless the taxpayer chooses to avoid it, an election [Sec. 195(b)] allows a current deduction for business start-up expenditures in the year in which the business starts. The deduction consists of two parts. First, in the year the business starts, up to $5,000 of start-up costs may be deducted immediately. However, if total start-up costs exceed $50,000, the $5,000 immediate deduction is reduced dollar for dollar. Second, costs in excess of the immediately deducted amount must be capitalized and amortized over a period of 180 months starting with the month in which the new business begins. Start-up costs specifically include three types of expenditures:

- *Business investigation expenses.* These expenses are costs a taxpayer incurs in reviewing and analyzing a prospective business before deciding whether to acquire or create it. The key here is that the taxpayer incurs the expenses before making a decision. These expenses include such items as analyses and surveys of markets, traffic patterns, products, labor supplies, and distribution facilities.

---

[21] This limitation does not apply to floor plan financing interest expense (Sec. 163(j)(1)(C)).

[22] Before 2022, deductions for cost recovery were excluded from adjusted taxable income.

ADDITIONAL COMMENT

Costs incurred in connection with the issuance of stock or securities do not qualify as start-up costs. These costs are capitalized as Paid-in Capital.

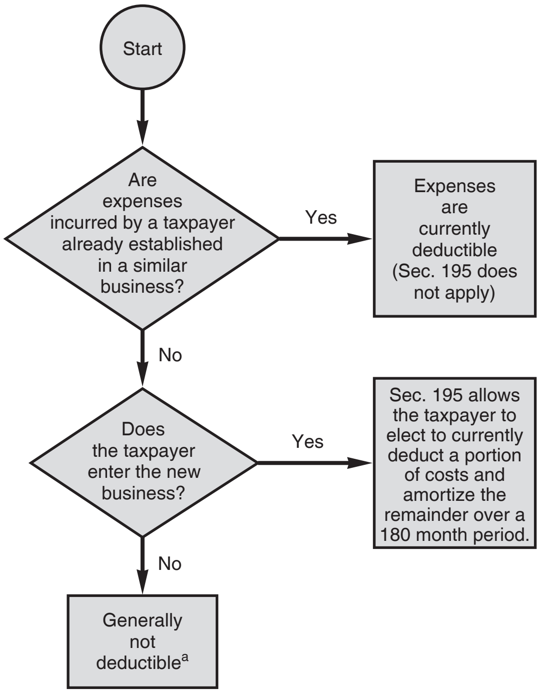
- *Preopening or start-up costs.* Preopening or start-up costs are expenses incurred after a taxpayer decides to acquire or create a business but before the business activity itself has started. These costs include expenditures for training employees; advertising; securing supplies, distributors, and potential customers; and professional services in setting up the business' books and records. These costs must be incurred by a taxpayer not engaged in any existing business or engaged in a business unrelated to the business the taxpayer is acquiring or creating.
- *Expenses incurred in connection with an investment activity.* These expenses are costs the taxpayer incurs in connection with an investment activity that the taxpayer anticipates will become an active trade or business.

STOP & THINK

Question: Jerri F. Martin owns four gasoline filling stations in a rural part of Alabama. Each station stocks snacks and sodas in machines in the small lobby (inside) near the restroom doors. In January 2025, because the vending machines often sell out in just a few days and the lack of a convenience store or grocery within 20 miles, Jerri began investigating what would be involved in expanding the stations to stock basic groceries and household supplies. After thorough study, Jerri decides to include in each station an area to serve as a shopping area for basic groceries. His cost to investigate the business totals $35,000, costs incurred to get the business ready to open (other than the equipment and building expansion) total $17,600. By June all four gas stations are operating an adjacent/connected small grocery store. What is the proper tax treatment for the costs incurred?

Solution: The $35,000 of investigation expenses and $17,600 of start-up costs both are eligible for the election under Sec. 195 to be deductible. The total, $52,600, exceeds $50,000 and means that only $2,400 of the costs are immediately deductible. The remaining $50,200 is amortized over 180 months. The 2025 deduction allowed equals $4,352 ($2,400 + 7 months × ($50,200/180 months)).

As defined by Sec. 195, start-up expenditures do not include these same types of expenses when incurred by a taxpayer already engaged in a business similar to the new one being created or acquired. In this case, the taxpayer may deduct these expenditures currently because the expenses originate in the taxpayer's existing business. Figure I:6-1 provides a flowchart to assist in properly classifying these types of expenditures.



Start
Are expenses incurred by a taxpayer already established in a similar business?
Yes
Expenses are currently deductible (Sec. 195 does not apply)
No
Does the taxpayer enter the new business?
Yes
Sec. 195 allows the taxpayer to elect to currently deduct a portion of costs and amortize the remainder over a 180 month period.
No
Generally not deductible[a]

[a] Rev. Rul. 57-418, 1957-2 C.B. 143 and Rev. Rul. 77-254, 1977-2 C.B. 63; *Morton Frank*, 20 T.C. 511 (1953).

FIGURE I:6-1 ▶ Deductibility of Business Investigation and Start-Up Costs

STOP & THINK

Question: Shauna works in an automobile manufacturing plant in Detroit, Michigan. In January of the current year, she took a two-week vacation to travel to Orlando, Florida. While in Orlando, she spent some time investigating the possibility of opening a store in nearby Coco Beach. In total, she spent $800 on airfare, $1,500 on hotels and food, $300 on equipment rentals, and $300 on a car rental. In addition to spending time on the beach talking to people and checking out the rental equipment, she also spent some time talking to shop owners and real estate agents. After some analysis, however, Shauna decides to keep her job in Detroit. What is the proper tax treatment for these expenditures?

Solution: In general, Sec. 162 of the IRC allows a deduction for expenses incurred in a business. Expenses incurred before the business starts are not incurred in a business and thus are not deductible under Sec. 162. However, under Sec. 195 expenditures such as business investigation expenses and start-up costs can be deducted, beginning with the month in which the new business begins. Unfortunately Shauna did not open the new business. Thus, she may not deduct or amortize any of these expenses.

Business Meals and Entertainment Expenses. The cost of business meals (food and beverages) is generally allowable as a deduction provided the three standards below are met (Sec. 274(k)(1) and Reg. Sec. 1.274-12).

1. The expenses are reasonable in amount (not extravagant);
2. The taxpayer (or taxpayer's employee) was present when the meal is provided; and
3. The meal is for the taxpayer and/or the taxpayer's business associates.

Sec. 274(n) provides the general rule that only 50% of the cost of business meals is deductible. As an exception, for business meal costs incurred in 2020 and 2021, the 50% limit did not apply if the meal was provided by a restaurant.

Though exceptions exist, in general, the cost of entertainment is not allowed as a deduction (Sec. 274(a)).

Topic Review I:6-2 summarizes the restrictions on the deductibility of these items.

TOPIC REVIEW I:6-2

Restrictions on the Deductibility of Expense Items

ITEM	RESTRICTIONS IMPOSED
1. Capital expenditures	The general rule is that the expenditure is not currently deductible if its life extends beyond the end of the year. Special elections are available to currently deduct certain capital expenditures (e.g., business start-up costs under Sec. 195; and limited amounts per year for acquisitions of tangible personal property used in a trade or business under Sec. 179).
2. Carrying charges	An election may be made under Sec. 266 to capitalize certain expenses that are normally deductible such as property and employment taxes, interest, and carrying charges on unimproved unproductive real estate.
3. Expenses related to tax-exempt income	Expenses such as interest incurred on debt used to purchase or carry tax-exempt securities are disallowed under Sec. 265.
4. Expenditures contrary to public policy	These expenditures are generally not deductible. Examples include bribes and kickbacks, fines and penalties, and expenses of an illegal activity involved with trafficking or dealing in drugs.
5. Political contributions and lobby expenses	These items are not deductible (e.g., costs of influencing public opinion), but there exists a convenience exception where in-house expenses do not exceed $2,000.
6. Business start-up costs	The following rules apply: a. Currently deductible if the taxpayer is already engaged in a similar business. b. Not deductible if the taxpayer is not currently engaged in a similar business and does not enter the new business. c. If the taxpayer enters the new business, a current deduction is allowed for the lesser of the amount of the expenses or $5,000 (reduced by amounts incurred over $50,000) with the remainder to be capitalized and amortized over a 180 month period. d. Deductible if expenditures constitute specific items such as legal expenses incurred in drafting purchase documents in an unsuccessful attempt to acquire a specific business. However, general investigation expenditures in search of a new business are not deductible.
7. Business meals and entertainment expenses	a. 50% of business meals cost is deductible if the three standards are met. b. None of business entertainment costs is deductible.

SUBSTANTIATION REQUIREMENTS

OBJECTIVE 4

List the substantiation requirements for deducting travel and entertainment expenses

Generally, the burden of proving the existence of a deduction or loss falls on the taxpayer. Thus, a taxpayer must properly substantiate all deductible expenses. Because the IRS may request proof, taxpayers should retain items such as receipts, cancelled checks, and paid bills. Occasionally, the courts will allow a deduction that is not properly substantiated by the taxpayer if an expenditure clearly has been made. In these cases, the court estimates the amount of the deduction based on all the facts and circumstances. This procedure is known as the *Cohan* rule and derives its name from a court case in which the judge allowed a deduction for an estimated amount of certain expenses.[23] The most prudent course of action, of course, is to retain proper documentation rather than to rely upon the *Cohan* rule.

EXAMPLE I:6-20 ▶ In April of the current year, Terry took his tax records to a CPA to have his prior year's income tax return prepared. As part of the return, the CPA attached a supplemental schedule listing all of Terry's items of income and expense. After the return was prepared and filed, Terry's records were stolen. Upon audit two years later, the IRS disallowed Terry's deductions because he had no records to substantiate the expenses. When the case was litigated, the court allowed deductions for an estimated amount of expenses under the *Cohan* rule because of the list that was attached to Terry's return and because the court believed that Terry had testified honestly in his own behalf.[24] ◀

HISTORICAL NOTE

Judge Learned Hand, in permitting a deduction for unsubstantiated amounts in *George M. Cohan v. CIR,* 8 AFTR 10552, 2 USTC ¶489 (2nd Cir, 1930), wrote "absolute certainty in such matters is usually impossible and it is not necessary; the Board should make as close an approximation as it can, bearing heavily if it chooses on the taxpayer whose inexactitude is of his own making."

Sections 274 and 280F provide specific and more stringent recordkeeping requirements for travel, entertainment, business gifts, computers, and vehicles used for transportation. In these cases, the taxpayer may not take a deduction unless the taxpayer substantiates the expenditure by either an adequate record or sufficient evidence that corroborates the taxpayer's statement. This substantiation may take the form of account books, diaries, logs, receipts and paid bills, trip sheets, expense reports, and statements of witnesses. The information that requires substantiation includes the following:

- Amount of the expense
- Time and place of the travel or entertainment
- Date and description of the gift
- Business purpose of the expenditure
- Business relationship to the taxpayer of the person entertained or of the person who received the gift

The *Cohan* rule does not apply to these types of expenses. (See Chapter I:7 for a more complete discussion regarding the deductibility of these types of expenses.)

WHEN AN EXPENSE IS DEDUCTIBLE

OBJECTIVE 5

Explain the timing of deductions under both the cash and accrual methods of accounting

Because the tax law generally requires calculating taxable income annually, the question of when a particular expense is deductible is especially important. The answer to this question largely depends on the taxpayer's method of accounting.[25] The most common methods include the following:

- Cash receipts and disbursements method (cash method)
- Accrual method
- Hybrid method (a combination of the cash and accrual methods where some items are accounted for on the cash method and other items are accounted for on the accrual method)

---

[23] *George M. Cohan v. CIR,* 8 AFTR 10552, 2 USTC ¶489 (2nd Cir., 1930). Interestingly, the *Cohan* case dealt with travel and entertainment expenses. Because of the subsequent enactment of Sec. 274(d), the *Cohan* rule may not be used to deduct entertainment expenses. It is still effective for other types of expenses.

[24] *Layard M. White,* 1980 PH T.C. Memo ¶80,582, 41 TCM 671.

[25] Methods of accounting as they relate to the reporting of income are discussed in Chapter I:3. Methods of accounting as they relate to deductibility of expenses and losses are covered in this chapter. For an overall discussion of accounting methods, see Chapter I:11.

ADDITIONAL COMMENT

Section 446(b) provides that in cases where no method of accounting has been regularly used or if the method used does not clearly reflect income, then the computation of taxable income is to be made under a method that, in the opinion of the IRS, does clearly reflect income.

Taxpayers normally use the same method for computing taxable income that they use in keeping their financial accounting records. However, except for the use of the last-in, first-out (LIFO) method of accounting for inventory, the tax law does not generally require conformity. For example, many companies use the straight-line depreciation method for financial accounting purposes and the modified accelerated cost recovery system (MACRS) for tax purposes. This difference in depreciation methods typically results in a temporary book-tax adjustment in the reconciliation of book income to taxable income.

CASH METHOD

Under the **cash method** of accounting, expenses are generally deductible when actually paid. The cash method considers payment by check equivalent to a cash payment as long as the bank subsequently honors the check. This is the case even if the payee receives the check so late on the last day of the year that the payee could not have cashed it.[26] If the taxpayer mails the check near the end of the year, the taxpayer must have evidence that the mailing took place in the year for which the taxpayer claims a deduction. Furthermore, the cash method treats payment by credit card as a cash payment at the time of the charge rather than at the time the taxpayer pays the credit card bill.

A mere promise to pay, or the issuance of a note payable, does not constitute a payment under the cash method. Thus, a charge on an open account with a creditor is not deductible until an actual payment of cash satisfies the charge.

EXAMPLE I:6-21 ▶ Fox, Inc., a calendar-year taxpayer, is in the plumbing repair business. The business uses the cash method of accounting. Under an arrangement with one of its suppliers, Fox and its employees can pick up supplies at any time during the month by merely signing for them. At the end of the month, the supplier sends Fox a bill for the charges. Fox always pays the bill in full during the following month. In December of the current year, Fox employees charge $1,500 for supplies. During the same month, Fox purchased a plumbing fixture for $250 from another supplier. Fox uses its charge card at the time of purchase. Fox may deduct the $250 during the current year. However, the $1,500 charged on the open account is deductible when paid in the following year. ◀

Prepaid Expenses. In general, a capital expenditure or the prepayment of expenses by a cash method taxpayer does not result in a current deduction if the expenditure creates an asset with a useful life that extends substantially beyond the close of the tax year. This can occur when a taxpayer makes expenditures for prepaid rent, services, or interest. However, in the case of prepaid rent, a circuit court of appeals decision has held that a taxpayer may take a current deduction for the entire amount of an expenditure if the period covered by the prepayment does not exceed one year and the rent agreement obligates the taxpayer to make the prepayment.[27] This one year rule also applies to other prepaid expenses (insurance).

EXAMPLE I:6-22 ▶ On November 1 of the current year, Twyla Corporation enters into a lease arrangement with Rashad to rent office space from Rashad for $1,800 per month over the following 36 months.

a. Assume Twyla prepays rent of $64,800 to cover the next 36 months of rent. This prepayment creates an asset (a leasehold) with a useful life that extends substantially beyond the end of the taxable year. Thus, only $3,600 ($1,800 × 2 months) of the total payment is deductible in the current year. The rest must be capitalized and amortized over the life of the lease.
b. However, assume instead that under the terms of the lease, Twyla Inc. is obligated to make three annual payments of $21,600 each November 1 for the subsequent 12 months. On November 1 of the current year, Twyla pays Rashad $21,600 for the first 12-month period. Because Twyla is obligated to make the prepayment and the period covered by the prepayment does not exceed one year, the entire $21,600 is deductible in the current year. ◀

Prepaid Interest. The IRC requires taxpayers to deduct prepaid interest expense over the period of the loan to which the interest charge is allocated.[28] Receipt of a discounted loan does not represent prepaid interest expense. Instead, the IRC deems the interest paid when the taxpayer repays the loan.

[27] *Martin J. Zaninovich v. CIR*, 45 AFTR 2d 80-1442, 80-1 USTC ¶9342 (9th Cir., 1980) and *Bonaire Development Co. v. CIR*, 50 AFTR 2d 82-5167, 82-2 USTC ¶9428 (9th Cir., 1982). See also *Stephen A. Keller v. CIR*, 53 AFTR 2d 84-663, 84-1 USTC ¶9194 (8th Cir., 1984).

[28] Sec. 461(g).

EXAMPLE I:6-23 ▶ In November of the current year, Richelle borrows $1,000 from the bank for use in her business. Richelle uses the cash method of accounting in her business. Under the terms of the loan, the bank discounts the loan by $80, issuing Richelle $920. When the loan comes due in October of the following year, Richelle is to repay the full $1,000. Richelle cannot deduct the $80 of interest expense until she repays the loan in the following year. ◀

REAL-WORLD EXAMPLE

A taxpayer made an overpayment of the federal income tax in 1975. In 1979, the IRS offset the overpayment against interest the taxpayer owed to the IRS. The Tax Court held that the interest expense was deductible in 1979 rather than in 1975. *Saverio Eboli*, 93 T.C. 123 (1989).

Taxpayers often prepay interest in the form of points. A point is 1% of the loan amount. Thus, the payment of two points on a $100,000 loan amounts to $2,000. While tax law generally requires the amortization of points over the life of the loan, if a taxpayer pays points in connection with the purchase or improvement of a principal residence, the taxpayer may deduct the points when they are paid. Points that a taxpayer pays in connection with the purchase (but not the improvement) of a principal residence are automatically deductible in the year paid if they satisfy the following four requirements:

- the closing agreement clearly designates the amount as points,
- the amount involves a computation as a percentage of the amount borrowed,
- the charging of points is an established business practice in the geographic area, and
- the points are paid in connection with the purchase of the taxpayer's principal residence which is used to secure the loan.[29]

REAL-WORLD EXAMPLE

The mortgage company will, at the end of the year, mail to the taxpayer a Form 1098 which shows the amount of interest and points paid.

Although points paid on loans incurred to *improve* the taxpayer's principal residence do not fall under this safe harbor rule, they still are currently deductible if the residence is collateral for the loan, the payment of points is an established business practice in the geographic area in which it is incurred, and the amount of the prepayment does not exceed the amount generally charged.

A taxpayer may not currently deduct points paid to refinance a mortgage on a principal residence because the points are not paid in connection with the purchase or improvement of the taxpayer's residence.[30] Refinancing points are deducted over the life of the loan.

EXAMPLE I:6-24 ▶ During the current year, Pam purchases a principal residence for $150,000, paying $50,000 down and financing the remainder with a 30-year mortgage secured by the property. Pam must make monthly payments on the mortgage. At the closing, Pam must pay three points ($100,000 × 0.03) as a loan origination fee. Because these points are paid in connection with the purchase of a principal residence, Pam may deduct $3,000 as interest expense during the current year. In addition, Pam may also deduct the interest portion of each monthly payment made during the year.

On the other hand, assume that Pam takes out the $100,000 loan in order to refinance her home at a lower interest rate. The $3,000 prepaid interest is not currently deductible. Instead, Pam must deduct the interest ratably over the term of the loan. Thus, Pam may deduct an additional $8.33 ($3,000 ÷ 360 payments) interest expense for each payment that she makes during the year. ◀

The cash method of accounting provides some flexibility because, under this method, taxpayers deduct expenses when paid rather than when accrued. Subject to the limitations mentioned above with regard to prepaid expenses, taxpayers may to some degree accelerate or defer deductions from one year to another by merely accelerating or deferring payment. However, tax law imposes limitations on the use of the cash method. Tax shelters are not allowed to use the cash method in any circumstances. Under Sec. 448, most C corporations and partnerships with C corporation partners are not allowed to use the cash method. However, if the business is small (has gross receipts averaging less than $31 million in the three preceding years), the cash method is allowed (Sec. 448(c)). Generally, a business in which inventory is an income-producing factor may not use the cash method.[31] However, after 2017, even a business with inventory may qualify to use the cash method if they qualify as small (see above gross receipts test), and their use of the cash method either treats inventory as non-incidental supplies or the business uses the cash method in their financial statements (Sec. 471(c)). (See Chapter I:11 for a complete discussion of the different accounting methods a taxpayer may use for computing taxable income.)

---

[29] Rev. Proc. 94-27, I.R.B. 94-15, 17. As explained in Chapter I:8, acquisition indebtedness incurred to acquire a personal residence is limited to $750,000. Hence, points that are allocated to the loan principal in excess of this limit are not deductible either.

[30] Rev. Proc. 94-27, I.R.B. 94-15, 17.

[31] Reg. §1.446-1(e)(2).

ACCRUAL METHOD

An *accrual method* taxpayer deducts expenses in the period in which they accrue. Generally, items accrue when the transaction meets both an **all-events test** and an **economic performance test.**[32]

All-Events Test. The all-events test is met when both of the following occur:

- The existence of a liability is established.
- The amount of the liability is determined with reasonable accuracy.

EXAMPLE I:6-25 ▶ During the current year, Phil provides services for Granite, Inc. Granite uses the accrual method of accounting. Phil claims that Granite owes $10,000 for the services. Granite admits owing Phil $6,000, but contests the remaining $4,000. Because the amount of the liability can be accurately established only with respect to $6,000, Granite can deduct only that amount. If Granite pays the full $10,000, it may deduct the full amount in the year of payment, even though the contested amount ($4,000) is not resolved until a subsequent taxable year.[33] If Phil loses the lawsuit and repays Granite the $4,000, Granite will include that amount in income in the year of repayment under the tax benefit rule (see Chapter I:11). ◀

Taxpayers may not deduct additions to reserves for estimated expenses such as warranty expenses. The all-events test is not met because the liability is not fixed until the work is provided. Instead, the taxpayer deducts the expenses in the year in which such work is actually performed.

EXAMPLE I:6-26 ▶ Best Corporation uses the accrual method of accounting and is engaged in the business of painting and rustproofing automobiles. Best Corporation provides a 5-year warranty for new vehicles and a 2-year warranty for used vehicles. Best Corporation extends the warranty only to the person who owns the car at the time the car is painted. The warranty is void if the vehicle is involved in an accident. Even though for financial accounting purposes Best Corporation may provide a reserve for estimated warranty expenses and deduct a reasonable addition to the reserve on an annual basis, no income tax deduction is allowed until the warranty work is actually done. ◀

ADDITIONAL COMMENT

Because of this difference between the tax treatment and the financial accounting treatment, an adjustment must be made on a corporation's reconciliation of book income and taxable income.

Economic Performance Test. To be currently deductible under the accrual method, an expense also must meet an economic performance test. Exactly when economic performance occurs depends on the type of transaction. Table I:6-1 contains a listing of various types of transactions that may arise and identifies when economic performance is deemed to have occurred under Sec. 461(h).

EXAMPLE I:6-27 ▶ On December 20 of the current year, Pit Rentals, an accrual method taxpayer, enters into a binding contract with Pat to have Pat do a deep cleaning of its offices. Under the terms of the contract, Pat is to do the work in March of the following year. The total cost of the job is $5,000. Pit pays Pat 10% down at the time the contract is signed. Because the job is not to be done until the following year, economic performance has not occurred in the current year and Pit Rentals may not deduct any portion of the expense in the current year. ◀

HISTORICAL NOTE

The economic performance test was added by Congress in the Tax Reform Act of 1984. Congress was concerned that in some situations taxpayers could deduct expenses currently, but the actual cash expenditure might not be made for several years. Taking a current deduction in such situations overstated the real cost because the time value of money was ignored.

An exception to the economic performance test provides that taxpayers may take a current deduction for recurring liabilities if all of the following occur:

- The item meets the all-events test during the year.
- Economic performance of the item occurs within the shorter of 8½ months after the close of the tax year or a reasonable period after the close of the tax year.
- The expense is recurring and the taxpayer consistently treats the item as incurred in the tax year.
- Either the item is not material or the accrual of the item in the tax year results in a more proper matching against income than accruing the item in the tax year in which economic performance occurs.

---

[32] Reg. Sec. 1.461-1(a)(2) and Sec. 461(h).

[33] Reg. Sec. 1.461-2(a)(1).

▼ TABLE I:6-1
When Economic Performance Is Deemed to Have Occurred

Event That Gives Rise to Liability	When Economic Performance Is Deemed to Have Occurred
Another person provides the taxpayer with property or services	When the person actually provides the services[a]
Taxpayer uses property	As the taxpayer uses the property[a]
Taxpayer must provide property or services to another person	As the taxpayer provides property or services to the other person[b]
Taxpayer must make payments to another, including payments for rebates and refunds, awards or prizes, insurance or service contracts, and taxes	As the taxpayer makes payments to the other person
Taxpayer must make payments to another person because of a tort, breach of contract, violation of law, or injury claim under a worker's compensation act	As the taxpayer makes payments to the other person

[a] Economic performance may be deemed to have occurred at the earlier date of payment if the taxpayer reasonably expects the property or services to be provided within 3½ months after the payment is made. Reg. Sec. 1.461-4(d)(6)(ii).

[b] Economic performance may also occur as the taxpayer incurs costs in connection with the obligation to provide the property or services. Reg. Sec. 1.461-4(d)(4)(i).

The recurring liability exception is available for the first four types of transactions identified in Table I:6-1, but it is not available for the last type of transaction in the table.

EXAMPLE I:6-28 ▶ Beta Inc. is a calendar-year, accrual method taxpayer. Every year at the end of October, Beta enters into a contract with Sam to provide snow removal services for the parking lots at Beta corporate offices. This contract extends for five months through the end of March of the following year. Because the all-events test is met (the liability is fixed), the expense recurs every year, economic performance occurs within the requisite period of time, and the item is not material, Beta may deduct the entire expense in the year in which Beta and Sam enter into the contract. ◀

A special rule under Sec. 461(c) applies to real property taxes. Under this provision, a taxpayer may elect to accrue real property taxes ratably over the period to which the taxes relate. Once made, this election is irrevocable unless the taxpayer obtains permission from the IRS.

EXAMPLE I:6-29 ▶ Under the laws of State X, the lien date for real property taxes is January 1 each year. The tax is payable in full on December 15. Alpha Holdings is an accrual-method taxpayer that has a January 31 fiscal year end. On January 1, 2024, real property taxes of $100,000 are assessed against a building Alpha owns. Alpha pays the taxes on December 15, 2024. If Alpha does not make the election to use the ratable accrual method, Alpha cannot deduct any of the payment in its fiscal year ending January 31, 2024, because the payment date is more than 8½ months after Alpha's January 31, 2024, year end.

On the other hand, if Alpha makes the election, it may deduct $8,333 ($100,000 × $\frac{1}{12}$) in its fiscal year that ends January 31, 2024, and $91,667 ($100,000 × $\frac{11}{12}$) in its fiscal year that ends January 31, 2025.

If the taxes are paid on September 30, 2024, Alpha would be better off not making the ratable accrual election. In this case, the recurring item exception applies because Alpha makes the payment within 8$\frac{1}{2}$ months of its January 31, 2024, fiscal year end. Thus, if Alpha does not make the election, all of the $100,000 is deductible in its fiscal year ending on January 31, 2024. ◀

Topic Review I:6-3 presents the rules for determining when an expense is deductible.

TOPIC REVIEW I:6-3

When an Expense Is Deductible

CASH METHOD: DEDUCTIBLE WHEN PAID

Payment Is Made When

- Cash or other property is transferred.
- A check is delivered or mailed.
- An item is charged on a credit card.

  Note: A mere promise to pay or delivery of a note payable is not deductible under the cash method.

Prepaid Expenses

- Generally are deductible over the prepayment period.
- Deductible when paid if the prepayment period covered does not exceed one year.
- Prepaid interest is generally deductible ratably over the period covered by the loan.
- Points are deductible when paid if:
  - The loan is used to purchase or improve the taxpayer's principal residence.
  - The loan is secured by the residence.
  - Points are established business practice in the geographical area.
  - The points do not exceed the amount generally charged.
  - For points paid to purchase a principal residence, the closing agreement clearly designates the amount as points and the amount must be computed as a percentage of the amount borrowed.

ACCRUAL METHOD: DEDUCTIBLE WHEN ACCRUED

In General

- Accrual occurs when the item satisfies both the all-events test and economic performance test.

All-Events Test

- The existence of a liability is established and
- The amount of the liability is determined.

Economic Performance Test

- When economic performance occurs depends on the transaction involved (see Table I:6-1).
- Occurs in the year the item meets the all-events test and all of the following tests:
  - Actual economic performance occurs within the shorter of:
    8½ months after the taxable year or a reasonable period after the taxable year.
  - The expense is recurring and receives consistent treatment from year to year.
  - Either:
    The item is immaterial or
    Deducting the expense in the year it meets the all-events test results in a more proper matching of income and deductions.

SPECIAL DISALLOWANCE RULES

OBJECTIVE 6

Discuss special disallowance rules for certain deductions

In addition to the general rules mentioned above, certain types of transactions are subject to further limitations and disallowances. These include wash sales, transactions between related persons, gambling losses, losses associated with an activity determined to be a hobby, expenses of renting a vacation home, and expenses of an office in the taxpayer's home. Further discussion of these special disallowance rules follows.

WASH SALES

Section 1091 disallows losses incurred on wash sales of stock or securities in the year of sale. For purposes of Sec. 1091, a **wash sale** occurs when:

- A taxpayer realizes a loss on the sale of stock or securities, and

- The taxpayer acquires "substantially identical" stock or securities within a 61-day period of time that extends from 30 days before the date of sale to 30 days after the date of sale.[34]

The purpose of the wash sale rule is to prevent taxpayers from generating artificial tax losses in situations where taxpayers do not intend to reduce their holdings in the stock or securities sold.

EXAMPLE I:6-30 ▶ Leslie realizes $10,000 in short-term capital gains (STCGs) through dealings in the stock market during the current year. Realizing that STCGs are fully includible in gross income and are taxed at ordinary rates unless they are offset against realized capital losses, Leslie analyzes her portfolio to determine whether she owns any stocks that have declined in value. She finds that the FMV of her Edison Corporation common stock is only $7,500, even though she originally purchased it for $16,000. Despite the $8,500 paper loss on the stock, Leslie wants to retain the stock because she feels that Edison Corporation is still a good investment. If Leslie attempts to take advantage of the paper loss on the Edison stock by selling the stock she owns and repurchasing a similar number of shares of Edison common stock within the 61-day period, Sec. 1091 disallows the loss. ◀

At times, taxpayers may attempt to circumvent the wash sale provisions through either a sham transaction or an indirect repurchase of the securities. If this is the case, the wash sale provisions still prevent the recognition of the loss. The Supreme Court has held that losses on sales of stock by a husband were disallowed when the stockbroker was instructed to purchase the same number of shares in his wife's name.[35]

In some instances a taxpayer may attempt to circumvent the wash sale provisions by merely delaying the repurchase of the substantially identical stock. This tactic should work as long as a written agreement to repurchase the stock does not exist at the time of the sale or at any time within the 61-day period mandated by the Sec. 1091 wash sale provisions. If such an agreement exists, the courts will disallow the loss, even though the actual purchase does not occur within the 61-day period.[36]

In certain cases, taxpayers may still recognize losses on transactions that literally fall within the wash sale requirements. For example, a taxpayer may purchase stock and then sell a portion of those shares within 30 days where the intent is merely to reduce the stock holdings. Taken together, these two transactions meet the tests of Sec. 1091. However, because the purpose of the sale is to reduce the taxpayer's holdings rather than to generate an artificial tax loss, Sec. 1091 does not disallow the loss.[37] Section 1091 also does not apply to losses that a dealer in stock or securities realizes in the ordinary course of business.

If the taxpayer acquires fewer shares of stock within the 61-day period than the number of shares disposed of, Sec. 1091 disallows only a proportionate amount of the total loss.

SELF-STUDY QUESTION

During 2018, you bought 100 shares of X stock on each of three occasions. You paid $158 a share for the first block of 100 shares, $100 a share for the second block, and $95 a share for the third block. On December 21, 2024, you sold 300 shares of X stock for $125 a share. On January 6, 2025, you bought 250 shares of identical X stock. Can you deduct the loss realized on the first block of stock?

ANSWER

You cannot deduct the loss of $3,300 on the first block because within 30 days after the date of sale you bought 250 identical shares of X stock. In addition, you cannot reduce the gain realized on the sale of the second and third blocks of stock by this loss.

EXAMPLE I:6-31 ▶ Several years ago, Henry purchased 100 shares of New Corporation common stock for $2,000 ($20 per share). On July 2 of the current year, Henry sells all 100 shares for $1,000. On July 30 of the current year, Henry purchases 75 shares (three-fourths of the original shares) of New Corporation common stock. As a result of the reacquisition, three-fourths of the total loss ($750) is disallowed. Henry recognizes the remaining $250 loss. ◀

Substantially Identical Stock or Securities. Only the acquisition of substantially identical stock or securities will cause a loss to be disallowed. The IRC and the Treasury Regulations do not define the term *substantially identical*. Judicial and administrative rulings have held that bonds issued by the same corporation generally are not substantially identical if they differ in terms (e.g., interest rate and term to maturity). However, bonds of the same corporation that differ only in their maturity dates (e.g., the bonds do not come due for 16 years and mature within a few months of each other) have been held to be substantially identical. Generally, courts have not considered the preferred stock of a corporation to be substantially identical to the common stock of the same corporation.[38]

---

[34] Here the term *acquire* includes an acquisition of the stock either by purchase or in a taxable exchange. The term *stock or securities* includes contracts or options to acquire or sell stock or securities (see Sec. 1091(a)). The wash sale rules also apply to losses realized on the closing of a **short sale** of stock or securities if, within the 61-day period, substantially identical stock or securities were sold or another short sale of (or a securities futures contract to sell) substantially identical stock or securities was entered into.

[35] *John P. McWilliams v. CIR*, 35 AFTR 1184, 47-1 USTC ¶9289 (USSC, 1947).

[36] Rev. Rul. 72-225, 1972-1 C.B. 59, and *Frank Stein*, 1977 PH T.C. Memo ¶77,241, 36 TCM 992.

[37] Rev. Rul. 56-602, 1956-2 C.B. 527.

Basis of Stock. If the wash sale provisions disallow a loss, then the disallowed loss increases the basis of the recently acquired stock. This increase in basis merely causes the disallowed loss to be deferred. The taxpayer will eventually recognize the loss upon the subsequent sale or disposition of the stock that causes the loss disallowance. If there has been more than one purchase of replacement stock and the amount of stock purchased within the 61-day period exceeds the stock that is sold, the stock that is deemed to have caused the loss to be disallowed is accounted for chronologically. The holding period of the replacement stock includes the period of time the taxpayer held the stock sold.

EXAMPLE I:6-32 ▶ Ingrid enters into the following transactions with regard to Pacific Corp. common stock:

Date	*Transaction*	*Amount*
January 4, 2013	Purchases 600 shares	$30,000
October 2, 2025	Purchases 400 shares	10,000
October 12, 2025	Sells original 600 shares	12,000
October 20, 2025	Purchases 200 shares	5,000
October 25, 2025	Purchases 300 shares	8,400

Because Ingrid purchases more than 600 shares within the 61-day period before and after the date of sale (the purchases made on October 2, 20, and 25), the recognition of the entire loss of $18,000 ($12,000 – $30,000) from the October 12 sale is postponed. Four hundred shares (two-thirds of the number of shares sold) are purchased on October 2 and 200 shares (one-third) are purchased on October 20. Thus, the basis of the 400 shares of stock purchased on October 2 is $22,000 [$10,000 purchase price + ($18,000 disallowed loss × 400/600)]. The basis of the 200 shares of stock purchased on October 20 is $11,000 [$5,000 + ($18,000 × 200/600)]. Both of these blocks of stock have a holding period that starts on January 4, 2013.[39] The basis of the 300 shares of stock purchased on October 25 is its purchase price of $8,400. Its holding period begins on October 25, 2025. ◀

STOP & THINK

Question: With regard to his investments in the stock market, the current year has been like a roller coaster ride for Doug. He now wants to do some year-end tax planning. For the year to date, he has realized a net gain of $12,000 on his stock investments. Although some of his current stock holdings have unrealized losses, he feels that they are excellent investments that will provide excellent returns in the next year or two. His stock broker has suggested that he sell enough of his holdings to realize a $12,000 loss (to offset the $12,000 capital gain) and then simply repurchase some of the stock. What advice would you give Doug as he discusses this strategy with his broker?

Solution: By realizing $12,000 in capital losses this year, Doug may be able to offset the capital gains he has already recognized. In order to recognize these losses, however, he must make sure that the wash sale provisions do not apply. Thus, he must either (1) purchase stock of different corporations or (2) delay the repurchase of the same issue of stock for at least 31 days after the date of sale. Because Doug is happy with his current investments, perhaps the second strategy is the best. Of course, other non-tax issues must also be considered. For example, does Doug think that the prices will go up quickly within the next 30 days? If so, he may lose out on some significant gains while he is waiting to repurchase the stock. Additionally, he must also consider the transaction costs (such as commissions).

---

[38] *Marie Hanlin, Executrix v. CIR*, 39-2 USTC ¶9783 (3d Cir., 1939). However, the IRS held in Rev. Rul. 77-201, 1977-1 C.B. 250, that the convertible preferred stock of a corporation is substantially identical to its common stock if the preferred stock has the same voting rights and is subject to the same dividend restrictions as the common stock, is unrestricted as to its convertibility, and sells at relatively the same price (taking into consideration the conversion ratio).

[39] An asset's holding period is important in determining whether subsequent gain or loss on the asset is long-term or short-term gain or loss. This is explained further in Chapter I:5.

TRANSACTIONS BETWEEN RELATED PARTIES

Section 267 places transactions between certain related parties under special scrutiny because of the potential for tax abuse. For example, a taxpayer could sell a piece of property at a loss to a wholly owned corporation. Without any restrictions on the deductibility of the loss, the individual could recognize the loss while still retaining effective control of the property. Under Sec. 267, related taxpayers may not take current deductions on two specific types of transactions. These transactions are:

- Losses on sales of property
- Accrued expenses that remain unpaid to the related cash method taxpayer at the end of the tax year

ADDITIONAL COMMENT

Section 267 does not define the word property, but the IRS and the courts have given it a broad meaning.

Related Parties Defined. Section 267 defines taxpayers with the following relationships as related parties:

- Individuals and their families. The term family includes an individual's spouse, brothers and sisters (including half-brothers and half-sisters), ancestors, and lineal descendants.
- An individual and a corporation in which the individual owns more than 50% of the value of the outstanding stock.
- Various relationships between grantors, beneficiaries, and fiduciaries of a trust or trusts, or between the fiduciary of a trust and a corporation if they meet certain ownership requirements.
- A corporation and a partnership if the same persons own more than 50% in value of the stock of the corporation and more than 50% of the partnership.
- Two corporations if the same persons own more than 50% in value of the outstanding stock of both corporations and at least one of the corporations is an S corporation.
- Other complex relationships involving trusts, corporations, and individuals.

TAX STRATEGY TIP

The related party rules many times cause the tax consequences to be different than what was expected. Be sure that your clients provide all details to you ahead of time when related parties are involved in the transaction. You might be able to help structure the transaction in a way that meets your clients' expectations.

Several of these relationships depend on an individual's ownership of a corporation. For example, if a taxpayer does not own more than 50% of a corporation's stock, the individual and the corporation are not related and a loss on the sale of business or investment property between the two is deductible. Occasionally, individuals might attempt to circumvent the related party rules by dispersing the ownership of a corporation (e.g., among close family members) while retaining economic control. To prevent these tactics, Sec. 267 contains constructive ownership rules whereby a taxpayer is deemed to own stock owned by certain other persons. These constructive ownership rules are as follows:

- Stock owned by an individual's family is treated as owned by the individual. Here the definition of *family* is the same as that of *related parties* (i.e., spouse, brothers and sisters, ancestors, and lineal descendants).
- Stock owned by a corporation, partnership, estate, or trust is treated as owned *proportionately* by the entity's shareholders, partners, or beneficiaries.
- If an individual partner in a partnership owns (or is treated as owning) stock in a corporation, the individual is treated as owning any stock of that corporation owned by any other partner in the partnership. This does not occur, however, if the only stock the individual owns (or is considered to own) is through family attribution.[40]
- Stock ownership that is attributed to a shareholder or partner from an entity can be reattributed to another taxpayer under any of the constructive ownership rules. In other words, the same stock can be constructively owned by more than one person. However, stock ownership attributed to a taxpayer under the family or partner rules cannot be reattributed.

---

[40] Reg. Sec. 1.267(c)-1(b), Exs. (2) and (3).

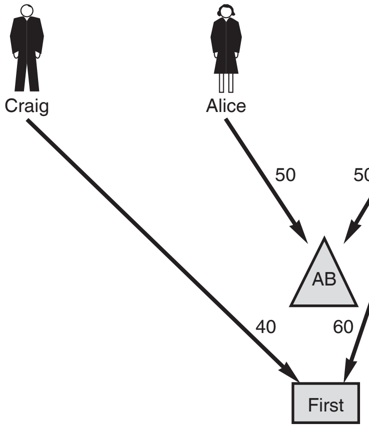

FIGURE I:6-2 ▶ Illustration for Example I:6-33

The following examples illustrate these rules.

EXAMPLE I:6-33 ▶ Alice and Beth are equal partners in the AB Partnership. Beth owns 60% of First Corporation's stock, and Craig, Alice's husband, owns the other 40%. The ownership of the partnership and the corporation is demonstrated in Figure I:6-2. Under the constructive ownership rules, Alice is considered to own Craig's 40% of the First Corporation stock. Alice is not considered to own the First Corporation stock owned by her partner, Beth, because the only First Corporation stock Alice owns (or is considered to own) is the stock owned by her husband. If Alice sells property at a loss to First Corporation, the loss is recognized because Alice does not directly or constructively own more than 50% of the First Corporation stock. ◀

EXAMPLE I:6-34 ▶ Assume the same facts as in Example I:6-33, except that the First Corporation stock is owned 50% by the AB Partnership and 25% each by Beth and Craig. The ownership of the partnership and the corporation is shown in Figure I:6-3. In addition to Craig's 25%, Alice is considered to own 50% of the stock owned by the AB Partnership because of her 50% ownership in AB. The other half of AB's stock ownership is attributed to her partner, Beth. However, Alice is also treated as owning the First Corporation stock Beth owns both actually and constructively (50%). Thus, Alice is treated as owning 100% of the First Corporation stock. In this case, Alice will not be able to recognize a loss on the sale of property to First Corporation. ◀

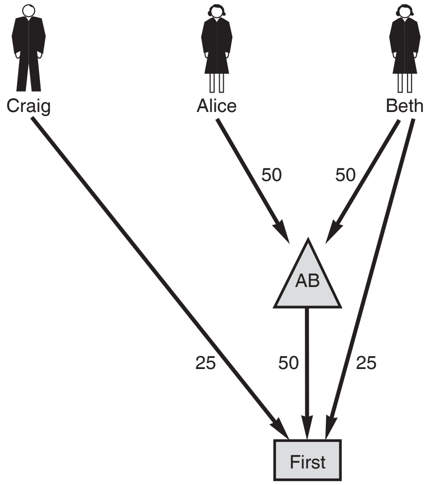

FIGURE I:6-3 ▶ Illustration for Example I:6-34

Disallowed Losses. If Sec. 267 disallows the loss, the original seller of the property receives no tax deduction. The disallowed loss has no effect on the purchaser's basis. The cost basis to the purchaser is equal to the amount paid for the property. However, Sec. 267 provides partial relief because, on a subsequent sale of the property, the related purchaser may reduce any recognized gain by the amount of the disallowed loss. This offsetting of a subsequent gain is available only to the related person who originally purchased the property. If the disallowed loss is larger than the subsequent gain, or if the purchaser sells the property at a loss, the taxpayer may not take a deduction for the unused loss. This may result in a partial disallowance of an overall economic loss for the related parties because there is no upward basis adjustment for the previously disallowed loss (as is the case for a wash sale).

EXAMPLE I:6-35 ▶ Assume three separate scenarios in which Sam sells a tract of land during the current year. In each case assume that Sam purchased the land from his father, Frank, for $10,000. Frank's basis at the time of the original sale was $15,000 in each case. Thus, Frank's $5,000 loss on each land sale was disallowed.

KEY POINT

The loss disallowance rule for related parties is more severe compared to the loss disallowance rule on wash sales. In a related party transaction, it is possible to lose the tax benefit of all or a portion of the economic loss.

		Scenario	
	1	2	3
Selling price	$17,000	$ 12,000	$ 8,000
Minus: Sam's basis	(10,000)	(10,000)	(10,000)
Sam's realized gain (loss)	$ 7,000	$ 2,000	$ (2,000)
Minus: Frank's disallowed loss (up to Sam's gain)	(5,000)	(2,000)	—0—
Sam's recognized gain (loss)	$2,000	—0—	($2,000)

In Scenario 1, Sam and Frank together have incurred an aggregate gain of $2,000 ($17,000 – $15,000). Thus, Frank's full disallowed loss reduces Sam's subsequent gain. In Scenario 2, the aggregate economic loss incurred by Sam and Frank is actually $3,000 ($12,000 – $15,000). However, the actual amount of the tax loss recognized by Sam and Frank is zero. In Scenario 3, the actual tax loss would have been $7,000 ($8,000 – $15,000) instead of $2,000 if Frank had held the land until its eventual sale. ◀

A similar rule found in Sec. 707(b)(1) disallows losses between a partner and a partnership in which the partner owns directly or indirectly over 50% of the partnership and between two partnerships in which the same people own directly or indirectly over 50% in each partnership. The constructive ownership rules of Sec. 267 apply here in determining ownership (see the *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* text).

KEY POINT

The effect of Sec. 267 with respect to unpaid expenses is to place an accrual method taxpayer on the cash method for amounts owed to a related cash method taxpayer.

Unpaid Expenses. Sec 267(a)(2) requires time period matching for an accrual method taxpayer's expense owed but unpaid at year end to a cash method taxpayer. The accrual method taxpayer's expense is deductible only in the year in which the cash method taxpayer reports the receipt of payment as income. In effect, this rule prevents an accrual-method taxpayer (the payer) from taking a deduction for an unpaid expense in the earlier year of accrual while the related cash-method taxpayer (the payee) recognizes the payment as income in the subsequent year.

For unpaid expenses, Sec. 267 expands the definition of related parties to include a personal-service corporation and any employee-owner.[41] A personal-service corporation is one whose principal activity is the performance of personal services substantially performed by employee-owners. An employee-owner is an employee who owns any of the outstanding stock of the personal-service corporation.[42]

EXAMPLE I:6-36 ▶ Michelle owns 100% of the outstanding stock of Hill Corporation. Michelle is a cash-method taxpayer and Hill Corporation is an accrual-method taxpayer. Both taxpayers are calendar-year taxpayers. In a bona fide transaction, Hill borrows some funds from Michelle. By the end of the current year, $8,000 interest expense had accrued on the loan. However, Hill Corporation does not pay the interest to Michelle until February of the following year. Because Michelle is a cash-method taxpayer, she reports the interest income when she receives it in the following year. Although Hill is an accrual-method taxpayer, it must deduct the interest expense when paid, in February of the following year. The results are the same if Hill Corporation is a personal service corporation and Michelle is an employee and owns any amount of the Hill stock. ◀

---

[41] Sec. 267(a)(2).

[42] Secs. 269A(b) and 441(i)(2). In determining the ownership of an employee-owner, the constructive ownership rules of Sec. 318 as modified by Sec. 441(i)(2) are used. These rules differ substantially from the constructive ownership rules of Sec. 267.

For purposes of these unpaid expenses, the definition of *related parties* also includes various relationships involving partnerships or S corporations and any person who owns (either actually or constructively) any interest in these entities.[43]

HOBBY ACTIVITIES

Certain activities have both profit-motivated and personal attributes. In these cases, one must examine all the relevant factors to determine the tax status of the activity. The distinction is important because, in general, expenses incurred in a profit-motivated activity are deductible, but most expenses associated with personal activities (hobbies) are not deductible. Reg. Sec. 1.183-2(b) lists the factors the IRS uses to determine whether an activity is profit-motivated. These factors include the following:

- Whether the taxpayer conducts the activity in a businesslike manner.
- The expertise of the taxpayer or the taxpayer's advisors.
- The time and effort expended by the taxpayer in carrying on the activity.
- Whether the assets used in the activity are expected to appreciate in value.
- The taxpayer's success in carrying on other similar activities.
- The taxpayer's history of profits or losses with respect to the activity.
- The amount of occasional profits earned, if any.
- The taxpayer's financial status.
- Any elements of personal pleasure or recreation the activity might involve.

ADDITIONAL COMMENT

Many of the court cases dealing with profit motive under Sec. 183 are ranch and farm cases. In fact, Sec. 183, now titled "Activities Not Engaged in for Profit" was originally titled "Farm Losses, etc." in the Tax Reform Act of 1969.

No one of these factors is determinative, and the IRS also may consider other factors not listed. Furthermore, the IRS does not make a determination by merely counting the number of factors that are present. Instead, the decision depends on an examination of all the factors together. If the IRS asserts that an activity is a personal one (i.e., a hobby) rather than a business or investment, the burden of proof rests on the taxpayer to prove otherwise.

Presumptive Test. In cases where a clear profit motive cannot be shown under the factors mentioned above, the Code provides a presumptive test whereby an activity may be presumed to be engaged in for profit. The activity meets the test if it shows a profit for any three years during a consecutive five-year period. The five-year period consists of the year in question plus the previous four years.[44] This presumption is rebuttable (i.e., if the taxpayer meets the test, the IRS has the burden of proof to show that the activity *is not* profit motivated). However, if the taxpayer fails to meet this test, the taxpayer must prove that the activity *is* profit motivated. If the IRS challenges the activity's treatment as a business before the five-year test window is complete, an election is available to postpone determination until profits and losses are reported for the full five-year window (Sec. 183(e)).

KEY POINT

The presumptive test in Section 183(d) primarily serves to shift the burden of proof from the taxpayer to the IRS.

If the examination of the factors leads to the determination that the activity is a business, the taxpayer generally may deduct all qualified business expenses from the gross income, even if a net loss results.[45] However, if the factors lead to a determination that the activity is a hobby, the taxpayer may not deduct the related expenses (Sec. 67(g) in the Tax Cuts and Jobs Act for tax years 2018–2025) and must include in taxable income the gross income from the hobby.[46]

EXAMPLE I:6-37 ▶ Paula, a successful attorney with an annual income of $300,000, also enjoys raising and training quarter horses. She generally spends five to six hours each week training, showing, or racing the horses. Over the last four years her winnings from shows and races have amounted to $16,000. Over that same period, she has generated an additional $8,000 of income from stud fees and the sale of colts. Often Paula uses the horses to take her family or friends riding. In addition, Paula often participates in equestrian clinics and demonstrations for 4-H Clubs and other similar groups. Paula employs a high school student to feed the horses each day and clean the stalls weekly. Paula also hires a professional horse trainer for 4 hours each week to help her train the horses.

---

[43] Sec. 267(e). A discussion of these modifications is beyond the scope of this book.

[44] Sec. 183(d). If the major part of the activity involves breeding, training, showing, or racing horses, the five-year period is extended to a seven-year period, and a profit must be shown in only two, rather than three, of the years covered by that seven-year period.

[45] If the activity is a passive activity, however, the loss may be deferred or suspended. See Chapter I:9 for a discussion of the passive loss rules.

[46] Before 2018, the taxpayer could generally deduct the expenses as a miscellaneous itemized deduction but only to the extent of the gross income from the activity.

In this case, several factors such as the level of earnings, the hiring of professional help, and the amount of time spent in the activity suggest that Paula is engaged in a business. Other factors, such as the time spent riding with family and friends, the voluntary clinics and demonstrations, and the small amount of revenue generated as compared with Paula's other income, support the position that Paula merely has a hobby of raising horses. ◀

EXAMPLE I:6-38 ▶ Lorenzo, a stockbroker, enjoys raising pedigreed poodles. Although he mainly raises them for recreation and relaxation after work, Lorenzo periodically sells some of his poodles. Lorenzo realizes $850 in income and $2,900 in expenses from the activity in the current year.

If Lorenzo's poodle-raising activity is a business, Lorenzo will report a net loss of $2,050 ($850 − $2,900). If the activity is determined to be a hobby, however, Lorenzo will report $850 in income but can deduct none of the $2,900 of expenses. ◀

ADDITIONAL COMMENT

The hobby expense is one that is deductible whether or not incurred in a profit-motivated activity, such as real property taxes on a home, the taxpayer can include the expense in his/her itemized deductions.

EXAMPLE I:6-39 ▶ Lynn raises various plants and flowers in a small greenhouse constructed specifically for that purpose. During the current year, Lynn reports gross income from the greenhouse activities of $1,700. Lynn also incurs the following expenses:

Property taxes on the greenhouse	$1,150
Utilities	300
Depreciation (assuming the activity is considered a business)	800

If the greenhouse activity is considered to be a hobby rather than a business, the only deduction Lynn may take is an itemized deduction of $1,150 in property taxes. ◀

REAL-WORLD EXAMPLE

Good records are very important in establishing the existence of a business rather than a hobby. A taxpayer, who owned and operated an apple orchard, asserted that he maintained sufficient business records, consisting of bank deposit slips, check stubs, and tax forms. A separate bank account was also maintained. But the taxpayer did not present any production records for the apple orchard. In fact, at trial, the taxpayer was not even certain of the exact number of trees in the orchard. Thus, the court found that due to the limited records, the taxpayer's activity was considered to be a hobby rather than a business. *Zdun*, TC Memo 1998-296 (1998).

VACATION HOME

Because owning a home may have both personal and profit-motivated attributes, Sec. 280A may disallow or limit deductions for expenses related to the rental of a home that is also used as a residence by the taxpayer.

Residence Defined. For the restrictive rules of Sec. 280A to apply, the property must be a dwelling unit that qualifies as the taxpayer's residence. As used in this context, the term *dwelling unit* is expansive and may include property such as boats and mobile homes. The determining factor is whether the property provides shelter and accommodations for eating and sleeping.[47] Even a mini-motorhome that contains the appropriate accommodations has been held to be a dwelling unit subject to the rules and limitations of Sec. 280A.

The tax treatment of income and expenses associated with a taxpayer's rental of a home is determined annually and depends on the extent to which the taxpayer uses it (personal use) and the extent to which the home is rented at its fair value. The categories listed below capture these dimensions:

SELF-STUDY QUESTION

What is the maximum number of days during a year that a taxpayer may use a property for personal use and not have it considered to be used as a residence?

1. The home is rented for fewer than 15 days. *Primarily personal*

   In these circumstances, the taxpayer may exclude from gross income the rental income received, but may not deduct expenses related to the home, other than the itemized deductions allowed for property tax and mortgage interest expense (Sec. 280A(g)).

2. The home is rented for more than 14 days and the taxpayer's personal use of the home exceeded the larger of i) 14 days or ii) 10% of rented days. *Mixed personal and rental*

   For a home in this category, the taxpayer must report in gross income all of the rental income and may offset allocated rental expenses against that income, but only to the extent of income. A rental loss is not allowed. Allocated expenses not deductible in one year because of this limit are carried forward, and are deductible against the subsequent year's rental income.

---

[47] *Ronald L. Haberkorn*, 75 T.C. 259 (1980), and *John O. Loughlin v. U.S.*, 50 AFTR 2d 82-5827, 82-2 USTC ¶9543 (D.C. Minn., 1982).

3. The home is rented for more than 14 days and the taxpayer's personal use of the home did not exceed the larger of i) 14 days or ii) 10% of rented days. *Primarily rental*

   In these circumstances, the taxpayer must report in gross income all of the rental income and may offset allocated rental expenses against that income, even to the extent that the allocated expenses generate a rental loss.

For purposes of the residence test, a day of personal use includes all of the following:

- Any day the taxpayer or the taxpayer's family uses the property for personal purposes. Family is defined here as including the taxpayer's spouse, brothers and sisters, ancestors, and lineal descendants.[48]
- Any day any individual uses the property under a reciprocal-use arrangement.[49]
- Any day any individual uses the property and does not pay a fair rental for its use.[50]

Despite the family-use rule, if a taxpayer rents property at a fair rental to a family member who uses the property as a principal residence, such use does not constitute personal use by the taxpayer.

EXAMPLE I:6-40 ▶

Sarah owns a houseboat on Lake Powell that she personally uses for 21 days out of the year. During the year she also rents out the boat for a total of 300 days. The houseboat is considered primarily a rental activity because Sarah's personal use does not exceed 30 days during the year (greater of 14 days or 10% of the 300 rental days for the year). ◀

ANSWER

If a property was rented for 332 days it could be used by the taxpayer for 33 days and not be considered a residence.

EXAMPLE I:6-41 ▶

During the current year, Peggy purchases a small house as an investment and rents the property to Stan, her married son, who uses the property as his principal residence. Stan pays his mom a fair rental for the property. Because Stan uses the property as his principal residence and pays Peggy a fair rental for the property, Peggy is not treated as personally using the house for any days during the year. Thus Peggy's personal use does not exceed the greater of 14 days or 10% of the rental days during the year, and the rules of Sec. 280A do not apply to limit the expenses that Peggy may deduct (although the passive loss rules may limit the deduction). ◀

KEY POINT

A second home is classified as either rental property, a residence, or some combination of the two. If it is classified as some combination of rental property and a residence, the expenses of the property must be allocated between the two categories.

Allocation of Expenses. When a taxpayer uses a home personally as well as for rental purposes, the tax law requires the taxpayer to allocate the expenses between the taxpayer's personal use and rental use. The reason for this required allocation of the expenses is that the IRC generally allows individuals to deduct expenses attributable to the rental of property (subject to various limitations), whereas individuals generally cannot deduct expenses allocated to personal use of property.

Sec. 280A uses the following formula to allocate expenses between the personal use and the rental use of the property:[51]

$$\text{Rental use expenses} = \frac{\text{Number of rental days}}{\text{Total number of days used}} \times \text{Total expenses for the year}$$

The denominator of the allocation fraction is the sum of the days the property is rented plus the days the taxpayer uses it for personal purposes. The formula does not include the days that no one uses the property.

Some courts have modified the allocation formula by using the total number of days in the year as the denominator for qualified residential interest and property taxes instead of the number of days the property was used.[52] Use of this ratio allocates less interest and taxes to the rental use, allowing more of the other expenses to be deducted against the rental income. Expenses allocated to personal use of the home generally are not deductible. However, as explained in Chapter I:8, individuals may take a *from* AGI deduction (itemized) for real estate taxes paid on personal use property such as a home or vacation home. In addition an individual may deduct as a *from* AGI deduction certain interest expense incurred on a "qualified residence" of the taxpayer. For the vacation home to qualify as a "qualified residence" the taxpayer's personal usage must exceed the greater of (1) 14 days or (2) 10% of the rental days during the year.[53] Examples I:6-42 and I:6-43 use the allocation formula for the interest and taxes that is sanctioned by the courts.

---

[48] Sec. 280A(d)(2). A day during which the taxpayer spends substantially full time on repairs and maintenance does not count as a personal-use day.

[49] Sec. 280A(d)(2)(B). A reciprocal-use arrangement is one whereby another person uses the taxpayer's property in exchange for the taxpayer's use of the other person's property.

[50] Sec. 280A(d)(2)(C). Exactly what constitutes a fair rental must be determined by an examination of all the associated facts and circumstances.

[51] Sec. 280A(e)(1).

Order of the Deductions. To the extent the allocated expenses exceed the gross rental income, the deductions are allowed in the following order.

- Tier 1: Expenses that are deductible even though not incurred in a trade or business (e.g., itemized deductions such as property taxes and qualified mortgage interest expense)
- Tier 2: Other expenses that would be deductible in a trade or business context but which do not affect the property's basis
- Tier 3: Expenses deductible in a trade or business context which reduce the basis of the property (e.g. depreciation)

EXAMPLE I:6-42 ▶ Joan owns a cabin near a ski resort. During the year, Joan and her family use the cabin a total of 25 days. Joan also rents the cabin to out-of-state skiers for a total of 50 days during the year, generating rental income of $10,000. Joan incurs the following expenses:

Expense	*Amount*
Mortgage interest expense	$3,000
Property taxes	1,500
Utilities	2,000
Insurance	1,500
Security and snow removal	2,500
Depreciation	12,000

Because the cabin is rented for more than 14 days and Joan's personal use of the cabin exceeds 14 days (larger of 10% of 50 rental days and 14 days), the cabin is reported using the limits on *mixed personal and rental* activities. The activity cannot generate a net rental loss. The amount of deductions (for AGI) Joan may take with respect to the property during the year is as follows:

Item	*Calculation*	*Allocated to Rental*	*Allocated to Personal*	*Treatment of Personal Amounts*
Rental income		$10,000		
Tier 1:				
Interest expense	$\$ 3{,}000 \times \frac{50}{365}$	(411)*	($2,589)	Deductible from AGI**
Property taxes	$\$ 1{,}500 \times \frac{50}{365}$	(205)*	(1,295)	Deductible from AGI***
Tier 2:				
Other expenses	$\$ 6{,}000 \times \frac{50}{75}$	(4,000)	(2,000)	Not deductible
Tier 3:				
Depreciation	$\$ 12{,}000 \times \frac{50}{75}$	(5,384)	(4,000)	Not deductible
Net Rental Income from Property		$0		

SELF-STUDY QUESTION

Assume that a taxpayer rents his cabin to an individual who occupies it on a Saturday afternoon. Two weeks later the tenant leaves the cabin on a Saturday morning. Has the cabin been rented for more than 14 days?

ANSWER

No. Although the tenant was on the premises for 15 calendar days, he is treated as having rented the property for only 14 days.

---

[52] *Dorance D. Bolton v. CIR*, 51 AFTR 2d 83-305, 82-2 USTC ¶9699 (9th Cir., 1982). See also *Edith G. McKinney v. CIR*, 52 AFTR 2d 83-6281, 83-2 USTC ¶9655 (10th Cir., 1983).

[53] No deduction is allowed for interest incurred with respect to a personal residence if the debt on which the interest is paid is not secured by the property or the taxpayer has not chosen the property as a second residence for purposes of deducting the interest as qualified residential interest (see Chapter I:8). For purposes of the discussion and examples used here, the assumption is made that the interest qualifies as qualified residential interest.

Because a rental loss is not allowed for this activity, deductible allocable expenses are limited to the property's income of $10,000. All of Tier 1 and Tier 2 expenses allocated to the rental activity ($4,616) are deductible, but the remainder, $5,384, is the limit on Tier 3 deductions.

The income and expenses allocated to the rental use are reported on Schedule E. Thus, the expenses allocated to the rental use are *for* AGI deductions. The deductible interest and taxes allocated to the personal use are *from* AGI deductions (itemized deductions).

* Under the approach favored by the IRS, $2,000 of the interest and $1,000 of the taxes would be allocated to the rental use (50/75 or 2/3 or each expense), leaving only $3,000 of the depreciation to be deducted against the gross income.

** Joan can include the interest allocated to her personal use as an itemized *from* AGI deduction because her personal usage of the cabin (25 days) exceeds 14 days (the greater of 14 days or 10% of the rental days). See Chapter I:8 and Sec. 163(h)(2) and (h)(4)(A).

*** Deductible under Sec. 164(a)(1) as an itemized *from* AGI deduction. ◀

EXAMPLE I:6-43 ▶ Assume all the same facts in Example I:6-42 except that during the year Joan uses the cabin for 16 days and rents the cabin out for 170 days. Pursuant to the court's approved method, Joan chooses to calculate the allocation and deductibility of the interest and taxes using the full year. The allocation of expenses is as follows:

Item	*Calculation*	*Allocated to Rental*	*Allocated to Personal*	*Treatment of Personal Amounts*
Rental income		$10,000		
Tier 1:				
Interest expense	$ $3,000 \times \frac{170}{365}$	(1,397)	($1,603)	Not deductible
Property Taxes	$ $1,500 \times \frac{170}{365}$	(699)	(801)	Deductible from AGI
Tier 2:				
Other expenses	$ $6,000 \times \frac{170}{186}$	(5,484)	(516)	Not deductible
Tier 3				
Depreciation	$ $12,000 \times \frac{170}{186}$	(10,968)	(1,032)	Not deductible
		($8,548)		

Because the cabin was rented for more than 14 days but Joan's personal use (16 days) did not exceed the larger of 14 days or 10% of rented days (17 days), the cabin's use is *primarily rental* (category 3). A rental loss is allowed, and for this property, it totals ($8,548). However, note that the personal portion of mortgage interest expense, $1,603, is not eligible as an itemized deduction because Joan's use of the cabin is insufficient to qualify it as a personal residence (Sec. 163(h)(2) and (h)(4)(A)). ◀

EXAMPLE I:6-44 ▶ Assume the same facts as in Example I:6-42, except that during the year Joan rents the cabin out for only 12 days and the amount of rental income is $2,400. The cabin qualifies as Joan's residence because her personal use (25 days) exceeds 14 days. Because the cabin is rented for less than 15 days during the year, Joan may only take itemized deductions of $4,500 for the qualified residential interest and taxes. She may not deduct the other expenses. In addition, she excludes the $2,400 from gross income. ◀

Finally, any net income or loss from rental property is subject to the Sec. 469 passive loss rules, which may limit the deductibility of any losses from the property (see Chapter I:9).

EXAMPLE I:6-45 ▶ Assume the same facts as in Example I:6-43 except that Joan chooses to use the IRS's method of allocating the interest and taxes between the personal use and the rental use of the cabin based upon the total number of days used during the year rather than on the total 365 days in the year.

Item	*Total*	*Allocation*	*Allocated to Rental*	*Allocated to Personal*	*Treatment of Personal Amounts*
Rental income	$10,000		$10,000		
Tier 1:					
Interest expense	(3,000)	170/186	(2,742)	(258)	Not deductible
Property taxes	(1,500)	170/186	(1,371)	(129)	Deductible from AGI
Tier 2:					
Other expenses	(6,000)	170/186	(5,484)	(516)	Not deductible
Tier 3:					
Depreciation	(12,000)	170/186	(10,968)	(1,032)	Not deductible
			(10,565)		

Relative to Example I:6-43, the above allocation yields a larger rental loss ($10,665), and less ($258 versus $1,603) of the interest expense is allocated to the non-deductible personal portion. Though it seems a better result, note that the choice of allocation method must be consistent over time and that the passive activity loss rules (Sec. 469) may limit the deductibility of the rental loss. ◀

The rule of Sec. 280A regarding the rental of residential property is summarized in Figure I:6-4.

EXPENSES OF AN OFFICE IN THE HOME

Unless the taxpayer meets certain strictly imposed requirements, Sec. 280A disallows any deduction for home office expenses. In general, for a taxpayer to deduct office-in-home expenses, the taxpayer must use the office regularly and exclusively as either of the following:

- The principal place of business for a trade or business of the taxpayer, or
- A place where the taxpayer meets or deals with clients in the normal course of business.

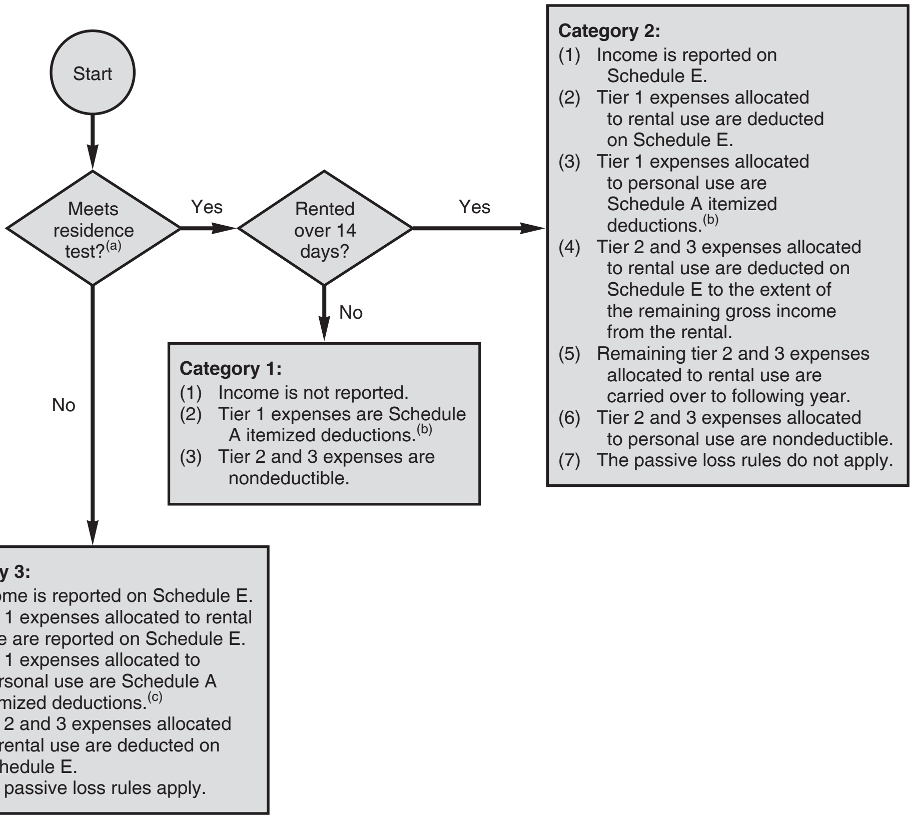
WHAT WOULD YOU DO IN THIS SITUATION?

Mr. Bouteilles Gerbeuses has been your longtime tax client. He has amassed an impressive portfolio of real estate, securities, and joint venture investments. His net worth is substantial.

Despite all his financial success, Mr. Gerbeuses wants to take on a new challenge—that of producing fine wines. He has not had any formal wine training but he has decided to start his own winery, named Cuvée de Prestige. He will pattern it after the great wine houses of Europe.

He already owns several hundred acres of agriculturally zoned land in the wine producing region of the Noir Valley. It happens to adjoin his home in the Wemadeit Country Club and Retirement Resort subdivision. He anticipates a life of semi-retirement by engaging in the art of malolactic fermentation and blending of his blanc de blancs and pinot noir grapes into his own estate wine. He expects his start-up capital investment to be over $5 million and does not expect the first harvest to take place for at least seven years after the initial planting of grape vines. He expects to offset any losses against his other income.

Assuming Mr. Gerbeuses comes to you for tax advice on his new wine venture, what tax and ethical issues should be considered?



Category 1:
(1) Income is not reported.
(2) Tier 1 expenses are Schedule A itemized deductions.(b)
(3) Tier 2 and 3 expenses are nondeductible.

Category 2:
(1) Income is reported on Schedule E.
(2) Tier 1 expenses allocated to rental use are deducted on Schedule E.
(3) Tier 1 expenses allocated to personal use are Schedule A itemized deductions.(b)
(4) Tier 2 and 3 expenses allocated to rental use are deducted on Schedule E to the extent of the remaining gross income from the rental.
(5) Remaining tier 2 and 3 expenses allocated to rental use are carried over to following year.
(6) Tier 2 and 3 expenses allocated to personal use are nondeductible.
(7) The passive loss rules do not apply.

Category 3:
(1) Income is reported on Schedule E.
(2) Tier 1 expenses allocated to rental use are reported on Schedule E.
(3) Tier 1 expenses allocated to personal use are Schedule A itemized deductions.(c)
(4) Tier 2 and 3 expenses allocated to rental use are deducted on Schedule E.
(5) The passive loss rules apply.

(a) Personal use is more than the larger of (1) 14 days or (2) 10% of rental days.
(b) In order for the interest to be deductible, it must be “qualified residence interest” (see Chapter I:8).
(c) Because the home does not meet the definition of a personal residence, the mortgage interest allocated to its personal use is not eligible as an itemized deduction (see Chapter I:8).

FIGURE I:6-4 ▶ Section 280A: Limitation of Deductions on Rental of Residential Property

The term “principal place of business” includes a home office used by the taxpayer for administrative or management activities of the business if no other fixed location exists where the taxpayer conducts these administrative or managerial activities. In addition, a separate structure not attached to the taxpayer’s house may qualify if regularly and exclusively used in connection with the taxpayer’s business. (See Chapter I:7 for a comprehensive discussion of these rules.)

TAX PLANNING CONSIDERATIONS

OBJECTIVE 7

Describe tax planning considerations for deductions and losses

HOBBY VERSUS BUSINESS

Deductions for expenses incurred in a hobby activity are not allowed as deductions. For an activity with both profit and personal motives, taxpayers should plan carefully to increase the prospect of meeting the presumptive test of profitability for the activity. That is, if the gross income exceeds the deductions from the activity in at least three out of five consecutive years (two out of seven for activities involving the breeding, training, showing, or racing of horses), tax law presumes the activity is a business, and the expenses of the activity are deductible. Taxpayers should use care in timing the realization of items of income and expense. For example, if an activity has shown a profit in only two out of the previous four

ETHICAL POINT

In some cases it is difficult to ascertain whether an activity is a trade or business or a hobby. A CPA should not prepare or sign a tax return unless he or she in good faith believes that the return takes a position that has substantial authority.

years, a taxpayer may consider accelerating some of the income into the fifth year or deferring some of the expenses of the activity into the following year. Under the cash method of accounting, the taxpayer can delay payment for some of the expenses or accelerate income-generating transactions. Note that meeting the three-out-of-five-year test does not automatically ensure the activity will be treated as a business. It merely compels the IRS to prove the activity is *not* a business. Under these circumstances, the IRS is less likely to challenge the deductions.

UNREASONABLE COMPENSATION

If the IRS feels that a salary payment to an officer of a corporation is excessive, it may recharacterize the excess portion as a dividend. If that happens, the corporation cannot deduct the full amount of the salary payment. To prevent a potential future disallowance, the parties may enter into a payback or hedge agreement, which provides that the employee must return to the corporation any payment held to be excessive. Under such an agreement, the employee receives a *for* AGI deduction for any amount he or she repays to the corporation. This deduction is available in the year of repayment. A payback agreement must meet the following requirements to be effective:

- The parties must enter into the agreement before actually making the payment.
- It must legally obligate the employee to repay the excess amount.[54]

The IRS may take the position that the existence of the payback agreement itself is evidence that the compensation is excessive. The corporation and employees can avoid this situation if they include the agreement in the general corporate bylaws rather than in a specific contract with a particular employee.[55]

TIMING OF DEDUCTIONS

Because of the time value of money, taxpayers generally prefer to deduct an expenditure as a current expense rather than capitalize it and spread the deductions over the next several years as depreciation or amortization. In some situations, however, the taxpayer may prefer to capitalize rather than expense a particular item. For example, if a taxpayer has net operating loss carryovers that are about to expire, a current deduction may prevent the use of these losses.[56]

In some cases it is difficult to determine whether an item should be treated as a capital expenditure or a deduction item (e.g., certain repairs may require capitalization). Because of this conflict, the Treasury has issued recent regulations that provide very detailed guidance on when an expenditure is to be capitalized and when it may be currently deducted. In addition, the taxpayer may elect to either capitalize or expense certain types of expenditures—such as those for start-up costs. A tax practitioner should give consideration to the taxpayer's tax situation when making this decision. In making this decision, taxpayers and their advisors should consider any pre-2018 NOL carryovers that might be expiring. They should also compare the taxpayer's current marginal tax rate with their anticipated future marginal tax rate.

---

[54] *Vincent E. Oswald*, 49 T.C. 645 (1968) and *J. G. Pahl*, 67 T.C. 286 (1976). See also *Ernest H. Berger*, 37 T.C. 1026 (1962).

[55] *Charles Schneider and Co. v. CIR*, 34 AFTR 2d 74-5422, 74-2 USTC ¶9563 (8th Cir., 1974). See also *Plastics Universal Corp.*, 1979 PH T.C. Memo ¶79,355, 39 TCM 32. Additionally, some taxpayers have been successful in defending their current level of compensation where they proved that they had been undercompensated in prior years. See *Acme Construction Co., Inc.*, 1995 RIA T.C. Memo ¶95,600, 69 TCM 1596.

[56] A net operating loss (NOL) arises when business expenses exceed business income for a year. NOLs generated in years before 2018 may be carried back two years and forward up to twenty years. NOLs generated in 2018, 2019, and 2020 can be carried back 5 years and carried forward indefinitely. NOLs generated after 2020 may be carried forward (only) without limitation. See Chapter I:9 for a discussion of NOLs.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 8

Describe compliance and procedural considerations for deductions and losses

PROPER CLASSIFICATION OF DEDUCTIONS

Individuals report trade or business expenses on Schedule C (Profit or Loss from Business or Profession). It is similar to an income statement for business-related income and expenses. Income reported on Form 1040 includes the net income computed on Schedule C, because the process of arriving at the taxable income from the business involves deducting business-related expenses. Thus, these expenses are deductions *for* AGI. Similar treatment is given to expenses attributable to the production of rental and royalty income reported on Schedule E. The other deductions *for* AGI are reported on Schedule 1 for Form 1040 as "Adjustments to Income."[57]

Deductions *from* AGI are reported on Schedule A.

A filled-in Schedule C is provided in Appendix B.

SELF-STUDY QUESTION

A professor in the Department of Accounting also teaches continuing education courses for the state CPA society as a sole proprietor. If she is a member of the state CPA society, are her dues deductible on Schedule C?

ANSWER

Certainly, she would prefer to have the dues deductible on Schedule C so that they will be deductible. This question demonstrates the difficulty of classifying some deductions, and the answer probably depends on the primary reason for membership in the organization.

PROPER SUBSTANTIATION

The burden of proving the deductibility of any expense generally rests on the taxpayer. This has always been the case. However, in recent years Congress and the IRS have become increasingly concerned about the propriety of many deductions. In the case of travel and entertainment expenses, the Code states that taxpayers may not take a deduction for an improperly documented expense. This documentation must include the amount of the expense, the time and place of the travel or entertainment activity, the business purpose, and the business relationship of the people entertained.

BUSINESS VERSUS HOBBY

When an activity has both profit-making and personal attributes, the burden is normally on the taxpayer to prove that the activity is a business. However, if a taxpayer can show that the activity has generated a profit in at least three out of five consecutive years (two out of seven for activities involving the breeding, training, showing, and racing of horses), the burden of proof shifts to the IRS. Because the statute of limitations generally runs three years after a return is filed for any particular year (i.e., for audit purposes the year closes and the IRS cannot assess any tax deficiency for that year), a potential problem exists for taxpayers who want to rely on this presumption during the first year or two of an activity's life. In these cases, the taxpayer may elect to defer the determination of whether the presumption applies until the fifth (seventh) year of operation. The election keeps the year in question open with respect to that activity until sufficient years have passed to allow for application of the presumptive test. If the taxpayer subsequently does not meet the presumptive test, the IRS can still assess a deficiency for that activity for the prior year, because the year is still open. A taxpayer makes the election by filing Form 5213 (Election to Postpone Determination as to Whether the Presumption That an Activity Is Engaged In for Profit Applies) within three years after the due date for the year in which the taxpayer first engages in the activity.

ADDITIONAL COMMENT

When a taxpayer elects to defer the determination of whether a particular activity is engaged in for profit, the statute of limitations is automatically extended for all years in the postponement period. However, the automatic extension applies only to items that might be disallowed under the hobby loss rules.

---

[57] Some of these expenses, such as moving expenses (Form 3903), are summarized on separate forms. These separate forms, however, are not net income statements in the same sense as Schedules C and E.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:6-1 Why is the distinction between deductions *for* AGI and deductions *from* AGI important for individuals?

I:6-2 Sam owns a small house that he rents out to students attending the local university. Are the expenses associated with the rental unit deductions *for* or *from* AGI?

I:6-3 During the year, Sara sold a capital asset at a loss of $2,000. She had held the asset as an investment. This is the only capital asset she sold during the year. Is her deduction for this capital loss a deduction *for* or a deduction *from* AGI?

I:6-4 Joe is a single, self-employed individual who owns his own business. During 2025, Joe reported $200,000 gross income and $60,000 of business expenses. He also paid $30,000 in alimony (divorced in 2017) to his former spouse, $4,000 mortgage interest on his personal home, $6,000 for health insurance premiums, and $2,000 for medicine and doctors. Ignoring any self-employment tax on the business income, what is Joe's AGI?

I:6-5 For 2025, Mario , age 35, a single individual with no dependents, receives income of $55,000 and incurs deductible expenses of $9,000.

- **a.** What is Mario's taxable income assuming that the expenses are deductions *for* AGI?
- **b.** What is Mario's taxable income assuming that the expenses are itemized deductions *from* AGI?

I:6-6 Deductible business or investment expenses must be related to a profit-motivated activity.

- **a.** What are the factors used in determining whether an activity is profit-motivated?
- **b.** Why are these factors so important in making this determination?

I:6-7 If an activity does not generate a profit in three out of five consecutive years, is it automatically deemed to be a hobby? Why or why not?

I:6-8 Because expenses incurred both in a business and for the production of investment income are deductible, why is it important to determine in which category a particular activity falls?

I:6-9 In order for a business expense to be deductible it must be *ordinary, necessary,* and *reasonable*. Explain what these terms mean.

I:6-10 What are the criteria for distinguishing between a deductible expense and a capital expenditure?

I:6-11 Why are expenses related to tax-exempt income disallowed?

I:6-12 Under what circumstances may a taxpayer deduct an illegal bribe or kickback?

I:6-13 Michelle pays a CPA $400 for the preparation of her federal income tax return. Michelle's only sources of income are her salary from employment and interest and dividends from her investments.

- **a.** Is the tax preparation fee a deductible expense? If so, is it a deduction *for* or *from* AGI?
- **b.** Assume the same facts as in Part a except that in addition to her salary and investment and dividend income, Michelle also owns a small business. Of the $400 fee paid to the CPA, $250 is for the preparation of her Schedule C (Profit or Loss from Business). How much, if any, of the $400 is a deductible expense? Identify it as either *for* or *from* AGI.

I:6-14 In March 2025, Otter Corporation sends people to the state capital to lobby the legislature to build a proposed highway that is planned to run through the area where its business is located.

- **a.** If Otter Corp. incurs $3,200 of expenses, what part, if any, of its expenses are deductible?
- **b.** Would it make a difference if the proposed road were a city road rather than a state highway, and Otter lobbied its local government?
- **c.** Assume the same facts in Part a except that Otter's total in-house expenses are $1,500. Are any of these expenses deductible?

I:6-15 During November and December of last year, Tommy's, Inc., incurred the following expenses in investigating the feasibility of opening a new restaurant in town:

Expenses for a market survey	$3,800
Expenses to identify potential suppliers of goods	$2,000
Expenses to identify a proper location	$1,000

Explain the proper treatment of these expenses under the following scenarios:

- **a.** Tommy's, Inc., already owns another restaurant in town and wants to expand. Tommy's, Inc. opens the new restaurant in February of the current year.
- **b.** Assume that Tommy's, Inc. is in the book selling business, and it wants to move into the restaurant business. It opens the restaurant in February of the current year.
- **c.** Same as Part b except Tommy's decides against opening a restaurant after the investigation.

I:6-16 What documentation is required in order for travel or entertainment expenses to be deductible?

I:6-17 Under what circumstances can prepaid expenses be deducted in the year of payment by a taxpayer using the cash method of accounting?

I:6-18 Under what circumstances would a taxpayer use both the cash method and the accrual method of accounting at the same time?

I:6-19 The timing of when the economic performance test is satisfied depends on the type of transaction and whether the transaction is recurring.

- **a.** When does economic performance occur for a taxpayer who must provide property or services to another person?
- **b.** When does economic performance occur when another person provides the taxpayer with property or services?
- **c.** Explain the exception to the economic performance test for recurring liabilities.

I:6-20 Why did Congress enact the wash sale provisions?

I:6-21 The wash sale rules disallow a loss in the year of sale when substantially identical stock or securities are acquired by the taxpayer within a 61-day period. What types of stock or securities are considered substantially identical?

I:6-22 Under Sec. 267, current deductions may not be taken for certain transactions between related parties.

- **a.** Who is considered a member of a taxpayer's family under the related party transaction rules of Sec. 267?
- **b.** Identify some of the other relationships that are considered related parties for purposes of Sec. 267. Why are these other relationships included in the definition?

I:6-23 Under the related party rules of Sec. 267, why has Congress imposed the concept of constructive ownership?

I:6-24 If property is sold at a loss to a related taxpayer, under what circumstances can at least partial benefit be derived from the disallowed loss?

I:6-25 Assume that Jill is engaged in painting as a hobby. During the current year, she earns $1,000 from sales of her paintings and incurs $1,300 expenses for supplies and lessons. Jill's salary from her job is $70,000. What is the tax treatment of the hobby income and expenses?

I:6-26 Under Sec. 280A, what constitutes personal use of a vacation home by the taxpayer?

I:6-27 Under Sec. 280A, how are expenses allocated to the rental use of a vacation home? In what order must the expenses be deducted against the gross income of the property?

I:6-28 Under Sec. 280A, how will a taxpayer report the income and expenses of a vacation home if it is rented out for only 12 days during the year?

ISSUE IDENTIFICATION QUESTIONS

I:6-29 David, a CPA for a large accounting firm, often works 10- to 12-hour days. As a requirement for his position, he must attend social events to recruit new clients. In addition to his job with the accounting firm, he also has private clients in his unincorporated marketing business. David purchased exercise equipment for $3,000. He works out on the equipment to maintain his stamina and good health that enable him to carry such a heavy workload. What tax issues should David consider?

I:6-30 Gus coaches several developing professional tennis players as an employee of the Central Tennis Training Camp (CTTC). In May of the current year, his ex-girlfriend Teresa (a tennis player former client), alleged sexual abuse by Gus and made a complaint against him. When Gus informed them of the situation, CTTC was disillusioned and concerned over the risk to the camp's reputation. Soon after, CTTC paid Teresa $50,000 to drop the complaint and to keep the entire matter confidential. CTTC incurred legal costs of $7,800 related to the matter. CTTC required Gus to acknowledge (sign) their intention to terminate his employment if the complaint and its settlement became public. Will the settlement payment and legal fees be allowed as tax deductions to CTTC? Explain.

I:6-31 Kathleen pays $3,000 mortgage interest on the home that she and her husband live in. Kathleen and her husband live with Molly, Kathleen's mother. The title to the home is in Kathleen's name. However, the mortgage is Molly's obligation. What tax issues should Kathleen consider?

I:6-32 Katie and Alan are avid boaters and water skiers. They also enjoy parasailing. This year, they started a new parasailing venture to provide rides to patrons. Katie and Alan are both employed full-time in other pursuits, but they take patrons out during the summer months, on weekends and holidays. Alan has attended classes on boat operation and parasailing instruction. Katie and Alan have owned a boat for four years, but because of the heavy usage this summer, they replaced their old boat in July. They plan to replace their boat with a new one every two years now. They use their boat in the parasailing activity and for recreational purposes. This year, Katie and Alan earned $5,400 from chartering activities and incurred $11,600 of expenses associated with their boating and parasailing. What tax issues should Katie and Alan consider?

PROBLEMS

I:6-33 ***For or From AGI Deductions.*** Roberta is a self-employed accountant. During the year, Roberta incurs the following unreimbursed expenses:

Item	*Amount*
Travel to client locations	$750
Subscriptions to professional journals	215
Taking potential clients to lunch	400
Photocopying	60
	$1,425

Identify which of these expenses are deductible and the amount that is deductible by Roberta. Indicate whether they are deductible *for* or *from* AGI.

I:6-34 ***For vs. From AGI.*** During 2025, Kent, a 40-year-old single taxpayer, reports the following items of income and expense:

Income:	
Salary	$150,000
Dividends from Alta Corporation	800
Interest income from a savings account	1,500
Rental income from a small apartment he owns	8,000
Expenses:	
Medical	6,000
Interest on a principal residence	7,000
Real property taxes on the principal residence	4,300
Charitable contributions	4,000
Loss from the sale of Delta Corporation stock (held for two years)	2,000
Expenses incurred on the rental apartment:	
Maintenance	500
Property taxes	1,000
Utilities	2,400
Depreciation	1,700
Insurance	800
Alimony payments to former wife (divorced July 21, 2018)	10,000

The amounts above are before any limitations. What is Kent's taxable income for the year?

I:6-35 ***Capitalization vs. Expense.*** Sam owns a small apartment building (this is the only rental building Sam owns). During the year Sam incurs the following expenditures:

Item	*Amount*
Replace roof and roof underlying structure because of building code requirements	$30,000
Repaint the interior	3,000
Repair door handles and door locks	1,000
Replace three broken windowpanes	1,500
Replace crumbling sidewalks and stairs because of building code requirements	25,000

Discuss the proper tax treatment for these expenditures.

I:6-36 ***Political Contributions and Lobbying Expenses.*** Eljay, LLP owns several apartment complexes and office buildings. The leasing and management of these buildings constitutes Eljay's only business activity. During 2023, Eljay incurred the following:

- $900 in airfare and lodging for a trip to Washington, D.C. The purpose of the trip was to protest proposed tax rate increases for individuals and corporations.
- $700 for renting space on billboards along the highway. The billboards express its concern regarding pending legislation that would significantly increase property taxes.
- $500 in airfare and hotel bills incurred on a trip to the state capital. The purpose of the trip was to meet with the legislative subcommittee on property taxation.
- $50 for a subscription to a political newsletter published by a national political party.
- $150 in making a presentation to the county council protesting a proposed increase in the property tax levy.

a. What is the total amount Eljay may deduct because of these expenditures?

b. Assume instead that Eljay did not travel to Washington, D.C. or to the state capital. Costs incurred were for billboard rental ($700), newsletter ($50), and presentation to the county council ($150). What amount may Eljay deduct because of these expenditures?

I:6-37 ***Legal and Accounting Expenses.*** Sam is a sole proprietor who owns, leases, and manages several apartment complexes and office buildings. During the current year, Sam incurs the following expenses. Which of these expenditures are deductible? Are they *for* or *from* AGI deductions?

a. $200 in attorney's fees for title searches on a new property Sam has acquired.

b. $450 in legal fees in an action brought to collect back rents.

c. $500 to his CPA for the preparation of his federal income tax return. $400 is for the preparation of Schedule C (Profit or Loss from Business).

d. $300 in attorney's fees for drafting a will.

e. $250 in attorney's fees in an unsuccessful attempt to prevent the city from rezoning the area of the city where several of his office buildings are located.

I:6-38 ***Illegal Payments.*** Damian Corporation is engaged in the business of purchasing and importing carpets. The carpets are imported from a country which the U.S. has banned as a source of imports. Following is a list of income and expense items for the year:

Item	*Amount*
Sales	$750,000
Cost of goods sold	270,000
Salaries	75,000
Freight	22,500
Bribes to customs officials	30,000
Lease payments on warehouses	15,000
Interest expense	12,000

a. What is the taxable income of Damian Corporation from the illegal business activity?

b. Assume the same facts as in Part a except that Damian's business consists of buying and selling illegal drugs. What is Damian's taxable income from this illegal business activity?

I:6-39 ***Illegal Payments.*** Indicate whether Glenda can deduct the $5,000 payment in each of the following independent situations.

a. Glenda is a supplier of medical supplies. In order to secure a large sales contract to the regional Veterans Affairs Hospital, Glenda makes a gift of $5,000 to the hospital's purchasing agent. The payment is illegal under state law.

b. Assume the same facts as in Part a, except that the payment is made to the purchasing agent of a government-owned hospital in Brazil.

c. Assume the same facts in Part a, except that the payment is made to the purchasing agent of a privately owned hospital in Idaho.

I:6-40 ***Business Investigation Expenditures.*** During January and February of the current year, Big Bang LLP incurs $13,000 in travel, feasibility studies, and legal expenses to investigate the feasibility of opening a new entertainment gallery in one of the new suburban malls in town. Big Bang already owns two other entertainment galleries in other malls in the area.

a. What is the proper tax treatment of these expenses if Big Bang decides not to open the new gallery?

b. Assume instead of an entertainment gallery, Big Bang incurred expenses to investigate opening an online retail store devoted to rental and sale of video games. What is the proper tax treatment of these expenses if Big Bang decides to open the new store on May 1 of the current year and makes the appropriate election under Sec. 195?

I:6-41 ***Business Investigation Expenditures.*** Assume the same facts as in Problem I:6-40, except that Big Bang LLP incurs $51,000 in expenses, and it does *not* already own the other entertainment galleries and it does not own anything similar.

a. What is the proper tax treatment of these expenses if Big Bang does not open the new gallery?

b. What is the proper tax treatment of these expenses if Big Bang decides to open the new gallery on May 1 of the current year and makes the appropriate election under Sec. 195?

I:6-42 ***Timing of Expense Recognition.*** Solutions Corporation, a computer vendor and consulting company, uses the accrual method of accounting. Its tax year is the calendar year. The following are three of the corporation's transactions during the current year:

1. Solutions Corporation hired a contractor to remodel its sales floor. The contractor completed the remodeling on November 30. On December 15, Solutions received a $5,000 bill from the contractor. Solutions immediately contacted the contractor to contest $1,000 of the total charges, arguing that it exceeded the price that was agreed upon. Solutions made no payment on the bill during its current tax year.
2. Solutions offers a 2-year warranty on all of its computer systems. For sales of computers in the current year, it paid $11,500 to service warranties during the current tax year, and it expects to pay $12,000 to fulfill the remaining warranty obligations next year.
3. Every year, Solutions offers a series of six trade seminars from November 1 through April 30. It receives all registration fees from participants by October 1, before the seminars begin. As of December 31, two of the six seminars are completed, and the next seminar is scheduled for January 14–15. The expenses incurred in performing the seminars are routine each year. On the first of each month from November through April, Solutions pays the $625 monthly rent for the seminar location. On September 16, Solutions signs a contract with the seminar teacher, a computers expert and excellent public speaker. The contract requires Solutions to pay the teacher $900 after each seminar, a total of $5,400. On October 3, Solutions signs a contract with a local printing company, which will provide text materials for the seminars. Solutions pays the printer $350 after each seminar's materials are delivered the day before the seminar. Solutions reports in year 1 only the revenue related to the first two seminars as earned by December 31 (Sec. 451(c) and Rev. Proc. 2004-34), with the balance earned in year 2, when the remaining 4 seminars are completed.

Required:

a. How should Solutions Corporation treat these transactions? What rules apply?
b. How would your answers change for each of the transactions if Solutions Corporation were a cash-method taxpayer?

I:6-43 ***Prepaid Expenses.*** Pamello, Inc., an engineering consulting firm, uses the cash method of accounting and is a calendar year taxpayer. Compute the amount of Pamello's current year deductions for the following transactions:

a. On November 1 of the current year, it entered into a lease to rent some office space for five years. The lease agreement states that the lease payments are $12,000 per year, payable in advance each November 1 for the following 12-month period. Under the terms of the lease, Pamello is required to pay a $5,000 deposit, refundable upon the termination of the lease.
b. On December 1 of the current year, Pamello also renewed its malpractice insurance, paying $18,000 for the three-year contract.
c. On December 31 of the current year, Pamello mailed out a check for $5,000 for drafting services performed for it during the current year by an individual who lives in another city.
d. On December 31, the firm received a shipment of $700 worth of stationery and other office supplies. Pamello has an open charge account with the office supply company, which bills the firm monthly for charges made during the year.
e. On December 31, Pamello picked up some work that a local printing company had done for it, which amounted to $1,000. The firm charged the $1,000 with its corporate credit card.

I:6-44 ***Prepaid Interest.*** During the current year, Richard and Alisha, a married couple who use the cash method of accounting, purchased a principal residence for $320,000. They paid $40,000 down and financed the remaining $280,000 of the purchase price with a 30-year mortgage. At the closing, they also paid $500 for an appraisal, $500 for a title search, and 1.5 points representing additional interest over the term of the loan. At the end of the year, Richard and Alisha received a statement from the mortgage company indicating that $12,000 of their total monthly payments made during the year represents interest and $1,000 is a reduction of the principal balance.

a. What is the total amount Richard and Alisha may deduct in the current year arising from the purchase and ownership of their home?
b. What is the treatment of the other items that are not deductible?

I:6-45 ***Wash Sales.*** John Broward owns 1,500 shares of Silver Fox Corporation common stock. John purchased the 1,500 shares on April 17, 2011, for $21,000. On December 8, 2024, John sells 750 shares for $5,000. On January 2, 2025, John buys 250 shares of Silver Fox Corporation common stock for $1,750 and 50 shares of Silver Fox Corporation preferred stock for $1,000. The preferred stock is nonvoting, nonconvertible.

a. What is John's realized and recognized loss on the December 8 sale of stock?
b. What is his basis and the holding periods of the shares purchased in 2011 and in 2025?

I:6-46 ***Wash Sales.*** Mr. Cougar owns 1,000 shares of Western Corporation common stock, which was purchased on March 8, 2011, for $12,000. In 2025, Mr. Cougar buys and sells Western

Corporation stock as follows. On October 3, Cougar purchases an additional 300 shares for $3,000. On October 12, he sells the original 1,000 shares acquired in 2011 for $8,500. On November 1, he purchases an additional 500 shares for $4,000.

a. What is Mr. Cougar's recognized gain or loss as a result of the sale on October 12?
b. What are the basis and the holding period of the stock he continues to hold?
c. How would your answers to Parts a and b change if the stock Cougar purchases during 2025 is Western nonvoting, nonconvertible, preferred stock instead of Western common stock?

I:6-47 ***Constructive Ownership.*** During the current year, Troy sells land to Berry Corporation for $165,000. Troy purchased the land for investment in 2002 for $170,000. Berry Corporation is owned as follows:

Owner	*Percentage Ownership*
Tom (Troy's son)	20%
Jimmy (Troy's cousin)	15%
Jimmy's father (Troy's uncle)	30%
Angie (Troy's wife)	10%
Nicole (Angie's Sister)	25%

Troy and Jimmy are equal partners in a separate entity, TJ Partnership.

a. What is Troy's constructive ownership in Berry Corporation?
b. What is the amount of loss Troy may recognize?
c. How would your answers to Parts a and b change if TJ Partnership owned 25%, instead of Nicole?

I:6-48 ***Constructive Ownership.*** PIB Partnership is owned 20% by Sara, 40% by Steve, and 40% by Thann. Burnham, Inc. is owned 70% by PIB Partnership, 10% by Ralph, 10% by Thann, and 10% by Sara. Ralph and Thann are brothers. All other individuals are unrelated. During the current year, Ralph sold a piece of land to Burnham, Inc., for $90,000. Ralph originally purchased the land as an investment a few years ago for $100,000.

a. How much of the loss may Ralph recognize?
b. Now assume all the same facts except that the sale occurred between Thann and Burnham, Inc. How much of the loss may Thann recognize?
c. Now assume the same facts as in b except that Burnham, Inc., is owned 60% by Sara and 40% by Ralph. Thann sells the land to Burnham, Inc. How much of the loss may Thann recognize?

I:6-49 ***Related Party Transactions.*** Sally is an attorney who computes her taxable income using the cash method of accounting. Sage Corporation, owned 40% by Sally's brother, 40% by her cousin, and 20% by her grandmother, uses the accrual method of accounting. Sally is a calendar-year taxpayer, whereas Sage Corporation's fiscal year ends on January 31. During 2025, Sally does some consulting work for Sage Corporation for a fee of $10,000. The work is completed on December 15 and Sage receives Sally's invoice on that date. For each of the following assumptions, answer the following questions: During which tax year must Sally report the income? During which tax year must Sage Corporation deduct the expense?

a. The payment to Sally is made on December 27, 2025.
b. The payment to Sally is made on January 12, 2026.
c. The payment to Sally is made on February 3, 2026.

I:6-50 ***Related Party Transactions.*** During the current year, CVI Corporation sells a tract of land for $75,000. The sale is made to Sandi, CVI Corporation's sole shareholder. CVI Corporation originally purchased the land five years earlier for $98,000.

a. What is the amount of gain or loss that CVI Corporation will recognize on the sale during the current year?
b. Assume that in the following year, Sandi sells the land for $85,000. What is the amount of gain or loss Sandi will recognize? What are the tax consequences to CVI Corporation upon the subsequent sale by Sandi?
c. Assume that in the following year, Sandi sells the land for $70,000. What is the amount of gain or loss Sandi will recognize?
d. Assume that in the following year, Sandi sells the land for $105,000. What is the amount of gain or loss Sandi will recognize?

I:6-51 ***Hobby Loss Presumptive Rule.*** Rachel Schurtz is a high school English teacher. In her spare time, she likes to make her own body lotion, lip gloss, and bath and shower gel. She uses the bath products herself and gives them to her friends and relatives as gifts. Two years ago, Rachel started attending arts and crafts festivals three or four times a year to sell her products. She hands out her business card so her customers can buy directly from her via phone, email, or internet. In 2023 (the first year), Rachel reported a net loss of $375 from the activity. In 2024, she reported a loss of $460. Rachel is audited for the year 2024, and the agent disallows the $460 loss. Rachel is confident she will make a profit on her sales in 2025, and she assumes she will continue to make a profit in future years. Rachel is not sure that she can prove that her activity is a business right now. What can she do to delay or avoid having to prove to the IRS that her loss is not a hobby loss?

I:6-52 ***Hobby Loss Presumptive Rule.*** Emily is an interior decorator who does consulting work for several furniture stores. Additionally, she has been designing and creating rubber stamps for the past several years. She sells the stamps to local stationary and novelty shops. Emily has reported the following net income or loss from the rubber stamp activity:

Year	*Net Income (Loss)*
2020	$ 300
2021	(900)
2022	(400)
2023	600
2024	(550)
2025	(800)

Emily is audited for the year 2025, and the agent disallows the $800 loss. Can Emily make an election for 2025 to keep the year open in anticipation of meeting the presumptive rule for the year? Why or why not?

I:6-53 ***Hobby Losses.*** Chuck, a dentist, raises prize rabbits for breeding and showing purposes. Assume that the activity is determined to be a hobby. During the current year, the activity generates the following items of income and expense:

Items	*Amount*
Sale of rabbits for breeding stock	$800
Prizes and awards	300
Property taxes on rabbit hutches	(200)
Feed	(600)
Veterinary fees	(500)
Depreciation on rabbit hutches	(250)

a. What is the total amount of income and deductions Chuck should report for the current year with respect to the rabbit raising activities?

b. Identify which expenses may be deducted and indicate whether they are deductions *for* or *from* AGI.

c. By what amount is the cost basis of the rabbit hutches to be reduced for the year?

I:6-54 ***Rental of Vacation Home.*** During the current year, Kim incurs the following expenses with respect to her beachfront condominium in Hawaii:

Expense Items	*Amount*
Insurance	$ 500
Repairs and maintenance	700
Interest on mortgage	3,000
Property taxes	1,000
Utilities	800
Depreciation	$8,000

During the current year, Kim used the condominium 20 days for vacation. She rented it out for a total of 60 days, generating a total gross income of $9,100.

a. What are the total amounts of deductions for and from AGI that Kim may take with respect to the condominium using the IRS allocation method?

b. What is the effect on the basis of the condominium?

I:6-55 ***Rental of Vacation Home.*** Assume all of the same facts as in Problem I:6-54, except that during the year Kim rents the condominium a total of 14 days and uses it for her vacation for 3 days. How does Kim report the income and deductions from the property?

COMPREHENSIVE PROBLEMS

I:6-56 Bryce, a bank official, is 40 years old, unmarried and has no dependents. During 2025 he engages in the following activities and transactions:

a. Being an avid fisherman, Bryce develops an expertise in tying flies. At times during the year, he is asked to conduct fly-tying demonstrations, for which he is paid a small fee. He also periodically sells flies that he makes. Though a hobby, the income generated from these activities during the year is $2,500. The expenses for the year associated with Bryce's fly-tying activity include $125 personal property taxes on a small trailer that he uses exclusively for this purpose, $2,900 in supplies, $270 in repairs on the trailer, and $200 in gasoline for traveling to the demonstrations.

b. Bryce sells a small building lot to his brother for $40,000. Bryce purchased the lot four years ago for $47,000, hoping to make a profit.

c. Bryce enters into the following stock transactions in the current year: (None of the stock qualifies as small business stock.)

Date	*Transaction*
March 22	Purchases 100 shares of Silver Corporation common stock for $2,800.
April 5	Sells 200 shares of Gold Corporation common stock for $8,000. The stock was originally purchased two years ago for $5,000.
April 15	Sells 200 shares of Silver Corporation common stock for $5,400. The stock was originally purchased three years ago for $9,400.
May 20	Sells 100 shares of United Corporation common stock for $12,000. The stock was originally purchased five years ago for $7,000.

d. Bryce's salary for the year is $100,000. In addition to the items above, he makes $5,000 in cash contributions to Main Lutheran Church and pays $4,800 of state income tax.

Determine the following:

1. Bryce's taxable income for 2025.

2. Bryce's basis in the Silver stock he continues to own.

I:6-57 Using the following facts, determine Jaron's 2025 taxable income.

1. Almost two years ago, when his wife died, Jaron left the CPA firm he was working for and started his own practice so he could have more time to spend with his four children (ages 14, 16, 19, and 24 years old). The three younger children live at home with their father. Danny, Jaron's 19-year-old son, graduated from high school a year ago and is currently working at a local golf course. Danny earned $17,000 in the current year. Jaron's oldest daughter, Laura, is married and lives in town with her husband, Chad. Laura graduated from college two years ago and now works for a local advertising agency.

2. Jaron rents a small office downtown where he meets with clients and conducts business. He keeps all his client files and business records in this office. In the evening, he uses a converted bedroom in his home as his office. The following expenses are allocated to his home office (by square feet):

Depreciation	$2,150
Taxes	$1,500 ($3,600 for non-office portion of his home)
Utilities	$75

3. Jaron owns a condominium downtown. He rented it out 270 days during the year. He also allowed Laura and her husband to stay in the home rent-free for 24 days while they were looking for a home. Fortunately, the condominium was not rented during the time they needed it. The following items of annual income and expense relate to the condominium:

Rental income	$18,000
Mortgage interest	($3,150)
Taxes	($1,700)
Other expenses	($6,000)
Depreciation	($7,090)

4. On April 6, Jaron sold a parcel of land he had held for investment to a real estate development firm for $75,000. He purchased the land three years earlier from his brother for $70,000. His brother had originally purchased the land for $74,000.

5. On May 1, Jaron purchased 1,000 shares in Genomics Ltd. for $10 per share. In December he was forced to sell all 1,000 shares at $8 per share to avoid a conflict of interest.

6. Jaron reported the following items of income and expense from his consulting practice:

Consulting fees received	$185,000
Wages expense	(47,400)
Rent expense	(20,000)
Depreciation	(2,100)
Other expenses	(17,000)

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:6-58 Danielle Anderson, your client and a cash method taxpayer, works full-time at a music store located in a mall. She assists the manager in buying decisions, serves customers on the sales floor, and plays music to draw in customers. On the weekends, she plays in various orchestras, working as an independent contractor. She does not work under a business name, maintain an office, or maintain a separate bank account for her performing activities. She always pays her bills as soon as possible, well before the bill due date. In prior years, she has taken every allowable deduction related to the performing activities. Prior year returns show the following on her Schedule C:

2021	$(5,000)
2022	2,100
2023	3,000
2024	(1,800)

Danielle has come to you on December 12, 2025. She understands that the IRS can deny losses generated by her performing business if it determines the business is actually a hobby. Because of the uncertainty of the entertainment industry, she will likely continue to generate profits in some years and losses in others. Still, she continues the activities with the intent to earn a profit.

Danielle routinely sends bills to orchestra clients at the end of the month for work she performed during the month. Most of her clients, including the Springville Orchestra, send payment within ten days of when they receive her bill.

The following is a summary of the financial position of the business as of December 12, 2025:

Income received to date	$9,000
General expenses paid to date	(9,200)
Other Items:	
Bill for refurbishing work on cello, due in January 2026	$(300)
Newspaper bill for monthly advertisement, due in January 2026	(200)
Printer bill for business cards, due in January 2026	(500)
Meals eaten while in transit to performance locations	(150)
Income receivable for December 2025 performance with the Springville Orchestra	1,000

What will you recommend to your client? What issues must you address? What actions will you take to ensure the most favorable tax outcome possible? What advice, if any, will you give your client for the future?

I:6-59 Peter Baumann, your client, wants to sell a printing press to Chamberlain Corporation for $50,000. Pete has used the press in his business for two years and its adjusted basis equals $90,000. The Coxmann Partnership; Chloe International, Inc.; Watts, Inc., and Raleigh Corporation own Chamberlain Corporation equally. Pete and Emily Cox each own 50% of the Coxmann Partnership. Emily owns 70% of Chloe International, Inc., and Pete's sister Susan owns the other 30%. Pete's brother, Brian, owns 100% of Watts, Inc. Wade and Catherine Chamberlain, friends of Pete, own Raleigh Corporation equally. Peter wants to know what the tax consequences will be if he sells the printing press to Chamberlain Corporation. In a memo to Pete, explain any tax consequences of the proposed sale and any alternatives that would provide a better result.

TAX FORM/RETURN PREPARATION PROBLEMS

I:6-60 Dave Stevens, age 34, is a self-employed physical therapist. His wife Sarah, age 31, teaches English as a Second Language at a local language school. Dave's Social Security number is 111-11-1111. Sarah's Social Security number is 222-22-2222. Sarah and Dave have three children—Andrew, age 8; Isaac, age 6; and Mira, age 3. The children's Social Security numbers are, respectively, 333-33-3333, 444-44-4444, and 555-55-5555. They live at 12637 Pheasant Run, West Bend, Oregon 74658. They paid $8,900 in qualified residence interest and $2,400 in property taxes on their home. They had cash charitable contributions of $14,000. They also paid $180 to a CPA for preparing their federal and state income tax returns for the prior year, $100 of which was for the preparation of Dave's Schedule C. Sarah and Dave earned interest on CDs of $3,200. Sarah's salary for the year is $32,000, from which $9,600 in federal income tax and $1,400 in state income tax were withheld. Dave's office is located at Suite 402, 942 Woodview Drive, Portland, Oregon 74624, and his employer ID number is 11-1111111. Dave has been practicing for four years, and he uses the cash method of accounting. During 2024, Dave recorded the following items of income:

Revenue from patient visits	$300,000
Interest earned on the office checking balance	225

The following expenses were recorded for the office:

Property taxes	$ 4,500
Mortgage interest	12,000
Depreciation	4,500
Malpractice insurance	37,500
Utilities	3,750
Office staff salaries	51,000
Rent payments on equipment	15,000
Office magazine subscriptions	150
Office supplies	24,000
Medical journals	330

Dave pays $50 annually for use of a safety deposit box to store certain confidential documents related to his business. In addition to his medical practice, Dave spends 15 hours every week managing his real estate investments. To make sure he is aware of all current investment strategies and best practices, he subscribes to the following journals:

Wall Street Journal	$150
U.S. News & World Report	55
Money Magazine	45

Dave also prepaid $33,000 in estimated federal income taxes. Prepare Dave and Sarah's 2024 tax return (Form 1040, Schedules 1, 2, 3, A, B, C, SE, and Form 8995). Disregard any tax credits for which they may be eligible and assume the couple has no transactions involving virtual currency.

I:6-61 Lyle and Kaye James are married, have two minor children, Jessica, age 8 and Jerron, age 4, and are filing a joint tax return in the current year. They are both employed. Lyle and Kaye, ages 38 and 37, respectively, have combined salaries of $240,000, from which $48,000 of federal income tax and $10,000 of state income tax are withheld. Lyle and Kaye own two homes. Their primary residence is located at 11620 N. Mount Ave., New Haven, Connecticut 22222, and their vacation home is on the beach in Fort Lauderdale, Florida. They often rent their vacation home to supplement their income. The following items are related to the two homes:

Item	*New Haven*	*Fort Lauderdale*
Rental income	$ —	$15,000
Mortgage interest expense	7,200	5,000
Property taxes	1,400	1,000
Utilities	1,000	1,300
Repairs	200	300
Depreciation	0	3,500
Advertising	0	200
Insurance	1,500	1,500

The James family used their Fort Lauderdale home 20 days during the year. They rented the vacation home 60 days during the year.

Lyle and Kaye jointly own an investment portfolio (which does not include any virtual currency) and have the following transactions in the current year. None of the stocks qualifies as small business stock.

Date	*Transaction*	*Price Paid/Sold*
2/15	Bought 50 shares of Lake common stock (they own no other Lake stock)	$1,000
5/14	Bought 100 shares of Bass common stock (they own no other Bass stock)	3,000
5/24	Sold 25 shares of Lake common stock	250
5/27	Bought 50 shares of Lake common stock	900
	Sold 50 shares of Bass common stock	1,750
7/12	Bought 100 shares of Bass common stock	2,800

The James' have no other income or expense items. Lyle and Kaye's Social Security numbers are 111-22-3333 and 444-55-6666, respectively. Jessica and Jerron's Social Security numbers are 123-45-6789 and 888-99-1010. They use the IRS method of allocating all expenses between personal and rental use.

Prepare the James' income tax return Form 1040, Schedules 1, A, C, D, and SE for 2024 using the currently available forms and rates. Disregard the alternative minimum tax and any tax credits for which they may be eligible.

I:6-62 Scarlet Furniture Corporation, an accrual-method taxpayer, retails custom office furniture. On January 1 of the current year, Peter Marlin and John Tanner incorporated Scarlet Furniture Corporation. Peter transferred $350,000 cash for 70% of Scarlet's outstanding stock, and John transferred $150,000 cash for 30% of the outstanding stock. Scarlet generated the following financial statements at the end of its first year of operations:

Scarlet Corporation's Balance Sheet

Assets	
Cash	$ 91,400
Inventory	48,000
Other Current Assets	50,000
Office Equipment	170,000
Building	250,000
Accumulated Depreciation	(20,000)
Land	550,000
Total Assets	$1,139,400
Liabilities and Owner's Equity	
Accrued Expenses	$ 100,000
Long Term Debt	400,000
Common Stock	500,000
Retained Earnings	139,400
Total Liabilities and Owners' Equity	$1,139,400

Scarlet Corporation's Income Statement

Revenues	$650,000
Costs of Goods Sold	100,000
Gross Income	$550,000
Advertising Expense	40,000
Depreciation Expense	20,000*
Miscellaneous Expense	10,600**
Office Supplies	5,000
Property Tax Expense	60,000
Wages & Salaries Expense	135,000***
Warranty Expense	10,000****
Operating Income	$269,400
Interest Expense	30,000
Federal Income Tax Expense	100,000
Net Income	$139,400

*Depreciation expense for tax purposes was $120,441 because Scarlet made a Sec. 179 election to expense $105,000 of the cost of the equipment purchased this year. (Total cost = $170,000.)

**Miscellaneous expense relates to a $600 penalty fee as a result of a breached customer contract and a $10,000 fine assessed by OSHA for hazardous conditions in its storage facility.

***Wages and salary expense includes Peter's salary of $40,000 and the accrual of $15,000 of bonuses payable to Peter which Scarlet actually paid on February 10 of the following year.

****The actual expenditure paid for warranty repairs during the year is $2,000.

Scarlet does not make any sales or purchases on account. Scarlet's employer identification number is 12-3456789. Its address is 789 Presidential Way, Seattle, Washington 54789. Peter Marlin's Social Security number is 555-66-8888. During the current year, the Corporation made federal estimated income tax payments of $50,000.

Prepare a Form 1120 for the initial return for Scarlet.

CASE STUDY PROBLEM

I:6-63 John and Kathy Brown have just been audited and the IRS agent disallowed the business loss they claimed in 2024. The agent asserted that the activity was a hobby, not a business.

John and Kathy live in Rochester, New York, near Lake Ontario. Kathy is a CPA, and John was formerly employed by an insurance firm. John's firm moved in 2020 and John resolved not to move to the firm's new location. Instead of seeking other employment, John felt he could supplement his income by using his fishing expertise. He had been an avid fisherman for 15 years, and he owned a large Chris-Craft fly-bridge that he chartered to paying parties.

In 2020, Kathy and John developed a business plan, established a bank account for the charter activities, developed a bookkeeping system, and acquired insurance to cover the boat and the passengers. John fulfilled all the requirements to receive a U.S. Coast Guard operating license, a New York sport trolling license, and a seller's permit. These licenses and permits were necessary to legally operate a charter boat. The first year of their activity was 2020.

John advertised in local papers and regional sport fishing magazines. He usually had three or four half-day paying parties each week. John spent at least one day per week maintaining and repairing his boat. Kathy usually accompanied John on charters three or four times each year.

John's charter activity was unprofitable the first two years. In 2021, John and Kathy restructured the activity to improve profitability. The restructuring included increasing advertising, participating in outdoor shows, and negotiating small contracts with local businesses. After the restructuring, the activity provided a small profit in 2022 and 2023.

In 2024, John started working with another insurance company in the area on a full-time basis. Even though he returned to the insurance business, John normally took two paying parties and one nonpaying, promotional party each week throughout the fishing season. John's costs unexpectedly increased and he lost $8,000 in the activity during 2024. John and Kathy deducted the entire loss on Schedule C of their 2024 tax return.

Required: Prepare a memo to the Browns recommending what position they should take and why. Show the logic used in arriving at your recommendation.

TAX RESEARCH PROBLEMS

I:6-64 Richard Penn lives in Harrisburg, Pennsylvania. Richard is the president of an architectural firm. Richard has become known throughout the community for excellent work and honesty in his business dealings. Richard believes his reputation is an integral part of the success of the firm.

Oil was found recently in the area around Harrisburg and some geologists believed the reserves were large. A few well-respected businesspeople organized Oil Company to develop a few wells. Although some oil was being extracted, the oil corporation lacked capital to develop the oil fields to their expected potential. After reading the geologists' report, Richard felt that Oil Company was a good investment; therefore, he acquired 25% of the company. A short time after Richard's acquisition, the price of foreign oil decreased sharply. The drop in foreign oil prices caused Oil Company to be unprofitable due to its high production costs. Three months later Oil Company filed bankruptcy.

The bankruptcy proceedings were reported in the local newspaper. Many of Oil Company's creditors were real estate developers that engaged Richard's architectural firm to provide designs. After Oil Company declared bankruptcy the architectural firm's business noticeably decreased.

Richard felt the decline in business was related to the bankruptcy of Oil Company. Richard convinced his partner to use the accumulated earnings of the firm to repay all the creditors of Oil Company.

Richard has asked you whether his firm can deduct the expenses of repaying Oil Company's creditors. After completing your research explain to Richard why the expenses are or are not deductible.

I:6-65 Three years ago, Paul Wilde exercised all his stock options in the start-up company he helped establish and walked away with over $100 million. Since that time, he has spent all his energy, time, and effort in managing his portfolio. His investment philosophy is one of steady, careful investment in a well-balanced portfolio. Thus, although each year he engages in several sales and purchases, he generally buys and holds the securities for both the dividends and the growth potential. Consequently, most of the stock sales he makes are of securities he has held for over one year. Because his investment activities have grown so large, this year he rented a suite of offices and hired two investment advisors and five secretaries to help him. He also purchased several new computers and some new office furniture for the office.

Paul has now come to you for some tax help. Specifically, he would like to know if his activities are considered a business or an investment activity. In your explanation, please include whether the expenses incurred in the activity are deductions *for* or *from* AGI.

CHAPTER

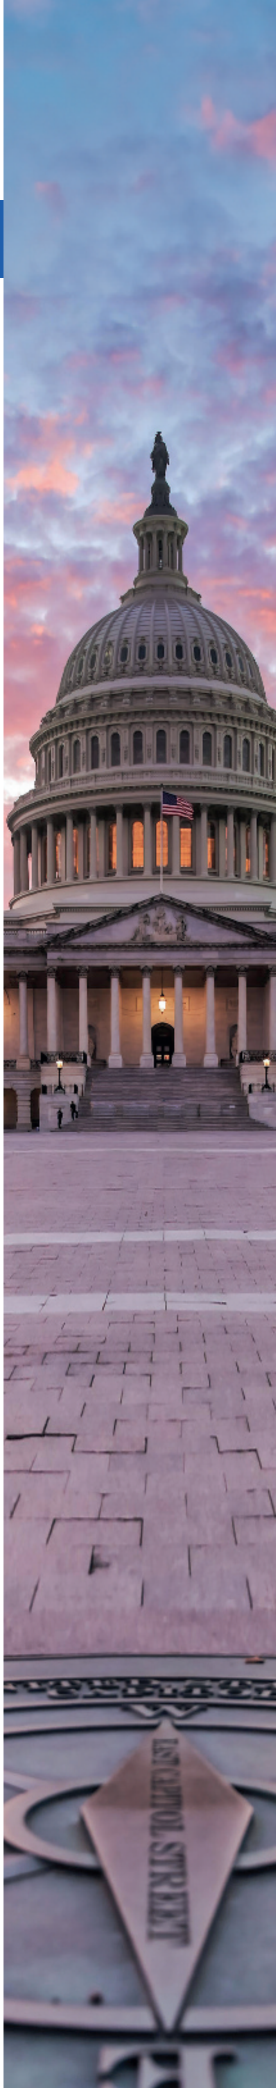
7

BUSINESS EXPENSES AND DEFERRED COMPENSATION

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Understand the deductibility of business and rental real estate activities
2. Distinguish the classifications of employees and independent contractors
3. Determine the proper deductible amount for travel expenses
4. Understand the deductibility of transportation expenses
5. Understand the deductibility of business meals
6. Identify deductible moving expenses
7. Describe the requirements for deducting education expenses
8. Determine whether the expenses of an office in home meet the requirements for deductibility and apply the gross income limitations
9. Discuss the tax treatment and requirements for various deferred compensation arrangements
10. Describe tax planning considerations for business expenses and deferred compensation
11. Describe compliance and procedural considerations for business and deferred compensation expenses



James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Part I: Self-Employed Expenses...7-2
Business and Rental Real Estate Expenses...7-2
Self-Employed Individual Versus Employee...7-3
Travel Expenses...7-4
Transportation Expenses...7-9
Meals and Entertainment Expenses...7-12
Moving Expenses...7-14
Education Expenses...7-15
Office in Home Expenses...7-17
Part II: Deferred Compensation...7-20
Tax Planning Considerations...7-37
Compliance and Procedural Considerations...7-38

This chapter discusses the tax consequences of two types of individual and business expenses:

- Part I: Expenditures incurred by individual taxpayers in connection with a trade or business or certain expenses that are classified as Adjustments to Income.
- Part II: Deferred compensation payments made to employees, including retirement plans.

As discussed in Chapter I:6, all tax-deductible expenses incurred by an individual taxpayer must be classified as either (1) *for* AGI deductions or (2) *from* AGI deductions (itemized deductions). *For* AGI deductions are discussed in this chapter, and itemized deductions are covered in Chapter I:8.

Deferred compensation refers to methods of compensating employees or self-employed persons that are based on their current service, but the actual payments are deferred until future periods. Deferred compensation arrangements are very popular and widely used in business. The two principal types of deferred compensation arrangements are qualified plans and nonqualified plans. Qualified plans, such as pension and profit-sharing plans, have very favorable tax benefits but also impose strict eligibility and coverage requirements. Nonqualified plans, while not as tax advantageous as qualified plans, are very useful for highly compensated employees. Both of these types of deferred compensation arrangements are discussed later in this chapter.

PART I: SELF-EMPLOYED EXPENSES

Part I of this chapter (through page I:7-20) deals with expenses classified as *for* AGI deductions. These deductions are reported on Schedule 1 of Form 1040.

For AGI deductions can be classified into two principal categories: (1) expenses connected with a trade or business and reported on Schedule C, expenses connected with rental real estate or royalties and reported on Schedule E, and expenses connected with farm income and reported on Schedule F; and (2) various types of expenses of individuals referred to as "adjustments to income" as shown on Schedule 1 of Form 1040. Schedule 1 of Form 1040 is presented in Figure I:7-2 near the end of this chapter.

As will be discussed in more detail in Chapter I:8, substantial changes to itemized deductions were made for the taxable years 2018–2025. The two most important changes were (1) a limitation on the deductibility of taxes paid to a maximum of $10,000, and (2) the elimination of **miscellaneous itemized deductions**. Most important for this chapter is the nondeductibility of employee business expenses as a miscellaneous itemized deduction.

BUSINESS AND RENTAL REAL ESTATE EXPENSES

OBJECTIVE 1

Understand the deductibility of business and rental real estate activities

As mentioned above, expenses connected with a business or rental real estate generally are tax-deductible if they are ordinary, necessary, and reasonable in amount under Sec. 162 of the IRC. In other words, for business expenses to be deductible, they need not be specifically identified in the tax law; they just must meet the general criteria of ordinary, necessary, and reasonable in amount. These expenses are netted against the income from the activity and reported as Additional Income on Schedule 1 of Form 1040. Many individual taxpayers work as consultants or independent contractors and are commonly referred to as *self-employed individuals*. These taxpayers are not employees, but they work directly with their own customers and clients; their activity is considered a trade or business and is reported on Schedule C of Form 1040. Similarly, expenses connected with rental real estate property are also tax deductible and reported as a *for* AGI deduction under Sec. 62(a)(4) of the IRC and are reported in Schedule E of Form 1040. While any expense connected with a business or rental real estate activity is deductible if ordinary, necessary, and reasonable in amount, some of the more frequently encountered expenses discussed in this chapter include:

- Travel
- Transportation

ADDITIONAL COMMENT

"The income tax has made more liars out of the American people than golf has. Even when you make a tax form on the level, you don't know when it's through if you are a crook or a martyr."
—Will Rogers

- Meals and entertainment
- Moving
- Education
- Office in home

Each of these types of expenses are discussed in this chapter. Other types of *for* AGI deductions referred to as Adjustments to Income on Schedule 1 of Form 1040, including Individual Retirement Accounts (IRAs), self-employed retirement plans, and Health Savings Accounts are covered in Part II of this chapter.

SELF-EMPLOYED INDIVIDUAL VERSUS EMPLOYEE

OBJECTIVE 2

Distinguish the classifications of employees and independent contractors

An individual who provides services for another person or entity may be classified either as an employee or as a self-employed individual (also referred to as an independent contractor). If the individual is classified as self-employed, expenses are deductible *for* AGI under Sec. 162, and are reported on Schedule C of Form 1040. As discussed below, expenses of employees are not deductible. In addition to the deductibility of expenses, the proper classification is also important due to employment taxes, such as Social Security and Medicare taxes. As is discussed below, self-employed taxpayers must pay both the employee and employer shares of Social Security and Medicare taxes.

EMPLOYEE EXPENSES

Major changes to employee expenses, referred to as employee business expenses, were enacted in late 2017. Effective for 2018 and future years through 2025, employee business expenses are no longer deductible. Under prior law, such expenses were deductible as miscellaneous itemized deductions. Most provisions of the 2017 tax law change pertaining to individual taxpayers are effective after December 31, 2017 and before January 1, 2026. So the miscellaneous itemized deductions for individuals are suspended rather than repealed and are scheduled to return in 2026. In contrast, the new tax law had little impact to self-employed individuals. Deductions continue to be allowed as a *for* AGI deduction.

Employer–Employee Relationship Defined. The Treasury Regulations provide that an employer–employee relationship generally exists where the employer has the right to control and direct the individual who provides services with regard to the end result and the means by which the result is accomplished.[1]

EXAMPLE I:7-1 ▶ Carmen is a nurse who assists a group of doctors in a clinic. Carmen is under the direct supervision of the doctors and is told what procedures to perform and when to perform them. Therefore, Carmen would be classified as an employee. ◀

EXAMPLE I:7-2 ▶ Carol is a registered nurse who provides in-home services to several elderly patients. She receives instructions from the patients' doctors regarding such items as medications and diet, but Carol is directly responsible for the delivery of nursing care and is in control of the end result. Thus, Carol would be classified as self-employed. ◀

ADDITIONAL COMMENT

Anyone in a trade or business making payments of $600 or more to an independent contractor during a year must file Form 1099-MISC.

Importance of Proper Classification. As mentioned above, proper classification is important both to employers and employees. If an individual is classified as an employee, the employer must match the Social Security and Medicare taxes that are paid by the employee. In addition, employers are generally liable for unemployment taxes for their employees. Thus, an employer must pay these employment taxes to the federal and/or state governments in addition to the wages, which means that the cost of an employee generally is higher than for a nonemployee.

---

[1] Reg. Sec. 31.3401(c)-1(b).

ADDITIONAL COMMENT

The maximum limit for OASDI ($176,100 for 2025) continues to increase rapidly. There is some support to eliminate the OASDI limit, thereby imposing the 6.2% rate to all earned income.

If an individual is *not* considered to be an employee, the individual is classified as self-employed (also called an independent contractor). Amounts paid to a self-employed individual are not considered to be wages and the payor is not responsible for any employment taxes. However, the self-employed individual must pay both the employee and employer portions of Social Security and Medicare taxes. This tax is referred to as the *self-employment tax*. As can be seen from the above discussion, employment taxes are shifted from the employer to the self-employed individual if the individual is not considered to be an employee.

Individuals may prefer to be classified as employees because the employee portion of the Social Security and Medicare taxes (7.65%) is only one-half of the self-employment tax rate (15.3%). Of the 7.65%, 6.2% (12.4% for self-employed individuals) is for the old age, survivors and disability insurance (OASDI) portion of the FICA tax and is assessed on a maximum income amount of $176,100 for 2025 ($168,600 for 2024). The remaining 1.45% (2.9% for self-employed individuals) portion of the FICA tax is for Medicare insurance and has no ceiling limitation.

Litigation Issues and Administrative Enforcement. The determination as to whether an individual who performs services is either an employee or an independent contractor has been a major ongoing area of contention between the IRS and taxpayers. In determining whether a worker is an employee or independent contractor, the facts of the situation must be analyzed and divided into three main categories: behavioral control, financial control, and relationship of the parties. No one factor is necessarily determinative, the totality of the situation must be considered. The first category, behavioral control, entails whether the payor has the right to control how the individual does the work. *Behavioral control* is characterized by the amount of instruction as to how the work is to be done as well as the level of training that is provided to the individual. As to *financial control*, an independent contractor has a significant investment in his or her work, is not reimbursed for expenses, and has the opportunity for profit or loss. An employee generally would not have these characteristics in their role as an employee. The third category is that the *relationship of the parties* and looks at employee benefits and explicit written contracts that show the type of relationship intended. These three categories of tests are an outgrowth of the so-called “20 factor test” that was used for many years to determine whether an individual was considered an employee or independent contractor. Under either system, the determination is still a very difficult and uncertain process.

Substantial litigation has occurred in the interpretation of these factors. For example, truck drivers who were owner-operators and were engaged under contract by an interstate trucking company were considered independent contractors because they selected their own routes and were paid a percentage of the company’s receipts for shipment.[2] However, drivers for a moving van company were considered employees because the company exercised control over their assignments.[3] The Tax Court held that cosmetologists, nail technicians, and massage therapists who performed services at a spa were not employees but rather independent contractors.[4] The individuals paid weekly rent, set their own hours and fees, and generally provided their own supplies.

TRAVEL EXPENSES

OBJECTIVE 3

Determine the proper deductible amount for travel expenses

DEDUCTIBILITY OF TRAVEL EXPENSES

The deductibility of travel expenses depends on the nature of the expenditure. The following rules apply to the deductibility of travel expenses.

- If the taxpayer is engaged in a trade or business as a self-employed individual or is engaged in an activity for the production of rental and royalty income, the travel-related expenditures are deductible *for* AGI. The specific requirements for deducting travel expenses are discussed below.

---

[2] Rev. Rul. 76-226, 1976-1 CB 332.

[3] *Richard N. Smith v. U.S.*, 78-1 USTC ¶9263 (CA-5, 1978).

[4] *Cheryl A. Mayfield Therapy Center*, TC Memo 2010–239.

HISTORICAL NOTE

The partial disallowance of business meals of 50% was enacted because Congress believed that taxpayers were spending excessively because the meals were tax deductible. Due to COVID-19, the 50% disallowance for business meals was repealed for years 2021 and 2022, making such business meals 100% deductible. However, for years 2023 and forward, the deduction of 50% is restored for business meals.

- Travel expenses for employees in connection with his or her job are not deductible after December 31, 2017 through the year 2025. If an employee is reimbursed for travel expenses by his employer, the reimbursement is excludible by the employee if paid under an **accountable plan**. Accountable plans are expense reimbursement plans whereby the employee must account for his expenses to his employer in order to receive a reimbursement. This accounting is typically done via an expense report. If the reimbursement is less than the actual travel expenses incurred by the employee, the excess travel expenses are not deductible.
- Personal travel expenses are not deductible.

DEFINITION OF TRAVEL EXPENSES

Travel expenses include transportation, meals, lodging, and other reasonable and necessary expenses incurred by a taxpayer while "away from home" in the pursuit of a trade or business. The term *travel expense* is more broadly defined in the IRC than is the term **transportation expense**. If an individual is not away from home, expenses related to local transportation are classified as transportation expenses rather than travel expenses. Table I:7-1 illustrates how travel expenses are reported. Transportation expenses for self-employed individuals are deductible under certain conditions and are discussed later in this chapter. Business meals are only 50% deductible in 2023 and future years. This topic is discussed in more detail beginning on page 7-12.

EXAMPLE I:7-3 ▶ Ahmed is away from home overnight on a business-related trip and incurs airfare, hotel, and taxi fares amounting to $800. Because Ahmed is away from home, the $800 is treated as travel expenses and fully deductible for tax purposes. ◀

EXAMPLE I:7-4 ▶ Charlotte uses her personal automobile to make deliveries of products to customers in the same local area of her place of business. Charlotte's automobile expenses are classified as transportation expenses (rather than travel expenses) because she was not away from home when they were incurred. As is discussed later in this chapter, transportation expenses are deductible but are subject to strict recordkeeping rules. If Charlotte stopped to eat lunch alone during her delivery activities, the meals are not deductible as they are neither travel nor transportation expenses. ◀

▼ TABLE I:7-1
Classification of Travel Expenses

	TAX TREATMENT		
Situation Facts	**Deductible *for* AGI**	**Deductible *from* AGI**	**Not Deductible**
1. Cindy is a self-employed attorney who incurs travel expenses related to her business.	X		
2. Jose, who lives in Dallas, is the owner of several apartment buildings in Denver. Periodically he travels to Denver to inspect and manage the properties.	X		
3. Clay is an employee who is required to travel to company facilities throughout the U.S. in the conduct of his management responsibilities. Clay is not reimbursed by his employer.			X
4. Same as Situation 3, except that Clay is fully reimbursed by his employer.	X[a]		
5. Colleen works in New York City and travels to her parents' home in Dallas during the holidays.			X

[a] Clay would not include the reimbursement in his gross income and is not allowed any deduction. In this case, since the expense equals the reimbursement, it is considered a "wash." Technically, Clay is required to report reimbursements as income and is allowed a deduction *for* AGI, but the IRS permits this "wash" treatment.

GENERAL QUALIFICATION REQUIREMENTS

To qualify as a travel expense deduction, the following requirements must be met:

- The purpose of the trip must be connected with a trade, business, or rental real estate activity. (Personal vacation trips or commuting to and from a work office are nondeductible personal expenses.)
- The taxpayer must be *away from his or her tax home overnight* or for a sufficient duration to require sleep or rest before returning home.

Away-from-Tax-Home Requirement. Travel expenses are deductible if the taxpayer is temporarily away from his or her tax home overnight. While this seems simple enough, there has been considerable controversy as to what the words actually mean. There are three important aspects of this requirement: (1) where the taxpayer's home is, (2) how *temporarily* is distinguished from *indefinite* or *permanent,* and (3) how the term *overnight* is interpreted.

TYPICAL MISCONCEPTION

There is a tendency to erroneously assume that a taxpayer's tax home is the location of his or her primary personal residence. It is actually the location of the taxpayer's principal place of business.

Taxpayer's home: The IRS's position is that a person's tax home is the location of his or her *principal place of business* regardless of where the family residence is maintained. Thus, a taxpayer who works permanently or for an indefinite period of time away from his or her family residence is *not* considered to be away from home and, therefore, travel expenses are not deductible. In this situation, the taxpayer's *tax home* is considered to be his work location.

Temporary vs. Indefinite: To meet the away from home requirement, a taxpayer must be away from home on a temporary basis. Thus, a self-employed individual who travels out of town on a three-day business trip clearly meets this requirement. However, a self-employed individual whose primary residence is in one location but works on a permanent basis during the week at another location, and possibly has an apartment at the work location, is not considered away from home at the *work location.* In this case, the work location is considered his tax home for income tax purposes, and he is not considered to be away from home.

REAL-WORLD EXAMPLE

A taxpayer was employed by a traveling circus with headquarters in Chicago. The Tax Court held that the taxpayer's home was wherever he happened to be with the circus. Therefore, the cost of his meals and lodging was not deductible. *Nat Lewis,* 1954 PH T.C. Memo ¶54,233, 13 TCM 1167.

The determination of whether a taxpayer is away from home temporarily or indefinitely is based upon the length of time the taxpayer is at such location. Work assignments of more than one year are treated as indefinite.[5] Work assignments for one year or less are classified as either temporary or indefinite depending on the facts and circumstances of each case. If a self-employed individual works away from home only for a temporary period, then his tax home does not change and the travel expenses are deductible. However, if the assignment is for an indefinite period, the individual's tax home shifts to the new location. The following bulleted items and examples are adapted from Rev. Rul. 93-86[6] and are used to illustrate the IRS's position concerning whether a taxpayer is away from home temporarily for purposes of deducting travel expenses:

- An independent contractor accepts an away from home assignment where it is realistically expected that the work will be completed in six months. The actual assignment period lasts ten months. Because the assignment period is realistically expected to last (and does in fact last) for one year or less, the IRS's position is that the assignment is temporary and the taxpayer's travel expenses are deductible.
- An independent contractor accepts an away from home assignment where it is realistically expected that the work will be completed in 18 months but the work is actually completed in ten months. In such case the IRS's position is that the assignment is treated as indefinite, regardless of whether it actually exceeds one year or not.
- An independent contractor accepts an away from home assignment where it is realistically expected that the work will be completed in nine months. After eight months the taxpayer is asked to remain for seven more months or a total period of more than one year. Based on these facts, the IRS's position is that the assignment is temporary for eight months and the travel expenses are deductible for the eight-month period. The assignment is considered indefinite for the remaining seven months and no travel expense deduction is allowed for the travel expenses during this period.

---

[5] Sec. 162(a). See also Rev. Rul. 99-7, 1999-1 C.B. 361.

[6] Rev. Rul. 93-86, 1993-2 C.B. 71.

Overnight test: To satisfy the overnight test, a taxpayer must show that it was reasonable for him to need to obtain sleep or rest during release time on such trips in order to meet the demands of his job.[7] Generally, costs of meals on one-day business trips are not deductible since the taxpayer was not away from home overnight. The Supreme Court held that a taxpayer who took short rest stops on long one-day business trips was not allowed to deduct his meals.[8] However, whether it is reasonable to need sleep or rest depends on the specific circumstances. A railroad conductor was allowed to deduct lodging, meals, and tips incurred during a six-hour layover on a total trip of 16 hours.[9]

EXAMPLE I:7-5 ▶ Roberto lives and works in Baltimore. He occasionally travels to New York City on business and stays overnight for two or three days at a time. Roberto clearly meets the away from home test and all of his travel expenses, including airfare, lodging, tips, taxi, and meals (subject to the 50% disallowance) are deductible as travel expenses. ◀

EXAMPLE I:7-6 ▶ Tom lives with his family in Baltimore. In 2025, Tom, an independent contractor, accepts a new assignment in New York City. However, he decides not to move his family to New York but to rent an apartment and stay there during the week and return home on weekends. Tom's work assignment would be considered indefinite and the cost of his apartment, food, and other incidental expenses would not be deductible travel expenses because his tax home is New York rather than Baltimore and he is not considered to be away from home. ◀

EXAMPLE I:7-7 ▶ Gunther lives and works in Baltimore. Gunther, an independent contractor, accepts an assignment in New York City that is expected to last approximately seven months. Gunther rents an apartment in New York for the seven months, then returns to his regular office in Baltimore. Gunther's work assignment in New York is considered temporary because it is less than one year, and therefore, all of his apartment rent, food, laundry, and other incidental costs are deductible as travel expenses. Because apartments and food are expensive in New York, his travel expense deduction will be substantial. Good records to substantiate the work assignment and the expenses are very important in this case. ◀

BUSINESS VERSUS PLEASURE

Travel expenses are deductible only if they are incurred in the pursuit of a trade or business activity or connected with a rental real estate activity. Thus, if a taxpayer takes a trip that is primarily personal in nature but some business is transacted, the only deductions allowed are those that are directly related to the business activity.[10] In such event, all of the traveling expenses to and from the destination are treated as nondeductible personal expenditures. However, if the trip is *primarily related* to business, all of the traveling expenses to and from the destination are deductible, and meals and lodging, local transportation, and incidental expenses are allocated to the business and personal activities, respectively. In effect, an all-or-nothing approach is applied to the deductibility of traveling expenses to and from the destination depending upon the primary purpose for making the trip, i.e., no proration of expenses.

In determining the primary purpose for a trip, the amount of time spent on personal activities compared to the time spent on business activities generally is the most important factor. However, the fact that a taxpayer may spend slightly more time on personal activities than business activities will not automatically prohibit the deductibility of the transportation expenses to and from the destination. The taxpayer must clearly show that the purpose of the trip was *primarily business*.

---

[7] Rev. Rul. 75-168, 1975-1 C.B. 58.

[8] *Correll v. U.S.*, 389 U.S. 299 (1968).

[9] *Williams v. Patterson*, 286 F2d 333 (5th Cir. 1961) and Rev. Rul. 75-170, 1975-1 C.B. 60. See also *Marc G. Bissonnette*, 127 T.C. 124 (October 23, 2006), where a six-hour layover on 15–17 hour days for a ferry boat captain was held to be "away from home."

[10] Reg. Sec. 1.162-2(b)(1).

EXAMPLE I:7-8 ▶ Dana, an independent contractor, travels to New York on a business trip and spends $500 for a roundtrip airline ticket and $200 per day for hotel, meals, and incidental expenses. Dana spends three days in business meetings and vacations for two days. Because the trip is primarily business, the traveling expenses to and from the destination (e.g., airfare) of $500 are fully deductible by Dana. Dana's meals, lodging, and incidental expenses amount to $1,000 (5 days × $200), but only $600 ($200 × 3 business days) of such travel expenses is deductible. The deductible business meal expenses are reduced by 50%. A proration of the meals, lodging, and incidental expenses based on the number of days may not be appropriate if the expenses are uneven or are directly related to either business or personal activities. ◀

EXAMPLE I:7-9 ▶ Assume that the facts in Example I:7-8 are reversed (i.e., that two days are business-related and three days are personal). Because more time was spent on personal activities, the general rule would hold that the trip is primarily personal and the traveling expenses to and from the destination of $500 are not deductible. Thus, only $400 ($200 × two business days) of travel expenses related to meals, lodging, and incidental expenses are deductible (subject to the limitations previously discussed). ◀

EXAMPLE I:7-10 ▶ Carroll is an independent contractor who lives and works in St. Louis, and he attends a mandatory business meeting in San Francisco. The meeting lasts two days. Because Carroll had never been to San Francisco, he decides to take three days of vacation and sightsee in the area. Even though Carroll spent more days on personal activities than business activities, Carroll's airfare would be deductible if he can clearly show that the primary purpose of the trip was business. ◀

REAL-WORLD EXAMPLE

It is very difficult to deduct expenses of a spouse who accompanies his or her spouse to a business meeting or convention. The accompanying spouse not only must work in the business but the reason for accompanying his or her spouse must be for bona fide business purpose.

Stringent rules are applied if the taxpayer is accompanied by family members because of the likelihood that the trip is primarily for personal reasons. No deduction is permitted for travel expenses of a spouse or a child (or other person accompanying the taxpayer) unless the person works in the business, the travel is for a bona fide business purpose, and the expenses would be otherwise deductible.[11]

FOREIGN TRAVEL

Due to the potential for abuse, special rules apply to foreign travel and foreign convention expenses.[12] Travel expenses related to foreign conventions, seminars, or similar types of meetings are disallowed unless it can be shown that the meeting is directly related to the taxpayer's trade or business activity and that it is reasonable for the meeting to be held outside North America. In addition, complex expense allocation rules are applied to business trips made outside the United States.[13]

SELF-STUDY QUESTION

Would the cost of going on a safari in Africa be deductible if the taxpayer were in the business of selling guns?

ANSWER

In an actual case, the Court held that the safari expenses were not sufficiently connected to the taxpayer's gun-selling business. Therefore, the safari costs were not deductible. *Vincent W. Eckel,* T.C. Memo 1974-33.

ADDITIONAL LIMITATIONS ON TRAVEL EXPENSES

IRC Section 274 also provides several limitations on the deductibility of certain types of travel expenses, including the following:

- Travel deductions are disallowed if the expenses are deductible only as a form of education. For example, a French language professor cannot deduct travel expenses to France if the purpose of the trip is to maintain a general familiarity with the French language and customs.
- Deductions allowed for luxury water travel (i.e., ocean liners, cruise ships, or other forms of water transportation) are limited to twice the highest per diem amount allowable for a day of domestic travel by employees in the executive branch of the federal government ($394 × 2 = $788 for 2024).
- Travel deductions to attend a convention, seminar, or meeting are not allowed if they are related to investment activities coming under Sec. 212. Expenses to attend a convention, seminar, or meeting are deductible if directly connected with a taxpayer's trade or business. However, expenses to attend such meetings on a U.S. cruise ship are deductible but only to a maximum amount of $2,000 pursuant to Sec. 274(h).

---

[11] Sec. 274(m)(3).

[12] Secs. 274(c) and (h).

[13] Reg. Sec. 1.274-4. No allocation of total expenses is made to the personal-use (nondeductible) element if an individual is away from home for seven days or less or if less than 25% of the time is devoted to personal purposes. In all other cases, all of the foreign travel expenses (including transportation costs) must be apportioned between business and personal activities based on the relative percentage of time devoted to each activity.

EXAMPLE I:7-11 ▶ Dawn travels from Miami on a cruise ship to attend a business meeting in Bermuda. The round-trip cost of the cruise is $7,500, and the travel is for a period of four days. If the highest daily per diem amount is $394 for a government employee, the travel expenses related to the cruise ship are limited to $3,152 ($788 per day × 4 days travel). ◀

EXAMPLE I:7-12 ▶ Assume that Dawn in Example I:7-11 went on the cruise to attend a business seminar held on the cruise ship. In this case, Dawn's deductible expenses are limited to a maximum of $2,000. ◀

EXAMPLE I:7-13 ▶ Danielle is an investor in the stock market who attends investment counseling seminars. During the current year, she incurs $4,000 in travel expenses and $1,000 in registration fees to attend the seminars. None of the travel expenses are deductible because the expenses are related to income-producing activities coming under Sec. 212. The registration fees are not deductible as an investment expense because miscellaneous itemized deductions are not allowed after December 31, 2017. If Danielle was employed as a stockbroker (rather than an investor) and attended investment seminars, her travel expenses would be deductible as well as the registration fee. ◀

TRANSPORTATION EXPENSES

OBJECTIVE 4

Understand the deductibility of transportation expenses

The deductibility and classification of transportation expenses also depends on the nature of the expenditure, as follows:

- Transportation expenses related to a trade or business are deductible *for* AGI and are not subject to specific limitations.
- Transportation expenses related to rental real estate and royalty income (e.g., an owner-investor in rental properties) are deductible *for* AGI and are not subject to specific limitations.
- *Unreimbursed* employee transportation expenses are not deductible, as miscellaneous itemized deductions are no longer allowed for years 2018–2025.
- Commuting expenses are nondeductible personal expenses.

KEY POINT

The primary difference between travel expenses and transportation expenses for tax purposes is that travel expenses are broad in nature and include transportation, lodging, meals, and other necessary expenses, whereas transportation expenses include only the cost of actual transportation.

DEFINITION AND CLASSIFICATION

Transportation expenses include such items as taxi fares, automobile expenses, airline tickets, tolls, and parking fees incurred in a trade, business, or rental real estate activity. Generally speaking, transportation expenses are those incurred for "local transportation" and are not treated as travel expenses because the away from home requirements have not been met. The cost of commuting to and from a business location are nondeductible personal expenditures regardless of the length of the trip.

EXAMPLE I:7-14 ▶ Eurie, an independent contractor, calls on several customers at different locations in the metropolitan area during the course of the workday. Her transportation expenses (e.g., auto expenses, tolls, and parking) are deductible as transportation expenses because they are related to providing services in her business. She would deduct these expenses against her business income on Schedule C of Form 1040. If Eurie is required to travel away from home overnight, the transportation costs are included with meals and lodging and deducted as a travel expense. ◀

EXAMPLE I:7-15 ▶ David, an independent contractor, obtains a major new client located 80 miles from his principal residence. The new client will require David to spend at least four days a week at the client's office. He decides not to move to the new location and drives the 160-mile roundtrip each day. None of David's transportation expenses are deductible because they are personal commuting expenses. (Note: Because the job is a permanent assignment, it is for an indefinite period rather than a temporary period and the transportation expenses are not deductible as travel expenses.) ◀

The following exceptions or unusual circumstances should be noted:

- Transportation expenses incurred to go from one work location to another are deductible for self-employed individuals. If the individual goes home between jobs, the deduction is only the amount it would have cost him to go directly from the first location to the second.[14]
- Expenses are deductible *for* AGI if they are related to the production of rental or royalty income. Expenses connected with other investment-related activities are not deductible after 2017 or before 2026.
- Transportation expenses related to medical treatment may be deductible from AGI as a medical expense (subject to the limitations on the deductibility of medical expenses discussed in Chapter I:8).
- Transportation expenses related to charitable activities may be deductible as a charitable contribution (subject to the limitations on the deductibility of charitable contributions discussed in Chapter I:8).

ADDITIONAL COMMENT

The IRS takes the position that the hauling of equipment, tools, etc., in an automobile for business purposes does not make the commuting expenses deductible. This position is based on the Supreme Court's decision in *Donald W. Fausner v. CIR*, 32 AFTR 2d 73-5202, 73-2 USTC ¶9515 (USSC, 1973). The Court held that it was not possible to allocate the automobile expenses between nondeductible commuting expenses and deductible business expenses. However, if the taxpayer incurs additional costs, such as in renting a trailer, these additional costs are deductible.

EXAMPLE I:7-16 ▶ As shown in Figure I:7-1, Dick has two work locations that are 10 miles apart. Dick lives 5 miles from the first job site and 8 miles from the second job site. If Dick drives directly from Job 1 to Job 2, he may deduct the automobile costs associated with the 10-mile trip. If he goes home from the first job before driving to the second job, the deduction is still limited to 10 miles, even though he actually travels 13 miles. ◀

EXAMPLE I:7-17 ▶ Diana owns a duplex, which she rents to tenants. She periodically drives from her place of business to this income-producing property to collect the rents and to inspect the property. The transportation expenses are deductible *for* AGI as an expense related to the production of rental income. ◀

TREATMENT OF AUTOMOBILE EXPENSES

An employee or self-employed person may use either of two methods to deduct allowable automobile expenses. First, actual automobile expenses, including gas, oil, repairs, depreciation, interest, property taxes, license fees, and insurance are deductible based on the percentage of business miles to total miles. Detailed records to support the expenses are necessary in order to properly claim the deduction. To help reduce the burden of detailed recordkeeping, a second method, the standard mileage rate method, is available to taxpayers.

The standard mileage rate for business travel for the year 2025 is 70 cents per mile.[15] Parking and tolls for business purposes are allowed as an addition to this

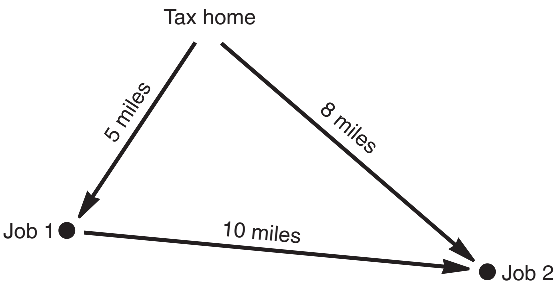


FIGURE I:7-1 ▶ Illustration for Example I:7-16

deduction as well as interest expense on an automobile loan and personal property taxes on the automobile. The following restrictions apply when the standard mileage rate is used:

---

[14] IRS, *Publication No. 463* (Travel, Entertainment, Gift, and Car Expenses), 2024.

[15] IRS Notice 2024-312. The rate for 2025 is 70 cents per mile. This rate is up from 67 cents per mile in 2024.

- The standard mileage rate method cannot be used for automobiles used for hire, such as taxicabs, or for five or more automobiles used simultaneously by a taxpayer.
- If a taxpayer changes from the standard mileage rate method in one year to the actual expense method in a later year, the basis of the used automobile must be reduced by 33 cents per mile in 2025, by 30 cents per mile for 2024, and by 28 cents per mile for 2023.[16] The modified accelerated cost-recovery system (MACRS) rules (discussed in Chapter I:10) cannot be used for computing depreciation in the year of the change and for the remaining useful life of the automobile. In such case, only the straight-line method under the alternative depreciation system (ADS) may be used (see Chapter I:10).
- A change to the standard mileage rate method is not allowed for an automobile that was previously depreciated under the MACRS rules or where an election was made under Sec. 179 to expense part or all of the automobile's cost in the year of acquisition. (See Chapter I:10 for a discussion of the Sec. 179 election.)
- The actual expense method is based on the ratio of business miles to total miles. (See Chapter I:10 for a discussion of specific restrictions on the computation of depreciation where mixed business- and personal-use automobiles are acquired.)

ADDITIONAL COMMENT

It should be remembered that in many cases the taxpayer can choose between the automatic mileage method and calculating the actual costs of operating the car. Although the automatic mileage method has the advantage of convenience, a calculation of the actual costs might produce a larger deduction.

STOP & THINK

Question: Assume a taxpayer uses her car (original cost, $30,000) in her business, drives a total of 15,000 miles per year, and can substantiate 80% of the mileage as business use. In general, will the taxpayer benefit more from the standard mileage method of deducting automobile expenses or from the actual expenses method?

Solution: In general, the actual expenses method will yield a higher deduction. The AAA (American Automobile Association) estimates that it costs approximately 82 cents per mile to operate a medium-sized car in the United States based on driving 15,000 miles per year. Therefore, the actual cost of operating the automobile would be approximately $12,300 (15,000 miles × $0.82). The deductible amount for tax purposes would be 80% of $12,300, or $9,840 for the actual expense method. Compare this amount with the standard mileage amount of $8,400 (15,000 miles × 80% business usage × 0.70/mile) and the actual expenses method yields a moderately higher deduction. Of course, each individual situation is different and the actual results can vary based on circumstances, such as the amount of repairs, depreciation, and so on.

HISTORICAL NOTE

Congress enacted a "contemporaneous" records test for substantiating expenses for automobiles and certain other activities. Public outcry caused Congress to repeal this requirement. Currently, the business use of an automobile can be substantiated either by keeping adequate records or by sufficient corroborating evidence, oral or written.

EXAMPLE I:7-18 ▶ Danny owns and operates a taxicab in New York City and drives 90,000 miles per year. In deducting his automobile expenses, Danny must use the actual cost method. He is not permitted to use the standard mileage method as the taxicab is an automobile for hire. ◀

EXAMPLE I:7-19 ▶ Doug acquired an automobile for use in his unincorporated business in 2022 and used the standard mileage rate method in 2022–2024. If Doug switches to the actual expense method for 2025 and later years, the automobile's adjusted basis (for depreciation purposes) must be reduced by 26 cents for 2022, 28 cents for 2023, and 30 cents for 2024. Thus, if the automobile originally cost $30,000 in 2022 and was used 10,000 miles for business purposes during 2022 and 15,000 miles each in 2023 and 2024, the adjusted basis for computing depreciation in 2025 is reduced by $11,300 {[(0.26 × 10,000) + (0.28 × 15,000) + (0.30 × 15,000)]. The remaining $18,700 basis ($30,000 − $11,300) must be depreciated using straight-line depreciation over the automobile's remaining ADS recovery period if the actual expense method is used. ◀

---

[16] The depreciation component of the mileage rate was $.30 per mile for 2024. For earlier years was 21 cents for 2021 and 2022.

EXAMPLE I:7-20 ▶ Edith uses her automobile 60% of the time for business use and 40% for personal use. These percentages are substantiated by records that document the total usage for the automobile. During 2025, Edith drives 3,000 miles per month or a total of 36,000 miles for the year. If the standard mileage rate method is used, she can deduct $15,120 [(60% × 36,000 miles) × 0.70] for the business and employment-related use. Additionally, Edith may deduct any business-related parking fees and tolls. ◀

ADDITIONAL COMMENT

The kind of written record that could corroborate the business use of an automobile would include account books, diaries, logs, trip sheets, expense reports, or written statements from witnesses.

MEALS AND ENTERTAINMENT EXPENSES

OBJECTIVE 5

Understand the deductibility of business meals

The deduction for meals and entertainment has been severely curtailed for expenses incurred after December 31, 2017 through the year 2025. First of all, entertainment expenses of any type are disallowed. This disallowance has had a major effect on many businesses for which entertainment of customers is an important part of their businesses. Second, business meals for businesses, although only 50% of the meals are currently deductible. For 2021 and 2022, the 50% reduction was eliminated for business meals and beverages provided by a restaurant. However, the general 50% rule for business meals has been restored for 2023. So, a self-employed individual, as well as other types of businesses such as corporations, LLCs, etc., are subject to the business meals and beverages rules. However, any portion of a meal that is considered entertainment is not deductible. Additional details on business meals are discussed below.

REAL-WORLD EXAMPLE

One common way business people document a business meal is to write on the back of the credit card receipt the other person(s) at the meal and the topic discussed. Then all of the necessary substantiation requirements are present on the one piece of paper: date, time, place, amount, people present, and business discussed.

BUSINESS MEALS AND BEVERAGES

Business meals and beverages continue to be deductible under Sec. 162 and are subject to the 50% reduction in 2025 if they are provided by a restaurant. However, business meals and beverages are still subject to the recordkeeping requirements under Sec. 274. Sec. 274 imposes stringent substantiation rules, such as the purpose of the meal, the persons who attended the meal, the amount of the meal, and the date of the meal. Each expenditure must contain this information; lack of documentation alone will cause the disallowance of a deduction. Because meals are so closely associated with entertainment, the Treasury Department issued income tax regulations[17] to clarify when business meals are nondeductible entertainment expenses under Sec. 274 and when they are tax-deductible.

Reg. Sec. 1.274-12 sets forth five requirements for a taxpayer to deduct a business meal expense:

1. The expense is an ordinary and necessary expense incurred in carrying on a trade or business.
2. The expense is not lavish or extravagant under the circumstances.
3. The taxpayer, or an employee of the taxpayer, is present in the furnishing of the food or beverages.
4. The food and beverages are provided to a current or potential business customer, client, consultant, or similar business contact.
5. If food and beverages are provided during or at an entertainment activity, a deduction is only allowed if the food and beverages are either paid for separately or are stated separately from the cost of the entertainment.

The Regulations provide a number of illustrations concerning how these rules apply. Basically, if the meal is provided to a bona fide business customer or client and the meal is not merely social or personal, the cost of the meal would be deductible as long as the taxpayer maintains sufficient records to meet the Sec. 274 substantiation rules. Further, if food and beverages

---

[17] Reg. Sec. 1.274-12. These final income tax regulations were issued on October 9, 2020 and make Proposed Regulations under Sec. 274 and Notice 2018-76 obsolete. These new Regulations contain the 50% limitation on meals and beverages that existed before 2021.

WHAT WOULD YOU DO IN THIS SITUATION?

You have recently acquired a new individual tax client, Joe Windsack, who is a manufacturer's representative for a local tool and die company. You have been engaged by Windsack to prepare his individual income tax return for the current year. Before the current tax year is over, you are at a party where Windsack is also a guest. You overhear Windsack bragging to a group of people that he substantially reduces his income tax liability by overstating meal expenses. He indicated that he overstates the deductions in several ways: (1) when he goes out to lunch or dinner that is personal in nature, such as with his family, he always uses a credit card and fictitiously writes the name of a client or prospective client on the charge card receipt, and (2) when he goes out to lunch with several colleagues from his office (not business related), he charges the entire amount on his credit card (for everyone at the table), collects the cash from his colleagues for the cost of their meals, and then writes the entire amount off as a business-related meal. When Windsack brings his tax information to you a couple of months later and you see a substantial amount of meal expenses, what should you do?

are consumed before, during, or after an entertainment event, the cost of the meals must be separately paid for or separated from the cost of the entertainment.

EXAMPLE I:7-21 ▶ Toby, a CPA, invites an important client in the insurance business to a basketball game. Toby purchases the tickets to attend the game in a suite where they have access to food and beverages that are not lavish or extravagant in the circumstances. The cost of the tickets, as stated on the invoice, includes the food and beverages. Because the basketball game is considered entertainment and the food and beverage cost is not separately-stated, Toby is not allowed a deduction for the cost of the tickets. Alternatively, if the invoice for the tickets separately-stated the cost of the food and beverages, Toby could deduct the cost of the food and beverages, subject to the 50% reduction, but not the basketball game. ◀

EXAMPLE I:7-22 ▶ Hank is a salesman for a manufacturing supply company. In 2025, Hank meets Harold, a purchasing agent who is an important customer, for lunch during a normal business day. Business is actually conducted during the lunch, and the lunch expenses are not lavish or extravagant under the circumstances. Hank spends $50 and maintains documentation of the details of the lunch. The business meal qualifies as a deduction because the meal involved the actual conduct of business where some business benefit is reasonably expected and a business discussion was conducted during the meal. Hank may deduct $25 of the cost of business meal expenses. ◀

EXAMPLE I:7-23 ▶ Susan is a self-employed individual and lives in Louisville, Kentucky. She travels to Las Vegas in 2025 to attend a business conference for three days. During the three-day conference, Susan eats alone, and the cost of her meals was $450. Since Susan meets the away from home test, she can deduct $225 ($450 × 50%). ◀

PER DIEM ALLOWANCES FOR MEALS AND LODGING

The IRS permits businesses and self-employed individuals to use optional "per diem allowances" for meals and lodging expenses in lieu of actual expenses. The use of per diem allowances is intended to simplify the burden of keeping detailed records for taxpayers who incur significant travel expenses. Special tables have been issued by the IRS that provide fixed per diem amounts for lodging as well as meals and incidental expenses (M&IE). The per diem allowances vary in amount depending on the city in which the travel took place. The tables list many cities in the United States as well as many cities in foreign countries. Thus, a taxpayer must only substantiate the time, place, and business purpose of the trip and then is permitted to use the per diem allowances. Under the per diem system, the expenses must be reasonably expected to be incurred, and the amount of expenses should be in reasonable proximity to the expected actual expense amount.[18] A full discussion of this topic is outside the scope of this text.

---

[18] The IRS tables for per diem allowances paid between October 1, 2024 and September 30, 2025, may be found in Notice 2024-68. The rate for travel on or after October 1, 2024, for high-cost localities (specifically identified by the IRS) is $319 per day (consisting of $233 for lodging and $86 for M&IE); all other localities are $225 per day (including $74 for M&IE). Further, self-employed individuals who are not reimbursed for their travel expenses may use the M&IE rate, but must substantiate lodging with actual receipts.

EXAMPLE I:7-24 ▶ Peyton Boying is a self-employed individual and travels extensively in the United States for business purposes in 2025. Instead of keeping actual records of his travel expenses, Peyton uses the per diem amounts as allowed by the IRS. Assuming Peyton traveled exclusively in high-cost localities (see footnote 18) and was away from home for 100 days, Peyton's per diem amount would be $31,900 (100 days × $319) without the necessity of Peyton keeping detailed receipts of his actual travel expenses. The amount that Peyton actually spent is irrelevant as the IRS will accept the per diem amounts. However, Peyton is required to keep records of the time, place, and business purpose of each trip. Peyton's tax deduction would be $27,600 for 2025, $23,300 for lodging and $4,300 for business meals ($8,600 × 50%). ◀

BUSINESS GIFTS

Business gifts are deductible but are subject to an annual ceiling amount of $25 per donee.[19] Amounts in excess of the $25 limit per donee are disallowed. The following rules and exceptions apply to determine the business gift deduction:

- Multiple gifts to each donee are aggregated for purposes of applying the $25 per donee annual limitation. Husbands and wives and other family members are treated as a single donee.
- Employee achievement awards made for length of service or safety that are under $400 per individual are excluded.[20]
- Business gifts do not include promotional material to be used on the business premises of the recipient. These items would be fully deductible.
- Business gifts are not subject to the 50% reduction for meals and entertainment.

EXAMPLE I:7-25 ▶ Jack is self-employed and makes the following gifts during the year:

Gifts to 100 customers @ $30 each	$3,000
Gifts to 50 customers @ $15 each	750
Total	$3,750

Jack is allowed a maximum deduction for business gifts of $25. Therefore the 100 gifts of $30 each are limited to a deduction of $2,500 (100 × $25) and the 50 gifts of $15 each are fully deductible. Jack's total deduction would be $3,250 ($2,500 + $750). ◀

REAL-WORLD EXAMPLE

A taxpayer who had deducted the full cost of two wedding gifts, both of which were in excess of $25 apiece, was able to deduct only $25 for each gift. *Jack R. Howard,* 1981 PH T.C. Memo ¶81,250, 41 TCM 1554.

MOVING EXPENSES

OBJECTIVE 6

Identify deductible moving expenses

Prior to enactment of the TCJA 2017, employees and self-employed individuals were allowed to deduct **moving expenses** in connection with their job or business. There were distance and time requirements, and only direct moving costs were deductible. The moving expense deduction was a *for* AGI deduction. For years 2018–2025, moving expenses are very limited, allowed only for members of the Armed Forces of the United States on active duty who move pursuant to a military order and incident to a permanent change of station. The distance and time requirements are not applicable to moves of members of the Armed Forces, and reimbursements for the move are not included in the member's gross income. Unless legislative changes are made in the interim, moving expenses for employees and self-employed individuals will again be deductible beginning in 2026.

---

[19] Sec. 274(b)(1).

[20] Sec. 274(j). The total limit including both qualified and nonqualified plan awards is $1,600 per individual (see Chapter I:4).

EDUCATION EXPENSES

OBJECTIVE 7

Describe the requirements for deducting education expenses

The deductibility of **education expenses** over the years has been quite controversial. There have been several different provisions for education expenses, some that overlapped each other and caused uncertainty as well as complexity. As a result of the Consolidated Appropriations Act of 2021, effective for tax years after 2020, some clarity has emerged. The discussion that follows covers tax law that is currently in effect.

Generally, education expenses are considered personal expenses and, therefore, are not deductible despite the obvious benefits that accrue to society from the pursuit of such activities. However, education expenses that are necessary in the pursuit of a trade or business activity are deductible. It would be inequitable if such educational expenditures were not deductible because they are incurred to produce income from business activities. The education expenses discussed in this chapter pertain to expenses that are related to a trade or business of a self-employed individual. However, there are a number of other provisions in the tax law that provide favorable tax advantages for education expenses. Most of these rules are covered elsewhere in this text; however, the other major tax provisions dealing with education are summarized below.

ADDITIONAL COMMENT

Attendance at a convention or professional meeting is one of the most common deductible education expenses. Almost every profession or occupation has its own society or association. Often these organizations sponsor local, regional, or national meetings. Training sessions or other types of educational activities are normally included on the program.

- Tax credits: Two important provisions benefiting education are the American Opportunity Tax Credit and the Lifetime Learning Credit. Both of these items are credits and are available for the taxpayer and his dependents and are discussed in Chapter I:14. The principal change in these two credits is the phase out limits are now the same for both credits. Currently, both credits are reduced (or phased-out) if the taxpayer's modified AGI exceeds $80,000. No credit is allowable if the modified AGI is $90,000 or larger. For married taxpayers filing a joint return, the amounts are $160,000 to $180,000.
- Exclusion for scholarships: Scholarships received by students are generally excludable from gross income under Sec. 117. See the discussion of scholarships in Chapter I:4.
- Educational assistance for employees: If an employer maintains an educational assistance plan, amounts received by the employee for tuition and other expenses are excludable from the employee's gross income under Sec. 127. This exclusion is also discussed in Chapter I:4.
- Student loan interest: A *for* AGI deduction is permitted for certain student loan interest under Sec. 221. (See Chapter I:6 for a further discussion of this topic.)
- Qualified state tuition programs: A very popular program for higher income taxpayers is the use of so-called Section 529 plans. These plans allow taxpayers to invest funds to be used for education and the income earned on such funds is not subject to tax. When amounts are withdrawn from the plan, the amounts are also not taxable if used for qualified education expenses. For many years, Sec. 529 plans have only been available for post-secondary expenses. However Sec. 529 plans can now pay for K–12 school expenses up to $10,000 per year. Additional favorable modifications to Sec. 529 plans have also been enacted in the SECURE Act of 2020. These plans are discussed in Chapter I:4.
- Coverdell Education IRA: These special IRAs are discussed later in this chapter and enable a taxpayer to invest up to $2,000 per year in a tax-deferred IRA.

CLASSIFICATION OF EDUCATION EXPENSES/CREDITS

Depending on the nature of the education-related activity, educational expenses may be either personal and nondeductible or deductible *for* AGI. Education expenses for a taxpayer that are not related to a trade or business are not deductible under Reg. Sec. 1.162-5. Such amounts may be eligible for the American Opportunity Tax Credit or the Lifetime Learning Credit as discussed in Chapter I:14. Self-employed individuals may deduct education expenses on Schedule C if they meet the requirements discussed below. Table I:7-2 illustrates the deductibility of education expenses for some common scenarios.

GENERAL REQUIREMENTS FOR A DEDUCTION

TYPICAL MISCONCEPTION

Education costs include the cost of books, tuition, registration fees, and supplies. Transportation costs and travel costs are also included.

An employee generally may deduct education expenses if either of the following two requirements are met:[21]

- The expenditure is incurred to maintain or improve skills required by the individual in his or her trade or business; or
- The expenditure is incurred to meet requirements imposed by law for retention of business, rank, or compensation rate.

Even if one of the two requirements above are met, education expenses are not deductible if:

- The education is required to meet minimum educational requirements for qualification in the taxpayer's trade or business; or
- The education qualifies the taxpayer for a new trade or business.

ETHICAL POINT

A client asks advice from his CPA as to whether certain educational expenses are deductible. The CPA should inform the client that the advice reflects professional judgment based on an existing situation. The CPA should use cautionary language to the effect that the advice is based on facts as stated and authorities that are subject to change.

The above income tax regulation applies to both employees and self-employed individuals. Because the education expenses for employees are treated as a miscellaneous itemized deduction, such expenses are not deductible for the years 2018–2025. Self-employed individuals, however, can continue to deduct these expenses if they meet the tests contained in Reg. Sec. 1.162-5 as discussed below.

The deductibility of education expenses has been a frequent source of controversy and litigation because of the uncertainty in interpreting the above Regulations. The principal area of disagreement has been the interpretation of the term "qualifies the taxpayer for a new trade or business." If a taxpayer undertakes education and that education will *qualify* her for a new trade or business, then her expenses will not be deductible. For example, several courts have disallowed deductions to IRS agents and accountants for educational expenses incurred in obtaining a law degree, even though such training would be helpful in the taxpayer's employment.[22] The courts reasoned that the taxpayers were qualifying for a new profession (i.e., the practice of law). However, the IRS has ruled that a practicing dentist may deduct educational expenses in becoming an orthodontist under the theory that a dentist becoming an orthodontist is not entering a new trade or business.[23]

STOP & THINK

Question: The Regulations clearly provide that if the education "qualifies" a taxpayer for a new trade or business, the cost of such education is not deductible. If taken to the extreme, could the IRS argue that *any* course would qualify an individual for a new trade or business? For example, if a person took a basket weaving course, could not the IRS argue that the person is now qualified for the new trade or business of basket weaving? How can a taxpayer support his position that the education does not qualify him for a new trade or business in order to meet the deductibility requirements?

Solution: This is a difficult question and many commentators have written that the Regulations are unfairly harsh toward taxpayers. The courts have required that the IRS be "reasonable" in its interpretations of qualification of a new trade or business. The best way for a taxpayer to support his position is to find a case where the facts are approximately the same as the taxpayer's and where the court has upheld the taxpayer's position in that case.

ADDITIONAL COMMENT

The same course could be deductible as a qualified educational expense or not depending on the particular situation of the student. For example, a CPA enrolled in a taxation course to update his or her tax knowledge could deduct the expense. On the other hand, a non-CPA taking the course as part of a series of courses meeting the requirements to sit for the CPA exam could not deduct the expense. The CPA has already met the minimum education requirements for the profession and the non-CPA has not.

---

[21] Reg. Sec. 1.162-5.

[22] *Jeffry L. Weiler,* 54 T.C. 398 (1970).

▼ TABLE I:7-2
Classification and Tax Treatment of Educational Expenses Under Reg. Sec. 1.162-5 and Sec. 127

Situation Facts	Classification and Tax Treatment
▶ Jeremy is a college student and is pursuing a general course of study.	▶ The expenses are nondeductible personal expenditures regardless of whether Jeremy or his parents pay them.
▶ Irene is an employee who incurs certain employment-related educational expenses including travel, transportation, tuition, and books.	▶ The expenses are nondeductible personal expenditures, regardless of who pays for them.
▶ Jesse is an employee who receives educational assistance payments from his employer to reimburse him for certain educational expenses incurred in attending college at the undergraduate level.	▶ Educational assistance payments up to $5,250 per year are excluded from Jesse's gross income and are deductible by the employer as trade or business expenses if the requirements of Sec. 127 are met.[24]
▶ Jackie is a self-employed CPA who incurs education expenses including travel, transportation, books, registration fees, and so on to attend a continuing education conference.	▶ All of the education expenses are deductible *for* AGI as trade or business expenses.

EXAMPLE I:7-26 ▶ Jane is a self-employed dentist who incurs education expenses attending a continuing education conference on new techniques in her field. Such expenditures are incurred to maintain or improve her skills as a practicing dentist (a trade or business activity). All of her educational expenses are deductible *for* AGI because Jane is currently engaged in a trade or business activity. ◀

EXAMPLE I:7-27 ▶ Juan is a business executive who incurs education expenses in the pursuit of an MBA degree in management. None of the expenses are reimbursed by Juan's employer. Under prior law, the expenses would have been deductible because they were incurred to maintain or improve Juan's skills as a manager and do not qualify Juan for a new trade or business. An MBA degree has been held to not qualify a taxpayer for a new trade or business. Since the deduction was a miscellaneous itemized deduction, it is not deductible in years 2018–2025. ◀

EXAMPLE I:7-28 ▶ Jean is self-employed and operates her own bookkeeping firm. She incurs expenses in connection with taking the CPA examination (e.g., CPA review course fees, travel, and transportation). Even though the expenditures may improve her business-related skills, they are not deductible because they are incurred to meet the minimum educational standards for qualification in Jean's accounting position.[25] ◀

EXAMPLE I:7-29 ▶ Joy is self-employed and a tax accountant who incurs expenses to obtain a law degree. Despite the fact that the law school courses may be helpful to Joy to maintain or improve her skills as a tax practitioner, such expenses are not deductible because the taxpayer is qualifying for a new trade or business. If Joy were not a degree candidate at the law school and merely took a few tax law courses for continuing education, the educational expenses would be deductible because they are incurred to maintain or improve Joy's skills as a tax specialist and do not qualify her for a new trade or business. In such a case, the expenses are deductible *for* AGI as Joy is self-employed. ◀

KEY POINT

The deduction for travel expenses is not permitted if the travel itself is the educational activity. Therefore, a high school teacher who teaches Spanish cannot deduct expenses incurred in living in Madrid during the summer.

OFFICE IN HOME EXPENSES

OBJECTIVE 8

Determine whether the expenses of an office in home meet the requirements for deductibility and apply the gross income limitations

Prior to 2018, office in home expenses for employees were classified as miscellaneous itemized deductions subject to the 2% of AGI floor. However, after 2017, miscellaneous itemized deductions are no longer deductible for years 2018–2025, and employees are not allowed to deduct office in home deductions. Self-employed individuals who claim office in home expenses are unaffected by the above rules, and qualified office in home expenses can be claimed as a *for* AGI deduction by these taxpayers.

---

[24] The Sec. 127 exclusion is applicable for expenses paid by an employer for courses taken by employees. Qualified expenses include tuition, fees, and related expenses. Both undergraduate and graduate-level courses qualify for the exclusion.

[25] Rev. Rul. 69-292, 1969-1 C.B. 84.

Qualified self-employed individuals who use a portion of their home for trade or business activities are entitled to a deduction because the property is used for trade or business activities. When a self-employed taxpayer's only office is located in his home, the office in home deduction should be straightforward and allowed for tax purposes. However, where a self-employed taxpayer has a separate office at a location outside his home as well as a home office, it is often difficult to determine whether the taxpayer is using the home office for business or personal use.

For many years, there has been an ongoing controversy in the tax law as to the deductibility of office in home expenses. Because of the possibility of abuse by taxpayers, the IRC, Treasury Regulations, and the courts[26] have been extremely strict as to who qualifies to deduct office in home expenses. In order to promote fairness and consistency in the tax law, the definition of an office in home that qualifies for a tax deduction was expanded in 1998.

GENERAL REQUIREMENTS FOR A DEDUCTION

ADDITIONAL COMMENT

Prior to the COVID-19 pandemic, approximately 27 million individuals, or 19% of the worked force, worked at least part-time at home. Since COVID-19, this number has dramatically increased.

Self-employed individuals are permitted to deduct office in home expenses only if the office is exclusively used on a regular basis under any of the following conditions:

- The office is used as the principal place of business for *any* trade or business of the taxpayer;
- The office is used as a place for meeting or dealing with patients, clients, or customers in the normal course of business; or
- If the office in home is located in a separate structure which is not attached to the dwelling unit, the office is used exclusively and regularly in connection with the taxpayer's trade or business.[27]

The first condition above has caused the major controversy in this area. Taxpayers are required to prove that the office is used exclusively as the "principal place of business." Under prior law, the principal place of business was interpreted to mean the "most important or significant place for the business," or more precisely, where the primary services were performed.

EXAMPLE I:7-30 ▶ In the *Soliman* case, Dr. Soliman was a self-employed anesthesiologist who performed medical services at three hospitals, none of which provided him with an office. He spent approximately two hours per day in his office in home where he maintained patient records and correspondence and he performed billing procedures. The office was not used as a place for meeting with or dealing with patients, clients, or customers in the normal course of his business. The U.S. Supreme Court denied a deduction for Dr. Soliman's office in home because it concluded that the essence of professional service rendered by the doctor was the actual medical treatment in the hospitals. A second factor considered by the court was the amount of time spent at the office relative to the total work effort. The effect of this case was to deny a deduction for an office in home for any type of taxpayer in a trade or business where the primary services were performed outside of the office (such as plumbers, electricians). This case was highly criticized. ◀

To combat the perceived unfairness of the *Soliman* case, Congress expanded the definition of "principal place of business." An office in home now qualifies as a taxpayer's principal place of business if:

1. the office is used by the taxpayer for *administrative or management* activities of the taxpayer's trade or business, and
2. there is no other fixed location of the trade or business where the taxpayer conducts substantial administrative or management activities of the trade or business.[28]

KEY POINT

The office-in-home deduction is available only where the office is being used for trade or business purposes. No deduction is permitted if the office is used to carry on investment activities.

Thus, the law essentially allows a deduction for an office in home even though the taxpayer provides his primary service away from the office. The above tests are clearly intended for self-employed taxpayers.

EXAMPLE I:7-31 ▶ David is a self-employed electrician who performs his electrical services at the location of his customers. He also maintains an office where he does his administrative and management duties. David is permitted a deduction for an office in home even though his primary duties of providing electrical services are performed away from his office. ◀

---

[26] See, for example, *CIR v. Nader E. Soliman,* 71 AFTR 2d 93-463, 93-1 USTC 50,014 (USSC, 1993).

[27] Sec. 280A(c)(1).

[28] Ibid. For years before 1999, this new definition of principal place of business does not apply. Thus, the restrictive rules promulgated by *Soliman* apply to these years.

DEDUCTIONS AND LIMITATIONS

The deduction for home office expenses is computed using the following two categories of expenses: (1) Expenses directly related to the office, and (2) Expenses indirectly related to the office.

Direct expenses include expenses that relate solely to the office, such as painting and decorating just the office. Indirect expenses are the pro rata share of expenses that benefit the entire house or apartment, such as mortgage interest (or rent), real estate taxes, insurance, utilities, and maintenance. The office in the home expense is the sum of the direct expenses plus the pro rata share (generally based on square footage) of indirect expenses.

To compute the office in home deduction, taxpayers first subtract all expenses not connected with the office from the income generated by the business. Then, 100% of the direct expenses of the office and the percentage of indirect expenses based on the pro rata share of the house are deducted. The total of the office in home expenses cannot create a loss.

EXAMPLE I:7-32 ▶ Julie, a self-employed individual, operates a mail order business out of her home and maintains an office in her home that is used exclusively for business. The size of her home in total is 2,400 square feet and her office is 300 square feet. During the current year, she generated gross income of $18,000 and had $6,000 of direct business expenses, supplies, and shipping charges. She also had the following expenses in connection with the office in her home:

Painting of office	$ 600
Decorations in office	900
Mortgage interest (total)	3,200
Real estate taxes (total)	1,800
Insurance (total)	600
Utilities (total)	2,400
Depreciation (total)	800

Julie's home office expense for the current year would be computed as follows:

Direct expenses:		
Painting	$ 600	
Decorations	900	$1,500
Indirect expenses:		
Mortgage interest	3,200	
Real estate taxes	1,800	
Insurance	600	
Utilities	2,400	
Depreciation	800	
	8,800	
Business percentage (300/2,400)	×12.5%	1,100
Total expense for office in home		$2,600

Julie would be allowed to deduct the $2,600 of office in home expenses as they do not exceed the $12,000 ($18,000 – $6,000) of income from the business. If Julie only had $8,000 of gross income and $6,000 of business expenses, her office in home expenses of $2,600 would be limited to $2,000. ◀

TAX STRATEGY TIP

When a taxpayer depreciates his office in the home, the office becomes business property. Upon the sale of the residence, the portion of the sale price attributable to the office will not be eligible for the sale of principal residence exclusion. Therefore, taxpayers might consider only deducting direct expenses of an in-home office to preserve the exclusion.

As mentioned above, the total allowable office in home expenses may not exceed the taxpayer's net income from the business (or rental) activity.[29] This ceiling limitation on office in home deductions is intended to prevent taxpayers from recognizing tax losses if the business (or rental) activity does not produce sufficient amounts of gross income. Expenses disallowed because of the gross income limitation can be carried forward but are subject to the gross income limitation in the later year and are subject to specific ordering rules.[30]

TYPICAL MISCONCEPTION

Where a taxpayer is not entitled to an office-in-home deduction, the taxpayer can still deduct directly related business expenses (e.g., the cost of office supplies, and a MACRS deduction on filing cabinets and other equipment).

---

[29] Sec. 280A(c)(5). Technically, the limitation is gross income less deductions not connected with the home office.

[30] See Prop. Reg. Sec. 1.280A-2 for the ordering rules. These rules are similar, but not identical to the ordering rules for hobby losses under Sec. 183, as follows: (1) mortgage interest and real estate taxes; (2) other deductions related to the office, such as insurance and utilities; and (3) depreciation.

Several years ago, the IRS issued rules that provide for an optional safe harbor that individuals can use to determine the amount of their deductible home office expenses. This safe harbor contains the same strict rules as to eligibility for a home office deduction, as discussed previously. The safe harbor allows taxpayers the option of claiming as their home office deduction $5 times the square feet of qualified use (300 square feet maximum), for a maximum total deduction of $1,500. Taxpayers can alternate the use of the actual expenses or the safe harbor amount each year. So, taxpayers will need to analyze each year which method to use and claim the greater amount.

PART II: DEFERRED COMPENSATION

OBJECTIVE 9

Discuss the tax treatment and requirements for various deferred compensation arrangements

Various types of benefit plans providing favorable tax treatment are available to employees and self-employed individuals. These tax benefits are provided to stimulate savings accumulations necessary for retirement. Private retirement plans should be the primary source of retirement with the Social Security system as a supplement, although in recent years, more and more retirees rely increasingly on Social Security. Favorable tax consequences generally include the following benefits:

- Deferral of taxes on amounts contributed to retirement plans until the individual retires or receives a distribution from the plan
- An immediate deduction for contributions to qualified retirement plans for the employer or self-employed individual
- Deferral of taxation on income earned on retirement plan assets
- Tax-free distributions from certain types of plans (Roth-type plans)

This section discusses *deferred compensation arrangements* including qualified pension and profit sharing plans, nonqualified deferred compensation arrangements, and self-employed retirement plans and individual retirement accounts (IRAs).

QUALIFIED PENSION AND PROFIT-SHARING PLANS

ADDITIONAL COMMENT

The Staff of the Joint Committee on Taxation estimates the revenue loss resulting from the deferral of taxes on contributions and earnings for qualified employer plans, individual retirement plans, and Keogh plans to be $286 billion in 2024. This provision represents one of the largest tax expenditures of the federal government and is designed to encourage employers to establish retirement plans for their employees.

The federal tax law provides favorable tax benefits for *qualified* pension and profit- sharing plans. A *qualified plan* is one that must meet strict requirements, such as not discriminating in favor of highly compensated individuals, be formed and operated for the exclusive benefit of employees, and meet specified vesting and funding requirements. In a qualified plan, both the employer and employee receive significant tax benefits, as follows:

Employer: receives an immediate tax deduction for pension and profit-sharing contributions made on behalf of employees.

Employee: is not taxed on either employer or employee contributions or earnings of the plan assets until funds are withdrawn from the plan at retirement.[31] Thus, funds invested in a qualified plan grow tax-free during an employee's working years. Alternatively, in recent years, Roth-type plans do not allow a deduction for the employee, but all qualified distributions at retirement age can be withdrawn completely tax free.

Types of Plans. Qualified plans[32] include:

- Pension plans
- Profit-sharing plans (including Sec. 401(k) plans)
- Stock bonus plans, including employee stock ownership plans (ESOPs)

---

[31] An employee may not be liable for federal income taxes but may be subject to Social Security taxes and possibly local or city income taxes.

[32] Qualified plans are generally covered in Secs. 401-417 of the IRC.

Pension Plans. The features that distinguish a **qualified pension plan** include the following:

- Systematic and definite payments are made to a pension trust (without regard to profits) based on formulas or actuarial methods.
- A pension plan may provide for incidental benefits such as disability, death, or medical insurance benefits.

A pension plan may be either contributory or noncontributory. Under a **noncontributory pension plan**, the contributions are made solely by the employer. Under a **contributory pension plan**, the employee makes voluntary contributions into the plan that supplement any contributions made by the employer.

Pension plans also may be either defined contribution plans or defined benefit plans. In a **defined contribution pension plan**, a separate account is established for each participant and certain amounts are contributed based on a specific formula (e.g., a specified percentage of compensation). The benefits payable to the participant at retirement are based on the value of the participant's account (including the amount of earnings that accrue to the account) at the time of retirement.

EXAMPLE I:7-33 ▶ Alabama Corporation establishes a qualified pension plan for its employees that provides for employer contributions equal to 8% of each participant's salary. Retirement payments to each participant are based on the amount of accumulated benefits in the employee's account at the retirement date. The pension plan is a defined contribution plan, because the contribution rate is based on a specific and fixed percentage of compensation. ◀

KEY POINT

The trend for most companies in the U.S. is away from defined benefit plans and toward defined contribution plans. Defined contribution plans usually are less costly and the employer liability is fixed at the date of contribution rather than at some future date.

Defined benefit plans establish a contribution formula based on actuarial techniques that are sufficient to fund a fixed benefit amount to be paid upon retirement. For example, a defined benefit plan might provide fixed retirement benefits equal to 40% of an employee's average salary for the five years before retirement.

A distinguishing feature of a defined benefit plan is that forfeitures of unvested amounts (e.g., due to employee resignations) must be used to reduce the employer contributions that would otherwise be made under the plan. In a defined contribution plan, however, the forfeitures related to unvested amounts may either be reallocated to the other participants in a nondiscriminatory manner or used to reduce future employer contributions.

Profit-Sharing Plans. A qualified **profit-sharing plan** also may be established by an employer in addition to, or in lieu of, a qualified pension plan arrangement. Profit-sharing plans include the following distinguishing features:

- A definite, predetermined formula must be used to allocate employer contributions to individual employees and to establish benefit payments.
- Annual employer contributions are not required, but substantial and recurring contributions must be made to satisfy the requirement that the plan be permanent.
- Employees may be given the option to receive cash that is fully taxable as current compensation or to defer taxation on employer contributions by having such amounts contributed to the profit-sharing trust. Plans of this type are called **Sec. 401(k) plans.**[33]
- Forfeitures arising under the plan may be reallocated to the remaining participants to increase their profit-sharing benefits, provided that certain nondiscrimination requirements are met.
- Lump-sum payments made to an employee before retirement may be provided following a prescribed period for the vesting of such amounts.
- Incidental benefits such as disability, death, or medical insurance may also be provided in a profit-sharing arrangement.

Roth-Type Plans. *Roth-type plans* are a special type of back-loaded plan. Under such a plan, a taxpayer does not receive a current deduction for any current contribution to the plan, but does not include any qualified distribution from the plan in gross income. The best known of this type of plan is a **Roth IRA** which was first enacted in 1998 and very popular today. A discussion of Roth IRAs is presented later in this chapter. Congress extended the Roth concept to Sec. 401(k) plans in 2006 where employees can contribute funds to a Roth 401(k) plan.[34] Similar to Roth IRAs, the employee receives no current tax deduction, but all contributions plus all earnings in the plan grow tax-free. Thus, any qualified distributions (generally, distributions after age 59½) are received tax-free by taxpayer. Participants in 401(k), 403(b), or 457 plans are permitted to roll over amounts in the plan to a "qualified Roth contribution program" but must pay income tax on the rollover amount.

---

[33] Sec. 401(k).

Stock Bonus Plan. A **stock bonus plan** is a special type of defined contribution plan whereby the investments of the plan are in the employer-company's own stock. The employer makes its contribution to the trust either in cash or in stock. If in cash, the amounts are invested in the company's stock. The stock is allocated and subsequently distributed to the participants. Stock bonus plan requirements are similar to profit-sharing plans. An **employee stock ownership plan (ESOP)** is a type of qualified stock bonus plan.[35] An ESOP, funded by a combination of employer and employee contributions and plan loans, invests primarily in employer stock. The stock is held for the benefit of the employees. ESOPs are attractive because the employer is allowed to reduce taxable income by deducting any dividends that are paid to the participants (or their beneficiaries) in the year such amounts are paid and are taxable to the participant. For employer securities acquired by the ESOP, the dividends-paid deduction is limited to dividends paid on employer stock acquired with an ESOP loan.

ADDITIONAL COMMENT

The tax law with respect to qualified pension and profit-sharing plans is extremely complex. A detailed study of these provisions is beyond the scope of this text.

QUALIFICATION REQUIREMENTS FOR A QUALIFIED PLAN

Qualified pension, profit-sharing, and stock bonus plans must meet complex qualification rules and requirements to achieve and maintain their favored qualifying status. A summary of the important requirements are discussed below.

- Section 401(a) requires that the plan must be for the employee's exclusive benefit. For example, the trust must follow prudent investment rules to ensure that the pension benefits will accrue for the employees' benefit.
- The plan may not discriminate in favor of highly compensated employees. Highly compensated employees are employees who meet either of two tests: (1) own more than 5% of the corporation's stock in either the current or prior year or (2) receive compensation of greater than $160,000 in the prior year.[36]
- Contributions and plan benefits must bear a uniform relationship to the compensation payments made to covered employees. For example, if contributions for the benefit of the participants are based on a fixed percentage of the employee's compensation (e.g., 4%), the plan should not be disqualified despite the fact that the contributions for highly-compensated employees are greater on an actual dollar basis than those for lower-paid individuals.
- Certain coverage requirements that are expressed in terms of a portion of the employees covered by the plan must be met.
- An employee's right to receive benefits from the employer's contributions must vest (i.e., become nonforfeitable) after a certain period or number of years of employment. The vesting requirement is intended to ensure that a significant percentage of employees will eventually receive retirement benefits. Employer-provided benefits must be 100% vested after 5 years of service.[37] In all cases, any employee contributions to the plan must vest immediately.

---

[34] Sec. 402A. For 2025, the maximum contribution limit to Roth 401(k) plans is $23,500 ($31,000 for taxpayers 50 years and older).

[35] Secs. 409(a) and 4975(e)(7).

[36] Sec. 414(q). The $160,000 applicable in 2025 is subject to annual indexing for inflation. The amount for 2024 was $155,000. Alternatively, an employer may elect to define a highly-compensated group as employees earning more than $160,000 *and* the top 20% group of employees based on compensation.

[37] Sec. 411(a)(2)(A). An alternative vesting schedule may also be used that provides for 20% vesting each year beginning in the third year of service, Sec. 411(a)(2)(B). Thus, after a total of seven years of service, an employee would be 100% vested. In addition, a faster vesting schedule is provided in Sec. 411(a)(2)(B) whereby the vesting begins after two years of service and increases at a rate of 20% per year to 100% after six years.

EXAMPLE I:7-34 ▶ Ken is a participant in a noncontributory qualified pension plan that provides for no vesting until an employee completes three years of service. Ken terminates his employment with the company after two years of service. Because Ken has not met the minimum vesting requirements, he is not entitled to receive any of the employer contributions that are made on his behalf. ◀

ADDITIONAL COMMENT

Most employees choose to contribute amounts to their qualified retirement plans on a pre-tax basis because of the time value of money. A current deduction (and the related tax savings) is more valuable than a deduction at retirement.

TAX TREATMENT TO EMPLOYEES AND EMPLOYERS

Employer contributions to a qualified plan are immediately deductible (subject to specific limitations on contribution amounts), and earnings on pension fund investments are tax-exempt to the plan. Amounts paid into a plan by or for an employee are not taxable until the pension payments are received, normally at retirement. At the election of the employee, amounts may be treated as having been made from either pre-tax or after-tax earnings. If amounts contributed to a qualified plan by an employee are made on a pre-tax basis, the taxable portion of the employee's earnings is reduced by the contribution amount. This has the effect of permitting a deduction for the contribution amount. When amounts are withdrawn at retirement, the entire distribution is subject to taxation.

EXAMPLE I:7-35 ▶ Larry is an employee of Cisco Corporation, which maintains a Sec. 401(k) plan. Larry contributes 5% of his gross salary into the plan on a pre-tax basis. During the current year, Larry's gross salary is $80,000 so his Sec. 401(k) contribution is $4,000. Since Larry's contribution is made on a pre-tax basis, his taxable salary for the current year will be $76,000. In effect, Larry is able to deduct the $4,000 from his salary in the current year. When Larry retires and begins withdrawing amounts from the plan, the entire amount withdrawn will be subject to income taxation. ◀

Conversely, an employee may elect to contribute to a qualified plan on an after-tax basis. If, in Example I:7-35, Larry contributed to the Sec. 401(k) plan on an after-tax basis, his taxable salary would have been $80,000. The $4,000 contributed to the plan is treated as an investment in the plan and is considered a tax-free return of capital when this amount is withdrawn at retirement.[38] Most employees do not elect the after-tax method because of the time value of money. In addition, a Roth-type plan is a much better alternative, as discussed later in this chapter.

Employee Retirement Payments. An employee's retirement benefits, other than from Roth-type plans, are generally taxed under the Sec. 72 annuity rules (see Chapter I:3). If the plan is noncontributory (i.e., no employee contributions are made to the plan), all of the pension benefits when received by the employee are fully taxable. If the plan is contributory, the taxability depends on whether the employee's contributions were made on a pre-tax or after-tax basis. If the contributions were made on a pre-tax basis, *all* retirement payments received by the employee are taxable. Alternatively, if the contributions were made on an after-tax basis, each payment is treated, in part, as a tax-free return of the employee's contributions and the remainder is taxable. The excluded portion is based on the ratio of the employee's investment in the contract to the expected return under the contract. However, the total amount that may be excluded is limited to the amount of the employee's contributions to the plan. If the employee dies before the entire investment in the contract is recovered, the unrecovered amount is allowed as an itemized deduction in the year of death.

As mentioned earlier, qualified distributions from a Roth-type plan, such as a Roth 401(k), are not subject to taxation. Qualified distributions are those that have been invested in the plan for at least five years and the employee is at least age 59½.

EXAMPLE I:7-36 ▶ Kevin retires in 2025 at age 64 and will receive monthly annuity payments of $2,000 for life from his employer's qualified pension plan beginning in January 2025. Kevin's investment in the contract (represented by his contributions made on an *after-tax basis*) is $100,000. Kevin's life expectancy per Sec. 72 is 260 months from the annuity starting date. So, for the next 260 months, Kevin can exclude $384.62 ($100,000/260 months). In 2025, Kevin would exclude $4,615.44 ($384.62 × 12 months) and $19,384.56 ($24,000.00 – $4,615.44) would be taxable. After Kevin receives payments for 260 months and his $100,000 investment in the contract is recovered, all subsequent payments are fully taxable. (See Chapter I:3 for a discussion of the annuity formula and related rules.) ◀

---

[38] Amounts contributed to a qualified plan on an after-tax basis are treated as an investment in the contract under the annuity rules of Sec. 72. Amounts withdrawn during retirement are taxed under the general rules of Sec. 72. (See Chapter I:3 for a discussion of taxation of annuities.)

EXAMPLE I:7-37 ▶ Assume the same facts as in Example I:7-36 except that Kevin made all of his contributions to the plan on a *pre-tax basis*. In other words, the amount that he contributed to the plan was subtracted from his salary each year. When Kevin starts receiving payments from the plan, all amounts received will be taxable. Therefore, in 2025, Kevin will include $24,000 in his gross income. Most employees elect to "tax defer" their contributions into retirement plans in order to reduce their current year taxable income and take advantage of the time value of money principle. ◀

EXAMPLE I:7-38 ▶ Keith, age 61 and still employed, has maintained a Roth 401(k) plan for 10 years. All of his contributions into the plan, therefore, have been made on a post-tax basis. Keith may contribute $31,000 into his Roth 401(k) for 2025. The maximum contribution is $23,500, but Keith is allowed an additional $7,500 catch-up contribution as he is 50 years old or older. ◀

KEY POINT

For purposes of the limitation on employer contributions, all defined contribution plans maintained by one employer are treated as a single defined contribution plan. Furthermore, under some circumstances a group of employers can be treated as a single employer.

ADDITIONAL COMMENT

Many individuals have the option of taking their retirement savings from traditional pensions, profit-sharing plans, and 401(k) s as a lump sum or an annuity. Those who want to take a lump-sum distribution can delay taxes by transferring the money directly into a tax-deferred IRA.

Limitation on Employer Contributions. The Code places limitations on (1) amounts an employer may contribute to qualified pension, profit-sharing, and stock bonus plans and (2) amounts that the employer may deduct:

- Defined contribution plan contributions in 2025 are limited to the lesser of $70,000 or 100% of the employee's compensation.[39]
- Defined benefit plans are restricted to an annual benefit to an employee equal to the lesser of $280,000 for 2025 or 100% of the participant's average compensation for the highest three years.[40]
- An overall maximum annual employer deduction of 25% of compensation paid or accrued to plan participants is placed on defined contribution, profit-sharing, and stock bonus plans.[41] If an employer has more than one type of qualified plan (e.g., a defined benefit pension plan and a profit-sharing plan), a maximum deduction of 25% of compensation is allowed.

The distinguishing features and major requirements for qualified pension and profit-sharing plans are summarized in Topic Review I:7-1.

TOPIC REVIEW I:7-1

Qualified Pension and Profit-Sharing Plans

DISTINGUISHING FEATURES AND MAJOR REQUIREMENTS

- Employer contributions and earnings on contributed amounts are not taxed to employees until distributed or made available. The contributions are immediately deductible by the employer.
- Pension plans can be established as either defined contribution or defined benefit plans in which systematic and definite payments are made to a pension trust. Incidental benefits (e.g., death and disability payments) can be provided under the plan.
- Profit-sharing plans require the use of a predetermined allocation formula and substantial and recurring contributions must be made although annual employer contributions are not required and the contributions need not be based on profits. Section 401(k) plans can be established where employees have the option to receive cash or to have such amounts contributed to the profit-sharing trust. The employer may also establish an ESOP where the plan is funded by a contribution of the employer's stock.
- Qualified plans must be created for the employees' exclusive benefit.
- The plans may not discriminate in favor of highly compensated employees.
- Contributions and plan benefits must bear a uniform relationship to the compensation of covered employees.
- Minimum vesting requirements must be met (e.g., 100% vesting after five years).
- Employee benefits are taxed under the Sec. 72 annuity rules.
- Total employer contributions to the plan are subject to specific ceiling limitations.

---

[39] Sec. 415(c). The deduction limit for 2024 was $69,000. In addition, individuals over 50 years of age are eligible to contribute extra amounts into their plans. The amount of the so-called catch-up contributions depend on the type of plan. For most plans, the catch-up contribution limit for 2025 is $7,500.

[40] Sec. 415(b)(1). The benefit amount for 2024 was $275,000. These amounts are subject to indexing each year.

[41] Sec. 404(a)(3)(A).

KEY POINT

Because nonqualified plans are not subject to the same restrictions as imposed upon qualified plans, they do not receive the same tax benefits that are available under qualified plans. For example, the employer may not be able to deduct amounts that are set aside for employees.

NONQUALIFIED PLANS

Nonqualified deferred compensation plans are often used by employers to provide incentives or supplementary retirement benefits for executives. Common forms of nonqualified plans include the following:

- An unfunded, nonforfeitable promise to pay fixed amounts of compensation in future periods.[42]
- Restricted property plans involving property transfers (usually in the form of the employer-company stock), where the property transferred is subject to a substantial risk of forfeiture and is nontransferable.[43]

Distinguishing Characteristics of Nonqualified Plans. Nonqualified plans are not subject to the same restrictions imposed on qualified plans (such as the nondiscrimination and vesting rules), although nonqualified plans may have some vesting rules. Thus, such plans are particularly suitable for use in executive compensation planning. In general, nonqualified plans impose certain restrictions on the outright transfer of the plan's benefits to the employee. This avoids immediate taxation under the constructive receipt doctrine, which does not apply if the benefits are not yet credited, set apart, or made available so that the employee may draw on them. The amount is taxed to the employee upon the lapse of such restrictions, and the employer receives a corresponding deduction in the same year.

Unfunded Deferred Compensation Plans. **Unfunded deferred compensation plans** are often used to compensate highly compensated employees who desire to defer the recognition of income until future periods (e.g., a professional athlete or a business executive who receives a signing bonus may prefer to defer the recognition of income from the bonus). In general, if the promise to make the compensation payment in a future period is nonforfeitable, the agreement must not be funded (e.g., the transfer of assets to a trust for the employee's benefit) or evidenced by a negotiable note. The employer, however, may establish an *escrow account* on behalf of the employee. Such an account is used to accumulate and invest the deferred compensation amounts. If the requirements for deferral are met, the employee is taxed when the amounts are actually paid or made available, and the employer receives a corresponding deduction in the same year.[44]

EXAMPLE I:7-39 ▶ In 2025, Kelly signs an employment contract to play professional football for the Chicago Skyhawks. The contract includes a $2,000,000 signing bonus that is payable in five annual installments beginning in 2026. The bonus agreement is nonforfeitable and is unfunded. The Skyhawks have agreed to place sufficient amounts of money into an escrow account to fund the future payments to Kelly. None of the $2,000,000 bonus is deductible by the employer or taxable to Kelly when the agreement is signed in 2025. The Skyhawks do not receive a deduction for any amounts that are deposited into the escrow account during the 2026–2030 period. In 2026, Kelly receives $400,000 taxable compensation (plus interest, if any, that accrued and was paid to Kelly is also taxable) upon receipt of the initial payment, and the Skyhawks receive a corresponding tax deduction. ◀

Requirements were enacted several years ago for nonqualified deferred compensation plans.[45] While a detailed examination of these new rules is outside the scope of this text, some major features of the law are as follows:

- The rules apply to any plan by which executive employees are permitted to defer the receipt and taxability of compensation from the current year to a future year. In prior years, the tax laws in this area were a wide range of cases and rulings.
- If deferred amounts under a plan fail to satisfy the requirements at any time during the tax year, the recipient must pay the tax on the deferred compensation plus interest and an additional 20% excise tax.

---

[42] Rev. Rul. 60-31, 1960-1 C.B. 174, modified by Rev. Rul. 64-279, 1964-2 C.B. 121 and Rev. Rul. 70-435, 1970-2 C.B. 100.

[43] Sec. 83.

[44] Reg. Sec. 1.451-2(a).

[45] Sec. 409A.

- Distributions from the plan to recipients are subject to strict rules. Deferrals may be distributed to participants no earlier than the time of separation of service, pursuant to a fixed schedule in the plan, death, disability, an unforeseeable emergency, or upon a change in control of the company. Thus, early distributions are not generally permitted. In addition, acceleration of payment amounts are severely curtailed.
- Funding rules essentially have remained the same except that employers generally may no longer use offshore trusts.

Because of the complexity of the rules in this area, taxpayers are strongly urged to look closely at their nonqualified deferred compensation plans to ensure that they comply with the rules.

Restricted Property Plans. **Restricted property plans** are used to attract and retain key executives. Under such arrangements, the executive generally obtains an ownership interest (i.e., stock) in the corporation. Restricted property plans are governed by the income recognition rules contained in Sec. 83. Under these rules, the receipt of restricted property in exchange for services rendered is not taxable if the property is nontransferable and subject to a substantial risk of forfeiture.

The employee is treated as receiving taxable compensation based on the amount of the property's fair market value (FMV) (less any amount paid for the property) at the earlier of the time the property is no longer subject to a substantial risk of forfeiture or is transferable. The employer receives a corresponding compensation deduction at the same time the income is taxed to the employee.

EXAMPLE I:7-40 ▶ In 2025, Allied Corporation transfers 1,000 shares of its common stock to employee Karen as compensation pursuant to a restricted property plan. The FMV of the Allied stock is $10 per share on the transfer date. The restricted property agreement provides that the stock is nontransferable by Karen until the year 2027 (i.e., Karen cannot sell the stock to outsiders until year 2027). The stock is also subject to the restriction that if Karen voluntarily leaves the company before the year 2027, she must transfer the shares back to the company and will receive no benefit from the stock other than from the receipt of dividends. The FMV of the stock is $100 per share in year 2027 when the forfeiture and nontransferability restrictions lapse. Because the stock is both nontransferable and subject to a substantial risk of forfeiture from the issue date to year 2027, the tax consequences from the stock transfer are deferred for both Karen and Allied Corporation until the lapse of the nontransferability or forfeiture restrictions in year 2027. Thus, no tax consequences result in 2025 or 2026. In year 2027, Karen must report ordinary (compensation) income of $100,000 ($100 × 1,000 shares), and Allied Corporation is entitled to a corresponding compensation deduction of the same amount. Karen is taxed currently on the dividends she receives because they are not subject to any restrictions. ◀

KEY POINT

If an employee makes the election to be taxed immediately, he or she should be aware of the adverse consequences of leaving the company before the forfeiture restrictions lapse. The employee will not receive the property, and no deduction is allowed on the forfeiture.

Election to Be Taxed Immediately. An exception which permits an employee to elect (within 30 days after the receipt of restricted property) to recognize income immediately upon receipt of the restricted property is provided in Sec. 83(b). If the election is made, the employer is entitled to a corresponding deduction at the time the income is taxed to the employee. This election is frequently made when the fair market value of the restricted property is expected to increase significantly in the future and the future gain would be taxed as long-term capital gain.

EXAMPLE I:7-41 ▶ Assume the same facts as Example I:7-40, except that Karen elects to recognize income in 2025 (i.e., the transfer date). Karen must include $10,000 ($10 × 1,000 shares) in gross income as compensation in the current year and Allied Corporation is entitled to a corresponding deduction in the same year. Karen will report no income in 2027 when the restrictions lapse and her basis in the Allied Corporation stock remains at $10,000. If Karen sells the stock for $100,000 in the year 2027, or a later year after the restrictions lapse, Karen reports a $90,000 ($100,000 − $10,000) long-term capital gain on the sale.[46] If Karen voluntarily leaves the company before the forfeiture restrictions lapse, no deduction is allowed when the forfeiture occurs, despite the fact that Karen is previously taxed on the stock's value on the transfer date (i.e., $10,000 of income is recognized by Karen in the current year). In such event, Allied Corporation must

---

[46] Sec. 1223. The holding period originates on the day following the transfer date because Karen made the election to be taxed immediately under Sec. 83(b).

TOPIC REVIEW I:7-2

Nonqualified Plans

Distinguishing Features and Major Requirements

1. The employee is taxed upon the lapse of restrictions imposed on the availability or withdrawal of funds and the employer receives a corresponding deduction in the same year.
2. Nonqualified plans may discriminate in favor of highly compensated employees and no minimum vesting rules are required.
3. Restricted property (usually employer stock) may be offered to executives where the incidents of taxation are deferred if the property is nontransferable and subject to a substantial risk of forfeiture. An election may be made under Sec. 83(b) to recognize income immediately upon the receipt of the restricted property.
4. Restrictions must be imposed to avoid immediate taxation to the employee under the constructive receipt doctrine.
5. To avoid immediate taxation, restricted property plans must be both nonforfeitable and subject to a substantial risk of forfeiture.

include $10,000 in gross income in the year of the forfeiture (i.e., the amount of the deduction that is taken in the year of the transfer to the extent of any previous tax benefit). ◀

Nonqualified plan features and requirements are summarized in Topic Review I:7-2.

EMPLOYEE STOCK OPTIONS

Stock option plans are used by corporate employers to attract and retain key management employees. Both stock option and restricted property arrangements using the employer's stock permit the executive to receive a proprietary interest in the corporation. Thus, an executive may identify more closely with shareholder interests and the firm's long-run profit-maximization goals. The tax law currently includes two types of stock-option arrangements: the incentive stock option and the nonqualified stock option.[47] Each type is treated differently for tax purposes.

REAL-WORLD EXAMPLE

The use of employee stock options has come under criticism recently in the financial press. The pressure to increase earnings has been a major issue in recent corporate scandals. Further, the Financial Accounting Standards Board has issued a statement requiring the current expensing of stock options in certain circumstances.

As will be seen in the discussions below, both types of plans have their respective advantages and disadvantages. Incentive stock option arrangements generally are preferred when long-term capital gain rates are low as compared to ordinary income rates. Thus, because long-term capital gain rates are 15% or 20% and marginal tax rates for ordinary income are rather high (37%), interest should continue in incentive stock option arrangements. However, an employer is more favorably treated under the nonqualified stock-option rules (i.e., the employer receives a tax deduction for the compensation related to a nonqualified stock option but does not receive a corresponding deduction if an incentive stock-option plan is adopted) and may therefore still prefer to continue to use nonqualified stock options.

KEY POINT

Incentive stock options have the disadvantage of not providing a compensation deduction for the employer.

KEY POINT

Incentive stock options can be a valuable tax planning tool because the earliest that they are generally taxed is when they are exercised. Also, when an employee realizes profits from stock options, those profits in certain cases may qualify as capital gains.

Incentive Stock Option Plans.

Employer Requirements. An **incentive stock option (ISO) plan** must meet the following plan or employer requirements:[48]

- The option price must be equal to or greater than the stock's FMV on the option's grant date.
- The option must be granted within ten years of the date the plan is adopted, and the employee must exercise the option within ten years of the grant date.
- The option must be both exercisable only by the employee and nontransferable except in the event of death.
- The employee cannot own more than 10% of the voting power of the employer corporation's stock immediately before the option's grant date.
- The total FMV of the stock options that become exercisable to an employee in any given year may not exceed $100,000. If more than $100,000 of options are issued, the excess over $100,000 are treated as nonqualified options.
- Other procedural requirements must be met (e.g., shareholder approval of the plan).

---

[47] The incentive stock option rules are provided in Sec. 422, whereas the rules governing nonqualified stock options are contained in Reg. Sec. 1.83-7.

[48] Sec. 422.

Employee Requirements. In addition to the above plan requirements, the employee must meet the following requirements:

- The employee must not dispose of the stock within two years of the option's grant date nor within one year after the option's exercise date.
- The employee must be employed by the issuing company on the grant date and continue such employment until within three months before the exercise date.

If an employee meets the requirements listed above, no tax consequences occur on the grant date or the exercise date. However, the excess of the FMV over the option price on the exercise date is an adjustment for purposes of the alternative minimum tax (see Chapter I:14). When the employee sells the optioned stock, a long-term capital gain or loss is recognized. If the employee meets the two requirements, the employer does not receive a corresponding compensation deduction. If the requirements are not met, the option is treated as a nonqualified stock option.

EXAMPLE I:7-42 ▶ American Corporation grants an incentive stock option to Kay, an employee, on January 1, 2025. The option price is $100, and the FMV of the American stock is also $100 on the grant date. The option permits Kay to purchase 100 shares of American stock. Kay exercises the option on June 30, 2027, when the stock's FMV is $400. Kay sells the 100 shares of American stock on January 1, 2029, for $500 per share. Because Kay holds the stock for the required period (at least two years from the grant date and one year from the exercise date) and because Kay is employed by American Corporation on the grant date and within three months before the exercise date, all of the requirements for an ISO have been met. No income is recognized on the grant date or the exercise date, although $30,000 [($400 − $100) × 100 shares] is a tax adjustment item for the alternative minimum tax in 2027. Kay recognizes a $40,000 [($500 − $100) × 100 shares] long-term capital gain on the sale date in 2029. American Corporation is not entitled to a compensation deduction in any year. ◀

EXAMPLE I:7-43 ▶ Assume the same facts as Example I:7-42, except that Kay sells the stock on August 1, 2027, thus violating the one-year minimum holding period requirement after the exercise date. Kay must recognize ordinary income on the sale date equal to the spread between the option price and the exercise price, or $30,000 [($400 − $100) × 100 shares]. The $30,000 spread between the FMV and the option price is no longer a tax adjustment item because the option ceases to qualify as an ISO. American Corporation can claim a $30,000 compensation deduction in 2027. Kay also recognizes a $10,000 [($500 − $400 adjusted basis) × 100 shares] short-term capital gain on the sale date, which represents the appreciation of the stock from the exercise date to the sale date. The gain is short-term because the holding period from the exercise date to the sale date does not exceed one year. ◀

KEY POINT

With ISOs, the employee does not recognize income when the option is exercised; income is recognized only when the stock is sold. With nonqualified stock options, income is recognized when the option is exercised or on the grant date and when the stock is sold at a gain.

Nonqualified Stock Option Plans. Stock options that do not meet the plan requirements for incentive stock options are referred to as **nonqualified stock options**. The tax treatment of nonqualified stock options depends on whether the option has a **readily ascertainable fair market value** (e.g., whether the option is traded on an established options exchange).

Readily Ascertainable Fair Market Value. If a nonqualified stock option has a readily ascertainable FMV (e.g., the option is traded on an established options exchange), the employee recognizes ordinary income on the grant date equal to the difference between the fair market value of the option and the amount paid (if any) for such property. The employer receives a compensation deduction on the grant date equal to the same amount of income that is recognized by the employee. In such case, no tax consequences occur on the date the option is exercised, and the employee recognizes capital gain or loss upon the sale or disposition of the stock.

No Readily Ascertainable Fair Market Value. If a nonqualified stock option has no readily ascertainable FMV, no tax consequences occur on the grant date. On the exercise date the employee recognizes ordinary income equal to the spread between the FMV of the stock and the option price, and the employer receives a corresponding compensation deduction. When the stock option is exercised, the employee's basis in the stock is equal to the option price plus the amount reported as ordinary income on the exercise date. Capital gain or loss is recognized upon the subsequent sale of the stock by the employee.

The alternative minimum tax does not apply to nonqualified stock options regardless of whether the option has a readily ascertainable FMV. Table I:7-3 illustrates the tax consequences to employees and employers for such options.

As illustrated in Table I:7-3, Kim reports a total gain of $11,000 from the nonqualified stock option transaction under both circumstances. However, the character of her profit (i.e., ordinary income or capital gain) and the timing of the profit recognition (i.e., grant date or exercise date) depends on whether the option's FMV is readily ascertainable.

The distinguishing features and major requirements for employee stock options are summarized in Topic Review I:7-3.

▼ TABLE I:7-3
Taxation of Nonqualified Stock Options

Situation Facts	Readily Ascertainable FMV	No Readily Ascertainable FMV
Grant date: On January 1, 2023, Kim is granted a nonqualified stock option to purchase 100 shares of stock from Apple Corporation (Kim's employer) at $90 per share. The stock's FMV is $100 on the grant date.	Ordinary income of $1,000 is recognized [($100 − $90) × 100 shares] by Kim in 2023. Apple Corporation receives a corresponding $1,000 compensation deduction in 2023.	No tax consequences to Kim or Apple Corporation.
Exercise date: On January 31, 2025, Kim exercises the option and acquires the 100 shares of Apple Corporation stock for the $90 option price when the FMV is $190.	No tax consequences to Kim or Apple Corporation.	Kim recognizes ordinary income in 2025 of $10,000 [($190 − $90) × 100 shares], and Apple Corporation receives a $10,000 compensation deduction.
Sale date: On February 1, 2026, Kim sells the stock for $200 per share and realizes $20,000 ($200 × 100 shares).	Kim recognizes a $10,000 ($20,000 − $10,000 basis) long-term capital gain.[a]	Kim recognizes a $1,000 ($20,000 − $19,000 basis) long-term capital gain on the sale.[b]

[a] Kim's basis includes the amount paid for the optioned stock of $9,000 plus ordinary income of $1,000 recognized on the grant date. Kim's holding period commences on the January 1, 2023, grant date for determining whether the gain is long-term.

[b] Kim's basis includes the $9,000 paid for the option stock plus the $10,000 ordinary income recognized on the exercise date. Kim's holding period commences on the January 31, 2025, exercise date for determining whether the gain is long-term.

TOPIC REVIEW I:7-3

Employee Stock Options

DISTINGUISHING FEATURES AND MAJOR REQUIREMENTS

- For an incentive stock option (ISO) plan no tax consequences occur on the grant or the exercise date (except for the recognition of a tax preference item under the AMT provisions on the exercise date). Capital gain or loss is recognized by the employee upon the sale or exchange of the stock. No deduction is allowed to the employer.
- ISOs and nonqualified stock options may be issued to highly-compensated employees without regard to nondiscrimination rules.
- If a nonqualified stock option has a readily ascertainable FMV, the employee recognizes ordinary income equal to the spread between the FMV of the stock and the option price on the grant date and the employer receives a corresponding deduction. If the option has no readily ascertainable FMV, income is recognized on the exercise date equal to the spread between the FMV of the stock and the option price and a corresponding deduction is available to the employer.
- For an ISO, the option price must be equal to or greater than the FMV of the stock on the grant date, employees cannot own more than 10% of the voting power of the employer's stock, and restrictions are placed on the total FMV of stock options that may be issued.
- To qualify under the ISO rules, a two-year holding period from the grant date is required (and at least one year after the exercise date) and the employee must continue to be employed by the company until within three months of the exercise date.

PLANS FOR SELF-EMPLOYED INDIVIDUALS

Self-employed individuals, such as sole proprietors or partners who practice as a trade or business, are not considered as employees and are not eligible for the retirement plans offered to employees. However, self-employed individuals have their own special types of retirement plans. Retirement plans of self-employed people are generally subject to the same contribution and benefit limitations as other qualified corporate plans. An individual who is an employee and also has a self-employed business generally is able to be covered under an employer-sponsored plan and a self-employed plan. There are overall limitations that apply in these circumstances.

ADDITIONAL COMMENT

If you are self-employed and establish a Keogh plan, you must include any full-time employees in the plan.

The principal types of retirement plans for self-employed individuals include the following:

- **H.R. 10 plan**—this plan, also referred to as a **Keogh plan**, was the original self-employed plan and, although still a viable and important type of plan, is not used as much now because of the annual paperwork requirements.
- SEP IRA—this plan, a Simplified Employee Pension plan, is similar to an H.R. 10 plan but is easier to set up and administer. SEP IRAs are discussed in more detail below.
- SIMPLE plan—SIMPLE plans are relatively easy to use and administer but the contribution limits are lower than those for H.R. 10 or SEP IRA plans. SIMPLE plans are discussed in more detail below.
- Solo 401(k) plan—this plan is for solo business owners with no other employees. Solo 401(k) plans provide for a $23,500 deferral for the business owner plus a 25% of salary match by the company. The total contribution limit (including both the deferral plus the company match) in 2025 is $70,000.

KEY POINT

Keogh plans can be either defined benefit or defined contribution plans. Many individuals avoid the defined benefit type of Keogh plan due to the extra paperwork and administrative costs.

For a defined contribution H.R. 10 plan or SEP IRA, a self-employed individual in 2025 may contribute the smaller of $70,000 or 25% of earned income from the self-employment activity.[49] *Earned income* refers to net earnings from self-employment. However, for purposes of computing the maximum amount that may be contributed to a Keogh or SEP IRA plan by a self-employed individual, earned income must be reduced by two amounts: (1) the 50% deduction for self-employment taxes and (2) the contribution itself. Since the contribution is based on earned income *after* the contribution, the 25% contribution percentage must be reduced to 20%.[50] To compute the limitations for 2025, a maximum of $350,000 of compensation may be taken into account for any one individual.[51]

EXAMPLE I:7-44 ▶ Larry is a self-employed CPA whose 2025 net earnings from his trade or business (before the H.R. 10 or SEP IRA plan contribution but after the deduction for one-half of the self-employment taxes paid under Sec. 164(f) [see Chapter I:14]) is $100,000. Larry may contribute $20,000 ($100,000 × 20%) to the plan for 2025. Larry must also provide coverage for all of his eligible full-time employees under the general rules provided in the law for qualified plans (e.g., nondiscrimination, vesting, and so on).[52] ◀

EXAMPLE I:7-45 ▶ Assume the same facts as in Example I:7-44 except that Larry's earnings from his trade or business (before the plan contribution but after the deduction for one-half of the self-employment taxes) is $400,000. The maximum contribution that Larry can make on his behalf in 2025 is $70,000 ($350,000 × 0.20). Even though his earnings were $400,000, the maximum compensation that can be used to calculate the H.R. 10 or SEP IRA plan contribution in 2025 is $350,000. ◀

KEY POINT

A Keogh plan must be created no later than the last day of your tax year. However, a SEP IRA may be created by the due date of the return.

An H.R. 10 plan must be established before the end of the tax year, but contributions may be made up to the due date for the tax return (including extensions). SEP IRA plans can be setup and funded by the due date of the return, including extensions. Thus, for the tax year 2025, a taxpayer is permitted to establish a SEP IRA by April 15, 2026 (or October 15, 2026, if the return is extended). All pension contributions made by a self-employed individual for *employees* are deductible for AGI on Schedule C. The H.R. 10 or SEP IRA contribution for the self-employed individual is deductible *for* AGI on page 1 of Form 1040.

---

[49] Sec. 415(c)(1). The limitations are indexed annually for inflation.

[50] This reduction in contribution percentage is computed as follows: 0.25/1.00 + 0.25 = 0.20. If the Keogh or SEP IRA contribution rate is 15% rather than 25%, the deductible percentage would be 13.0435%, computed as above, 0.15/1.00 + 0.15 = 0.130435. Other percentages can be calculated accordingly.

[51] Secs. 401(a)(17) and 404(l). The ceiling in 2024 was $345,000.

[52] Sec. 401(d).

SIMPLIFIED EMPLOYEE PENSIONS (SEP IRAS)

Due to the administrative complexity associated with qualified pension and profit-sharing plans, small businesses often establish simplified employee pension (SEP IRA) plans for their employees. In a SEP, the employer makes contributions to the IRAs of its employees.[53] The following is a summary of the tax rules that apply to SEP IRAs:

ADDITIONAL COMMENT

A self-employed person (i.e., a partner or sole proprietor) may establish a SEP rather than using an H.R. 10 plan arrangement because of reduced administrative complexity associated with a SEP.

- The employer receives an immediate tax deduction for contributions made under the plan. The annual deductible contributions for each participant are limited to the lesser of 25% of the participant's compensation (up to a ceiling of $350,000 for 2025) and the dollar limitations for defined contribution plans.[54] The maximum amount for 2025 is $70,000.
- Contributions are treated as being made on the last day of the tax year if they are made by the due date of the tax return (including extensions).
- Employer contributions must be nondiscriminatory.
- Distributions from a SEP are subject to taxation based on the IRA rules (previously discussed) including the penalty tax for premature distributions.

SIMPLE RETIREMENT PLANS

Another type of retirement savings plan for small businesses is called the savings incentive match plan for employees (SIMPLE).[55] This type of plan can be adopted by employers who have 100 or fewer employees who received at least $5,000 in compensation from the employer in either of the two preceding years. A SIMPLE plan may be set up either as an IRA for each employee or part of a qualified cash or deferred arrangement (401(k) plan). Essentially, employees are allowed to make elective contributions in 2025 of up to $16,500 per year and employers are required to make matching contributions.

The unique features of the SIMPLE plans are (1) that elective contributions by employees must be matched by the employer or the employer has the option of making nonelective contributions, (2) that all contributions to an employee's SIMPLE account must be fully vested, and (3) the SIMPLE plans are not subject to the special nondiscrimination rules generally applicable to qualified plans. This last feature is important in that there is no requirement that a set number of employees *participate* in the plan, the only requirement is that all employees who had $5,000 in compensation in the previous year and are reasonably expected to have $5,000 in compensation in the current year must be eligible to participate.

HISTORICAL NOTE

The IRA savings provisions were originally enacted in 1974 to provide a tax-favored retirement savings arrangement to individuals who were not covered under a qualified plan. Beginning in 1982, Congress extended IRA availability to all taxpayers. It was hoped that the extended availability would increase the level of savings and provide a discretionary retirement savings plan that was uniformly available. However, Congress in the Tax Reform Act of 1986 restricted the availability of IRAs because there was no discernible impact on aggregate personal savings.

INDIVIDUAL RETIREMENT ACCOUNTS (IRAS)

Under current law, there are three types of IRAs that are available to taxpayers: traditional IRA, Roth IRA, and Coverdell Education Savings Account IRA.[56] Each of these three types of IRAs is discussed below.

TRADITIONAL IRA

Traditional IRAs have been in the law for over 48 years and taxpayers may make either deductible or nondeductible contributions to the IRA. A contribution to a traditional IRA that is deductible has two principal benefits: (1) the amount contributed to the IRA (maximum $7,000 per year for 2025) is deductible on the taxpayer's return[57] and (2) the income earned on the investments in the IRA is not subject to current taxation. However, when amounts are withdrawn from the IRA at retirement, such amounts are fully subject to taxation. Nondeductible contributions to a traditional IRA may not be deducted on the taxpayer's return, but such contributions are not subject to taxation when withdrawn from the IRA. While contributions are not subject to taxation, any earnings are subject to taxation when withdrawn.

In order to make a deductible contribution to a traditional IRA, certain requirements must be met. First, the individual must have compensation (or earned income) equal to the lesser of $7,000 or the amount of the contribution. Second, either of the following conditions must exist:

---

[53] Sec. 408(k).

[54] Sec. 404(h)(1).

[55] Sec. 408(p).

[56] The Coverdell Education Savings Account was named after the late Senator Paul Coverdell of Georgia.

[57] The deductible amount to an IRA was increased from $2,000 prior to 2002 to $3,000 for 2002–2004, $4,000 for 2005–2007, $5,000 for 2008–2012, $5,500 for 2013–2018, $6,000 for 2019–2022, $6,500 for 2023 and $7,000 in 2024. See Sec. 219(b)(5). The deductible amount is indexed for inflation. Prior to 2002, the deductible amount was $2,000. In addition, individuals over 50 years of age are now eligible to contribute an extra $1,000 into their IRA. These extra amounts are referred to as "catch-up contributions."

- The individual is *not* an active participant in an employer-sponsored retirement plan, including tax-sheltered annuities, government plans, simplified employee pension plans, and H.R. 10 plans; or
- Individuals who are active participants in an employer-sponsored retirement plan must have an AGI equal to or below the following applicable dollar limits for 2025:[58] $79,000 for an unmarried taxpayer; $126,000 for a married couple filing a joint return; zero for a married individual filing separately. If an individual has AGI above these amounts, the deductible IRA contribution amounts are phased out on a pro rata basis as AGI increases from $79,000 to $89,000 for unmarried taxpayers and from $126,000 to $146,000 for married taxpayers filing a joint return.

EXAMPLE I:7-46 ▶ Laura is an unmarried taxpayer who is not an active participant in an employer-sponsored retirement plan or other qualified plan. In 2025, Laura's AGI is $90,000, consisting of earned income from wages. Laura is not subject to the dollar limitation because she is not an active participant in a qualified plan and may, therefore, contribute and deduct up to $7,000 to a traditional IRA. Laura's AGI is reduced to $83,000 ($90,000 − $7,000) because the amount is deductible *for* AGI. ◀

EXAMPLE I:7-47 ▶ Judy is an unmarried taxpayer and an active participant in her employer's qualified retirement plan. In 2025, Judy's AGI is $83,000, consisting of earned income from wages of $77,000 and interest and dividends of $6,000. Since she is an active participant in a qualified plan and her AGI is over $79,000, her deductible contribution to a traditional IRA is subject to the phase-out. Since the ceiling amount is exceeded by $4,000 ($83,000 − $79,000), the maximum IRA contribution is reduced by 40% ($4,000/$10,000), or $2,800. Thus, the maximum that Judy can contribute *and* deduct to her IRA in 2025 is $4,200 ($7,000 − $2,800). ◀

ADDITIONAL COMMENT

Banks, savings and loan associations, insurance companies, and stock brokerage firms make IRAs available to taxpayers. Usually, the amounts are invested in long-term investment accounts. However, self-directed plans are offered by some stock brokerage firms. In this type of IRA, the taxpayer can specify how the contributions will be invested.

If a taxpayer's AGI exceeds the above limits, the taxpayer may not make a deductible contribution but may make a nondeductible contribution of up to $7,000 to a traditional IRA. The benefit of making a nondeductible contribution to an IRA is that the earnings of the IRA investments grow tax-free. Thus, even though the *earnings* of the nondeductible IRA will be taxed when distributed, the ability to allow investments to compound before-tax is an advantage for taxpayers. However, as will be seen in the discussion of Roth IRAs below, if a taxpayer can qualify for a Roth IRA rather than a traditional nondeductible IRA, the choice clearly favors a Roth IRA. The maximum amount of a nondeductible contribution that may be made to a traditional IRA is $7,000 minus the amount that is allowed as a deduction. Also, a taxpayer may elect for all of his contributions to be nondeductible even though the contributions are otherwise eligible to be deducted.

EXAMPLE I:7-48 ▶ Using the same facts as in Example I:7-47, Judy is permitted to make a nondeductible contribution to her IRA of $2,800 ($7,000 − $4,200). She also could elect to designate all $7,000 as a nondeductible contribution even though she is eligible to deduct the $4,200. ◀

Two special rules apply to married couples relative to traditional IRAs:

1) If only one spouse is employed and this working spouse is otherwise eligible to make IRA contributions, the nonworking spouse may contribute up to $7,000 per year to an IRA (a so-called spousal IRA). Thus, a total of $14,000 may be deductible by a married couple ($7,000 to each spouse's IRA) even though only one spouse has earned income. It should be noted that even though only the working spouse must have earned income, such working spouse must have at least $14,000 of earned income in order to contribute $14,000 to the two IRAs.

2) If one spouse is covered under a qualified retirement plan but the other spouse is not covered, the noncovered spouse may contribute to a traditional deductible IRA. However, for 2025, the contribution to a traditional deductible IRA is phased out at adjusted gross incomes between $236,000 and $246,000.

EXAMPLE I:7-49 ▶ Gary and Babs are a married couple. Gary is covered under a qualified retirement plan at his job and earned $215,000 in 2025. Babs is employed as a secretary and earned $26,000 but is not covered under a qualified retirement plan. They file a joint return, have interest and dividend income of $35,000, and their AGI, is $276,000. Neither Gary nor Babs is entitled to deduct contributions to a traditional IRA. Gary cannot contribute and deduct any amount to an IRA because he is covered under another qualified plan and their AGI exceeds $146,000. Babs is also not eligible because their AGI exceeds $246,000. However, both Gary and Babs are allowed to make nondeductible contributions of $7,000 each to the IRA. ◀

---

[58] Sec. 219(g).

EXAMPLE I:7-50 ▶ Assume the same facts as in Example I:7-49 except Gary's income is $110,000 rather than $215,000 and their AGI is $171,000 rather than $276,000. Babs may contribute and deduct $7,000 to a traditional IRA because their AGI is less than $236,000. However, Gary may not make a deductible contribution because he is covered under a qualified plan and their AGI exceeds $146,000. Gary is permitted to make a $7,000 contribution to a nondeductible IRA. ◀

ADDITIONAL COMMENT

A contribution to an IRA for the tax year 2025 can be made as late as the due date for filing the 2025 return, or April 15, 2026.

The following significant tax rules apply to traditional IRAs:

- An IRA plan may be established between the end of the tax year and the due date for the tax return (not including any extensions that are permitted). Any deductible contributions made during this time are treated as a deduction for the prior year. Contributions are deductible if made by the due date for the tax return (i.e., contributions for 2025 must be made no later than April 15, 2026). Contributions to nondeductible IRAs also must be made by the tax return due date of the following year.
- Taxpayers who are 50 years of age or older by the end of the taxable year may contribute an additional $1,000 per year (or a total of $8,000 in 2025). These additional IRA contributions are referred to as catch-up contributions.
- For 2025, taxpayers are allowed to make contributions to a traditional IRA after they reach age 73. This rule was enacted under the SECURE 2.0 Act and the Omnibus Spending Bill.[59]
- Distributions from a traditional IRA are taxed under the annuity rules in Sec. 72. Normally distributions from an IRA are fully subject to taxation. However, if nondeductible contributions are made to an IRA, these amounts would represent the investment in the contract in calculating the exclusion ratio.
- Withdrawals by a participant before age 59½ are both includible in income and subject to a nondeductible 10% penalty tax.[60]
- Withdrawals must begin no later than April 1 of the year following the end of the tax year in which the individual reaches a specified retirement age. In prior years, this age could have been either age 70½ or 72. IRA contributions that were deducted over the years on the taxpayer's returns are fully taxable as ordinary income when the amounts are distributed. Under current law, the specified retirement age depends on a taxpayer's birth date. If your birth date is before 1/1/1951, your RMDs have already started and nothing changes. If your birth date is between 1/1/1951 and 12/31/1959, your RMDs must start at age 73. After 1/1/1960, your RMDs must begin at age 75.
- A nondeductible 6% penalty is levied on excess contributions to an IRA.

ROTH IRA

ADDITIONAL COMMENT

Employers may now offer their employees a Roth 401(k) option. Under a Roth 401(k), employees can contribute up to $23,500 in 2025. The Roth 401(k) plan operates in the same basic way as a regular Roth IRA.

The Roth IRA[61] is a relatively new type of IRA that is a so-called "backloaded IRA" because the tax benefits come at the end, not at the beginning, of the IRA. Contributions to a Roth IRA are nondeductible but all distributions from the IRA, including earnings, are nontaxable. The maximum amount that may be contributed to a Roth IRA is $7,000. However, taxpayers who are eligible for both a Roth IRA and a traditional IRA may only contribute a total of $7,000 to both types of IRAs. As with traditional IRAs, Roth IRAs are also subject to AGI phaseout limitations, although the limitation amounts are higher than with traditional IRAs.

All taxpayers may contribute up to the lesser of (1) $7,000 or (2) 100% of the taxpayer's compensation, to a Roth IRA; however, for 2025, this amount is phased-out for single taxpayers if their AGI is between $150,000 and $165,000 ($236,000 and $246,000 for married couples filing a joint return and $0 for married individuals filing separate returns). The principal advantage of the Roth IRA is the nontaxability of qualified distributions. One requirement of a qualified distribution is that the distribution must meet a five-year holding period. More specifically, the distribution may not be made before the end of the five-tax-year period beginning with the first tax year for which a contribution was made to the Roth IRA. The first tax year begins on the first day of the tax year

---

[59] The SECURE 2.0 Act contained major changes, effective January 1, 2023. The new law was part of the Omnibus Spending Bill signed on December 29, 2022.

[60] Sec. 72(t). The amount subject to the 10% penalty is the portion of the amount that must be included in gross income. Exceptions to the 10% penalty are provided in the event of death, disability, and certain non-lump-sum distributions. Two additional exceptions also apply: (1) withdrawals used to pay qualified higher education costs for taxpayer, spouse, children or grandchildren and (2) up to $10,000 to buy or build the principal residence for a "first time homebuyer."

[61] Sec. 408A.

(i.e., January 1 in most cases) in which a contribution was made even though such contribution may have been made later in such tax year. In addition to satisfying the five-year test, a qualifying distribution must also meet one of the following:

- made on or after the date on which the individual attains age 59½,
- made to a beneficiary (or the individual's estate) on or after the individual's death,
- attributable to the individual being disabled, or
- a distribution for first-time homebuyer expenses (maximum of $10,000).

An important aspect of distributions from a Roth IRA is a special ordering rule for determining the taxability of nonqualifying withdrawals. Under this rule, distributions are treated as being made from contributions first and, thus, are nontaxable. After all contributions have been withdrawn, any remaining amounts are considered taxable and subject to the 10% penalty.

EXAMPLE I:7-51 ▶ Ray and Marti are married and Ray is covered under his employer's qualified retirement plan. Their AGI for 2025 on a joint return is $110,000. Ray can contribute $7,000 to a Roth IRA. Alternatively, if their AGI was $240,000, Ray would be limited to a maximum contribution of $4,200. Since their AGI exceeds the threshold of $236,000 by $4,000, the $7,000 contribution is reduced by $2,800 [($4,000/$10,000) × $7,000]. ◀

EXAMPLE I:7-52 ▶ Bob, age 60 in 2025, contributes $7,000 each year to a Roth IRA in 2025, 2026, and 2027. On November 30, 2030, the value of the Roth IRA is $26,000. Bob has experienced some financial setbacks and needs to withdraw the money from the Roth IRA. If Bob withdraws $21,000 in 2030 and waits until January 2031 to withdraw the remaining $5,000, none of the distributions are taxable. This result occurs because the first $21,000 ($7,000 × 3 years) is treated as coming from contributions. The remaining $5,000 is nontaxable because Bob has met the five-year test and is over age 59 ½. Conversely, if Bob withdraws the entire $26,000 in 2030, $5,000 must be included in his income because the five-year test was not met. No penalty will be imposed because he is over age 59 ½. ◀

TAX STRATEGY TIP

Because of the tax-deferral of income within a Roth IRA and the ability to withdraw amounts at retirement tax-free, the Roth IRA generally is superior to a traditional IRA for younger taxpayers. Once a taxpayer reaches 50 years of age, the two types of IRAs become more equal.

A final aspect of Roth IRAs is the ability to "rollover" funds from an existing traditional IRA into a Roth IRA. Since the taxpayer received a deduction for the contribution into the traditional IRA, any rollover amount must be included in gross income in the year the rollover occurred, but is not subject to the 10% penalty for early withdrawals. This rollover option also has been extended to existing 401(k), 403(b), or 457 plans. There is considerable interest in this rollover option for taxpayers. The essential question is whether a taxpayer should convert his or her traditional IRA to a Roth IRA and pay the tax currently or keep the traditional IRA and pay the tax on a current basis as the amounts are withdrawn. The key variable in this analysis is the taxpayer's age. Younger taxpayers would definitely benefit with a Roth IRA as the amounts in the Roth IRA have years to accumulate and compound and such amounts will never be subject to taxation. Other important variables include the taxpayer's assessment of his or her future marginal tax rate and the ability to pay the tax on the rollover out of private funds.

EXAMPLE I:7-53 ▶ John is single and has a traditional IRA that has a balance of $250,000 on June 30, 2025. John would like to rollover the $250,000 to a Roth IRA. John is permitted to rollover the $250,000 from his traditional IRA to a Roth IRA in 2025. He must include the $250,000 in his gross income in 2025 but no penalty is imposed. This treatment is also now available for 401(k), 403(b), or 457 plans in addition to traditional IRAs. ◀

Below is a discussion of some of the important tax rules for Roth IRAs:

- Like traditional IRAs, Roth IRAs must be established by the due date of the tax return (not including extensions). Similarly, contributions to a Roth IRA also must be made by the due date of the return (i.e., April 15, 2026, for 2025 contributions).
- Contributions to a Roth IRA are never deductible.
- Contributions to a Roth IRA are subject to special modified AGI limitations.
- Contributions to a Roth IRA can be made after the owner has reached age 73. Similarly, no distributions are required at any age from a Roth IRA. (Remember: owners of traditional IRAs must begin taking distributions in the year after the taxpayer has reached age 73.)

- Taxpayers who are 50 years or older by the end of the taxable year may contribute an additional $1,000 per year (or a total of $8,000 in 2025).
- Withdrawals from a Roth IRA are not taxable if such withdrawals are "qualified distributions." If a withdrawal is not a qualified distribution, the amount is taxed under special ordering rules and subject to the 10% penalty.

STOP & THINK

Question: Both nondeductible contributions to a traditional IRA and contributions to a Roth IRA are similar in the sense that neither provides a tax deduction at the date of contribution. Which of the two types would be most advantageous to taxpayers?

Solution: Clearly, if a taxpayer qualifies for a Roth IRA, that type of IRA is superior to a nondeductible contribution to a traditional IRA. The reason is that distributions from a Roth IRA are totally excluded from gross income while only the principal portion of nondeductible contributions to a traditional IRA are excludable. In other words, the earnings generated in a Roth IRA are excluded from gross income whereas earnings associated with nondeductible contributions to a traditional IRA are subject to taxation. Generally, a nondeductible contribution to a traditional IRA will not be advantageous unless the taxpayer's AGI exceeds $246,000.

For a discussion of the decision whether to invest in a traditional deductible IRA or a Roth IRA, see the Tax Planning Considerations section later in this chapter. Also, for a more detailed analysis including computations, see Chapter I:18 of the *Individuals* volume.

Topic Review I:7-4 contains a table which summarizes the eligibility rules for traditional and Roth IRAs.

COVERDELL EDUCATION SAVINGS ACCOUNT

A special type of IRA, referred to as an Education IRA, was established to specifically assist low- and middle-income taxpayers with higher education expenses. The Education IRA was renamed the Coverdell Education Savings Account (CESA) in 2001. CESAs have a number of attractive features:

ADDITIONAL COMMENT

Any number of people may contribute funds to a Coverdell Education Savings Account for one child, but all of the contributions may not total more than $2,000 for that child.

- The maximum annual contribution into such plan is $2,000.[62]
- CESAs may be used for elementary and secondary education expenses as well as for higher education expenses, and
- Taxpayers can claim either the HOPE scholarship credit or Lifetime Learning Credit as well as excluding distributions from a CESA in the same year.

TOPIC REVIEW I:7-4

Traditional and Roth IRAs—Eligibility

If 2025 AGI Is	Eligible for IRA (Joint Returns)				
	Traditional IRA (Deductible)			Roth IRA	Traditional IRA (Nondeductible)*
	A	B	C		
Up to $126,000	Yes	Yes	Yes	Yes	Yes
$126,000–$146,000	Yes	Partially	Yes	Yes	Yes
$146,000–$236,000	Yes	No	Yes	Yes	Yes
$236,000–$246,000	Yes	No	Partially	Partially	Yes
Over $246,000	Yes	No	No	No	Yes

A If neither spouse is an active participant in an employer-sponsored plan
B For the IRA of a spouse who is an active participant in an employer-sponsored plan
C For the IRA of a spouse who is not an active participant in an employer-sponsored plan

* If AGI is not above $246,000, a nondeductible IRA will not be advantageous.

---

[62] Pursuant to the American Taxpayer Relief Act of 2012 (ATRA 2012), the contribution limit of $2,000 and other enhancements that were enacted in 2001 were made permanent for 2013 and future years.

A contributor can make a *nondeductible* contribution of up to $2,000 per year into a CESA for a designated beneficiary until the beneficiary reaches age 18.[63] The contributor need not be related to the beneficiary and there is no limit on the number of CESAs that can be set up by a contributor. Distributions to the beneficiary are excluded from gross income provided the distribution does not exceed the *qualified education expenses* of the designated beneficiary during the taxable year. Qualified education expenses include tuition, fees, books, supplies, equipment, and room and board. In the case of elementary and secondary education expenses, qualified education expenses include academic tutoring and Internet access fees. Distributions in any tax year in excess of qualified education expenses are includible in the gross income of the beneficiary and subject to a 10% penalty.

Similar to other IRA-type accounts, there are phaseout limits based on the contributor's AGI. The $2,000 annual contribution is phased out for married taxpayers filing joint returns with AGI from $190,000 to $220,000 ($95,000 to $110,000 for other taxpayers). In addition, if the taxpayer claims either the HOPE scholarship credit or the Lifetime Learning Credit, the education expenses used for these credits must reduce the qualified expenses for exclusion from a CESA.

EXAMPLE I:7-54 ▶ Lee and Patsy are married and have two young grandchildren. To assist the grandchildren with their future education expenses, they set up a CESA for each child in 2025 and plan to deposit $2,000 in both accounts. Their AGI for 2025 is $202,000. Because their AGI exceeds $190,000, they are limited to putting $1,200 [$2,000 − $2,000(($202,000 − $190,000)/$30,000)] into the accounts in 2025. In the future, the children can withdraw amounts tax-free from their CESA to pay for qualified education expenses for elementary, secondary, or higher education. ◀

EXAMPLE I:7-55 ▶ Craig Shaw is about to enter State University as a freshman and plans to withdraw amounts from his CESA to help pay his expenses. His expenses for the Fall Semester 2025 are as follows:

Tuition and fees	$2,200
Books	500
Supplies	300
Room and board	2,400
Total	$5,400

Craig's parents plan on paying Craig's tuition and fees, and Craig will pay the remaining $3,200 from his CESA. Craig qualifies as a dependent of his parents for the tax year. Craig's parents plan on claiming the American Opportunity Tax Credit. Craig is not required to include the $3,200 in his gross income in 2025 as his qualified education expenses are at least $3,200. Craig's parents will use $2,200 to claim the AOTC credit. ◀

HEALTH SAVINGS ACCOUNTS

Health Savings Accounts (HSAs) were established by Congress to enable individuals to accumulate funds on a tax-free basis to pay qualified medical expenses currently or in the future.[64] In summary, HSAs operate as follows:

- The individual must be covered by a high-deductible health plan and not covered under any other health plan that is not a high-deductible health plan.
- Taxpayer contributes money into an HSA with a qualified trustee or custodian (much like an IRA). The taxpayer must be an eligible individual and the contributions are subject to limitations. These detailed issues are discussed below.
- The taxpayer is allowed a *for* AGI deduction in the year the contributions are made.
- Distributions from the HSA that are used exclusively to pay for qualified medical expenses (medical expenses as defined in Sec. 213(d), but not health insurance premiums)

---

[63] Sec. 530. Contributions are allowed to continue past age 18 for a special-needs beneficiary.

[64] Sec. 223. Archer Medical Savings Accounts are similar to HSAs but cannot be established after 12/31/05. MSAs have a more restrictive definition of HDHP so there is little incentive to use them.

are excludable from gross income. However, any amount of the distribution that is not used to pay for qualified medical expenses is includable in the gross income of the taxpayer and subject to an additional 10% penalty. The 10% penalty is waived if the beneficiary/taxpayer is age 65 or older.

HSAs are only available to eligible individuals. An eligible individual is any individual who (1) is covered under a *high-deductible health plan* (HDHP), (2) is not also covered by any other health plan that is not an HDHP, (3) is not entitled to benefits under Medicare (i.e., generally, has not reached age 65), and (4) may not be claimed as a dependent on another person's tax return. An HDHP is a plan for an individual with an annual deductible in 2025 of at least $1,650 and annual out-of-pocket expenses (other than premiums) required to be paid not exceeding $8,300. For family coverage, these amounts are $3,300 and $16,600, respectively.

Annual contributions to an HSA are determined separately for each month the plan is in effect and is of the *lesser* of (1) 100% of the annual deductible under the HDHP (minimum of $1,650) or (2) $4,300. For individuals with family coverage under an HDHP, the amounts are (1) 100% of the annual deductible under the HDHP (minimum of $3,300) or (2) $8,550. Catch-up contributions are permitted for individuals age 55 to 64.

EXAMPLE I:7-56 ▶ Roy, age 45, established an HDHP for his family with a $3,600 annual deductible on April 1, 2025. Since the plan has been established only 9 months, the maximum he can contribute to the HSA is $712.50 per month ($8,550/12). Roy is eligible to put $6,412.50 (9 months × $712.50) into an HSA for the calendar year 2025. The purpose of the fund is to pay for medical expenses for himself and his family. In 2025, Roy is allowed to claim the $6,412.50 as a deduction for AGI. Any earnings of the fund investments are not subject to tax if the distribution is used to pay qualified medical expenses. ◀

EXAMPLE I:7-57 ▶ Using the information in Example I:7-56, in 2028, Roy takes a $5,000 distribution from the HSA to make a down payment on a new automobile. Since the distribution was not used to pay qualified medical expenses, Roy must include the $5,000 in his income and pay a $500 ($5,000 × 10%) penalty in 2028. ◀

TAX PLANNING CONSIDERATIONS

OBJECTIVE 10

Describe tax planning considerations for business expenses and deferred compensation

PROVIDING NONTAXABLE COMPENSATION TO EMPLOYEES

Employers should consider the tax consequences to employees when changes in fringe benefit and deferred compensation arrangements are evaluated. For example, it is preferable for an employer to pay for fringe benefit items such as group term life insurance (up to $50,000 in coverage), health and accident insurance, employee parking, and so on rather than to give cash raises of a comparable amount. Such payments are nontaxable to the employee up to certain limits, whereas a comparable salary increase is fully taxable. Both types of payments are deductible by the employer.

Consideration should also be given to increased deferred compensation benefit programs for employees, particularly highly-compensated individuals. The use of nonqualified deferred compensation plans, restricted property, and stock options result in tax deferrals and may result in the eventual recognition of capital gains that may be used to offset capital losses or that are taxed at preferential tax rates.

All eligible employees should consider establishing an individual retirement account (IRA) because of the available tax deferral benefits. Even if a premature withdrawal (i.e., before age 59½ occurs), the time value of the deferred benefits for the plan contributions and the earnings may be greater than the penalty tax imposed.

REAL-WORLD EXAMPLE

Banks and other financial institutions in their ads sometimes compare the accumulated wealth in an IRA to the accumulated wealth in a fully taxable investment. Although the IRA is generally advantageous, the ads sometimes overstate the advantages because they fail to deduct the tax that will be paid when amounts are withdrawn from the IRA.

ROLLOVERS TO ROTH IRA

Taxpayers have the ability to rollover amounts from traditional IRAs as well as 401(k), 403(b), or 457 plan to a Roth IRA.[65] However, if such a rollover is made, the taxpayer must include the rollover amount in gross income in the year of the rollover. The principal benefit of the rollover is that once the amounts are in the Roth IRA, no further taxes are due on these amounts upon distribution (assuming the five-year test is met). The essential question, therefore, is whether it is advantageous to rollover amounts to a Roth IRA and pay the tax now or keep the original plan intact and pay the tax when regular distributions are made.

---

[65] 401(k), 403(b), and 457 plans must have a separate "designated Roth account" for each participant in the plan.

The decision rests on several factors, including (1) the marginal tax rate at retirement, (2) age of taxpayer, and (3) payment of tax from rollover from post-tax funds. First, if a taxpayer's marginal tax rate at retirement is expected to be lower than the current tax rate, a rollover may not be advantageous. Second, younger taxpayers are more likely to benefit from a rollover because they have more years to accumulate earnings tax-free and may be in a lower tax bracket today than at retirement. Finally, if the taxes that accrue from the rollover must be paid from the rollover funds, a rollover will probably not be in the taxpayer's favor. In other words, taxpayers should have sufficient funds from other sources to pay the tax, then the entire amount of rollover into the Roth IRA will have maximum ability to grow on a tax-free basis.

Each case must be analyzed based on the unique factors of that particular situation. However, for most taxpayers, it is generally advantageous to rollover funds from a traditional type of plan to a Roth IRA. The desirability of Roth conversions is increased if the taxpayer believes tax rates will go higher in the future.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 11

Describe compliance and procedural considerations for business and deferred compensation expenses

SUBSTANTIATING TRAVEL AND BUSINESS MEAL EXPENSES

Travel and entertainment expenses are disallowed if the taxpayer does not maintain adequate records or documentary proof of the expenditures.[66] Normally, documentation includes expense statements (diary or account book) and proof of the amount, time, place, and business purpose. Strict substantiation rules are enacted in the law to curb widespread abuses in the so-called expense account living practices engaged in by some taxpayers.

To make compliance easier, the IRS formulated the following administrative procedural rules:

- The standard mileage rate may be used to compute automobile expenses in lieu of actual expenses.
- Taxpayers may elect an optional method for computing deductions for business travel and meal expenses in lieu of using actual costs. If a per diem allowance is paid by a self-employed individual in lieu of actual expenses, the expense is deemed to be substantiated if it does not exceed a federal per diem rate for the travel locality. In lieu of using actual expenses a self-employed individual may use the applicable federal per diem rate. The taxpayer must still provide documentation of time, place, and business purpose for the expenditures.

KEY POINT

It is extremely important to be able to substantiate travel expenses. The *Cohan* Rule permits a reasonable deduction when substantiation is lacking but does not apply to travel and entertainment expenses (see Chapter I:6).

ETHICAL POINT

The CPA has a responsibility to make sure that proper documentation has been furnished by the taxpayer to substantiate travel and entertainment expenses according to the provisions in Sec. 274(d). The CPA cannot rely on the use of estimates for these expenses despite the fact that the *AICPA's Statements on Standards for Tax Services No. 4* (see Appendix E) permits the use of estimates if it is impractical to obtain exact data and the estimated amounts appear to be reasonable.

REPORTING OFFICE IN HOME EXPENSES

Form 8829 (Expenses for Business Use of Your Home) must be used to figure the allowable expenses for business use that are reported on Schedule C (Profit or Loss from Business) and the carryover of any nondeductible amounts from prior years. Form 4562 (Depreciation and Amortization) must also be used to compute depreciation on the office portion of the residence.

---

[66] Sec. 274(d).

QUALIFICATION OF PENSION AND PROFIT-SHARING PLANS

The reporting requirements to establish and maintain a qualified pension or profit-sharing plan are too complex for this text. However, it should be noted that it is generally advisable for a taxpayer to obtain advance approval of the plan from the district director of the IRS by requesting a determination letter that all requirements for qualification have

Part I Additional Income

1	Taxable refunds, credits, or offsets of state and local income taxes			1	
2a	Alimony received			2a	
b	Date of original divorce or separation agreement (see instructions): ______				
3	Business income or (loss). Attach Schedule C			3	
4	Other gains or (losses). Attach Form 4797			4	
5	Rental real estate, royalties, partnerships, S corporations, trusts, etc. Attach Schedule E			5	
6	Farm income or (loss). Attach Schedule F			6	
7	Unemployment compensation			7	
8	Other income:				
a	Net operating loss	8a	( )		
b	Gambling	8b			
c	Cancellation of debt	8c			
d	Foreign earned income exclusion from Form 2555	8d	( )		
e	Income from Form 8853	8e			
f	Income from Form 8889	8f			
g	Alaska Permanent Fund dividends	8g			
h	Jury duty pay	8h			
i	Prizes and awards	8i			
j	Activity not engaged in for profit income	8j			
k	Stock options	8k			
l	Income from the rental of personal property if you engaged in the rental for profit but were not in the business of renting such property	8l			
m	Olympic and Paralympic medals and USOC prize money (see instructions)	8m			
n	Section 951(a) inclusion (see instructions)	8n			
o	Section 951A(a) inclusion (see instructions)	8o			
p	Section 461(l) excess business loss adjustment	8p			
q	Taxable distributions from an ABLE account (see instructions)	8q			
r	Scholarship and fellowship grants not reported on Form W-2	8r			
s	Nontaxable amount of Medicaid waiver payments included on Form 1040, line 1a or 1d	8s	( )		
t	Pension or annuity from a nonqualifed deferred compensation plan or a nongovernmental section 457 plan	8t			
u	Wages earned while incarcerated	8u			
z	Other income. List type and amount: ______	8z			
9	Total other income. Add lines 8a through 8z			9	
10	Combine lines 1 through 7 and 9. This is your **additional income**. Enter here and on Form 1040, 1040-SR, or 1040-NR, line 8			10

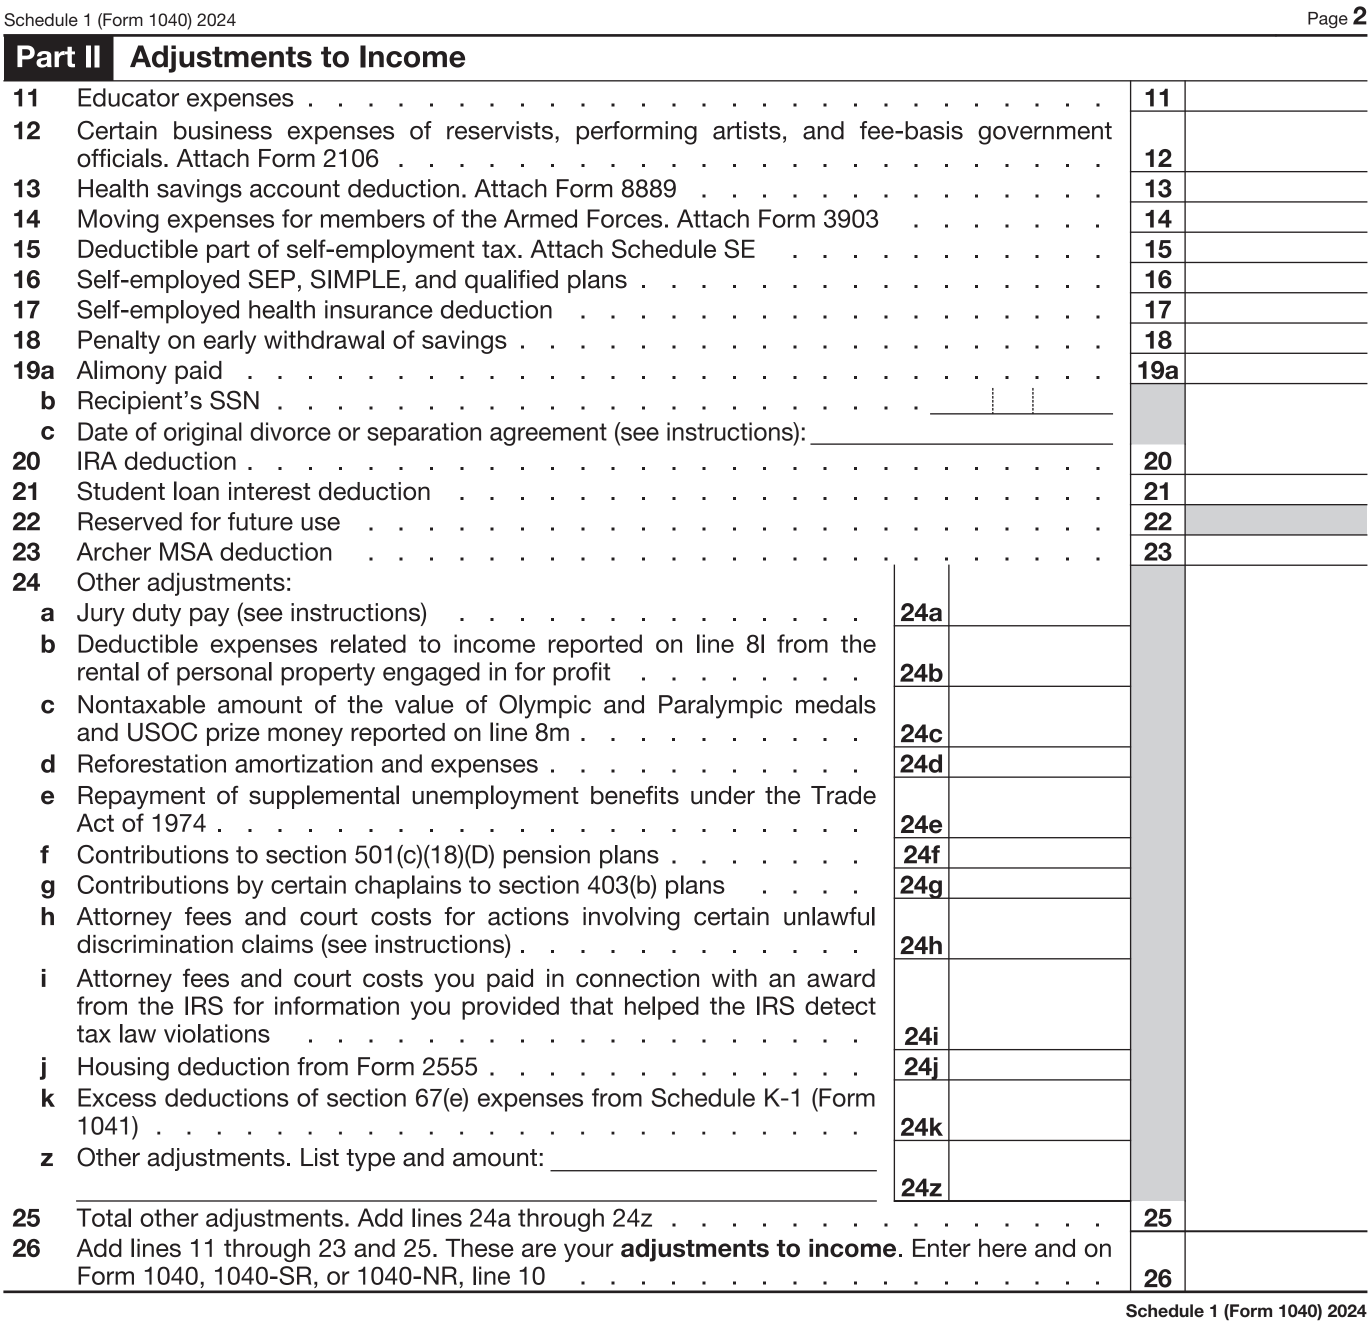
been met. A new determination letter should generally be requested when any material (e.g., substantial) modification is made to a plan. Material changes are frequently required when major tax legislation is enacted. In addition, several reports must be filed with the IRS and the U.S. Department of Labor.

Taxpayers who make deductible contributions to an IRA report the deduction on Schedule 1 of Form 1040 (see Figure I:7-2).



Schedule 1 (Form 1040) 2024 Page **2**

Part II Adjustments to Income

11	Educator expenses			**11**	
12	Certain business expenses of reservists, performing artists, and fee-basis government officials. Attach Form 2106			**12**	
13	Health savings account deduction. Attach Form 8889			**13**	
14	Moving expenses for members of the Armed Forces. Attach Form 3903			**14**	
15	Deductible part of self-employment tax. Attach Schedule SE			**15**	
16	Self-employed SEP, SIMPLE, and qualified plans			**16**	
17	Self-employed health insurance deduction			**17**	
18	Penalty on early withdrawal of savings			**18**	
19a	Alimony paid			**19a**	
b	Recipient's SSN				
c	Date of original divorce or separation agreement (see instructions):

21	Student loan interest deduction			**21**	
22	Reserved for future use			**22**	
23	Archer MSA deduction			**23**	
24	Other adjustments:				
a	Jury duty pay (see instructions)	**24a**			
b	Deductible expenses related to income reported on line 8l from the rental of personal property engaged in for profit	**24b**			
c	Nontaxable amount of the value of Olympic and Paralympic medals and USOC prize money reported on line 8m	**24c**			
d	Reforestation amortization and expenses	**24d**			
e	Repayment of supplemental unemployment benefits under the Trade Act of 1974	**24e**			
f	Contributions to section 501(c)(18)(D) pension plans	**24f**			
g	Contributions by certain chaplains to section 403(b) plans	**24g**			
h	Attorney fees and court costs for actions involving certain unlawful discrimination claims (see instructions)	**24h**			
i	Attorney fees and court costs you paid in connection with an award from the IRS for information you provided that helped the IRS detect tax law violations	**24i**			
j	Housing deduction from Form 2555	**24j**			
k	Excess deductions of section 67(e) expenses from Schedule K-1 (Form 1041)	**24k**			
z	Other adjustments. List type and amount:	**24z**			
25	Total other adjustments. Add lines 24a through 24z			**25**	
26	Add lines 11 through 23 and 25. These are your **adjustments to income**. Enter here and on Form 1040, 1040-SR, or 1040-NR, line 10			**26**	

Schedule 1 (Form 1040) 2024

FIGURE I:7-2 ▶ Schedule 1 (Form 1040) (Continued)

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:7-1 Why is it important to distinguish whether an individual is an employee or an independent contractor (self-employed)?

I:7-2 Deductions for individual taxpayers are classified as either *for* AGI or *from* AGI. Discuss the two categories of *for* AGI deductions.

I:7-3 *For* AGI deductions of individual taxpayers that are connected with either a trade or business or a rental activity are reported differently than other *for* AGI deductions reported as Adjustments to Income on Schedule 1 of Form 1040. Explain the difference as to how the two groups are reported for tax purposes.

I:7-4 In each of the following cases involving travel expenses, indicate how each item is reported on the taxpayer's tax return for 2024. Include any limitations that might affect its deductibility.

a. Marilyn lives in Houston and owns several rental properties in Denver. To supervise the management of these properties, Marilyn incurs travel expenses including airfare, lodging, and meals while traveling to and from the location of the rental properties.

b. Marc is an employee who incurs travel expenses as a salesperson. The expenses are fully reimbursed by his employer after an adequate accounting has been made.

c. Assume the same facts as in Part b, except that the expenses are not reimbursed.

d. Kay is a self-employed attorney who incurs travel expenses (including meals) to prepare a court case in a nearby city where she spends the night.

I:7-5 Kelly is self-employed and incurs $2,200 of business meal expenses in connection with business travel. $500 of the business meal costs are considered to be lavish or extravagant. How much can Kelly deduct in 2025?

I:7-6 Latoya is an independent contractor and operates her own successful consulting business in Milwaukee. She has just signed a large contract with a new client that will require her to spend nine months in Cincinnati. Latoya leaves her husband and children in Milwaukee and incurs the following expenses in connection with the temporary assignment:

Airfare to and from the temporary assignment in Cincinnati	$ 1,000
Living expenses in the new location (including restaurant meals of $1,000)	8,000
Personal clothing	1,500
Total	$10,500

a. Which (if any) of these items can Latoya deduct in 2025?

b. Would your answer to Part a change if Latoya, after completing the nine month assignment, needed to spend an additional six months in Cincinnati?

I:7-7 Louie is a self-employed taxpayer and also an investor in the stock market in his spare time. In the current year, Louie incurs $2,500 of travel expenses and $1,000 in registration fees related to attending investment seminars. Can Louie deduct the expenses for attending an investment seminar?

I:7-8 A self-employed individual travels in connection with her business. She travels in the city where she lives and works and also in several surrounding states. She returns to home each day after work. What is the criteria for her to deduct her travel expenses?

I:7-9 If a self-employed individual uses the standard mileage rate method for the year in which an automobile is acquired, may the actual expense method be used in a subsequent year? If so, what restrictions are imposed (if any) on depreciation methods? What adjustments to basis are required?

I:7-10 If a self-employed individual uses the actual method of deducting automobile expenses and claims depreciation for the first two years of business use, can the individual switch to the standard mileage rate method for the third year and beyond?

I:7-11 When a self-employed individual travels for business but mixes in some pleasure days, such as sightseeing, how does the taxpayer deduct expenses connected with the travel expenses to and from the destination as well as expenses while at the destination (such as hotel, meals, etc.)?

I:7-12 Robert is an independent contractor who lives and works in Philadelphia, PA. Robert rarely travels out-of-town but travels extensively in the Philadelphia area meeting with customers. He is home every evening after work. Is Robert permitted to deduct any of the expenses below?

Automobile expenses (not including commuting expenses)	$2,470
Automobile expenses for commuting to his office	620
Business lunches with his customers	580
Lunch by himself in Philadelphia	750

I:7-13 What taxpayers are eligible to deduct qualified moving expenses in years 2018–2025?

I:7-14 What are the two methods of computing automobile expenses of self-employed taxpayers?

I:7-15 Are deductions allowed for entertainment expenses of customers or clients in 2025?

I:7-16 If an individual belongs to a country club and uses the facility primarily for business entertainment of customers, what portion of the club dues is deductible?

I:7-17 Bass Corporation purchases 10 tickets to the Super Bowl in February 2025 for entertaining its customers. Due to unusually high demand, the tickets have to be purchased for $25,000 (10 × $2,500). The face value of the tickets is only $2,000 (10 × $200). The $2,500 cost per ticket includes a $500 charge for food and beverages and is separately stated on the invoice. What amount is deductible by Bass in 2025?

I:7-18 Would education expenses incurred by a self-employed individual be allowed in 2025 for the following expenses?

Cost of a CPA review course	$ 2,500
Accounting continuing education expenses (including travel, conference fees, and meals of $200)	1,000
Law school tuition and books	9,000
Total	$12,500

I:7-19 Discuss whether either of the following individuals are entitled to an office-in-home deduction:

a. Maggie is a self-employed management consultant who maintains an office in her home exclusively used for client meetings and other business-related activities. Maggie has no other place of business and her office is the most significant place for her business. She has substantial income from the consulting practice.

b. Bobby operates his own sole proprietorship as an electrician. He maintains an office at home where he keeps his books, takes phone calls from customers, and does the payroll for his five employees. All of his electrical work is done at the location of his customers.

I:7-20 Compare and contrast the tax advantages accruing to employers and employees from the establishment of a qualified pension or profit-sharing plan versus a nonqualified deferred compensation arrangement (e.g., a restricted property plan).

I:7-21 What is the difference between a defined benefit pension plan and a defined contribution pension plan?

I:7-22 Austin Corporation is proposing the establishment of a pension plan that will cover only employees with salaries in excess of $200,000. No other employees are covered under comparable qualified plans. What problems (if any) do you envision regarding the plan's qualification with the IRS?

I:7-23 Babson Corporation is proposing the creation of a qualified profit-sharing plan for its employees. The proposed plan provides for vesting of employer contributions after 20 years because the company wants to discourage employee turnover and does not feel that short-term employees should qualify for benefits. Will this plan qualify? Why or why not?

I:7-24 Explain how retirement distributions from a qualified pension plan, which are made in the form of annuity payments, are reported by an employee under the following circumstances:

a. No employee contributions are made to the plan.

b. The pension plan provides for employee contributions and matching employer contributions.

I:7-25 Discuss the limitations and restrictions on amounts that the Internal Revenue Code places on employer contributions to qualified pension and profit-sharing plans.

I:7-26 Why are nonqualified deferred compensation plans particularly well-suited for use in executive compensation arrangements?

I:7-27 A recently-formed corporation is considering going public and anticipates substantial future appreciation in its stock. Would it be advisable for an executive/employee receiving stock (restricted property) to elect to recognize income immediately under Sec. 83(b)? Contrast the tax consequences of a restricted property arrangement for both the employer and employee when this election is made versus when it is not made. Consider the effect of the subsequent lapsing of the restrictions and the employee's sale of the stock.

I:7-28 List and discuss the qualification requirements for an incentive stock option plan (ISO). Describe the advantages and disadvantages of ISOs compared to nonqualified stock option plans.

I:7-29 What difference does it make if a nonqualified stock option has a readily ascertainable FMV on the grant date?

I:7-30 Is a self-employed individual, who is also employed and covered by an employer's qualified pension plan, eligible to establish an H.R. 10 or a SEP plan on his or her self-employment income?

I:7-31 What limitations are placed on self-employed individuals for amounts of contributions made to defined contribution H.R. 10 plans? Must self-employed individuals cover their full-time employees if an H.R. 10 plan is established?

I:7-32 Discuss the essential differences between a traditional IRA and a Roth IRA.

I:7-33 Would you be more favorably inclined to advise a 30-year-old individual to establish a traditional deductible IRA or a Roth IRA? Explain. Consider any tax problems involved if the IRA funds are needed before age 59½. Would your answer change for a 55-year-old individual?

I:7-34 Your client, Charley Long, age 40, has requested your advice with respect to his IRA. He has a traditional IRA with a balance of $250,000 and his current AGI is $150,000. He expects his income to increase slightly when he retires at age 65. Charley has been reading about Roth IRAs and wants your advice as to whether he should rollover the $250,000 from his traditional IRA into a Roth IRA. He has sufficient outside money to pay any taxes due on the rollover. What advice would you give Charley?

I:7-35 Sally, who is single and age 40, made deductible IRA contributions in several early years, but has not been eligible to make deductible IRA contributions for the last 5 years because she is covered under her employer's plan. Her AGI is $100,000. She is interested in making IRA contributions in the current year. What advice would you give her?

I:7-36 Discuss the major features of a Coverdell Education Savings Account (CESA).

I:7-37 The owner of an unincorporated small business is considering whether to establish a simplified employee pension (SEP) plan for its employees.

a. What nontax factors might make a SEP attractive as an alternative to establishing a qualified pension or profit-sharing plan?

b. Is the owner of the small business eligible to make contributions on his or her behalf to the SEP?

ISSUE IDENTIFICATION QUESTIONS

I:7-38 Georgia is self-employed and recently completed a consulting assignment at an away-from-home location. It was realistically expected that the assignment would be completed in 15 months but the actual time period was only 11 months. Georgia incurred $15,000 of away-from-home expenses during the 11-month period. What tax issues should Georgia consider?

I:7-39 Juan, a self-employed medical doctor, maintains an office in his home where he maintains patient records and performs billing procedures. Most of his time is spent visiting patients and performing surgical procedures in the operating room at several local hospitals. Juan intends to deduct his expenses of his office in his home. What tax issues should Juan consider?

I:7-40 David is an independent contractor who has been in the consulting business for several years. David has applied and been accepted into a prestigious MBA program. The program is two years in duration. David has decided to suspend his consulting activities to complete the MBA degree. David plans to resume his consulting business in two years. David wants to deduct his education expenses. What are the relevant tax issues in this case?

PROBLEMS

I:7-41 ***Business-Related Expenses.*** Mike, a self-employed consultant, incurs the following business-related expenses in 2025:

Actual automobile expenses	$ 2,500
Moving expenses	4,000
Entertainment expenses	1,500
Travel expenses (including $500 of business meals)	2,500
Professional dues and subscriptions	500
Total	$ 11,000

Mike earned $130,000 of gross income from his consulting business and had $12,000 of interest and dividend income in 2025 before any of the above expenses are deducted. He has $20,000 of itemized deductions. Mike is married and files a joint return with his wife, Ann, who has no income.

a. What is the amount of Mike's deduction for business-related expenses for 2025?

b. What is Mike and Ann's AGI and taxable income in 2025, assuming he is married and files a joint return, and ignoring the self-employment tax?

I:7-42 ***Travel and Entertainment.*** Monique is a self-employed manufacturer's representative (i.e., an independent contractor) who solicits business for numerous clients and receives a commission based on sales. She incurs the following expenditures during the current year:

Airfare and lodging while away from home overnight	$ 4,000
Business meals while traveling at which business is discussed	1,000
Local transportation costs for automobile, parking, tolls, etc. (business-related)	2,000
Commuting expenses	1,000
Local entertainment of customers	2,000
Total	$10,000

a. Which of the expenditures listed above (if any) are deductible by Monique for 2025?
b. Are each of these items classified as *for* AGI or *from* AGI deductions?
c. How would your answers to Parts a and b change if Monique were an employee rather than self-employed and none of the expenses were reimbursed by her employer?

I:7-43 ***Business-Related Expenses.*** Mary is self-employed and incurs $3,600 of business-related travel and entertainment expenses during 2025 in which she was away from home overnight. These business expenses include the following:

Airfare	$1,500
Taxi fare	100
Meals eaten alone while away from home on business	300
Laundry	50
Lodging	650
Business meals with customers at which business is discussed	500
Entertainment of customers	500
Total	$3,600

Mary also pays $1,000 of investment counseling fees and $500 of tax return preparation fees in the current year.
a. What is the total amount of Mary's deductible expenses for 2025?
b. Are the deductible expenses classified as *for* AGI or *from* AGI?

I:7-44 ***Travel Expenses.*** Marilyn, an independent contractor who lives and works in Cleveland, obtains a large contract that will require her to live and work in Atlanta for a period of ten months. Marilyn leaves her husband and children in Cleveland and rents an apartment in Atlanta during the ten-month period. Marilyn incurs the following expenses:

Airfare to and from Atlanta	$ 800
Airfare for weekend trips to visit her family	8,000
Apartment rent	10,000
Meals in Atlanta	8,500
Entertainment of customers	2,000
Total	$29,300

a. What are Marilyn's total deductions for 2025?
b. Are the expenditures classified as *for* AGI or *from* AGI deductions?
c. Do the tax consequences change if Marilyn's assignment is for a period of more than one year?
d. Do the tax consequences in Parts a through c change if it was realistically expected that the work would be completed in ten months but after the ten-month period Marilyn is asked to continue for seven more months and if an additional $10,000 of travel expenses are incurred during the extended period?

I:7-45 ***Business/Personal Travel Expenses.*** Mike is an independent contractor in 2025. Mike attends a professional trade association convention in Los Angeles. He spends three days at the meeting and two days vacationing before the meeting. Mike's total expenses for the entire five days include the following:

Airfare to and from LA	$ 450
Meals ($50 per day)	250
Hotel ($100 per day)	500
Entertainment of customers (business is discussed)	500
Total	$1,700

a. How much can Mike deduct for business-related expenses for 2025?
b. How would your answers change if Mike spent two days at the meeting and three days vacationing?

I:7-46 ***Auto Expenses.*** Michelle is self-employed and uses her personal automobile for business trips. During 2025, Michelle drives her car 60% for business use and incurs the following total expenses (based on 100% use of car):

Gas and oil	$12,000
Repairs	2,800
Depreciation	4,700
Insurance and license fees	2,600
Parking and tolls (business related)	400
Total	$22,500

Michelle drives her car a total of 40,000 miles (24,000 business miles) during 2025.
a. What amount is deductible if Michelle uses the standard mileage method?
b. What amount is deductible if Michelle uses the actual cost method?
c. Can taxpayers switch back and forth between the mileage and actual methods each year?

I:7-47 ***Auto Expenses.*** Amelie is self-employed and uses her personal automobile in connection with her business. During 2025, Amelie drove her car a total of 28,000 miles. Her business log shows that she drove 22,400 miles for business purposes. During 2025, Amelie incurred the following actual expenses based on 100% use, that is, 28,000 total miles:

Gas and oil	$ 7,800
Repairs and maintenance	1,200
Depreciation	5,800
Insurance	1,440
Licenses and fees	300
	$16,540

a. Compute Amelie's deduction if she uses the actual cost method.
b. Compute Amelie's deduction if she uses the standard mileage method.
c. Assume Amelie used the standard mileage method above in 2025. In addition to the automobile expenses, she made several business trips and incurred the following travel expenses while away from home overnight:

Airfare	$ 4,600
Hotel	1,860
Meals	720
Taxi fees and tips	280
	$7,460

None of the above expenses were personal in nature. What are Amelie's deductions in 2025 after all limitations?
d. Would Amelie's deduction in 2025 be *for* AGI or *from* AGI?

I:7-48 ***Meal and Entertainment Expenses.*** Milt, a self-employed attorney, incurs the following expenses in 2025:

Business lunches for clients and prospective clients	$4,000
Entertainment of professional associates in his home (immediately following business meetings)	2,000
Country club dues (the club is used exclusively for business)	2,500
Total	$8,500

Which of the expenditures listed above (if any) are deductible in 2025 by Milt?

I:7-49 ***Entertainment Expenses.*** Beach Corporation purchases tickets to sporting events and uses them to entertain customers. In 2025, Beach Corporation purchases the following tickets:

100 tickets to football games (face value of the tickets is $7,000)	$10,000
A skybox rented for six NFL football games (seating capacity of the skybox is 20, and the highest price of a nonluxury box seat is $100; included in the price was a separate charge for food and beverages in the amount of $5,000)	30,000

a. What amount of the above expenses are deductible in 2025?

b. Would your answer change if the amount for food and beverages was not separately stated in the $30,000 price?

I:7-50 ***Education Expenses.*** For each of the following independent situations, determine whether any of the expenditures qualify as deductible education expenses in connection with a trade or business (Reg. Sec. 1.162-5). Are the expenditures classified as *for* AGI or *from* AGI deductions?

a. Law school tuition and books for a self-employed individual who works in the income tax business and is pursuing a law degree: $8,000.

b. Continuing professional accounting education expenses of $1,900 for a self-employed CPA: travel, $1,000 (including $200 meals); registration fees, $800; books, $100.

c. MBA education expenses for a self-employed individual totaling $25,000: tuition, $23,000; transportation, $800; and books, $1,200.

d. Bar review courses for a recent law school graduate: $3,000.

I:7-51 ***Office in Home.*** Nancy is a self-employed consultant who uses 10% of her residence as an office. The office is used exclusively for business and is frequented by customers on a regular basis. Nancy also uses her den as an office (12% of the total floor space of her home) to prepare bills and keep records. However, the den is also used by her children as a TV room. In 2025, Nancy's net income from the consulting business (other than her home office expenses) amounts to $40,000. She also incurs $1,400 of expenses directly related to the office (e.g., painting of the office, window blinds). Nancy incurs the following expenses in 2025 related to her residence:

Real estate taxes	$ 2,000
Mortgage interest	5,000
Insurance	500
Depreciation	3,500
Repairs and utilities	1,000
Total	$12,000

a. Which of the expenditures above (if any) are deductible for 2025? Are they *for* AGI or *from* AGI deductions?

b. Would your answer to Part a change if Nancy's net income from consulting were only $2,500 for the year?

I:7-52 ***Deferred Compensation Plan Requirements.*** Identify whether each of the following plan features is associated with a qualified pension plan, a qualified profit-sharing plan, an employee stock ownership plan, a nonqualifed plan, or none of these plans.

a. Annual employer contributions are not required, but substantial and recurring contributions must be made based on a predetermined formula.

b. Annual, systematic, and definite employer contributions are required without regard to profits but based on actuarial methods.

c. Forfeitures must be used to reduce contributions that would otherwise be made under the plan.

d. The plan may discriminate in favor of highly compensated individuals.
e. The trust is funded with the contribution of employer stock, which is subsequently distributed to employees.

I:7-53 ***Taxability of Pension Payments.*** Pat is a participant in a qualified pension plan. She retires on January 1, 2025, at age 63, and receives pension payments beginning in January 2025. Her pension payments, which will be received monthly for life, amount to $1,000 per month. Pat contributed $30,000 to the pension plan on a pre-tax (or tax-deferred) basis, and the number of anticipated payments based on Pat's age of 63 years is 260 months (see IRS table in Chapter I:3) from the date she starts receiving payments.
a. What gross income will Pat recognize in 2025 and each year thereafter?
b. How would your answer to Part a change if Pat made contributions to the plan on an after-tax basis?
c. If, in Part b, Pat dies in December 2026 after receiving pension payments for two full years, what tax consequences occur in the year of death?

I:7-54 ***Restricted Property.*** In 2025, Bear Corporation transfers 100 shares of its stock to its employee Patrick. The stock is valued at $10 per share on the issue date. The stock is subject to the following restrictions:

- Patrick cannot transfer the stock by sale or other disposition (except in the event of death) for a five-year period.
- The stock must be forfeited to Bear Corporation if Patrick voluntarily terminates his employment with the company within a five-year period.

In the year 2030, the Bear stock is worth $100 per share when the restrictions expire.
a. Assuming that no Sec. 83(b) election is made, what are the tax consequences to Patrick and Bear Corporation in 2025?
b. What are the tax consequences to Patrick and Bear Corporation if Patrick makes a valid Sec. 83(b) election in 2025?
c. What are the tax consequences to Patrick and Bear Corporation if Patrick forfeits the stock back to the company in 2026 when the stock is worth $20 per share if an election was made under Sec. 83(b)? What would happen if no Sec. 83(b) election were made?
d. What are the tax consequences to Patrick and Bear Corporation upon the lapse of the restrictions in the year 2030 if an election has been made under Sec. 83(b)? What would the results be if no Sec. 83(b) election were made?
e. What are the tax consequences to Patrick and Bear Corporation if Patrick sells the Bear stock in the year 2031 for $120 per share if a Sec. 83(b) election is made? if no Sec. 83(b) election is made?

I:7-55 ***IRAs.*** On February 12, 2026, Jamal, who is single and age 30, establishes a traditional IRA and contributes $7,000 to the account. Jamal's adjusted gross income is $85,000 in 2025 and $70,000 in 2026. Jamal is an active participant in an employer-sponsored retirement plan.
a. What amount of the contribution is deductible? In what year is it deductible?
b. How is the deduction (if any) reported (i.e., *for* AGI or *from* AGI)?
c. How would your answer to Part a change, if at all, if Jamal were not an active participant in an employer-sponsored retirement plan?
d. How would your answer to Part a change if Jamal were married and files a joint return with his spouse, who has no earned income? (Assume their combined AGI is $90,000.)

I:7-56 ***IRAs.*** Phil, age 30, is married and files a joint return with his spouse. On February 15, 2026, Phil establishes a traditional IRA for himself and a spousal IRA for his spouse with a $14,000 contribution, $7,000 for himself and $7,000 for his wife. Phil's spouse earned $4,000 in 2025 from a part-time job, and their combined AGI is $90,000. Neither Phil nor his spouse is an active participant in an employer-sponsored retirement plan.
a. What amount of the contribution is deductible?
b. To what year does the contribution apply? (Assume that an election is made to treat Phil's spouse as having no compensation.)
c. Is the deduction reported as *for* AGI or *from* AGI?
d. How would your answer to Part a change, if at all, if Phil and his spouse were active participants in an employer-sponsored retirement plan?
e. If a portion of the contribution is nondeductible in Part d, is it possible for Phil to make a deductible and a nondeductible contribution in the same year? Explain.
f. How would your answer to Part a change if Phil and his spouse's combined AGI were $150,000 in 2025 and Phil was an active participant in an employer-sponsored retirement plan?

I:7-57 *Roth IRA.* Chatham Mae is single, age 35, and wants to make a contribution to an IRA for the year ended December 31, 2025. She is an active participant in a qualified retirement plan sponsored by her employer. Her AGI for 2025 is $154,000 before considering any IRA contribution.

a. What type of IRA, if any, is Chatham Mae eligible to make a contribution to for 2025? If she is eligible to contribute to an IRA, what is the maximum amount that she can contribute to the IRA?

b. Assume Chatham Mae contributes a total of $20,000 over six years to a Roth IRA. In 2031, she withdraws $25,000 to pay off her car loan. The value of the IRA in2030 is $30,000. Her financial advisor suggested she withdraw the money from the IRA for two major reasons: (1) to eliminate her debt and (2) no tax would be due on distributions from a Roth IRA after five years. Chatham Mae wants to verify the accuracy of her advisor's advice. What would be the tax consequences of this withdrawal? Alternatively, what if Chatham Mae withdrew the $25,000 to purchase a house (she is a first-time homebuyer)?

c. Alternatively to Part b above, assume Chatham Mae has a traditional deductible IRA that has a balance of $50,000. She has been able to deduct all of her contributions to the IRA in prior years. Her financial advisor has recommended that she rollover the funds from her traditional IRA to a Roth IRA in 2025. What are the tax consequences of this rollover in 2025?

I:7-58 *Coverdell Education Savings Accounts.* Jack and Katie have five grandchildren, ages 19, 16, 15, 12, and 10. They have established Coverdell Education Savings Accounts (CESA) for each of the grandchildren and would like to contribute the maximum amount allowable to each CESA for the 2025 taxable year. Jack and Katie's AGI for 2025 is $196,000.

a. How much can Jack and Katie contribute to each grandchild's CESA in 2025?

b. Assume that the 19-year-old granddaughter is a freshman in college and makes a withdrawal of $7,000 from her CESA during the year 2025. Her college expenses for 2025 were as follows:

Tuition	$3,000
Room and board	2,000
Books and supplies	500

The extra amount withdrawn was used as a down payment on a car that the granddaughter purchased during the year. She needed the car in order to drive to school rather than having to either ride the bus or ride with a friend. What are the tax consequences of the $7,000 distribution to the granddaughter?

I:7-59 *H.R. 10 Plans.* Paula is a self-employed doctor and is considering whether to establish a defined contribution H.R. 10 plan. Paula's only employee is a full-time nurse who has been employed by Paula for seven years. Paula's net earnings from self-employment (before the H.R. 10 plan contribution but after the deduction for one-half of self- employment taxes paid) is expected to be $200,000 during the current year and increase slightly in future years.

a. If the H.R. 10 plan is established, what is the maximum amount Paula can contribute for the nurse's benefit?

b. What is the maximum amount Paula can contribute for herself? Is the amount reported as a *for* AGI or *from* AGI deduction?

c. Is Paula's nurse required to be included in the plan?

d. What are the tax consequences if Paula makes a premature withdrawal from the plan before reaching age 59½?

I:7-60 *Stock Options.* Bell Corporation grants an incentive stock option to Peggy, an employee, on January 1, 2025, when the option price and FMV of the Bell stock is $80. The option entitles Peggy to buy 10 shares of Bell stock. Peggy exercises the option and acquires the stock on April 1, 2027, when the stock's FMV is $100. Peggy, while still employed by the Bell Corporation, sells the stock on May 1, 2029, for $120 per share.

a. What are the tax consequences to Peggy and Bell Corporation on the following dates: January 1, 2025; April 1, 2027; and May 1, 2029? (Assume all incentive stock option qualification requirements are met.)

b. How would your answer to Part a change if Peggy instead sold the Bell stock for $130 per share on May 1, 2027?

I:7-61 *Stock Options.* Bender Corporation grants a nonqualified stock option to Penny, an employee, on January 1, 2025, that entitled Penny to acquire 1,000 shares of Bender stock at $80 per share. On this date, the stock has a $100 FMV and the option has a readily ascertainable FMV of $20 per share. Penny exercises the option on January 1, 2026 (when the FMV of the stock is $150), and acquires 1,000 shares of the stock for $80 per share. Penny later sells the Bender stock on January 1, 2028, for $200 per share.

a. What are the tax consequences to Penny and Bender Corporation on the following dates: January 1, 2025; January 1, 2026; and January 1, 2027?

b. How would your answer to Part a change if the Bender stock were instead closely-held and the option had no readily ascertainable FMV?

COMPREHENSIVE PROBLEM

I:7-62 Dan M. and Cheryl A. Peters are married, file a joint return, and have no children in 2025. Dan, age 45, is an independent contractor working in pharmaceutical sales and Cheryl, age 42, is a nurse at a local hospital. Dan's SSN is 400-20-0000 and Cheryl's SSN is 200-40-0000 and they reside at 2033 Palmetto Drive, Atlanta, GA 30304. Dan is paid according to commissions from sales, and he has no income tax or payroll tax withholdings. Dan operates his business from his home office. During 2025, Dan earned total commissions in his business of $125,000. Cheryl earned a salary during 2025 of $65,400 with the following withholdings: $9,000 federal taxes, $1,800 state taxes, $4,055 OASDI (Social Security), and $948 Medicare taxes.

During 2025, Dan and Cheryl had interest income from corporate bonds and bank accounts of $1,450 and qualified dividends from stocks of $5,950. Dan also actively trades stocks and had the following results for 2025:

	Date Acquired	Date Sold	Proceeds	Cost	Gain or Loss
Stocks	7/1/2018	12/1/2025	$10,900	$6,000	$4,900 Long-term
Stocks	7/1/2021	12/1/2025	$6,000	$9,200	($3,200) Long-term
Stocks	7/1/2025	10/30/2025	$4,000	$11,800	($7,800) Short-term

He had no capital loss carryovers from previous years. Basis for the stocks were reported to the IRS by the brokerage firm.

Dan does a considerable amount of travel in connection with his business and uses his own car. During 2025, Dan drove his car a total of 38,000 miles, of which 32,000 were business related. He also had business-related parking fees and tolls during the year of $280. Dan uses the mileage method for deducting auto expenses. Dan also had the following travel expenses while away from home during the year:

Hotel	$4,200
Meals	820
Entertainment of customers	1,080
Tips	100
Laundry and cleaning	150
Total	$6,350

Dan uses the simplified method to deduct expenses for his office-in-home. His office measures 15 feet by 12 feet in size.

Cheryl incurred several expenses in connection with her nursing job. She paid $450 in professional dues, $200 in professional journals, and $350 for uniforms.

Dan and Cheryl had the following other expenditures during the year:

Health insurance premiums (after-tax)	$ 4,400*
Doctor bills	470
Real estate taxes on home	6,800
Personal property taxes	1,400
Mortgage interest—all deductible	7,400
Charitable contributions—cash	9,000
Charitable contributions—Apple stock owned for 5 years:	
FMV	$8,000
Adjusted basis	2,000
Tax preparation fees ($250 allocated to Dan's business)	750

* Paid by Dan in connection with his business.

During 2025, Dan and Cheryl paid federal and state estimated tax payments on a quarterly basis. Federal estimated tax payments for the year amounted to $20,000. State estimated payments for the year amounted to $2,200. Compute Dan and Cheryl's income tax liability for 2025. Disregard the alternative minimum tax but include the self-employment tax.

TAX STRATEGY AND CRITICAL THINKING PROBLEM

I:7-63 Paul Price is self-employed and operates Lightmore Communications as a sole proprietorship. Lightmore has been extremely successful over the past 20 years. Paul travels extensively in connection with the business to meet with existing and prospective clients. Paul's wife, Laura, would be helpful to Paul in his business entertaining if she could accompany him on many of his business trips and, furthermore, she was unable to go on these trips in the past because of their children at home. Their youngest child is now in college, and Laura's duties at home have diminished. During the current year, Laura has made a number of trips with Paul, but after conferring with the company's tax advisor, had been informed that Laura's expenses would not be deductible for tax purposes. The tax advisor suggested the possibility of putting Laura on the Lightmore payroll as an employee.

a. Would Laura's travel expenses be deductible if she was an employee of the corporation?
b. What other benefits would be available to Laura if she was an employee of the corporation?
c. Are there any detriments to putting Laura on the payroll?

TAX FORM/RETURN PREPARATION PROBLEM

I:7-64 This tax form/return preparation problem uses the same information as Problem I:7-62 EXCEPT it applies to the 2024 tax year rather than 2025. Actual government tax forms for 2025 are unavailable at the time of publication. To complete the *2024* tax return for Dan M. and Cheryl A. Peters, all dates must be changed to the immediately prior year. For example, all of the 2025 dates in Problem I:7-62 must be changed to 2024 and other dates moved back one year.

Below are the significant date changes for Problem I:7-62:

- All wages and taxes withheld should be changed to 2024.
- All interest and dividends should be changed to 2024.
- Sales of stocks: All dates for the three stock *sales* should be changed to 2024. For dates of *purchase*, the first two should be changed to 2017 and 2020, respectively, and the third purchase date should be changed to 2024.
- All other dates relating to deductions and tax payments should be changed to 2024.

Be sure to use 2024 tax forms and 2024 tax rates.

CASE STUDY PROBLEMS

I:7-65 Ajax Corporation is a young high-growth company engaged in the manufacture and distribution of automotive parts. Its common stock has doubled in value since the company was listed on the NASDAQ exchange about two years ago. Ajax currently has a high debt/equity ratio due to the issuance of debt to finance its capital expansion needs. Despite rapid growth in assets and profitability, Ajax has severe cash flow problems and a poor working capital ratio. The company urgently needs to attract new executives to the organization and to provide financial incentives to existing top management because of recent turnover and high growth. Approximately 55% of the common stock is owned by Andrew Ajax, who is the CEO, and his immediate family. None of the other officers own stock in the company.

You are a tax consultant for the company who has been asked to prepare suggestions after reviewing the compensation system. Your discussions with several top management individuals reveal the following aspects of corporate strategy and philosophy:

- The company needs to expand the equity capital base because of its concern for the high risk caused by large amounts of debt.
- Improvement in cash flow and liquidity would enhance its stock price and enable the company to continue its high growth rate.

- Top management feels that employee loyalty and productivity would be improved if all employees owned some stock in the company. The company currently offers a qualified pension plan to its employees and executives that provides only minimal pension benefits. No other deferred compensation or bonus arrangements are currently being offered.
- Andrew Ajax feels that the top management group should own a substantial amount of Ajax stock to ensure that the interests of management correspond with the shareholder interests (i.e., the maximization of shareholder wealth).

  The following four types of executive compensation arrangements have been discussed:
- Sec. 401(k) and ESOP plans for employees.
- Encourage all employees and executives to independently fund their retirement needs beyond any Social Security benefits by establishing IRA plans.
- Provide restricted property arrangements (using Ajax stock) to attract new top level executives and to retain existing executives.
- Offer nonqualified or incentive stock options to existing and new executives.

Required: Prepare a client memo that recommends revisions to Ajax Corporation's existing compensation system for both its employee and executive groups. Your recommendations should discuss the pros and cons of different deferred compensation arrangements and should consider both tax and nontax factors.

I:7-66 Steve is part owner and manager of a small manufacturing company that makes keypads for alarm systems. The keypads are sold to several different alarm companies throughout the country. Steve must travel to several cities each year to meet with current customers and to attract new business. When you meet with Steve to obtain information to prepare his current year tax return, he tells you that he has spent about $5,000 during the current year on airfare and taking his customers out to dinner to discuss business. Because he took most of his trips in the summer and fall, and it is now April of the following year, Steve cannot remember the exact time and places of the business dinners and did not retain any receipts for the cash used to pay the bills. However, he remembers the names of the customers he went to see, the business topics that were discussed, and the restaurants where he had his meals. As Steve's tax consultant, what is your responsibility regarding the treatment of the travel and entertainment expenses under the mandates of the AICPA's *Statements on Standards for Tax Services*? Prepare a client letter explaining to Steve the requirements under Sec. 274(d) for sufficient substantiation of travel and entertainment expenses. (See the *Statements on Standards for Tax Services* section in Chapter I:15 for a discussion of these issues and Appendix E.)

TAX RESEARCH PROBLEM

I:7-67 Charley Long is a truck driver, the 18-wheeler variety. He lives in Mobile, Alabama, owns his own truck, and operates as an independent contractor. Charley's route entails leaving Mobile at 4:00 PM each day (five days per week) and delivering fresh fish to restaurants and wholesale fish distributors in Mississippi and Louisiana. His last stop, in Lafayette, Louisiana, is generally around 12:00 midnight. It normally takes Charley about five hours to get back to Mobile.

Charley's routine is varied. Sometimes, he drives straight back to Mobile from Lafayette. On other occasions, he will pull off at a truck stop and sleep in his cab before returning to Mobile. His cab is equipped with sleeping facilities, although small and sparse. Finally, on other occasions, Charley will spend the night in a motel along the road.

When Charley drives straight back to Mobile, Charley will eat one meal. When he sleeps overnight (either in his cab or in a motel), he will eat two meals, a late dinner and breakfast. He spends an average of $10.00 for dinner and $6.00 for breakfast. The cost of his motel averages $70.00 per night. When Charley sleeps in the cab, he generally sleeps about 4–5 hours and then drives on to Mobile.

During the current year, Charley incurred the following expenses:

Meals incurred on nonstop trips	$1,000
Meals incurred when: slept in cab	800
slept in motel	600
Lodging	2,800
Total	$5,200

The IRS has disallowed all of the above expenses on the grounds that they are not bona fide travel expenses but personal expenses, as they contend that Charley was not away from home overnight. Would you advise Charley to contest this issue?

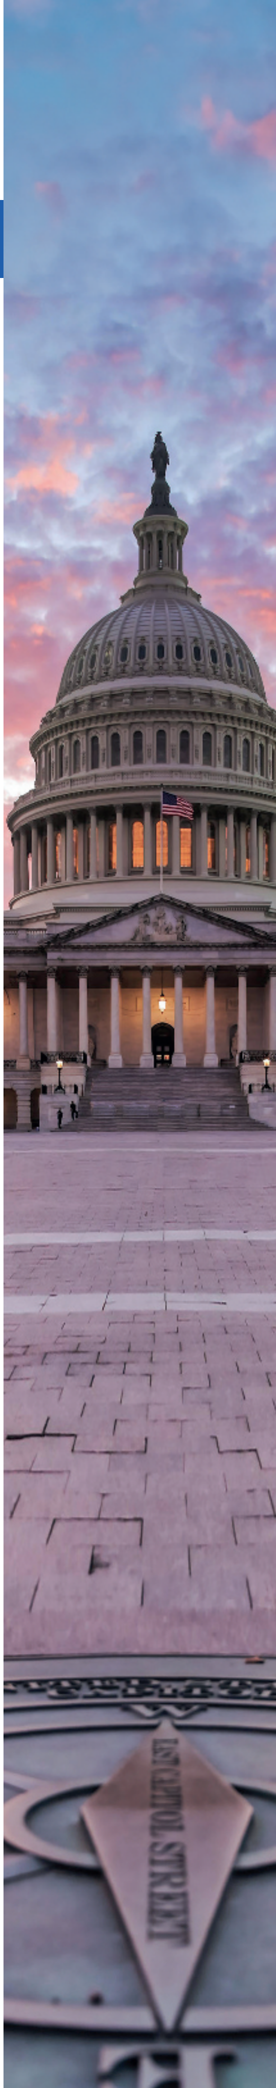
CHAPTER

8

ITEMIZED DEDUCTIONS



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Identify qualified medical expenses and compute the medical expense deduction
2. Identify taxes that are deductible as itemized deductions
3. Identify different types of interest deductions
4. Compute the amount of a charitable contribution deduction and identify limitations
5. Discuss casualty and theft losses
6. Determine the calculation of the qualified business income deduction
7. Describe tax planning considerations for itemized deductions
8. Describe compliance and procedural considerations for itemized deductions

CHAPTER OUTLINE

Medical Expenses...8-2
Taxes...8-9
Interest...8-12
Charitable Contributions...8-21
Casualty and Theft Losses...8-28
Qualified Business Income Deduction...8-29
Tax Planning Considerations...8-29
Compliance and Procedural Considerations...8-32

As explained in Chapter I:6, most deductible expenses for individuals fit into three general categories:

- Expenses incurred in a trade or business
- Expenses incurred for the production of income (an investment activity)
- Certain specified personal expenses

If an expense is deductible based on the above categories, the expense must be classified as either *for* AGI or *from* AGI. The distinction between *for* and *from* AGI was discussed in Chapter I:6. This chapter focuses on deductions *from* AGI, including *itemized deductions*, which include medical expenses, taxes, interest, and charitable contributions. Chapter I:9 discusses casualty losses on personal-use property. This chapter also discusses the qualified business income deduction, which is also a deduction from AGI but is not a personal expense.

In arriving at taxable income, individuals may subtract from AGI the larger of the standard deduction or the sum of all itemized deductions. In calculating the sum of the itemized deductions, certain deductions are subject to reductions and limitations.

MEDICAL EXPENSES

OBJECTIVE 1

Identify qualified medical expenses and compute the medical expense deduction

Medical expenses, which comprise one category of deductible personal expenditures, are deductible because Congress felt that excessive medical expenses might ultimately affect a taxpayer's ability to pay his or her federal income tax. However, under Sec. 213, taxpayers may deduct medical expenses only to the extent the expenses exceed 7.5% of the taxpayer's AGI. To qualify as a medical expense deduction, the expenditure must be incurred for the medical care of a qualified individual. Taxpayers may not take a deduction for medical expenses to the extent the expenses are reimbursed (i.e., compensated for by insurance or otherwise).

QUALIFIED INDIVIDUALS

To deduct medical expenses, taxpayers must pay the expenses on behalf of themselves, their spouses, or their dependents.

Taxpayer's Dependent. Deductible medical expenses include those paid on behalf of a taxpayer's dependent as well as on behalf of a person for whom the taxpayer could take a dependency exemption except for the failure to meet the gross income or joint return tests.[1]

EXAMPLE I:8-1 ▶

In March of 2025, Jean's son, Steve, is involved in an automobile accident. At the time of the accident Jean is 54 years old and Steve is 25 years old. Steve has worked full-time for part of the year, earning a total of $15,000. Because Steve has a very high deductible insurance plan and cannot pay his share of the medical bills or support himself as a result of the accident, Jean pays Steve's share of the medical expenses and supports him for the rest of the year. Because Jean provides over one-half of Steve's support for the year and Steve, except for the gross income test, otherwise qualifies as Jean's dependent, (Steve is a qualifying relative rather than a qualifying child because he is over 19 and is not a full-time student) Jean may deduct the medical expenses she pays on his behalf to the extent that these expenses, along with all of Jean's other medical expenses, exceed 7.5% of her AGI for the year. ◀

KEY POINT

Medical expenses are deductible for a person who satisfies only the support, relationship, and citizenship dependency tests.

Children of Divorced Parents. As long as one divorced parent qualifies to claim the child as a dependent under Sec. 152(e), the parent who pays medical expenses on behalf of the children may deduct the expenses. The parent taking the medical expense deduction doesn't need to be the parent who may claim dependency.

---

[1] Sec. 152. See Chapter I:2 for the tests that must be met to claim a qualifying child or qualifying relative as a dependent.

QUALIFIED MEDICAL EXPENSES

The **medical expense deduction** is available only for expenditures paid for medical care. Section 213 defines *medical care* as amounts paid for

- The diagnosis, cure, mitigation, treatment, or prevention of disease
- The purpose of affecting any structure or function of the body
- Transportation primarily for and essential to the first two items listed above
- Qualified long-term care services
- Insurance covering all of the items listed above

ADDITIONAL COMMENT

According to the IRS's Statistics of Income, in 2020 the deduction for medical expenses totaled $77.25 billion, representing 12.7% of the total dollar amount of itemized deductions.

Diagnosis, Cure, Mitigation, Treatment, or Prevention of Disease. Although the tax law does not precisely define the term *medical expense*, it is clear that medical expenses are deductible only if paid for procedures or treatments that are legal. For example, taxpayers cannot deduct amounts paid for "controlled substances (such as marijuana and laetrile) that aren't legal under federal law, even if such substances are legalized by state law."[2] The definition of medical care includes preventive measures such as routine physical and dental examinations. However, other expenses should be "confined strictly to expenses incurred primarily for the prevention or alleviation of a physical or mental defect or illness." Thus, unless they are for routine physical or dental examinations, the expenditures must be for the purpose of curing a specific ailment rather than related to the general health of an individual. This determination is especially critical when the expenditures in question are for items such as vacations, weight loss programs, or stop smoking programs. The taxpayer may or may not incur such expenses for a specific ailment.

EXAMPLE I:8-2 ▶ Helmut is nervous and irritable because of pressures at work and begins to suffer angina symptoms. In order to relax and get away from it all, he takes an ocean cruise around the world. Helmut's angina symptoms ease while he is on the cruise. In a case with facts very similar to Helmut's situation, the Tax Court held that a cruise is not a proven medical necessity because the taxpayer's physician did not specifically prescribe it. Although the cruise was beneficial to Helmut's general health, it was not deductible.[3] ◀

EXAMPLE I:8-3 ▶ Dave enrolls in a weight reduction program on the advice of two doctors who prescribe the program as a means of relieving his obesity, hypertension, and certain hearing problems. Based on a revenue ruling issued by the IRS, these expenses qualify as deductible medical expenditures because they are incurred for a specific medical condition.[4] ◀

Although a doctor's recommendation appears to lend a great deal of weight to deductibility, it is not always sufficient. For example, a taxpayer could not deduct the cost of dancing lessons for an emotionally disturbed child, even though the lessons proved to be beneficial and were recommended by a physician. Likewise, a taxpayer suffering from arthritis could not deduct the cost of ballroom dance lessons, even though a doctor recommended the lessons. On the other hand, the IRS has ruled that the cost of a clarinet and clarinet lessons was deductible when recommended by an orthodontist to correct a malocclusion of a child's teeth.[5] In short, determining the deductibility of certain expenditures can be difficult.

ADDITIONAL COMMENT

One cannot deduct the cost of nonprescription medicine (except insulin), toothpaste, toiletries, maternity clothes, diaper service, or funeral expenses.

Range of Deductible Medical Services. According to the Treasury Regulations, typical medical expenses include payments for a wide range of medical, dental, and other diagnostic and healing services. Thus, taxpayers may deduct payments to licensed or certified medical professionals such as general practitioners, obstetricians, surgeons, ophthalmologists, opticians, dentists, and orthodontists. Furthermore, deductible medical expenditures include payments for medical services rendered by individuals such as chiropractors, osteopaths, and psychotherapists who may or may not be required to be licensed or certified.[6] Taxpayers may deduct payments to Christian Science practitioners as well as for acupuncture treatment if the taxpayer receives the treatment for a specific medical purpose.[7] Qualified medical expenses also include payment for hospital services, nursing services, laboratory fees, X-rays, artificial teeth or limbs, ambulance hire, eyeglasses, and prescribed medicines and insulin. Nondeductible expenses include expenditures for nonprescription medicines, drugs, vitamins, and other types of health foods that improve the individual's general health.

---

[2] Reg. Sec. 1.213-1(e)(1)(ii). See also Rev. Rul. 97-9, 1997-1 C.B. 77 and IRS Publication 502 (2018) which contains the IRS's recommended treatment for a number of medical expenses.

[3] Daniel E. Mizl, 1980 PH T.C. Memo ¶80,227, 40 TCM 552. Even if the taxpayer's physician had prescribed the trip, it still may not have been deductible. See Reg. Sec. 1.213-1(e)(1)(ii).

[4] Rev. Rul. 2002-19, 2002-1 C.B. 778. However, taxpayers still may not deduct the cost of diet foods or weight loss programs directed at general health or appearance. Taxpayers may deduct costs incurred for prescription medications and programs to stop-smoking, but not over-the-counter stop smoking aids. See Rev. Rul. 99-28, 1999-1 C.B. 1269 and IRS Publication 502 (2017).

[5] *John J. Thoene*, 33 T.C. 62 (1959), *Rose C. France v. CIR*, 50 AFTR 2d 82-5504, 1982-1 USTC ¶9225 (6th Cir., 1982), and Rev. Rul. 62-210, 1962-2 C.B. 89.

To deduct costs incurred for schools and camps, the taxpayer must show that the facility has the appropriate medical equipment and regularly engages in providing medical services. For example, a court held that a taxpayer could deduct costs he incurred to send his mentally disabled son to a school with a special curriculum specifically for mentally disabled children. Similarly, another court ruled that a taxpayer could deduct the cost of sending a child with psychiatric problems to a school that specialized in learning disorders. However, taxpayers generally may not deduct the cost of sending children with special medical problems to schools or camps that do not have the proper equipment, facilities, or curriculum for such problems.

TYPICAL MISCONCEPTION

Taxpayers tend to define qualifying medical expenses too narrowly. This may be caused, in part, by comparison with expense reimbursement limitation policies of health insurance companies.

Medical Procedures Affecting Any Function or Structure of the Body. Deductible medical expenditures also include payments for services affecting any function or structure of the body, even though no specific illness or disease exists. Thus, qualifying medical expenses include expenditures for such items as physical therapy, obstetrical services, eyeglasses, dental examinations and cleanings, and hearing aids. Under Sec. 213, cosmetic surgery or any other similar procedure does not qualify as a medical expense unless such surgery is necessary to correct a deformity arising from a congenital abnormality, a personal injury resulting from an accident or trauma, or a disfiguring disease. Cosmetic surgery is defined as any procedure undertaken to improve a person's appearance that does not meaningfully promote the proper function of the body or prevent or treat an illness or disease.

Transportation Essential to Medical Care. Taxpayers may deduct transportation expenses that are essential to and incurred primarily for qualified medical care. Thus, taxpayers may deduct actual out-of-pocket automobile expenditures, taxis, airfare, ambulance fees, and other forms of transportation if the travel is for medical reasons. However, the tax law disallows a deduction if the travel is undertaken for recreational purposes or for the general improvement of the taxpayer's health.

ADDITIONAL COMMENT

For 2025, the standard mileage rate for business mileage is 70 cents per mile. For medical it is 21 cents, and for charitable purposes it is 14 cents.

In lieu of the actual cost of the use of an automobile, for 2025 the IRS allows a deduction of 21 cents for each mile that the automobile is driven for medical reasons. In addition to this standard mileage rate, taxpayers may also deduct the cost of tolls and parking.

Certain courts have held that the cost of meals and lodging while en route to a medical facility is part of deductible travel costs incurred for medical purposes. However, taxpayers may not deduct the cost of meals eaten on trips that are too short to warrant a stop for meals. Additionally, taxpayers may deduct only 50% of the cost of meals. (See Chapter I:7 for a discussion of the 50% disallowance rule for meals and 100% disallowance rule for entertainment.) Sec. 213(d)(2) limits the potential deduction for the cost of lodging to $50 per night. Furthermore, lodging expenses qualify as medical expenditures only if the travel is primarily for and essential to medical care, the medical care is provided in a licensed hospital (or a facility related or equivalent to a licensed hospital), and there is no significant element of personal pleasure or recreation in the travel. The tax law imposes the $50 limitation on lodging on a per-individual basis. Thus, if the patient is unable to travel alone, the taxpayer may deduct an additional $50 per night for the lodging costs of a nurse, parent, or spouse.

---

[6] Reg. Sec. 1.213-1(e)(1) and Rev. Rul. 63-91, 1963-1 C.B. 54 and IRS Publication 502 (2020). See also Ltr. Rul. 8919009 (February 6, 1989) where a pregnant woman was entitled to a deduction for the cost of childbirth classes to the extent that they prepared her for the childbirth. However, the cost of the classes where she received instructions on the care of the unborn child represented a flat fee that allowed a coach to attend the class with the taxpayer. Thus, one-half of the fee was deemed attributable to the coach and was not allowed as a qualified medical expense.

[7] Rev. Rul. 72-593, 1972-2 C.B. 180 and IRS Special Ruling, February 2, 1943.

Qualified Long-Term Care. Taxpayers may also deduct expenditures for qualified long-term care as medical expenses subject to the 7.5% of AGI limitation. Long-term care is defined as medical services required by a chronically ill individual which are provided under a prescribed plan of care. Under Sec. 7702B, such items include expenditures for diagnostic, preventive, therapeutic, curing, treating, mitigating, rehabilitative, and personal care services. A chronically ill individual generally is someone who, for a period of at least 90 days, cannot perform at least two daily living tasks such as eating, toileting (including continence), bathing, or dressing. According to Sec. 213(d)(11), if the long-term care service is provided by the individual's spouse or relative, any payment for the long-term care service is not deductible unless the spouse or relative is a licensed professional to be able to provide this care. Furthermore, services provided by a corporation or partnership in which the person owns over 50% are also not deductible.

Expenditures for long-term care insurance premiums also qualify as medical deductions, subject to an annual limit based upon the age of an individual.[8]

Capital Expenditures for Medical Care. Generally, taxpayers may not currently deduct capital expenditures for federal income tax purposes. For assets used in a trade or business or held for the production of income, taxpayers must recover such costs through depreciation, cost recovery, or amortization. Capital expenditures incurred for personal medical purposes are not depreciable or amortizable. However, a current deduction is available when the capital expenditure is made to acquire an asset primarily for the medical care of the taxpayer, the taxpayer's spouse, or the taxpayer's dependents. To qualify as a deduction, the taxpayer must incur the expenditure as a medical necessity for primary use by the individual in need of medical treatment, and the expenditure must be reasonable in amount. The following are the three categories of deductible capital expenditures for medical care:[9]

- Expenditures that relate only to the sick or handicapped person, not to the permanent improvement or betterment of the taxpayer's property (e.g., eyeglasses, dogs or other animals that assist the blind or the deaf, artificial teeth and limbs, wheelchairs, crutches, and portable air conditioners purchased for the sole use of a sick or disabled person)
- Expenditures that permanently improve or better the taxpayer's residence for the purpose of providing medical care (e.g., a swimming pool installed in the home of an individual suffering from arthritis)
- Expenditures to remove structural barriers in the home of a physically disabled individual (e.g., costs of constructing entrance ramps, widening doorways and halls, lowering kitchen cabinets, and adding railings)

REAL-WORLD EXAMPLE

The cost of installing an elevator in the home upon the recommendation of a physician to help a patient with a heart condition was deductible to the extent that it did not increase the value of the home. *James E. Berry v. Wiseman*, 2 AFTR 2d 6015, 58-2 USTC ¶9870 (D.C. Okla., 1958).

Capital expenditures that relate only to the sick person (the first category) are fully deductible in the year paid. Expenditures that improve the residence (the second category) are deductible only to the extent that the amount of the expenditure exceeds the increase in the fair market value (FMV) of the residence. Expenditures to remove physical barriers in the home of a physically disabled individual (the third category) are deductible in full (i.e., the increase in the home's value is deemed to be zero). In addition, any costs of operating or maintaining the assets in all three categories are deductible as long as the medical reason for the capital expenditure continues to exist.[10] All of the above expenditures are subject to the 7.5% of AGI floor.

EXAMPLE I:8-4 ▶ During the current year, Rita is injured in an industrial accident. As a result, she sustains a chronic disabling leg injury, which requires her to spend much time in a wheelchair. Rita's physician recommends that a swimming pool be installed in her backyard and that she devote several hours each day to physical exercise. During the year, Rita makes the following expenditures:

Wheelchair	$ 2,500
Swimming pool	27,000
Operation and maintenance of the pool	1,800
Entrance ramp and door modification	5,000

---

[8] For 2025, if the individual is 40 years of age or less, the annual deductible limit for the premiums is $480. For individuals over 40 but not more than 50, the limit is $900. For those who are over 50 but not more than 60, the limit is $1,800. For those who are over 60 but not more than 70, the limit is $4,810. For those who are more than 70, the limit is $6,020 (Rev. Proc. 2024-40).

[9] Reg. Sec. 1.213-1(e)(1)(iii) and H. Rept. No. 99-841, 99th Cong., 2d Sess., p. II-22 (1986).

[10] Rev. Rul. 87-106, 1987-2 C.B. 67.

A qualified appraiser estimates that the swimming pool increases the value of Rita's home by only $20,000. Rita's medical expenses for the year include $2,500 for the wheelchair, $7,000 for the swimming pool (the excess of the cost of the pool over the increase in the FMV of the home), $1,800 for the operation and maintenance of the pool, and $5,000 for the ramp and door modification. ◀

REAL-WORLD EXAMPLE

Taxpayers made nonrefundable advance payments required as a condition for an institution's future acceptance of their disabled child for lifetime care in the event that taxpayers could not care for the child. The amounts paid were deductible as expenses for medical care in the year paid. Rev. Rul. 75-303, 1975-2 C.B. 87. This current deduction for prepaid amounts is only available for certain lifetime care expenditures incurred in situations described in this ruling. Rev. Rul. 93-72, I.R.B. 1993-34,7.

Costs of Living in Institutions. The entire cost of in-patient hospital care, including meals and lodging, qualifies as a medical expense. However, if an individual is in an institution other than a hospital (e.g., a nursing home or a special school for the disabled), the deductibility of the costs involved depends on the facts of the particular case. If the principal reason for the taxpayer's presence in an institution is the need for and availability of the medical care furnished by that institution, the qualified medical expenditures include the entire costs of meals, lodging, and other services necessary for furnishing the medical care. If medical care is not the principal reason for the taxpayer's presence in the institution, the institutional expenses are not deductible. Only specific medical expenses, such as doctor bills and prescription drugs, are eligible for deduction.

ADDITIONAL COMMENT

A taxpayer cannot deduct the Medicare (hospital insurance benefits) tax that is withheld from wages as part of the Social Security tax.

Medical Insurance Premiums. Qualified medical expenses also include premiums paid for medical insurance, including premiums paid for supplementary medical insurance for the aged under the Social Security Act and premiums paid for qualified long-term care insurance contracts. In many cases, taxpayers pay premiums for insurance coverage that extends beyond mere medical care. For example, in addition to the standard medical care coverage, an insurance policy may provide coverage for loss of income or loss of life, limb, or sight. In such cases, the tax law allows a deduction for the medical care portion of the premium only if the cost of each type of insurance is either separately stated in the contract or furnished to the policyholder by the insurance company in a separate statement.[11]

EXAMPLE I:8-5 ▶ Each month Malazia pays $300 for an insurance policy under which she is reimbursed for any doctor or hospital charges she incurs. In addition, the policy will pay two-thirds of her regular salary each month if she becomes disabled. Finally, the policy will pay her $10,000 for the loss of any limb. At the end of the year, her insurance company issues a statement that allocates two-thirds of the premiums to the medical insurance coverage. Malazia's medical care expenditure is $2,400 ($300 × 12 × 0.667). ◀

If a taxpayer pays the premiums attributable to an individual or group medical insurance plan, the payments are deductible as medical expenses, which are itemized deductions in most cases. Self-employed individuals may deduct 100% of these amounts as deductions *for* AGI. Any amounts paid by the taxpayer's employer are excluded from the employee's gross income and are not includible in the taxpayer's medical expenses.[12]

Chapter I:7 discusses the deduction for certain medical savings accounts established for employees.

AMOUNT AND TIMING OF DEDUCTION

The amount and timing of the allowable medical expense deduction depend on when the taxpayer actually pays the medical expenses, the taxpayer's AGI, and whether the taxpayer receives any reimbursement for the medical expenses.

Timing of the Payment. In general, taxpayers may deduct medical expenses only in the year they actually pay the expenses. This rule applies regardless of the taxpayer's method of accounting or when the event that caused the expenditure occurs.[13] Thus, if taxpayers receive medical care during the year but have not paid for it as of the end of the year, taxpayers must defer the deduction for that care until the year they pay for the medical care. If the obligation is charged on a credit card, payment is deemed to have been made on the date of the charge, not on the later date when the taxpayer pays the credit card balance. Conversely, if medical care is prepaid, the deduction is deferred until the year the taxpayer receives the care unless there is a legal obligation to prepay or unless the prepayment is a requirement for the receipt of the medical care.[14]

---

[11] Sec. 213(d)(6). See also Rev. Ruls. 66-216, 1966-2 C.B. 100, and 79-175, 1979-1 C.B. 117.

[12] Sections 162 and 106.

[13] Reg. Sec. 1.213-1(a)(1). However, medical expenses paid within one year from the day following the taxpayer's death are treated as paid at the time they are incurred (see Sec. 213(c)).

Limitation on Amount Deductible. As previously noted, other than medical insurance premiums paid by self-employed individuals, the tax law allows a medical expense deduction only for the years in which the taxpayer itemizes his or her deductions and the taxpayer's expenditures for medical care exceed 7.5% of AGI.

EXAMPLE I:8-6 ▶ During 2025, Kelly incurs qualified medical expenditures of $6,000. Kelly is 45 and her AGI for the year is $50,000. After subtracting the floor, she has $2,250 ($6,000 − [0.075 × $50,000]) of deductible medical expenses. These medical expenses are added to Kelly's other itemized deductions to determine whether they exceed the standard deduction. ◀

SELF-STUDY QUESTION

Why does the IRS not require that the taxpayer file an amended return when a reimbursement is received in a later year?

ANSWER

The administrative burden on the IRS of processing additional returns would be too great.

Medical Insurance Reimbursements. Taxpayers may only deduct unreimbursed medical expenditures. It does not matter whether the reimbursement is from an insurance plan purchased from an insurance company, a medical reimbursement plan of an employer, or a payment resulting from litigation.

If the taxpayer receives reimbursement in the same year he or she pays for the medical expenses, the amount of the reimbursement reduces the allowed deduction. If a taxpayer receives a reimbursement in a year subsequent to the year of payment, the taxpayer must include the reimbursement in gross income in the year of receipt to the extent that the taxpayer derived a tax benefit from the deduction in the previous year. If the taxpayer did not take a deduction in the prior year, the taxpayer doesn't need to report the reimbursement as income. This may occur because the taxpayer's total itemized deductions do not exceed the standard deduction or because the taxpayer's total medical expenses do not exceed 7.5% of AGI. If the taxpayer took a deduction in the prior year, however, the taxpayer must report as income the lesser of the amount of the reimbursement or the amount the medical expenses reduced the taxable income in the prior year.

EXAMPLE I:8-7 ▶ During 2025, Dan, a single taxpayer, reports the following items of income and expense:

AGI	$80,000
Total qualified medical expenses	14,000
Itemized deductions other than medical	8,000

Dan's taxable income for 2025 is calculated as follows:

AGI			$80,000
Reduction: Larger of itemized deductions or standard deduction			
Medical expenses	$14,000		
Minus: 7.5% of AGI	(6,000)	8,000	
Other itemized deductions		8,000	
Total itemized deductions		$16,000	
Greater of itemized deductions or standard deduction ($15,000)			(16,000)
Taxable income			$64,000

If during 2026 Dan receives a reimbursement of $4,000 for medical expenses he incurred the prior year, he must include $1,000 ($16,000 − $15,000) in gross income for 2026, which is the amount of the tax benefit from the medical expense deduction for the prior year. This amount can be calculated by comparing Dan's actual taxable income for 2025 with what would have been his 2025 taxable income if the reimbursement had been received that year. This calculation is as follows:

---

[14] Rev. Rul. 78-39, 1978-1 C.B. 73 and *Robert M. Rose v. CIR*, 26 AFTR 2d 70-5653, 70-2 USTC ¶9646 (5th Cir., 1970). See also Rev. Rul. 93-72, Rev. Rul. 1993-2 C.B. 77, Rev. Rul. 75-302, 1975-2 C.B. 86, and Rev. Rul. 75-303, 1975-2 C.B. 87.

AGI			$80,000	
Reduction: Larger of itemized deductions or standard deduction				
Medical expenses	$14,000			
Minus: Reimbursement	(4,000)			
Minus: 7.5% of AGI	(6,000)	4,000		
Other itemized deductions		8,000		
Total itemized deductions		$12,000		
Greater of itemized deductions or standard deduction ($15,000)			(15,000)	
Taxable income (assuming reimbursement was received in 2025)			$ 65,000	
Minus: Actual 2025 taxable income			($ 64,000)	
Tax benefit			$ 1,000	◀

Topic Review I:8-1 highlights the principal requirements for the medical expense deduction previously discussed.

STOP & THINK

Question: Vince and Diane are married and file a joint tax return. For the current year they estimate their AGI at $90,000. They also estimate their itemized deductions for taxes, interest, and charitable contributions total $25,000. Up to the current date they have incurred $6,500 in deductible medical expenses. For several months they have been considering laser surgery on Diane's eyes. The total expenditure for the operations will be $8,000 and is not covered by their medical insurance. Since they already have spent so much this year on medical expenses and they do not anticipate such large expenses next year, they are considering delaying the eye operation until next year. They estimate their AGI next year will be approximately $110,000. Does this decision make sense from a tax point of view?

Solution: From a tax point of view, Vince and Diane should consider having and paying for the operation this year. If so, $8,000 is added to the prior $6,500 medical expenditures for a total of $14,500 for the year. After applying the 7.5% of AGI limitation, $7,750 [$14,500 − ($90,000 × 0.075)] of their total medical expenses are deductible and their total itemized deduction sums to $32,750 ($25,000 + $7,750). Without the additional eye surgery expenses, the $6,500 of their prior medical expenses this year is less than the 7.5% of AGI limit, and they can't deduct any of their medical expenses. Thus, their total itemized deduction would be $25,000, which does not exceed the standard deduction ($25,000 − $30,000). If they wait until next year to do the eye surgery, none of the $8,000 for the eye surgery is deductible in either year because of the AGI limitation (assuming their estimates are correct and assuming they don't anticipate any other medical expenses next year).

TOPIC REVIEW I:8-1

Medical Expense Deductions

ITEMS	DEDUCTION RULES AND LIMITATIONS
Qualifying expenditures	(a) Expenditures for the diagnosis, cure, mitigation, treatment, or prevention of disease and qualified long-term care. (b) Transportation at 21¢ per mile for 2025; lodging limited to $50 per night, per person; and 50% of meals. (c) Medical and qualified long-term care insurance premiums. (d) Capital expenditures (subject to specific limitations).
Qualifying individuals	Taxpayer, spouse, dependents, children of divorced parents even if not dependent, and persons who would qualify as dependent except for the failure to meet gross income or joint return tests.
Amount and timing of the deduction	Deduct in the year paid unless prepaid, then deductible when medical treatment is received. If prepayment is required or there is a legal obligation to prepay, then deduct in year of prepayment.
Treatment of insurance reimbursements	Medical expenses are subject to a 7.5% of AGI nondeductible limitation. The deduction is reduced if the reimbursement is received in the year of payment. Reimbursements received in a subsequent year are included in gross income of the year received to the extent that a tax benefit was received in the earlier year.

TAXES

OBJECTIVE 2

Identify taxes that are deductible as itemized deductions

Section 164 provides taxpayers with a deduction for specifically listed taxes paid or accrued during the taxable year. Generally, cash-method taxpayers deduct the taxes when they pay for them, whereas taxpayers using the accrual method deduct taxes in the year the taxes accrue. The tax law specifically lists other taxes as nondeductible. To be deductible as a tax, the assessment in question must be a tax rather than a fee or charge imposed by a government for providing specific goods or services. For tax years 2018 through 2025, TCJA 2017 limits the itemized deductions for state and local taxes to $10,000 ($5,000 for married filing separately).

ADDITIONAL COMMENT

According to the IRS's Statistics of Income, in 2020 the deduction for taxes totaled $215.9 billion, representing 35.5% of the total dollar amount of itemized deductions.

DEFINITION OF A TAX

A **tax** is a mandatory assessment levied under the authority of a political entity for the purpose of raising revenue to use for public or governmental purposes. Thus, fees, assessments, or fines imposed for specific privileges or services are not deductible as taxes under Sec. 164. These nontax items include:

- Vehicle registration and inspection fees
- Registration tags for pets
- Toll charges for highways and bridges
- Parking meter charges
- Charges for sewer, water, and other services
- Special assessments against real estate for items such as sidewalks, lighting, and streets

However, if taxpayers incur these nontax fees and charges in a business or income-producing activity, the taxpayers may either capitalize or deduct these items as ordinary and necessary business expenses or ordinary and necessary expenses incurred for the production of income.

DEDUCTIBLE TAXES

The following taxes are specifically deductible under Sec. 164:

- State, local, and foreign real property taxes
- State and local personal property taxes if based on value
- State, local, and foreign income, war profits, and excess profits taxes
- The GST (Generation Skipping Transfer Tax) imposed on income distributions.[15]
- Other state, local, and foreign taxes that are paid or incurred in either a trade or business or an income-producing activity
- Generally taxpayers cannot deduct state and local sales taxes unless they make an election to deduct their state and local sales taxes instead of deducting their state and local income taxes. They make this election annually.

In general, taxes imposed by the federal government are not deductible in calculating a taxpayer's income tax. However, federal customs and excise taxes incurred in the taxpayer's business or income-producing activity are deductible as ordinary and necessary expenses under Secs. 162 or 212. Furthermore, an employer may deduct the *employer's* portion of Federal Social Security taxes and federal and state unemployment taxes as ordinary and necessary business expenses if the employee works in the employer's business or income-producing activity. A self-employed individual may deduct one-half of the self-employment tax imposed on the individual's self-employment income as a *for* AGI deduction.

LIMITS ON ITEMIZED DEDUCTIONS FOR STATE AND LOCAL TAXES

Beginning in 2018, itemized deductions for state and local real property taxes, state and local personal property taxes, and state and local income taxes (or state and local sales taxes, if elected instead of income taxes) are limited to $10,000 ($5,000 for married filing separately).

---

[15] The generation-skipping transfer tax is imposed by the United States on certain distributions from a trust (see Sec. 2601) and is deductible for federal income tax purposes. Furthermore, under Sec. 691(c) a taxpayer who includes income in respect of a decedent in taxable income may deduct the estate tax attributable to that amount.

STATE AND LOCAL INCOME TAXES

For individuals, state and local income taxes are normally an itemized (*from* AGI) deduction. Thus, an individual does not receive any federal income tax benefit if these taxes, in addition to the taxpayer's other itemized deductions, do not exceed the standard deduction. Cash method taxpayers generally deduct all state and local income taxes paid or withheld during the year even if the taxes are attributable to another tax year.

BOOK-TAX DIFFERENCE

For financial accounting purposes, all taxes are expensed in arriving at net income after taxes. However, for tax purposes, only certain taxes are deductible. This gives rise to an M-1 or M-3 adjustment.

EXAMPLE I:8-8 ▶

During 2025, Rita had $1,500 in state income taxes withheld from her salary. On April 15, 2026, Rita pays an additional $400 when she files her 2025 state income tax return. If the sum of her itemized deductions for 2025 exceeds the 2025 standard deduction, for 2025 Rita may deduct as an itemized deduction the $1,500 in state income taxes withheld from her salary during 2025. The $400 that Rita pays on April 15, 2026, is added to her itemized deductions for 2026 even though the liability relates to her 2025 state income tax return. ◀

If a taxpayer receives a refund of state income taxes deducted in a prior year, the taxpayer must include the refund as income in the year of the refund to the extent the taxpayer received a tax benefit from the prior deduction. This calculation is similar to the calculation of the tax benefit from a medical expense reimbursement in Example I:8-7.

ADDITIONAL COMMENT

Every state except Alaska, Florida, Nevada, New Hampshire, South Dakota, Tennessee, Texas, Washington, and Wyoming impose a personal income tax. Although New Hampshire does not impose a personal income tax, they do tax interest and dividends at the individual level.

STATE AND LOCAL SALES TAXES

As mentioned previously, taxpayers are allowed to deduct state and local sales taxes in lieu of state and local income taxes. Taxpayers electing to deduct state and local sales taxes instead of state and local income taxes have two options for determining the deductible amount. Taxpayers can deduct the actual amount of sales taxes paid by accumulating receipts showing the actual amount of sales taxes paid, or they can deduct the appropriate amount from tables provided by the Treasury Department. If a taxpayer uses the amount from the tables, sales taxes the taxpayer paid on major purchases can be added to the table amount.

PERSONAL PROPERTY TAXES

Many state and local governments impose personal property taxes. For individuals, the key issue is whether the levy is a deductible tax under Sec. 164 or a nondeductible fee. To qualify as a deductible personal property tax, the levy must meet two basic tests:

- The tax must be an ad valorem tax on personal property. In other words, the property's value determines the amount of the tax rather than some other measure such as a vehicle's weight or model year.
- The tax must be imposed on an annual basis, even if not collected annually.[16]

If a personal property tax is based partly on value and partly on some other basis, only the ad valorem portion is deductible.

EXAMPLE I:8-9 ▶

Banner County imposes on all passenger automobiles a property tax of 1% of value plus 20 cents per pound. Clay's automobile has a value of $20,000 and weighs 1,500 pounds. Clay may deduct $200 ($20,000 × 0.01) under Sec. 164. Clay may not deduct the remaining $300 (1,500 × 0.20) under Sec. 164; however, he may deduct it as an ordinary business expense if the automobile is used in his business. ◀

ADDITIONAL COMMENT

Several states impose a tax on the value of a taxpayer's investment portfolio. This is an example of a deductible intangible personal property tax.

---

[16] Reg. Sec. 1.164-3(c).

For individuals, personal property taxes are *from* AGI (itemized) deductions unless the individual incurs the taxes in the individual's trade or business or for the production of rental income.

REAL ESTATE TAXES

Apportionment of Taxes. When real estate is sold during the year, the federal income tax deduction for property taxes imposed on that real estate is allocated between the seller and the purchaser based on the amount of time each taxpayer owns the property during the real property tax year. The real property tax year may or may not coincide with the taxpayer's tax year. The apportionment, based on the number of days each party holds the property during the real property tax year of sale, assumes that the purchaser owns the property on the date of the sale. This apportionment is mandatory for all taxpayers even though one of the parties (i.e., the purchaser or seller) may have actually paid the entire property tax bill. The party who actually pays the taxes (either the buyer or the seller) deducts his or her share of the taxes in the year he or she pays the taxes unless the taxpayer makes an election under Sec. 461(c) to accrue the taxes. The tax consequences do not depend on whether the agreement requires proration of the real estate taxes. Both the purchaser and the seller may deduct their apportioned share of the taxes, regardless of who actually pays the taxes. Generally the sales agreement provides for the proper apportionment of property taxes between the buyer and the seller and will state the amount of the taxes apportioned to each party separately from the selling price of the property. If the seller pays all of the taxes prior to the sale, at closing the buyer will reimburse the seller for the payment of these taxes in addition to paying the down payment. On the other hand, if the taxes are to be paid by the buyer after the purchase of the property, the amount collected from the buyer at closing is reduced by the amount of taxes allocated to the seller. This process does not impact the selling price of the property if properly allocated and accounted for at closing.[17]

ADDITIONAL COMMENT

Delinquent taxes of the seller that are paid by the buyer as part of the contract price are not deductible.

EXAMPLE I:8-10 ▶

The real property tax year for Bannock County is the calendar year. Property taxes for a particular real property tax year become a lien against the property as of June 30 of that year, and the owner of the property on that date becomes liable for the tax. However, the taxes are not payable until February 28 of the subsequent year. On May 30 of the current (non-leap) year, Sandy, a cash-method taxpayer, sells a building to Roger, who is also a cash-method taxpayer. The real estate taxes on the property for the current year are $1,095. Although Roger is liable for the payment of the tax, Sandy is treated as having paid $447 ($1,095 × 149/365 [the numerator of 149 is the number of days from January 1 through May 29 and the denominator is the entire real property tax year]) on the date of the sale. Thus, Sandy may deduct $447 in the year of sale. Roger may deduct his share of the taxes, equaling $648 ($1,095 × 216/365), in the subsequent year (i.e., the year during which Roger actually pays the full amount of property tax due of $1,095). On the other hand, if the taxes become a lien against the property on April 1, Sandy is the owner of the building on that date and, since she is liable for the tax, she will be the one who actually pays the tax. Under these circumstances, the result is the same (i.e., Sandy deducts $447 and Roger deducts $648) except that Roger may take the $648 deduction in the year of sale rather than in the year of payment and Sandy takes the $447 deduction in the year of payment rather than the year of sale. ◀

Real Property Assessments for Local Benefits. Local governments often make assessments against real estate for the purpose of funding local improvements. These assessments may be for such items as street improvements, sidewalks, lighting, drainage, and sewer improvements. If the tax assessment is only against the property that benefits from the improvement, it is not deductible, even though the general public may also

TYPICAL MISCONCEPTION

Taxpayers often fail to differentiate between assessments for new construction and for repairs. For example, an assessment for street repairs is deductible, but an assessment for the construction of a new street is not deductible.

---

[17] However, if the agreement does not specifically provide and account for an apportionment of taxes, the apportionment of the taxes is still made and the seller's gain or loss on the sale (and the purchaser's basis in the property) must be adjusted either upward or downward, depending on which party actually pays the taxes.

incidentally benefit.[18] The tax law requires capitalization of such assessments as part of the property's adjusted basis.

Real property taxes incurred on personal-use assets, such as a personal residence, are deductible *from* AGI. Real property taxes incurred on business property or property held for the production of rental income are deductions *for* AGI.

SELF-EMPLOYMENT TAX

Wages paid to an employee are subject to a payroll tax which consists of two components (Social Security, technically called OASDI, and Medicare). Both the employer and the employee pay a share of the taxes imposed. Thus, on wages paid to an employee, the employer and the employee generally each pay a tax of 6.2% for Social Security (a total of 12.4%) and 1.45% (a total of 2.9%) for Medicare. The Social Security tax is imposed on a limited amount of wages. For 2025, this wage limit is $176,100. However, the Medicare tax is imposed on both the employer and the employee without limit on the amount of the wages paid. Self-employed individuals must pay both of these taxes on their self-employment income. Because these taxes are imposed only on the self-employed individual, these taxes are imposed on the individual's self-employment income at the total 2.9% for Medicare and the total 12.4% (up to self-employment income of $176,100 in 2025) for Social Security. Self-employed individuals may deduct one-half of these self-employment taxes paid as a *for* AGI deduction.[19]

Starting in 2013, an additional surtax is imposed under the Patient Protection and Affordable Care Act passed by Congress in 2012. This new tax is imposed on individuals with over $200,000 in income ($250,000 for married filing jointly) and is imposed at 3.8% on investment income and 0.9% on wages and self-employment income. The reason for this 0.9% (3.8% – 2.9%) difference in these rates is that self-employment income and wages are already subject to the 2.9% Medicare tax whereas investment income is not. This new tax is imposed only on individuals, not on employers. Furthermore, unlike the Social Security tax and the Medicare tax, this new tax is not deductible by individuals.

SELF-STUDY QUESTION

Would a taxpayer normally prefer to deduct foreign taxes or take a foreign tax credit?

ANSWER

Normally the foreign tax credit is better because a credit provides a direct dollar-for-dollar reduction of the tax liability rather than a reduction of taxable income.

NONDEDUCTIBLE TAXES

The following taxes are not deductible under Sec. 164:

- Federal income taxes
- Federal estate, inheritance, legacy, succession, and gift taxes
- Federal import or tariff duties and excise taxes unless incurred in the taxpayer's business or for the production of income
- Employee's portion of Social Security and other payroll taxes
- State and local sales taxes and state inheritance, legacy, succession, and gift taxes (unless the individual taxpayer elects to deduct the state and local sales taxes instead of the state income taxes)
- Foreign income taxes if the taxpayer elects to take the taxes as a credit against his or her federal income tax liability
- Property taxes on real estate to the extent treated as imposed on another taxpayer
- Tax imposed on wages, self-employment income, and investment income under the Patient Protection and Affordable Care Act

INTEREST

OBJECTIVE 3

Identify different types of interest deductions

In years past, taxpayers could deduct virtually all interest paid or accrued in the taxable year. Gradually, however, Congress has enacted numerous exceptions into the tax law rendering several types of interest nondeductible. For example, individuals may not deduct personal interest expense, such as interest paid on personal credit cards and automobile loans. Interest incurred in connection with a trade or business is deductible. Thus, to determine the amount of interest expense deduction, individuals must properly classify their interest expense for the year. The interest expense categories include the following: active trade or business, passive activity, investment, personal, qualified residence, and student loan.

---

[18] Reg. Sec. 1.164-4. However, if the assessment that is applied to the local property is also applied to other property and not just to that specific property, the assessment is deductible as a tax. The taxpayer bears the burden of proof to show how much of the assessment is deductible (see Sec. 164(c)(1)).

[19] Sec. 164(f). In calculating its taxable income subject to the income tax, an employer is able to deduct as a business expense its portion of these Social Security taxes and Medicare taxes. Thus, in order to equate the amount and deductibility of these taxes imposed on self-employed individuals, an adjustment is made to the amount of the self-employed income that is subject to these taxes. (See Chapter I:14 for a discussion of the self-employment tax.)

ADDITIONAL COMMENT

According to the IRS's Statistics of Income, in 2020 the deduction for interest paid totaled $157.79 billion, representing 25.97% of the total dollar amount of itemized deductions.

DEFINITION OF INTEREST

Interest is defined as "compensation for the use or forbearance of money."[20] Thus, finance charges, carrying charges, loan discounts, premiums, loan origination fees, and points are all considered interest if they represent a cost for the use of money.

Charge for Services. In addition to interest, borrowers may incur other charges in connection with borrowing money. These service charges include fees for appraisals, title searches, bank service charges, and the annual service charge on credit cards. Unless incurred in a trade or business, these expenses are not deductible because they all represent nondeductible personal expenses. As explained in the section in this chapter entitled Personal Interest, although finance charges on credit cards represent interest rather than service costs (on page I:8-16), they likewise are not deductible unless incurred in a trade or business.

Bank Service Charges and Finance Charges. Bank service charges on checking accounts are nondeductible expenses for services rendered rather than interest. The annual service charge on credit cards is also a charge for services rather than interest. However, finance charges on credit cards are interest. Late payments charged by public utilities are interest expense because they do not relate to any specific service.[21] Of course, if taxpayers incur these expenses in a trade or business, they are deductible.

KEY POINT

In general, the classification of interest expense depends on the use to which the borrowed money is put, not on the nature of the property used to secure the loan.

CLASSIFICATION OF INTEREST EXPENSE

The deductibility of interest generally depends on the purpose for which the taxpayer incurs the indebtedness because interest incurred in certain activities is subject to limitation and disallowance. For example, interest expense incurred in the taxpayer's active business is deductible in full against the business income (a deduction *for* AGI, taken on Schedule C), whereas interest expense allocated to the purchase of the taxpayer's residence is subject to the limitations applicable to that type of interest and is an itemized deduction (a deduction *from* AGI). Except for certain student loan interest and certain interest on a personal residence, taxpayers may not deduct interest allocated to personal-use expenditures.

Pursuant to the Treasury Regulations, taxpayers must allocate interest expense to the different interest expense categories by identifying the use of the borrowed money. Property used as collateral in securing the debt normally has no bearing on the allocation of the interest expense.[22]

EXAMPLE I:8-11 ▶

Cathy pledges some stock and securities as collateral for a $30,000 loan. She then purchases an automobile with the proceeds of the loan. The automobile is used 100% of the time for personal use. Even though the collateral for the loan is investment property, the interest expense is allocated to a personal-use asset and is not deductible. ◀

---

[20] *Deputy v. Pierre S. DuPont*, 23 AFTR 808, 40-1 USTC ¶9161 (USSC, 1940).

[21] Rev. Rul. 73-136, 1973-1 C.B. 68 and Rev. Rul. 74-187, 1974-1 C.B. 48. See also Rev. Rul. 77-417, 1977-2 C.B. 60, which rules that one-time charges of 2% of each new cash advance and 1% of each new check and overdraft advance on a credit card account is an interest charge if the charges are not for services performed in the maintenance of the account. Of course, interest on a credit card or interest charged by a public utility is not deductible if it is personal interest.

[22] Temp. Reg. Sec. 1.163-8T. The major exception to this rule deals with home equity loans where the funds borrowed may be used for any purpose. Home equity loans are discussed later in this chapter.

If the taxpayer deposits borrowed funds in a bank rather than spending them immediately, the deposit is treated as an investment, and the interest on the loan is investment interest until the taxpayer withdraws or expends the funds. Then the taxpayer allocates the interest expense to a category based on the reason for making the expenditure, regardless of when the taxpayer actually pays the interest expense for the debt. This reallocation occurs as of the date the taxpayer writes the check on the account, as long as the delivery or mailing of the check occurs within a reasonable period of time.[23]

EXAMPLE I:8-12 ▶ On March 1 of the current year, José borrows $100,000 and immediately deposits the funds into an account that contains no other funds. José makes no additional deposits or payments. On May 1 of the current year, he withdraws $40,000 from the account and purchases a sailboat to be used for personal purposes. On July 1, José withdraws an additional $50,000 and purchases a passive activity. For the current year, the interest expense on the loan is categorized as follows: from March 1 through April 30, all of the expense is investment interest expense. 40% ($40,000/$100,000) of the interest expense attributable to the period May 1 through June 30 is classified as personal interest and the remainder is investment interest. The interest expense attributable to the period from July 1 to the end of the year is classified as 40% personal interest, 50% passive activity interest, and 10% investment interest. ◀

If both borrowed and personal funds are mingled in the same account, expenditures from that account are treated as coming first from the borrowed funds.[24]

EXAMPLE I:8-13 ▶ On April 1 of the current year, Diane borrows $30,000 and deposits it into a checking account that contains $10,000 of personal funds. On May 1 of the current year, Diane purchases a passive activity for $15,000, and on June 1 she purchases a personal automobile for $20,000. The $15,000 expended for the passive activity on May 1 is treated as coming from the borrowed funds. Thus, as of that date, one-half of the interest expense on the debt is reallocated from investment interest to passive activity interest. $15,000 of the funds expended for the personal automobile on June 1 is treated as coming from the borrowed funds, and the remaining $5,000 is treated as coming from the personal funds. Thus, as of June 1, the remaining interest expense on the debt is reallocated to personal interest. ◀

When the taxpayer repays the debt, the allocation of the repayment to the expenditures made with the borrowed funds occurs in the following order: (1) personal expenditures, (2) investment expenditures and passive activity expenditures other than rental real estate, (3) passive activity expenditures in rental real estate, and (4) trade or business expenditures.

Active Trade or Business. Generally, a taxpayer may deduct any interest expense incurred in the taxpayer's active trade or business. For 2025, large businesses (defined as those with gross receipts of $31 million or more) must limit their deduction for interest to 30% of taxable income, with any excess being carried forward to following years.[25] As explained in Chapter I:6, the determination of whether a particular activity constitutes a trade or business or an investment depends on an examination of all the relevant facts and circumstances. For individuals, estates, trusts, and certain corporations, however, it is not sufficient that the taxpayer incur the interest in a trade or business. In addition, the taxpayer must *materially participate* in the business. If not, the activity is considered a **passive activity**, and losses from the activity (including the interest expense) are subject to the **passive loss** limitation rules (see Chapter I:9 for a discussion of these rules). Interest incurred in an active trade or business is a deduction *for* AGI.

---

[23] Temp. Reg. Sec. 1.163-8T(c). If during any one month several expenditures are made from an account, the taxpayer may elect to treat all the expenditures as if made on the first day of the month. This election is made on each account separately and is available only for accounts where the borrowed funds are already in the account as of the first day of the month. If the funds are not in the account as of the first day of the month, the expenditures may be treated as made on the date that the borrowed funds are deposited in the account. See Temp. Reg. Sec. 1.163-8T(c)(4)(iv).

[24] Temp. Reg. Sec. 1.163-8T(c)(4)(iii)(B). However, if an expenditure is made out of the mingled funds within 15 days of the deposit of the borrowed funds into the account, the taxpayer may designate the expenditure to which the borrowed funds are allocated.

[25] Sec. 163(j).

Passive Activity. Individuals, estates, trusts, and certain corporations that incur losses from passive activities are subject to the passive loss limitation rules explained in Chapter I:9. These rules prevent taxpayers from offsetting passive activity losses against other types of income such as salary, interest, dividends, and income from an active business. Taxpayers must include interest expense attributable to the passive activity in computing the net income or loss generated from the passive activity, and thus may not be able to deduct the interest under these limitation rules (see Chapter I:9 for a discussion of these rules).

Investment Interest. Individuals and other noncorporate taxpayers are limited on the deductibility of interest expense attributable to investments. Without any limitation, high-income taxpayers could realize significant tax savings by borrowing money to invest in assets that are appreciating in value but produce little or no current income. This would enable the taxpayer to offset current highly taxed income with a current interest deduction, while deferring the taxable income from the investment until it is sold at a later date. This technique also would enable taxpayers to increase their future capital gain income and reduce their current ordinary income. This procedure is favorable to individual and noncorporate taxpayers because the tax on capital gains is less than the tax on ordinary income.

Because of these concerns, Sec. 163(d) limits the current deduction for investment interest expense to the noncorporate taxpayer's net investment income for the taxable year. Any investment interest expense disallowed as a current deduction is carried over and treated as investment interest expense incurred in the following year.

EXAMPLE I:8-14 ▶ In the current year, Rita earns $27,000 in net investment income and incurs $40,000 of investment interest expense. Rita's interest expense deduction for the year is limited to $27,000, the amount of her net investment income.

The remaining investment interest expense of $13,000 ($40,000 − $27,000) may be carried over and deducted in a subsequent year. This carryover amount is treated as paid or accrued in the subsequent year and is subject to the disallowance rules that pertain to the subsequent year. ◀

Investment Interest. **Investment interest** is interest expense on indebtedness properly allocable to property held for investment. This includes property that generates portfolio types of income such as interest, dividends, annuities, and royalties. It does not include business interest, personal interest, qualified residence interest, or interest incurred in connection with any passive activity. Under Sec. 469, all rental activities are passive (see Chapter I:9 for a discussion of the passive loss limitation rules). Thus, interest incurred in owning and renting property is subject to the passive loss limitation rather than the investment interest limitation.

Investment interest also does not include interest expense incurred to purchase or hold tax-exempt securities. This interest is not deductible at all. Without this disallowance, a taxpayer could, in certain circumstances, actually borrow funds at a higher rate of interest than the rate at which they were reinvested, while still generating a positive net cash flow because the government would be subsidizing the transaction through the interest deduction on the borrowings.

Net Investment Income. For purposes of the investment interest limitation, the term **net investment income** means the excess of the taxpayer's investment income over investment expenses. Investment income is gross income from property held for investment, including items such as dividends, interest, annuities, net short-term capital gains, and royalties (if not earned in a trade or business), but excluding qualified dividends and net long-term capital gains taxed at the preferential capital gains tax rates.

Including either of these two items in the definition of investment income would increase the amount of deductible investment interest expense, which might offset other income that is taxed at higher rates. Thus, the definition of investment income generally excludes net capital gain attributable to the disposition of property held for investment and qualified dividends. However, at the election of the taxpayer, net capital gain from the disposition of investment property and qualified dividends can be included in investment income. To the extent the taxpayer elects to include gains from the disposition of investment property and qualified dividends in investment income, these items are taxed at the regular tax rates rather than at the preferential long-term capital gain rates.[26] The calculation of investment income does not include gains on business and personal-use property.

EXAMPLE I:8-15 ▶ During the current year, Michael incurs $15,000 investment interest expense, earns $7,000 of qualified dividends and $3,000 interest income. He also reports the following gains and losses from the sale of stocks and bonds during the year:

Short-term capital gains	$4,000
Short-term capital losses	(3,000)
Long-term capital gains	5,000
Long-term capital losses	(2,000)

Considering all of Michael's other income and deductions for the year, assume that he is subject to a 35% marginal tax rate and a 15% tax rate on long-term capital gains. Michael's net capital gain is $3,000 (net long-term capital gain of $3,000 in excess of net short-term capital losses of $0). He also has a $1,000 ($4,000 – $3,000) net short-term capital gain. Thus, of his total capital gain of $4,000 ($9,000 of total gains – $5,000 of total losses), only $1,000 ($4,000 net gain – $3,000 net capital gain) is included in investment income. In addition, the $7,000 of qualified dividends also are not included in investment income. If Michael does not make an election, his investment income is $4,000 ($3,000 of interest plus $1,000 net short-term capital gain). He may deduct $4,000 of the investment interest expense in the current year. The excess investment interest for the current year of $11,000 ($15,000 – $4,000) is carried over to the next year. The $3,000 net capital gain and the qualified dividends are subject to the 15% tax rate on net capital gain. If Michael makes the election, his investment income is $14,000 (the $3,000 net capital gain and $7,000 of qualified dividends are included), and he may deduct $14,000 of the investment interest expense. Thus, only $1,000 ($15,000 – $14,000) of investment interest expense is not currently deductible and is carried over to the next year. However, his $3,000 net capital gain and $7,000 of qualified dividends are subject to the 35% ordinary income tax rate. ◀

Investment expenses include all deductions (except interest) that are directly connected with the production of investment income. Beginning in 2018, the Tax Cuts and Jobs Act eliminated the deduction of investment expenses. After 2018, net investment income equals investment income when calculating the amount of investment interest expenses that can be deducted.

EXAMPLE I:8-16 ▶ Kevin's AGI for the current year is $200,000. Included in his AGI is $175,000 salary and $25,000 of investment income. In earning the investment income, Kevin paid investment interest expense of $33,000.

The investment interest expense deduction is limited to $25,000. The remaining investment interest of $8,000 ($33,000 – $25,000) is carried over and deducted in a subsequent year (subject to the disallowance rules that pertain to the subsequent year). ◀

Personal Interest. In general, the tax law does not allow a deduction for interest expense on debt incurred for personal purposes, or **personal interest.** Thus, taxpayers may not deduct interest on credit cards, car loans, and consumer debt. However, taxpayers generally may deduct interest on debt to acquire a personal residence. Qualified students may also deduct as a *for* AGI deduction interest incurred on certain student loans.

---

[26] Secs. 1(h)(3) and 163(d)(4)(B).

ADDITIONAL COMMENT

Banks and other financial institutions that receive mortgage interest from homeowners are required to report interest of $600 or more to the IRS and to the homeowners on Form 1098.

Qualified Residence Interest. Subject to certain limitations discussed below, individuals may deduct **qualified residence interest**. To be qualified residence interest, the interest payment must be acquisition indebtedness with respect to a qualified residence of the taxpayer. In all cases the residence must secure the debt.[27] A qualified residence (discussed below) may consist of the taxpayer's principal residence and a second residence.

Acquisition Indebtedness. Acquisition indebtedness is any debt secured by the residence and incurred in acquiring, constructing, or substantially improving the qualified residence. Debt may be treated as qualified acquisition indebtedness if the taxpayer acquires the residence within 90 days before or after the date that the debt is incurred. In the case of the construction or substantial improvement of a residence, debt incurred before the completion of the construction or improvement can qualify as acquisition debt to the extent of construction expenditures that are made no more than 24 months before the date the debt is incurred. Furthermore, debt incurred after construction is complete and within 90 days of the completion date may qualify as acquisition indebtedness to the extent of any construction expenditures made within the 24-month period ending on the date the debt is incurred.[28] Making payments of principal on the loan reduces the amount of acquisition debt. The only way to increase the amount of acquisition debt is to make substantial improvements to the property. The taxpayer may refinance acquisition indebtedness (and therefore treat it as acquisition indebtedness) to the extent that the principal amount of the refinancing does not exceed the principal amount of the acquisition debt immediately before the refinancing. Acquisition indebtedness includes debt obtained for home improvement. This includes debt labeled "home equity" if the proceeds are used for home improvements.

EXAMPLE I:8-17 ▶ Kay acquired a personal residence in 2012 for $220,000 and borrowed $140,000 on a mortgage that was secured by the property. In the current year the principal balance of the mortgage has been reduced to $100,000. Kay's acquisition indebtedness in the current year is only $100,000 and cannot be increased above $100,000 (except by indebtedness incurred to substantially improve the residence). If she refinances the existing mortgage in the current year and the refinanced debt is $110,000, only $100,000 (the principal balance of the existing acquisition indebtedness) qualifies as acquisition indebtedness. ◀

The limitation for qualified acquisition indebtedness is $1,000,000 ($500,000 for a married individual filing a separate return) for debt contracts entered into before December 15, 2017. Taxpayers who enter into binding contracts after December 14, 2017 are limited to qualified acquisition indebtedness of $750,000 ($375,000 for married filing separately).

---

[27] Sec. 163(h). If the loan is not secured by the residence, it does not qualify. In one instance the taxpayer agreed to purchase her ex-husband's ownership interest in their residence. The terms of the sale were $10,000 down plus an unsecured $25,000 note. In a private ruling, the IRS ruled that because the note was not secured by the residence, the interest on the note was not qualified residence interest. (See Ltr. Rul. 8752010 September 18, 1987.) However, if under any state or local homestead law the security interest is ineffective or unenforceable, the interest expense still qualifies as qualified residence interest. See Sec. 163(h)(4)(C). In another letter ruling the taxpayer borrowed money to purchase a residence securing the debt by pledging stock and bonds. Here also, the IRS denied the deduction because the loan was not secured by the residence. (See Ltr. Rul. 8906031 November 10, 1988.)

[28] Notice 88-74, 1988-2 C.B. 385.

Points Paid as Qualified Residence Interest. Often taxpayers must pay *points* on real estate debt. A point is equal to 1% of the loan amount. Thus, two points paid on a $120,000 mortgage equal $2,400 (120,000 × .02). Points often represent prepaid interest because the stated rate of interest for the loan is lower than the current rate of interest. Generally, prepaid interest paid in the form of points must be capitalized and amortized over the life of the loan. However, points paid on a loan incurred to purchase the taxpayer's principal residence (acquisition indebtedness) are automatically deductible when paid if certain requirements are met. The IRS has also indicated that points paid on Veteran Administration (VA) and Federal Home Administration (FHA) loans are also currently deductible as interest if clearly designated as points incurred in connection with the indebtedness.[29]

EXAMPLE I:8-18 ▶ During the current year, Kevin and Donna purchase a new home for $300,000, putting $100,000 down and borrowing $200,000. At the closing, they are required to pay one and one-half points as a loan discount in connection with the loan, which is secured by a mortgage against the home. The practice of charging points is an established business practice where they live.

These points represent prepaid interest on the purchase of a principal residence. Thus, in addition to the interest portion of every payment they make during the year, Kevin and Donna may also deduct $3,000 ($200,000 × 0.015) as interest paid during the year of purchase. ◀

Taxpayers must capitalize points paid on a loan to purchase property other than a principal residence or for refinancing a mortgage on a principal residence. If the property is used in a business, held as an investment, or a qualified residence (the taxpayer's principal residence and one other that the taxpayer chooses) the taxpayer may amortize the points over the life of the loan.[30]

In order for the points to be currently deductible, the purchaser of the principal residence (borrower) must have paid for them with unborrowed funds. However, amounts provided by the borrower as down payments, escrow deposits, earnest money, or other funds are treated as paid for the points. Furthermore, as long as the borrower provides sufficient funds in these other categories, he or she is treated as having paid the points even if the seller has paid for them on behalf of the borrower.[31]

Qualified Residence. For any tax year, a taxpayer may have two qualified residences:

- Taxpayer's principal residence
- One other residence selected by the taxpayer, with regard to which the taxpayer meets the residence test of Sec. 280A(d)(1)

In order to meet this residence test, the taxpayer must have personally used the property more than the greater of 14 days or 10% of any rental days during the year.[32]

---

[29] These requirements, are as follows: The points are paid upon the purchase of a principal residence; they are designated as paid in connection with the acquisition debt and are a percentage of the loan; they follow business practices and are secured by the residence. Rev. Proc. 94-27, 1994-1 C.B. 613.

[30] Rev. Rul. 87-22, 1987-1 C.B. 146, and Rev. Proc. 87-15, 1987-1 C.B. 624. The 8th Circuit Court of Appeals has held in one case that points paid on refinancing a "bridge" or temporary loan are currently deductible. *James R. Huntsman v. CIR*, 66 AFTR 2d 90-5020, 90-2 USTC ¶50,340 (8th Cir., 1990), rev'g 91 TC 57 (1988). The IRS will not follow *Huntsman* in other circuits (IRS Action on Decision CC-1991-02, Feb. 11, 1991).

[31] Reg. Sec. 1.6050H-1(f)(3). See also Rev. Proc. 94-27, 1994-1 C.B. 613.

[32] Sec. 280A(d)(1). Use by the taxpayer's family as defined in Sec. 267(c)(4), other individuals under a reciprocal-use arrangement, and anyone when a fair rental is not charged counts as a day of personal use by the taxpayer.

EXAMPLE I:8-19 ▶ Fred owns a lakeside cabin that he uses for vacations. He also rents the cabin out to others when he is not using it. During the year Fred rents the cabin out at a fair rental for 90 days. Fred personally uses the cabin for a total of 22 days. Because Fred's personal use for the year (22 days) exceeds 14 days [the greater of 14 days or 9 days (10% of the rental days)], the cabin qualifies as his residence for purposes of deducting qualified residence interest for the year. ◀

ADDITIONAL COMMENT

Whether property is a residence for tax purposes is based on all the facts and circumstances, including the good faith of the taxpayer. A residence generally includes a house, condominium, mobile home, boat, or house trailer, that contains sleeping space and toilet and cooking facilities. Treas. Reg. § 1.163-10T(p)(3)(ii).

Despite the residence test, the taxpayer may select a property that has not been rented by the taxpayer at any time during the year as the second residence on which the taxpayer may deduct qualified residence interest.

Student Loan Interest. Pursuant to Sec. 221, individuals may take a *for* AGI deduction for interest paid on qualified education loans. The maximum annual interest deduction for qualified student loans is $2,500. Furthermore, the deduction is phased out if the student reports modified AGI in excess of certain amounts. For 2025 the deduction begins phasing out for a single individual with modified AGI of $85,000 (with a $15,000 phase-out range). For a student who is married filing jointly, the phase-out begins at $170,000 (with a $30,000 phase-out range).[33]

EXAMPLE I:8-20 ▶ During 2025, Ryan pays a total of $2,800 in interest on a loan incurred for qualified education expenses. Ryan is single and reports modified AGI of $94,000 for the year. Because his modified AGI of $94,000 is $9,000 more than $85,000, the maximum deduction of $2,500 is reduced by 60% ($9,000/$15,000). Ryan may take a *for* AGI deduction of $1,000 [2,500 − (60% × 2,500)]. If Ryan pays only $1,800 of interest (rather than $2,800), the potential deduction of $1,800 would be reduced by 60% to $720 [$1,800 − (60% × $1,800)]. ◀

To qualify for this deduction, the interest must be payable on a loan incurred solely to pay for qualified higher education expenses. If a taxpayer takes out a loan to pay for higher education expenses and for other purposes, none of the interest on the loan qualifies. Higher education expenses include tuition, fees, books and equipment, and room and board incurred during a time the taxpayer, the taxpayer's spouse, or the taxpayer's dependent is a student at a qualified higher education institution on at least a half-time basis. However, these qualified expenditures do not include amounts excluded from income under an employer educational assistance program or from United States savings bonds, as well as any scholarship or allowance that is excluded from income. Furthermore, to prevent a double deduction, the tax law allows no deduction to an individual who qualifies as a dependent on another person's tax return or for any amount that is deductible under any other provision of the Code.

TIMING OF THE INTEREST DEDUCTION

Under Sec. 163, deductible interest becomes deductible in the year the interest is paid or accrued. This generally means that cash method taxpayers deduct interest in the year paid, whereas accrual method taxpayers deduct interest as it accrues. However, the IRC makes exceptions to this general rule.

---

[33] Modified AGI includes certain excluded income from Guam, American Samoa, or Puerto Rico, as well as any income excluded under the foreign earned income provisions. Furthermore, the deduction for qualified tuition and related expenses is not allowed.

ADDITIONAL COMMENT

Points paid on the refinancing of an existing mortgage must be written off over the life of the new mortgage.

Prepaid Interest. If a cash method taxpayer prepays interest and the prepayment relates to a loan that extends beyond the end of the tax year, generally the taxpayer must capitalize the prepayment and amortize it over the periods to which the interest relates (i.e., the accrual method applies to cash method taxpayers in regards to prepaid interest). As previously discussed, the law makes one exception to this rule involving interest paid in the form of points charged in connection with the purchase or improvement of the taxpayer's principal residence. If these points represent prepaid interest, the taxpayer may deduct them in the year paid.[34]

Interest Paid with Loan Proceeds. Assuming the interest is otherwise deductible, if an individual borrows money from a third party rather than from the original lending institution and uses the funds to make a payment on a previously outstanding loan, the individual generally may deduct the interest portion of the payment. However, if the taxpayer borrows the funds used to pay the interest on the first loan from the same lender to whom the interest is due, and either (1) the purpose of the second loan is to pay the interest on the first or (2) the borrower does not have unrestricted control of the funds, then the borrower may not deduct the interest.[35]

Discounted Notes. Lending institutions often discount notes. In effect, the borrower pays the interest by repaying more money than is received when the note is signed. A cash method taxpayer can deduct this interest at the time of repayment, whereas an accrual method taxpayer must deduct the interest as it accrues over the term of the loan.

EXAMPLE I:8-21 ▶ On December 1, 2025, Stan borrows $1,000 from his credit union to use in his business. Under the terms of the contract, Stan actually receives $970 but is required to repay $1,000 on February 28, 2026 (three months later). Because Stan is a cash-method taxpayer, he may deduct the full $30 interest in 2026 when the note is repaid. If he were an accrual-method taxpayer, he could deduct $10 ($30 × 1/3) in 2025, and $20 ($30 × 2/3) in 2026. ◀

TYPICAL MISCONCEPTION

Taxpayers sometimes mistakenly assume that any business interest paid on loans between related taxpayers is not deductible. However, if the taxpayers are not governed by the Sec. 267 limitation and the interest is paid on a bona fide business loan, it is deductible.

Interest Owed to a Related Party by an Accrual Method Taxpayer. One of the purposes of Sec. 267 is to require related cash method lenders and accrual method borrowers to report the results of their joint transaction in the same year. Thus, an accrual method taxpayer who is related to a cash method creditor must defer the deduction for any accrued expense (including interest) until the year in which the taxpayer actually pays the expense and the creditor reports the income. Section 267 also disallows losses on the sale of property between related parties. Disallowance of losses between related parties is discussed in Chapter I:6.

The relationships covered by this rule are quite extensive. Some of the more common relationships include the following:

- Members of a family (defined as an individual's brothers, sisters, spouse, ancestors, and lineal descendants)
- An individual and a C corporation in which the individual owns directly or indirectly more than 50% of the outstanding stock
- A corporation and a partnership which are both over 50% owned directly or indirectly by the same people
- A partnership and any partner of the partnership
- An S corporation and any shareholder of the S corporation[36]

---

[34] Sec. 461(g). In order for the exception to apply, the home must be used to secure the loan, and the charging of points must be an established business practice in the area where the loan is granted. (See the discussion of the deductibility of points in this chapter under the heading Definition of **Interest** as well as the discussion in Chapter I:6.)

[35] *H. C. Franklin v. CIR*, 50 AFTR 2d 82-5551, 82-2 USTC ¶9532 (5th Cir., 1982) and *Newton A. Burgess*, 8 T.C. 47 (1947). See also *Norman W. Menz*, 80 T.C. 1174 (1983). The IRS has also announced that it will disallow a deduction for interest paid with funds obtained through a second loan from the same lender (see IRS News Release 83-93, July 6, 1983).

[36] Secs. 267(b) and (e). The list of relationships is much more extensive than those mentioned. An S corporation is one that meets certain requirements and has made an election to have its income taxed directly to its shareholders. A C corporation is one that has not made an S election. (See Chapter C:11 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* text or Chapter C:11 of *Pearson's Federal Taxation: Comprehensive* text.)

EXAMPLE I:8-22 ▶ During the current year, Lisa, a cash method taxpayer, loans some money to her 100%-owned calendar year C corporation, which uses the accrual method of accounting. As of December 31 of the current year, the corporation owes Lisa $3,000 in interest. However, because of a shortage of funds, the corporation does not actually pay the interest until February 15 of the following year. Despite the fact that the corporation uses the accrual method of accounting, the corporation cannot deduct the $3,000 until the corporation actually pays the interest to Lisa in the subsequent year. The result would be the same if the corporation were an S corporation even if Lisa owned 50% or less of the outstanding stock. ◀

Imputed Interest. Under certain circumstances, if a taxpayer charges less than an adequate rate of interest, the IRS is authorized to impute an interest charge. This may cause the lender to have additional interest income and the borrower to have additional interest expense. The deductibility of this imputed interest expense depends on the classification of the expense (i.e., personal, investment, etc.). (See Chapter I:11 for a discussion of imputed interest.)

Topic Review I:8-2 summarizes the rules for deducting various types of interest.

TOPIC REVIEW I:8-2

Deductibility of Interest Expense

TYPE OF INTEREST	RULES
Business	Deductible in full as a *for* AGI deduction.
Passive	Subject to the passive loss limits (see Chapter I:9).
Investment	Deductible as an itemized deduction to the extent of the taxpayer's net investment income for the year. Any amount not deductible is carried over to subsequent years.
Personal	Not deductible.
Qualified residence	(a) Must be attributable to debt secured by the taxpayer's principal residence and one other qualified residence selected by the taxpayer. (b) Interest on up to $750,000 of home acquisition indebtedness is deductible as an itemized deduction.
Student loan interest	(a) Payable on loan incurred to pay qualified higher education expenses. (b) Taken as a *for* AGI deduction. (c) Maximum deductible amount is $2,500. The deduction is phased out ratably for modified AGI between $85,000 and $100,000 ($170,000 and $200,000 for married filing jointly).

CHARITABLE CONTRIBUTIONS

OBJECTIVE 4

Compute the amount of a charitable contribution deduction and identify limitations

Under Sec. 170, individuals who itemize their deductions and corporations can deduct charitable contributions to qualified organizations. With the exception of certain contributions made by corporations (explained later in this chapter), a taxpayer takes the **charitable contribution deduction** in the year the contribution is made, regardless of the taxpayer's method of accounting. The amount of the deduction depends on the type of charity receiving the contribution, the type of property contributed, and the applicable limitations.

LEGISLATIVE UPDATE

While taxpayers have typically had to itemize to take charitable contributions, COVID relief legislation provides limited opportunities for deducting charitable contributions for non-itemizers in tax years 2020 and 2021.

QUALIFYING ORGANIZATION

To deduct a contribution for federal income tax purposes, a taxpayer must make the contribution to or for the use of a qualified organization.[37] Contributions made directly to individuals, even though the individuals may be needy, are generally not deductible.[38] Under Sec. 170, qualified organizations include the following:

---

[37] The Supreme Court has ruled that in order for a contribution to be for the use of a qualifying organization, the gift must be held either in a legally enforceable trust or in a similar legal arrangement. (See *U.S. v. Harold Davis*, 65 AFTR 2d 90-1051, 90-1 USTC ¶50,270 (USSC, 1990).)

- The United States, the District of Columbia, a state or possession of the United States, or a political subdivision of a state or possession
- A corporation, trust, community chest, fund or foundation created or organized under the laws of the United States, a state, possession, or the District of Columbia[39]
- A post or organization of war veterans
- A domestic fraternal society, order, or association[40]
- Certain cemetery companies

Because of the restrictions and limitations examined later in this chapter, the qualifying nongovernmental entities are further classified into public charities and private nonoperating foundations. Different restrictions and limitations apply to each type of organization.

Public charities include:

- Churches or a convention or association of churches
- Educational institutions that normally maintain a regular faculty, curriculum, and regularly enrolled students
- Organizations such as hospitals and medical schools whose principal function is medical care or medical education and research
- Government-supported organizations that exist to receive, hold, invest, and administer property for the benefit of a college or university
- Any qualified governmental unit
- Organizations that normally receive a substantial part of their support from either a governmental unit or the general public
- Certain private operating foundations[41]

ADDITIONAL COMMENT

According to the IRS's Statistics of Income, in 2020 the deduction for charitable contributions totaled $204.66 billion, representing 33.69% of the total dollar amount of itemized deductions.

REAL-WORLD EXAMPLE

The American Red Cross, Boy Scouts of America, United Way, Goodwill, and Indiana University are examples of public charities.

TYPE OF PROPERTY CONTRIBUTED

If a taxpayer makes a contribution in cash, the amount of the contribution is easily determinable. However, in order to assure that the contribution has been properly made to a qualified charity, the taxpayer is required to maintain a record of the contribution such as a bank record or a written communication from the donee.[42] If noncash property is donated, the amount of the contribution is not as easy to identify. In the case of noncash property, the amount of the donation depends on two factors: (1) the type of property donated and (2) the type of qualifying organization (public charity or private nonoperating foundation) to whom the property is given. Furthermore, a gift of property that consists of less than the donor's entire interest in the property is not usually considered a contribution of property. Thus, for example, no charitable contribution is allowed when an individual donates the use of a vacation home for a charitable fund-raising auction.[43]

SELF-STUDY QUESTION

Doug purchases an item having a FMV of $75 for $100 in a charity auction. How much can he deduct?

ANSWER

Doug can deduct only $25 because the cash paid must be reduced by the value of the property received.

Contribution of Long-Term Capital Gain Property. In general, the amount of a donation of long-term capital gain property is its FMV. Regulation Sec. 1.170A-1(c)(2) defines a property's FMV as the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts. For purposes of charitable contributions, **capital gain property** is property held over one year, on which the taxpayer would recognize a long-term capital gain if the taxpayer sold it at its FMV on the date of the contribution. If a capital loss or a short-term capital gain would be recognized on the sale of the capital asset, the property is considered to be ordinary income property for purposes of calculating the amount of the charitable contribution deduction.

---

[38] Under certain circumstances, a taxpayer may take a deduction (limited to $50 per month) for maintaining a student as a member of his or her household. The student may not be a dependent or relative of the taxpayer and must be placed in the taxpayer's home under an arrangement with a qualifying organization (see Sec. 170(g)).

[39] These organizations must be organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes; to foster national or international amateur sports competition; or for the prevention of cruelty to children or animals.

[40] Furthermore, gifts to these organizations must be made by individuals and must be used exclusively for religious, charitable, scientific, literary, or educational purposes, or for the prevention of cruelty to children or animals.

[41] Sec. 170(b)(1)(F). The distinction between a private operating foundation and a private nonoperating foundation generally depends on the way the foundation spends or distributes its income and contributions. The details of this distinction are beyond the scope of this text.

[42] Sec. 170(f)(17) and Notice 2008-16. This record must show (1) the name of the donee organization, (2) the date of the contribution, and (3) the amount of the contribution.

[43] Sec. 170(f)(3), Reg. Sec. 1.170A-7(a)(1) and Rev. Rul. 89-51, 1989-1 C.B. 89. Note, however, that certain transfers of partial interests in property do qualify (e.g., the contribution of certain remainder interests to a trust, the transfer of a remainder interest in a personal residence or a farm, or a contribution of an undivided interest in property). These exceptions are beyond the scope of this text.

ADDITIONAL COMMENT

In 2004, rules were added relating to the contribution of used vehicles and intellectual property. For a used vehicle donated to a charity, in most cases the deduction will be limited to the charity's gross proceeds on the subsequent sale of the vehicle. A taxpayer's deduction for the contribution of a patent or similar intellectual property is the taxpayer's basis in the property.

Contribution to a Private Nonoperating Foundation. The tax law provides an exception to this general rule for contributions of capital gain property to private nonoperating foundations. In general, a private nonoperating foundation is an organization that does not receive funding from the general public (e.g., the Carnegie Foundation). Private nonoperating foundations distribute funds to various charitable organizations that actually perform the charitable services. The amount of the contribution of long-term capital gain property to a private nonoperating foundation is the property's FMV, reduced by the capital gain that would be recognized if the property were sold at its FMV on the date of the contribution. This means that generally the deductible amount of the contribution is the lesser of the property's adjusted basis or its FMV.[44]

EXAMPLE I:8-23 ▶

Betty purchased some land in 2002 for $10,000. In the current year, she contributes the land to the United Way. At the time of the contribution, the FMV of the property is $25,000. Because the land is long-term capital gain property donated to a public charity, the amount of the contribution is $25,000 (its FMV).

On the other hand, if Betty donates the land to Cherry Foundation, a private nonoperating foundation, the amount of the contribution is $10,000 ($25,000 − $15,000 capital gain that would be recognized if the land were sold). ◀

TYPICAL MISCONCEPTION

Many people do not understand that the unrelated use restriction applies only to tangible personal property. A gift of shares of stock (intangible property) would not be a gift of unrelated use property where the stock is sold by the donee.

Unrelated Use Property. A second exception applies to capital gain property (that is also tangible personal property) contributed to a public charity and used by the organization for purposes unrelated to the charity's function. In such cases, the amount of the contribution deduction is equal to the property's FMV minus the capital gain that would be recognized if the property were sold at its FMV. This amount generally is the property's adjusted basis. Tangible property is all property that is not intangible property (e.g., property other than stock, securities, copyrights, and patents). Personal property is all property other than real estate. The taxpayer is responsible for proving that the property was not put to unrelated use. However, a taxpayer meets this burden of proof if, at the time of the contribution, the taxpayer reasonably anticipates that the property will not be put to unrelated use. The immediate sale of the property by the charitable organization is a use unrelated to its tax-exempt purpose.

EXAMPLE I:8-24 ▶

Laura purchases a painting for $3,000. Several years later she contributes the painting to a local college. The FMV of the painting is $5,000 at the time the property is contributed. The painting is both tangible personal property and capital gain property. The college places the painting in the library for display and study by art students. Because the college uses the painting for purposes related to its function as an educational institution, the amount of Laura's contribution is equal to the painting's FMV ($5,000). On the other hand, if the college had sold the painting immediately after receiving it, the presumption is that the property's use was unrelated to the college's tax-exempt purpose. In this case, Laura's contribution is only $3,000. ◀

Certain Intangibles. Under Sec. 170(e)(1)(B)(iii), a third exception applies to the contribution of certain intangibles to a charitable organization. In this case, the amount of the charitable contribution is the FMV of the property, reduced by the amount of long-term capital gain that would have been recognized if the taxpayer had sold the property. These intangibles include patents, trademarks, a trade name or secret, know-how, a purchased copyright, and certain software.

---

[44] The amount of a contribution of appreciated stock held over one year made to a private nonoperating foundation remains at its FMV.

Contribution of Ordinary Income Property

REAL-WORLD EXAMPLE

A retired congressman was not entitled to a charitable contribution of his memos and papers because the papers were ordinary income property and had no basis. *James H. Morrison,* 71 T.C. 683 (1979).

General Rule. If a taxpayer contributes ordinary income property to a charitable organization, the deduction is equal to the property's FMV minus the amount of gain that would be recognized if the taxpayer had sold the property at its FMV on the date of the contribution. In most cases, this deduction is equal to the property's adjusted basis. This rule applies regardless of the type of charitable organization to which the property is donated.

For this purpose, **ordinary income property** includes any property that would result in the recognition of income taxed at ordinary income rates if the taxpayer sold the property. Thus, ordinary income property includes inventory, works of art or manuscripts created by the taxpayer, capital assets that have been held for one year or less, and Sec. 1231 property to the extent a sale would result in the recognition of ordinary income due to depreciation recapture.[45]

EXAMPLE I:8-25 ▶ During the current year, Beta, Inc. purchases land as an investment for $10,000. Five months later, it contributes the land to the United Way. At the time of the contribution the property's FMV is $15,000. The amount of Beta's contribution is $10,000 ($15,000 – [$15,000 – $10,000]) because it held the land for less than one year. ◀

EXAMPLE I:8-26 ▶ Pork, Inc. purchased a machine a few years ago for $20,000 and used the machine in its business. During the current year, Pork, Inc. donates the machine to a local community college. At the time of the contribution, the machine's adjusted basis is $5,000 and its FMV is $8,000. Because Pork, Inc. would have recognized a $3,000 gain (all ordinary income under Sec. 1245) if the machine were sold at its FMV, the amount of the contribution is $5,000 ($8,000 – $3,000), which is equal to the machine's adjusted basis. ◀

Donation of Inventory by a Corporation. Under certain circumstances, the donation of inventory by a C corporation (not an S corporation) to certain public charities provides a larger charitable contribution deduction than the adjusted basis of the property. One of these enhanced charitable contributions involves the donation of inventory to the charity if the charity uses the inventory solely for the care of the ill, needy, or infants.[46] C corporations may also take an enhanced charitable contribution deduction for donating scientific equipment constructed by the taxpayer and donated to a college, university, or qualified research organization for use in research, experimentation, or research training in the physical or biological sciences.[47] The amount of the enhanced charitable contribution is the property's FMV, reduced by 50% (not 100%) of the ordinary income that the corporation would have recognized if it had sold the property at its FMV. However, the amount of the contribution cannot exceed twice the basis of the property.

EXAMPLE I:8-27 ▶ During the current year, Able Corporation, a manufacturer of medical supplies, donated some of its inventory to the American Red Cross. The Red Cross used the inventory for the care of the needy and ill. At the time of the contribution, the FMV of the inventory was $10,000. Able's basis in the inventory was $3,000. Because this transaction qualifies under the exception, the amount of Able's contribution (before any limitations are applied) is $6,500 [$10,000 – (0.50 × $7,000)] but the actual amount of the contribution is limited to $6,000 (2 × the $3,000 basis in the property). ◀

---

[45] Reg. Secs. 1.170A-4(b)(1) and 1.170A-4(d). Sec. 1231 property includes property used in a trade or business that is subject to depreciation. If it is sold at a gain, part or all of the gain is treated as ordinary income. Any remaining gain is subject to the Sec. 1231 rules. (See Chapter I:13 for an explanation of the depreciation recapture and Sec. 1231 rules.)

[46] Sec. 170(e)(3). These charitable organizations are known as Sec. 501(c)(3) charities. All taxpayers, not just C corporations, can take this enhanced charitable contribution if the donated property is wholesome food that will be used for the care of the ill, needy, or infants. The total amount of this enhanced donation is generally limited to 15% of the taxpayer's aggregate net income. Special rules must be met to meet the fair market value and the wholesome food tests. (See Sec. 170(e)(3)(C).)

[47] Sec. 170(e)(4). For tax years before 2012, additional enhanced charitable contribution deductions also included the donation of computer technology and equipment to public libraries and elementary and secondary schools, and the donation of books to a public library.

Contribution of Services. When a taxpayer renders services to a qualified charitable organization, the taxpayer may only deduct the unreimbursed expenses incurred incident to rendering the services. These items include out-of-pocket expenses, transportation expenses, the cost of lodging and 50% of the cost of meals while away from home, and the cost of a uniform that is required to be worn in performing the donated services but is not suitable for general wear. The out-of-pocket expenses are deductible only if the taxpayer who actually renders the services to the charity is the person who incurs these out-of-pocket expenses. Taxpayers cannot take a deduction for expenses while away from home unless they experience no significant element of personal pleasure, recreation, or vacation in such travel. Instead of the actual costs of operating an automobile while performing the donated services, the law permits a deduction of 14 cents per mile.[48]

EXAMPLE I:8-28 ▶ During the current year, Tony spends a total of 100 hours developing an accounting system for the local council of the Scouting America. As an accountant, Tony earns $200 per hour. During the year, Tony also drives his car a total of 500 miles in performing the services for the Boy Scouts of America. If he uses the automatic mileage method to compute the amount of the charitable contribution, he can deduct $70 (0.14 × 500). No deduction is available for the value of 100 hours of Tony's contributed services. ◀

REAL-WORLD EXAMPLE

The cost of newspaper advertising, paper, pencils, and other supplies purchased by volunteers in connection with their involvement in the Volunteer Income Tax Assistance Program (VITA) is deductible. Rev. Rul. 80-45, 1980-1 C.B. 54.

DEDUCTION LIMITATIONS

Overall 50% Limitation. The charitable contribution deduction available for any tax year is subject to certain limitations. For individuals, the general overall limitation applicable to public charities is 50% of the taxpayer's AGI for the year. Any contributions in excess of the limitations may be carried forward and deducted in the subsequent five tax years. The tax law imposes limitations on contributions of capital gain property to either a public charity or a private nonoperating foundation and all types of property contributions to private nonoperating foundations. Beginning on January 1, 2018, the limitation for cash contributions to a public charity increased to 60% of the taxpayer's AGI.

KEY POINT

The generosity of Congress in permitting individuals to use FMV is tempered by the 30% of AGI limitation.

30% Limitation. Under certain circumstances, a special 30% of AGI limitation applies. Contributions of capital gain property (capital assets held over one year on which a gain would be realized if sold) to public charities are generally valued at the property's FMV, but the deduction may not exceed an overall limit of 30% of AGI instead of a 50% limit. This special 30% limit does not apply, however, in the following situations:

- ▶ Capital gain property (which is tangible personal property) donated to a public charity that does not put the property to its related use. In such cases, the amount of the contribution is reduced by the capital gain that would be recognized if the property were sold.
- ▶ The taxpayer elects to reduce the amount of the charitable contribution deduction by the capital gain that the taxpayer would recognize if he or she sold the property.

EXAMPLE I:8-29 ▶ Joy donates a painting to the local university during a year in which she has AGI of $50,000. The painting, which cost $10,000 several years before, is valued at $30,000 at the time of the contribution. The university exhibits the painting in its art gallery. Because the painting is put to a use related to the university's purpose, the amount of Joy's contribution is $30,000. If Joy does not make the election, her current year charitable contribution deduction is limited to $15,000 (0.30 × $50,000 AGI). The remaining $15,000 is carried over to the subsequent five years. If she elects to reduce the amount of the contribution by the long-term capital gain, Joy's current year charitable contribution deduction is her basis of $10,000 in the property. She has no charitable contribution carryover. In this case, making the election doesn't make sense. ◀

The overall deduction limitation of 30% of AGI also applies to the contribution of all types of property other than capital gain property (e.g., cash and ordinary income property) to a private nonoperating foundation. However, further restrictions may apply to the deductibility of certain contributions to this type of charity.

---

[48] Sec. 170(i).

20% Limitation on Capital Gain Property Contributed to Private Nonoperating Foundations. Contributions of capital gain property to private nonoperating foundations may not exceed the lesser of (1) 20% of the taxpayer's AGI or (2) 30% of the taxpayer's AGI, reduced by any contributions of capital gain property donated to a public charity.

Applying the Deduction Limitations. Contributions subject only to the 50% of AGI limitation are accounted for before the contributions subject to the 30% of AGI limitation. So a contribution subject to a 30% limit is the smaller of 30% of AGI or 50% of AGI minus all contributions subject to the 50% or 60% limit.

EXAMPLE I:8-30 ▶ During a year when Ted's AGI is $70,000, he donates $22,000 in ordinary income property to his church and $18,000 to a private nonoperating charity. Ted's deduction for the contribution to the private nonoperating charity (a 30% charity) is limited to $13,000 (the lesser of the following three amounts):

The actual contribution	$18,000
The remaining 50% limitation after the contribution to Ted's church [(0.50 × $70,000) − $22,000]	$13,000
30% of AGI (0.30 × $70,000)	$21,000 ◀

The deduction limit is applied differently when there are aggregate cash contributions subject to the 60% rule. When applying the 30 and 50% limits for a tax year, the limit is reduced by the aggregate cash contributions allowed under the 60% limit for the year.[49]

EXAMPLE I:8-31 ▶ Sandy's tax year is 2025, and Sandy elects to have the 60% limit apply for her qualified cash contributions. Her AGI is $160,000, and she contributes $40,000 to a 50% charity. Her charitable contributions deduction is determined as follows:

Automobile (limited to 30% × $160,000)	$48,000
Cash [limited to (60% × $160,000) − $48,000]	$40,000
Charitable contributions deduction	$88,000

Sandy must carry the remaining $4,000 of the automobile's value in subsequent years. ◀

APPLICATION OF CARRYOVERS

As noted earlier, any contributions that exceed the 60% limitation may be carried over and deducted in the subsequent five years. These carryovers are subject to the limitations that apply in subsequent years. Thus, taxpayers may deduct carryovers only to the extent that the limitation of the subsequent year exceeds the contributions made during that year.

These general rules also apply with regard to the special limitations. For example, if the taxpayer donates property subject to the 50% limitation during the current year and the amount of the contribution exceeds the limitation, the excess may carry over to the five subsequent years subject to the 50% limitation in the carryover years. In the carryover year, a deduction may be taken for the excess contribution to the extent that the 50% limitation of the subsequent year exceeds the amount of the property donated during the subsequent year subject to the 50% limitation. Excess contributions of property subject to the 30% or 20% limitations may also carry over to the subsequent five years. This carryover is also subject to the special restrictions noted above for the 50% limitation. The carryovers are used in chronological order.

TAX PLANNING

If a taxpayer has contribution carryovers that are about to expire, the taxpayer should consider reducing the current year's contribution so that the carryovers can be deducted.

EXAMPLE I:8-32 ▶ Assume that for the years 2025 through 2027, Joan reports AGI and makes charitable contributions in the following amounts:

	2025	*2026*	*2027*
AGI	$40,000	$40,000	$60,000
Cash contributions subject to the 60% of AGI limitation	29,000	27,000	30,000
60% of AGI limitation	24,000	24,000	36,000

---

[49] Sec. 170(b)(1)(G)(iii)(ll).

The amount of the charitable contribution deduction for each year and the order in which the deduction and carryovers are used are as follows:

	2025	*2026*	*2027*
Amount of deduction	$24,000	$24,000	$36,000
Amount of carryover			
From 2025	5,000	5,000	0
From 2026		3,000	2,000

◀

SPECIAL RULES FOR CHARITABLE CONTRIBUTIONS MADE BY CORPORATIONS

The rules governing charitable contributions made by corporations are generally the same as those pertaining to contributions made by individuals. However, certain differences do exist.

ETHICAL POINT

A tax practitioner should not be a party to the backdating of a Board of Director's authorization of a charitable contribution pledge so that the corporation may improperly deduct the contribution in the earlier year.

Pledges Made by an Accrual Method Corporation. Generally, taxpayers may only deduct actual contributions (not pledges) made during the tax year. This rule applies to both cash and accrual method taxpayers. A major exception to this general rule exists for accrual method corporations. These accrual method corporations may elect to claim a charitable deduction for the year in which the corporation makes a pledge to make a contribution as long as the actual contribution is made by the fifteenth day of the third month following the close of the year in which the pledge is made. The corporation's board of directors must authorize the pledge.

Limitation Applicable to Corporations. Corporate charitable deductions may not exceed 10% of the corporation's taxable income for the year. This amount is computed without regard to the dividends-received deduction, net operating loss or capital loss carrybacks, or any deduction for the charitable contribution itself. Excess contributions may be carried forward for five years and are deductible only if the current-year contributions are less than the current year's 10% limitation. The corporation also uses the carryovers in chronological order.

SUMMARY OF CHARITABLE CONTRIBUTIONS DEDUCTION LIMITATIONS

Topic Review I:8-3 summarizes the rules governing the deduction for charitable contributions.

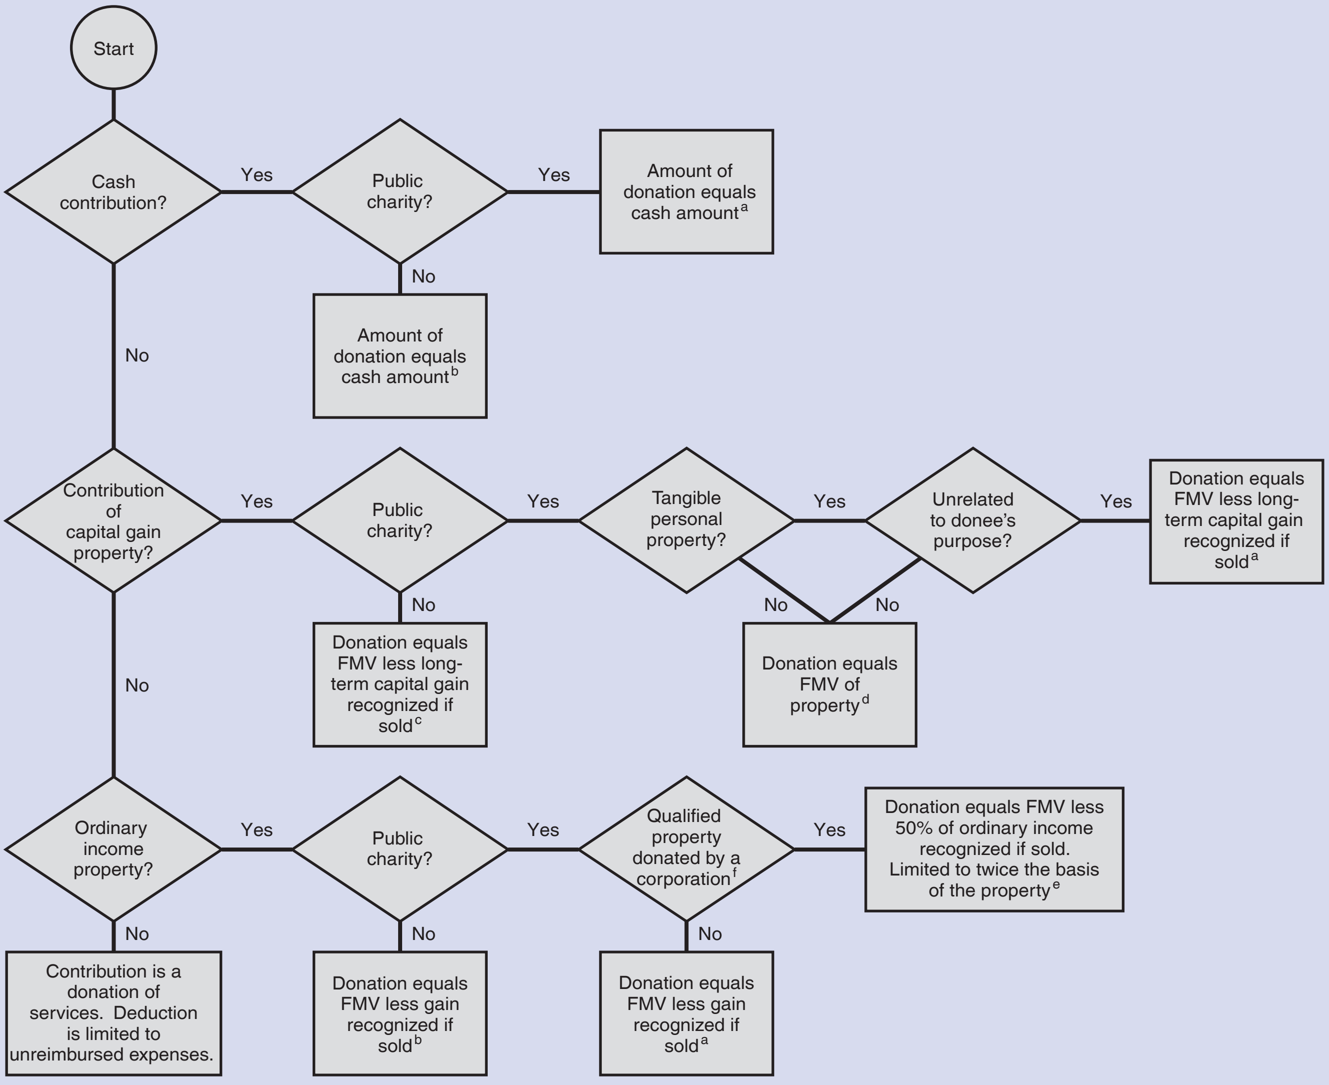
STOP & THINK

Question: During the current year, Kim pledges to contribute $10,000 to both the Boy Scouts of America (BSA) and to a private nonoperating foundation. She wants to satisfy those pledges before the end of the year in order to take a deduction this year. She has enough cash to satisfy one of the pledges, but must either sell or donate some land in order to satisfy the other. The land she has in mind has a fair market value of $10,000 and a cost basis of $2,000. She purchased the land four years ago. Kim estimates that she will have AGI of $170,000 and will be in the 24% marginal tax bracket. Assuming that both charities would gladly accept either contribution, how should Kim satisfy these pledges?

Solution: The amount of contribution of capital gain property to a public charity is the property's fair market value. The 30% of AGI limitation applies to such contributions. However, a contribution of capital gain property to a private nonoperating foundation is the property's fair market value, reduced by the gain that the taxpayer would have recognized if he or she had sold the property (generally the property's basis). Since Kim's AGI for the year is so high, the limitations do not apply. Thus, Kim should contribute the land to the BSA and the cash to the private nonoperating foundation, for a total charitable contribution of $20,000.

TOPIC REVIEW I:8-3

Deduction Rules for Charitable Contributions



Start
Cash contribution?
Yes
Public charity?
Yes
Amount of donation equals cash amount[a]
No
Amount of donation equals cash amount[b]
No
Contribution of capital gain property?
Yes
Public charity?

Public charity?
Yes
Qualified property donated by a corporation[f]
Yes
Donation equals FMV less 50% of ordinary income recognized if sold. Limited to twice the basis of the property[e]
No
Contribution is a donation of services. Deduction is limited to unreimbursed expenses.
No
Donation equals FMV less gain recognized if sold[b]
No
Donation equals FMV less gain recognized if sold[a]

[a] Limited to 60% of AGI (50% of AGI for property).

[b] Limited to lesser of (1) 30% of AGI or (2) remaining 50% of AGI after accounting for donations to public charities.

[c] Limited to lesser of (1) 20% of AGI, (2) 30% of AGI less contributions subject to 30% limit, or (3) 50% of AGI less all contributions subject to the 30%, 50%, or 60% contribution limits.

[d] Taxpayer may elect to scale down the amount of donation by long-term capital gain. If the election is made, limited to 50% of AGI reduced by any cash contributions to public charities.

[e] Limited to 10% of the corporation's taxable income without regard to any deduction for charitable contributions, dividends received, a net operating loss carryback or a capital loss carryback.

[f] Qualified property consists of either (1) inventory or property used in a trade or business which will be used by a Sec. 501(c)(3) charity for the care of the ill, needy, or infants and (2) inventory constructed by the corporation which will be used by a qualified research institution in the physical or biological sciences.

CASUALTY AND THEFT LOSSES

OBJECTIVE 5

Discuss casualty and theft losses

Generally, taxpayers may not deduct losses on personal-use property. However, under Sec. 165 individuals may deduct a casualty or theft loss on personal-use property as an itemized deduction on Schedule A of Form 1040 if it is attributable to a federally declared disaster. For individuals, casualty losses on business and investment properties held for the production of rents or royalties are deductions in computing AGI. Other casualty losses are itemized deductions. Chapter I:9 discusses casualty losses in greater depth.

QUALIFIED BUSINESS INCOME DEDUCTION

OBJECTIVE 6

Determine the calculation of the qualified business income deduction

For tax years beginning after 2017, the tax law allows a deduction for qualified business income (QBI) under Sec. 199A. The deduction reduces taxable income (instead of adjusted gross income), but taxpayers can take the deduction regardless of whether the taxpayers itemize their deductions or utilize the standard deduction. For pass-through entities, the deduction is taken at the partner or shareholder level. In general, the deduction is the lesser of 20% of net business income from a partnership, S corporation, or sole proprietorship, as well as to a percentage of the taxpayer's qualified REIT and publicly-traded partnership income or 20% of the excess of taxable income (before the QBI deduction) over any net capital gain. The purpose of this deduction was to effectively reduce the tax rate of business income earned by these types of businesses to be closer to that imposed on C corporations. However, there are a number of exceptions and rules that can make the calculation of this deduction fairly complex.

QBI includes income from a U.S. trade or business that is not in the service-related businesses of law, accounting, healthcare, and consulting. Combined QBI is further defined as the lesser of:

1. 20% of qualified business income, or
2. The greater of
   a. 50% of W-2 wages allocable to the taxpayer by the business, or
   b. 25% of allocable W-2 wages plus 2.5% of the allocable share of unadjusted basis qualified property immediately after it has been acquired.

The restrictions for service industries and the W-2 limitations do not apply to taxpayers with taxable income in 2025 less than a threshold amount of $197,300 for single taxpayers, $197,300 for married filing separately and $394,600 for married filing jointly.

EXAMPLE I:8-33 ▶ Carrie is a 50% partner in CD partnership. In the current year, the partnership had qualified business income of $2.8 million. CD partnership paid W-2 wages of $900,000 and owns depreciable tangible property with an unadjusted basis of $1,600,000. What is Carrie's qualified business income deduction (ignoring the $\frac{1}{2}$ deduction for self-employment taxes)? ◀

Deduction for the general limit ($2,800,000 × 50% ownership × 20%)		$280,000
Deduction limitation limited to greater of:		
$900,000 × 50% interest × 50%	$225,000	
$1,600,000 × 50% × 2.5% + $900,000 × 50% × 25%	132,500	
Allowable Section 199A deduction		$225,000

TAX PLANNING CONSIDERATIONS

OBJECTIVE 7

Describe tax planning considerations for itemized deductions

As noted throughout this chapter, TCJA 2017 made significant changes to many of the itemized deductions. These changes can have implications for tax planning.

MEDICAL EXPENSE DEDUCTION

Working with the 7.5% of AGI Floor. As explained previously, a deduction for medical expenses is available to individuals only to the extent that the taxpayer's medical expenditures exceed 7.5% of the taxpayer's AGI for the year. Thus, many individuals find that no deduction is available, even though their medical expenses are relatively high. In these cases, taxpayers may obtain some benefit if they can bunch the medical expenses into one year. Orthodontic work, certain orthopedic treatment, noncosmetic elective surgery, and new eyeglasses are all examples of medical expenditures that may be either accelerated or delayed into a year in which other medical expenses are high or AGI is lower.

Generally, a taxpayer may take a deduction for medical expenses only in the year in which the expense is actually paid. The mere prepayment of future expenses usually does not accelerate the deduction. However, taxpayers may take a deduction in the earlier year of payment if there is a legal obligation to pay or if the prepayment is a requirement for the receipt of the medical care.[50] If the taxpayer has already received the medical treatment, but the taxpayer does not have sufficient cash to pay the bill, the taxpayer may preserve a deduction for the current year by either borrowing the cash to satisfy the bill or by using a credit card.

EXAMPLE I:8-34 ▶ During the current year, Marty is 40 and he estimates his AGI to be $70,000. Marty has already incurred $5,000 in medical expenses for himself and his family during the year. Because of the 7.5% of AGI limitation, Marty will not be able to deduct any of the medical expenses. Marty estimates that he will incur $4,000 in medical expenses for orthodontic work for his son next year. He doesn't think he will incur any other major medical expenses next year. Marty also estimates his AGI next year to remain the same as this year. If these estimates are correct, Marty won't be able to deduct any medical expenses in either year because the expenses for each year are less than the AGI limitation in each of the years. However, if the orthodontic work is started in the current year and Marty pays for the work in the current year, he will incur a total of $9,000 in medical expenses in the current year. Thus, in the current year Marty may deduct $3,750 ($9,000 − $5,250) of the total medical expenses. This, of course, assumes that the total of Marty's itemized deductions exceeds the standard deduction for the year.

Mere prepayment in this case is not sufficient. Marty must have a portion of the orthodontic services performed in the earlier year. If he does not have sufficient cash to pay the bill in the current year, he could borrow the money or use a bank credit card. ◀

KEY POINT

Even if the medical expenses exceed 7.5% of AGI the taxpayer may not benefit from the deduction if the medical expenses in addition to the other itemized deductions do not exceed the standard deduction.

Multiple Support Agreements. An individual may deduct medical expenses incurred for himself or herself, his or her spouse, dependents, children of divorced parents even if not a dependent, and persons who would qualify as a dependent except for the failure to meet the gross income or joint return test. In cases where a multiple support agreement has been filed, the tax law treats the individual who is the subject of the agreement as the dependent of the taxpayer entitled to a deduction for any medical expenses paid on behalf of the dependent.

EXAMPLE I:8-35 ▶ Amy, Bart, Clay, and Donna each provide 25% of the support of their father, Eric. Under the terms of a multiple support agreement, Bart, Clay, and Donna all agree to allow Amy to claim Eric as her dependent. During the year, $3,000 in medical expenses are incurred on Eric's behalf. If Amy pays these expenses, she may deduct them (subject to limitations). However, if Bart, Clay, or Donna pays these expenses, no one may claim the medical expenses as a deduction. ◀

INTEREST EXPENSE DEDUCTION

A taxpayer may deduct qualified residence interest incurred on a principal residence and one other qualified residence that the taxpayer selects. The taxpayer makes this choice annually. The taxpayer may choose any residence that is not a rental property.

---

[50] *Robert M. Rose v. CIR*, 26 AFTR 2d 70-5653, 70-2 USTC ¶9646 (5th Cir., 1970). See also Rev. Ruls. 75-302, 1975-2 C.B. 86, and 75-303, 1975-2 C.B. 87, both clarified by Rev. Rul. 93-72, 1993-2 C.B. 77.

In order for the second residence to qualify, the taxpayer must either (1) not rent out the second residence at all during the year or (2) use it personally for more than the greater of 14 days or 10% of the rental days during the year. If this personal use test is met, however, the Sec. 280A limitations on the rental of vacation homes also apply. As explained in Chapter I:6, under these rules, taxpayers must allocate expenses between the rental use and the personal use of the property. Taxpayers may deduct the expenses allocated to the rental use only to the extent of the rental income. Of the expenses allocated to the personal use, only the taxes and interest (if the residence is selected and if the loan is secured by the residence) are deductible as itemized deductions.

If the personal use by the taxpayer does not meet the test mentioned above, the interest allocated to the personal use cannot qualify as residence interest and it becomes nondeductible personal interest. Furthermore, the passive loss rules apply to the rental income and expenses allocated to the rental use of the property (see Chapter I:9). Under these rules, individuals generally can deduct losses generated from a passive activity only to the extent of the individual's **passive income**. Certain individuals, however, may deduct up to $25,000 of losses from the rental of real estate. Thus, the two alternatives and their consequences are as follows:

- Meet the personal use test. No loss from the rental portion of the property is deductible. However, the interest allocated to the personal use portion may be fully deductible as qualified residence interest.
- Do not meet the personal use test. The interest allocated to the personal use portion is nondeductible personal interest. However, all of the passive loss from the rental portion is deductible against passive income. Furthermore, certain individuals may deduct up to $25,000 additional passive loss.

The alternative a taxpayer chooses depends on several factors, including the amount of the taxpayer's passive income, the total amount of itemized deductions, and whether the loan is secured by the vacation home.

DEDUCTION FOR CHARITABLE CONTRIBUTIONS

SELF-STUDY QUESTION

What type of property lends itself to the "election to reduce"?

ANSWER

Property on which there is very little appreciation.

Election to Reduce the Amount of a Charitable Contribution. The election to reduce the contribution of capital gain property to public charities by the long-term capital gain that the taxpayer would recognize if he or she sold the property is an annual election that applies to all capital gain property donated to public charities during the year. Because the election increases the ceiling limitation from 30% to 50%, under certain circumstances a taxpayer may actually receive a larger deduction for the year than would normally be available if the taxpayer did not make the election.

EXAMPLE I:8-36 ▶ During the current year, Jane has AGI of $50,000. She donates a painting to the local university during the same year. The painting, valued at $30,000 at the time of contribution, cost her $25,000 several years before. The university displays the painting in its art museum. If Jane does not make the election, the amount of the contribution is equal to its FMV ($30,000). However, Jane's charitable contribution deduction for the year is limited to $15,000 ($50,000 × 0.30). If Jane makes the election to reduce the contribution amount, the deduction is reduced to $25,000 ($30,000 – $5,000 LTCG). The deduction limitation, however, increases to $25,000 for the year because the limitation is now based on 50% of AGI instead of 30%. In this case, Jane will receive a larger deduction for the year by making the election. However, the cost associated with this election is the loss of $5,000 of deduction because the total deduction is reduced from $30,000 to $25,000 if she makes the election. ◀

Many tax practitioners make this election only when preparing the taxpayer's final tax return. The taxpayer makes the election at this time because charitable contribution carryovers to the decedent's estate are not permitted.

ADDITIONAL COMMENT

To help determine the FMV of contributed property, taxpayers can refer to IRS Pub. No. 561, Determining the Value of Donated Property (2007).

Donation of Appreciated Capital Gain Property. Instead of selling substantially appreciated capital gain property and donating the cash proceeds, the taxpayer should consider donating the property directly to a charity. If property is donated in this way, the donor receives a deduction equal to the FMV of the property and does not recognize any taxable gain on the disposition.

EXAMPLE I:8-37 ▶ Colleen wishes to satisfy a pledge of $100,000 made to a local university. She owns $100,000 worth of marketable securities purchased ten years ago for $30,000. Because the securities are marketable, the university is indifferent as to whether Colleen donates cash or the securities. Although her marginal tax rate is 35%, Colleen would be subject to a tax rate of 15% on the sale of the securities. She has enough AGI to be able to deduct the full contribution in the current year. The following chart summarizes the cash flows to Colleen under two different alternatives:

	Donate Securities	*Sell Securities and Donate Cash*
Proceeds of sale	0	$100,000
Tax on gain	0	(10,500)[a]
Cash payment to charity		(100,000)
Tax savings from the contribution deduction	$35,000[b]	35,000[b]
Net cash flow	$35,000	$ 24,500

[a] ($100,000 − $30,000) × 0.15 = $10,500.

[b] $100,000 × 0.35 = $35,000 (assuming the overall reduction of itemized deductions does not apply). ◀

In order to take a tax loss on business or investment property, a taxpayer should not donate property that has decreased in value. Rather, the taxpayer should sell the property, recognize the loss, and donate the cash proceeds.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 8

Describe compliance and procedural considerations for itemized deductions

MEDICAL EXPENSES

In certain cases, expenditures qualify as both a medical care expense and a dependent care expense (i.e., expenses for household and dependent care services that the taxpayer must pay to be gainfully employed). A taxpayer who incurs an expense that qualifies under both provisions may choose to take either a medical expense deduction or a tax credit under Sec. 21.[51] However, if a taxpayer takes a credit for these expenses, they are not deductible as medical expenses.

---

[51] A credit of up to 35% of expenses for child and dependent care services is allowed if the dependent is under age 13 or a spouse or dependent who is mentally or physically incapable of caring for himself or herself. The credit is reduced 1% for every $2,000 (or portion thereof) of AGI over $15,000. However, the credit may not be reduced below 20%. (See the discussion on Personal Tax Credits in Chapter I:14 for a more detailed explanation of the child and dependent care credit.)

EXAMPLE I:8-38 ▶ Joel's daughter, Debbie, has a physical disability. As a result, Joel hires a nurse who provides daily care while he is at work. During the year, Joel pays the nurse a total of $3,000. This amount qualifies for both the dependent care credit and the medical expense deduction. If Joel takes the dependent care credit, he may not deduct the $3,000 as a medical expense. Because of the limitations imposed on each, the determination of which treatment is more advantageous depends on items such as the taxpayer's AGI, other medical expenses, and total itemized deductions. ◀

ADDITIONAL COMMENT

On Form 8283, the charitable organization is required to acknowledge receipt of the gift and to file an information return if the property is sold or disposed of within two years.

REAL-LIFE EXAMPLE

In one case the taxpayer, a CPA, failed to support a contribution with a qualified appraisal. As a result, his charitable deduction for art and printing supplies donated to a high school was denied. To substantiate the claimed $40,000 charitable deduction, the taxpayer submitted with Form 8283 an appraisal of the donated items made by the high school's principal. The principal, however, wasn't a "qualified appraiser." *D'Arcangelo,* TC Memo 1994-572 (1994).

ADDITIONAL COMMENT

If the taxpayer's total deduction for art is $20,000 or more, he or she must include an 8 × 10 inch color photograph or a color transparency no smaller than 4 × 5 inches.

CHARITABLE CONTRIBUTIONS

Over the past several years, the IRS has significantly tightened the requirements needed to properly substantiate a charitable contribution in an attempt to prevent abuses in claiming inflated charitable contributions. In order for a taxpayer to take a deduction for a cash contribution of any amount, the taxpayer must be able to substantiate the contribution with either a bank record or a written receipt from the charity. Self-created documents are not sufficient. Previously, this requirement was imposed only on cash contributions of $250 or more. In addition, when a taxpayer donates property other than cash to a qualifying charity, proper determination of the property's FMV is a critical issue. Because of actual and perceived abuses in this area, the IRS often scrutinizes and, if necessary, challenges the valuation of contributed property. This is especially true for contributions of property for which no published market quotes exist. Thus, the taxpayer must (1) properly substantiate the fact that the contribution has actually been made, and (2) in the case of the contribution of property, the taxpayer may be required to acquire and retain or provide to the IRS information documenting the property's FMV. As noted below, special detailed substantiation and documentation requirements apply to the contribution of used motor vehicles, boats, and airplanes.

Proper Substantiation. As mentioned above, if the contribution is made in cash, the taxpayer must retain evidence of the donation by keeping a cancelled check or other bank record or a receipt from the charitable organization. If the contribution is in the form of noncash property, the taxpayer must maintain records containing the following:

- Name and address of the charity to which the contribution was made
- Date and location of the contribution
- Description of the property
- FMV of the property
- Method of determining the property's FMV
- Signed copy of the appraisal report if an appraiser was used[52]

For charitable contributions of $250 or more, no deduction is allowed unless the contribution is substantiated by a contemporaneous, written acknowledgment (receipt) by the donee organization. This acknowledgment must contain the following information:

- The amount of cash and a description of any property contributed
- Whether or not the organization provided any goods or services in consideration for the cash or property received, including a description and good faith estimate of the value of any goods or services provided by the organization

The acknowledgment is contemporaneous if obtained by the earlier of the date the taxpayer files a return for the year in question or the extended due date for filing such a return. This substantiation requirement is waived if the donee organization files a return that contains the required information.[53] Additionally, no deduction is allowed for a contribution of clothing or household items unless the items are in "good" condition. Unfortunately, the law does not provide guidance as to what constitutes "good" condition.

---

[52] Reg. Sec. 1.170A-13.

Documentation of Property's FMV. In addition to the substantiation requirement, in certain cases the taxpayer must also properly document the property's FMV. The specific documentation requirements depend upon the amount of the claimed deduction for the contributed property. If a claimed deduction for a contribution of property exceeds $500, noncorporate taxpayers (and closely held C corporations and personal service corporations) must include with their tax return a description of the property and any other information the IRS requires, including the type, location, holding period, basis, and FMV of the property. This information is reported on Form 8283 (see Appendix B). If the claimed deduction exceeds $5,000, in addition to the above requirements, all taxpayers must obtain a qualified appraisal of the property and must include with their tax return any additional information that the IRS requires. Finally, if the claimed deduction exceeds $500,000, all taxpayers are additionally required to obtain a qualified appraisal and actually attach the appraisal to their tax return. Because these documentation requirements are based on the amount of a claimed contribution, the donation of similar items of property donated to all charities will be treated as the donation of one property. This requirement prevents taxpayers from avoiding these documentation requirements by spreading out their contributions. If a partnership or an S corporation donates property, these documentation requirements are applied at the entity level. However, if the documentation requirements are not met, the deduction is denied at the partner or shareholder level. In general, these documentation rules do not apply to contributions of cash, certain intangibles, inventory, or publicly traded securities.

Contribution of Used Motor Vehicles, Boats, and Airplanes. Special documentation rules apply to contributions of motor vehicles, boats, and airplanes if the claimed value of the property exceeds $500. However, these rules do not apply if the contributed vehicle, boat, or airplane is inventory in the hands of the donor. If these special rules apply, the substantiation rules for a donation of property exceeding $250 are no longer applicable. Instead, the charity must give the taxpayer and the IRS a contemporaneous written acknowledgment of the contribution. This acknowledgment must be included with the taxpayer's tax return. The information included in the acknowledgment and the date by which the charity must give the acknowledgment to the taxpayer depend upon whether or not the charity sells the vehicle without any significant use or any material improvement of the vehicle. In either case, the acknowledgment must include the name and taxpayer identification number of the taxpayer who donated the vehicle, as well as the vehicle identification number. If the vehicle is sold by the charity before any significant use or material improvement, the acknowledgment must also include (1) a certification that the vehicle was sold in an arm's length transaction to an unrelated party, (2) the gross proceeds from the sale, and (3) a statement that the deductible amount may not exceed the amount of the gross proceeds. This acknowledgment must be given to the taxpayer within 30 days of the contribution of the vehicle to the charity, and, as mentioned earlier, the amount of the deduction for the vehicle is limited to the gross proceeds received from the sale. On the other hand, if the charity uses or improves the vehicle, the acknowledgment must also state: (1) the intended use or improvement and the intended duration of the use and (2) a certification that the vehicle will not be transferred or sold before completion of the intended use or improvement. This acknowledgment must be given to the taxpayer within 30 days of the donation of the vehicle.[54]

---

[53] Sec. 170(f)(8) and Reg. Sec. 1.170A-13(f).

[54] Sec. 170(f)(11) and (f)(12).

EXAMPLE I:8-39 ▶ During the current year, Peter Smith (SSN. 123-45-6789) reports AGI of $250,000. Smith also makes the following charitable contributions during the year:

- Smith performs voluntary dental work three days each month in rural areas of the state. Smith drives a total of 4,000 miles on these trips during the year.
- Smith makes the following contributions by cash or check: $750 to the city library, $2,000 to the United Way, $500 to a local community college, and $4,000 to his church.
- Smith contributes a tract of land to a small rural town. The town plans to erect a public library on the site. Smith purchased the land in 1997 for $5,000. Its appraised value at the time of the contribution is $8,000.

Smith's contributions are reported on the partially completed Schedule A shown in Figure I:8-1. The out-of-pocket expenses of $560 (4,000 miles× $0.14) and the contributions by cash or check of $7,250 (library, United Way, church, and community college) are totaled and reported on line 11. The property contribution of $8,000 is separately stated on line 12. Because Smith contributes property with a value exceeding $500, Form 8283, an appraisal summary, and signed statements by the qualified appraiser and an authorized official of the organization that received the property must be attached to the return. In addition, for the donations that separately exceed $250, Peter must obtain and retain written acknowledgments from the donee organizations in order for the contributions to be deductible. ◀

TAXES

Individuals generally report their deduction for property taxes on Schedule A of Form 1040. However, if the taxpayer incurs the taxes in his or her business, they are reported on Schedule C. Taxes incurred for the production of rents and royalties are reported on Schedule E. Taxes incurred in the taxpayer's farming business are reported on Schedule F. State and local income taxes imposed on individuals are always reported on Schedule A, even if the individual is self-employed.

Real estate brokers must report any real estate tax allocable to the purchaser of a residence. (See the discussion in this chapter regarding the allocation of real estate taxes between the seller and buyer of a residence.)[55] The broker reports this information on Form 1099-S (Proceeds from Real Estate Transactions).

WHAT WOULD YOU DO IN THIS SITUATION?

Much has been written about abusive practices concerning the valuation of noncash property donated to qualified charities. Under Sec. 170, both corporations and individuals may deduct the FMV of property contributed to charitable organizations. Of course, a number of valuation and percentage limitations and carryover rules are applicable to both individual and corporate taxpayers.

Assume your clients, Mr. and Mrs. Nicholas Nice, come into your office on December 27 for some year-end tax planning. Your review of their tax situation indicates that they have made substantial donations of clothing and household goods to Goodwill Industries. They have obtained proper documentation for donations made during the year but do not know how to qualify for taking a charitable deduction vis-à-vis valuation, forms, and the like. They do know that their original cost basis in the donated goods was $15,000 and that the goods were in good condition at the time of the donation. What tax and ethical issues should be considered?

For Paperwork Reduction Act Notice, see the Instructions for Form 1040. Cat. No. 17145C **Schedule A (Form 1040) 2024**

FIGURE I:8-1 ▶ Partially Completed Schedule A

EXAMPLE I:8-40 ▶ During the year, Andrea incurs $1,500 in property taxes on a two-family duplex. Andrea lives in one unit and rents out the other. She also pays $100 in registration fees and $600 in personal property taxes on her automobile, based on its value. Andrea uses the automobile 80% of the time in an unincorporated business. During the current year, she also pays $2,000 in state income taxes, all of which is attributable to her income of the prior year from the unincorporated business.

Because one-half of the real estate taxes are attributable to property used to produce rental income, $750 (0.50 × $1,500) is reported on Schedule E, and the remaining personal-use portion ($750) is reported on Schedule A. Because 80% of the use of the automobile is in Andrea's business, $80 (0.80 × $100) of the registration fee is deductible as a business expense on Schedule C. The remaining $20 is not deductible because the registration fee is not a tax. However, $480 (0.80 × $600) of the personal property tax on the automobile is deductible as a business expense on Schedule C. The remaining $120 is deductible as a tax on Schedule A. Finally, even though the state income tax is related to Andrea's business income, all $2,000 of the state income tax is reported on Schedule A. Because Andrea pays the state income tax in the current year, it is deductible in the current year. ◀

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:8-1 **a.** For which persons may a taxpayer deduct medical expenses?
b. In the case of children of divorced parents, must the parent who is entitled to claim the child as a dependent pay the medical expenses of the child to ensure that the expenses are deductible? Explain.
c. Who should pay the medical expenses of an individual who is the subject of a multiple support agreement?

I:8-2 What is the definition of medical care for purposes of the medical care deduction?

I:8-3 **a.** What is the definition of cosmetic surgery under the Internal Revenue Code?
b. Is the cost of cosmetic surgery deductible as a medical expense? Explain.

I:8-4 **a.** If a taxpayer must travel away from his or her home in order to obtain medical care, which en route costs, if any, are deductible as medical expenses?
b. Are there any limits imposed on the deductibility of these expenses?

I:8-5 What are the rules dealing with the deductibility of the cost of meals and lodging incurred while away from home in order to receive medical treatment as an outpatient?

I:8-6 **a.** Which types of capital expenditures incurred specifically for medical purposes are deductible?
b. What limitations, if any, are imposed on the deductibility of these expenditures?

I:8-7 Bill, a plant manager, is suffering from a serious ulcer. Bill's doctor recommends that he spend three weeks fishing and hunting in the Colorado Rockies. Can Bill deduct the costs of the trip as a medical expense?

I:8-8 In what cases are medical insurance premiums paid by an individual not deductible as qualified medical expenses?

I:8-9 What is the limit placed on medical expense deductions? When can a deduction be taken for medical care? What if the medical care is prepaid?

I:8-10 **a.** Which taxes are specifically deductible for federal income tax purposes under Sec. 164?
b. If a tax is not specifically listed in Sec. 164, under what circumstances may it still be deductible?

I:8-11 If Susan overpays her state income tax because of excess withholdings, can she deduct the entire amount in the year withheld? When Susan receives a refund from the state how must she treat that refund for tax purposes?

I:8-12 What is an ad valorem tax? If a tax that is levied on personal property is not an ad valorem tax, under what circumstances may it still be deductible?

I:8-13 When real estate is sold during a year, why is it necessary that the real estate taxes on the property be apportioned between the buyer and seller?

I:8-14 **a.** Identify the different categories of interest expense an individual may incur. How is the classification of the interest determined?
b. Are these different categories of interest deductible? If so, how?

I:8-15 At times, the term *points* is used to refer to different types of charges. Define the term and describe when points are deductible.

I:8-16 In which year or years are points (representing prepaid interest on a loan) deductible?

I:8-17 Why does Sec. 267 impose a restriction on the deductibility of expenses accrued and payable by an accrual method taxpayer to a related cash method taxpayer?

I:8-18 **a.** What is the amount of the annual limitation placed on the deductibility of investment interest expense?
b. Explain how net investment income is calculated.
c. Is any disallowed interest expense for the year allowable as a deduction in another year? If so, when?

I:8-19 Explain what acquisition indebtedness and home equity indebtedness are with respect to a qualified residence of a taxpayer. Identify any limitations on the deductibility of interest expense on this indebtedness.

I:8-20 Explain what a qualified residence is for purposes of qualified residence interest.

I:8-21 Why is interest expense disallowed if it is incurred to purchase or hold tax-exempt obligations?

I:8-22 When is interest generally deductible for cash-method taxpayers? Explain if the general rule applies to prepaid interest, interest paid with loan proceeds, discounted notes, and personal interest. If the general rule does not apply, explain when these interest expenses are deductible.

I:8-23 **a.** For purposes of the charitable contribution deduction, what is capital gain property? Ordinary income property?
b. What is the significance of classifying property as either capital gain property or ordinary income property?

I:8-24 How is the *amount* of a charitable contribution of capital gain property determined if it is donated to a private nonoperating foundation? How does this determination differ if capital gain property is donated to a public charity?

I:8-25 May an individual who is married and files a joint return deduct any charitable contributions if the itemized deductions total $7,000 (of which $3,000 are qualified charitable contributions)?

I:8-26 For individuals, what is the overall deduction limitation on charitable contributions? What is the limitation for corporations?

I:8-27 If a taxpayer's charitable contributions for any tax year exceed the deduction limitations, may the excess contributions be deducted in another year? If so, in which years may they be deducted?

I:8-28 How are charitable contribution deductions reported on the tax return for individuals? What reporting requirements must be met for the contribution of property?

I:8-29 What is the purpose of the qualified business income deduction? Does it achieve its goal?

ISSUE IDENTIFICATION QUESTIONS

I:8-30 Wayne and Maria file a joint tax return on which they itemize their deductions and report AGI of $50,000. During the year they incurred $3,500 of medical expenses when Maria broke her leg. Furthermore, their dentist informed them that their daughter, Alicia, needs $3,000 of orthodontic work to correct her overbite. Wayne also needs a new pair of eyeglasses that will cost $300. What tax issues should Wayne and Maria consider?

I:8-31 This year, Chuck took out a loan to purchase some raw land for investment. He paid $40,000 for the land, and he expects that within 5 years the land will be worth at least $75,000. Chuck is married, and his AGI for the year is $230,000. Chuck paid $4,300 in interest on the loan this year. Chuck has $2,600 in interest income and $1,300 in dividend income for the year. He plans to itemize his deductions so he can use the interest expense to offset his investment income. What tax issues should Chuck consider?

I:8-32 During the current year, George made contributions totaling $40,000 to an organization called the National Endowment for the Preservation of Liberty (NEPL). Later during the year, the NEPL started giving money to a political candidate to help with his campaign expenses. What tax issues should George consider?

I:8-33 During the current year, Bob has AGI of $100,000. He also donated some stock to his church. He purchased the stock two years ago for $55,000. The FMV of the stock at the time of the contribution is $60,000. Bob has $5,000 of unused excess contributions from a prior year. What tax issues should Bob consider?

PROBLEMS

I:8-34 ***Medical Expense Deduction.*** During 2025, Angela sustains serious injuries from a snow-skiing accident. She incurs the following expenses:

Item	*Amount*
Doctor bills	$11,700
Hospital bills	9,400
Legal fees in suit against ski resort	3,000

Angela is single and has no dependents. For the year, her salary is $58,000. She pays $600 in medical and dental insurance premiums, which is withheld from her paycheck on an after-tax basis, $6,750 in mortgage interest on her home, and $1,200 in interest on her car loan. Her health insurance provider reimburses her for $10,000 of the medical expenses. What is her 2025 taxable income?

I:8-35 ***Reimbursement of Previously Deducted Medical Expenses.*** Assume the same facts as in Problem I:8-34. In addition, assume that in 2026, Angela receives an additional $7,000 in a settlement of a lawsuit arising because of the snow-skiing accident. $4,000 of the settlement is to pay Angela's medical bills, and $3,000 is to reimburse her legal expenses. What is the proper tax treatment of this $7,000 settlement?

I:8-36 ***Medical Expense Deduction.*** Dan lives in Duncan, a small town in Arizona. Because of a rare blood disease, Dan is required to take special medical treatments once a month. The closest place these treatments are available to Dan is in Phoenix, 200 miles away. The treatments are provided on an outpatient basis but require him to stay overnight in Phoenix. During the year, Dan makes 12 trips to Phoenix by automobile to receive the treatments. The motel he always stays in charges $85 per night. For the year, Dan also spends a total of $250 for meals on these trips. $100 of this $250 is spent while en route to Phoenix. What is the amount of Dan's qualified medical expenses for 2025?

I:8-37 ***Medical Expense Deduction.*** Chad is divorced and has custody of Brett, his 14-year-old son. Chad's ex-wife has custody of their daughter, Sara. During the year, Chad incurs $3,000 for orthodontic work for Sara to correct a severe overbite and $2,000 in unreimbursed medical expenses associated with Brett's broken leg. Chad also pays $900 in health insurance premiums, which is withheld from his paycheck on a pre-tax basis. Both Brett and Sara are covered under Chad's medical insurance plan. In addition, Chad incurs $400 for prescription drugs and $1,000 in doctor bills for himself. Chad's AGI is $40,000. What is Chad's medical expense deduction for the year assuming that his other itemized deductions exceed the standard deduction?

I:8-38 ***Medical Expense Deduction.*** In 2025, Charla, a single taxpayer with no dependents, was severely hurt in a farm accident. Charla is 38 years old. The accident left Charla's legs 85% paralyzed. After incurring $14,000 of medical expenses at the hospital, the doctor recommended that Charla install a pool at her home for therapy. The pool cost $25,000 to install and increased the value of her home by $22,000. She spent $930 maintaining the pool in 2025 and $1,060 in 2026. Charla also purchased a wheelchair on December 28, 2025, for $2,300, which she charged to her credit card. She paid her credit card bill on January 6, 2026. She also purchased a hospital bed for $3,800 but did not pay for the bed until 2026. Charla paid her physical therapist $4,000 for services performed in 2025. Charla paid $1,200 in medical insurance premiums on an after-tax basis in both 2025 and 2026. In 2026, the insurance company reimbursed Charla $9,000 for her hospital stay in 2025. Her AGI for 2025 and 2026 is $38,000 and $43,000, respectively, not considering any of the above items. Charla has no other itemized deductions in either year.

a. What is Charla's taxable income for 2025?

b. What is Charla's medical expense deduction for 2026? How does she treat the reimbursement?

I:8-39 ***Deduction of Taxes.*** Joyce is a single, cash-method taxpayer. On April 11, 2024, Joyce paid $120 in state income taxes with her 2023 state income tax return. During 2024, Joyce had $1,600 in state income taxes withheld. On April 13, 2025, Joyce paid $200 with her 2024 state tax return. During 2025, she had $2,100 in state income taxes withheld from her paycheck. Upon filing her 2025 tax return on April 15, 2026, she received a refund of $450 for excess state income taxes withheld. Joyce had total AGI in 2025 and 2026 of $51,000 and $53,500, respectively. In 2025, Joyce also paid $13,500 in qualified residence interest.

a. What is the amount of state income taxes Joyce may include as an itemized deduction for 2024?

b. What is Joyce's allowed itemized deduction for state income taxes for 2025?

c. What is Joyce's taxable income for 2025?

I:8-40 ***Deduction of Taxes.*** Dawn, a single, cash-method taxpayer, paid the following taxes in the current year: Dawn's employer withheld $5,400 for federal income taxes, $2,000 for state income taxes, and $3,800 for FICA from her paychecks. Dawn purchased a new car and paid $600 in sales tax and $70 for the license. The car's FMV was $20,000 and it weighed 3,000 pounds. The county also assessed a property tax on the car. The tax was 2% of the car's value and $10 per hundredweight. Dawn uses the car 100% of the time for personal purposes. Dawn sold her house on April 15 of the current year. The county's property tax on the home for the year is $1,850, payable on February 1 of the current year. The county's real property tax year is the calendar year. Dawn's AGI for the year is $50,000 and her other itemized deductions exclusive of taxes are $8,000 (disregard any leap year).

a. What is Dawn's deduction for taxes in the current year?
b. Where should Dawn report her deduction for the taxes on her tax return?

I:8-41 *Apportionment of Real Estate Taxes.* On May 1 of the current year, Tara sells a building to Janet for $500,000. Tara's basis in the building is $300,000. The county in which the building is located has a real property tax year that ends on June 30. The taxes are payable by September 1 of that year. On September 1, Janet pays the annual property taxes of $6,000. Both Tara and Janet are calendar-year, cash method taxpayers. The closing agreement does not separately account for the property taxes. Disregard any leap year.

a. What amount of real property taxes may Janet deduct in the current year?
b. What amount of real property taxes may Tara deduct in the current year?
c. If no apportionment on the real property taxes is made in the sales agreement, what is Tara's total selling price of the building? Janet's basis for the building?

I:8-42 *Classification of Interest Expense.* On January 1 of the current year, Scott borrows $80,000, pledging the assets of his business as collateral. He immediately deposits the money in an interest-bearing checking account. Scott already had $20,000 in this account. On April 1, Scott invests $75,000 in a limited real estate partnership. On July 1, he buys a new ski boat for $12,000. On August 1, he makes a $10,000 capital contribution to his unincorporated business. Scott repays $50,000 of the loan on November 30 of the current year. Classify Scott's interest expense for the year.

I:8-43 *Investment Income and Deductions.* During the current year, Travis takes out a $40,000 loan, using stock he owns as collateral. He uses $10,000 to purchase a car, which he uses 100% for personal use. He uses the remaining funds to purchase stocks and bonds. He pays $3,200 interest on the loan. Travis also reports the following for the year:

AGI without any investment income	$130,000
State income taxes paid	8,400
Dividend income (qualified dividends)	10,000
Interest income	2,100
Qualified residence interest	7,800
Investment expenses (exclusive of interest)	8,000
Net short-term capital gains	7,300
Net long-term capital gain	8,600

Travis is single. What is his net taxable income?

I:8-44 *Qualified Residence Interest.* During the current year, Tina purchases a beachfront condominium for $600,000, paying $150,000 down and taking out a $450,000 mortgage, secured by the property. At the time of the purchase, the outstanding mortgage on her principal residence is $700,000. This debt is secured by the residence. The FMV of the principal residence is $950,000. She purchased the principal residence in 2018. What is the amount of qualified indebtedness on which Tina may deduct the interest payments?

I:8-45 *Interest Between Related Parties.* Crown Corporation is an accrual method taxpayer owned 55% by Brett and 45% by Susie. Brett and Susie are good friends and have been business associates for several years. BJ Partnership is a cash method taxpayer, owned 40% by Brett and 60% by Jeremy, Brett's uncle. Both Crown Corporation and BJ Partnership are calendar year entities. On January 5 of the current year, Crown borrows $50,000 from BJ Partnership and pays 8% interest on the loan. Crown must pay the interest on January first of next year.

a. What amount of interest expense can Crown Corporation deduct in the current year?
b. How would your answer change if Jeremy were Brett's brother, instead of his uncle?

I:8-46 *Timing of Interest Deduction.* On April 1 of the current year, Henry borrows $12,000 from the bank for a year. Because the note is discounted for the interest charge and Henry receives proceeds of $10,200, he is required to repay the face amount of the loan ($12,000) in four equal quarterly payments beginning on July 1 of the current year. Henry is a cash method individual.

a. What is the amount of Henry's interest expense deduction in the current year with respect to this loan?

b. Assume the same facts except that the initial starting date when the repayments begin is April 1 of the following year. What is the amount of Henry's interest expense deduction in the current year?

c. Assume the same facts as in Part b, except that Henry is an accrual method taxpayer and the loan will be outstanding for one year. What is the amount of his interest expense deduction in the current year?

I:8-47 ***Itemized Deductions.*** During 2025, Doug incurs the following deductible expenses: $2,300 in state income taxes, $3,000 in local property taxes, $800 in medical expenses, and $2,000 in noncash charitable contributions. Doug is 33, single, has no dependents, and has $35,000 AGI for the year. What is the amount of Doug's taxable income?

I:8-48 ***Computation of Taxable Income.*** During 2025, James, a single, cash method taxpayer incurred the following expenditures:

Qualified medical expenses	$ 8,000
Investment interest expense	16,000
Other investment activity expenses	15,000
Qualified residence interest	12,000
Interest on loan on personal auto	2,000
Charitable contributions	3,000
State income tax paid	7,000
State sales tax paid	4,500
Property taxes	4,000
Tax return preparation and consulting fees	5,000

James' income consisted of the following items:

Salary	$70,000
Interest income	7,000
Long-term capital gains	23,000
Long-term capital losses	(15,000)

a. Compute James' taxable income for the year (assuming that he makes an election to have the net capital gain taxed at the regular tax rates).

b. What is James' investment interest carryover (if any)?

I:8-49 ***Computation of Taxable Income.*** Assume all the same facts as in Problem I:8-48 except that James' salary income is $130,000 instead of $70,000 and that he does not make the election. Compute James' taxable income for the year.

I:8-50 ***Charitable Contributions: Services.*** Donna is an attorney who renders volunteer legal services to a Legal Aid Society, which provides legal advice to low-income individuals. The Legal Aid Society is a qualified charitable organization. During the current year she spends a total of 200 hours in this volunteer work. Her regular billing rate is $350 per hour. In addition, she spends a total of $800 in out-of-pocket costs in providing these services. She receives no compensation and is not reimbursed for her out-of-pocket costs. What is Donna's charitable contribution for the year because of these activities?

I:8-51 ***Charitable Contribution Limitations.*** In each of the following independent cases, determine the amount of the charitable contribution and the limitation that would apply. In each case, assume that the donee is a qualified public charity.

a. Sharon donates a tract of land to a charitable organization. She has held the land for seven years. Her basis in the land is $10,000 and its FMV is $40,000.

b. Assume the same facts in Part a, except that Sharon has held the land for only 11 months and that its FMV is $23,000.

c. Jack purchases a historical document for $50,000. He donates the historical document to a charitable organization two years later. The organization plans to use it for research and study. Its FMV at the time of the donation is $100,000.

d. Assume the same facts in Part c, except that the organization plans to sell the document and put the money into an endowment fund.

e. Valerie donates some inventory to a charitable organization. The inventory is not food or clothing. The inventory is purchased for $500 and its FMV is $1,200 at the time of the donation. She held the inventory for seven months.

I:8-52 *Charitable Contributions to Private Nonoperating Foundations.* Assume the same facts as Problem I:8-51, except that the qualified organization is a private nonoperating foundation. Determine the amount of the charitable contribution for Parts a through e.

I:8-53 *Charitable Contribution Limitations.* During the current year, Helen donates stock worth $50,000 to her local community college. Two years ago the stock cost Helen $40,000. Her AGI for the current year is $100,000. Beginning next year, the bulk of her income will be from tax-exempt municipal securities. Thus, she is not interested in any carryover of excess charitable contribution. What is the maximum charitable contribution deduction Helen may take this year?

I:8-54 *Charitable Contribution Limitations.* During the current year, Melissa reports AGI of $200,000. As part of some estate planning, she donates $30,000 to her alma mater, Middle State University, and $65,000 to a private nonoperating foundation.

a. What is the amount of Melissa's charitable deduction for the current year?

b. Assume the same facts in Part a except that she donates $45,000 to Middle State University.

I:8-55 *Corporate Charitable Contributions.* Circle Corporation, an accrual method taxpayer, manufactures and sells mainframe computers. In January of the current year, Circle Corporation donates a mainframe that was part of its inventory to City College. City College will use the computer for physical science research. Circle's basis in the mainframe is $300,000. The computer's FMV is $650,000. On December 15 of the current year, Circle also pledged stock to the Red Cross and promised delivery of the stock by March 1 of the following year. The stock's FMV is $100,000 and Circle's adjusted basis in the stock is $50,000. Circle has held the stock for over one year. Circle's taxable income (before deducting any charitable contributions) for the current year is $4,000,000.

a. What is the amount of Circle's charitable contribution for the current year?

b. How much of the contribution can Circle deduct in the current year and how much may be carried over, if any?

I:8-56 *Charitable Contribution Carryovers.* Bonnie's charitable contributions and AGI for the four-year period are as follows:

	2025	*2026*	*2027*	*2028*
AGI	$50,000	$60,000	$58,000	$60,000
Contributions subject to the 60% limitation	40,000	39,000	25,000	10,000

What is the amount of the charitable deduction for each year and the order in which the deduction and carryovers are used?

I:8-57 *Qualified Business Income Deduction.* The LM Partnership has two equal partners, Liam and Martin. In the current year, the partnership earns $400,000 of ordinary income (all business) and recognizes a $15,000 long-term capital gain. Liam is married, files a joint return, and claims a standard deduction. Other than partnership items, Liam has only a $6,000 short-term capital loss at the individual level. What is Liam's taxable income?

I:8-58 *Qualified Business Income Deduction.* Cathy is a 60% partner in the XY partnership, which owns a small manufacturing business. In the current year, the business had qualified business income of $3 million. XY partnership paid W-2 wages of $800,000 and owns depreciable tangible property with an unadjusted basis of $1,500,000. What is Cathy's qualified business deduction (ignoring the ½ deduction for self-employment taxes)?

I:8-59 *Qualified Business Income Deduction.* During the current year, Marilyn earned $115,000 as an accounting consultant.

a. If she has no other income besides a $20,000 capital gain, how much can she claim as a QBI deduction (please ignore the 50% self-employment tax deduction)?

b. If she is married and files jointly with her husband, who makes $600,000 a year as an attorney, how much can she claim as a QBI deduction?

COMPREHENSIVE PROBLEM

I:8-60 Tim and Monica Nelson are married, file a joint return, and are your newest tax clients. They provide you with the following information relating to their 2025 tax return:

1. Tim works as a pediatrician for the county hospital. The W-2 form he received from the hospital shows wages of $150,000 and state income tax withheld of $8,500.

2. Monica spends much of her time volunteering, but also works as a substitute teacher for the local schools. During the year, she spent 900 hours volunteering. When she doesn't volunteer, she earns $8.00 per hour working as a substitute. The W-2 form she received from the school district shows total wages of $3,888 and state income tax withheld of $85.
3. On April 13, the couple paid $250 in state taxes with their 2024 state income tax return. The Nelsons' state and local sales taxes in 2025 were $5,500.
4. On December 18, the Nelsons donated a small building to the Boy Scouts of America. They purchased the building three years ago for $80,000. A professional appraiser determined the fair market value of the home was $96,000 on December 12.
5. Tim and Monica both received corrective eye surgery, at a total cost of $3,000. They also paid $1,900 in health insurance premiums.
6. On June 1, the couple bought a car for $30,000, paying $18,000 down and borrowing $12,000. They paid $750 total interest on the loan in 2025.
7. On June 10, the Nelsons took out a home equity loan of $20,000 to expand their home. They paid a total of $850 interest with their monthly payments on the loan.
8. The Nelsons paid a total of $2,300 interest on their original home loan.
9. They sold stock in Cabinets, Inc. for $5,200, which they purchased for $7,900 in March of the current year. They also sold stock in The Outdoor Corporation for $12,500, which they purchased several years ago for $8,600.
10. Tim incurred the following expenses related to his profession, none of which were reimbursed by his employer:

Item	*Amount*
Subscriptions to medical journals	$400
American Medical Association (AMA) annual membership fee	250

11. During the year, the couple paid their former tax advisor $700 to prepare their prior year tax return.
12. The Nelsons do not have children, and they do not provide significant financial support to any family members.

Required: Compute the Nelsons' taxable income for 2025.

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:8-61 Dean makes a pledge of $30,000 to a local college. The college is willing to accept either cash or marketable securities in fulfillment of the pledge. Dean owns stock in Ajax Corporation worth $30,000. The stock was purchased five years ago for $10,000. Dean's marginal tax rate is 35% and he is subject to the long-term capital gains rate of 15%. Should Dean sell the stock and then donate the cash, or should he donate the stock directly? Compute the net tax benefit from each alternative and explain the difference. (Ignore the 3.8% tax on the net investment income of high-income taxpayers for this comparison.)

I:8-62 On December 1, 2025, Rebecca Ward, a single taxpayer, comes to you for tax advice. At the end of every year, she donates $5,000 to charity. She has no other itemized deductions. This year, she plans to make her charitable donation with stock. She presents you with the following information relating to her stock investments:

Corporation	*FMV on Dec. 1*	*Adjusted Basis*	*Date Purchased*
Sycamore	9,600	7,800	5/22/16
Oak	2,900	3,800	9/10/17
Redwood	5,400	4,900	6/15/21

Which stock should Rebecca donate to charity? What other tax advice would you give her?

TAX FORM/RETURN PREPARATION PROBLEMS

I:8-63 Following is a list of information for Peter and Amy Jones for the current tax year. Peter and Amy are married and have three children, Aubrynne, Bryson, and Caden. They live at 100 Main Street, Anytown, USA 00000. Peter is a lawyer working for a Native American law firm. Amy works part-time in a genetic research lab. The Jones' Social Security numbers and ages are as follows:

Name	*S.S. No.*	*Age*
Peter	111-11-1111	32
Amy	222-22-2222	28
Aubrynne	333-33-3333	5
Bryson	444-44-4444	3
Caden	555-55-5555	1

Receipts	
Peter's salary	$70,000
Amy's salary	32,000
Interest income on municipal bonds	2,400
Interest income on certificate of deposit (Universal Savings)	3,100
Dividends on GM stock	1,600

Disbursements	
Eyeglasses and exam for Aubrynne	$ 600
Orthodontic work for Bryson to correct a congenital defect	2,500
Medical insurance premiums, after-tax basis	1,800
Withholding for state income taxes	7,200
Withholding for federal income taxes	16,000
State income taxes paid with last year's tax return (paid when the return was filed in the current year)	500
Property taxes on home	1,100
Property taxes on automobile	300
Interest on home	15,700
Interest on credit cards	200
Cash contribution to church	5,900

In addition to the above, on September 17, Peter and Amy donate some Beta Trader, Inc. stock to Lakeville Community College. Beta Trader, Inc. is publicly traded. The FMV of the stock on the date of the contribution is $700. Peter and Amy had purchased the stock on November 7, 2011 for $300.

Compute Peter and Amy's income tax liability for 2024 using Form 1040, Schedules A and B, and Form 8283, if necessary. Assume the couple had no transactions involving virtual currency.

I:8-64 Kelly and Chanelle Chambers, ages 47 and 45, are married and live at 584 Thoreau Drive, Boston, MA 59483. Kelly's Social Security number is 111-11-1111 and Chanelle's is 222-22-2222. The Chambers have two children: Emma, age 23, and Chet, age 19. Their Social Security numbers are 333-33-3333 and 444-44-4444, respectively. Emma is a single college student and earned $8,000 during the summer. Kelly and Chanelle help Emma through school by paying for her room, board, and tuition. Emma lives at home during the summer. Chet has a physical handicap and lives at home. He attends a local university and earned $4,000 working for a marketing firm. In sum, Kelly and Chanelle provide more than 50% of both Emma's and Chet's total support for the year.

Kelly is a commercial pilot for a small airline. His salary is $95,000, from which $19,000 of federal income tax and $8,000 of state income tax were withheld. Kelly also pays premiums for health, disability, and life insurance. $2,000 of the premium was for health insurance, $250 for disability, and $400 for life insurance.

Chanelle owns Alliance Networks, a proprietorship that does network consulting. During the year, Chanelle's gross revenues were $23,000. She incurred the following expenses in her business:

Liability insurance	$ 700
Software rental	5,400
Journals and magazines	150
Training seminars	1,200
Supplies	1,300
Donations to a political campaign fund	800

Kelly enjoys playing guitar and plays in a band. Kelly's band has developed a local following. This year, his gross revenues were $1,200 for playing shows and $700 on CD sales. He incurred the following expenses:

Studio rent expense	$1,300
Sound system repairs	200
CD production	500
New guitar and amplifier	800

Kelly's father passed away during the year. Kelly and Chanelle received $100,000 from the life insurance policy. Neither Kelly nor Chanelle paid any of the premiums.

Chanelle purchased 100 shares of Thurston Co. stock on May 1, 1993, for $1,000. Thurston Co. was declared bankrupt during the current year.

Chet's physician recommended that he see a physical therapist to help with his disability. Kelly paid the therapist $7,000 during the year because his insurance would not cover the bills.

Kelly and Chanelle went to Las Vegas and won $5,000 at the blackjack table. The next night, they lost $6,000.

Kelly and Chanelle gave $900 to their church and, during the year, they had the following other income and expenses:

Real estate taxes	$1,400
Property taxes on car (determined by value)	500
Home mortgage interest	15,000
Credit card finance charges	2,600
Tax return preparation fees ($600 is allocable to Chanelle's business)	1,000
Sales tax on purchases during the year	6,200
Interest from a savings account	800
Interest from City of Boston Bonds	700
Dividend from 3M stock	400

Prepare Kelly and Chanelle's tax return Form 1040 and Schedules A, B, C, D, and SE for 2024. Assume the couple had no transactions involving virtual currency.

CASE STUDY PROBLEMS

I:8-65 Brian Brown, an executive at a manufacturing enterprise, comes to you on December 1 of the current year for tax advice. He has agreed to donate a small tract of land to the Rosepark Community College. The value of the land has been appraised at $58,000. Mr. Brown purchased the land 14 months ago for $50,000. Mr. Brown's estimated AGI for the current year is $100,000. He plans to retire next year and anticipates that his AGI will fall to $35,000 for all subsequent years. He does not anticipate making any additional large charitable contributions. He understands that there are special rules dealing with charitable contributions and wants your advice in order to get the maximum overall tax benefit from his contribution. Because the college plans to use the property, selling the land is not an alternative. You are to prepare a letter to Mr. Brown explaining the tax consequences of the different alternatives. His address is 100 East Rosebrook, Mesa, Arizona 85203. For purposes of your analysis, assume that Mr. Brown is married and files a joint return. Also assume that Mr. Brown feels that an appropriate discount rate is 10%. In your analysis, use the tax rate schedules for the current year.

I:8-66 For several years, you have prepared the tax return for Alpha Corporation, a closely held corporation engaged in manufacturing garden tools. On February 20 of the current year, Bill Johnson, the president of Alpha Corporation, delivered to your office the files and information necessary for you to prepare Alpha's tax return for the immediately preceding tax year. Included in this information were the minutes of all meetings held by Alpha's Board of Directors during the year in question.

Then on February 27, Bill stops by your office and hands you an "addendum" to the minutes of the director's meeting held December 15 of the tax year for which you are preparing the tax return. The addendum is dated the same day as the director's meeting, and authorizes a charitable contribution pledge of $20,000 to the local community college. With a wink and a big smile, Bill explains that the addendum had been misplaced. In reviewing the original minutes, you find no mention of a charitable contribution pledge.

What should you do? [See Appendix E and the *Statements on Standards for Tax Services* section in Chapter I:15 (or C:1 of the *Comprehensive* volume) for a discussion of these issues.]

TAX RESEARCH PROBLEMS

I:8-67 Mark Hancock is a self-employed attorney who operates his law practice as an unincorporated sole proprietorship. In 2024, the IRS disallowed several business deductions he took in 2022 and 2023. In addition to paying the deficiency and assessed penalties, he also pays $18,000 in interest on the tax owed. Can he deduct that interest in the current year?

- Sec. 162, Sec. 163
- Reg. Sec. 1.163-9T
- *Kikalos v. Comm.,* 84 AFTR 2d 99-5933

I:8-68 Last year, Mr. Smith was involved in an automobile accident, severely injuring his legs. As part of a long-term rehabilitation process, his physician prescribes a daily routine of swimming. Because there is no readily available public facility nearby, Smith investigates the possibility of either building a pool in his own back yard or purchasing another home with a pool. In the current year he finds a new home with a pool and purchases it for $175,000. He then obtains some estimates and finds that it would cost approximately $20,000 to replace the pool in the home he has just purchased. He also obtains some real estate appraisals, which indicate that the existing pool increases the value of the home by only $8,000. During the current year, Smith also expends $500 in maintaining the pool and $1,800 in other medical expenses. What is the total amount of medical expenses he may claim in the current year? Smith's AGI for the year is $60,000.

CHAPTER

9

LOSSES AND BAD DEBTS

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1 Identify transactions that may result in losses

2 Determine the proper classification for losses

3 Examine the tax treatment of passive losses

4 Identify and calculate the deduction for a casualty or theft loss

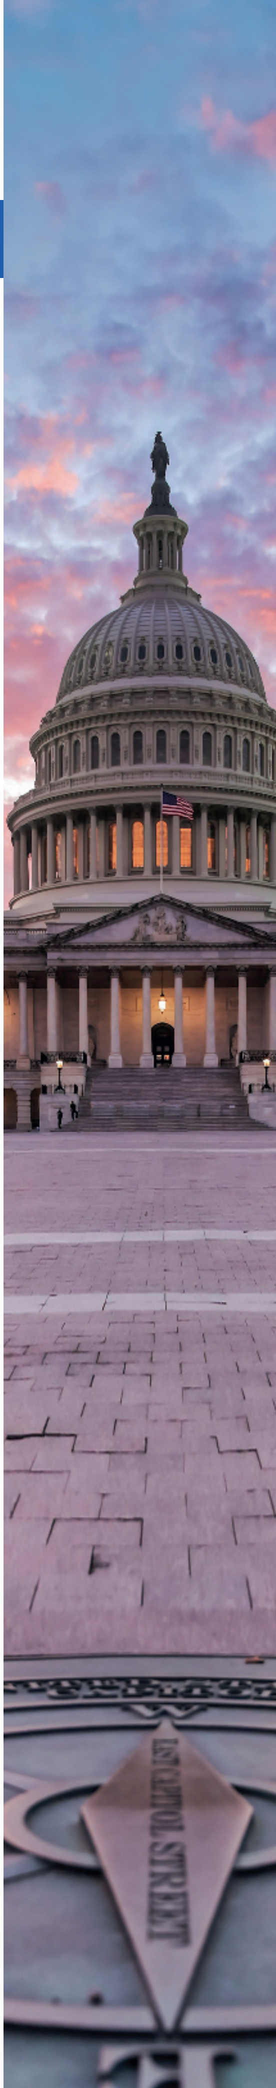
5 Compute the deduction for a bad debt

6 Compute a net operating loss deduction

7 Compute the excess business loss limitation

8 Identify tax planning considerations for losses and bad debts

9 Identify compliance and procedural considerations for losses and bad debts



James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Transactions That May Result in Losses...9-2
Classifying the Loss on the Taxpayer's Tax Return...9-4
Passive Losses...9-7
Casualty and Theft Losses...9-17
Bad Debts...9-24
Net Operating Losses...9-29
Excess Business Losses...9-33
Tax Planning Considerations...9-33
Compliance and Procedural Considerations...9-34

Taxpayers often sustain losses on property they sell, exchange, or dispose of. If the taxpayer uses the property in a trade or business or holds the property for investment, the tax law generally provides a deduction for these losses. Noncorporate taxpayers may also take a limited deduction for losses on personal-use property that is either stolen or damaged in a casualty. However, in general, taxpayers may not deduct other types of losses on personal-use property (e.g., a loss they realize on the sale of a personal residence or an automobile that they use exclusively for personal purposes). Special rules allow taxpayers to take a deduction for losses they incur because of uncollectible business or nonbusiness debts. This chapter discusses the rules concerning the deductibility of these types of losses.

TRANSACTIONS THAT MAY RESULT IN LOSSES

OBJECTIVE 1

Identify transactions that may result in losses

For taxpayers to deduct a loss on property, the loss must be both *realized* and *recognized* for tax purposes. Generally, *realization* occurs in a completed (closed) transaction evidenced by an identifiable event such as a sale or exchange. This is referred to as the closed transaction doctrine. As a general rule, taxpayers who have realized losses on business or investment property may recognize such losses for tax purposes unless a specific provision holds otherwise (see pages I:9-6 and I:9-7).

EXAMPLE I:9-1 ▶ Capital Corporation purchased 500 shares of Data Corporation stock for $10,000 on February 22 of the current year. By October 31 of the same year, the price of the stock declines to $8,000. Even though Capital has suffered an economic loss on the stock, no realization event has occurred, and the corporation may not deduct the $2,000 loss. However, if Capital sells the stock for $8,000 on October 31, it realizes the loss for tax purposes in the current year. ◀

ADDITIONAL COMMENT

If property is used partly for business and partly for personal use, the loss attributable to the business portion is deductible but the loss on the personal-use portion is not unless the loss was sustained in a casualty from a federally declared disaster.

KEY POINT

Anticipated losses, including those for which reserves have been established, are not deductible until realized.

Losses on property may arise in a variety of transactions, including:

- Sale or exchange of the property
- Expropriation, seizure, confiscation, or condemnation of the property by a government
- Abandonment of the property
- Worthlessness of stock or securities
- Planned demolition of the property in order to construct other property in its place
- Destruction of the property by fire, storm, or other casualty
- Theft
- Deductible business expenses exceeding business income, giving rise to a net operating loss (NOL)

SALE OR EXCHANGE OF PROPERTY

The amount of the loss a taxpayer incurs in a sale or exchange of property equals the excess of the property's adjusted basis over the amount realized for the property.[1] The amount realized for the property equals the sum of the money received plus the fair market value (FMV) of any other property the taxpayer receives in the transaction. If the property sold or exchanged is subject to a mortgage or other liability, the amount realized by the taxpayer also includes the amount of the liability transferred to the buyer.[2] The treatment of any selling costs depends on the type of property sold or exchanged. If the property is inventory (i.e., property normally held for sale in the taxpayer's business), the selling costs are generally deductible expenses in the year in which the taxpayer incurs the expenses. However, if the sale involves property not normally held for sale by the taxpayer, the selling costs reduce the amount realized from the sale or exchange.

[2] *Beulah B. Crane v. CIR*, 35 AFTR 776, 47-1 USTC ¶9217 (USSC, 1947); and Reg. Sec. 1.1001-2.

EXAMPLE I:9-2 ▶ Four years ago, Boyer Corporation purchased a plot of land as an investment for $50,000. Unfortunately, local economic conditions worsened after Boyer, Inc. purchased the land and the land's value declined to $35,000. Boyer sells the property in the current year. At the time of the sale, the land is subject to a $10,000 mortgage. The terms of the sale are $25,000 paid in cash with the purchaser assuming the mortgage. Boyer also incurs $2,000 in sales commissions. The amount realized is $33,000 ($25,000 cash + $10,000 mortgage assumed by the buyer − $2,000 commissions). The loss on the sale is $17,000 ($50,000 basis − $33,000 amount realized). ◀

In general, taxpayers can only deduct losses they incur in the sale or exchange of property used in a trade or business or held for investment. Taxpayers cannot deduct losses they incur in the sale or exchange of personal-use property. Furthermore, the type of deduction a taxpayer may take for a loss realized on the sale or exchange of business or investment property depends on the type of property sold. For example, if inventory is sold, the loss is an ordinary loss. If the asset is a capital asset, the loss is a capital loss (see Chapter I:5). If the sale is of property used in a trade or business (a Sec. 1231 asset), the type of loss depends on the total net gain or loss realized on all the taxpayer's Sec. 1231 transactions during the year (see Chapter I:13).

EXPROPRIATED, SEIZED, CONFISCATED, OR CONDEMNED PROPERTY

A taxpayer may own property that the government expropriates, seizes, confiscates, or condemns. In these cases, the taxpayer incurs a deductible loss if the taxpayer used the property in a trade or business or held it for investment. The Tax Court has held that the confiscation, seizure, condemnation, or expropriation of property does not constitute a theft or a casualty. Rather, it is treated as a sale or exchange. Thus, no deductible loss arises if the seized property is personal-use property.[3] If the seized or condemned property is business or investment property, the classification of the loss depends on the type of property. (See the section in this chapter titled Classifying the Loss on the Taxpayer's Return.) A taxpayer may take the deduction only in the year in which the property is actually seized. Whether formal expropriation or nationalization occurs in a later year is irrelevant.[4] A taxpayer realizes gain if he or she receives compensation for the property in excess of its basis. Under certain circumstances, the taxpayer may defer this gain. (See Chapter I:12 for a discussion of the nonrecognition of gain in an involuntary conversion.)

ABANDONED PROPERTY

If a taxpayer's property becomes worthless or is not worth repairing in order to return the property to a serviceable condition, the taxpayer may simply abandon the property. If the property still has basis, the taxpayer realizes a loss. The taxpayer may not deduct such losses if the property is personal-use property. However, the taxpayer may deduct losses on business or investment property. Furthermore, because the abandonment of property is not a sale or exchange, the loss is an ordinary loss. The amount of the loss is the property's adjusted basis on the date of abandonment. The taxpayer bears the burden of proof to verify that the property was actually abandoned. If the property is depreciable (e.g., machinery and buildings), the taxpayer must actually physically abandon it to take the full amount of the loss.[5]

WORTHLESS SECURITIES

A taxpayer may take a deduction for securities that become completely worthless during the tax year.[6] Because the deduction is only available in the year the security actually becomes worthless, both the taxpayer and the IRS may have problems determining the year in which the security becomes worthless. A mere decline in value is not sufficient to create a deductible loss if the stock has any recognizable value. Furthermore, the sale of the stock for a nominal amount such as $1 does not necessarily establish that the stock became worthless in the year of the sale. The taxpayer must show that the security is completely worthless and that the security became worthless during the year.

[4] Rev. Rul. 62-197, 1962-2 C.B. 66 as modified by Rev. Rul. 69-498, 1969-2 C.B. 31. (See also *Estate of Frank Fuchs v. CIR*, 24 AFTR 2d 69-5077, 69-2 USTC ¶9505 (2nd Cir., 1969).)

[5] Reg. Sec. 1.167(a)-8(a)(4).

[6] For this purpose, a *security* is defined in Sec. 165(g)(2) as stock in a corporation, the right to subscribe for or receive a share of stock in a corporation, or a bond, debenture, note, or certificate of indebtedness issued by a corporation or a government either in registered form or with interest coupons. Promissory notes issued by a corporation are generally not securities.

Under Sec. 165, once the taxpayer determines the year of worthlessness, the taxpayer treats the loss as a loss from the sale of a capital asset on the last day of the tax year. Although this provision does not help in determining the year of worthlessness, it does establish a definite date for purposes of measuring whether the loss is short- or long-term. In some cases, this provision causes the loss to be long-term because it extends the date of worthlessness to the end of the year.

EXAMPLE I:9-3 ▶ On February 20 of the current year, Control Corporation enters into bankruptcy with no possibility for the shareholders to receive anything of value. Because the amount of Control Corporation's outstanding liabilities exceeds the FMV of its assets on that date, the stock of the corporation becomes worthless. Janet, a calendar-year taxpayer, owns 500 shares of Control's common stock, which she had purchased for $10,000 through her broker on June 17 of the prior year. Under Sec. 165(g), she treats the loss as having arisen from the sale of a capital asset on the last day of the current year. Thus, Janet incurs a $10,000 long-term capital loss because the holding period for the stock is more than one year. On the other hand, if Janet had received the stock directly from Control Corporation in exchange for either money or other property, and if certain other requirements are met, the stock may qualify as Sec. 1244 stock. Individuals who sustain losses on Sec. 1244 stock receive a limited amount of ordinary loss treatment rather than capital loss treatment. (See the discussion in this chapter under the heading "Losses on Sec. 1244 Stock.") ◀

Under certain circumstances, if a domestic corporation owns worthless securities of an affiliated corporation, the domestic corporation treats the loss as having arisen from the sale of a noncapital asset. This allows the corporation to treat the loss as an ordinary loss rather than as a capital loss.[7] For this exception to apply, the corporation must meet the following requirements:

- The domestic corporation that is deducting the loss must own at least 80% of the voting power of all classes of the affiliated corporation's stock and 80% of the total value of the affiliated corporation stock.
- More than 90% of the affiliated corporation's gross receipts for all its taxable years must be from nonpassive income.[8]

DEMOLITION OF PROPERTY

At times, taxpayers, intent on building their own facilities, purchase land with an existing structure that must first be removed. Taxpayers may also demolish a structure they currently use to construct new facilities. In both cases, taxpayers may not deduct any demolition costs or any loss sustained on account of the demolition. Instead, under Sec. 280B, taxpayers must add these amounts to the basis of the land on which the demolished structure previously stood.

CLASSIFYING THE LOSS ON THE TAXPAYER'S TAX RETURN

OBJECTIVE 2

Determine the proper classification for losses

If a loss is deductible, the taxpayer must determine whether the loss is an ordinary loss or a capital loss. In addition, individual taxpayers must also identify the deductible amount as either a deduction *for* or *from* AGI.

---

[7] As explained in Chapter I:5, the deductibility of capital losses is limited. For corporate taxpayers, capital losses must initially be offset against capital gains of the current year, and any excess loss is not deductible but may be carried back three years and forward for five years. Individuals may offset capital losses against capital gains and any excess loss is deductible up to $3,000 per year as an offset to ordinary income. Capital losses in excess of this amount for an individual are carried forward for an indefinite period. Thus, taxpayers generally prefer ordinary losses rather than capital losses.

[8] Sec. 165(g)(3). *Nonpassive income* includes all income other than royalties, rents, dividends, interest, annuities, and gains from the sale or exchange of stocks and securities.

ORDINARY VERSUS CAPITAL LOSS

Whether a deductible loss is ordinary or capital depends on the type of property involved and the transaction in which the taxpayer sustains the loss. To incur a capital loss, a sale or exchange of a capital asset must occur. If both elements (i.e., a sale or exchange and a capital asset) are not present, the deduction generally is an ordinary loss. In general, all assets *except* inventory, notes and accounts receivable, and depreciable property and land used in a trade or business (i.e., property, plant, and machinery) are classified as **capital assets**.[9]

Because a casualty is not a sale or exchange, the destruction of a capital asset in a casualty creates an ordinary rather than a capital loss. Likewise, a deductible loss realized on the abandonment of property is an ordinary loss because an abandonment is not a sale or exchange.

EXAMPLE I:9-4 ▶ On July 24 of the current year, Jermaine & Associates, LLP sells some investment property for $75,000. The property's adjusted basis is $85,000. The investment property is a capital asset. Jermaine realizes a $10,000 ($75,000 – $85,000) capital loss. If, instead, the property had been destroyed by fire and the partnership had received $75,000 in insurance proceeds, the $10,000 loss would have been an ordinary loss because a casualty is not a sale or exchange. ◀

BOOK-TAX DIFFERENCE

For book purposes, it makes no difference if a gain or loss is ordinary or capital. The full amount of the loss is deductible. However, because corporations may not deduct a capital loss in excess of its capital gains for the year, a book-tax timing (temporary) difference may arise, making an M-1 or M-3 adjustment necessary.

Certain transactions, though not actually constituting a sale or exchange, receive sale or exchange treatment. For example, as mentioned previously, if a security owned by an individual investor becomes worthless during the year, the individual treats the loss as a loss from the sale of a capital asset on the last day of the tax year, even though no sale actually occurs. Thus, the loss is a capital loss. Likewise, the taxpayer will treat a seizure or condemnation of property as a sale or exchange.

Section 1231 Property. Whether a loss on a particular transaction is treated as a capital loss may also depend on the gains and losses the taxpayer reports from other property transactions for the tax year. For instance, under Sec. 1231, taxpayers must net certain gains and losses together. If the Sec. 1231 gains exceed the Sec. 1231 losses for the year, the taxpayer treats the net gain as a long-term capital gain. However, if the losses equal or exceed the gains, both the gains and the losses are treated as ordinary. **Section 1231 property** includes real or depreciable property used in a trade or business and held for more than one year. (See Chapter I:13 for a discussion of the netting procedure under Sec. 1231.)

Losses on Sec. 1244 Stock. Taxpayers generally recognize capital gain or loss on the sale of stock or securities. For individuals, the tax law provides an exception for losses from the sale or worthlessness of small business corporation (Sec. 1244) stock. Individuals may deduct these losses as ordinary losses up to a maximum of $50,000 per tax year ($100,000 for married taxpayers filing a joint return). Any remaining loss for the year is a capital loss.

To qualify the loss as ordinary under Sec. 1244, the following requirements must be met:

- The stock must be owned by an individual or a partnership.
- The stock must have been originally issued by the corporation to the individual or to a partnership in which an individual is a partner.[10]
- The stock must be stock in a domestic (U.S.) corporation.
- The taxpayer must have received the stock in exchange for cash or property (other than stock or securities) that the taxpayer contributed to the corporation. Stock issued to the taxpayer for services rendered is not eligible for Sec. 1244 treatment.

---

[9] Sec. 1221. Certain other exceptions also exist. The definition of a capital asset is more fully examined in Chapter I:5.

[10] Stock received in certain reorganizations of corporations in exchange for Sec. 1244 stock is also considered Sec. 1244 stock. Section 1244 does not apply to stock that the individual has received through other means such as purchase in a secondary market, exchange, gift, or inheritance.

- The corporation must not have derived over 50% of its gross receipts from passive income sources during the five tax years immediately preceding the year of sale or worthlessness.[11]
- The amount of money and property contributed to both capital and paid-in surplus may not exceed $1 million at the time the corporation issues the stock.

Note that the last test listed above occurs when the corporation *actually issues the stock*. As long as the corporation's capital and paid-in surplus does not exceed $1 million at the time the stock was issued, the individual taxpayer may still report an ordinary loss on the stock even if the corporation has capital and paid-in surplus in excess of the $1 million limit at the time the loss is realized.

STOP & THINK

Question: Tony, a single taxpayer, incorporated Waffle, Inc. three years ago by contributing $70,000 in exchange for the stock. Waffle owns and operates a small restaurant. Unfortunately, Waffle's business never really became profitable. Tony has been trying to sell the Waffle stock since July of last year, but because the corporation had become insolvent, he couldn't find any buyers. In February of the current year, Waffle was judged to be bankrupt. Tony didn't receive anything for his stock. What issues should Tony's tax advisor address with regard to the Waffle, Inc. stock?

Solution: Tony's tax advisor must determine (1) the amount of any realized loss, (2) the year in which the loss is recognized, and (3) the character of the realized loss. The Waffle, Inc. stock is considered a security under Sec. 165. Whenever a security becomes completely worthless and it is determined that the owner will receive nothing for it, the owner realizes a loss to the extent of the security's basis ($70,000). The loss is deemed to be realized in the year in which the security becomes worthless. While the bankruptcy court ruled the stock to be worthless in February of the current year, the fact that Tony could not find any buyers last year because the corporation was insolvent may indicate that the stock really became worthless last year. This determination is important because Tony must recognize the loss in the year in which the stock becomes worthless. Furthermore, the stock is deemed to become worthless on the last day of that year. Since Tony received the stock directly from the corporation in exchange for contributed cash, Waffle, Inc.'s gross receipts are from business operations, and the capitalization at the time the stock was issued is less than $1 million, the stock qualifies as Sec. 1244 stock. Thus, $50,000 of the loss is characterized as ordinary loss. The remaining $20,000 is a long-term capital loss.

DISALLOWANCE POSSIBILITIES

The tax law may disallow or defer losses incurred in certain transactions and activities. Some of these transactions include:

- Transfers of property to a controlled corporation in exchange for stock of the corporation (see the discussion in Chapter C:2 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* text and Chapter C:2 of the *Comprehensive* volume)
- Exchanges of property for other property considered to be like-kind to the property given up (see the discussion in Chapter I:12)
- Property sold to certain related parties (see the discussion in Chapter I:6)
- Wash sale transactions (see the discussion in Chapter I:6)
- Losses limited because the losses exceed the amount for which the taxpayer is at risk (see the discussion in Chapter C:9 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* text and Chapter C:9 of the *Comprehensive* volume)

In addition, the passive loss rules discussed below may limit the amount of losses that individuals and certain corporations may deduct.

Topic Review I:9-1 contains a summary of loss transactions.

---

[11] For this purpose, passive income sources include royalties, rents, dividends, interest, annuities, and sales or exchanges of stocks and securities. If the corporation has not been in existence for a full five years, the gross receipts test is applied to the shorter period. If the corporation has not been in existence for an entire taxable year, the test is applied to the time period up to the date of the loss (see Sec. 1244(c)(2)).

TOPIC REVIEW I:9-1

Transactions That May Result in Losses

TYPE OF TRANSACTION	RESULT
Sale or exchange	Taxpayers may not deduct a loss on personal-use property. The tax treatment of a loss on business or investment property depends on the type of property. Losses on capital assets result in capital losses. Losses on Sec. 1231 assets are subject to the Sec. 1231 netting rules discussed in Chapter I:13.
Seizure, expropriation, confiscation, or condemnation	Treated as a sale or exchange.
Abandonment	Not treated as a sale or exchange. No deduction is allowed for a loss on personal-use property. Business or investment property is given ordinary loss treatment.
Worthless securities	Treated as a loss from the sale of the securities on the last day of the year in which the securities become worthless. This generally results in a capital loss. However, if the requirements of Sec. 1244 are met, an individual taxpayer may treat at least part of the loss as an ordinary loss. (See Sec. 1244 stock below.) A loss realized by a corporation on worthless securities of an affiliated corporation results in an ordinary loss.
Demolition	No deductible loss is allowed. Instead, losses and costs of demolition are added to the basis of the land where the demolished structure was located.
Sec. 1244 stock	Individual taxpayers may take an ordinary loss of up to $50,000 per year ($100,000 for married filing jointly) for losses realized on qualified Sec. 1244 stock. The remaining loss is capital. The stock must have been originally issued to the individual for property or cash, and the corporation must meet the requirements to be a small business corporation.

PASSIVE LOSSES

OBJECTIVE 3

Examine the tax treatment of passive losses

Before 1987, taxpayers were able to reduce their income tax liability on their salary or on income from business or investment activities with deductions, losses, and credits arising in other activities. Thus, taxpayers often invested in activities, called **tax shelters**, that would spin off tax deductions and credits. Many of these tax shelters were simply *passive investments* because they did not require the taxpayer's involvement or participation. In some situations, tax shelters had real economic substance, i.e., a taxpayer's economic return in this type of shelter was not based solely on the tax benefits that the activity generated. In many cases, however, tax shelters had no real economic substance other than the creation of deductions and credits that enabled taxpayers to reduce, and sometimes eliminate, the income tax liability from their other business activities. To prevent these perceived and real abuses, Congress enacted Sec. 469, which restricts taxpayers from currently using losses and credits that arise in rental activities and in other activities in which the taxpayer does not materially participate. These activities constitute passive activities. (See the "Definition of a Passive Activity" section in this chapter for an extended discussion of what constitutes a passive activity.)

HISTORICAL NOTE

Before the passive activity loss limits became effective in 1987, most tax shelters were concentrated in the areas of real estate, oil and gas, equipment leasing, farming, motion pictures, timber, and research and development. Many tax shelters took advantage of liberal depreciation rules during the early 1980s such as the rapid depreciation of real estate over a 15-year period.

COMPUTATION OF PASSIVE LOSSES AND CREDITS

In enacting the passive loss rules of Sec. 469, Congress did not want to prevent taxpayers from currently deducting or using losses and credits that the taxpayer incurs in an active business. At the same time, Congress realized that certain investments (such as investments that generate interest or dividend income) normally give rise to taxable income, which could itself be sheltered by losses and credits that arise in other passive activities. Thus, Sec. 469 requires certain taxpayers to classify their income into three categories: **active income** (such as wages, salaries, and active business income), *portfolio (or investment) income*, and *passive income*. **Portfolio income** includes dividends, interest, annuities, and royalties (and allocable expenses and interest expense) not derived in the ordinary course of a trade or business. Portfolio income also includes gains and losses on property that produces these types of income if the disposition of the property does not occur in the ordinary course of business.[12] Portfolio income becomes part of net investment income, which is used in computing the deduction limit for investment interest expense. (See Chapter I:8 for a discussion of the investment interest expense limitation.)

ADDITIONAL COMMENT

Even though portfolio income and passive income from passive activities are calculated separately for purposes of the regular income tax, in general they are added together in calculating net investment income, which is subject to the 3.8% Net Investment Income Tax imposed as part of the Affordable Care Act.

Passive Income and Losses. Taxpayers compute income and loss in the passive category separately for each passive activity in which they have invested. In general, for any tax year, a taxpayer may use losses generated in one passive activity to offset income from other passive activities, but may not use them to offset either active or portfolio income.

EXAMPLE I:9-5 ▶ During the year, Kasi, a CPA, reports $100,000 of active business income from his CPA practice. He also owns two passive activities. From activity A, he earns $10,000 of income, and from activity B, he incurs a $15,000 loss. Kasi may use $10,000 of the loss from activity B to offset the $10,000 of income from activity A. However, Kasi may not deduct the $5,000 excess loss from activity B in the current year, even though he has $100,000 of active business income. ◀

CARRYOVERS

A taxpayer carries over disallowed passive activity losses indefinitely and treats them as losses allocable to that specific passive activity in the following tax years. The taxpayer may use these losses, known as *suspended losses*, to offset passive activity income of the subsequent year, but generally may not offset other types of income. If a taxpayer has invested in several passive activities, and for the year some of the activities generate income while others generate losses, the loss carried over for each loss activity is a pro rata portion of the total passive loss for the year.

KEY POINT

Excess passive activity losses are not "lost" because they can be carried over to future years.

EXAMPLE I:9-6 ▶ Tammy reports the following income and loss for the year:

Salary	$200,000
Loss from activity X	(40,000)
Loss from activity Y	(10,000)
Income from activity Z	30,000

X, Y, and Z are all passive activities. The losses generated in activities X and Y offset the income from activity Z, but none of the salary income is offset. Thus, Tammy has a net passive loss for the year of $20,000 ($40,000 + $10,000 − $30,000), which must be carried over to subsequent years. The amount of the carryover attributable to each activity is as follows:

Activity X: $\$20{,}000 \times \frac{\$40{,}000}{\$50{,}000} = \$16{,}000$

Activity Y: $\$20{,}000 \times \frac{\$10{,}000}{\$50{,}000} = \$\ 4{,}000$ ◀

Taxable Disposition of Interest in a Passive Activity. When a taxpayer disposes of a passive activity in a taxable transaction, the taxpayer can compute the economic gain or loss generated by the activity and can deduct the suspended losses of the activity against other income after applying the limitation based on excess business losses for noncorporate taxpayers of $313,000 ($626,000 for married filing joint). However, the amount of the total net economic loss from the asset disposed of must first offset any passive income for the year from other passive activities.[13]

EXAMPLE I:9-7 ▶ During the current year, Pam realizes $6,000 of taxable income from activity A, $1,000 of loss from activity B, and $8,000 of taxable income from activity C. All three activities are passive activities with regard to Pam. In addition, $30,000 of passive losses from activity C are carried over from prior years. During the current year, Pam sells activity C for a $15,000 taxable gain. Pam reports salary income of $90,000 for the year. Because Pam sells activity C in a fully taxable transaction, Pam may deduct $2,000 of loss against the salary income:

---

[12] Sec. 469(e)(1). Gain or loss on property dispositions occurring in the ordinary course of business is either passive or active business income, depending on the taxpayer's level of involvement (i.e., material participation) in the activity.

[13] Sec. 469(g). Income from the activity for prior years may also be taken into account in arriving at the net income from all passive activities for the year if it is necessary to prevent avoidance of the passive loss rules.

Income for the year from C	$ 8,000	
Gain from the sale of C	15,000	
Suspended losses from C	(30,000)	
Total loss from C		($7,000)
Income for the year from A	$ 6,000	
Loss for the year from B	(1,000)	5,000
Pam's deduction against salary income		($2,000)

◀

BOOK-TAX DIFFERENCE

Since passive losses are not limited under financial accounting rules, the limitation and carryover of passive losses for tax purposes will create a timing (temporary) difference between book and tax. However, many taxpayers subject to the passive loss rules are individuals who do not use financial accounting rules.

If the taxpayer sells the passive activity to a related party, he or she may not deduct the suspended loss until the related party sells the activity to a nonrelated person. The definition of *related persons* includes spouse, brothers and sisters, ancestors, lineal descendants, and corporations or partnerships in which the individual has a greater than 50% ownership.[14]

Although the death of a taxpayer is not a taxable disposition of the asset, some of the suspended losses may be deductible when a taxpayer dies. The amount of the deduction allowed is the amount by which the suspended losses exceed the increase in basis of the property. The decedent's final income tax return generally includes the deduction for these losses. Any suspended losses up to the amount of the increase in basis will never be deductible.[15]

EXAMPLE I:9-8 ▶ At the time that John died, he owned passive activity property with an adjusted basis of $20,000 and FMV of $35,000. Suspended losses attributable to the property totaled $25,000. Because the increase in the basis of the property is $15,000 ($35,000 – $20,000), $15,000 of the suspended losses are lost. However, $10,000 ($25,000 suspended losses – $15,000 increase in basis) of the suspended losses are deductible on John's final income tax return. ◀

In general, the suspended losses of a passive activity become deductible only when the taxpayer completely disposes of his or her interest in the activity. However, in Treasury Reg. 1.469-4(g) the government has stated that taxpayers may treat the disposition of a substantial part of an activity as the disposition of a separate activity. This treatment is only available, however, if the taxpayer can establish with reasonable certainty the amount of income, deductions, credits, and suspended losses and credits that are allocable to that part of the activity.

Carryovers from a Former Passive Activity. The determination of whether an activity is passive with respect to a taxpayer must be made annually. Thus, an activity that was previously passive may not be passive with respect to the taxpayer for the current year. This is called a **former passive activity**. A taxpayer may deduct any loss carryover from a former passive activity against the current year's income of that activity even though the activity is not a passive activity in the current year. However, any suspended loss in excess of the activity's income for the year is still subject to the carryover limitations. Because the activity is no longer passive for the year, the current year's loss is deductible against active business income.

EXAMPLE I:9-9 ▶ Kris owns activity A, which, for the immediately preceding tax year, was considered a passive activity with regard to Kris. $10,000 in losses from activity A were disallowed and carried over to the current year. Because of Kris' increased involvement in activity A in the current year, it is not considered passive with regard to Kris for the current year. During the current year, activity A generates a $5,000 loss. During the current year, Kris also has an investment in activity B, a passive activity. Her share of activity B's income is $7,000. Kris reports $60,000 in salary. Because for the current year activity A is not a passive activity, the $5,000 current year loss is fully deductible against her salary. However, the $10,000 loss carryover from the prior year is deductible only against the $7,000 of income from passive activity B. The $3,000 ($10,000 – $7,000) excess is carried over to the subsequent year. ◀

---

[14] Other relationships described in Secs. 267(b) and 707(b) are also considered related parties for this purpose.

[15] Sec. 469(g)(2). For 2011 and later the basis of inherited property is its FMV on the date of death (see Chapter I:5).

Credits. A taxpayer may only use tax credits generated in a passive activity against the portion of the taxpayer's tax liability that is attributable to passive income. The taxpayer determines this amount by comparing the tax liability on all income for the year with the tax liability on all income excluding the passive income.

EXAMPLE I:9-10 ▶ Dale invests in a passive activity. For the year, he must report $10,000 of taxable income from the passive activity. Dale's share of tax credits generated by the passive activity is $5,000. Assume Dale's precredit tax liability on all income (including the $10,000 from the passive activity) is $25,000, and his precredit tax liability on all income excluding the passive activity income is $22,000. He may use only $3,000 ($25,000 − $22,000) of the tax credits generated by the passive activity. Dale must carry forward the remaining $2,000 of tax credits and can use them in a subsequent year against the portion of his tax liability attributable to his passive activity income in that year. However, these credits may never offset any portion of the tax liability attributable to nonpassive activities. (See Chapter I:14 for a discussion of credits and their carryovers.) ◀

DEFINITION OF A PASSIVE ACTIVITY

The term *passive activity* includes any trade or business in which the taxpayer does not materially participate as well as any rental activity. An important exception applies to a rental activity that is considered to be a *real property trade or business*. This exception is discussed below on page I:9–14.[16] The definition of a passive activity is based on two critical elements: an identification of exactly what constitutes an activity and a determination of whether the taxpayer has materially participated in that activity.

Identification of an Activity. Identification of the activity becomes critical for several reasons. (1) The determination of whether a taxpayer materially participates in an activity is determined separately for each activity. (2) A taxpayer may deduct suspended losses of a passive activity when the taxpayer completely terminates his or her ownership of the activity. (3) As explained in a subsequent section of this chapter, taxpayers may deduct currently up to $25,000 of passive losses from rental real estate activities. Thus, taxpayers must not combine losses from passive business and rental real estate activities into one activity.

The way taxpayers combine or separate operations into activities can significantly impact the deductibility of losses generated by the activities. Taxpayers may treat one or more activities as a single activity only if they constitute an "appropriate economic unit."[17] Although the taxpayer makes this determination by examining all the relevant facts and circumstances, the following factors receive the greatest weight:

- Similarities and differences in the types of business,
- The extent of common control,
- The extent of common ownership,
- The geographical location, and
- Any interdependencies between the operations (i.e., the extent to which the operations purchase or sell goods between each other, have the same customers, are accounted for with a single set of books, etc.).

A taxpayer may treat more than one operation as a single activity, even if all of these factors do not apply. Furthermore, a taxpayer may use any reasonable method of applying the relevant facts and circumstances in grouping the activities.

EXAMPLE I:9-11 ▶ Carla owns a bakery and a movie theater in each of two different shopping malls, one located in Baltimore and the other in Philadelphia. Depending on other relevant facts and circumstances, a reasonable grouping of the operations may result in any of the following:

---

[16] Secs. 469(c)(1) and (c)(2). Sec. 469(c)(6) also includes investment (production of income) activities under Sec. 212 as a passive activity. Section 469(j)(8) defines the term *rental activity* as any activity where payments are principally for the use of tangible property. Pursuant to the Regulations, there are six exceptions to this general rule. These exceptions include (1) providing the use of tangible property where the average period of customer use is seven days or less, (2) the average period of customer use is 30 days or less and significant personal services are provided by the owner in conjunction with the use of the property, (3) extraordinary personal services are provided by the owner in conjunction with the use of the property, (4) the rental of the property is incidental to a nonrental activity of the taxpayer, (5) the property is customarily made available during defined business hours for nonexclusive use by various customers, or (6) the property is provided for use in a nonrental activity conducted by a partnership, S corporation, or joint venture in which the taxpayer owns an interest. The details of these exceptions are beyond the scope of this text. (See Reg. Sec. 1.469-1(e)(3)(iii).)

[17] Reg. Sec. 1.469-4.

- One activity involving all four operations
- Two activities: a bakery activity and a theater activity
- Two activities: a Baltimore activity and a Philadelphia activity
- Four activities ◀

Under the Treasury Regulations, taxpayers apparently have some degree of flexibility in determining the grouping into activities of different business operations. However, once taxpayers establish the activities, they must be consistent in grouping these activities in subsequent years unless material changes in the facts and circumstances clearly make the groupings inappropriate.

In identifying separate activities, taxpayers generally may not group rental operations with trade or business operations. However, a combination is allowed if either the rental operation is insubstantial in relation to the business operation or vice versa. Unfortunately, the Treasury Regulations do not give any guidance with regard to what is insubstantial. Furthermore, because of the special rules dealing with real estate rental activities (explained later in this chapter), the taxpayer may not combine rental activities involving real estate with rental activities involving personal property.

EXAMPLE I:9-12 ▶ Sandy owns a building in which she (1) operates a restaurant and (2) leases out apartments to tenants. Generally the tenants sign apartment leases of one year or longer. Of the total gross income derived from the building, 15% comes from the apartment rentals and 85% comes from the restaurant operation. If the apartment rental operation is insubstantial in relation to the restaurant operation, the taxpayer may combine the two into one activity. If it is not insubstantial, the two operations are considered two separate activities: a business activity and a rental real estate activity. ◀

Partnerships and S corporations (pass-through entities) must identify their business and rental activities by applying these rules at the partnership or S corporation level and then must report the results of their operations by activity to the partners or shareholders. Each partner or shareholder must then take the results from these activities and, using these same rules, combine them where appropriate with operations conducted either directly or through other pass-through entities. In fact, in practice taxpayers often hold real estate passive activities as either partnerships or S corporations.

Material Participation. Once each activity is identified, taxpayers must determine whether the activity is passive or active. If the taxpayer does not materially participate in the activity, it is deemed to be a passive activity with respect to that taxpayer. Pursuant to the Treasury Regulations,[18] there is **material participation** in an activity if the taxpayer meets at least one of the following tests:

- The individual participates in the activity for more than 500 hours during the year.
- The individual's participation in the activity for the year constitutes substantially all of the participation in the activity by all individuals, including individuals who do not own any interest in the activity.
- The individual participates in the activity for more than 100 hours during the year, and that participation is more than any other individual's participation for the year (including participation by individuals who do not own any interest in the activity).
- The individual participates in "significant participation activities" for an aggregate of more than 500 hours during the year.[19] Thus, an individual who spends over 100 hours each in several separate significant participation activities may aggregate the time spent in these activities in order to meet the 500-hour test.
- The individual materially participated in the activity in any five years during the immediately preceding ten taxable years. These five years need not be consecutive.

---

[18] Temp. Reg. Sec. 1.469-5T(a).

[19] A significant participation activity is a trade or business in which the individual participates for more than 100 hours during the year but for which the individual does not meet the material participation test alone (i.e., with respect to that activity, the individual does not meet one of the other material participation tests). (See Temp. Reg. Sec. 1.469-5T(c).)

- The individual materially participated in the activity for any three years preceding the year in question, and the activity is a personal service activity.[20]
- The individual participates in the activity on a regular, continuous, and substantial basis during the year, taking into account all the relevant facts and circumstances.

ADDITIONAL COMMENT

A taxpayer may be a material participant in an activity one year and a passive investor the next year. A taxpayer must satisfy one of the material participation tests each year to be treated as a material participant for that year.

Note that the first four tests are based on the number of hours the taxpayer spent in the activity during the current year. The fifth and sixth tests are based on the material participation of the taxpayer in prior years and are designed to prevent taxpayers from asserting that retirement income is passive and offsetting it with passive losses from tax shelters. To determine whether a taxpayer materially participates in an activity, the participation of the taxpayer's spouse is also taken into account.

Limited Partnerships. A limited partner has limited liability for his or her investment in the partnership and normally is not actively involved in the business of the partnership. As a consequence, a limited partner generally does not meet the material participation test and the limited partner's investment is treated as passive. Thus, most income and deductions passed through to a limited partner from a limited partnership are passive. However, a limited partner can meet the material participation test if the individual meets either the 500 hour test or the fifth or sixth tests above (prior year tests).

Working Interest in an Oil and Gas Property. A working interest is an interest that is responsible for the cost of development or operation of the oil and gas property. This type of interest in an oil and gas property is not a passive activity as long as the taxpayer's liability in the interest is not a limited interest. Thus, even though a taxpayer may not materially participate in the activity, the passive loss rules do not apply. This is so even if the taxpayer holds the interest through an entity such as a partnership.

TAXPAYERS SUBJECT TO PASSIVE LOSS RULES

The passive loss limitation rules apply to:

- Individuals, estates, trusts
- Any closely held C corporation
- Any personal service corporation
- Certain publicly traded partnerships

Because the income and losses of partnerships and S corporations are taxed directly to the partners and shareholders, the passive loss rules do not apply to these entities.[21] Rather, the passive loss limitations apply directly at the partner or shareholder level. Thus, the situation may arise where one partner or shareholder is subject to the passive loss rules with regard to an activity conducted by the partnership or S corporation while other partners or shareholders are not.

Generally, regular corporations (i.e., C corporations) are not subject to the passive loss limitation rules. However, to prevent certain individuals from avoiding the passive loss rules through the use of a regular corporation, the passive loss rules do apply to closely held C corporations and personal service corporations.

ADDITIONAL COMMENT

Because a closely held C corporation's passive losses may offset its income from active business operations, some tax professionals advise their clients to transfer their investments in passive activities that generate passive losses to their profitable corporations.

Closely Held C Corporations. The passive loss rules apply to closely held C corporations but only on a limited basis. A **closely held C corporation** is a C corporation where more than 50% of the stock is owned by five or fewer individuals at any time during the last half of the corporation's taxable year.[22] Without this special rule involving closely held C corporations, taxpayers would be motivated to transfer their investments (both portfolio investments and passive activities) to a C corporation where the portfolio income could be offset by the corporation's passive losses. Thus, as applied to a closely held C corporation, the passive loss rules prevent passive activity losses from offsetting portfolio income. However, a closely held C corporation's passive losses may offset its income from active business operations.

---

[20] A personal service activity involves rendering personal services in the fields of health, law, engineering, architecture, accounting, actuarial science, performing arts, or consulting. It also includes any other trade or business in which capital is not a material income-producing factor. (See Temp. Reg. Sec. 1.469-5T(d).)

[21] An S corporation is a corporation that has elected for federal income tax purposes to be treated as a flow-through entity. Thus, the income or losses and separately stated items of an S corporation flow through to the shareholders who report these items on their individual tax returns.

[22] Secs. 469(j)(1), 465(a)(1)(B), and 542(a)(2).

EXAMPLE I:9-13 ▶ All of the outstanding stock of Delta Corporation is owned equally by individuals Allen and Beth. During the current year, Delta generates $15,000 taxable income from its active business operations. It also earns $10,000 of interest and dividends from investments and reports a $30,000 loss from a passive activity. Because Delta is a closely held C corporation, the $15,000 of taxable income from the active business is offset by $15,000 of the passive loss. However, the $10,000 of portfolio income may not be offset. Thus, for the current year, Delta reports $10,000 of taxable income from its portfolio income and has a $15,000 passive loss carryover. ◀

Personal Service Corporation. A **personal service corporation** (**PSC**) is a regular C corporation whose principal activity is the performance of personal services that are substantially performed by owner-employees.[23] However, a corporation is not a PSC unless owner-employees own more than 10% of the value of the stock. In contrast with a closely held C corporation, the passive loss limitation rules apply in their entirety to a PSC. If a corporation is both a PSC and a closely held C corporation, the more restrictive rules for PSCs apply. Thus, a PSC cannot offset its active business income or portfolio income with losses from its passive activities.

Material Participation by PSCs and Closely Held C Corporations. Special rules apply for determining whether closely held C corporations or PSCs materially participate in an activity. These corporations materially participate in an activity only if one or more shareholders who own more than 50% in value of the outstanding stock materially participate in the activity. In addition, a closely held C corporation (other than a PSC) materially participates in an activity if it meets *all* of the following tests with regard to an activity:

1. A substantial portion of the services of at least one full-time employee is in the active management of the activity.
2. A substantial portion of the services of at least three full-time nonowner employees is directly related to the activity.
3. The Sec. 162 business deductions of the activity exceed 15% of the activity's gross income for the period.[24]

Publicly Traded Partnerships. In many cases, the tax law provisions for corporations apply to publicly traded partnerships (PTP). For purposes of the passive loss rules, a PTP is defined as any partnership if interests in the partnership are either traded on an established securities market or readily tradable on a secondary market.[25] If the corporate tax provisions apply to a PTP, the passive loss rules generally do not apply. However, if a PTP meets certain gross income requirements, the partnership tax provisions may still apply, causing its items of income, loss, and credit to flow through to the partners.[26] If this is the case, the passive loss rules apply at the partner level separately to the flow through items from each PTP. Thus, partners treat losses from a PTP as separate from any other type of income (passive, active business, or portfolio) and separate from any income from other PTPs. Partners can only carry these losses forward and offset them against income generated by that particular PTP in a subsequent year. Furthermore, a PTP loss may not offset any portfolio income that the PTP might generate. Any net income from PTPs is portfolio income.

---

[23] Secs. 469(j)(2) and 269A(b)(1). For this purpose any employee who owns any stock of the corporation is an owner-employee. This stock ownership is determined by using the Sec. 318 constructive ownership rules as modified by Sec. 469(j)(2).

[24] Secs. 469(h)(4) and 465(c)(7). Tests 1 and 2 must be met for the 12-month period ending on the last day of the tax year. Test 3 must be met for the tax year. Furthermore, the Sec. 404 deductions are also included in the 15% of gross income test.

[25] Sec. 469(k)(2). (See Chapter C:10 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* and Chapter C:10 of the *Comprehensive* volume for a definition and discussion of publicly traded partnerships.)

[26] Sec. 7704(c). For the taxable year and all preceding years beginning after Dec. 31, 1987, at least 90% of the PTP's gross income consists of dividends, interest, real property rents, income from certain gas, oil, mineral or timber activities, and gains from the sale of real estate or certain capital assets. Furthermore, certain other PTPs may also elect to continue to be treated as a partnership rather than as a corporation.

EXAMPLE I:9-14 ▶ Mark owns interests in partnerships A and B, both of which are PTPs that are treated as partnerships. During the current year, Mark's share of the income from A is $2,000. Mark's share of B's loss is $1,200. B also generates some portfolio income. Mark's share of B's portfolio income is $800. The $1,200 loss from B may not offset any of B's $800 portfolio income. Furthermore, it may not offset any of the $2,000 income from A. The $2,000 income from A is treated as portfolio income. Thus, Mark reports $2,800 portfolio income and has a $1,200 suspended loss from B. In a subsequent year, Mark's share of any income from B can be offset by the $1,200 of suspended loss that is carried forward. ◀

A partner may deduct suspended losses from a PTP in the year the partner disposes of his or her interest in the PTP. Partners do not recognize a loss in the year that the PTP itself sells a passive activity.

REAL ESTATE BUSINESSES

In general, rental activities are considered passive activities. However, the passive activity loss rules do not apply to certain taxpayers who are involved in real property trades or businesses. Instead, these activities are treated as active businesses. A *real property trade or business* involves the development, redevelopment, construction, reconstruction, acquisition, conversion, rental, operation, management, leasing, or brokering of real property.

This exception only applies to a taxpayer if he or she meets both of the following requirements:

- More than one-half of the personal services the taxpayer performs in all trades or businesses during the year are in real property trades or businesses in which the taxpayer materially participates.
- The taxpayer performs more than 750 hours of work during the taxable year in real property trades or businesses in which the taxpayer materially participates.

In meeting these tests, personal services a taxpayer renders in his or her capacity as an employee are not treated as performed in real property trades or businesses unless the employee owns at least 5% of the employer. Furthermore, for married taxpayers filing a joint return, the exception applies only if one of the spouses separately meets both requirements. The time spent in the activity by both spouses counts toward the determination of whether or not the taxpayer meets the material participation test.

EXAMPLE I:9-15 ▶ Anwar and Anya are married and file a joint return. They own four large apartment complexes which they manage themselves. Neither is employed elsewhere. During the current year, Anya spent 500 hours keeping records and corresponding with tenants. Anwar spent 700 hours during the year maintaining and repairing the apartments. Even though all of Anya and Anwar's personal services are connected with a real property trade or business in which they materially participate, this rental activity is considered passive because neither Anwar nor Anya alone spends more than 750 hours doing services related to the rental activity. ◀

For a closely held C corporation to meet this rental real estate business exception, the corporation must derive more than one-half of its gross receipts from real property businesses in which it materially participates.

Any deduction allowed under the previously discussed exception for taxpayers involved in real property trades or businesses is not considered in determining the taxpayer's AGI for purposes of the phase-out of the $25,000 deduction available for taxpayers who actively participate in a rental real estate activity. (See the following section in this chapter for a discussion of the $25,000 active participation exception.)

KEY POINT

Up to $25,000 of passive losses attributable to rental real estate can be deducted each year against income from nonpassive sources such as salary, interest, and dividends.

OTHER RENTAL REAL ESTATE ACTIVITIES

Many rental real estate activities are not considered rental real estate businesses and are, therefore, subject to the passive loss rules. However, if an individual taxpayer meets certain requirements, the taxpayer still may deduct against other income up to $25,000 of annual losses from these passive rental real estate activities. To meet this exception, an individual must do both of the following:

- *Actively* participate in the activity
- Own at least 10% of the value of the activity for the entire tax year

Additionally, in order to take a deduction in the current year for a loss sustained in a prior year, Section 469(i) requires the taxpayer to actively participate in the activity during both years.

KEY POINT

Active participation is different from *material participation*, and is a lesser standard of involvement.

Active Participation. A taxpayer can achieve *active participation*, as opposed to material participation, without regular, continuous, and material involvement in the activity and without meeting any of the material participation tests. However, the taxpayer still must participate in making management decisions or arranging for others to provide services in a significant and bona fide sense. This includes approving new tenants, deciding on rental terms, approving expenditures, and other similar decisions. Taxpayers may achieve active participation even if they hire a rental agent and others to provide the services. However, a lessor under a net lease arrangement generally does not achieve active participation. Additionally, a limited partner generally cannot actively participate in any activity of a limited partnership.

Limitation on Deduction of Rental Real Estate Loss. Taxpayers must first apply rental real estate losses against other net passive income for the year. Taxpayers may then reduce their portfolio or active business income by up to $25,000. However, the tax law requires reduction of the $25,000 amount by 50% of the taxpayer's AGI in excess of $100,000.[27] For this purpose, AGI does not include any passive activity loss or any loss allowable to taxpayers who materially participate in real property trades or businesses (e.g., a real estate developer). Thus, if a taxpayer has AGI of $150,000 or more, the rental real estate losses are not eligible for the $25,000 deduction and are aggregated with the taxpayer's other passive losses.

EXAMPLE I:9-16 ▶ During the current year, Penny, a married individual who files a joint return, reports the following items of income and loss:

Salary income	$120,000
Activity A (passive)	15,000
Activity B (nonbusiness rental real estate)	(50,000)

Penny owns over 10% and actively participates in activity B. Her AGI for the year is as follows:

ADDITIONAL COMMENT

In calculating AGI to determine the amount of the $25,000 that is phased out, married taxpayers filing joint returns must include the income of both spouses. This provision results in a marriage penalty where both spouses have income.

Salary		$120,000
Passive income from activity A	$15,000	
Minus: Passive loss from activity B ($50,000, but limited to $15,000)	(15,000)	–0–
Minus: Maximum rental real estate loss (from activity B)	$25,000	
Reduced by phase-out: [($120,000 − $100,000) × 0.50]	(10,000)	
Deductible amount (but not to exceed actual loss)		(15,000)
AGI		$105,000

Penny may deduct $30,000 of the loss from activity B during the year ($15,000 as an offset to the passive income from activity A + $15,000 deductible against portfolio or active business income). Penny has $20,000 ($50,000 − $30,000) of suspended passive losses from activity B that are carried over to the following year. ◀

---

[27] Sec. 469(i)(3).

The $25,000 limit applies to the sum of both deductions and credits. Thus, in order to properly apply the limit, taxpayers must convert the credits into deduction equivalents. A *deduction equivalent* is an amount that, if taken as a deduction, would reduce the tax liability by an amount equal to the credits. The amount of deduction equivalents can be computed by dividing the amount of the credit by the taxpayer's marginal tax rate. If the sum of the deductions and the deduction equivalents exceeds the $25,000 limit, the taxpayer must first use the deductions.

EXAMPLE I:9-17 ▶ Hal owns over 10% of activity A, in which he actively participates. Activity A is a passive real estate rental activity. Hal's marginal tax rate is 25% and he has AGI of less than $100,000. For the year, activity A generates a $20,000 net loss and $10,000 in tax credits, which amounts to $40,000 in deduction equivalent {$10,000/25%}. After deducting the $20,000 net loss against his active business and portfolio income, Hal has a remaining real estate deduction under the limit of $5,000 ($25,000 − $20,000). Thus, Hal may use $1,250 ($5,000 × 0.25) of the credits. The remaining $8,750 ($10,000 − $1,250) of tax credits must be carried over to subsequent years. ◀

If deductions and credits exceeding the $25,000 limit arise from more than one passive activity, the taxpayer must allocate the deductions and credits between the activities.[28]

EXAMPLE I:9-18 ▶ Mary has AGI of less than $100,000 and a 25% marginal tax rate. During the year she reports a $30,000 loss from activity A and a $10,000 loss from activity B. Additionally, activity A generates $5,000 of tax credits. Both activities A and B are passive real estate rental activities in which Mary actively participates and owns over 10% of each activity. The $25,000 deduction is first allocated to the losses. Because the sum of the losses ($40,000) exceeds the limit, the deductible loss must be allocated ratably between the activities as follows:

Activity A: $25,000 × $30,000 ÷ $40,000 = $18,750
Activity B: $25,000 × $10,000 ÷ $40,000 = $6,250

Activity A has an $11,250 ($30,000 − $18,750) suspended loss, and activity B has a $3,750 ($10,000 − $6,250) suspended loss. In addition, activity A has $5,000 of suspended tax credits. ◀

Topic Review I:9-2 summarizes the passive activity loss rules.

STOP & THINK

Question: Jana is a businesswoman who has successfully invested in various stock and bond funds. Now she is considering diversifying her holdings by investing in real estate. She is considering purchasing an interest in a limited partnership that invests in real estate. A friend is also urging Jana to go into a partnership with him in order to purchase a small office building they would rent out. Assume that the size of Jana's investment in the two alternatives would be exactly the same and that Jana estimates the economic results to be equivalent (e.g., she expects both to spin off equivalent losses for the first few years and then begin turning a profit). What tax issues should Jana consider when making her investment decision?

Solution: In comparing alternatives such as these, of course, the most important considerations should be the non-tax factors such as cash flow from the investment, the capital appreciation of the assets, the marketability of the investment, and the risk. For example, as a limited partner, Jana will not personally be liable for debts of the partnership or lawsuits filed against the partnership. Purchase of the office building as a general partner with her friend will cause her to be personally liable unless it is done through an LLC or LLP. Additionally, in comparing these two alternatives, certain tax issues may come into play. Both alternatives are investments in rental real estate. However, Jana is not eligible to deduct up to $25,000 of the passive losses from the limited partnership because she

---

[28] A taxpayer may earn different types of credits, based upon the different types of investments. Furthermore, the phase-out of the $25,000 limit is treated differently for different types of credits. For example, the phase-out for the rehabilitation credit only begins when the taxpayer's AGI exceeds $200,000. Additionally, there is no phase-out applied to the credit for low income housing. (See Sec. 469(e)(3) and Chapter I:14 for a discussion of these credits.) Thus, taxpayers are required to allocate the deductions and credits among the activities and account for them in a specific order. A complete analysis of these rules is beyond the scope of this discussion. Example I:9-18 assumes both activities earn the same type of credit and are subject to the $25,000 limit.

TOPIC REVIEW I:9-2

Passive Losses

Topic	Summary
Taxpayers covered	Individuals, estates, trusts, closely held C corporations, personal service corporations, certain publicly traded partnerships.
Passive activity	Any trade or business activity in which the taxpayer does not materially participate. Includes all rental activities except for certain rental real estate activities and exceptions contained in regulations. Does not include working interests in oil and gas property.
Limitation	Passive losses are deductible against passive income, but not against active or portfolio income. Disallowed losses are carried over to subsequent years (suspended losses). Losses must be accounted for separately by activity. Activities are identified by examining the taxpayer's undertakings.
Suspended losses	Must be allocated and attributed among the passive activities that generated the losses.
Disposition of interest	Taxpayers may deduct suspended losses in the year of a taxable disposition of the passive activity subject to the limitation on excess business losses of $262,000. For inherited property, suspended losses in excess of the increase in basis may be deducted on the final return of a decedent. Losses up to the amount of the basis increase are lost.
Material participation	Must be regular, continuous, and substantial. The regulations contain seven separate tests; four based on current-year participation; two based on participation in prior years; and one based on facts and circumstances.
Real property trades or businesses	Passive activity loss rules do not apply to taxpayers who materially participate in real property trade or business activities for more than 750 hours during the year. Additionally, more than one-half of the taxpayer's personal services must be performed in real property trades or businesses in which the taxpayer materially participates.
Rental of real estate	Individuals may deduct losses up to $25,000 against active and portfolio income if they actively participate in the activity and own at least 10% of the value of the activity. Additionally, they may take certain credits generated in passive rental activities in which they actively participate. Active participation is a lesser standard than material participation, but the taxpayer must still participate in management decisions or arranging for others to provide services. The deduction and credits phase out at a 50% rate for AGI in excess of $100,000.

will not actively participate in the partnership. On the other hand, if she is involved in management decisions regarding the office building held by the partnership, she will be actively participating and will be eligible for the $25,000 passive loss deduction exception. Of course, the benefit of this exception begins phasing out if her AGI exceeds $100,000.

CASUALTY AND THEFT LOSSES

OBJECTIVE 4

Identify and calculate the deduction for a casualty or theft loss

Taxpayers may deduct losses incurred in connection with business or investment property, but individuals generally are not allowed a deduction for losses on personal-use property. However, under Sec. 165, individuals may take a limited deduction if the loss on personal-use property arises from a fire, storm, shipwreck, other casualty, or theft. In other words, losses on personal-use property are deductible only if the loss results from a casualty. In order for an event to qualify as a casualty, the event must meet certain requirements.

CASUALTY DEFINED

According to the IRS, a deductible **casualty loss** is one that occurs in an identifiable event that is sudden, unexpected, or unusual.[29] In addition, beginning January 1, 2018, the deduction for personal casualty and theft losses is limited to those losses incurred in a "federally-declared disaster." Casualty and theft losses of business and investment property are deductible.

---

[29] Rev. Rul. 79-174, 1979-1 C.B. 99. See also IRS *Publication No. 547*, Casualties, Disasters, and Thefts, 2016, p. 2.

Identifiable Event. Because the event that causes the loss must be *identifiable*, the act of losing or misplacing property is generally not considered a casualty.

However, an accidental loss of property can qualify as a deductible casualty if the loss is the result of an identifiable event.

KEY POINT

The taxpayer has the burden of proof to establish that a loss was caused by a casualty. The taxpayer should gather as much evidence as possible. Newspaper clippings, police reports, photographs, and insurance reports can be helpful in establishing the cause of the loss.

Sudden, Unexpected, or Unusual Events. According to the IRS, a *sudden event* is one that is swift, not gradual or progressive. An *unexpected event* is one that is ordinarily unanticipated and not intended. An *unusual event* is one that is not a day-to-day occurrence and that is not typical of the activity.

Thus, the IRS has ruled that a deductible casualty loss occurred when a taxpayer went ice fishing and his automobile fell through the ice.[30] A taxpayer whose automobile was damaged as the result of an accident also sustained a deductible casualty loss. However, a taxpayer may not deduct losses incurred in an accident caused by the taxpayer's willful negligence or willful act.[31] Damage sustained as the result of an accident in an automobile race was held to be nondeductible because accidents occur often and are not unusual events in automobile races.[32]

The following are a few examples of events that the courts have held to constitute a deductible casualty loss:

ADDITIONAL COMMENT

Sudden, unexpected, or unusual events must also be accompanied by an external force. For example, a blown engine in an automobile is a sudden event but because no external force caused the event, the loss is not a casualty loss.

- Rust and water damage to furniture and carpets caused by the bursting of a water heater
- Damage to the exterior paint of a building caused by a severe, sudden, and unexpected concentration of chemical fumes in the air
- Loss caused by fire (unless the taxpayer sets the fire, in which case no deduction is available)
- Damage to a building caused by an unusually large blast at a nearby quarry or a jet sonic boom[33]
- Death of trees just a few days after a sudden infestation of pine beetles[34]

The following are examples of events that the courts have held *not* to be a casualty:

ETHICAL POINT

A client loses his business-use cell phone while fishing and wants to deduct the loss as a casualty. The CPA should not sign the tax return unless he or she believes that the client's position has a realistic possibility of being sustained on its merits if challenged, which is doubtful in this situation. CPA ethical responsibilities are discussed in Chapter C:15 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* text.

- Water damage to the walls and ceiling of a taxpayer's personal residence as the result of the gradual deterioration of the roof[35]
- Trees dying because of gradual suffocation of the root systems
- The loss of trees and shrubs because of disease[36]
- Damage to carpet and clothing caused by moths and carpet beetles[37]
- Damage to a road due to freezing, thawing, and gradual deterioration[38]
- Damage caused by drought because it occurs through progressive deterioration
- The steady weakening of a building caused by normal wind and weather conditions
- The rusting and deterioration of a water heater[39]

At times it is very difficult to determine under the particular facts whether the necessary requirements of suddenness, unexpectedness, or unusualness exist. For example, as mentioned above, damage caused by the sudden infestation of pine beetles in some instances has been held to be a casualty, but in other instances it has not.[40]

THEFT DEFINED

Under Sec. 165, a taxpayer may also deduct a loss sustained as the result of a theft. This includes theft of business, investment, or personal-use property. The Treasury Regulations state that "the term theft shall be deemed to include, but shall not necessarily be limited to, larceny, embezzlement, and robbery."[41] A determination whether other actions also constitute theft often depends on whether the action involves criminal intent and is illegal under the state law where the action has occurred. Thus, the IRS has stated that blackmail, extortion, and kidnapping for ransom may also constitute theft.[42]

DEDUCTIBLE AMOUNT OF CASUALTY LOSS

The amount of a casualty loss deduction depends on the amount of the loss sustained, any insurance or other reimbursement the taxpayer received, and, in the case of personal-use property, the limitations imposed under the tax law.

Measuring the Loss. As explained below, one measurement of the amount of the loss sustained in a casualty is the amount by which the casualty reduces the property's FMV. This is measured by comparing the property's FMV immediately before and immediately after the casualty.[43] The amount of the loss may not include any reduction in the FMV of the taxpayer's surrounding but undamaged property.

EXAMPLE I:9-19 ▶

Gail purchased a rental cabin for $310,000. Shortly after she purchased the property, a mudslide completely destroyed several neighboring cabins. Gail's cabin sustained no damage. After the slide, an appraisal reveals that the FMV of the cabin has declined to $250,000 because of fears that other mudslides might occur. The $60,000 reduction in the FMV of the cabin does not constitute a deductible casualty loss. ◀

ADDITIONAL COMMENT

Taxpayers cannot deduct a loss unless they own the damaged property. Therefore, a taxpayer cannot deduct amounts he or she paid to another individual for damage he or she caused to the other individual's property.

The taxpayer must use actual market value, not sentimental value, to compute the reduction in the FMV. Additionally, the cost of protecting property to prevent damage from a casualty is not a deductible loss.

If the property involved in the casualty is only partially destroyed, the amount of the loss is the lesser of the reduction in the property's FMV or the taxpayer's adjusted basis in the property.

EXAMPLE I:9-20 ▶

Troy purchased a home for $225,000 several years ago. Through the years, the value of the home appreciated until it was appraised at $325,000 in the current year. Shortly after the appraisal, a flood swept through the area and severely damaged Troy's home, and the flood was declared a federal disaster. After the flood, the value of the home declined to $90,000. Troy does not have any flood insurance. His loss is limited to his $225,000 basis in the home even though the economic loss is $235,000 ($325,000 − $90,000). ◀

TYPICAL MISCONCEPTION

Taxpayers sometimes think their loss should be based on the total economic loss rather than just the property's basis. Taxpayers should remember that they have not paid a tax on the appreciation in value and, therefore, should not be entitled to a deduction for a loss on the unrealized gain.

If business or investment property is totally destroyed in a casualty, the amount of the loss is the taxpayer's adjusted basis in the property, even if it is greater than the property's FMV. However, if personal-use property is totally destroyed, the amount of the loss is limited to the lesser of the reduction in the property's FMV or the property's adjusted basis.

EXAMPLE I:9-21 ▶

A machine Beth uses in her business is completely destroyed by fire. At the time of the fire, the adjusted basis of the machine is $5,000 and its FMV is $3,000. Because the machine is business property, Beth's loss is $5,000. If the machine were a personal-use asset, the amount of the loss would be $3,000, the amount of the reduction in the property's FMV rather than Beth's basis of $5,000. ◀

---

[40] Rev. Rul. 79-174, 1979-1 C.B. 99 and *George K. Notter*, 1985 PH T.C. Memo ¶85,391, 50 TCM 614.

[41] Reg. Sec. 1.165-8(d).

[42] Rev. Rul. 72-112, 1972-1 C.B. 60 and IRS *Publication* No. 547 (Casualties, Disasters, and Thefts), 2018.

[43] Reg. Sec. 1.165-7(a)(2).

Generally, taxpayers must establish the reduction in the FMV of the property by an appraisal. If an appraisal is difficult or impossible to obtain, the taxpayer may use the cost of the repairs instead. The repairs must meet all of the following requirements before the taxpayer may use this alternative:

KEY POINT

The reason for this difference is that taxpayers may not deduct a loss on the sale of personal-use property. Thus, taxpayers should not be able to deduct the decline in the personal property's value that occurs before the casualty.

- The repairs will bring the property back to its condition immediately before the casualty.
- The cost of the repairs is not excessive.
- The repairs do no more than repair the damage incurred in the casualty.
- The repairs do not increase the value of the property over its value immediately before the casualty.

If the same casualty destroys more than one property, the taxpayer calculates the loss on each property separately.[44] Thus, the taxpayer compares each property's basis with the reduction in the FMV of that property, rather than aggregating the basis and FMV amounts for all the properties destroyed in the casualty.

If the taxpayer receives insurance or any other type of recovery, the taxpayer must reduce the amount of the loss by these amounts. In some cases these payments may actually exceed the taxpayer's basis in the property, causing the realization of a gain. If certain requirements are met, taxpayers may defer or exclude the recognition of these gains. (See the detailed discussion of involuntary conversions in Chapter I:12.)

LIMITATIONS ON PERSONAL-USE PROPERTY

The amount an individual may deduct for a casualty loss on personal-use property is subject to two limitations: (1) losses sustained in each separate casualty must be reduced by $100, and (2) the total amount of all net casualty losses for personal-use property is reduced by 10% of the taxpayer's AGI for the year. For property destroyed in the same casualty, only $100 is deducted from all the properties (i.e., the taxpayer does not reduce the loss from each separate property by $100).

EXAMPLE I:9-22 ▶ During the year a hurricane, which was declared a federal disaster, blows over a large tree in front of Cathy's house, damaging the house and totally destroying her automobile. After the insurance reimbursement, the loss on the house amounts to $3,000, and the loss on the automobile is $2,500. Because the losses occur in the same casualty, the total amount of the loss is reduced to $5,400 ($3,000 + $2,500 − $100). If the damage to the car was sustained in a separate event such as an automobile accident, the total amount of the casualty losses incurred by Cathy during the year would have been $5,300 [($3,000 − $100) + ($2,500 − $100)]. This $5,300 or $5,400 loss is then further reduced by 10% of Cathy's AGI for the year. ◀

EXAMPLE I:9-23 ▶ As the result of a storm declared a federal disaster, Liz incurs a $4,100 casualty loss on personal-use property during the year. She also sustains a $600 loss from a flood, a second federally declared disaster. Liz's AGI for the year is $50,000. She receives no tax deduction for the casualty and theft losses because they do not exceed the following limitations:

KEY POINT

Many taxpayers cannot deduct their casualty losses because of the $100 floor and 10% of AGI limitation.

	Storm	*Flood*	*Total*
Loss before limitations	$4,100	$600	$4,700
Minus: $100 floor	(100)	(100)	(200)
	$4,000	$500	$4,500
Minus: 10% of AGI (0.10 × $50,000)			(5,000)
Deductible loss			0 ◀

Because of these limitations, many taxpayers who sustain casualty and theft losses on personal-use property do not receive a tax deduction. Furthermore, if the taxpayer's insurance covers the property, the taxpayer cannot take a casualty loss deduction unless

---

[44] Reg. Sec. 1.165-7(b)(2). For personal-use property, losses on real property and improvements to the property are computed in the aggregate. Thus, no separate basis need be apportioned to the improvements. (See Reg. Secs. 1.165-7(b)(2)(ii) and 1.165-7(b)(3) Example (3).)

ADDITIONAL COMMENT

Individuals sometimes fail to file insurance claims for damage to their personal automobile for fear that their insurance rates will increase, and hope instead to deduct the loss. In this situation, the taxpayer cannot deduct the loss.

he or she timely files an insurance claim for the loss. This disallowance relates only to the portion of the loss covered by the insurance.

Below is a summary of the rules concerning deductibility of casualty losses:

Result of Casualty		*Business*	*Investment*	*Personal Use Federal Disaster*
Total Destruction	Amount of Casualty[a]	Basis	Basis	Lesser of: basis or decline in FMV, reduced by $100 and 10% of AGI
	Type	For AGI	From AGI (For AGI if Rental)	From AGI
Partial Destruction	Amount of Casualty[a]	Lesser of: basis or decline in FMV	Lesser of: basis or decline in FMV	Lesser of: basis or decline in FMV, reduced by $100 and 10% of AGI
	Type	For AGI	From AGI (For AGI if Rental)	From AGI

[a] All amounts are first reduced by any insurance reimbursement.

NETTING CASUALTY GAINS AND LOSSES ON PERSONAL-USE PROPERTY

TYPICAL MISCONCEPTION

The concept of a gain on a casualty can be confusing. Nevertheless, if the insurance proceeds exceed the property's basis, a gain results.

Taxpayers must net casualty gains and losses incurred during the year on personal-use assets. Personal casualty losses that do not result from a federally declared disaster are deductible to the extent the taxpayer has personal casualty gains for the year. An individual would first reduce the amount of personal casualty gains by the amount of non-federally declared disaster losses. Any remaining personal casualty gain is then used to reduce the federally declared disaster loss. These gains and losses are not combined with casualty gains and losses on business and investment property. For purposes of the netting process, the losses should be reduced by any insurance reimbursements and the $100 limitation, but not the 10% of AGI floor. If the gains exceed the losses for the year, all the gains and losses are treated as capital gains and losses.

EXAMPLE I:9-24 ▶ During the year, Pat incurs the following casualty gains and losses on personal-use assets. Assets W and X are destroyed in one casualty, and asset Y is destroyed in another. Pat acquired assets X and Y in the current year, whereas she acquired asset W several years ago.

Asset	*Reduction in FMV*	*Adjusted Basis*	*Insurance*	*Holding Period*
W	$10,000	$3,000	$10,000	More than 12 months
X	3,600	5,000	2,000	Less than one year
Y	1,600	3,000	0	Less than one year

Pat realizes a $7,000 ($10,000 − $3,000) gain on asset W because the insurance proceeds received for the asset exceed its basis. She realizes a $1,600 ($3,600 reduction in FMV − $2,000 insurance) loss on asset X. This loss is reduced to $1,500 because of the $100 reduction for personal casualty losses. She realizes a $1,600 loss on asset Y. Because this loss is realized as a result of the second casualty, the $100 limitation is deducted, resulting in a $1,500 loss from that casualty. Pat realizes a $4,000 [$7,000 − ($1,500 + $1,500)] net casualty gain for the year. Thus, the gain or loss on each asset is treated as a capital gain or loss. Pat must report a $7,000 long-term capital gain on asset W, a $1,500 short-term capital loss on asset X, and a $1,500 short-term capital loss on asset Y. ◀

If the casualty losses on personal-use property exceed the casualty gains for the year, the taxpayer must further reduce the net loss by 10% of AGI. The taxpayer performs all of these calculations (the netting process and reductions) on Form 4684. If any loss remains after the netting and reductions, the taxpayer reports the loss as an itemized deduction on Schedule A of Form 1040.

EXAMPLE I:9-25 ▶ Matt has AGI of $100,000 for the current year. After applying the $100 floor, Matt has $10,000 of nonfederal casualty losses, $18,000 of federal disaster losses, and $15,000 of personal casualty gains for the year. Matt's nonfederal losses are applied against the casualty gain. The remaining casualty gain of $5,000 ($15,000 − $10,000) is applied against the federal disaster loss ($18,000 − $5,000). Next, Matt applies the 10% limit of AGI of $10,000 (10% × $100,000), resulting in a $3,000 ($13,000 − $10,000) deductible loss. ◀

CASUALTY GAINS AND LOSSES ATTRIBUTABLE TO BUSINESS AND INVESTMENT PROPERTY

Taxpayers must net casualty gains and losses on business and investment property held over one year. (See Chapter I:13 for a discussion of the netting procedure under Sec. 1231.) If the losses exceed the gains, the business losses and losses on investment property that generate rents or royalties are *for* AGI deductions. Losses on other investment property (e.g., the theft of a security) are itemized deductions. The $100 or 10% of AGI limitations do not apply to losses on business and investment property. Casualty gains and losses on business and investment property held one year or less are all treated as ordinary.

TIMING OF CASUALTY LOSS DEDUCTION

In general, taxpayers must deduct casualty losses in the tax year in which the taxpayer sustains the loss. In the following instances, however, taxpayers may deduct the loss in another year:

- Theft losses
- Insurance or other reimbursements that the taxpayer can reasonably expect to receive in a subsequent year
- Certain disaster losses

Theft. Taxpayers must deduct a theft loss in the tax year in which the taxpayer discovers the theft. This rule is equitable and practical because a taxpayer may not discover a theft until a subsequent year.

EXAMPLE I:9-26 ▶ Dale owns an investment property in upstate New York. Sometime after his last trip to the lodge in November 2024, someone breaks into the property and steals paintings. Dale discovers the theft when he returns to the property on May 19, 2025. Dale's insurance does not cover the entire cost of the items. The loss is deductible in 2025, even though the theft may have occurred in 2024. ◀

REAL-WORLD EXAMPLE

A taxpayer had property confiscated by the Cuban government in 1960. The taxpayer left the country and could have filed for indemnity but did not because she expected to return. Later, the government took away the right of indemnity in 1961. Since she did not file for indemnity from the Cuban government when she had the chance, she was not allowed a casualty or theft loss. *Vila v. U.S.*, 23 AFTR 2d 69-1311 (1969).

Insurance and Other Reimbursements. Taxpayers must subtract any reimbursement received as compensation for a loss in arriving at the amount of the loss. This is necessary even when the taxpayer has not yet received the reimbursement, as long as there is a reasonable prospect that the taxpayer will receive it in the future. Thus, the taxpayer may not take a deduction in the year of loss if in that year a reasonable expectation of full recovery exists.[45] If no anticipation of full recovery exists, the taxpayer may deduct a loss in the year the casualty occurs for the estimated unrecovered amount. As previously mentioned, the taxpayer may not take a deduction to the extent the taxpayer has insured the personal-use property and the taxpayer does not file a timely insurance claim.

EXAMPLE I:9-27 ▶ In December of the current year, Andrea suffers a $10,000 casualty loss when her business-use automobile is struck by a city bus. Although she does not receive any reimbursement from the insurance company by December 31, she reasonably expects to recover the full amount. Andrea may not deduct a casualty loss in the current year. ◀

EXAMPLE I:9-28 ▶ Assume the same facts as in Example I:9-27, except that Andrea reasonably anticipates her reimbursement from the insurance company will be only $7,000. In this case, her casualty loss in the current year is $3,000. ◀

If the taxpayer does not receive the full amount of the anticipated recovery in the subsequent year, he or she may deduct the unrecovered portion. However, rather than filing an amended return for the year of loss, the taxpayer deducts the loss in the subsequent year. Thus in some cases, the taxpayer may spread the income tax consequences for a single casualty loss over two years.

---

[45] Reg. Sec. 1.165-1(d)(2)(i).

EXAMPLE I:9-29 ▶ During the current year, Javier's home is damaged by an exceptionally severe blast at a nearby stone quarry owned by Acme Corporation. The blast is declared a federal disaster. Although the amount of the damage is properly appraised at $20,000, Javier can reasonably anticipate a recovery of only $15,000 from Acme Corporation at the end of the current year. He does not receive any recovery from Acme during the current year. Unfortunately, in the subsequent year Acme Corporation is declared bankrupt, and Javier does not receive any reimbursement. Javier's AGI is $40,000 in the current year and $45,000 in the subsequent year. During the current year, Javier may deduct $900 {$5,000 loss reasonably anticipated in the current year − [$100 limitation + (0.10 × $40,000)]}. In the subsequent year, Javier may deduct an additional casualty loss of $10,500 [$15,000 additional loss − (0.10 × $45,000)]. ◀

If a taxpayer receives a subsequent recovery for a previously deducted loss, the taxpayer includes the reimbursement in income in the year of recovery. The taxpayer does not file an amended return. However, the amount that the taxpayer must include in income is limited to the amount of tax benefit the taxpayer received for the previous deduction.

EXAMPLE I:9-30 ▶ During the current year, Becky's automobile sustains $5,000 in damages when it is struck by another automobile during an earthquake declared a federal disaster. The driver of the other automobile is uninsured, and Becky does not reasonably expect to recover any of the loss. Becky's AGI for the current year is $35,000. Becky deducts $1,400 ($5,000 loss − [$100 + $3,500]). During the subsequent year, the other driver reimburses Becky for the full amount of the damage. Because Becky received a tax benefit of only $1,400 for the loss in the year of the accident, she must only include $1,400 in gross income in the subsequent year, even though she receives a $5,000 reimbursement. Becky does not file an amended return for the year of the accident. ◀

Disaster Losses. Under certain circumstances, a taxpayer may elect to deduct a casualty loss in the year preceding the year in which the loss actually occurs. This election is available to taxpayers who suffer losses attributable to a disaster that occurs in an area subsequently declared by the President of the United States as a disaster area.[46] Thus, an individual can elect to deduct a disaster loss occurring in 2025 on his or her 2024 tax return or report it in the regular way on his or her 2025 return. The taxpayer must file an amended return (Form 1040X) unless he or she has not filed the prior year's return when the disaster is declared. This election allows taxpayers the possibility of receiving financial help sooner from potential tax refunds by filing an amendment to the prior year's return.

Topic Review I:9-3 summarizes the casualty loss deduction rules.

STOP & THINK

Question: Due to a series of hurricanes that hit Florida during the current year, many homes, roads, and other property are destroyed. Because of the tremendous destruction, the President of the United States declares the area a disaster area. One of the properties totally destroyed is Jack's vacation home in Miami. Jack uses the home exclusively for vacationing. The value of the home is $390,000. Unfortunately, Jack had not insured the home against a hurricane. What issues must Jack consider in determining the year in which to take the casualty loss?

Solution: Since the property was destroyed in a disaster and is located in an area which the President subsequently declared as a disaster area, Jack may take the casualty deduction either in the year of the casualty or in the previous year. The year which is most beneficial is based on several factors. The destroyed property was personal use property, so the deduction is an itemized deduction that would normally be subject to the 10% of AGI limitation. Thus, Jack should compare his estimated AGI for the current year with his AGI in the last year. He also should consider his other itemized deductions, including any other casualty losses that might be subject to the $100 or 10% of AGI limitation. In addition, he should compare his marginal tax rates in the two years. Jack should also consider the time value of money, since by taking the deduction on his prior year return, he will receive the tax benefit earlier than if he takes the deduction on the current year return.

---

[46] Sec. 165(i). Additionally, the same treatment may apply under Sec. 165 to taxpayers who live in a disaster area and who are ordered by a state or local government to move from or relocate their residence because the disaster caused the residence to be unsafe. In order to qualify for this treatment, the order to move must come from the state or local government within 120 days of the date that the President determines the area to be a disaster area. If the property destroyed in a presidentially declared disaster area is the taxpayer's principal residence and the casualty results in a gain, the taxpayer may exclude a portion of the gain if certain conditions are met (see Chapter I:12).

TOPIC REVIEW I:9-3

Casualty Losses

TYPE OF PROPERTY	LIMITATION AND TREATMENT
Personal use	The amount of the loss is the lesser of the property's adjusted basis or the reduction of the asset's FMV. This amount is reduced by any insurance reimbursement. If the insurance reimbursement exceeds the property's basis, a gain is realized. To the extent the property is insured, the taxpayer must file a claim or the loss is disallowed. The amount of loss incurred in each separate casualty event during the year is reduced by $100. All casualty gains and losses for the year are netted. Gains are netted against casualty losses that are not related to a federal disaster first. Any remaining disaster losses unrelated to a federal disaster are not deductible. Any remaining losses that are related to a federal disaster are reduced by 10% of AGI. Any remaining loss is deducted.
Business or investment	If the property is totally destroyed, the amount of the loss is the adjusted basis of the property. If only partially destroyed, the amount of the loss is the lesser of the property's adjusted basis or the reduction of the asset's FMV. This amount is reduced by any insurance reimbursement. A gain is realized if the insurance reimbursement exceeds the property's basis. For property held one year or less, the losses and gains are ordinary losses and gains. For property held over one year, the casualty gains and losses for the year are netted. The treatment depends on the total of the taxpayer's other Sec. 1231 transactions (see Chapter I:13). Business casualty losses and losses on investment property that generate rents or royalties are not subject to the $100 or 10% of AGI limitations.

BAD DEBTS

OBJECTIVE 5

Compute the deduction for a bad debt

In addition to losses on property, taxpayers may also sustain losses because of uncollectible debts. In dealing with a deduction for **bad debts**, taxpayers must address the following requirements and issues:

- A bona fide debtor-creditor relationship must exist between the taxpayer and some other person or entity.
- The taxpayer must have basis in the debt.
- The debt must actually have become worthless during the year.
- The type and timing of a bad debt deduction depend on whether the debt is a business or nonbusiness bad debt.

Generally, taxpayers may use only the specific write-off method of accounting when deducting the bad debt. A partial or complete recovery of a debt that was previously deducted may occur. In many cases a recovery of this type causes income recognition in the year of the recovery.

ADDITIONAL COMMENT

The tax provisions that deal with deductions for losses and the tax provisions that deal with the deductions for bad debts are mutually exclusive, and an amount properly deductible as a loss cannot be deducted as a bad debt or vice versa.

BONA FIDE DEBTOR-CREDITOR RELATIONSHIP

Only items constituting bona fide debt are eligible to be deducted as a bad debt. A **bona fide debt** is one that arises from a valid and enforceable obligation to pay a fixed or determinable sum of money and results in a debtor-creditor relationship.[47]

KEY POINT

The fact that the debtor is a related party does not preclude deduction of a bad debt, but the taxpayer must be able to document the debt as being bona fide.

Related-Party Transactions. Determining whether a bona fide loan transaction has actually taken place is especially critical when the transaction is between the taxpayer and a family member or other related party (e.g., a controlled corporation). The tax advisor must carefully examine all the facts and circumstances surrounding the transaction because a gift does not constitute a debt. The taxpayer's intent is critical. For example, if the taxpayer's intent is to provide property, cash, or services to someone else without receiving any consideration in return, a gift—not a loan—has been made. Some tests used to determine the taxpayer's intent include the following:

---

[47] Reg. Sec. 1.166-1(c).

- Does a note or other written instrument exist which evidences an obligation to repay?[48]
- Have the parties established a definite schedule of repayment?
- Have the parties documented a stated reasonable rate of interest?
- Would a person unrelated to the debtor make the loan?[49]

EXAMPLE I:9-31 ▶ During the current year Maria loaned $20,000 to her son Sam, who used the money in his business. Although they signed no written note or contract, Sam orally promised to repay Maria as soon as his business became profitable. No rate of interest was stated. Unfortunately, the business failed and Sam went out of business in the subsequent year. He never repaid the loan principal or interest.

In this case, no valid debt exists because the taxpayer did not establish an interest rate or a repayment schedule. An unrelated person would not have made a loan to Sam under these conditions. In addition, Maria does not receive any consideration in return for the "loan." Since the facts indicate that the transaction is actually a gift, Maria may not claim a bad debt deduction because of Sam's failure to repay. ◀

REAL-WORLD EXAMPLE

A taxpayer advanced $8,500 to his son-in-law who operated a livestock auction barn. The taxpayer was entitled to a bad debt deduction upon default because notations on the checks indicated that they were loans and undisputed testimony indicated that repayment was to be made within 90 days. *Giffin A. Andrew*, 54 T.C. 239 (1970).

Tax advisors should also closely examine other related party transactions. For example, a loan from a shareholder to a controlled corporation may actually be an additional contribution to capital disguised as a loan. Thus, a transfer of cash by a shareholder who owns a controlling (i.e., more than 50%) interest in the stock of a corporation may indicate a capital contribution rather than a loan. Likewise, a "loan" from a corporation to a controlling shareholder may actually be a disguised dividend or a salary payment.

Third Party Debt. In some cases a taxpayer will guarantee or endorse someone else's obligation. If under the terms of the guarantee, the guarantor is required to pay the debtor's remaining outstanding principal as well as any accrued interest on the debt, the relationship between the debtor and the guarantor as well as the terms of the guarantee must be carefully analyzed. The guarantor's intent determines whether the guarantee and subsequent payment of the outstanding principal and accrued interest constitutes a gift to the debtor. If the guarantor's intent was a gift, the guarantor may not deduct the payment of the outstanding principal and accrued interest. On the other hand, if the guarantor can prove that the guarantee was not a gift, the guarantor may deduct the principal and accrued interest as a bad debt issued to the debtor at the time of the payment.

EXAMPLE I:9-32 ▶ Ron is the sole shareholder and a full-time employee of Zip Corporation. For Zip Corporation to obtain a bank loan, Ron personally signs a guarantee that the loan will be repaid. Unfortunately, Zip Corporation defaults on the loan and Ron must repay the loan. Assume proof exists that Ron signed the guarantee to preserve his job and enhance his investment in Zip Corporation. Although Ron receives no direct consideration for having signed the note, he does receive indirect consideration in the form of continued job security and protection of his investment. Because a business or investment purpose motivated Ron to sign the loan guarantee, Ron may deduct the bad debt. On the other hand, without proof, this guarantee and subsequent payment of Zip Corporation's debt by Ron may be seen as merely an additional capital contribution by Ron to Zip Corporation. ◀

TAXPAYER'S BASIS IN THE DEBT

For a bad debt to be deductible, the creditor must have basis in the debt. The taxpayer may acquire this basis in different ways. If a taxpayer loans money, the taxpayer's basis in the debt is the amount loaned. If the debt arises because the taxpayer provides property or

---

[48] A written note or other instrument is an evidence of a bona fide debtor-creditor relationship. However, if the note or other instrument is registered or has interest coupons and is issued by a corporation or a government, the bad debt provisions of Sec. 166 do not apply. Instead, the worthless security provisions of Sec. 165 (previously discussed) apply.

[49] *Jean C. Tyler v. Tomlinson*, 24 AFTR 2d 69-5426, 69-2 USTC ¶9559 (5th Cir., 1969). See also, *C. L. Hunt*, 1989 PH T.C. Memo ¶89,335, 57 TCM 919, where certain loans that the taxpayer made to his children were treated as bona fide loans, whereas others were treated as gifts. In that case, the children had been trading in silver futures and were required to make margin calls. Because they could not make the calls, the children's positions were involuntarily liquidated. Up to the date of the liquidation, the taxpayer had made loans to the children that were payable on demand and were subject to the prime rate of interest. These loans were evidenced by promissory notes. After the liquidation, the taxpayer continued to make loans to the children. However, these loans were not evidenced by notes. The loans up to the time of the liquidation were treated as bona fide loans and the subsequent loans were treated as gifts.

TYPICAL MISCONCEPTION

Taxpayers sometimes mistakenly assume that a cash method taxpayer can take a bad debt deduction on a debt that arose from services rendered by the taxpayer.

services for the other party, basis is established only if the taxpayer has previously included the FMV of the property or services in income. This often depends on the taxpayer's method of accounting. An accrual method taxpayer generally reports income in the year the services are performed or the property is provided. (See the discussion in Chapter I:11.) Thus, an accrual method taxpayer has a basis in either a note receivable or an open account receivable equal to the amount included in gross income (i.e., the FMV of the services). A cash method taxpayer, however, reports income only in the year in which the taxpayer receives payment in the form of cash or property. Because a note constitutes the receipt of property, a cash method taxpayer reports income (and establishes basis) in the year the note is received. However, if the cash method taxpayer does not receive a note and the receivable is an open account item, the taxpayer reports no income until the receivable is collected. Thus, the taxpayer has no basis in the receivable and does not receive a bad debt deduction if the receivable is not collected.

EXAMPLE I:9-33 ▶ In October of the current year, Jim performs some legal services for Joy. Jim bills Joy for $10,000. Joy does not sign a note for the debt. As a cash method taxpayer, Jim does not include the $10,000 in his current year's income. After repeated efforts to collect the fee, Jim discovers in June of the subsequent year that Joy has left the city and cannot be found. Jim may not deduct a bad debt for the uncollected amount in the subsequent year because he has not taken the amount into income and he has no basis in the debt. If Joy had signed a note for the debt, Jim would have reported income in the current year in an amount equal to the note's FMV. Thus, Jim can deduct the loss when the note becomes uncollectible in the subsequent year. ◀

ADDITIONAL COMMENT

Because in many cases it is difficult to pinpoint the exact time of worthlessness, the statute of limitations is extended to seven years for bad debts.

DEBT MUST BE WORTHLESS

To deduct a bad debt, the taxpayer must show that the debt is worthless. This determination is made by reference to all the pertinent evidence, including the general financial condition of the debtor and whether the debt is secured by collateral.

In proving the worthlessness of a debt, a taxpayer does not need to take legal action if the surrounding circumstances indicate that legal action probably would not result in the collection of the debt. By simply showing that legal action is not warranted, the taxpayer provides sufficient proof that the debt is worthless.[50] Indications that an unsecured debt is worthless include bankruptcy of the debtor, disappearance or death of a debtor, and repeated unsuccessful attempts at collection. Furthermore, if the surrounding circumstances warrant it, a taxpayer may deduct a worthless debt even before the debt comes due. As will be explained later in this chapter, a nonbusiness debt must be totally worthless before a deduction is allowed. However, a current deduction is allowed for a partially worthless business bad debt.

KEY POINT

Taxpayers must distinguish between business and nonbusiness bad debts because the tax treatment varies according to the type of debt.

NONBUSINESS BAD DEBTS

The distinction between a business bad debt and a nonbusiness bad debt is important because the classification of the debt determines its tax treatment. A business bad debt gives rise to an ordinary deduction, whereas a taxpayer must treat a nonbusiness bad debt as a short-term capital loss. All loans made by a corporation are assumed to be associated with the corporation's business; therefore, the provisions for nonbusiness bad debts do not apply to corporations.

TYPICAL MISCONCEPTION

Assume that a taxpayer lends money to a friend to be used in the friend's business. If the friend does not repay the loan, the debt is a nonbusiness bad debt unless the taxpayer is in the business of lending money. This type of debt is occasionally improperly classified as a business debt.

Definition of a Nonbusiness Bad Debt. A *nonbusiness debt* is defined as any debt other than (1) a debt created or acquired in connection with a trade or business of the taxpayer or (2) a debt the loss from the worthlessness of which is incurred in the taxpayer's trade or business. This determination depends on an examination of the facts and circumstances surrounding the debt in question.

A debt incurred in a taxpayer's business continues to be a business debt for that taxpayer even if, at the time the debt goes bad, the taxpayer has ceased conducting that particular business (situation (1) above). If another taxpayer acquires a business, any outstanding debt at the time the business is acquired continues to be business debt as long as the purchaser continues the business (situation (2) above). The debt is a nonbusiness debt if the person who owns the debt when it becomes worthless is not engaged in the business in which the debt is incurred either at the time the debt arose or when it becomes worthless.

---

[50] Reg. Sec. 1.166-2.

EXAMPLE I:9-34 ▶ Matt, an individual who uses the accrual method of accounting, is engaged in the grocery business. During 2025, he extends credit to Jeff on an open account. In 2026, Matt sells his business to Joan, but retains Jeff's account. Jeff's account becomes worthless in 2026. Even though Matt is no longer engaged in the grocery business at the time the debt becomes worthless, he may deduct the loss as a business bad debt in 2026. If Joan purchases Jeff's account upon acquiring the grocery business, Joan is entitled to a business bad debt deduction in 2026 because the debt was incurred in the trade or business in which Joan is currently engaged. ◀

In addition, classification as a business debt requires a proximate relationship between the loan and the taxpayer's business.[51] According to the Supreme Court, this relationship exists if a business motive is the taxpayer's dominant motivation in making the loan. This determination must be made on a case-by-case basis. For example, when an individual stockholder who is also an employee of the corporation loans money to the corporation, is the loan a business or nonbusiness debt? Because an employee is considered to be engaged in the business of working for a corporation, a loan made to the corporation in an attempt to protect the employment relationship may be held to be a business debt. However, if the individual's dominant motive is to protect his or her stock investment, the loan is a nonbusiness debt.[52]

EXAMPLE I:9-35 ▶ Lisa is an individual engaged in the advertising business. If clients occasionally need additional funds to meet their cash-flow obligations, Lisa sometimes lends them money. Lisa's dominant motive for making the loans is to retain the clients. She has no ownership interests in these clients. Under these facts, if any of these loans becomes worthless, it would likely be considered a business bad debt.[53] ◀

Tax Treatment. Individuals deduct nonbusiness debts that become wholly worthless during the year as short-term capital losses. The length of time the debt is outstanding has no bearing on this treatment.

Individuals generally prefer an ordinary deduction rather than a short-term capital loss because capital losses are first used to offset capital gains. If the capital losses exceed the capital gains, the individual taxpayer is limited to an additional $3,000 tax deduction each year. Any loss in excess of this limit is carried over to subsequent years to be included in the capital gain and loss netting process in those years (see Chapter I:5).

EXAMPLE I:9-36 ▶ During 2025, Kim loaned her friend $10,000. The friend used the funds to invest in commodity futures. The transaction had all the characteristics of a bona fide debt rather than a mere gift to a friend. Unfortunately, the commodities market prices declined, and Kim's friend incurred substantial losses. In 2026, Kim's friend declared personal bankruptcy and Kim was unable to collect any of the loan. Kim did not recognize any other capital gains or losses during 2026. The $10,000 bad debt loss recognized in 2026 is treated as a short-term capital loss. Thus, Kim may deduct only $3,000 in 2026. The remaining $7,000 is carried forward indefinitely to 2027 and subsequent years. ◀

TYPICAL MISCONCEPTION

Partial worthlessness means that a debt is still partially recoverable. The term is sometimes erroneously applied to debt where there has been a partial recovery even though there is no prospect for further recovery.

Partial Worthlessness. As previously noted, taxpayers may not deduct a partially worthless nonbusiness debt. Thus, a taxpayer cannot deduct a loss for a nonbusiness debt that is still partially recoverable during the year.

---

[51] Reg. Sec. 1.166-5(b)(2).

[52] *John M. Trent v. CIR*, 7 AFTR 2d 1599, 61-2 USTC ¶9506 (2nd Cir., 1961). See also *Charles L. Hutchinson*, 1982 PH T.C. Memo ¶82,045, 43 TCM 440 and *U.S. v. Edna Generes*, 29 AFTR 2d 72-609, 72-1 USTC ¶9259 (USSC, 1972).

[53] *Stuart Bart*, 21 T.C. 880 (1954), *acq.* 1954-1 C.B. 3.

EXAMPLE I:9-37 ▶ Gordon, an individual, made a $5,000, five-year interest-bearing loan to a small company in 2023. Gordon was not in the trade or business of making commercial loans. In 2025, Gordon received word from the attorney who was appointed trustee of the company that bankruptcy proceedings had been filed. The trustee indicated that, although final disposition of the case will not occur until 2026, Gordon can reasonably expect to receive only 20 cents for every $1 invested. Because this is a nonbusiness bad debt that is still partly recoverable in 2026, Gordon may not deduct the partial loss as a short-term capital loss in 2025 and must wait until 2026 when the case is finally settled to deduct the nonbusiness bad debt. ◀

BUSINESS BAD DEBTS

The tax treatment of losses from business bad debts differs substantially from the treatment of nonbusiness bad debts. As previously discussed, a business bad debt provides an ordinary loss deduction. Furthermore, taxpayers may also deduct a business debt that has become only partially worthless during the year.

EXAMPLE I:9-38 ▶ Assume the same facts as in Example I:9-37 except that Gordon's loan is made for business reasons (e.g., to provide assistance to a customer in financial difficulty). Because 80% of the loan is reasonably expected to be unrecoverable during 2025, Gordon may deduct $4,000 (0.80 × $5,000) as an ordinary loss in 2025. If Gordon receives only $600 in 2026 as a settlement, he may deduct an additional $400 of ordinary loss for the year. ◀

BOOK-TAX DIFFERENCES

In general, for tax purposes, taxpayers can use only the specific write-off method of accounting for bad debts. However, a corporation or other taxpayer would probably be required to use the reserve method for financial reporting purposes. This book-tax difference is one of the most common M-1 or M-3 adjustments in filing a Form 1120 for corporate taxpayers.

Accounting for the Business Bad Debt. In general, two basic methods are available to account for business bad debts: the specific write-off method and the reserve method. Except for certain specialized industries, however, taxpayers can use only the specific write-off method for tax purposes. Under the **specific write-off method**, the taxpayer deducts each bad debt individually as it becomes worthless and the taxpayer writes it off as an expense. Taxpayers use this method for (1) business bad debts that are either totally or partially worthless and (2) nonbusiness bad debts that are totally worthless. However, as previously noted, taxpayers take no deduction for partially worthless nonbusiness bad debts.

In the case of a partially worthless business bad debt, taxpayers may only deduct the worthless part of the debt. The taxpayer must prove to the satisfaction of the IRS the amount of the debt that has become worthless.

Recovery of Bad Debts. A taxpayer may collect a debt that was previously written off for tax purposes. Since the taxpayer previously deducted the uncollectible debt, the taxpayer must report the recovery as income in the year it is collected. The amount of the income that must be reported depends on the tax benefit rule discussed in Chapter I:4.

DEPOSITS IN INSOLVENT FINANCIAL INSTITUTIONS

At their election, qualified individuals may treat a loss on deposits in qualified bankrupt or insolvent financial institutions as a personal casualty loss in the year in which the individual can reasonably estimate the loss. The recognized loss is the difference between the taxpayer's basis in the deposit and a reasonable estimate of the amount that the taxpayer will receive. This treatment allows the individual an ordinary loss deduction, but subjects the loss to the personal casualty loss limitations.

Qualified financial institutions include banks, federal or state chartered savings and loans and thrift institutions, and federal or state insured credit unions.

This election applies to all losses sustained by the individual in the same institution and cannot be revoked unless the taxpayer receives IRS permission.

The treatment of business and nonbusiness bad debts for non-corporate taxpayers is summarized in Topic Review I:9-4.

TOPIC REVIEW I:9-4

Bad Debts

TYPE OF DEBT	RESULTS
Nonbusiness	Deductible as a short-term capital loss. Deductible only when the debt is totally worthless. The taxpayer must have basis in the debt.
Business	Deductible as an ordinary loss. Except for certain specialized exceptions, the specific write-off method must be used. The reserve method is not available. May deduct partial worthlessness. Must have basis in the debt.

NET OPERATING LOSSES

OBJECTIVE 6

Compute a net operating loss deduction

A **net operating loss** (NOL) under Sec. 172 generally involves only business income and expenses. An NOL occurs when taxable income for any year is negative because business expenses exceed business income. A deduction for the NOL arises when a taxpayer carries the NOL to a year in which the taxpayer has taxable income. Thus, an NOL for one year becomes a deduction against taxable income in a subsequent year.

The NOL deduction is intended to mitigate the inequity caused by the interaction of the progressive rate structure and the requirement to report income on an annual basis. This inequity arises between taxpayers whose business income fluctuates widely from year to year and those whose business income remains relatively constant.

EXAMPLE I:9-39

John and Julie Jones and Ken and Karen Smith are both married couples and file joint returns. Over a two-year period they both report a total of $140,000 in taxable income. However, John and Julie report $70,000 of taxable income each year; Ken and Karen report $60,000 of loss in the first year and $200,000 of income in the second year. Without the NOL provisions and using the 2025 tax rates for both years, John and Julie will report a $15,846 ($7,923 + $7,923) total tax liability for the two years, whereas Ken and Karen will report a total tax liability of $20,628 on their taxable income of $140,000 ($200,000 − $60,000) in the second year.[54] Although the total tax liability over the two years for the two couples is still unequal ($15,846 for the Joneses, and $20,628 for the Smiths), the ability to carry over NOLs substantially reduces the difference and helps provide some degree of fairness.

KEY POINT

If taxpayers were not entitled to a deduction for net operating losses, taxpayers would actually pay a tax on an amount that exceeded their economic income over a period of time. The NOL deduction permits taxpayers to offset taxable income with losses incurred in other years.

COMPUTING THE NET OPERATING LOSS FOR INDIVIDUALS

The starting point in calculating an individual's NOL is generally taxable income. As mentioned earlier in this chapter, individuals may deduct three basic types of expenses to arrive at the amount of taxable income: business-related expenses, investment-related expenses, and certain personal expenses. The NOL, however, generally attempts to measure only the economic loss that occurs when business expenses exceed business income. Thus, individual taxpayers must make several adjustments to taxable income to arrive at the amount of the NOL for any particular year. These include adjustments for an NOL deduction, a capital loss deduction, the deduction for personal exemptions, and the excess of nonbusiness deductions over nonbusiness income.

ADDITIONAL COMMENT

In computing the NOL for corporations, only minor adjustments are necessary.

Add Back Any NOL Deduction. Under certain circumstances, a taxpayer might have taken a deduction for an NOL arising from another tax year in computing the taxable loss for the current loss year. Allowing this deduction to create or increase the NOL of the current loss year would provide an unwarranted benefit. Thus, taxable income for the current loss year must be increased for this deduction.

ADDITIONAL COMMENT

If taxpayers were permitted to calculate the NOL for the current year by including NOL carryovers from earlier years, they could possibly extend the carryover period beyond the statutorily established 20-year carryforward period allowed for losses before January 1, 2018.

---

[54] Using the 2025 tax rate schedules for both years.

Add Back Any Capital Loss Deduction. To compute taxable income, individuals may deduct up to a maximum of $3,000 capital losses in excess of capital gains in any year. Any capital loss in excess of this limit can be carried over and deducted in a subsequent tax year, subject to the same limitation. Because capital losses have their separate carryover provisions, taxpayers must add back any deduction associated with these losses to taxable income to arrive at the NOL for the current loss year. To make this adjustment, the taxpayer must follow several steps:

Step 1. A taxpayer must separate nonbusiness capital gains and losses from business capital gains and losses. The nonbusiness gains and losses are then netted, while the business gains and losses are netted separately.

Step 2. If the nonbusiness capital gains exceed the nonbusiness capital losses, the excess, along with other types of nonbusiness income, is first used to offset any nonbusiness ordinary deductions. Any nonbusiness capital gain remaining is then used to offset any business capital loss in excess of the business capital gain for the year.[55]

Step 3. If both groups of transactions result in net losses, the capital loss deduction provided by these transactions must be added back. For purposes of the NOL, no deduction is allowed for either business or nonbusiness net capital losses.

Step 4. If the taxpayer's nonbusiness capital losses exceed the nonbusiness capital gains, the losses may not be offset against the taxpayer's excess business capital gains. Allowing this offset would provide an indirect deduction for a nonbusiness economic loss.[56]

EXAMPLE I:9-40 ▶ During the current year, Nils recognizes a short-term capital loss of $10,000 on the sale of an investment capital asset. He also recognizes a $5,000 long-term capital gain on the sale of a business capital asset. For taxable income purposes, the loss is netted against the gain, leaving a $5,000 net short-term capital loss. This loss provides a $3,000 deduction from taxable income, with the remaining $2,000 being carried forward to the following year. To compute the NOL, however, none of the $10,000 nonbusiness capital loss is deductible. Thus, the $3,000 deduction as well as the $5,000 loss that offset the business capital gain must be added back because in computing taxable income the taxpayer, in essence, has received a total $8,000 reduction from the nonbusiness capital loss. ◀

PRE-2018 LAW

Individual taxpayers were allowed a deduction for personal and dependency exemptions prior to December 31, 2017. The exemptions had to be added back to arrive at the year's NOL.

ADDITIONAL COMMENT

An excess of nonbusiness deductions over nonbusiness income cannot increase the NOL. However, an excess of nonbusiness income over nonbusiness expenses can reduce the NOL.

Add Back Excess of Nonbusiness Deductions over Nonbusiness Income. Because nonbusiness deductions do not reflect an economic loss from business, they are not deductible in arriving at the NOL. However, these deductions do offset any nonbusiness income reported during the year. Nonbusiness income includes sources of income such as dividends and interest, as well as nonbusiness capital gains in excess of nonbusiness capital losses. Wages and salary, even if they are earned in part-time employment, are considered business income. Nonbusiness deductions include itemized deductions such as charitable contributions, medical expenses, and nonbusiness interest and taxes. Casualty losses on personal-use assets, however, are treated as business losses and are excluded from this adjustment.[57] If a taxpayer does not have itemized deductions in excess of the standard deduction, the standard deduction is used as the amount of the nonbusiness deductions.

---

[55] Reg. Sec. 1.172-3. If the nonbusiness deductions exceed the nonbusiness income, the excess is added back. This adjustment is discussed later in the chapter.

[56] Sec. 172(d)(2). Note that all deductible nonbusiness capital losses involve investment property because capital losses on personal-use assets are not deductible in arriving at taxable income. To make the adjustment for any capital loss, the exclusion under Sec. 1202 for gains from small business stock is not allowed (see Chapter I:5).

[57] Sec. 172(d)(4)(C).

Following are several independent examples demonstrating these required adjustments. In each case, assume that Nancy is a single taxpayer.

EXAMPLE I:9-41 ► During 2024, Nancy, who is single, reports the following taxable income:

Gross income from business		$123,000	
Minus: Business expenses		(147,000)	($24,000)
Plus: Interest income			700
Dividend income			400
AGI			($22,900)
Minus: Greater of itemized deductions or standard deduction:			
Interest expense		$ 6,000	
Taxes		8,000	
Casualty loss (reduced by the $100 floor)		2,000	
Total itemized deductions		$ 16,000	
		or	
Standard deduction		15,000	(16,000)
Taxable income			($38,900)
Nancy's NOL for the year is computed as follows:			
Taxable income			($38,900)
Nonbusiness deductions:			
Itemized deductions	$16,000		
Minus: Casualty loss	(2,000)	$ 14,000	
Minus: Nonbusiness income:			
Interest	$700		
Dividends	400	(1,100)	
Plus: Excess of nonbusiness deductions over nonbusiness income			12,900
Net operating loss			($26,000)[a] ◄

[a] Note that the NOL equals the total of the $24,000 net business loss and the $2,000 casualty loss.

EXAMPLE I:9-42 ► During 2025, Betsy, who is single, reports the following taxable income:

Gross income from business		$123,000	
Minus: Business expenses		(147,000)	($24,000)
Plus: Interest income			700
Dividend income			400
AGI			($22,900)
Minus: Greater of itemized deductions or standard deduction:			
Interest expense		$ 2,000	
		or	
Standard deduction		15,000	(15,000)
Taxable income			($37,900)
Betsy's NOL for the year is computed as follows:			
Taxable income			($37,900)
Nonbusiness deductions:			
Standard deduction		$ 15,000	
Minus: Nonbusiness income:			
Interest	$ 700		
Dividends	400	(1,100)	
Plus: Excess of nonbusiness deductions over nonbusiness income			13,900
Net operating loss			($24,000)[a] ◄

[a] Note that the NOL equals the net business loss for the year.

EXAMPLE I:9-43 During 2025, Rachael, who is single, reports the following taxable income:

Gross income from business		$123,000	
Minus:	Business expenses	(147,000)	($24,000)
Plus:	Interest income		700
	Dividend income		400
	Salary		6,000
	Nonbusiness LTCG		14,000
AGI			($2,900)
Minus:	Greater of itemized deductions or standard deduction:		
	Interest expense	$ 6,000	
	Taxes	9,000	
Casualty (reduced by the $100 floor)		1,000	
Total itemized deductions		$ 16,000	
		or	
Standard deduction		15,000	(16,000)
Taxable income			($18,900)

Rachael's NOL for the year is computed as follows:

Taxable income				($18,900)
Plus:	Nonbusiness deductions:			
	Itemized deductions	$16,000		
Minus: Casualty loss		(1,000)	$ 15,000	
Minus:	Nonbusiness income:			
	Interest	$700		
	Dividends	400		
	LTCG	14,000	(15,100)	
Excess of nonbusiness deductions over nonbusiness income				0
Net operating loss				($18,900)[a]

[a]Note that the NOL can also be calculated as follows:

Loss from business	($24,000)
Salary	6,000
Casualty loss	(1,000)
Excess of nonbusiness income ($15,100) over nonbusiness deductions ($15,000)	100
NOL	($18,900)

CARRYOVER PERIODS

Prior to the Tax Cuts and Jobs Act of 2017 (for tax years before 2018), NOLs were allowed to be carried back 2 years and carried forward 20 years. The TCJA of 2017 provided that NOLs arising from non-farming businesses after December 31, 2017 were allowed to be carried forward indefinitely.[58] However, in providing COVID relief in the CARES Act of 2020, Congress changed the treatment of NOLs for tax years 2018, 2019, and 2020. For these years, taxpayers can now carry back an NOL for 5 years and carry forward indefinitely. The original TCJA of 2017 rules (carry forward only indefinitely) still apply to years after December 31, 2020. The amount that can be deducted in a following year is limited to the lesser of the aggregate net operating losses carried over or 80% of taxable income computed before any NOL deduction is taken.

EXAMPLE I:9-44 During 2025, Sue has a NOL of $50,000 that she can carry forward. In the following year, 2026, Sue has taxable income of $60,000. Sue carries the NOL to 2026 and can deduct the lesser of:

1. the NOL carryforward of $50,000, or
2. 80% of taxable income before the NOL. In this case 80% × $60,000 = $48,000.

So Sue will be able to deduct $48,000 of the NOL in 2026, but will need to carry forward the remaining $2,000 of NOL from 2025 to future years.

PRE-2018 LAW

NOLs arising before January 1, 2018 were allowed to be carried back 2 years and carried forward 20 years.

Topic Review I:9-5 summarizes the rules for net operating losses.

---

[58] For NOLs arising in a farming business, in a qualified small business attributable to a Presidentially declared disaster, or in a casualty or theft sustained by an individual, the carryback period is extended to three years. These NOLs are taken after the regular NOL. Certain "specified liability losses" are entitled to a ten-year carryback. Sec. 172(b)(1)(C) and (f).

TOPIC REVIEW I:9-5

Net Operating Losses

ITEM	RULES
Computation of NOL (adjustments to taxable income)	Add back any NOL deduction carried to the current year.
	Add back any capital loss deduction. Add back the excess of nonbusiness deductions over nonbusiness income. For this purpose, casualty losses on personal-use property are treated as business losses.
Carryover period	May be carried forward indefinitely.
Income limitation	NOL deduction is limited to 80% of taxable income.

EXCESS BUSINESS LOSSES

OBJECTIVE 7

Compute the excess business loss limitation

For taxable years beginning after December 31, 2020, a noncorporate taxpayer is not allowed to deduct any excess business losses.[59] Any excess losses are carried forward and are treated as a part of the taxpayer's NOL. An excess business loss is the excess of aggregate business deductions for the year over the sum of a taxpayer's aggregate business gross income and gains plus $313,000 if single and $626,000 if married in 2025 ($305,000/$610,000 in 2024). The excess business loss limitations for partnerships and S corporations are applied at the partner or shareholder level. This limitation is applied to passive activities after the application of the passive loss rules.

EXAMPLE I:9-45 ▶ During 2025, Tim, who is single, reports the following income/loss from his business activities:

Gross income from sole proprietorship	$ 2,500,000
Gross expenses from sole proprietorship	($2,200,000)
Net loss from ABC Partnership	($ 785,000)

Tim's excess business loss is $180,000, calculated as follows:

Business deductions ($2,200,000 + $785,000)	$ 2,985,000
Business income plus $313,000 ($2,500,000 + $313,000)	−$ 2,813,000
Excess Business Loss	$ 172,000

$172,000 of business losses are disallowed and will become an NOL carryover. ◀

TAX PLANNING CONSIDERATIONS

OBJECTIVE 8

Identify tax planning considerations for losses and bad debts

BAD DEBTS

To deduct a bad debt, a taxpayer must show that the debt is worthless. At times the IRS might assert that the debt being written off is either not yet worthless or that it became worthless in a previous year. If the taxpayer is unable to overcome the IRS's assertion concerning the year of worthlessness, the taxpayer might be barred from filing an amended return for the prior year because of the statute of limitations.[60] Thus, taxpayers should carefully document all efforts at collection and other facts that show the debt is worthless.

---

[59] Sec. 461(l).

KEY POINT

If uncertainty exists as to the year in which a debt became worthless, the issue may not be settled within the normal three-year statute of limitations. For this reason, a taxpayer may claim a deduction for a worthless debt at any time within seven years.

As previously mentioned, a third-party guarantor of a loan who is required to repay the debt may, under certain circumstances, be entitled to a bad debt deduction. The guarantor must demonstrate that he or she received reasonable consideration in the form of cash or property in exchange for guaranteeing the debt. If the taxpayer does not receive proper consideration, the guarantee and subsequent payment of the loan by the guarantor is considered to be a gift rather than a loan. Reasonable consideration is also deemed to be received if the taxpayer enters into the agreement for a good faith business purpose or in accordance with normal business practice. However, if the taxpayer guarantees the debt of a spouse or a relative, the taxpayer must receive the consideration in the form of cash or property.

In the case of an outright loan between related taxpayers, the lender should always make sure to retain proper documentation to substantiate the fact that the transaction is a loan. If the taxpayer does not keep such documentation, the IRS may assert that the transaction is a gift.

CASUALTIES

A deduction is allowed for stolen property, but no deduction is allowed for lost property. Thus, taxpayers should always carefully document losses of property through theft (e.g., the filing of police reports or claims with the taxpayer's insurance company). In addition, pictures and written appraisals may be helpful to prove the amount of the loss.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 9

Identify compliance and procedural considerations for losses and bad debts

CASUALTY LOSSES

If a taxpayer sustains a casualty loss in a location that the President of the United States declares a disaster area, he or she may make an election to deduct the loss in the year preceding the year in which the loss occurred. A taxpayer makes this election by either filing the return for the previous year and including the loss in that year (if the return has not already been filed) or filing an amended return or claim for refund for that year.[61] The return should clearly include all the following information:

ADDITIONAL COMMENT

Instant access for downloading federal income tax forms, instructions, publications, etc. is available on the Internet (http://www.irs.gov).

- That the election is being made
- The date of the disaster giving rise to the loss
- The city, county, and state in which the damaged property is located

The taxpayer must make the election before the due date of the return for the year in which the disaster actually occurs. Although the Regulations state that the election may not be revoked more than 90 days after it is made, the Tax Court has held that this part of the Regulation is invalid.[62]

WORTHLESS SECURITIES

As explained earlier in this chapter, securities that become worthless during the taxable year are deemed to have become worthless on the last day of the year. In many cases, this treatment causes the loss to be treated as a long-term capital loss. If the loss from the worthless security is long term, the taxpayer reports it in Part II of Schedule D (Form 1040) along with the other long-term gains and losses for the year. The taxpayer reports short-term capital losses in Part I of Schedule D.

---

[60] However, the statute of limitations for claims for a refund or credit because of a bad debt is extended from three years to seven years under Sec. 6511(d)(1), thus giving the taxpayer additional time if this is the case.

[61] Sec. 165(i).

[62] *Chester Matheson*, 74 T.C. 836 (1980), *acq*. 1981-2 C.B. 2.

WHAT WOULD YOU DO IN THIS SITUATION?

A client comes to you with an idea to treat a loan that he made to one of his children two years ago as a bad debt. The loan is evidenced by a properly executed note with stated interest and payment dates. However, the client has not collected any loan payments or interest during the two-year period. The child is insolvent and has declared bankruptcy. Before leaving your office, the client also mentions in passing that the child is in London on vacation with other members of the family and will stay in Europe for six weeks. What would you do about classifying this loan as a bad debt?

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:9-1 What is the closed transaction doctrine, and why does it exist for purposes of recognizing a loss realized on holding property?

I:9-2 When property is disposed of, what factors influence the amount of the deductible loss?

I:9-3 Describe the usual tax consequences that apply to a worthless security.

I:9-4 Under what circumstances will a loss that is realized on a worthless security not be treated as a capital loss?

I:9-5 What two general requirements must be met for a transaction to result in a capital loss?

I:9-6 What requirements must be met for stock to be considered Sec. 1244 stock?

I:9-7 What tax treatment applies to gains and losses on Sec. 1244 stock?

I:9-8 Describe a situation where a loss on the sale of business or investment property is not currently deductible, and explain why.

I:9-9
a. What is a passive activity?
b. Who is subject to the passive loss limitation rules?

I:9-10
a. For purposes of the passive loss rules, what is a closely held C corporation?
b. In what way do the passive loss rules differ from the regular passive loss rules when applied to closely held C corporations?

I:9-11 Why is it important to identify exactly what constitutes an activity for purposes of the passive activity rules?

I:9-12
a. If a taxpayer is involved in several different business operations during the year, how is the determination made as to how many activities these operations constitute for purposes of the passive activity loss rules?
b. Can a business operation and a rental operation ever be combined into one activity? Explain.

I:9-13 Which of the following activities are considered passive for the year? Explain. Consider each situation independently.
a. Laura owns a rental unit that she rents out to students. The rental unit is Laura's only business and she spends approximately 875 hours per year managing, collecting the rent, advertising, and performing minor repairs. At times she must hire professionals such as plumbers to do the maintenance. Is the rental unit a passive activity with respect to Laura?
b. Kami is a medical doctor who works four days a week in a medical practice that she and five other doctors formed. Last year she and her partners formed another partnership that owns and operates a medical lab. The lab employs ten technicians, one of whom also acts as manager. During the year Kami spent 120 hours in meetings, reviewing records, etc., for the lab. Is the lab a passive activity with respect to Kami?
c. Assume the same facts in part b. In addition, assume that the same group of doctors have formed two other partnerships. One is a medical supply partnership. Kami spent

150 hours working for this partnership. The medical supply partnership has five full-time employees. Kami also spent 250 hours during the year working for the other partnership. This partnership specializes in providing medical services to individuals from out of town who are staying at local hotels and motels. This partnership hires two full-time and six part-time nurses. Are the lab and the two other partnerships passive activities with respect to Kami?

I:9-14 Explain the difference between materially participating and actively participating in an activity. When is the active participation test used?

I:9-15 **a.** What requirements must be met in order for a taxpayer to deduct up to $25,000 of passive losses from rental real estate activities against active and portfolio income?

b. What requirements must be met in order for a real estate rental activity to be considered a real estate business that is not subject to the passive loss rules?

I:9-16 Are the losses suspended under the passive loss rules lost forever? Explain.

I:9-17 What tests must be met to qualify a loss as deductible under the casualty loss provisions? Discuss the application of each of these tests.

I:9-18 Explain how a taxable gain on property can be realized because of a casualty event such as a fire or theft. How are these gains treated?

I:9-19 During the current year, Rulon's toilet overflowed due to a pipe breaking during a nationally declared earthquake disaster. Rulon was at work when the earthquake hit, and by the time he returned, the water had flooded the basement, causing damage to the carpet, walls, and ceiling. The cost of repairing the damage was $9,000. Rulon has homeowners insurance that will cover half of the damage. However, because he has already had claims this year, Rulon does not want to report the incident to his insurance company for fear of a large increase in insurance rates. Instead, Rulon wants to deduct the loss as a casualty loss on his tax return. His AGI for this year is $50,000, and he has other itemized deductions of $6,000. Rulon is single. What amount of the casualty loss may he deduct?

I:9-20 Compare and contrast the computational rules for deducting casualty losses on personal-use property with casualty losses incurred on business or investment property.

I:9-21 Under what circumstances may a loss arising from a casualty or theft be deducted in a year other than the year in which the loss occurs?

I:9-22 For individuals, how are casualty losses on personal-use property reported on the tax return? How are casualty losses on business property reported?

I:9-23 Is the $100 floor on personal-use casualty losses imposed on each individual loss item if more than one item of property is destroyed in a single casualty? Is the floor imposed before or after the casualty gains are netted against the casualty losses?

I:9-24 How are excess business losses calculated? Does the limitation apply to passive activities as well as nonpassive activities?

I:9-25 Sarah loans $50,000 to her best friend, John. John uses the money to open a pizza parlor next to the local high school. Three years later, when John still owed Sarah $15,000, John closed the pizza parlor and declared bankruptcy. Discuss the appropriate tax treatment for Sarah.

I:9-26 Dana is an attorney who specializes in family law. She uses the cash method of accounting and is a calendar-year taxpayer. Last year, she represented a client in a lawsuit and billed the client $5,000 for her services. Although she made repeated attempts, Dana was unable to collect the outstanding receivable. Finally, in November of the current year, she finds out that the individual has moved without leaving any forwarding address. Dana's attempts to locate the individual are futile. What is the amount of deduction that Dana may take with respect to this bad debt?

I:9-27 Under what circumstances may a taxpayer deduct a bad debt even though another party to the transaction is the creditor?

I:9-28 What is the definition of a nonbusiness debt? What is the character of the deduction for a nonbusiness bad debt?

I:9-29 How can individuals deduct a loss on a deposit in a qualified financial institution on their tax returns?

I:9-30 A taxpayer collects a debt that was previously written off as a bad debt. What tax consequences arise if the recovery is received in a subsequent tax year?

I:9-31 What is an NOL deduction, and why is it allowed?

I:9-32 List the adjustments to an individual taxpayer's negative taxable income amount that must be made in computing an NOL for the year. What is the underlying rationale for requiring these adjustments for individuals?

I:9-33 Can a casualty loss on a personal-use asset create or increase an NOL? Explain.

I:9-34 Several recent tax law changes have impacted how NOLs are treated. Pre-2018, NOLs could be carried back 2 years and carried forward 20 years. For tax years 2018, 2019, and 2020, the CARES Act allowed taxpayers to carry back an NOL for 5 years. Beginning in 2021, taxpayers can carry forward the NOL indefinitely. Compare the advantages and disadvantages of these sets of rules.

ISSUE IDENTIFICATION QUESTIONS

I:9-35 On January 12 of the current year, Barney Corporation, a publicly held corporation, files for bankruptcy. During the bankruptcy proceedings it is determined that creditors will only receive 10% of what they are owed and that the shareholders will receive nothing. Sheryl, a calendar-year taxpayer, purchased 1,000 shares of Barney Corporation common stock for $7,000 on February 22 of the prior year. What tax issues should Sheryl consider?

I:9-36 Five years ago, Cora incorporated Gold, Inc., by contributing $80,000 and receiving 100% of the Gold common stock. Gold, Inc. is engaged in a retail business. Cora is single. Gold experienced financial difficulties. On December 22 of the current year, Cora sold all of her Gold stock for $5,000. What tax issues should Cora consider?

I:9-37 As a result of a federally declared earthquake disaster, Evan crashed his automobile, doing $8,000 worth of damage. Fortunately, no one was injured. Since Evan received two speeding tickets during the past year, he is concerned about losing his insurance if he files an insurance claim. What tax issues should Evan consider?

I:9-38 Dan, a full-time employee of Beta, Inc., also owns 10% of its outstanding stock. The other 90% is owned by his three brothers. During the year, the president of Beta came to Dan, expressing grave concern about whether the company had the financial resources to remain in business. He mentioned specifically that a bank was threatening to force Beta to file bankruptcy if it didn't repay its $100,000 loan in full. After some negotiation, Dan agreed to loan Beta the $100,000 for one year until permanent financing could be obtained. A reasonable interest rate was set and a payment schedule was documented. Unfortunately, business did not improve, and Beta discontinued its business and did not repay the loan. What tax issues should Dan consider?

PROBLEMS

I:9-39 ***Section 1244 Losses.*** During the current year, Karen sells her entire interest in Central Corporation common stock for $22,000. She is the sole shareholder, and originally organized the corporation several years ago by contributing $89,000 in exchange for her stock, which qualifies as Sec. 1244 stock. Since its incorporation, Central has been involved in the manufacture of items that protect personal computers from static electricity. Unfortunately, this market is extremely competitive, and Central Corporation incurs substantial losses throughout its existence.

a. Assuming Karen is single, what are the amount and the character of the loss recognized on the sale of the Central Corporation stock?

b. Assuming Karen is married and files a joint return, what are the amount and the character of the loss recognized on the sale of the Central Corporation stock?

c. How would your answer to Part a change if Karen had originally purchased the stock from another shareholder rather than organizing the corporation?

d. How might Karen have structured the transaction in Part a to receive a greater tax advantage?

I:9-40 ***Amount and Character of Loss Transactions.*** On September 30 of the current year, Fox Corporation files for bankruptcy. At the time, it estimates that the total FMV of its assets is $725,000, whereas the total amount of its outstanding debt amounts to $950,000. Fox Corporation has been engaged in the resale of tax preparation and tax research-related books and software for several years.

a. At the time of the bankruptcy, Fox is owned by Randall, who purchased the stock from an investor for $250,000 several years ago. Randall is single. What are the amount and character of the loss sustained by Randall upon Fox's bankruptcy?

b. How would your answer to part a change if Randall originally organized Fox Corporation, capitalizing it with $250,000 of cash and assuming Fox qualifies as a small business corporation?

c. How would your answer to Part a change if Randall were a corporation instead of an individual?

d. How would your answer to Part b change if Randall were a corporation instead of an individual?

I:9-41 ***Amount and Character of Loss Transactions.*** Five years ago, Brian and his brother Boyd formed Stewart Corp., a golf apparel manufacturing corporation. At that time, Brian contributed $300,000 to the corporation in exchange for 50% of its stock. During the current year, Brian needed some cash to purchase a golf course so he sold a third of his interest in Stewart Corp. for $85,000. He also sold stock in the following companies for the amounts indicated:

Corporation	*Sales Proceeds*	*Adjusted Basis*	*When Acquired*
IBM	$15,000	$10,000	52 months ago
Microsoft	25,000	45,000	18 months ago
Tidal Radio	32,000	12,000	7 months ago
Wavetable	20,000	26,000	4 months ago

During the year Brian hired a collection agency to collect a $14,000 loan he made to an old friend, which was due in full on January 1 of the current year. The agency found no trace of his friend. Also during the year, BTR Corporation, in which he owns stock, went bankrupt. His investment was worth $94,000 on January 1, he purchased it six years ago for $100,000, and he expects to receive only $8,000 in redemption of his stock. Finally, Brian's salary for the year was $114,000 for his work as an associate professor.

a. What are the net gains and losses from the above items and their character?
b. What is Brian's AGI for the year assuming he has no other items of income or deduction?

I:9-42 ***Passive Losses.*** In the current year Alice reports $150,000 of salary income, $20,000 of income from activity X, and $35,000 and $15,000 losses from activities Y and Z, respectively. All three activities are passive with respect to Alice and are purchased during the current year. What is the amount of loss that may be deducted with respect to each of these activities? Also compute the amount of loss that must be carried over for each activity.

I:9-43 ***Passive Losses.*** In the current year Clay reports income and losses from the following activities:

Activity X	$ 28,000
Activity Y	(10,000)
Activity Z	(20,000)
Salary	100,000

Activities X, Y, and Z are all passive with respect to Clay. Activity Z has $40,000 in passive losses which are carried over from the prior year. In the current year Clay sells activity Z for a taxable gain of $30,000.

a. What is the amount of loss that Clay may deduct and what is the amount that must be carried over in the current year?
b. Based solely on the amounts above, compute Clay's AGI for the current year.

I:9-44 ***Passive Losses: Rental Real Estate.*** During the current year, Irene, a married individual who files a joint return, reports the following items of income and loss:

Salary	$130,000
Activity X (passive)	10,000
Activity Y (rental real estate, nontrade or business)	(30,000)
Activity Z (rental real estate, nontrade or business)	(20,000)

Irene actively participates in activities Y and Z and owns 100% of both Y and Z.

a. What is Irene's AGI for the year?
b. What is the amount of suspended losses (if any) that may be carried over with respect to each activity?

I:9-45 ***Passive Losses.*** In 2024, Mark purchased two separate activities. Information regarding these activities for 2024 and 2025 is as follows:

	2024			*2025*	
Activity	*Status*	*Income (Loss)*	*Activity*	*Status*	*Income (Loss)*
A	Passive	($24,000)	A	Active	$10,000
B	Passive	(8,000)	B	Passive	20,000

The 2024 losses were suspended losses for that year. During 2025, Mark also reports salary income of $120,000 and interest and dividend income of $20,000. Compute the amount (if any) of losses attributable to Activities A and B that are deductible in 2025 and any suspended losses carried to 2026.

I:9-46 ***Passive Losses.*** During the current year, Juan, a single individual, has AGI of $124,000 before taking into account any passive activity losses. He also actively participates and owns 100% of activity A, which is a real estate rental activity. For the year, activity A generates a net loss of $6,000 and $3,000 in tax credits. Juan is in the 24% tax bracket. What is the amount of suspended loss and credit from activity A that must be carried to subsequent years?

I:9-47 ***Passive Losses.*** In 2025, Julie, a single individual, reported the following items of income and deduction:

Salary	$166,000
Interest income	14,000
Long-term capital gain from sales of stock	22,000
Short-term capital losses from sales of stock	(17,000)
Loss from a passive rental real estate activity	(20,000)
Interest expense on loan to purchase stock	(21,000)
Qualified residence interest on residence	(12,000)
Charitable contributions	(8,000)
Property taxes on residence	(5,000)
Tax return preparation fees	(2,500)
Unreimbursed employee business expenses	(2,000)

Julie owns 100% and is an active participant in the rental real estate activity. What is her taxable income for 2025?

I:9-48 ***Casualty Losses.*** Tony is a carpenter who owns his own furniture manufacturing business. During the current year, a tornado (a federally declared disaster) damaged several pieces of equipment and destroyed his delivery truck and his personal automobile, which he often kept in the workshop garage. The asset descriptions and related values are as follows:

Asset	*FMV Before Casualty*	*FMV After Casualty*	*Cost to Repair/Replace*	*Adjusted Basis*	*Insurance Proceeds*
Equipment A	$12,300	$4,000	$ 8,700	$ 9,000	$ 3,700
Equipment B	8,100	0	9,000	3,000	7,800
Equipment C	Not Available	Not Available	13,800	15,300	11,400
Delivery Truck	18,000	0	32,000	17,500	16,000
Automobile	15,000	0	12,000	28,000	12,000

Although he could not obtain its fair market value after the casualties, Tony decided to repair rather than replace Equipment C.

Before considering any deductions because of these casualties, Tony's AGI is $80,000. What deductions may Tony take relating to these losses?

I:9-49 ***Theft Losses.*** On December 17 of the current year, Kelly's business office safe is burglarized. The theft is discovered a few days after the burglary. $3,000 cash from the cash registers is stolen. A diamond necklace and a ring that Kelly frequently wore are also stolen. The necklace cost Kelly $2,300 many years ago and is insured for its $6,000 FMV. Kelly purchased the ring for $3,000 just two weeks before the burglary. Unfortunately, the ring and the cash are not insured. Kelly's AGI for the year, not including the items noted above, is $70,000.

a. What is Kelly's deductible theft loss in the current year?
b. What is Kelly's deductible theft loss in the current year if the theft is not discovered until January of the following year?

I:9-50 ***Casualty Losses: Year of Deduction.*** Jerry sprayed all of the landscaping around his business with a pesticide in June 2025. Shortly thereafter, all of the trees and shrubs unaccountably died. The FMV and the adjusted basis of the plants were $15,000. Later that year, the pesticide manufacturer announced a recall of the particular batch of pesticide that Jerry used. It also announced a program whereby consumers would be repaid for any damage caused by the improper mixture. Jerry is single and reports $38,000 AGI in 2025 and $42,000 in 2026.

a. Assume that in 2025 Jerry files a claim for his losses and receives notification that payment of $15,000 will be received in 2026. Jerry receives full payment for the damage in 2026. How should the loss and the reimbursement be reported?
b. How will your answer to Part a change if in 2026 the manufacturer files for bankruptcy and Jerry receives $1,500 in total and final payment for his claim?
c. How will your answer to Part a change if the announcement and the reimbursement do not occur until late in 2026, after Jerry has already filed his tax return for 2025?

I:9-51 ***Casualty Losses.*** During 2025, Pam incurred the following casualty losses:

Asset	*FMV Before*	*FMV After*	*Basis*	*Insurance*
Business 1	$18,000	$ 0	$15,000	$ 4,000
Business 2	25,000	10,000	8,000	3,000
Business 3	20,000	0	18,000	19,000
Personal 1	12,000	0	20,000	2,000
Personal 2	8,000	5,000	10,000	0
Personal 3	9,000	0	6,000	8,000

All of the items were destroyed in the same casualty, which resulted from a federally declared disaster. Before considering the casualty items, Pam reports business income of $80,000, qualified residential interest of $6,000 property taxes on her personal residence of $2,000, and charitable contributions of $4,000. Compute Pam's taxable income for 2025. Pam is single.

I:9-52 ***Business Bad Debt.*** Elaine is a physician who uses the cash method of accounting for tax purposes. During the current year, Elaine bills Ralph $1,200 for office visits and outpatient surgery. Unfortunately, unknown to Elaine, Ralph moves away leaving no payment and no forwarding address. What is the amount of Elaine's bad debt deduction with respect to Ralph's debt?

I:9-53 ***Nonbusiness Bad Debt.*** During 2024, Becky loans her brother Ken $5,000, which he intends to use to establish a small business. Because Ken has no other assets and needs cash to establish the business, the agreement provides that Ken will repay the debt if (and when) sufficient funds are generated from the business. Becky and Ken do not establish an interest rate. The business is unsuccessful, and Ken is forced to file for bankruptcy in 2025. By the end of 2025, it is estimated that the creditors will receive only 20% of the amount owed. In 2026 the bankruptcy proceedings are closed, and the creditors receive 10% of the amount due on the debt. What is Becky's bad debt deduction for 2025? For 2026?

I:9-54 ***Bad Debt Deduction.*** Assume the same facts as in Problem I:9-53, except that Becky and Ken are not related and that under the terms of the loan Ken agrees to repay Becky the $5,000 plus interest (at a reasonable stated rate) over a five-year period. What is Becky's bad debt deduction for 2025? For 2026?

I:9-55 ***Net Operating Loss Deduction.*** Michelle and Mark are married and file a joint return. Michelle owns an unincorporated dental practice. Mark works part-time as a high school math teacher, and spends the remainder of his time caring for their daughter. During 2025, they report the following items:

Mark's salary	$18,000
Interest earned on savings account	1,200
Interest paid on personal residence	12,700
Itemized deductions for state and local taxes	9,400
Items relating to Michelle's dental practice	
Revenues	65,000
Payroll and salary expense	49,000
Supplies	17,000
Rent	16,400
Advertising	4,600
Depreciation	8,100

a. What is Michelle and Mark's taxable income or loss for the year?
b. What is Michelle and Mark's NOL for the year?

I:9-56 ***Net Operating Loss Deduction.*** Assume the same facts as in Problem I:9-55, except in addition to the other itemized deductions Michelle and Mark suffer an $8,500 deductible personal casualty loss (after limitations).
a. What is Michelle and Mark's taxable income or loss for the year?
b. What is Michelle and Mark's NOL for the year?

I:9-57 ***Net Operating Loss Deduction.*** Assume the same facts as in Problem I:9-55, except that the interest on their personal residence is $15,300 and they also have an $8,500 deductible casualty loss on personal property (after limitations).
a. What is Michelle and Mark's taxable income or loss for the year?
b. What is Michelle and Mark's NOL for the year?

I:9-58 ***Net Operating Loss.*** During 2025, Karen, a single taxpayer, reports the following income and expense items relating to her interior design business:

Revenues	$52,000
Cost of goods sold	41,000
Advertising	3,300
Office supplies	1,700
Rent	13,800
Contract labor	28,000

Karen also worked part-time during the year, earning $13,500. She reports a long-term capital gain of $4,200, and a short-term capital loss of $3,800. Her itemized deductions total $5,200.

a. What is Karen's taxable income or loss for the year?
b. What is Karen's NOL for the year?

I:9-59 During the current year, Kenneth, who is married, reports the following income/loss from his business activities:

Gross income from sole proprietorship	$ 7,850,000
Gross expenses from sole proprietorship	(7,775,000)
Income from ABC Partnership (Kenneth is a general partner)	120,000
Loss from XYZ Partnership (Kenneth is a general partner)	(1,300,000)

What is the amount of Kenneth's excess business loss? How is the excess business loss treated?

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:9-60 In 2022, Annie Cook and several family members formed Treehouse Rentals, Inc., in Denver, Colorado. Treehouse is a closely held C corporation engaged in the rental real estate business. Treehouse properly classifies its activities as passive. In 2022, 2023, and 2024, the corporation generated net passive losses of ($380,000), ($145,000), and ($194,000), respectively, all of which were properly suspended.

Effective January 2025, Treehouse elected to be taxed as an S corporation. Also during 2025, Treehouse sold two pieces of rental real estate property. The suspended losses related to these properties were ($63,000) and ($112,000).

Write a memo to Treehouse Rentals explaining the tax treatment of the disposition of the rental properties in 2025.

- Sec. 469, Sec. 1371
- TAM 9628002
- *St. Charles Investment Co. v. Comm.*, 86 AFTR 2d 2000-6882 (CA 10, 11/14/2000)

I:9-61 Jace Seaton is a single taxpayer living in Eugene, Oregon. From 2020 to 2023, he worked as the CEO of Wengren & Jeffers, a local architectural firm. In 2023, he left the firm to start his own company as well as spend more time golfing and travelling. On October 25, 2025, he formed Seaton & Associates, a Limited Liability Company (LLC) under Oregon law.

Upon forming the LLC, Jace received an 80% interest in the company. Two other architects, Maria Juarez and Jaman Turhoon, each received a 10% interest in the company. Jace provided all necessary capital, whereas Maria and Jamal provided experience and a commitment to work for the company. Seaton & Associates chose to be taxed as a partnership for federal income tax purposes.

During 2025, Jace worked approximately 300 hours for Seaton & Associates, and received a guaranteed payment of $100,000. Maria and Jamal each worked approximately 600 hours, and each received a guaranteed payment of $150,000. In 2025, the company generated a net loss of $530,000.

Write a memo to Jace explaining how the LLC members, particularly Jace, should treat the loss generated in 2025.

- Reg. 1.469-5T
- *Gregg v. U.S.*, 87 AFTR 2d 2001-337

I:9-62 On November 15, Alex and Deanna Kent come to you for tax advice. The Kents, a married couple that files a joint tax return, own a rental home in Southern California. From January to November 1 of the current year, they rented out the home for 210 days. Since they live in Minnesota, they are considering staying in their rental home from December 10 to 31. If they do not stay in the home during that period, it will sit vacant. They ask you if this decision would have any tax consequences. They also provide you with the following information for the year:

Rental home income and expenses:	
Rental income	$16,000
Mortgage interest	12,400
Property taxes	4,300
Homeowners Assoc. Fees	3,500
Depreciation	18,000
Other income and expenses:	
Deanna's salary	75,000
Alex's salary	65,000
Passive income (from an investment in a limited partnership)	1,000
Mortgage interest on their Minnesota home	7,800
Charitable contributions	14,200
Medical expenses	8,100
Property taxes on their Minnesota home	2,900
State income taxes	9,700

What do you recommend to the Kents?

I:9-63 Jim had $100,000 in deposits in a savings account at a bank in Page, Arizona. The bank collapsed and Jim did not receive anything for his deposits. The bank was chartered by the state of Arizona and was not insured by federal law. Jim is not sure what his options are in deducting this loss on his tax return. What can Jim do to take advantage of this loss on his tax return? He has an AGI of $110,000 and no capital gains for the current year.

I:9-64 On December 21 of the current year, Chelsea Brown, who is in the 32% tax bracket, was reviewing her trades for the past year. She determined that she had a $12,000 net long-term capital gain and an $18,000 short-term capital gain. She has decided to sell one additional stock before the end of the year. She is indifferent between selling her Apple stock or her New York Times stock. She purchased the Apple stock in March of this year for $77,000. The Apple stock is currently worth $64,000. The New York Times stock she purchased 5 years ago for $80,000 is currently worth $67,000.

a. Which shares would you advise her to sell if the investment risk were the same across both stocks?
b. How would your answer change if on December 21 she had a $12,000 long-term capital gain and an $18,000 short-term capital loss?
c. How would your answer change if on December 21 she had an $18,000 long-term capital gain and a $6,000 short-term capital loss?

TAX FORM/RETURN PREPARATION PROBLEMS

I:9-65 Heather and Nikolay Laubert are married and file a joint income tax return. Their address is 3847 Jackdaw Path, Madison, WI 58493. Nikolay's Social Security number is 000-00-1111, and Heather's is 000-00-2222. Nikolay is a mechanical engineer, and Heather is a highly renowned speech therapist. Nikolay's employer provides health care coverage for Heather and Nikolay. Heather is self-employed. They report all their income and expenses on the cash method. For 2024, they report the following items of income and expense:

Gross receipts from Heather's business	$110,000
Rent on Heather's office	12,000
Receivables written off during the year (received in Heather's business)	1,300

Subscriptions to linguistic journals for Heather	250
Salary for Heather's secretary-receptionist	22,000
Nikolay's salary	78,000
Qualified medical expenses	12,000
Property taxes on their personal residence	4,200
State income tax refund received this year (the tax benefit was received in the prior year from the state income tax deduction)	400
State income taxes withheld on Nikolay's salary	4,600
Federal income taxes withheld on Nikolay's salary	12,000
Heather's estimated tax payments	20,000
Interest paid on residence	11,000
Income tax preparation fee for the prior year's return paid this year ($500 is allocated to preparation of Schedule C)	$940

Heather and Nikolay sold the following assets:

Asset	*Acquired*	*Sold*	*Sales Price*	*Cost*
KNA stock	2/12/19	3/13/24	$14,000	$ 8,000
AEN stock	3/2/24	7/7/24	20,000	22,000
KLN stock	6/8/15	4/10/24	13,000	17,000
Motorcycle	5/3/12	9/12/24	2,500	6,000

Heather owned the KLN stock and sold it to her brother, Jacob. Heather and Nikolay used the motorcycle for personal recreation.

In addition to the items above, they donate Miner Corporation stock to their community church. The FMV of the stock on the date it is donated (8/18/2024) is $6,200. It cost $2,700 when purchased on 3/12/2001. Heather and Nikolay's shed was damaged in a fire that was a federally-declared disaster. The fire damaged a snowblower (FMV $3,500; cost $5,000), the shed (FMV $12,000; cost $10,000), and a lawn mower (FMV $1,500; cost $1,300). The insurance company pays $1,500 for the snowblower, $4,000 for the shed, and $500 for the lawn mower. Complete Heather and Nikolay's Form 1040, Schedules A, C, D, and SE, Form 4684, and Form 8283. For purposes of this problem, disregard the alternative minimum tax, any credits, and the qualified business income deduction. Assume the couple had no transactions involving virtual currency.

I:9-66 Kara and Brandon Arnold are married and file a joint return. Their Social Security numbers are 000-00-1111 and 000-00-2222, respectively. Kara and Brandon have one son, Henry, age 3. His Social Security number is 000-00-3333. They live at 356 Welcome Lane, Woodbury, WA 84653. They report their income on the cash method. During 2024, they report the following items:

Salary	$103,000
Interest income from money market accounts	600
Dividend income from Davis Corp. stock	700
Cash contributions to church	6,000
Rental of a condominium in Lutsen:	
Rental income (30 days)	12,000
Interest expense	7,000
Property taxes	3,200
Maintenance	1,700
Depreciation (entire year)	7,500
Insurance	2,000
Days of personal use	16

The address of the Condo is 1127 Skyline Drive, Lutsen, WA 84666. During the year the following events also occur:

- **a.** In 2024, Brandon had loaned a friend $3,000 to help pay medical bills. During 2024, he discovers that his "friend" has skipped town.
- **b.** On June 20, 2024, Brandon sells Kim Corporation stock for $16,000. He purchased the stock on December 12, 2017, for $22,000.
- **c.** On September 19, 2024, Kara discovers that the penny stock of Roberts, Inc. she purchased on January 2 of the prior year is completely worthless. She paid $5,000 for the stock.

d. Instead of accepting $60 the utility store offers for their old dishwasher, they donate it to Goodwill on November 21, 2024. They purchased the dishwasher for $750 on March 30, 2013. The new dishwasher cost $900.

e. Kara and Brandon purchased a new residence for $250,000. As part of the closing costs, they pay two points, or $3,800, on the mortgage, which is interest rather than loan processing fees. This payment enables them to obtain a more favorable interest rate for the term of the loan. They also paid $8,400 in interest on their mortgage on their personal residence.

f. They pay $4,100 in property taxes on their residence and $7,500 in state income taxes.

g. On July 20, 2024, Kara and Brandon donate 1,000 shares of Anton, Inc. stock to the local community college. The value of the stock on that date is $10,200. Anton, Inc. is a listed stock. They had purchased the stock on November 10, 2016, for $1,000.

h. $7,000 in federal income tax was withheld during the year.

Complete Kara and Brandon's Form 1040, Schedules A, B, D, and E, Form 8283 and Form 8949. For purposes of this problem, disregard the alternative minimum tax and any credits. Assume the couple had no transactions involving virtual currency.

I:9-67 ***Short Tax Form.*** Fiona Starr (social security number 111-22-3333) is single and earns $105,000 as a manager at Costco. Three years ago, she bought a single-family home on 12 Beach St., Bangor, ME 55555, which she rents out for $3,000 a month. She makes all the decisions regarding the property, including tenant approval, rental terms, and repairs. She incurs $12,000 in property taxes, $28,000 in depreciation, $4,000 for insurance premiums, $15,000 in mortgage interest, and $8,000 in repairs. Complete Schedule E and Form 8582 for Fiona.

CASE STUDY PROBLEMS

I:9-68 Dr. John Brown is a physician who expects to make $150,000 this year from his medical practice. In addition, Dr. Brown expects to receive $10,000 dividends and interest income.

Last year, on the advice of a friend, Dr. Brown invested $100,000 in Limited, a limited partnership. He spends no time working for Limited. Limited's operations did not turn out exactly as planned, and Dr. Brown's share of Limited's losses last year amounted to $15,000. Dr. Brown has already been informed that his share of Limited's losses this year will be $10,000.

In January of the current year, Dr. Brown set up his own laboratory. Originally he intended to have the lab only do the work for his own practice, but other physicians in the area were impressed with the quick turnaround and convenience that the lab provided and began sending their work. This year, Dr. Brown estimates that the lab will generate $30,000 of taxable income. The work in the lab is done by two full-time qualified laboratory technicians. A part-time bookkeeper is hired to keep the books. Dr. Brown has spent 320 hours to date establishing and managing the lab. He plans to hire another technician who will also manage the lab so that it can operate on its own.

In November, Dr. Brown calls you requesting some tax advice. Specifically, he would like to know what actions he should take before the end of the year in order to reduce his tax liability for the current year.

Write a memo to Dr. Brown, detailing your suggestions. His address is: Dr. John Brown, 444 Physicians Drive, Suite 100, Anytown, USA 88888.

I:9-69 In preparing the tax return for one of your clients, Jack Johnson, you notice that he has listed a deduction for a large business bad debt. Jack explains that the loan was made to his corporate employer when the corporation was experiencing extreme cash flow difficulties. In fact, Jack was very concerned at the time he made the loan that the corporation would go bankrupt. This would have been extremely bad, because not only would he have lost his job, but he also would have lost the $80,000 he had invested in the common stock of the corporation.

You know that if the loan is a business loan Jack will receive an ordinary deduction. However, if the loan is a nonbusiness debt, it becomes a short-term capital loss (and Jack can only currently deduct $3,000).

After thoroughly reviewing all of the facts, you do a complete search of the relevant judicial and administrative authority. There you find that the courts are split as to whether under these circumstances the loan should be treated as a business or nonbusiness bad debt.

What position should you take on Jack's federal income tax return? (See the *Statements on Standards for Tax Services* section in Chapter I:15 and Appendix E for a discussion of this issue.)

TAX RESEARCH PROBLEM

I:9-70 Early in the current year, Keith meets Dan through a business associate. Dan tells Keith that he is directing a business venture that purchases poorly managed restaurants in order to turn them around and make them profitable. Dan mentions that he is currently involved in acquiring a real "gold mine" but needs to raise additional cash in order to purchase it. On the strength of Dan's representations, Keith loans Dan $30,000 for the venture. An agreement is written up between Keith and Dan, wherein Dan agrees to repay Keith the entire amount over a five-year period plus 14% interest per annum on the unpaid balance. Later in the year, however, Keith discovers that Dan had never intended to purchase the restaurant and, in fact, had used most of the money for his own benefit. Upon making this discovery, Keith sues Dan for recovery of the money, alleging that Dan falsely, fraudulently, and deceitfully represented that the money would be invested and repaid, in order to cheat and defraud Keith out of his money. Unfortunately for Keith, he is never able to recover any amount of the loan. Discuss the tax treatment that Keith may claim with regard to the loss.

A partial list of research sources is:

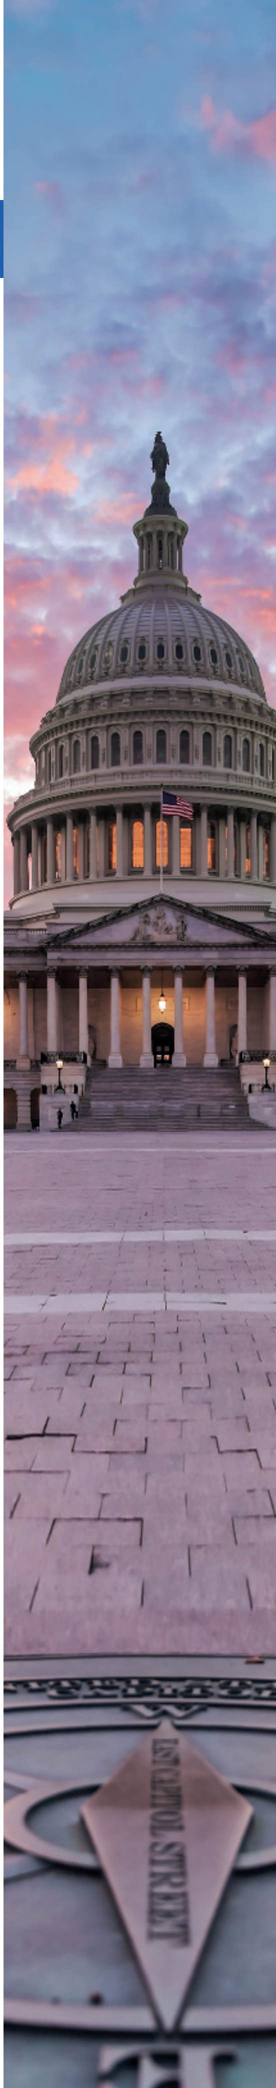
CHAPTER

10

DEPRECIATION, COST RECOVERY, AMORTIZATION, AND DEPLETION



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Explain the general concepts of tax depreciation and cost recovery
2. Calculate amortization for intangible assets and distinguish between amortizable and non-amortizable assets
3. Apply cost and percentage depletion methods and summarize the treatment for intangible drilling costs
4. Identify tax planning considerations for depreciation
5. Identify compliance and procedural considerations for depreciation

CHAPTER OUTLINE

Depreciation and Cost Recovery...10-2
Amortization...10-18
Depletion, Intangible Drilling and Development Costs...10-22
Tax Planning Considerations...10-24
Compliance and Procedural Considerations...10-25

The income tax law allows taxpayers to deduct a reasonable allowance for the exhaustion, wear and tear, and obsolescence of property used in a trade or business or held for the production of income.[1] Such deductions enable taxpayers to recover the cost of an asset under the "return of capital" doctrine. Depreciation, therefore, is the systematic allocation of the cost of an asset over its estimated economic life. The term *depreciation* relates to deductions for most tangible property; *amortization* relates to deductions for intangible property; and *depletion* relates to deductions for natural resources (oil and gas, coal, etc.) While the concepts of depreciation, amortization, and depletion are similar to those in financial accounting, the income tax rules are unique. This chapter discusses the income tax rules relating to depreciation, amortization, and depletion.

DEPRECIATION AND COST RECOVERY

OBJECTIVE 1

Explain the general concepts of tax depreciation and cost recovery

GENERAL CONSIDERATIONS

Taxpayers must use specific depreciation methods depending on *when* an asset is placed in service. Three separate depreciation and cost recovery systems are currently in place. These three distinct systems are the result of tax law changes in 1981 and 1986. The systems that taxpayers must use are as follows:

- Property placed in service after December 31, 1986. Taxpayers must use the Modified Accelerated Cost Recovery System (MACRS) as provided in Sec. 168.
- Property placed in service after December 31, 1980, and before January 1, 1987. Taxpayers must use the Accelerated Cost Recovery System (ACRS) as provided in Sec. 168.
- Property placed in service prior to 1981. Taxpayers must use the rules contained in Sec. 167. These rules basically follow financial accounting principles.

In this chapter, we emphasize the MACRS rules because most assets placed in service before 1987 are now fully depreciated.

The terms *depreciation* and *cost recovery* are used interchangeably in this text. The rules in Sec. 167 (or pre-ACRS) and the MACRS rules under Sec. 168 both refer to depreciation. However, the deduction under ACRS is referred to as cost recovery. In 1981, Congress initiated the original ACRS system to achieve a number of objectives, including a stimulus for private investment, improving business productivity, simplifying taxpayer compliance, and facilitating IRS administration of the tax law. Therefore, less importance was placed on the financial accounting concept of matching costs and revenues, which is the primary theory that governed the Sec. 167 depreciation rules. Congress' primary objective in 1981 was to allow businesses and investors to recover the cost of capitalized expenditures over a period of time that is substantially shorter than the property's economic useful life. Thus, the term *cost recovery* rather than *depreciation* was used under the ACRS system. The post-1986 MACRS rules more closely follow the concept of economic useful life and, therefore, the MACRS rules refer to depreciation rather than cost recovery.

BOOK-TO-TAX ACCOUNTING COMPARISON

Depreciation expense under federal income tax rules differs from depreciation expense under financial accounting rules.

HISTORICAL NOTE

Before 1954, except for the limited use of a declining-balance method, taxpayers were required to use the straight-line method.

Common Rules of All Systems. Regardless of the particular system of depreciation required (i.e., MACRS, ACRS, etc.), certain rules are common to all systems of depreciation. These common rules are discussed below.

- Depreciation may be claimed only on property used in a trade or business or for the production of income. Thus, personal-use assets, such as a personal-use automobile or the taxpayer's personal residence, are not depreciable.
- No depreciation is permitted for land or other assets that have an indefinite life. Assets such as works of art are generally not depreciable.

ADDITIONAL COMMENT

Property is considered to be "placed in service" when it is in a condition or state of readiness and is available for a specifically assigned function. This can be important in attempting to determine the first year that a depreciation deduction is available.

---

[1] Sec. 167(a).

ADDITIONAL COMMENT

A case held that a professional musician could depreciate a nineteenth-century violin bow. The IRS had argued the bow had an indeterminate life, but because the taxpayer played the violin, there was "wear and tear" on the bow and depreciation was allowed. *Simon v. Comm.*, 95-2 USTC ¶50,552 (CA-2, 1995).

- First-year depreciation is permitted only in the year the asset is placed in service. For example, a calendar year taxpayer may purchase a depreciable asset in December 2024 but not place it in service until January 2025. In this case, depreciation is not allowed until 2025.
- Regardless of the depreciation system, consistency is required. Taxpayers must consistently use the method selected in the year the asset was placed in service unless the IRS allows a change of accounting method.
- The adjusted basis of property being depreciated must be reduced by the amount of depreciation that is allowable. An important aspect of depreciation is determining the amount of depreciation that is *allowed* and *allowable*. The depreciation allowed is the actual depreciation claimed by the taxpayer for a particular taxable year. Allowable depreciation is the depreciation the taxpayer is entitled to deduct (if the taxpayer has not deducted depreciation for the current year or any prior tax year, allowable depreciation is determined under the straight-line method). If a taxpayer does not take any depreciation during a particular year, the property's adjusted basis must be reduced by the amount of depreciation that should have been taken during the year (i.e., the allowable depreciation).

EXAMPLE I:10-1 ▶

Maria acquires and places in service a machine (7-year property) for $50,000 to be used in her business. She elects straight-line depreciation under MACRS. Maria properly takes depreciation in the first two years in the amount of $10,714 ($3,571 in Year 1 and $7,143 in Year 2, assuming the half-year convention). However, because of a net operating loss in Year 3, Maria did not take any depreciation on the tax return. The allowable depreciation in Year 3 was $7,143. Even though Maria did not claim the $7,143 in Year 3, the basis of the machine must still be reduced by that amount. Thus, at the end of Year 3, the basis of the machine would be $32,143 ($50,000 minus the allowable accumulated depreciation of $17,857). Obviously, Maria should amend her tax return for Year 3 and deduct the allowable depreciation. This would increase her net operating loss for Year 3, which carries to other tax years under the net operating loss rules discussed in Chapter I:9. ◀

REAL-WORLD EXAMPLE

Harrah's Club in Reno, Nevada, restores antique autos and displays them. The restoration costs cannot be depreciated because the autos have an indefinite life as museum pieces. *Harrah's Club v. U.S.*, 43 AFTR 2d 79-745, 81-2 USTC ¶9677 (Ct. Cls., 1981).

Types of Property. For both property law and income tax purposes, there are two basic types of property, tangible and intangible. **Tangible property** refers to property that has physical substance, such as land, buildings, natural resources, equipment, etc. **Intangible property** refers to property that does not have physical substance, such as goodwill, patents, and stocks and bonds. The cost of tangible property (other than land, of course) is systematically written off through depreciation or depletion. Natural resources, such as oil and gas reserves, are recovered through depletion. Intangible property generally is written off through amortization.

Tangible property is further classified as either real property or personal property. **Real property** (often referred to as real estate or realty) is defined as land or any structure permanently attached to the land, such as buildings. **Personal property** is any tangible property that is not real property, and includes items such as equipment, vehicles, furniture, etc. It is important to distinguish between personal property and personal-use property. *Personal-use property* is any property, tangible or intangible, real or personal, that is used by the taxpayer for his own personal use rather than in a trade or business or for the production of income.

ADDITIONAL COMMENT

The IRS issued a private letter ruling that required an airline to capitalize engine overhauls rather than expensing such amounts in the current year. The IRS position requires capitalization because the overhauls involve replacement or reconditioning of a large portion of the engine's parts. This ruling has been severely criticized by the airlines industry, saying that the decision could negatively impact passenger safety.

Capitalization Versus Expense. As discussed in Chapter I:6, properly classifying expenditures as expenses versus capital expenditures can be challenging in some cases. If an expenditure improves an asset's efficiency or extends its life substantially beyond the end of the tax year, the expenditure generally should be capitalized. For financial accounting purposes, however, many businesses expense the acquisition of an item of depreciable property rather than capitalizing it if its amount is less than a materiality threshold. Taxpayers doing so for this and other nontax purposes may annually elect to expense, rather than depreciate, the cost of such items costing $2,500 or less.[2]

Conversion of Personal-Use Property. If personal-use property is either converted to business-use or held for the production of income (e.g., a principal residence converted to a rental house), the property's basis for depreciation purposes is the lesser of its adjusted basis or its fair market value (FMV) determined as of the conversion date.[3]

---

[2] Reg. Sec. 1.263(a)-1(f) and Notice 2015-82 (2015-50 IRB 859). The threshold is $5,000 rather than $2,500 if the taxpayer's financial statement meets certain criteria, such as being audited and certified by a CPA. Other details regarding this expensing election are beyond the scope of this chapter.

[3] Reg. Sec. 1.168(i)-4(b)(1).

This lower of cost or market rule prevents taxpayers from depreciating the portion of the cost that represents a nondeductible loss on a personal-use asset. Chapter I:5 discusses the disposition of personal-use property.

EXAMPLE I:10-2 ▶ Marty purchased a house for $175,000 ten years ago and has been using it as her residence since then. In the current year, she moves to an apartment. Because the house's FMV is only $150,000 due to a depressed local real estate market, she rents out the house rather than selling it. She thus converts the property from personal use to rental use in the current year. The depreciable basis of the rental property is $150,000 (the lesser of its $175,000 adjusted basis or $150,000 FMV when converted). The $25,000 ($175,000 − $150,000) decline in FMV is a nondeductible personal loss and is not depreciable. (The example assumes for simplicity that the $175,000 and $150,000 pertain to the house itself and not the land on which it is located. Any purchase cost or FMV pertaining to the land is not depreciable.) ◀

DEPRECIATION METHODS

As mentioned previously, the depreciation method required for income tax purposes depends on the date the asset was placed in service. Assets placed in service prior to 1987 must use the old depreciation methods that were in effect during those years.[4] Under current law, for assets placed in service after 1986, the MACRS system of depreciation is required for most assets. MACRS is different from depreciation methods used for financial accounting purposes in several ways, including the following:

- MACRS does not consider salvage value in the computation of the depreciation amount.
- MACRS uses specific asset classes. Both tangible personal property and real property must be placed into specific asset classes, based on the type of property. Asset classes refer to the number of years over which the asset must be depreciated, such as 5-year property, 7-year property, etc.
- MACRS uses fewer depreciation methods, and the methods are built into the MACRS tables. Both accelerated and straight-line methods are used in MACRS, but accelerated methods are not permissible for real property. The MACRS tables are summarized in Appendix C.
- MACRS uses assumptions about when assets are either placed in service or disposed of rather than using actual dates. The applicable assumption is called a *convention*. The **half-year convention** is generally required for all tangible personal property. It assumes that all asset acquisitions or dispositions are made at the midpoint of the tax year. A special convention that may apply to tangible personal property is the *mid-quarter convention*, discussed later in this chapter. For real estate, the *mid-month convention* is used. It assumes that all asset acquisitions or dispositions are made at the midpoint of the month in which the transaction occurs.

EXAMPLE I:10-3 ▶ Golden Corporation, a calendar year taxpayer, purchases a business-use machine on March 10, 2025. For depreciation purposes, under the half-year convention, the machine is treated as if it were placed in service on July 1, 2025, so one-half year's depreciation is allowable for 2025. The half-year convention assumes all asset acquisitions and dispositions occur at the midpoint of the tax year. ◀

EXAMPLE I:10-4 ▶ Assume that Golden Corporation, in Example I:10-3 above, uses the machine for several years and sells the machine on October 30, 2027. To compute the depreciation deduction for 2027, Golden is permitted one-half year's depreciation. This one-half year's depreciation is required even though the actual sale occurred on October 30 because the half-year convention applies. ◀

EXAMPLE I:10-5 ▶ Silver, Inc., a calendar year taxpayer, purchases a business-use building on March 5, 2025. For depreciation purposes, under the mid-month convention, the building is treated as if it were placed in service on March 15, 2025, so $9\frac{1}{2}$ months of depreciation is allowable for 2025 (one-half of March plus nine full subsequent months). ◀

---

[4] For assets placed into service between 1981 and 1986, taxpayers were required to use the ACRS method; for assets placed into service before 1981, a pre-ACRS method was required. Pre-ACRS methods more closely resemble depreciation methods used for financial statement purposes.

CALCULATION OF DEPRECIATION

The annual depreciation deduction involves a number of variables. Below is a discussion of these variables in connection with the two principal types of depreciable property: tangible personal property and real property.

Tangible Personal Property: Classification and Recovery Rates. Tangible personal property, such as equipment, furniture, computers, etc., is depreciable under MACRS if used in a trade or business or held for the production of income. Each piece of tangible personal property acquired must be classified into one of six asset classes.[5] Depreciation is computed using the percentages contained in Table 1 in Appendix C if the half-year convention applies.

The MACRS recovery periods that apply to tangible personal property placed in service after December 31, 1986, are as follows:[6]

ADDITIONAL COMMENT

Most depreciable personal property is classified as 5-year or 7-year property under MACRS.

KEY POINT

Notice that an asset's recovery period for tax purposes is not necessarily the same as its estimated useful life.

▶ 3-Year	Property with a class life of 4 years or less. This category includes property such as tractor units, race horses over 12 years old, and special tools.
▶ 5-Year	Property with a class life of more than 4 years but less than 10 years. This category includes property such as automobiles, light and heavy-duty general purpose trucks, computers, and research and experimental (R&E) equipment.
▶ 7-Year	Property with a class life of 10 years or more but less than 16 years. This category includes property such as office furniture and equipment, horses, single-purpose agricultural or horticultural structures, and property with no class life and not classified elsewhere. Many types of machinery are included in this class.
▶ 10-Year	Property with a class life of more than 16 years, but less than 20 years. This category includes property such as barges, vessels, and petroleum and food processing equipment.
▶ 15-Year	Property with a class life of more than 20 years, but less than 25 years. This category includes property such as billboards, service station buildings, and land improvements.
▶ 20-Year	Property with a class life of 25 or more years, including property such as utilities and sewers.

KEY POINT

Remember that salvage value is not taken into consideration under the MACRS system.

Depreciation rates for the 3-year, 5-year, and 7-year recovery classes using the half-year convention are provided on the next page in Table I:10-1. (See Table 1 in Appendix C for depreciation rates for all classes of property.) The rates are based on the 200% DB method switching to straight-line when it yields a larger amount. To properly apply the half-year convention when property is disposed of in a year before the final table year, the amount calculated from the table must be multiplied by one-half.

EXAMPLE I:10-6 ▶ In March 2025, Mary acquires and places in service a business machine which costs $20,000 and has a 7-year recovery period under MACRS rules. Assuming no Sec. 179 expensing or bonus depreciation (discussed later), the depreciation deduction for 2025 is $2,858 ($20,000 × 0.1429). This MACRS depreciation deduction also can be computed by applying the accelerated depreciation rate (using the half-year convention) to the basis of the assets. Thus the depreciation deduction for 2025 is $2,857 ($20,000 ÷ 7 years × 200% DB × 0.50 year). The $1 difference between the two calculations is due to rounding. ◀

Certain types of property are *excluded* from MACRS depreciation, including:[7]

- ▶ Property depreciated under a method not expressed in terms of years, such as the units of production method, where the taxpayer elects to not depreciate the property under MACRS;
- ▶ Intangible assets, such as goodwill or copyrights;
- ▶ Films, videotapes, or sound recordings.

---

[5] The **class life** is similar to the estimated useful life that financial accounting uses when determining depreciation expense, but class life is specified by the IRS rather than the taxpayer (Rev. Proc. 87-56, as modified by Rev. Proc. 88-22).

[6] Sec. 168(e)(1).

[7] Sec. 168(f).

SELF-STUDY QUESTION

In Table I:10-1, how has the 20% first-year cost recovery rate for five-year property been calculated?

ANSWER

The 20% rate is calculated by multiplying the double declining-balance rate of 40% by the half-year convention of depreciation.

▼ TABLE I:10-1 (a Portion of Table 1 in Appendix C)

MACRS Percentage Rates for Tangible Personal Property (Using Half-Year Convention)

Recovery Year	Recovery Period 3-Year	 5-Year	 7-Year
1	33.33	20.00	14.29
2	44.45	32.00	24.49
3	14.81	19.20	17.49
4	7.41	11.52	12.49
5	—	11.52	8.93
6	—	5.76	8.92
7	—	—	8.93
8	—	—	4.46

Source: Table 1 of Rev. Proc. 87-57, 1987-2 C.B. 687.

ADDITIONAL COMMENT

Congress has substantially increased the maximum Sec. 179 expensing election several times in recent years. This maximum was $125,000 for 2007 and $510,000 for 2017, but it is $1.25 million for 2025.

Section 179 Expensing Election. In lieu of depreciating the cost of new or used tangible personal business property under the regular MACRS methods discussed above, taxpayers may elect to expense up to $1.25 million (for 2025) of the acquisition cost as an ordinary deduction in the year the property is placed in service. The immediate expensing election is not generally applicable to real estate.[8] The election is made on an annual basis, and the taxpayer must select the assets to which the deduction applies. MACRS rules apply to any amount of an asset's cost not expensed under Sec. 179 or claimed as bonus depreciation (discussed later).

The maximum Sec. 179 expense amount (ceiling) is adjusted each year for inflation, as shown in Table I:10-2.

EXAMPLE I:10-7 ▶

In 2025, Arbor Corporation acquires $1.32 million of 7-year MACRS property and places it into service in its business. Arbor elects to expense $1.22 million of the cost under Sec. 179. Assuming Arbor does not claim bonus depreciation (discussed later), its basis for MACRS depreciation is $100,000 ($1,320,000 − $1,220,000). If the half-year convention applies, Arbor claims 14.29% (see Table I:10-1) of the $100,000 as MACRS depreciation. Arbor's total 2024 depreciation is $1,234,290 [$1,220,000 + ($100,000 × 0.1429)]. ◀

▼ TABLE I:10-2

Section 179 Expense Amounts

Tax Year Beginning In	Maximum Sec. 179 Expense (Ceiling)
2025	$1,250,000
2024	1,220,000
2023	1,160,000
2022	1,080,000
2021	1,050,000

ADDITIONAL COMMENT

In the case of a partnership, the partnership and each partner are separately subject to the annual Sec. 179 limitation.

The following limitations and special rules apply to the Sec. 179 election:

- The property must be purchased for use in an active trade or business (more than 50% business-use) as distinguished from property that is acquired for the production of income (e.g., personal property used in a rental activity held by an investor does not qualify).

---

[8] Taxpayers may elect Sec. 179 expensing for qualified real property, which includes qualified improvement property (discussed later). It also includes roofs, HVAC property, fire protection and alarm systems, and security systems that improve nonresidential real property if such improvements are placed in service after the nonresidential real property was first placed in service.

- Qualified property is generally tangible personal property.
- The property cannot be acquired from a related party under Sec. 267 or by gift or inheritance.
- The Sec. 179 tax benefits are recaptured if the property is no longer predominantly used in a trade or business (e.g., the property is converted to personal use) at any time.[9] In the year of recapture, the taxpayer must include in gross income the amount previously expensed reduced by the amount of depreciation that would have been allowed for the period the property was held for business use.[10]
- If the total cost of qualified property placed into service during the year is more than \$3.13 million (for 2025), the \$1.25 million ceiling is reduced on a dollar-for-dollar basis by the excess amount. Thus, no deduction is permitted for the 2025 tax year if \$4.38 million or more of Sec. 179 property is placed in service. No carryovers of Sec. 179 depreciation under this provision are permitted. However, the portion of cost not expensed remains in the property's basis subject to MACRS depreciation (or bonus depreciation).
- A second limitation on the total Sec. 179 deduction is that it cannot exceed the taxpayer's taxable income (before deducting the Sec. 179 expense) from the trade or business.[11] Any acquisition cost that cannot be deducted because of the limitation based on taxable income is carried forward for an unlimited number of years and is added to the other amounts eligible for the Sec. 179 deduction in the future year. Such carryover amount will be subject to the taxable income limitation in the carryover year.

ADDITIONAL COMMENT

Married taxpayers who file separate tax returns are each entitled to a maximum of half the regular limitation under Sec. 179.

SELF-STUDY QUESTION

Are corporations entitled to the election to expense up to \$1.25 million under Sec. 179 for 2025?

ANSWER

Yes, but larger corporations will not receive the benefit from it because the Sec. 179 deduction is zero when the cost of qualified property is \$4.38 million or more for 2025.

EXAMPLE I:10-8 ▶ Davis Corporation operates a manufacturing business. In 2025, it purchases and places into service \$3.53 million of tangible personal property for use in its business. Davis' taxable income from its business (before the Sec. 179 deduction) is \$900,000. Davis reduces its maximum Sec. 179 deduction by \$400,000 (\$3,530,000 − \$3,130,000), and it cannot carryover any of this \$400,000 reduction. Assuming it elects the maximum \$850,000 (\$1,250,000 − \$400,000) it is allowed under Sec. 179, Davis depreciates \$2,680,000 (\$3,530,000 − \$850,000) of the property's cost using MACRS (or bonus depreciation, which is discussed later). Davis' \$850,000 Sec. 179 deduction is not limited because it is less than its \$900,000 business taxable income.

Assume instead that Davis' business taxable income (before any Sec. 179 deduction) is \$344,000. Its maximum Sec. 179 deduction is still \$850,000, but it can deduct for 2025 only \$344,000. Davis carries over \$506,000 (\$850,000 − \$344,000) to 2026 as Sec. 179 deduction for that year (possibly limited by 2026 business taxable income). Even though only \$344,000 is deductible under Sec. 179, Davis carries over \$506,000 to 2026 rather than depreciating it using MACRS (or bonus depreciation). However, if Davis elects \$344,000 under Sec. 179 instead of its \$850,000 maximum, it would not carry over any amount to 2026 and could depreciate \$3,186,000 (\$3,530,000 − \$344,000) using MACRS (or bonus depreciation). ◀

Many states impose income taxes, and they usually follow most federal income tax rules. However, some states use a lower Sec. 179 expensing maximum than the \$1.25 million the federal income tax rules allow.

EXAMPLE I:10-9 ▶ Limestone Corporation operates in State X. In 2025, Limestone purchases and places into service \$350,000 of 7-year property for use in its business. For federal income tax purposes, it elects Sec. 179 expensing for all \$350,000 of the property's cost and thus does not claim any MACRS depreciation for it.

State X allows a \$100,000 maximum Sec. 179 election. For State X income tax purposes, Limestone claims \$100,000 of Sec. 179 expensing and uses MACRS depreciation for the other \$250,000 (\$350,000 − \$100,000) of the property's cost (if it does not claim bonus depreciation). Its total depreciation expense for 2025 for State X income tax purposes is \$135,725 [\$100,000 + (\$250,000 × 0.1429)] if the half-year convention applies. ◀

---

[9] Sec. 179(d)(10).

[10] Reg. Sec. 1.179-1(e).

[11] Sec. 179(b)(3). Under Reg. Sec. 1.179-2(c)(6)(iv), employees are considered to be engaged in the active conduct of the trade or business from their employment. Thus, a small business person who is also an employee may include wages and salary derived from employment in determining taxable income for purposes of this limitation. Such amounts are considered derived from the conduct of a trade or business. For an individual, taxable income is also computed without regard to the deduction for one-half of self-employment taxes paid under Sec. 164(f) (see Chapter I:14).

ADDITIONAL COMMENT

Bonus depreciation has varied from 30% to 100%, depending on the year. It was 100% for property acquired and placed in service from September 28, 2017, through December 31, 2022 (80% for property acquired and placed in service in 2023, 60% for property acquired and placed in service in 2024).

KEY POINT

Sec. 179 and bonus depreciation accelerate depreciation deductions but do not increase their total over a depreciable property's life. The acceleration of the deductions' tax savings, however, generally is advantageous for the taxpayer because of the time value of money.

Bonus Depreciation. In recent years, Congress has temporarily (but repeatedly) permitted a special depreciation allowance for qualified property, often referred to as **bonus depreciation.**[12] This allows the taxpayer to deduct a percentage of the property's cost in the year it is placed in service. Unlike Sec. 179 expensing, there is not a maximum dollar amount of bonus depreciation the taxpayer may claim.

Bonus depreciation is 40% for property placed in service in 2025, 20% in 2026, and 0% beginning in 2027. Unless Congress again extends bonus depreciation, it will not be available after 2026. While a taxpayer elects *into* Sec. 179 expensing, bonus depreciation applies unless the taxpayer elects *out of* it.[13] Electing out of bonus depreciation (and not electing Sec. 179 expensing) may be advantageous if the taxpayer's marginal tax rate is expected to be higher in the near future.

Qualified property for bonus depreciation includes property with a MACRS recovery period of 20 years or less, as well as computer software (other than computer software that is an amortizable Sec. 197 intangible; Sec. 197 is discussed later in this chapter). Buildings and other real property generally do not qualify for bonus depreciation.

Property qualifying for bonus depreciation generally also qualifies for Sec. 179 expensing and MACRS depreciation. The taxpayer claims Sec. 179 expensing first. Second, the taxpayer claims bonus depreciation for any cost remaining after Sec. 179 expensing. Finally, the taxpayer claims MACRS depreciation for any cost remaining after Sec. 179 expensing and bonus depreciation, using the usual MACRS rules for such remaining cost.[14]

EXAMPLE I:10-10 ▶ In 2025, Polar Corporation purchases and places in service $2,500,000 of equipment (7-year MACRS property and half-year convention). Polar claims Sec. 179 expensing for $1,250,000 of the property's cost. It may also claim $500,000 [0.40 × ($2,500,000 − $1,250,000)] of bonus depreciation and $107,175 [0.1429 × ($2,500,000 − $1,250,000 − $500,000] of MACRS depreciation. Polar's total depreciation deduction for 2025 is $1,857,175 ($1,250,000 + $500,000 + $107,175).

For 2026, Polar cannot again claim Sec. 179 expensing or bonus depreciation for the equipment, but Polar can continue MACRS depreciation for it. The 2026 depreciation deduction is $183,675 [0.2449 × ($2,500,000 − $1,250,000 − $500,000]. (Polar may be able to claim Sec. 179 expensing and/or bonus depreciation for additional property it places in service in 2026.) ◀

If bonus depreciation was 100% in the year that the qualified property was placed in service, the taxpayer could have deducted the property's entire cost through bonus depreciation (and/or Sec. 179 expensing, generally), leaving no cost for which to claim MACRS depreciation.

EXAMPLE I:10-11 ▶ Assume the same facts as in Example I:10-10, except the property was placed in service in 2022, when the maximum Sec. 179 election was $1,080,000 and bonus depreciation was 100%. Polar could have claimed $1,080,000 of Sec. 179 expensing and $1,420,000 ($2,500,000 − $1,080,000) of bonus depreciation. The property's MACRS depreciation would be zero for all years. (Polar could have instead claimed a smaller amount of Sec. 179 expensing and a correspondingly larger amount of bonus depreciation, but MACRS depreciation would still be zero.) ◀

As noted earlier, states usually follow most federal income tax rules. However, many states do not allow bonus depreciation. For income tax returns filed in such states, taxpayers claim Sec. 179 expensing (to the extent allowed) and MACRS depreciation but do not claim bonus depreciation.

---

[12] Sec. 168(k). Bonus depreciation is allowed for both regular income tax and alternative minimum tax purposes. (The alternative minimum tax is discussed in Chapter I:14).

[13] A taxpayer may elect out of bonus depreciation for a particular tax year with respect to any property class, such as 5-year MACRS property (Sec. 168(k)(7) and Reg. Sec. 1.168(k)-1(e)).

[14] Reg. 1.168(k)-1(d)(3) Example 2.

EXAMPLE I:10-12 ▶ Assume the same facts as in Example I:10-10. Polar operates in State X, which allows $100,000 of Sec. 179 expensing but does not allow bonus depreciation. For its 2025 State X income tax return, Polar claims Sec. 179 expensing of $100,000 and MACRS depreciation of $342,960 [0.1429 × ($2,500,000 − $100,000)]. For its 2026 State X income tax return, Polar claims MACRS depreciation of $587,760 [0.2449 × ($2,500,000 − $100,000)]. ◀

KEY POINT

Remember, the mid-quarter convention does *not* apply to real property.

Use of the Mid-Quarter Convention. As mentioned previously, the MACRS system generally uses the half-year convention for personal property. However, the MACRS system requires the use of the *mid-quarter convention* if the aggregate basis of all personal property placed in service during the last three months of the year exceeds 40% of the cost of all personal property placed in service during the tax year.[15] The 40% test is applied after reducing the property's basis by Sec. 179 expensing, if elected, but not by bonus depreciation, if claimed. If the test is met, the mid-quarter convention must be used instead of the half-year convention, and special mid-quarter tables must be used to compute depreciation under this convention. (See Tables 2 through 5 in Appendix C.) Property placed in service and disposed of during the same tax year is not taken into account for purposes of the mid-quarter test,[16] nor is property expensed under Sec. 179.[17]

The 40% rule prevents taxpayers from using the half-year convention and thereby obtaining one-half year's depreciation in the year of acquisition when a substantial portion of the assets are placed in service during the last quarter of the tax year.

EXAMPLE I:10-13 ▶ In 2025, Fir Corporation purchases and places into service $2.65 million of 5-year MACRS property:

Date Placed in Service	*Acquisition Cost*
March 3	$630,000
April 2	700,000
December 21	1,320,000

Fir does not claim Sec. 179 expensing or bonus depreciation for the property. Because more than 40% of the property acquired during the year is placed in service in the last three months ($1,320,000 ÷ $2,650,000 = 50%), the mid-quarter convention applies for all three properties. Fir computes 2025 depreciation as follows:

Property Placed in Service	*2025 MACRS Depreciation*	*Appendix C Table*
March 3	$630,000 × 35% = $220,500	Table 2
April 2	700,000 × 25% = 175,000	Table 3
December 21	1,320,000 × 5% = 66,000	Table 5
Total	$461,500	

◀

EXAMPLE I:10-14 ▶ Assume the same facts as in Example I:10-13 except Fir elects $1.25 million of Sec. 179 expensing for the December 21 property. The mid-quarter convention does not apply because not more than 40% of the property (after the Sec. 179 election) was placed in service in the fourth quarter [($1,320,000 − $1,250,000) ÷ ($2,650,000 − $1,250,000) = 5%]. Fir uses the half-year convention (Table 1 in Appendix C), and its depreciation for 2025 is computed as follows:

Property Placed in Service	*2024 MACRS Depreciation*	*Sec. 179 Depreciation*	*Total Depreciation*
March 3	$630,000 × 20% = $126,000	–0–	$ 126,000
April 2	700,000 × 20% = 140,000	–0–	140,000
December 21	70,000* × 20% = 14,000	$1,250,000	1,264,000
Total			$1,530,000

* After Sec. 179 election ($1,320,000 − $1,250,000)

---

[15] Sec. 168(d)(3).

[16] Sec. 168(d)(3)(B) and Reg. Sec. 1.168(d)-1(b)(3).

[17] PLR 9126014 (March 29, 1991).

In this case, the half-year convention yields a 2025 depreciation deduction that is larger than with the mid-quarter convention. The reverse can be true in some cases, such as when a large percentage of property is placed in service in the first quarter but enough property is placed in service in the fourth quarter to require the mid-quarter convention. ◀

As noted earlier, the taxpayer may have claimed 100% bonus depreciation for a property's cost when it was placed in service (e.g., in 2022). If so, the applicability of the half-year versus mid-quarter convention would be irrelevant because there would be no cost remaining on which to claim MACRS depreciation. However, it was important for such property that the 40% test for the mid-quarter convention was applied after reducing the property's basis for Sec. 179 expensing but not for bonus depreciation because many states' income taxes do not allow bonus depreciation.

ADDITIONAL POINT

To reflect the applicable convention, the taxpayer must manually adjust the depreciation factor found in the MACRS table for assets disposed of during the year.

Year of Disposition. The MACRS system requires that depreciation be taken in the year of disposition using the same convention that applied on acquisition (e.g., half-year, mid-month, or mid-quarter convention). Therefore, if property is disposed of during any year in which the half-year convention is applicable, the depreciation for the year of disposition will be one-half of the amount computed by using the table percentages.

EXAMPLE I:10-15 ▶ Michelle acquired machinery in March 2021 that qualified as 7-year MACRS property and had a $100,000 basis for depreciation. The half-year convention applied in the year of acquisition, and Michelle claimed no Sec. 179 depreciation or bonus depreciation on the machinery. In December 2025, Michelle sells the machinery. Michelle's depreciation deduction for 2025 is $4,465 ($100,000 × 0.0893 × 0.50). See Table 1 in Appendix C. ◀

If property is subject to the mid-quarter convention, it is treated as being disposed of at the midpoint of the quarter.

EXAMPLE I:10-16 ▶ Jason uses the calendar year as his tax year. In addition to other property acquired in the fourth quarter of 2021, Jason acquired $200,000 of 5-year property in May 2021 (second quarter). He depreciated all property acquired in 2021 using the mid-quarter convention. He claimed no Sec. 179 expense or bonus depreciation. If Jason sells the 5-year property on July 14, 2025 (third quarter), the property will be treated as if it were sold on August 15, 2025, which is the midpoint of the third quarter. Thus, using Table 3 in Appendix C, Jason claims $14,213 of depreciation for 2025 [($200,000 × 0.1137) × (2.5 ÷ 4)]. ◀

KEY POINT

Depreciable real property placed in service after 1986 must be depreciated using the straight-line method.

ADDITIONAL COMMENT

For purposes of determining whether at least 80% of the gross rental income is rental income from dwelling units, a taxpayer living in any part of the building includes the fair rental value of his unit in the gross rental income.

Real property falls into two categories: residential rental property and nonresidential real property. **Residential rental property** is defined as property from which at least 80% of the gross rental income is rental income from dwelling units.[18] Dwelling units include houses, apartments, and manufactured homes that are used for residential purposes but not hotels, motels, or other establishments for transient use. *Nonresidential real property* is any real property other than residential rental property.

Real Property: Classification and Recovery Rates. The MACRS recovery periods that apply to real property placed in service in years after 1986 are:

- Residential rental property: 27.5 years (Table 7 in Appendix C)
- Nonresidential real property: 39 years[19] (Table 8 in Appendix C)

Straight-line depreciation must be used and is reflected in the tables. A mid-month convention is used in the year of acquisition and in the year of disposition.

EXAMPLE I:10-17 ▶ On October 4, 2025, Husker, Inc., acquired an office building to relocate its rapidly-growing staff. The property was purchased for $1,500,000, of which $200,000 was allocated to the underlying land. Because the property is nonresidential real property, it is classified as 39-year property. Depreciation is computed using Table 8 in Appendix C (mid-month convention), totaling $6,955 ($1,300,000 × 0.00535). For 2026, depreciation on the building will be $33,332 ($1,300,000 × 0.02564). ◀

ADDITIONAL COMMENT

In Example I:10-17, Husker cannot claim Sec. 179 expensing or bonus depreciation for the office building.

---

[18] Secs. 168(e)(2)(A).

[19] Sec. 168(c). A 31.5-year recovery period applies to nonresidential real property placed in service on or after January 1, 1987, and before May 13, 1993.

Taxpayers owning buildings must depreciate subsequent capital improvements. Capital improvements are depreciated over the full MACRS recovery period of the improvement, not over the remaining life or recovery period of the building. Thus, the cost of a new roof on an office building must be depreciated over 39 years, even though the building may have been placed in service several years ago.

Qualified Improvement Property. Qualified improvement property (QIP) is any improvement to an interior portion of nonresidential real property if the improvement is placed into service by the taxpayer after the date the real property was placed into service. Certain improvements are not considered to be QIP, such as building enlargements, elevators, escalators, or a building's internal structural framework.

Under MACRS, the cost of QIP is depreciable over 15 years using the straight-line method. QIP, however, is eligible for Sec. 179 expensing and bonus depreciation.

EXAMPLE I:10-18 ▶ Shaheen Corporation leases office space for some of its business offices. The landlord placed the building into service several years ago. In June 2025, Shaheen spends $120,000 to rearrange the offices' walls and replace the ductwork but does not change the overall size of the offices. The improvements are QIP. Shaheen can deduct all $120,000 for 2025 by claiming Sec. 179 expensing (assuming it places in service less than $3.13 million of Sec. 179 property during 2025).

Alternatively, Shaheen could forego Sec. 179 expensing and elect out of bonus depreciation. If so, Shaheen deducts MACRS depreciation of $4,000 [($120,000 ÷ 15 years) × $\frac{1}{2}$] for 2025, assuming the half-year convention applies. For 2026, it deducts $8,000 of MACRS depreciation. ◀

Straight-Line (Method) Election Under MACRS. Instead of using the accelerated methods previously described under the MACRS rules, taxpayers may elect to use the straight-line method for tangible personal property. If the straight-line election is made, the taxpayer must use either the same depreciation period or an extended period based on the alternative depreciation system, as discussed below.[20]

EXAMPLE I:10-19 ▶ In 2025, Delta Corporation places in service equipment costing $100,000. Delta does not claim Sec. 179 expensing or bonus depreciation for the property, and it elects the straight-line method under MACRS. Using a 7-year recovery period and half-year convention, Delta's depreciation for 2025 is $7,143 [($100,000 ÷ 7 years) × 0.50]. ◀

ADDITIONAL COMMENT

U.S. corporations often operate abroad through foreign subsidiary corporations. The ADS is used when calculating global intangible low-taxed income, which is a portion of the subsidiaries' income that the U.S. federal government taxes in a special way (Sec. 951A(d)(3)(A)).

Alternative Depreciation System. The alternative depreciation system (ADS) is required for certain property and is also allowed for other depreciable assets if the taxpayer so elects.[21] The election is made on a year-by-year basis. Once the election is made for specified property, it is irrevocable. For personal property, the ADS election applies to all property within a class (all 5-year property, for example); for real property, the ADS election may be made on an individual property basis. The principal type of property for which the ADS is *required* is tangible property used predominantly outside the United States. Property that is required to be depreciated under ADS is ineligible for bonus depreciation. ADS recovery periods are generally longer than recovery periods under MACRS, and ADS requires the use of the straight-line method with a half-year, mid-quarter, or mid-month convention, whichever is applicable. Thus, the ADS election is generally made by taxpayers who want to use the straight-line method over a longer recovery period. For example, an individual might anticipate being in a higher tax bracket in the future. Electing the ADS shifts some depreciation deductions from the current year to future years, when the taxpayer expects them to save greater taxes (the taxpayer, however, should not overlook the time value of money).

---

[20] Sec. 168(g)(7).

[21] Sec. 168(g). (See Tables 9–11 in Appendix C.)

TOPIC REVIEW I:10-1

Comparison of MACRS and ADS

	MACRS	ADS
Recovery Periods:		
Automobiles	5 years	5 years
Computers	5 years	5 years
Office machinery	5 years	6 years
Office furniture and equipment	7 years	10 years
Residential rental property	27.5 years	30 years[a]
Nonresidential real property	39 years[b]	40 years
Personal property with no specified class life	7 years	12 years
Conventions:		
Personal property	Half-year or mid-quarter[c]	Half-year or mid-quarter[c]
Real property	Mid-month	Mid-month
Depreciation in year of sale:		
Personal property	Yes	Yes
Real property	Yes	Yes

[a] For property placed in service prior to January 1, 2018, the ADS recovery period is 40 years.

[b] For property placed in service prior to May 13, 1993, the MACRS recovery period is 31.5 years.

[c] If more than 40% of the cost of personal property (after Sec. 179 expensing) is placed in service during the fourth quarter of the year.

EXAMPLE I:10-20 ▶ In May 2025, Bob Roaster purchases an office building for $300,000 ($50,000 allocated to the land) as rental property. Roaster elects to depreciate the building using ADS. Depreciation expense for 2025, using the mid-month convention and a 40-year ADS recovery period, is $3,908 [$250,000 × .01563 (Table 11, Appendix C)]. If Roaster had not elected ADS, his depreciation would have been $4,013 [$250,000 × .01605 (Table 8, Appendix C)]. The difference is small because the recovery period is 39 years under regular MACRS and 40 years under ADS. ◀

The alternate depreciation system also is used to compute earnings and profits (E&P) for a corporation (see Chapter C:4 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*), and a variation of the ADS applies to compute depreciation for property placed into service after 1986 but before 1999 for alternative minimum tax purposes for individuals (see Chapter I:14).

Topic Review I:10-1 presents a comparison of the MACRS and ADS rules.

MACRS RESTRICTIONS

ETHICAL POINT

The personal use of a corporate automobile by a shareholder-employee may be a constructive dividend. Personal use by a nonshareholder-employee results in additional taxable compensation to the employee.

Personal-Use Assets. The personal-use portion of an asset's cost is not depreciable. For example, if a taxpayer owns a duplex and uses one unit as a personal residence, only the unit that is rented to tenants qualifies for depreciation.

Listed Property Rules. Because Congress was concerned about taxpayers claiming large depreciation deductions (using accelerated methods) on certain types of assets that are conducive to mixed business/personal use, it placed restrictions on assets that are classified as *listed property*. Listed property includes automobiles and property generally used for purposes of entertainment, recreation, or amusement (for example, a video recorder).[22] If a listed property's business use is greater than 50% of its total use, the taxpayer may elect Sec. 179 expensing for the business portion and may use regular MACRS tables for the remaining business portion of the asset's cost, including bonus depreciation where applicable. However, if the business use is 50% or less, the taxpayer may not elect Sec. 179 expensing, must use ADS (e.g., 5-year straight-line cost recovery for automobiles), and may not use bonus depreciation (because ADS is required).[23]

---

[22] Computers and peripheral equipment placed into service before 2018 are also listed property.

[23] An employee is not allowed to deduct depreciation for his or her employment-related use of listed property (e.g., automobile) unless such use is for the employer's convenience and required as a condition of employment (Sec. 280F(d)(3)). For 2018 through 2025, unreimbursed employee business expenses are not deductible (see page I:7-3), but this Sec. 280F(d)(3) rule will have renewed importance starting in 2026.

EXAMPLE I:10-21 ▶ In 2025, Paula acquires an automobile costing $30,000, and 60% of its use is for her business. Paula is not required to use ADS because the automobile is predominantly used in business, i.e., more than 50%. Assuming she does not claim Sec. 179 expensing or bonus depreciation and that the half-year convention applies, the MACRS percentage for 2025 is 20% (see Table 1 in Appendix C). Paula deducts MACRS depreciation for the business-use portion of the automobile, which is $3,600 ($30,000 × 0.20 × 0.60) for 2025. ◀

EXAMPLE I:10-22 ▶ Assume the same facts as in Example I:10-21 except 40% of the automobile's use is for Paula's business. She must use ADS to depreciate the business portion of the automobile's cost and thus uses the straight-line method over five years. Paula's 2025 depreciation deduction is $1,200 [($30,000 ÷ 5 years) × $\frac{1}{2}$ year × 0.40]. She is not allowed to claim Sec. 179 expensing or bonus depreciation for the automobile. ◀

Recapture of Excess Cost Recovery Deductions. If the taxpayer's business use of an item of listed property decreases to 50% or less in a subsequent year, the taxpayer reports as ordinary income any excess depreciation deductions for it. Depreciation deductions for all years are recomputed using ADS. The excess depreciation deducted, including any Sec. 179 expense and bonus depreciation, is recaptured as ordinary income by including it in the taxpayer's gross income in the year the business-use percentage first falls to 50% or below.[24] Once the business use falls to 50% or below, ADS must be used for the current year and for all subsequent years, even if the business-use percentage increases to more than 50% in a subsequent year.

EXAMPLE I:10-23 ▶ Paul, a self-employed attorney, acquired an automobile in June 2023 for $40,000 and did not claim Sec. 179 expensing or bonus depreciation for it. In both 2023 and 2024, Paul's business-use percentage was 60%. MACRS depreciation for these two years was as follows, assuming the half-year convention applied:

2023: Regular MACRS depreciation assuming 100% business use ($40,000 × 0.20)	$ 8,000
Times: Business-use percentage	0.60
Depreciation for 60% business use	$ 4,800
2024: Regular MACRS depreciation assuming 100% business use ($40,000 × 0.32)	$12,800
Times: Business-use percentage	0.60
Depreciation for 60% business use	$ 7,680

In 2025, Paul's business-use percentage declines to 40%. Therefore, he must use ADS for 2025 and also recapture the excess depreciation taken for 2023 and 2024. The recapture is computed as follows:

MACRS depreciation taken for 2023 and 2024 ($4,800 + $7,680)		$12,480
2023: Recomputed ADS depreciation ($40,000 × 0.60 × 0.10)	$2,400	
2024: Recomputed ADS depreciation ($40,000 × 0.60 × 0.20)	4,800	(7,200)
Recapture of excess depreciation for 2025 (ordinary income)		$ 5,280

Paul must use ADS to compute depreciation for 2025 and all subsequent years. His 2025 deduction will be $3,200 ($40,000 × 0.40 × 0.20). ◀

Limitations on Luxury Automobiles. Congress limits depreciation deductions for higher-cost passenger automobiles because it believes that such deductions would otherwise be too generous. A passenger automobile is defined as a 4-wheeled vehicle which is manufactured primarily for use on public streets, roads, and highways and which is rated at 6,000 pounds or less unloaded gross vehicle weight rating (GVWR).[25] In essence, taxpayers are still allowed to fully depreciate luxury cars, but must depreciate them over longer than the normal five-year recovery period.

---

[24] Sec. 280F(b).

[25] Sec. 280F(d)(5)(A).

TAX AUTHORITY UPDATE

At the time this edition went to press, the IRS had not yet released the 2025 ceiling limits. For these examples, we assume the limits will be the same for 2025 as they were for 2024.

To prevent such perceived abuse, Congress limits depreciation deductions for passenger automobiles. For such vehicles placed into service in 2025 that are used 100% for business purposes, these ceiling limits are:

Year 1 (2025)	$12,400 or $20,400*
Year 2 (2026)	19,800
Year 3 (2027)	11,900
After Year 3 (2028 and subsequent years)	7,160

*If the taxpayer does not elect out of bonus depreciation.

For each year of the property's recovery period, the taxpayer deducts the lesser of the depreciation that would otherwise be deductible or the ceiling limit. Any unrecovered basis at the end of the recovery period is deductible starting in the tax year after the recovery period ends, limited to the ceiling limit for years after the third year.

EXAMPLE I:10-24 ▶

In 2025, Joe purchases and places in service a passenger automobile costing $85,000 that he uses 100% for business purposes. Joe does not claim Sec. 179 expensing or bonus depreciation for it, and the half-year convention applies. His depreciation deductions for the automobile's five-year recovery period are determined as follows (MACRS percentages are from Appendix C, Table 1):

Year	(a) *MACRS depreciation*	(b) *Ceiling limit*	*Deduction (lesser of a or b)*
2025	$85,000 × 0.2000 = $17,000	$12,400	$12,400
2026	$85,000 × 0.3200 = 27,200	19,800	19,800
2027	$85,000 × 0.1920 = 16,320	11,900	11,900
2028	$85,000 × 0.1152 = 9,792	7,160	7,160
2029	$85,000 × 0.1152 = 9,792	7,160	7,160
2030	$85,000 × 0.0576 = 4,896	7,160	4,896
Total for recovery period			$63,316

At the end of 2030, Joe's unrecovered basis is $21,684 ($85,000 − $63,316). For 2031, Joe deducts $7,160 (lesser of $21,684 or $7,160), reducing his unrecovered basis to $14,524. Joe similarly deducts $7,160 for 2032, $7,160 for 2033, and $204 for 2034. ◀

ADDITIONAL COMMENT

The limitations on luxury automobiles mean that the depreciation deductions normally are limited during the 5-year recovery period on business automobiles costing more than approximately $62,000 ($12,400 ÷ 0.20) if the taxpayer places it in service in 2025 and does not claim Sec. 179 expensing or bonus depreciation for it.

Different ceiling limits may apply for a passenger automobile the taxpayer placed in service in a prior year (see Table 6 in Appendix C).

If the taxpayer claims bonus depreciation for a passenger automobile, the first-year ceiling limit is $8,000 higher. However, as is the case for other property for which bonus depreciation is claimed, the automobile's basis for MACRS depreciation is its cost reduced by Sec. 179 expensing and bonus depreciation.[26]

EXAMPLE I:10-25 ▶

Assume the same facts as in Example I:10-24 except Joe claims bonus depreciation. Because he does not claim Sec. 179 expensing, bonus depreciation is $34,000 (0.40 × $85,000), and its basis for MACRS depreciation is $51,000 ($85,000 − $34,000). Joe's depreciation deductions for the automobile's recovery period are determined as follows:

Year	(a) *MACRS depreciation*	(b) *Ceiling limit*	*Deduction (lesser of a or b)*
2025	$51,000 × 0.2000 = $10,200	$20,400	$20,400*
2026	$51,000 × 0.3200 = 16,320	19,800	16,320
2027	$51,000 × 0.1920 = 9,792	11,900	9,792
2028	$51,000 × 0.1152 = 5,875	7,160	5,875
2029	$51,000 × 0.1152 = 5,875	7,160	5,875
2030	$51,000 × 0.0576 = 2,938	7,160	2,938
Total for recovery period			$61,200

* Lesser of (a) $34,000 bonus depreciation + $10,200 MACRS, or (b) $20,400.

At the end of 2030, Joe's unrecovered basis is $23,800 ($85,000 − $61,200). He deducts $7,160 for each year from 2031 through 2033 and the remaining $2,320 for 2034. ◀

---

[26] A taxpayer cannot claim bonus depreciation with respect to only a portion of a qualified property's cost (unlike Sec. 179), so the property's basis for MACRS depreciation for all years is reduced by bonus depreciation for it (and any Sec. 179 expensing for it). Rev. Proc. 2019-13 (2019-9 IRB, 2/13/2019) provided an exception to this treatment for certain property that qualified for 100% bonus depreciation (e.g., 2018 through 2022).

Depreciating Mixed-Use Automobiles. Taxpayers who use passenger automobiles less than 100% for business must compute the regular MACRS depreciation amount, identify the ceiling amount, and then reduce each one by the percentage of personal use. The actual depreciation deduction for the year will be the lesser of the two reduced amounts. Complicating the matter, the taxpayer's basis in the automobile will decrease by the lesser of the *unreduced* amounts, even though that was not the amount allowed as a deduction.[27] Example I:10-26 and Table I:10-3 demonstrate this rule.

EXAMPLE I:10-26 ▶

Assume the same facts as in Example I:10-24 (where Joe does not claim bonus depreciation) except his use of the passenger automobile is 80% for business purposes and 20% for personal purposes in all years. Table I:10-3 details Joe's depreciation deductions. For each year after the end of the regular MACRS recovery period, Joe deducts $5,728 ($7,160 × 0.80) of the unrecovered cost of the automobile's business-use portion. ◀

TYPICAL MISCONCEPTION

It is sometimes mistakenly believed that the Sec. 179 expensing allowance can be used to boost the first-year depreciation of luxury automobiles.

Trucks, Vans, and SUVs. As mentioned previously, depreciation deductions are limited for passenger automobiles whose unloaded gross vehicle weight rating (GVWR) is 6,000 pounds or less. Sport utility vehicles (SUVs) often have a GVWR exceeding 6,000 pounds, so the luxury automobile limitations do not apply to them. To prevent taxpayers from deducting the entire cost of a SUV in the year of purchase, the tax law limits Sec. 179 expensing to $31,300 for a SUV with a GVWR exceeding 6,000 pounds that is placed into service in 2025.[28]

▼ TABLE I:10-3
Depreciation Amounts for Example I:10-26 (80% Business-Use Automobile)

	(A) Depreciation Deduction: 100% Bus. Use (Table 1)	(B) Ceiling Limit: 100% Bus. Use (Table 6)	Deduction Allowed: 80% × Lesser of MACRS or Ceiling	Unrecovered Basis
2025 MACRS depreciation ($85,000 × 0.20)	$17,000	$12,400	$ 9,920	$72,600*
2026 MACRS depreciation ($85,000 × 0.32)	$27,200	$19,800	$15,840	$52,800
2027 MACRS depreciation ($85,000 × 0.192)	$16,320	$11,900	$ 9,520	$40,900
2028 MACRS depreciation ($85,000 × 0.1152)	$ 9,792	$ 7,160	$ 5,728	$33,740
2029 MACRS depreciation ($85,000 × 0.1152)	$ 9,792	$ 7,160	$ 5,728	$26,580
2030 MACRS depreciation ($85,000 × 0.0576)	$ 4,896	$ 7,160	$ 3,917	$21,684
Total through 2030	$85,000	N/A	$50,653	
2031 and subsequent years until fully depreciated Ceiling limit		$ 7,160	$ 5,728	

* **Unrecovered basis** equals original basis minus the lesser of A or B [($85,000 − $12,400) for 2025], even though the annual deduction is limited to business usage.

Note: Based on the unrecovered basis of $21,684 at the end of 2030, it would take Joe four more years to fully depreciate the automobile ($21,684 ÷ $7,160 = 3.03 years). The personal-use portion of the automobile's cost ($85,000 × 0.20 = $17,000) never will be depreciated and will be recovered only upon disposition.

---

[27] Sec. 280F(d)(8).

[28] Sec. 179(b)(5). Vehicles with a GVWR of more than 14,000 pounds are not considered SUVs and are not subject to the $30,500 limitation.

EXAMPLE I:10-27 ▶ Abby and Blake each purchase and place in service a vehicle that is used 100% for business in 2024 for $60,500. Abby's vehicle is a passenger automobile; she does not elect Sec. 179 expensing and does not elect out of bonus depreciation. Blake's vehicle is an SUV with a 6,800-pound GVWR; he elects Sec. 179 expensing and does not elect out of bonus depreciation. Each taxpayer's 2024 depreciation is computed as follows (if the half-year convention applies):

Abby:	Bonus depreciation ($60,500 × 0.40)	$24,200
	MACRS depreciation [($60,500 − $24,200) × 0.20]	7,260
	Sum of bonus and MACRS depreciation	31,460
	Ceiling limitation (Table 6)	20,400
	Depreciation deduction (lesser of $31,460 or $20,400)	$20,400
Blake:	Sec. 179 expensing (limited to $31,300)	$31,300
	Bonus depreciation [($60,500 − $31,300) × 0.40]	11,680
	MACRS depreciation [($60,500 − $31,300 − $11,680) × 0.20]	3,504
	Ceiling limitation (Table 6)	n/a*
	Depreciation deduction ($31,300 + $11,680 + $3,504)	$46,484

*Does not apply because the vehicle's GVWR is more than 6,000 pounds.

ADDITIONAL COMMENT

In Example I:10-27, Abby's 2025 depreciation deduction is much smaller than Blake's, even though their vehicles cost the same. However, this difference reverses in subsequent years, when Abby's depreciation deductions will be much larger than Blake's.

This example shows the significant first-year tax savings from buying an SUV with a GVWR exceeding 6,000 pounds. It should be noted that any vehicle that avoids the ceiling limitations must be used more than 50% for business, under the general listed property rules. ◀

Although some taxpayers avoid the ceiling limitations by purchasing heavy vehicles, other taxpayers who use light trucks and vans (6,000 GVWR or less) in their businesses are hurt by the ceiling limitations. In response to small business concerns, two exceptions to the ceiling limitations have been issued: (1) exemption from the ceiling limitations for vehicles that clearly are not for personal use and (2) higher ceiling limitation amounts for other light trucks and vans placed in service before 2018.

- Exemption from ceiling limitations: Certain "nonpersonal use" vehicles are completely exempt from the ceiling limitations.[29] These vehicles must be specifically modified so that they are not likely to be used more than a de minimis amount for personal purposes. This somewhat vague definition is explained further in the regulations as a van that only has a front bench for seating, has permanent shelving that fills most of the cargo area, or has been painted with advertising or the company's logo.
- Higher ceiling limitations: Even if a light truck or van does not meet the nonpersonal use criteria above, higher ceiling limitations apply for trucks and vans placed into service before 2018 on a truck chassis that have a GVWR of 6,000 pounds or less.[30] The ceiling limitations for trucks and vans and those for other vehicles are both based on the same historical dollar amounts in the IRC, but the IRS had historically calculated annual inflation adjustments separately for the two types of vehicles. Under the 2017 legislation that increases these dollar amounts in the IRC for 2018 and later years, these higher dollar amounts are adjusted for inflation for 2019 and later years. For 2018–2024, the ceiling limitations are the same for both types of vehicles. The IRS has not announced whether it will resume its practice of separate inflation adjustments for the two types of vehicles. At the time of content update, the 2025 numbers are not yet available.

ADDITIONAL COMMENT

The amount that can be deducted for leased automobiles is also limited.

Additional Computations for Leased Vehicles. If a taxpayer leases an automobile or light truck or van for business purposes, the deduction for rental payments is reduced to reflect the luxury auto depreciation limits imposed on purchased vehicles. If these restrictions were not applied to leased automobiles, the ceiling limitations could be avoided by leasing instead of purchasing an automobile. The leasing restriction is accomplished by requiring taxpayers to reduce their deduction by an “inclusion amount” obtained from an IRS table.[31] This amount is based on the automobile’s FMV and the tax year in which the lease commences, and is prorated for the percentage of business use and number of days used during the year. Lease inclusion tables are provided in Table 12 in Appendix C.

---

[29] Reg. Sec. 1.274-5(k).

[30] Rev. Proc. 2003-75, 2003-2 C.B. 1018.

EXAMPLE I:10-28 ▶

TAX AUTHORITY UPDATE

At the time this edition went to press, the IRS had not yet released the 2025 lease inclusion amounts. For Example I:10-28, we assume these amounts will be the same for 2025 as they were for 2024.

On January 1, 2025, Jim leased and placed in service an automobile with an $82,500 FMV and annual lease payments of $15,200. Jim uses the automobile 80% for business purposes. Jim can deduct $12,160 ($15,200 × 0.80) of the lease payments but must reduce his deduction by 80% of the $142 inclusion amount from Table 12 for the first year to reflect the luxury auto depreciation limitation. Thus, Jim’s auto lease deduction for 2025 is $12,046 [$12,160 − ($142 × 0.80)]. For 2026, Jim uses the $313 inclusion amount from Table 12 for the second year, obtaining a lease deduction of $11,910 [$12,160 − ($313 × 0.80)]. ◀

Topic Review I:10-2 summarizes the special depreciation elections and restrictions.

TOPIC REVIEW I:10-2

Special Depreciation Elections and Restrictions

Section 179 Expensing Election

Maximum deduction: $1.25 million (for 2025) of the total cost of qualified property placed in service during the year.

Qualified property: New or used tangible personal business-use property.

Limitations on deduction:

1. Cost limitation: The maximum Sec. 179 expense is reduced dollar-for-dollar by the excess of total qualified property cost over $3.13 million (for 2025). Taxpayers may not carry forward amounts reduced by this limitation. However, the cost not expensed because of this limitation remains as basis subject to bonus depreciation or MACRS depreciation,
2. Taxable income limitation: The Sec. 179 expense after cost limitation is further limited to taxable income before the deduction. Taxpayers may carry forward amounts lost because of this limitation.

Basis reduction: The basis of qualified property for bonus depreciation or MACRS depreciation is reduced by the Sec. 179 expense (after the cost limitation reduction).

Bonus Depreciation

Maximum allowed: 40% for 2025 of the cost of qualified property placed in service during the year.

Qualified Property: Property that is (1) MACRS property with a recovery period of 20 years or less or (2) computer software.

Business Use Restriction

Listed property: If business use of listed property exceeds 50% of total use, taxpayers may elect Sec. 179 expensing for the business portion and may depreciate the remaining business-use portion using bonus depreciation or MACRS rules. If business use is 50% or less of total use, taxpayers may not elect Sec. 179 expensing or bonus depreciation and must depreciate listed property using ADS rules.

Automobiles, Trucks, and Vans

Table 6 in Appendix C provides annual ceiling amounts for depreciation on 100% business-use automobiles and on 100% business-use trucks and vans with a GVWR of 6,000 pounds or less. The taxpayer computes regular depreciation under MACRS, including Sec. 179 expensing and bonus depreciation, and then compares that figure to the Table 6 ceiling figure. The deduction is the lesser of these two. If business-use is less than 100%, both figures must be reduced by the personal-use percentage. Basis nevertheless is adjusted by the unreduced figure. Business-use trucks and vans with a GVWR of more than 6,000 pounds are not subject to these limitations.

Leased Vehicles

Taxpayers who lease vehicles must subtract from their otherwise deductible lease payments an ”inclusion amount” (see Table 12 in Appendix C) to adjust the lease expense deduction for the luxury auto depreciation limitations imposed on purchased vehicles. This rule prevents individuals from avoiding the luxury auto depreciation limits by leasing vehicles.

---

[31] The latest lease inclusion table is contained in Rev. Proc. 2024-13, 2024-9 IRB 678 (2/26/2024).

AMORTIZATION

OBJECTIVE 2

Calculate amortization for intangible assets and distinguish between amortizable and non-amortizable assets

Amortization deductions are allowed for a variety of intangible assets. Although amortization periods vary greatly depending on the type of asset, all intangible assets are amortized on a *straight-line basis*. The major intangible assets that may be amortized are as follows:

- Goodwill and Other Purchased Intangibles, Sec. 197
- Research and Experimental Expenditures, Sec. 174
- Computer software
- Start-up Expenditures, Sec. 195
- **Organizational Expenditures,** Sec. 248
- Pollution Control Facilities, Sec. 169

Several of the above intangibles are discussed below.

SEC. 197 INTANGIBLES

Sec. 197 allows taxpayers to deduct the cost of certain Sec. 197 intangibles. The deduction is calculated using straight-line amortization over a 15-year (180-month) period beginning with the month of acquisition; any salvage value is disregarded.[32] However, the cost of an internally-created intangible (the taxpayer creates it rather than acquiring it from someone else) generally is not amortized over 15 years; its treatment depends on its type (discussed below). Sec. 197 intangibles include the following:

BOOK-TO-TAX ACCOUNTING COMPARISON

For financial statement reporting, a firm reduces goodwill by an impairment amount rather than by amortization.

- Goodwill and going concern value. **Goodwill** is the value of a trade or business that is attributable to the expectation of continued customer patronage, whether due to the name or reputation of the trade or business or to any other factor.[33] Going concern value is the added value that attaches to acquired property because it is an integral part of a going concern. A taxpayer generally acquires this type of Sec. 197 intangible when acquiring assets constituting a trade or business, and its cost is amortized over 15 years. Internally-created goodwill and going concern value often arise through advertising, employee training and retention, and other such expenditures that generally are deducted immediately.
- Intangibles relating to the workforce, an information base (e.g., a customer list), know-how, customers, suppliers, or similar items. Know-how related intangibles include patents, copyrights, formulas, and processes. Similar to goodwill and going concern value, the costs of these Sec. 197 intangibles generally are amortized over 15 years if acquired with assets constituting a trade or business but are deducted immediately if internally-created. However, the cost of an internally-created patent or copyright is depreciated under Sec. 167 (not amortized under Sec. 197) using the straight-line method over its useful life (which may be its remaining legal life).[34]
- Licenses, permits, or other rights granted by a governmental unit or agency (e.g., the capitalized cost of acquiring a radio broadcasting license).
- Covenant not to compete. This is an agreement between the buyer and seller of a business that the seller will not compete with the buyer for a specified period of time and/or within a specified geographic area. Its cost is amortized over 15 years even if its term is for a shorter length of time.[35]
- Franchises, trademarks, and trade names. A franchise includes any agreement that gives one the right to distribute, sell, or provide goods, services, or facilities, within a specified area.

---

[32] Sec. 197(a) and Reg. Sec. 1.197-2(f)(1). In general, Sec. 197 applies only to intangibles held in connection with the conduct of a trade or business or an activity engaged in for the production of income.

[33] Reg. Sec. 1.197-2(b)(1).

[34] Reg. Sec. 1.167(a)-3.

[35] The cost of a covenant not to compete for five years was required to be amortized over 15 years (*Frontier Chevrolet Co.*, 2003-1 USTC ¶50,490 (9th Cir., 2003) aff'g 116 T.C. 289 (2001)).

EXAMPLE I:10-29 ► In January of the current year, Chicago Corporation acquires all the net assets of Coastal Corporation for $1 million. The following intangible assets are included in the purchase agreement:

Assets	*Acquisition Cost*
Goodwill and going concern value	$100,000
Licenses	55,000
Patents	45,000
Covenant not to compete for five years	90,000

All the intangible assets above qualify as Sec. 197 intangible assets and are amortizable on a ratable basis (straight-line) over 15 years beginning with the month of acquisition. This 15-year amortization period applies to the covenant not to compete even though the covenant is only for five years. ◄

EXAMPLE I:10-30 ► On June 1 of the current year, McKee Corporation receives a patent for a process it created. McKee incurs $100,000 of legal costs to obtain the patent, which has a useful life of 17 years. The patent is not a Sec. 197 intangible asset because it is internally-created. Instead, McKee depreciates it under Sec. 167 over 17 years using the straight-line method. For the current year, McKee can deduct $3,431 (($100,000/17) × (7/12)). ◄

STOP & THINK

Question: When one company purchases the assets of another company, the purchasing company may acquire goodwill. Because purchased goodwill is a Sec. 197 intangible asset and may be amortized over 15 years, determining the cost of goodwill is important. How is the "cost" of goodwill determined in an acquisition?

Solution: The IRS requires that taxpayers use the "residual method" as prescribed in Sec. 1060. Under this method, all of the assets except for goodwill are valued. The total value of these assets is then subtracted from the total purchase price, and the residual is the amount of the purchase price allocated to goodwill.

ADDITIONAL COMMENT

Sec. 1231 generally allows a net Sec. 1231 gain to be treated as a long-term capital gain and a net Sec. 1231 loss to be deducted as an ordinary loss. Sec. 1245 requires that gains be classified as ordinary income to the extent depreciation, amortization, or depletion was claimed as an ordinary deduction in prior periods. Chapter I:13 discusses Secs. 1231 and 1245.

Classification and Disposition of Intangible Assets. A Sec. 197 intangible asset is treated as depreciable property. Thus, a disposition is given Sec. 1231 treatment if the intangible asset is held for more than one year.[36] Gain on disposition of a Sec. 197 intangible is subject to depreciation recapture under Sec. 1245.[37] Loss on disposition of a Sec. 197 intangible asset, however, is not deductible if other intangibles acquired in the same acquisition of a trade or business are retained. In such case, the bases of the retained Sec. 197 intangibles are increased by the disallowed loss.[38]

EXAMPLE I:10-31 ► Assume the same facts as in Example I:10-29. After five years, the covenant not to compete expires. Its adjusted basis is $60,000 [$90,000 − ($\frac{5}{15}$ × $90,000)]. The $60,000 loss is not deductible, and the disallowed loss is allocated to the retained Sec. 197 assets based on their respective FMVs. ◄

EXAMPLE I:10-32 ► Assume the same facts as in Example I:10-29. After one year the *patent* is sold for $50,000. In the initial year, $3,000 ($45,000 ÷ 15) of amortization was deducted. The recognized gain on the sale is $8,000 ($50,000 − $42,000). Of the gain, $3,000 is recaptured as ordinary income under Sec. 1245, and $5,000 is classified as Sec. 1231 gain. ◄

RESEARCH AND EXPERIMENTAL EXPENDITURES

Many businesses make expenditures for research and experimental (R&E) activities, expecting the activities to help them create new products or improve existing products. It can be unclear whether these expenditures are expenses or capital expenditures, so the tax law specifies rules for deducting them.[39]

---

[36] Sec. 197(f)(7).

[37] Sec. 1245(a)(2)(C).

[38] Sec. 197(f)(1).

[39] Sec. 174.

▼ TABLE I:10-4
Research and Experimental Expenditures

Items That Qualify	Items That Do Not Qualify[a]
▶ Costs incident to the development of an experimental or pilot model, a plant process, a product, a formula, an invention ▶ Costs associated with product improvements ▶ Costs of obtaining a patent, such as attorney fees ▶ Research contracted to others ▶ Depreciation or cost-recovery amounts attributable to capitalized R&E items (e.g., research laboratory and equipment)	▶ Expenditures for ordinary testing or inspection of materials or products for quality control purposes ▶ Efficiency surveys and management studies ▶ Marketing research, advertising, etc. ▶ Cost of acquiring another person's patent, model, production, or process ▶ Research incurred in connection with literary, historical, or similar projects

[a] Certain of these expenses may be deductible as trade or business expenses under Sec. 162, amortizable under Sec. 197, or treated as start-up expenditures under Sec. 195.

REAL-WORLD EXAMPLE

An airline company paid a manufacturer to defray the manufacturer's costs to design, develop, fabricate, and test a supersonic transport aircraft. The IRS held that these payments were R&E expenditures. Rev. Rul. 69-484, 1969-2 C.B. 38.

For taxable years that began before January 1, 2022, a taxpayer had three alternatives for deducting R&E expenditures: (1) treat them as expenses, thus deducting them in the year the taxpayer paid or incurred them, (2) capitalize them as deferred expenses and amortize them over a period of 60 months or more beginning with the month the taxpayer first realized benefits from them, or (3) capitalize them indefinitely, deducting them when the research project was abandoned or became worthless.

For taxable years that begin after December 31, 2021, these alternatives are not allowed. Instead, the taxpayer must capitalize R&E expenditures and amortize them ratably over the five-year period beginning with the middle of the taxable year in which they are paid or incurred (15 years for foreign research).

R&E expenditures are expenditures incurred in connection with the taxpayer's trade or business that are research and development costs in the experimental or laboratory sense. Table I:10-4 summarizes items that qualify and do not qualify as R&E expenditures. The cost of land or depreciable property does not qualify as an R&E expenditure, but depreciation deductions for property used in connection with research or experimentation do qualify as R&E expenditures.[40]

TYPICAL MISCONCEPTION

It is sometimes mistakenly believed that the cost to construct a building to be used as a research facility qualifies as an R&E expenditure. Only the depreciation deductions for the building can so qualify.

EXAMPLE I:10-33 ▶ Bratten Corporation uses the calendar year as its tax year and the accrual method as its overall accounting method. Bratten leases a research laboratory in the U.S. to develop new products and improve existing products for its business. Bratten incurs the following expenditures in 2025:

Laboratory supplies and materials	$ 80,000
Laboratory equipment	300,000*
Utilities and rent	100,000
Salaries	500,000

* The laboratory equipment has a 5-year MACRS recovery period. Assume the half-year convention applies for it, so its 2025 MACRS percentage is 20% (see Table I:10-1).

---

[40] Reg. Sec. 1.174-2.

Bratten's 2025 R&E expenditures are $740,000 [$80,000 + (20% × $300,000) + $100,000 + $500,000]. For each full year of the R&E expenditures' amortization period, Bratten can deduct $148,000 ($740,000 ÷ 5 years). Bratten thus can deduct $74,000 for 2025 and 2030 ($148,000 × $\frac{1}{2}$) and $148,000 for each of 2026, 2027, 2028, and 2029. ◀

COMPUTER SOFTWARE

The amortization or depreciation of computer software depends on the nature of the software and how it is acquired. Basically, computer software is either developed by the taxpayer or acquired (purchased or leased) from an outside party.

Developed Computer Software. Computer software development costs that qualify as research and experimental (R&E) expenditures are treated as such expenditures. As is discussed earlier, R&E expenditures are capitalized and amortized over five years (15 years for foreign research). If the computer software development costs do not qualify as R&E expenditures (e.g., the software is not in the experimental stage), they are depreciated using the straight-line method over 36 months, beginning with the date the software is placed in service.[41]

Purchased Computer Software. Purchased computer software generally may be depreciated in two alternative ways: (1) if the software is included in the cost of the computer hardware, the software does not have to be separately stated as long as the taxpayer consistently follows this treatment. Therefore, the computer and software would be depreciated together under MACRS over five years; or (2) if the software is purchased separately, the software must be depreciated on a straight-line basis over 36 months. An exception to these rules occurs if computer software is purchased in connection with the acquisition of a number of assets of an existing trade or business. In this case, the computer software is considered to be a Sec. 197 intangible and must be amortized over a period of 15 years.[42]

EXAMPLE I:10-34 ▶ Morris Corporation purchased all the assets of an existing business on April 1, 2025, for $1,000,000. Included in the assets was computer software that Morris intends to use in its business. The software is specialized for use by businesses in Morris' industry. Based on relative fair market values, the computer software is allocated a cost of $63,000. The software is a Sec. 197 intangible and would be amortized over 15 years beginning in the month of acquisition. For the nine-month period in calendar year 2025, Morris Corporation's amortization deduction would be $3,150 [($63,000 ÷ 15 years) × 9/12]. ◀

EXAMPLE I:10-35 ▶ Using the same facts as in Example I:10-34, if Morris Corporation had purchased computer software on April 1, 2025 (not in connection with an asset acquisition) for $63,000, the software would not be a Sec. 197 intangible and would be depreciable under Sec. 167(f) on a straight-line basis over a period of 36 months. Therefore, in 2025, Morris Corporation's depreciation deduction would be $15,750 ($63,000 × 9/36). ◀

---

[41] Sec. 167(f)(1) and Rev. Proc. 2007-16, 2007-1 C.B. 358.

[42] Sec. 197(e)(3)(A). If the computer software acquired in an asset acquisition is software that is readily available for purchase by the general public, such software would not be considered a Sec. 197 intangible (Sec. 197(e)(3)(A)(i)).

Leased or Licensed Computer Software. Computer software that is leased or licensed for use in the taxpayer's trade or business generally is deductible in full in the year paid.[43]

DEPLETION, INTANGIBLE DRILLING AND DEVELOPMENT COSTS

OBJECTIVE 3

Apply cost and percentage depletion methods and summarize the treatment for intangible drilling costs

The taxation of natural resources, such as oil and gas, coal, iron ore, etc. has many of its own specific rules. This section of the text discusses some of the concepts that apply to the oil and gas industry. Other natural resources have slightly different rules, but the oil and gas industry demonstrates the normal taxation of natural resources.

The exploration, development, and operation of oil and gas properties require an outlay of various types of expenditures. Below are the four major types of oil and gas property expenditures and their income tax treatment.

- Payments for the mineral interest. These costs are capitalized and recovered through depletion.
- Intangible drilling and development costs (e.g., labor and other operating costs to clear land, erect a derrick, and drill the well). Taxpayers elect to either capitalize or immediately expense these expenditures.
- Tangible asset costs (e.g., machinery, pipe). These expenditures must be capitalized and depreciated under the MACRS rules.
- Operating costs after the well is producing. These expenditures are deductible under Sec. 162 as ordinary and necessary business expenses.

DEPLETION METHODS

KEY POINT

A depletion deduction is available in the case of mines, oil and gas wells, other natural resources, and timber. However, the percentage depletion method is not available in the case of timber.

Depletion, similar to depreciation, is the using up of natural resources by the process of mining (coal, for example) or drilling (oil and gas). It is calculated under the **cost depletion method** or the **percentage depletion method** for each period. The method used in any year is the one that results in the largest deduction. Thus, percentage depletion may be used in one year and cost depletion may be used in the following year.

Depletion is allowed to the taxpayer who has an *economic interest* in the property. The person who typically has an economic interest in the property is the owner of the natural resource (i.e., the oil, gas, coal, etc.). Thus, depletion may be claimed by the persons who either own the natural resource property or retain a royalty interest. A mining company that only mines coal from a property and does not own (or lease) the underlying coal is not considered to hold an economic interest and, therefore, is not allowed a depletion deduction. The landowner who owns the coal would be entitled to the depletion deduction.

ADDITIONAL COMMENT

Note that a taxpayer will deduct the greater of cost depletion or percentage depletion. If percentage depletion is used, the adjusted basis of the property is reduced by the percentage depletion amount.

Cost Depletion Method. The cost depletion method is similar to the units-of-production method of depreciation. The adjusted basis of the asset is divided by the estimated recoverable units to arrive at a per-unit depletion cost. This per-unit cost is then multiplied by the number of units sold to determine the cost depletion deduction.[44] If the original estimate of recoverable units is subsequently determined to be incorrect, the per-unit cost depletion rate must be revised and used on a prospective basis to determine cost depletion in future years.[45] It is not proper to file an amended return for the years in which the incorrect estimated unit cost was used.

EXAMPLE I:10-36 ▶ Ralph acquires an oil and gas property interest for $100,000 in 2025. The estimate of recoverable units is 10,000 barrels of oil. The per-unit cost depletion amount is $10 ($100,000 ÷ 10,000). If 3,000 units are produced and 2,000 units are sold in 2025, the cost depletion amount is $20,000 (2,000 units × $10 per unit). If cost depletion is used because it exceeds the percentage depletion amount, the cost basis of the property is reduced to $80,000 ($100,000 – $20,000) at the beginning of 2026. If the estimate of remaining recoverable units is revised downward in 2026 from 8,000 units (10,000 − 2,000 units sold in 2025) to 5,000 units (including the 1,000 barrels produced but not sold in 2025), the property's $80,000 adjusted basis is divided by 5,000 units to arrive at a new per-unit cost depletion amount of $16 for 2026. This process is continued each year until the cost of the oil and gas property interest is fully depleted. ◀

---

[43] Reg. Sec. 1.162-11 and Rev. Proc. 2000-50, 2000-2 C.B. 601, as modified by Rev. Proc. 2007-16, 2007-1 C.B. 358.

[44] Sec. 612.

[45] Sec. 611(a).

REAL-WORLD EXAMPLE

Taxpayers are entitled to a depletion deduction if they have an economic interest in the property. This economic interest may be in the form of a royalty interest where a landowner receives a certain amount per unit extracted from her land, such as $10 for each barrel of oil. The landowner would be entitled to a depletion deduction based on the royalty income received.

Percentage Depletion Method. Percentage depletion generally offers substantial tax benefits for taxpayers in the natural resources industry. The purpose of allowing percentage depletion is to encourage persons to invest and/or operate in an industry that is both capital intensive and high risk but is also vital to our national interests. Percentage depletion may be used by taxpayers for a wide variety of natural resources, such as oil and gas, coal, gold, etc. The percentage depletion method has not been available to *large* oil and gas producers since 1974; but it is still available to *small* oil and gas producers and royalty owners under a specific exemption in the law.[46] Percentage depletion is computed by multiplying the percentage depletion rate times the gross income from the property. However, the depletion amount may not exceed 50% of the taxable income from the property before depletion is deducted (100% for oil and gas properties).[47] Percentage depletion may not be calculated on any lease bonus, advance royalty, or other amount payable without regard to production from the property.

Whether the taxpayer uses cost depletion or percentage depletion, the amount of the depletion deduction reduces the basis of the natural resource property. Once the basis of depletable property has been reduced to zero, a taxpayer may no longer claim depletion using the cost depletion method. However, the taxpayer may continue to claim percentage depletion. Subsequent percentage depletion will not reduce the basis of the property below zero. It should be apparent that percentage depletion is a very advantageous method because the total depletion allowed over the life of the property may exceed the property's cost.[48]

Percentage depletion rates vary by the type of mineral. Depletion rates for selected minerals are as follows:

Mineral	*Depletion Rate*
Oil and gas	15%[49]
Coal, asbestos	10%
Gold, silver, copper, iron ore	15%
Sulphur and uranium	22%
Gravel, stone	5%
All other minerals	14%

EXAMPLE I:10-37 ▶

In the current year, Carmen acquires for $400,000 an oil and gas property interest with 200,000 barrels of estimated recoverable oil. During the year, 10,000 barrels of oil are sold for $250,000. Intangible drilling and development costs (IDCs) amount to $100,000 and are expensed in the current year. Other expenses are $50,000. Cost depletion is $20,000 [10,000 barrels sold × ($400,000/200,000 barrels)] in the current year. The computation of percentage depletion is as follows:

(1) Percentage depletion before taxable income limitation ($250,000 × 0.15)	$ 37,500
(2) Taxable income ceiling:	
Gross income	$250,000
Minus: Intangible drilling costs (IDCs) expensed	(100,000)
Other expenses	(50,000)
Taxable income before depletion	$100,000
(3) Percentage depletion (lesser of (1) or (2))	$ 37,500

Carmen's depletion deduction is $37,500 because the percentage depletion amount is greater than the $20,000 of cost depletion. The adjusted basis of the property is reduced by $37,500, the amount of depletion actually claimed. ◀

HISTORICAL NOTE

An Arab oil embargo to the United States in 1973 created a situation where oil prices increased significantly. Consequently, most domestic U.S. oil producers reported huge profits. This situation contributed to the repeal of the percentage depletion allowance for large oil and gas producers.

KEY POINT

The use of the percentage depletion method permits recovery of more than the cost of the property.

---

[46] Sec. 613A(c). To be classified as a small oil and gas producer or royalty owner, the maximum depletable quantity is based on average daily production of not more than 1,000 barrels of oil or 6 million cubic feet of natural gas.

[47] Sec. 613(a).

[48] Depletion in excess of the adjusted basis of the property is a tax preference item under Sec. 57(a)(1). See Chapter I:14.

[49] For small producers and royalty owners of oil and gas properties, there is a further limitation: the percentage depletion deduction may not exceed 65% of taxable income from all sources before the depletion deduction (Sec. 613A(d)(1)).

TREATMENT OF INTANGIBLE DRILLING AND DEVELOPMENT COSTS

Intangible drilling and development costs (**IDCs**) may either be deducted as an expense or capitalized.[50] IDCs apply only to oil, gas, and geothermal wells and basically include all expenditures, other than the acquisition costs of the underlying property, that are incurred for the drilling and preparation of wells. If the IDCs are capitalized, the amounts are added to the property's basis for determining cost depletion, and the costs are expensed through cost depletion. For a well that is nonproductive (i.e., a dry hole), an ordinary loss is allowed for any IDC costs that have been capitalized and not recovered through depletion. The amount of depletion claimed in a tax year equals the greater of the percentage depletion and cost depletion amounts. If IDCs are capitalized and cost depletion is thereby increased, little or no tax benefit may result because the percentage depletion may still produce a greater deduction than cost depletion. Therefore, it is generally preferable to expense the IDCs if the percentage depletion is expected to be more than the cost depletion and is used to compute the depletion allowance.

EXAMPLE I:10-38 ▶ In the current year, Penny acquires certain rights to oil and gas property for $1,000,000, incurring $300,000 of IDCs. If the IDCs are capitalized, the basis for cost depletion purposes is $1,300,000. Assume that the cost depletion amounts are $100,000 in the current year if the IDCs are expensed and $130,000 if IDCs are capitalized. If the percentage depletion amount is $150,000, percentage depletion will be used because it is greater than either of the cost depletion amounts. Thus, expensing the IDCs permits Penny to deduct the entire $300,000 of IDCs in the current year plus $150,000 of percentage depletion. ◀

TAX PLANNING CONSIDERATIONS

OBJECTIVE 4

Identify tax planning considerations for depreciation

ALTERNATIVE DEPRECIATION SYSTEM UNDER MACRS

In some instances, it may be preferable to elect to use the alternative depreciation system (ADS) rather than the regular MACRS rules. For example, a taxpayer who is currently in a low tax bracket but anticipates being in a higher tax bracket in the future may elect to use ADS, which employs the straight-line method of depreciation over a longer recovery period.

EXAMPLE I:10-39 ▶ Gabriel's sole proprietorship normally is very profitable and puts his taxable income in the 37% tax bracket. In the current year, his profits are much lower than normal, putting his taxable income in the 24% tax bracket. Gabriel is confident his business' profitability will return to normal in a few years, so he spends $100,000 to acquire new machinery and equipment for it. The property's MACRS recovery period is seven years, and its ADS recovery period is 12 years. To reduce the portion of the $100,000 he deducts at a 24% tax rate in the current year, Gabriel does not elect Sec. 179 expensing and elects out of bonus depreciation. To further reduce his current-year deduction, Gabriel elects the ADS, under which his deduction is $4,167 [($100,000 ÷ 12 years) × $\frac{1}{2}$ year] if the half-year convention applies (versus $14,290 ($100,000 × 0.1429) under MACRS). Gabriel thus will deduct $95,833 ($100,000 − $4,167) of the property's cost in future years (versus $85,710 under MACRS), when he expects them to reduce taxes at a higher rate.[51] ◀

ADDITIONAL COMMENT

A taxpayer who is attempting to report a profit in three out of five years in an attempt to avoid the hobby loss rules (see Chapter I:6) might want to use the alternative depreciation system.

USE OF UNITS OF PRODUCTION DEPRECIATION

The MACRS depreciation system requires taxpayers to use a recovery period that is sometimes longer than the useful life of the asset. For example, assume a taxpayer uses a machine in his or her business that is classified as 7-year property under MACRS. However, the machine is operated 24 hours a day, seven days a week and is expected to be completely worn out in two years. The use of the 7-year recovery period substantially understates depreciation for the machine in the two years of actual use. Under Sec. 168(f), taxpayers may exclude property from the MACRS system if the property is depreciated under the unit-of-production method or any other method not expressed in terms of years. Therefore, if the

---

[50] Sec. 263(c).

[51] In Example I:10-39, Gabriel's increased tax savings are delayed, so he should also consider the time value of money.

WHAT WOULD YOU DO IN THIS SITUATION?

Your CPA firm has a long-standing tax client named Widgets R Us, Incorporated (WRU). WRU has been a worldwide leader in widget technology for years and continues to expand its global market share through a substantial program of basic research and development of widget crystallization processes. You have advised WRU as to which of these expenditures qualify as research and experimental (R&E) expenditures. In addition, you have given timely advice as to the tax treatment of WRU's R&E expenditures.

You are having your monthly tax conference with Ms. Ima Worthmore, president of WRU, and Mr. Stan Cunning, tax counsel of WRU. Ms. Worthmore relates to you a conversation she had with the local manager of a competitor CPA firm, Ms. Ruth Less. Ms. Less told Ms. Worthmore that she had discovered that WRU was one of the top spenders on research and development in the area and that her firm was "certified" to practice before the IRS and had experienced great success in gaining R&E write-offs for comparable firms. Ms. Less went on to say that, "For you, for this one year only, we offer to prepare your tax returns on a contingent basis. We promise to save you at least $1 million from what you are now paying the IRS through our better use of R&E tax breaks, and our fee will only be 30% of the tax savings!"

Ms. Worthmore was excited that WRU might be able to pay considerably lower taxes and is somewhat perturbed because you had not brought this tax opportunity to her attention. She wants your firm to provide her with a counteroffer. How do you ethically respond to your client's request to match or better Ms. Ruth Less' proposal?

taxpayer can express the useful life of the machine in terms of some base other than years (such as machine hours, units produced, etc.), it may be possible to depreciate the machine over a much shorter period than the seven years required under MACRS.

STRUCTURING A BUSINESS COMBINATION

REAL-WORLD EXAMPLE

A taxpayer purchased a business that owned retail franchises. The IRS determined that amounts paid in excess of the value of the net assets represented a nondepreciable "indivisible asset." However, the taxpayer was able to show that retail franchises have limited useful lives, and was able to amortize the excess costs. *Super Food Services, Inc. v. U.S.*, 24 AFTR 2d 69-5309, 69-2 USTC ¶9558 (7th Cir., 1969).

When a company purchases the assets of another business, the agreement must specify the amounts paid for the tangible depreciable, nondepreciable, and intangible assets. Also, the company must comply with the reporting requirements of Sec. 1060, which states that both the transferor and the transferee are bound by their written agreement as to the allocation of the purchase price to individual assets unless the IRS determines that such allocation is not appropriate. Amounts paid for tangible assets should be documented by appraisals and evidence of negotiations between the buyer and seller. Within reason, the purchaser should attempt to allocate as much of the total price to tangible depreciable assets, such as machinery and equipment. The purchaser also should consider allocating part of the purchase price to amortizable Sec. 197 intangible assets such as goodwill, covenants not to compete, patents, copyrights, licenses, and customer lists because such asset costs are recovered over a 15-year period. This is preferable to allocating the purchase price to depreciable real estate because such property must be depreciated over 39 years.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 5

Identify compliance and procedural considerations for depreciation

REPORTING COST RECOVERY, DEPRECIATION, DEPLETION, AND AMORTIZATION DEDUCTIONS

Form 4562 is the primary reporting device for depreciation (cost recovery), depletion, and amortization. Individual taxpayers engaged in trade or business complete Form 4562 and carry the total to Schedule C of their Form 1040, using a separate 4562 for each enterprise. Corporations, partnerships, and other tax entities also use Form 4562, carrying the total to their specific returns. Individuals with rental property complete a 4562 and carry the total to Schedule E of their Form 1040. If depreciation is computed only on property placed in service before the current year, an exception applies so that Form 4562 is not required. Depreciation totals are entered directly on the applicable primary form, but detailed depreciation records to support the deduction must be maintained.

EXAMPLE I:10-40 ▶ Form 4562 for 2024: Jones Corporation is a building contractor that owns the following 100% business-use properties:[52]

- Specialized utility repair truck (5-year property that is not listed property), $80,000 cost, placed in service on February 15, 2024.
- Machinery and equipment (7-year property), $1,290,000 cost, placed in service on June 10, 2024.
- Patent, $34,000 cost, placed in service on June 1, 2024, when it had a remaining useful life of 17 years. The patent is not a Sec. 197 intangible.
- MACRS deduction for assets placed in service before 2024 is $132,000.

Jones has 2024 taxable income of $1,920,000 (before the Sec. 179 deduction). It elects Sec. 179 expensing on the machinery and equipment but elects out of claiming bonus depreciation on all qualifying property. For 2024, the maximum amount allowed under Sec. 179 was $1.22 million, and this amount was reduced if Sec. 179 property placed into service during 2024 exceeded $3.05 million. Jones' employer identification number is 00-1234567. Depreciation and amortization amounts are reported on Form 4562 and are shown in Figures I:10-1 and I:10-2.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:10-1 Which of the following assets are subject to either amortization, depreciation, or cost recovery? Explain.

a. An automobile held for personal use.
b. Excess amounts paid in a business combination that are attributable to goodwill.
c. Excess amounts paid in a business combination that are attributable to customer lists that have a limited useful life.
d. A patent created internally which has a useful life of 17 years.
e. Land held for investment purposes.
f. A covenant not to compete which is entered into by the buyer and seller of a business.

I:10-2 Rick is a sole proprietor who has a small business currently operating at a loss. He would like to discontinue depreciating the fixed assets of the business for the next few years and to carry the deductions over to a future period. What tax consequences would result if Rick implements the plan to discontinue depreciation and then sells some of the depreciable assets several years later?

I:10-3 Rita purchased a house a few years ago for $250,000 and has been using it since then as her residence. In the current year, she moves to an apartment in another city to start a new job. The value of Rita's house has declined to $200,000 due to depressed housing conditions, so she decides to rent it rather than "give it away." She also believes that doing so will allow her to write off through depreciation the $250,000 purchase cost. Explain why her belief is incorrect.

I:10-4 Daytona Corporation, a manufacturing corporation, acquires the following business assets in the current year:

- Furniture
- Plumbing fixtures
- Land
- Goodwill and a trademark acquired in the acquisition of a business
- Automobile
- Heavy truck
- Machinery
- Building used in manufacturing activities

a. Which of the assets above are eligible for depreciation under the MACRS rules or amortization under Sec. 197?
b. What recovery period should be used for each of the assets listed above that come under the MACRS rules or under Sec. 197?

I:10-5 In 2025, Andes Corporation purchases $1.5 million of machinery (7-year property) and places it into service in its business. What are Andes' depreciation deductions for 2025 and 2026 in each of the following situations? Assume the half-year convention applies and this is the only property Andes places into service in 2025.

a. Andes does not elect Sec. 179 expensing and elects out of bonus depreciation.
b. Andes elects Sec. 179 expensing for the assets and does not elect out of bonus depreciation.
c. Andes elects Sec. 179 expensing for the assets and elects out of bonus depreciation.

---

[52] Note that Example I:10-40 pertains to 2023, so it reflects the Sec. 179 dollar amounts for that year. The 2024 version of Form 4562 was not available when this edition went to press.

FIGURE I:10-2 ▶ Form 4562 (Continued)

I:10-6 Goodrich Corporation uses the calendar year as its tax year. It acquires and places into service two depreciable assets during 2025:

- Asset #1: 7-year property; $950,000 cost; placed into service on January 20.
- Asset #2: 5-year property; $400,000 cost; placed into service on August 1.

What are Goodrich's depreciation deductions for 2025 and 2026 in each of the following situations if this is the only property it places into service in those years?

a. Goodrich does not elect Sec. 179 expensing and elects out of bonus depreciation for the machine.

b. Goodrich elects Sec. 179 expensing for the assets (to maximize its total 2025 depreciation deduction) and does not elect out of bonus depreciation.

I:10-7 Is a deduction allowed under the MACRS rules for depreciable real estate (used in a business or held for investment) in the year the property is sold? If so, explain how it is calculated.

I:10-8 Jose is considering acquiring a new luxury automobile costing $84,500 that will be used 100% in his business. The salesperson at the automobile dealership states that Jose will be entitled to substantial tax benefits in the initial year (2025) including:

If Sec. 179 is elected:

- A deduction of $84,500 of the acquisition cost under Sec. 179.

If Sec. 179 is not elected:

- A $16,900 ($84,500 × 0.2) depreciation deduction.

a. Assuming Jose elects out of bonus depreciation, are the salesperson's assertions relative to the tax benefits accurate? Explain.

b. Would your answer to Part a differ if the automobile were used only 60% for business purposes?

c. Would your answer to Part a differ if Jose instead were to lease the automobile?

d. Would your answers to Part a differ if the vehicle were a large SUV (unloaded gross vehicle weight rating (GVWR) greater than 6,000 pounds) rather than an automobile?

I:10-9 Rhonda acquires and places into service 5-year and 7-year property to use in her sole proprietorship. Rhonda's marginal tax rate currently is 24%, but she expects it to increase to 37% because her business' income is rapidly increasing. Explain why Rhonda may prefer to elect the alternative depreciation system, rather than claiming regular MACRS depreciation.

I:10-10 Rudy is considering whether to make the election under Sec. 179 to expense the maximum amount of the acquisition cost related to certain fixed asset additions. What advantages are associated with the Sec. 179 election?

I:10-11 Luby Corporation has maintained an office in a leased building for several years. The corporation has decided to make some significant improvements to enhance the property. How should Luby Corporation depreciate these improvements?

I:10-12 Your client is a self-employed attorney who is considering the purchase of a $90,000 automobile that will be used 80% for business.

a. What depreciation method and recovery period are used under MACRS for the automobile?

b. What tax consequences would occur if the business use of the automobile decreases to 50% or less in a succeeding year? Explain.

I:10-13 In recent years, Congress has enacted provisions in the tax law that permitted bonus depreciation for certain assets.

a. What types of assets typically qualified for bonus depreciation?

b. How does bonus depreciation interface with Sec. 179 first-year expensing?

I:10-14 On March 1, 2025, Sarah enters into a three-year lease for an automobile worth $83,000. The monthly lease payment is $850, and she uses the automobile only for her sole proprietorship. What amount of lease payments may Sarah deduct for 2025? (See Table 12 in Appendix C for lease inclusion amounts.)

I:10-15 What difference does it make for income tax purposes whether an intangible asset is (1) acquired in connection with a business acquisition, (2) acquired by the purchase of an individual asset (e.g., a patent), or (3) created internally? Explain.

I:10-16 In January of the current year, Park Corporation incurs $34,000 of legal costs associated with a patent that was developed internally and has a useful life of 17 years. Park also acquired for cash the net assets of Central Corporation for $1,000,000. The following assets are specified in the purchase agreement:

Land	$ 200,000
Goodwill and going concern value	100,000
Covenant not to compete	50,000
Licenses	125,000
Customer lists	25,000
Inventory	100,000
Equipment and other tangible depreciable business assets	400,000
Total	$1,000,000

a. What tax treatment should be accorded the intangible assets?

b. Assuming that you were advising Park Corporation during the negotiations before drafting the purchase agreement, what suggestions would you make regarding the allocation of the total purchase price to the individual assets?

I:10-17 Prior to 2022, many taxpayers deducted research and experimental (R&E) expenditures when they were paid or incurred.

a. Explain how this pre-2022 treatment differs from their deductibility in 2022 and later years.

b. Would most taxpayers prefer the pre-2022 treatment of R&E expenditures or their treatment in 2022 and later years?

I:10-18 In a business combination, why does the buyer generally prefer to allocate as much of the purchase price to short-lived depreciable assets, ordinary assets such as inventory, and Sec. 197 intangible assets?

I:10-19 Explain the difference between cost depletion and percentage depletion. Which of these two methods generally provides the largest deduction?

I:10-20 Simon acquires an interest in an oil property for $50,000. Intangible drilling costs (IDCs) in the initial year are $10,000. Cost depletion is $5,000 if the IDCs are expensed and $6,000 if the costs are capitalized. Percentage depletion is $15,000 if the IDCs are expensed and $20,000 if the costs are capitalized. The difference in the percentage depletion amounts is due to the 100% taxable income limitation.

a. What method (i.e., expensing or capitalization and amortization) should be elected for the treatment of the IDCs in the initial year if Simon wants to maximize his deductions?

b. Why are intangible drilling costs expensed by most taxpayers?

ISSUE IDENTIFICATION QUESTIONS

I:10-21 Georgia Corporation acquires a business automobile for $60,000 on December 31 of the current year but does not actually place the automobile into service until January 1 of the following year. What tax issues should Georgia Corporation consider?

I:10-22 Paula is planning to either purchase or lease a $75,000 automobile. She anticipates that business use of the auto will be 60% for the first two years but will decline to 40% in years three through five. Currently, Paula's marginal tax rate is 12% but she anticipates that her marginal tax rate will be 37% after a few years. What tax issues should Paula consider relative to the decision to purchase or lease the automobile?

I:10-23 In the current year, Coastal Corporation acquires all of the net assets of Acorn Corporation for $2,000,000. The purchase agreement allocated the following amounts to the individual assets and liabilities:

Land and building	$1,400,000
Accounts receivable	200,000
Inventory	300,000
Goodwill	400,000
Patents (remaining useful life of ten years)	100,000
Covenant not to compete	200,000
Liabilities	(600,000)
Total	$2,000,000

What tax issues should Coastal Corporation consider relative to the asset acquisitions?

I:10-24 Woburn Corporation uses the calendar year as its tax year. Woburn purchases and places into service $2.3 million of depreciable property during 2025:

	Cost	*Recovery Period*
January 20	$1,100,000	7 years
August 2	$ 400,000	7 years
November 15	$ 800,000	5 years

You are working in Woburn's tax department and are trying to decide how to make the Sec. 179 election so as to maximize Woburn's 2025 depreciation deduction. What tax issues should you consider for this decision?

PROBLEMS

I:10-25 ***Allowed Versus Allowable Depreciation.*** Sandy acquired business machinery (7-year MACRS property; half-year convention) on July 15, 2022, for $10,000. For 2022, Sandy claimed a $1,429 regular MACRS depreciation deduction and did not claim Sec. 179 depreciation or bonus depreciation. Because of her low tax rate in 2023–2025, Sandy did not claim any depreciation deduction on her tax returns in those years. She sells the machine on July 1, 2025, for $6,000.

a. What is the adjusted basis of the machine on the sale date?
b. How much gain or loss is recognized on the sale of the machine?

I:10-26 ***Conversion of Personal Asset to Business Use.*** Sid purchased an automobile for personal use on January 18, 2021 for $30,000. On January 1, 2025 (when its fair market value is $18,000), Sid starts a small business and begins to use the automobile exclusively in the business. The automobile's MACRS recovery period is five years.

a. What is the automobile's basis for depreciation when converted to business use in 2025?
b. What is Sid's depreciation deduction for 2025? Assume that Sid does not claim Sec. 179 expensing or bonus depreciation and that the half-year convention applies.

I:10-27 ***MACRS 40% Test and Bonus Depreciation.*** In 2025, Silver Corporation purchases the following properties to use in its business:

Property	*MACRS Recovery Period*	*Cost*	*Placed in service*
Trucks	5 years	$2,000,000	February 15, 2025
Machinery	7 years	5,000,000	May 1, 2025
Land	N/A	6,000,000	July 1, 2025
Building	39 years	10,000,000	December 1, 2025
Equipment	5 years	5,500,000	January 5, 2026

Silver claims the maximum allowed Sec. 179 expensing and bonus depreciation, and it uses the calendar year as its tax year.

a. What is Silver's total depreciation deduction for 2025?
b. What is Silver's total depreciation deduction for 2026? Note that 2026 bonus depreciation is 20%. Assume the dollar amounts for the maximum Sec. 179 election for 2025 also apply for 2026. Assume also that Silver does not place in service any other property.

I:10-28 ***MACRS 40% Test and Partial Year Depreciation.*** Large Corporation acquired and placed in service the following 100% business-use assets. Large did not claim Sec. 179 or bonus depreciation expensing on any of these properties.

- Truck (light-duty, modified non-personal use) costing $36,000: Placed in service on March 3, 2025, with a 5-year MACRS recovery period.
- Machinery costing $85,000: Placed in service on November 15, 2025, with a 7-year MACRS recovery period.
- Land costing $90,000: Placed in service on October 12, 2025.
- Building costing $280,000: Placed in service on December 4, 2025, with a 39-year MACRS recovery period.

a. What is Large's total depreciation deduction for 2025?
b. Large Corporation sells the machinery on February 2, 2027, and sells the building on September 18, 2027. What are the adjusted bases of these two assets on the dates of sale (compute accumulated depreciation to date of sale)?

I:10-29 ***Sec. 179 Expensing and MACRS Depreciation.*** Turner Corporation uses the calendar year as its tax year. It purchases and places into service $2.27 million of property during 2025 to use in its business:

	Placed into service	*Cost*	*Recovery Period*
Apartment building*	May 1	$990,000	27.5 years
Office furniture	June 23	$780,000	7 years
Office machinery	October 15	$500,000	5 years

* $80,000 of the cost pertains to the land on which the apartment building is located.

What is Turner's total depreciation deduction for 2025 in each of the following circumstances? Assume that Turner elects out of bonus depreciation.

a. Turner does not claim Sec. 179 expensing.
b. Turner claims Sec. 179 expensing for $780,000 of the office furniture's cost and $470,000 of the office machinery's cost.
c. Turner claims Sec. 179 expensing for $750,000 of the office furniture's cost and $500,000 of the office machinery's cost.

I:10-30 ***Sec. 179 Limitations and Carryovers.*** In 2025, Tish acquires and places into service in her business 7-year MACRS property costing \$40,000 and 5-year MACRS property costing \$165,000. Tish elects Sec. 179 expensing for all of the properties' cost. Tish's taxable income (before the Sec. 179 and 50% of self-employment tax deductions) is \$160,000.

a. What amount may Tish deduct under Sec. 179 for 2025 for the properties? What amount can she carry over to 2026?
b. What is Tish's total 2025 depreciation deduction?
c. What are the limitations on Tish's ability to use the Sec. 179 carryover in 2026?
d. How would your answers to Parts a, b, and c change if Tish's 2025 business taxable income (before the Sec. 179 expense and the 50% of self-employment tax deductions) was \$300,000 instead of \$160,000?

I:10-31 ***MACRS Dispositions.*** Tampa Corporation sold the following assets in 2025:

	Date Acquired	*Date Sold*	*Original Cost Basis*	*Depreciation/ Cost-Recovery Method*	*Recovery Period (Years)*	*Sales Price*
Automobile	1/1/22	12/1/25*	\$ 9,000	MACRS	5	\$ 1,200
Equipment	1/6/22	9/1/25*	20,000	MACRS	7	9,500
Building (nonresidential)	4/1/15	12/10/25	100,000	MACRS	39	240,000

* The half-year convention was used in the year of acquisition. Tampa did not claim Sec. 179 expense or bonus depreciation during the acquisition years.

a. What is the depreciation deduction for each asset in 2025?
b. Compute the gain or loss on each asset sold.

I:10-32 ***Sec. 179 Expensing Election and MACRS Depreciation.*** In 2025, Richmond Corporation purchases and places into service a machine. Richmond elects Sec. 179 expensing for \$1.25 million of its \$1.45 million cost. The machine has a 7-year MACRS recovery period. Assume the half-year convention applies and that Richmond's taxable income (before deducting Sec. 179 expensing) exceeds such expensing.

a. What is Richmond's total depreciation deduction for the machine for each year of its recovery period if it elects out of bonus depreciation for 2025?
b. How would your answer to Part a change if Richmond does not elect out of bonus depreciation for 2025?
c. How would your answers to Parts a and b change if Richmond sells the machine for \$430,000 on January 31, 2027? What is its gain or loss on the sale?

I:10-33 ***Sec. 179 Expensing and Mid-Quarter Convention.*** In 2025, Wabash Corporation purchases two assets and places them into service (both have a 7-year MACRS recovery period):

- Asset #1: \$1,510,000 cost; placed in service in February.
- Asset #2: \$1,490,000 cost; placed in service in November.

Wabash elects \$1.25 million under Sec. 179 and elects out of bonus depreciation. Compute Wabash's total depreciation deduction for 2025 under each of the following assumptions:
a. Wabash elects the \$1.25 million for Asset #1.
b. Wabash elects the \$1.25 million for Asset #2.

I:10-34 ***Straight-Line Depreciation.*** Bobby's marginal tax rate has been low for several years because his sole proprietorship has had low profits. Therefore, he has not elected Sec. 179 expensing, elected out of bonus depreciation, and elected to use the alternative depreciation system for property acquisitions. Bobby acquires, holds, or sells the following assets in 2025:

	Date Acquired	*Date Sold*	*Original Cost Basis*	*Selling Price*	*Depreciation Method*	*Recovery Period (Years)*
Equipment	6/1/25	—	\$40,000	—	SL ADS	7
Light duty truck (Business-use)	5/1/21	12/1/25	30,000	\$ 8,000	SL ADS	5
Furniture	3/1/21	—	10,000	—	SL ADS	7
Automobile	7/1/22	12/1/25	12,000	10,000	SL ADS	5

Assume the half-year convention applies for each year.

a. What is the depreciation deduction for each asset for 2025?

b. What amount of gain or loss does Bobby recognize on the properties sold in 2025?

I:10-35 ***Mixed Personal/Business Use.*** Trish is a self-employed CPA who purchases an automobile for $72,000 and places it into service in the current year (2025). Calculate Trish's current year MACRS depreciation deduction, assuming she does not elect Sec. 179 expensing, she elects out of bonus depreciation, and the half-year convention applies.

a. Trish uses the vehicle 60% for her business and 40% for personal purposes.

b. Trish uses the vehicle 40% for her business and 60% for personal purposes.

I:10-36 ***Recapture of Depreciation Deductions Due to Personal Use.*** Tammy acquired an automobile for $20,000 on July 1, 2022. Her business use of the vehicle is 70% in 2022, 70% in 2023, 40% in 2024, and 35% in 2025. The property's MACRS recovery period is 5 years, and Tammy does not claim Sec. 179 expensing or bonus depreciation for it. Assume the half-year convention applies.

a. Compute the MACRS depreciation deductions for each year.

b. What amount of previously claimed depreciation deductions must Tammy recapture in 2024?

I:10-37 ***Luxury Auto Limitations.*** Lutz Corporation acquired a 100% business-use automobile (MACRS 5-year recovery) on July 1, 2025, for $77,000. The company did not elect Sec. 179 expensing and elects out of bonus depreciation. What is depreciation for 2025 and each subsequent year?

I:10-38 ***Luxury Auto Limitations.*** In 2025, Luby Corporation acquires and places into service an automobile that it uses only for business purposes. Luby does not claim Sec. 179 expensing or bonus depreciation for the vehicle. Compute Luby's depreciation deduction for 2025 and each subsequent year. Assume the half-year convention applies.

a. Luby purchases the automobile for $80,000.

b. Luby purchases the automobile for $48,000.

I:10-39 ***Luxury Auto Limitations.*** Tracy acquires an automobile (MACRS 5-year recovery) on March 1, 2025. He uses the automobile 70% in his business and 30% for personal use. The automobile cost $76,000. No amount is expensed under Sec. 179, and Tracy elects out of bonus depreciation.

a. What is depreciation for 2025 and each subsequent year?

b. How would your answer to Part a change if the vehicle were a SUV with an unloaded gross vehicle weight rating (GVWR) of over 6,000 pounds and Tracy elected to expense the SUV under Sec. 179?

I:10-40 ***Luxury Auto Limitations—Leasing.*** Troy entered into a three-year lease of an automobile on January 1, 2025, for use 80% in business and 20% for personal use. The FMV of the automobile at the inception of the lease was $79,000, and Troy made 12 monthly lease payments of $1,165 in each year of the lease.

a. Before considering the effects of any lease inclusions amounts, what amount of lease payments are deductible for 2025, 2026, and 2027?

b. What portion, if any, of the "inclusion amount" must reduce Troy's lease deduction for 2025, 2026, and 2027?

c. How would your answers to Parts a and b change if the FMV of the auto was $48,000 and the monthly lease payments are $785?

I:10-41 ***Amortization of Intangibles.*** On January 1 of the current year, Palm Corporation purchases the net assets of Vicki's unincorporated business for $600,000. The tangible net assets have a $300,000 book value and a $400,000 FMV. The purchase agreement states that Vicki will not compete with Palm Corporation by starting a new business in the same area for a period of five years. The stated consideration received by Vicki for the covenant not to compete is $50,000. Other intangible assets included in the purchase agreement are as follows:

- Goodwill: $70,000
- Patents (12-year remaining useful life): $30,000
- Customer list: $50,000

a. How would Vicki's assets be recorded for tax purposes by Palm Corporation?
b. What is the amortization amount for each intangible asset in the current year?

I:10-42 ***R&E Expenditures.*** Park Corporation incurs the following costs in 2025, its initial year of doing business:

Materials and supplies for research laboratory	$ 80,000
Utilities and depreciation on research laboratory and equipment	40,000
Costs of acquiring another entity's patent for a new product	20,000
Market research salaries for surveys relative to proposed new products	60,000
Labor and supplies for quality control tests	50,000
Research costs subcontracted to a local university	35,000
Total	$285,000

Which of these expenditures are research and experimental expenditures for federal income tax purposes?

I:10-43 ***R&E Expenditures.*** In 2025, Tempe Corporation acquires a new research facility and hires several scientists to develop new products. Tempe incurs the following expenditures in 2025:

Laboratory materials	$ 40,000
Research salaries	80,000
Overhead attributable to the research facility	30,000
R&E equipment placed into service (5-year MACRS recovery period and half-year convention)	100,000

What are Tempe's 2025 and 2026 deductions for research and experimental (R&E) expenditures?

I:10-44 ***Computer Software.*** Phillips Corporation, a construction company that specializes in home construction, uses special computer software to schedule jobs and keep track of job costs. It uses generic software for bookkeeping and spreadsheet analysis. During 2025, Phillips Corporation had the following transactions relating to computer software:

- The corporation purchased a new computer system on May 12, 2025, for $15,000. The system included computer hardware and built-in computer software valued at $3,000. The corporation has never separated computer software from the hardware in prior years when a computer system was purchased.
- The corporation separately purchased new bookkeeping software on September 1, 2025, for $5,760.
- On June 1, 2025, Phillips Corporation acquired another home building company to strengthen its position in higher-priced homes. The total purchase price was $700,000 allocated to specific assets as follows:

Equipment	$500,000
Goodwill	150,000
Computer software	50,000

What amount can Phillips Corporation deduct in 2025 with respect to computer software?

I:10-45 ***Cost Depletion.*** Tina acquires an oil and gas property interest for $200,000 in the current year. The following information about current year operations is supplied for purposes of computing the amount of Tina's depletion and intangible drilling and development cost (IDC) deductions:

Estimated recoverable units	20,000
Units produced	6,000
Units sold	4,000
IDCs	$20,000
Percentage depletion (after limitations)	$25,000

a. What is the cost depletion amount if the IDCs are expensed?
b. What is the cost depletion amount if the IDCs are capitalized?
c. How much depletion is deducted on the tax return?
d. Should the IDCs be capitalized or expensed? Explain.

I:10-46 ***Percentage Depletion.*** Tony has owned an oil and gas property for a number of years. The following information is provided about the property's operations in the current year:

Gross income	$500,000
Minus: Expenses (including IDCs of $100,000)	(300,000)
Taxable income (before depletion)	$200,000
Cost depletion (if IDCs are expensed)	$ 20,000
Cost depletion (if IDCs are capitalized)	$ 30,000

a. What is the percentage depletion amount if the IDCs are expensed?
b. What is the percentage depletion amount if the IDCs are capitalized?
c. What is the depletion deduction amount assuming that the IDCs are expensed?
d. Based on the information above, which method should be used for the IDCs? Explain.

COMPREHENSIVE PROBLEM

I:10-47 John and Ellen Brite are married, file a joint return, and are less than 65 years old. They have no dependents and claim the standard deduction. John owns an unincorporated specialty electrical lighting retail store, Brite-On. Brite-On had the following assets on January 1, 2024:

ADDITIONAL COMMENT

Problem I:10-47 pertains to 2024 because tax forms for that year were the latest available at the time this edition went to print. (This problem's facts are used in Tax Form/Return Preparation Problem I:10-51.)

Assets	*Cost*
Old store building purchased April 1, 2009	$100,000
Equipment (7-year recovery) purchased January 10, 2019	30,000
Inventory valued using FIFO method: 4,000 light bulbs	$5/bulb

Brite-On purchased a competitor's store on March 1, 2024, for $206,000. The purchase price included the following:

New store building	$115,000 (FMV)
Land	28,000 (FMV)
Equipment (5-year recovery)	45,000 (FMV)
Inventory: 3,000 light bulbs	$ 6/bulb (cost)

On June 30, 2024, Brite-On sold the 7-year recovery period equipment for $12,000. Brite-On leased a car for $860/month beginning on June 1, 2024. The car is used 100% for business.

Brite-On sold 8,000 light bulbs at a price of $15/bulb during the year. Also, Brite-On made additional purchases of 4,000 light bulbs in August 2024 at a cost of $7/bulb. Brite-On had the following revenues (in addition to the sales of light bulbs) and additional expenses:

Service revenues	$94,000
Interest expense on business loans	6,000
Auto expenses (gas, oil, etc.)	4,800
Taxes and licenses	3,300
Utilities	2,800
Salaries	36,000

Ellen receives $42,000 of wages from employment elsewhere, from which $4,000 of federal income taxes were withheld. John and Ellen made four $3,100 quarterly estimated tax payments. For self-employment tax purposes, assume John spent 100% of his time at the store while Ellen spends no time at the store.

Additional Facts:

- Equipment acquired in 2019: The Brites elected out of bonus depreciation and did not elect Sec. 179. The half-year convention applies for this property.
- Equipment acquired in 2024: The Brites elected Sec. 179 to expense the cost of the 5-year equipment.
- Assume that the lease inclusion rules require that Brite-On reduce its annual deductible lease expense by $41.

Compute the Brite's taxable income and balance due or refund for 2024.

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:10-48 Stan uses a car 100% for his sole proprietorship. In January 2025, Stan must decide whether to buy or lease a new car. After bargaining with several car dealers, Stan has agreed to a price of $75,000. If he buys the car, he will borrow the entire $75,000 at a 6% annual interest rate, and his payments will be $1,449.96 per month over 60 months. Annual principal and interest payments are:

	Total	*Principal*	*Interest*
2025	$17,400	$13,260	$ 4,140
2026	17,400	14,079	3,321
2027	17,400	14,947	2,453
2028	17,400	15,868	1,532
2029	17,400	16,846	554
Totals:	$87,000	$75,000	$12,000

If Stan purchases the car, he will not claim Sec. 179 expensing or bonus depreciation, the half-year convention will apply, and he will sell the car for $23,000 at the end of five years. If Stan leases it, his monthly lease payment will be $1,120 for 60 months, and he will turn in the car at the end of the five-year lease period. (He does not plan to exercise the lease's option to purchase the car for $23,000 at that time.)

Using present value analysis, is Stan better off buying the car or leasing it? Assume the following in your analysis:

- Stan's marginal tax rate is 24% each year.
- The lease inclusion amount for each year is $268 (which is the average of the five lease inclusion amounts for a $75,000 vehicle).
- For the alternative of buying the car, Stan discounts cash flows (including tax savings) at a 6.2% annual rate. For the alternative of leasing it, Stan discounts cash flows (including tax savings) at a 0.5% monthly rate (one-twelfth of 6%; this 0.5% rate, compounded monthly, is approximately equal to a 6.2% annual rate).

I:10-49 Helen has operated a sole proprietorship for many years and has tentatively agreed to sell its assets to Blaze Corporation. They are negotiating how to allocate $1.4 million of the transaction's amount to two of the proprietorship's assets: equipment and goodwill. Helen estimates the equipment is worth $750,000 and the goodwill is worth $650,000, but Blaze wants to allocate $1 million to the equipment and $400,000 to the goodwill to enhance the tax benefits it realizes. Helen's adjusted basis is $150,000 for the equipment and zero for the goodwill. Assume the transaction will occur at the beginning of Year 1.

Required:

a. Determine the effect on the present value of tax savings Blaze realizes if the allocation is (i) $1 million for the equipment and $400,000 for the goodwill, versus (ii) $750,000 for the equipment and $650,000 for the goodwill). Blaze will claim 40% bonus depreciation for the equipment and MACRS depreciation for the other 60% of its cost (7-year recovery period; half-year convention). Blaze cannot claim Sec. 179 expensing because the cost of other Sec. 179 property it places in service during the year exceeds $4.38 million (for 2025). Blaze's marginal tax rate is 21%, and it discounts cash flows at a 10% annual rate.

b. Determine the effect on the tax Helen pays with allocations (i) and (ii) from part a. Assume the gain on the equipment is taxed as ordinary income, while the gain on the goodwill is taxed as a long-term capital gain. Helen's marginal tax rate is 37% for ordinary income and 20% for long-term capital gains. (The treatment of the equipment's gain as ordinary income is due to depreciation recapture, which is discussed in Chapter I:13).

c. Which of the two allocations is better?

TAX FORM/RETURN PREPARATION PROBLEMS

I:10-50 Thom Jones (SSN 000-00-1111) is an unincorporated manufacturer of widgets. He reports the following for 2024:

Sales	$1,250,000
Cost of goods sold	500,000
Office expense	10,000
Depreciation[a]	?
Legal services expense	4,000
Wages expense	196,000
Payroll and property taxes expense	30,000
Repairs and maintenance expense	20,000

[a] Information related to the depreciable property:

Cost of office furniture acquired and placed in service on April 15, 2024 (7-year MACRS recovery period)	$320,000
Cost of warehouse acquired and placed in service on August 1, 2024	750,000
Depreciation on assets purchased and placed in service prior to 2024	28,000

The business operates under the name Jones Widget Company and is located at 400 W. Main Street in Springfield, Maryland 21368. Its employer identification number is 55-9876543. The business uses the cash method, Thom materially participates in it, and it did not make any payments that would require it to file Form 1099.

Complete Thom's 2024 Form 4562 and page 1 of his Schedule C, assuming Thom elects to expense the maximum amount possible under Sec. 179 and uses bonus depreciation for any eligible amounts exceeding the Sec. 179 maximum.

I:10-51 Refer to the facts in Problem I:10-47 for John and Ellen Brite. The following information is also available for them:

- John (SSN 123-45-6789) and Ellen (SSN 234-56-7890) live at 111 Maple Street, Johnsonville, Colorado 81733.
- Brite-On is located at 3900 Market Street, Johnsonville, Colorado 81733. Its employer identification number is 44-1357924.
- The business uses the accrual method and did not make any payments that would require Form 1099 to be filed. It has used the cost method to value inventory for many years.
- John and Ellen do not have any transactions involving digital assets.

Complete the Brites' 2024 Form 1040, Schedules 1, 2, C, and SE, and Forms 4562, 4797, and 8995.

CASE STUDY PROBLEMS

I:10-52 Able Corporation is a manufacturer of electrical lighting fixtures. Able is currently negotiating with Ralph Johnson, the owner of an unincorporated business, to acquire his retail electrical lighting sales business. Johnson's assets include the following:

Assets	*Adjusted Basis*	*FMV*
Inventory of electrical fixtures	$ 30,000	$ 50,000
Store buildings	80,000	100,000
Land	40,000	100,000
Equipment: 7-year recovery period	30,000	50,000
Equipment: 5-year recovery period	60,000	100,000
Total	$240,000	$400,000

Mr. Johnson thinks that a total purchase price of $1 million in cash is warranted for the business because of its high profitability and strategic locations, and Able has agreed. Despite the fact that both parties agree that the $600,000 excess payment is goodwill, Able would prefer that it be designated as a 5-year covenant not to compete so that he can amortize it over a 5-year period.

You are a tax consultant for Able who has been asked to make recommendations as to the structuring of the purchase agreement and the amounts to be assigned to individual assets. Prepare a client memo to reflect your recommendations.

I:10-53 In 2023, the Margate Corporation acquired an automobile with a cost of $30,000 for use in its business. Shortly thereafter, Margate Corporation experienced a decline in sales. Several employees were laid off, and the automobile was not immediately needed for any of the sales personnel. Instead of letting the new automobile sit in the corporate lot, the president decided to permit a corporate officer to use the automobile for personal use. The officer used the automobile in 2023 and 2024 only. In 2025, Margate Corporation hired you as their new CPA (tax consultant). You learn that the officer's personal use of the corporate automobile took place for the two prior years without proper accounting to the IRS. As Margate Corporation's tax consultant, what actions (if any) should you take regarding the proper treatment of the automobile? What are your responsibilities as a CPA regarding this matter under the rules of the AICPA's *SSTS* No. 1? (See Appendix E for information on accessing the SSTSs.)

TAX RESEARCH PROBLEM

I:10-54 The Morriss Corporation is a very successful and profitable manufacturing corporation. The corporation just completed construction of new corporate offices, primarily for its top executives. The president and founder of the corporation, Mr. Timothy Couch, is an avid collector of artwork and has instructed that the lobby and selected offices be decorated with rare collections of art. These expensive works of art were purchased by the corporation in accordance with Couch's directives. Couch justified the purchase of these artworks on the premise that (1) they are excellent investments and should increase in value in the future, (2) they provide an appropriate and impressive office atmosphere when current and prospective customers visit the corporation's offices, and (3) the artwork is depreciable property and the corporation will be able to take sizable write-offs against income. The Financial Vice-President of the corporation has requested your advice as to whether the works of art are, in fact, depreciable property. Prepare a research memorandum for the Financial Vice-President on this issue.

A partial list of research sources is provided below.

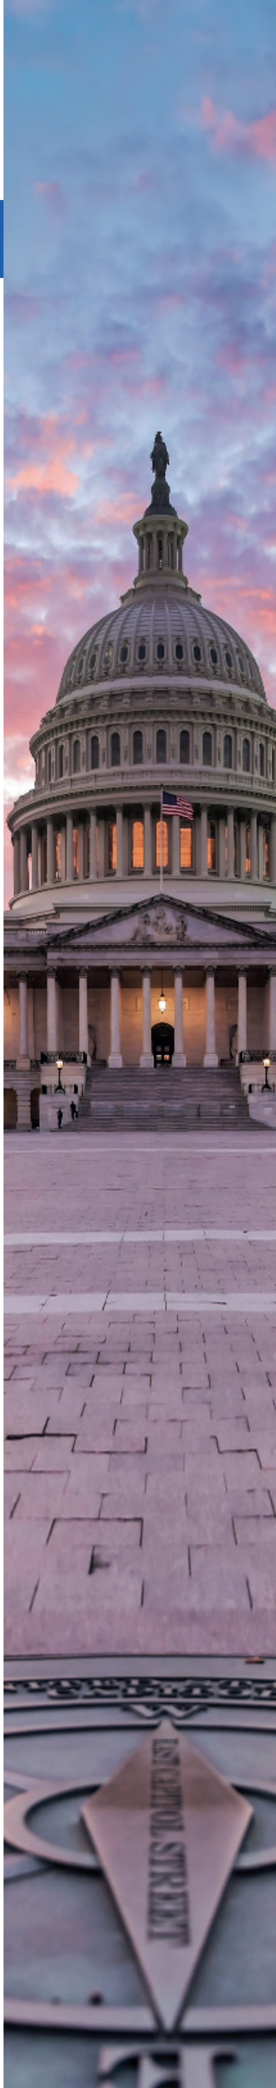
CHAPTER

11

ACCOUNTING PERIODS AND METHODS



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Explain the rules for adopting and changing an accounting period
2. Explain the differences between cash, accrual, and hybrid accounting
3. Determine what costs must be included in inventory
4. Identify the amount of income to be reported from special accounting methods
5. Compute the amount of imputed interest in certain transactions
6. Determine the tax treatment that results from changes in accounting methods
7. Describe tax planning considerations for accounting periods and methods
8. Describe compliance and procedural considerations for accounting periods and methods

CHAPTER OUTLINE

Accounting Periods...11-2
Overall Accounting Methods...11-7
Inventories...11-11
Special Accounting Methods...11-15
Imputed Interest...11-22
Change in Accounting Methods...11-25
Tax Planning Considerations...11-28
Compliance and Procedural Considerations...11-28

An **accounting method** is a system of rules and procedures used to determine the year in which income and expenses are reported for tax purposes. The accounting methods used to compute taxable income generally must be the same as those used in keeping the taxpayer's books and records and determine *when* income and expenses are reported, not whether they are reported. Although the accounting methods used by a taxpayer do not necessarily affect the amount of income reported over the life of a business, they do affect the tax burden in two ways. First, selecting the appropriate accounting method can accelerate deductions or defer income recognition in order to postpone tax payments, and second, because of the progressive tax rate structure, noncorporate taxpayers can save taxes by spreading income over several accounting periods rather than having income bunched into one period.

EXAMPLE I:11-1 ▶ Jane is an individual who itemizes deductions and uses the cash method of accounting. She has a 22% marginal tax rate for 2024 and expects to have a 12% marginal tax rate for 2025. It is mid-December of 2024, and she is planning to make a $1,000 charitable contribution in the next several weeks. A contribution in early 2025 is expected to reduce her tax by $120 (0.12 × $1,000), while a contribution in late 2024 reduces her tax by $220 (0.22 × $1,000). Jane's tax is lower if she accelerates the contribution from 2025 to 2024, and she realizes the tax savings sooner. ◀

ACCOUNTING PERIODS

OBJECTIVE 1

Explain the rules for adopting and changing an accounting period

Taxable income is computed on the basis of the taxpayer's annual **accounting period**, which is ordinarily 12 months (either a calendar year or a fiscal year). A **fiscal year** is a 12-month period that ends on the last day of any month other than December. The tax year must coincide with the year used to keep the taxpayer's books and records. Taxpayers who do not have books (e.g., an individual with wage income) must use the calendar year.[1] A taxpayer with a seasonal business may find a fiscal year to be advantageous. During the slow season, inventories may be lower and employees are available to take inventory and perform other accounting duties associated with the year-end. The tax year is elected on the first tax return that is filed by a taxpayer and cannot be changed without consent from the IRS.[2]

A partnership generally must use the same tax year as the partners who own the majority (greater than 50%) of partnership income and capital. If a majority of partners do not have the same year, the partnership must use the tax year of its principal partners (those with more than a 5% interest in the partnership). If the principal partners do not have the same tax year, the partnership must use the taxable year that results in the least aggregate deferral of income to the partners.[3] An exception is made for partnerships that can establish to the satisfaction of the IRS a business purpose for having a different year.

The purpose of the strict rules for selecting accounting periods is to prevent partners from deferring partnership income by choosing a different tax year for the partnership. For example, calendar-year partners might select a partnership year that ends on January 31. Because partnership income is considered to be earned by the partners on the last day of the partnership's tax year, reporting the profits would thus be deferred 11 months because the partnership year ends after the partner's year. (See the section entitled Required Payments and Fiscal Years in this chapter for further discussion of the calendar-year requirement.)

A similar rule generally requires S corporations and personal service corporations to adopt a calendar year unless the corporation has a business purpose for electing a fiscal year.[4] Taxpayers willing to make required payments or distributions may choose a fiscal year. (See the Required Payments and Fiscal Years section in this chapter.)

STOP & THINK

Question: The tax rules related to accounting periods require most partnerships, S corporations, and personal service corporations to report on the calendar year basis.

---

[1] Sec. 441(g).

[2] Reg. Sec. 1.441-1(b)(4).

[3] Reg. Sec. 1.706-1(a)(3).

[4] Sec. 1378(a).

Of course, almost all individual taxpayers also report on the calendar year basis. What impact does this have on accountants?

Solution: The principal impact is a compression of tax compliance work into the "accounting busy season." A substantial portion of auditing and other accounting work also takes place at year-end. As a result, these services are also compressed into the accounting busy season. The accounting profession has sought to have these rules changed, but has, at least so far, been unsuccessful.

An improper election to use a fiscal year automatically places the taxpayer on the calendar year.[5] Thus, if the first return is filed late because of oversight, the option to choose a fiscal year is lost.

EXAMPLE I:11-2 ▶ City Corporation receives its charter but does not begin operations for three years. Tax returns are required for all years. Timely returns are not filed because City's officers are unaware that returns must be filed for inactive corporations. Thus, City Corporation must use the calendar year. City Corporation may petition the IRS for approval to use a fiscal year. ◀

ADDITIONAL COMMENT

The use of a 52–53-week year aids in budgetary matters and statistical comparisons because a four-week period, unlike a calendar month, is a uniform, fixed period.

TYPICAL MISCONCEPTION

It is sometimes mistakenly believed that a tax year can end on a day in the middle of the month.

While most tax years end on the last day of a month, the tax law allows taxpayers to use a tax year that always ends on the same day of the week, such as the last Friday in October. This means that the tax years will vary in length between 52 and 53 weeks. Taxpayers who regularly keep their books over a period that varies from 52 to 53 weeks may elect the same period for tax purposes. A 52–53-week taxable year must end either the last time a particular day occurs during a calendar month (e.g., the last Friday in October) or the occurrence of the particular day that is closest to the end of a calendar month (e.g., the Saturday closest to the end of November).[6] Under the first alternative, the year may end as many as six days before the end of the month, but must end within the month. Under the second alternative, the year may end as many as three days before or after the end of the month.

The 52–53-week year is especially useful to businesses with inventories. For example, a manufacturer might choose a 52–53-week year that ends on the last Friday in December to permit inventory to be taken over the weekend without interfering with the company's manufacturing activity. Similarly, wage accruals would be eliminated for a company with a weekly payroll if the payroll period always ends on Friday.

Although the 52–53-week year may actually end on a day other than the last day of the month, it is treated as ending on the last day of the calendar month for "effective date" changes in the tax law that would otherwise coincide with the year-end.

EXAMPLE I:11-3 ▶ Eagle Corporation has adopted a 52–53-week year. Eagle's tax year begins on December 29, 2025. Assume that a new tax rate schedule applies to tax years beginning after December 31, 2025. The new tax rate schedule is applicable to Eagle because, in the absence of the 52–53-week year, its tax period would have started on January 1, 2026. ◀

REQUIRED PAYMENTS AND FISCAL YEARS

Virtually all C corporations (other than personal service corporations) have flexibility in choosing an accounting period. Other entities, such as partnerships and S corporations, may use a fiscal year if they have an acceptable business purpose. However, most of these businesses are unable to meet the rather rigid business purpose requirements outlined by the IRS. As a result, these businesses report using the calendar year, concentrating most tax work during the early months of the year. Concern over this problem led Congress to enact Sec. 444, which allows partnerships, S corporations, and personal service corporations (such as incorporated medical practices) to elect a taxable year that results in a tax deferral of three months or less (e.g., a partnership with calendar-year partners may elect a September 30 year-end). This is called the **Sec. 444 election**. Furthermore, partnerships,

---

[5] *Q.A. Calhoun v. U.S.*, 33 AFTR 2d 74-305, 74-1 USTC ¶9104 (D.C. Va., 1973).

[6] Sec. 441(f).

S corporations, and personal service corporations may continue using the fiscal year they were using when the current law was passed in 1986 even if that fiscal year results in a deferral beyond three months.

ADDITIONAL COMMENT

If May 15 is a Saturday, Sunday, or legal holiday in the District of Columbia, the Sec. 444 required payment is not due until the next day that is not a Saturday, Sunday, or such legal holiday (Sec. 7503).

Partnerships and S corporations making the Sec. 444 election, however, must make annual required payments by May 15 of the following year. The purpose of the required payment is to offset the tax deferral advantage obtained when fiscal years are used.

The amount of the required payment is determined by multiplying the maximum tax rate for individuals plus 1% (38%) times the previous year's taxable income times a deferral ratio.[7] The deferral ratio is equal to the number of months in the deferral period divided by the number of months in the taxable year. An adjustment is made for deductible amounts distributed to the owners during the year. If the amount due is $500 or less, no payment is required.

EXAMPLE I:11-4 ▶ ABC Partnership begins operations on October 1, 2025, and elects a September 30 year-end under Sec. 444. The partnership's net income for the fiscal year ended September 30, 2026, is $100,000. ABC must make a required payment of $9,500 ($100,000 × 38% × $^3\!/_{12}$) on or before May 17, 2027. ◀

The owners of businesses making such payments do not claim a credit for the amount paid. Instead, the partnership or S corporation subtracts the previous year's required payment from the current year's required payment. If the result is negative, then the entity is entitled to a refund.

EXAMPLE I:11-5 ▶ Assume the same facts as in Example I:11-4 except that ABC Partnership's required payment for the year ended September 30, 2027, is $6,000. ABC is entitled to a refund of the difference of $3,500 ($9,500 − $6,000). ◀

Personal service corporations also may elect a fiscal year. However, deductions to shareholder/employees may be limited if distributions to such shareholder/employees during the deferral period do not exceed a minimum amount.[8] Personal service corporations are incorporated medical practices and other businesses owned by individuals who provide their services through the corporation. In general, the rules prevent a distribution pattern that creates a tax deferral. This is achieved by requiring that the deductible payments made to owners during the deferral period be at a rate no lower than during the previous fiscal year.

EXAMPLE I:11-6 ▶ Austin, Inc., is a personal service corporation of attorneys with a fiscal year ending September 30. For the year ended September 30, 2025, the company earned a profit of $480,000 before any salary payments to the owners. The entire profit, however, was paid out as wages to the owners, resulting in a taxable income of zero. To avoid any deduction limitation, Austin must pay salaries to its owners of no less than $120,000 ($480,000 × $^3\!/_{12}$) during the period October 1, 2025, to December 31, 2025. If less than $120,000 is paid during this deferral period, deductions are limited for the year ended September 30, 2026. ◀

An option allows personal service corporations to compute the amount of the minimum distribution by using a three-year average of income and distributions.

CHANGES IN THE ACCOUNTING PERIOD

KEY POINT

The use of a natural business year helps match revenues and expenses because the business is normally in a maximum state of liquidity and the problems associated with making estimates involving uncompleted transactions are reduced to a minimum.

Once adopted, an accounting period cannot normally be changed without IRS approval.[9] The IRS will usually approve a change only if the taxpayer can establish a substantial business purpose for the change (e.g., changing to a natural business year).[10] A natural business year ends at or soon after the peak income earning period (e.g., the natural business year for a department store that has a seasonal holiday business may be on January 31). A business without a peak income period may not be able to establish a natural business year and may, therefore, be precluded from changing its tax year. In general, at least

---

[7] Sec. 7519(b). The high rate discourages elections by businesses with middle and lower income owners. Businesses do not have to make similar required payments for self-employment and other taxes. As a result, there can be some advantage for businesses with higher income owners.

[8] Sec. 280H(a).

[9] Sec. 442.

[10] Rev. Proc. 2002-39, 2002-1 C.B. 1046.

25% of revenues must occur during the last two months of the year in order to qualify as a natural business year.

EXAMPLE I:11-7 ▶ USA Department Store's sales peak during the holiday season in December. During January, the department store further reduces its inventory through storewide clearance sales. USA elects a "natural" business year-end of January 31 because its inventory levels are lowest at the end of January. Also, USA meets the prescribed test because at least 25% of its revenues for the year occur in December and January. ◀

In a few instances, IRS approval is not required to change to another accounting period.

REAL-WORLD EXAMPLE

Target, Lowe's, and Walmart all use an accounting period ending with January.

- A newly married person may change tax years to conform to that of his or her spouse so that a joint return may be filed. The election must be made in either the first or second year after the marriage date.[11]
- A change to a 52–53-week year that ends with reference to the same calendar month in which the former tax year ended.[12]
- A taxpayer who erroneously files tax returns using an accounting period other than that on which his or her books are kept is not required to obtain permission to file returns for later years based on the way the books are kept.[13]
- A corporation meeting the following specified conditions may change without IRS approval: (1) There has been no change in its accounting period within the past ten calendar years, (2) the resulting year does not have a net operating loss (NOL), (3) the taxable income for the resulting short tax year when annualized is at least 90% of the taxable income for the preceding full tax year, and (4) there is no change in status of the corporation (such as an S corporation election).[14]
- An existing partnership can change its tax year without prior approval if the partners with a majority interest have the same tax year to which the partnership changes or if all principal partners who do not have such a tax year concurrently change to such a tax year.[15]

There is one instance, however, when a change in tax years is required: A subsidiary corporation filing a consolidated return with its parent corporation must change its accounting period to conform with its parent's tax year.

Application for permission to change accounting periods is made on Form 1128, Application to Adopt, Change, or Retain a Tax Year, on or before the due date of the return including extensions.

The IRS may establish certain conditions for the taxpayer to meet before it approves the change to a new tax year. For example, the IRS has ruled that if the short period that results from a change involves a NOL greater than $50,000, the taxpayer may have to forgo a carryback of the loss.[16]

RETURNS FOR PERIODS OF LESS THAN 12 MONTHS

Most income tax returns cover an accounting period of 12 months. On two occasions, however, a taxpayer's accounting period may be less than 12 months: when the taxpayer's first or final return is filed and when the taxpayer changes accounting periods.

ADDITIONAL COMMENT

For 2018–2025, personal exemptions are zero (see Chapter I:2).

Taxpayers filing an initial tax return and executors filing a taxpayer's final return or corporations filing their last return are not required to annualize the year's income, nor are personal exemptions or tax credits prorated. These returns are prepared and filed, and taxes are paid as though they are returns for a 12-month period ending on the last day of the short period. An exception permits the final return of a decedent to be filed as though the decedent lived throughout the entire tax year.[17]

---

[11] Reg. Sec. 1.442-1(e). A statement should be attached to the resulting short period return indicating that the change is being made.

[12] Reg. Sec. 1.441-2(c)(2). A statement should be attached to the first return filed under the election indicating that the change is being made.

[13] Rev. Rul. 58-256, 1959-1 C.B. 215.

[14] Reg. Sec. 1.442-1(c). A statement should be attached to the return indicating that each condition is met.

[15] Reg. Sec. 1.442-1(b)(2).

[16] Rev. Proc. 2002-37, 2002-1 C.B. 1030.

EXAMPLE I:11-8 ▶ ABC Partnership, which has filed its returns on a calendar-year basis, terminates on June 30. ABC's final return is due on September 15. ◀

EXAMPLE I:11-9 ▶ Joy, a single individual who has filed her returns on a calendar-year basis, dies on June 30. Joy's final return is due the following April 15. ◀

Taxpayers who change from one accounting period to another must annualize their income for the resulting short period. This prevents income earned during the resulting short period from being taxed at lower rates. Income is annualized as follows:

1. Determine modified taxable income for the short period. Individuals must compute their taxable income for the short period by itemizing their deductions (i.e., the standard deduction is not allowed; see Chapter I:2).
2. Annualize modified taxable income by multiplying it by the following fraction:

$$\frac{12}{\text{Number of months in short period}}$$

3. Compute the tax on the resulting annualized modified taxable income using the appropriate tax rate schedule.
4. Multiply the resulting tax by the following fraction:

$$\frac{\text{Number of months in short period}}{12}$$

EXAMPLE I:11-10 ▶ Pat, a single individual, obtains IRS permission to change from a calendar year to a fiscal year ending on April 30, 2025. During the four months ending April 30, 2025, Pat earns $25,000 and has $5,000 in itemized deductions.[18]

Gross Income	$25,000
Minus: Itemized deductions	(5,000)
Modified taxable income	$20,000
Annualized modified taxable income [(12 ÷ 4) × $20,000]	$60,000
Tax on annualized modified taxable income	$ 8,114
Gross tax [(4 ÷ 12) × $8,114]	$ 2,705 ◀

ADDITIONAL COMMENT

A corporation changing its taxable year does not annualize its income because corporate income is subject to a flat 21% tax rate.

Topic Review I:11-1 summarizes the available accounting periods and the rules for changing accounting periods.

STOP & THINK

Question: Why are taxpayers required to annualize when they change tax years? What provision of the tax law creates this need?

Solution: A change of tax years results in a shortened filing period during the period the change takes place. For example, a taxpayer who changes from a calendar year to a April 30 year-end reports income for only a 4-month period on the first return following the change. Less income is reported, and that income would be taxed at lower rates without annualization. Annualization is necessary because of the progressive tax rate structure.

---

[17] Reg. Sec. 1.443-1(a)(2).

[18] An alternative method to compute the tax is provided in Sec. 443(b)(2) and Reg. Sec. 1.443-1(b)(2) whereby the taxpayer can elect to compute the tax for a 12-month period beginning on the first day of the short period and then convert the tax to a short-period tax.

TOPIC REVIEW I:11-1

Accounting Periods and Changes

AVAILABLE TAX YEARS

- Available tax years include the calendar year, a fiscal year (a year that ends on the last day of any month other than December), and a 52–53-week year (a year that always ends on the same day of the week).
- A partnership must use the tax year of its partners unless the partnership can establish a satisfactory business purpose for having a different year or if the partnership makes required payments.
- Similar rules generally require S corporations and personal service corporations to adopt a calendar year unless the corporation has a business purpose for electing a fiscal year. Entities willing to make required payments or distributions may choose a fiscal year ending on September 30, October 31, or November 30.

CHANGE IN ACCOUNTING PERIODS

- Once adopted, an accounting period normally cannot be changed without approval by the IRS. The IRS is more likely to approve a change to a natural business year. In general, at least 25% of revenues must occur during the last two months of the year in order to qualify as a natural business year.
- Taxpayers who change from one accounting period to another must annualize their income for the resulting short period. This prevents income earned during the resulting short period from being taxed at lower rates.

OVERALL ACCOUNTING METHODS

OBJECTIVE 2

Explain the differences between cash, accrual, and hybrid accounting

A taxpayer's method of accounting determines the year in which income is reported and expenses are deducted. Taxable income must be computed using the method of accounting regularly used by the taxpayer in keeping his or her books if that method clearly reflects income.[19] Permissible overall accounting methods are:

- Cash receipts and disbursements method (often called the cash method of accounting)
- Accrual method
- A combination of the first two methods, often called the hybrid method

KEY POINT

The Code provides the IRS with broad powers in ascertaining whether the taxpayer's accounting method clearly reflects income. It entitles the IRS to more than the usual presumption of correctness.

New taxpayers may generally choose any of the accounting methods listed above. However, the accrual method must be used for sales and cost of goods sold if inventories are an income-producing factor to the business. An exception gives taxpayers (other than tax shelters) whose average annual gross receipts for the three prior years do not exceed $31 million for 2025 ($30 million for 2024) the option of using the cash method.[20] This rule simplifies accounting for millions of small and medium sized businesses. Also, businesses without inventories, such as accounting firms and architects, can use the cash method regardless of size. The fact that an overall accounting method is used in one trade or business does not mean that the same method must be used in a second trade or business or for nonbusiness income and deductions.

EXAMPLE I:11-11 ▶

Troy, a practicing CPA, also owns an appliance store. The fact that Troy uses the accrual method of reporting income from the appliance store, where inventories are an income-producing factor, does not preclude Troy from using the cash method to report income from his service-based accounting practice. Troy could also use the cash method for reporting nonbusiness income (such as dividends) and nonbusiness expenses (such as itemized deductions). ◀

REAL-WORLD EXAMPLE

It has been held that the cash method of accounting can be used where inventories are inconsequential. *Michael Drazen,* 34 T.C. 1070 (1960).

The term *method of accounting* is used to include not only overall methods of accounting listed above but also the accounting treatment of any item.[21]

CASH RECEIPTS AND DISBURSEMENTS METHOD

Most individuals and small- and medium-sized businesses use the cash receipts and disbursements method of accounting. Under the cash receipts and disbursements method of accounting, a taxpayer is required to report income for the tax year in which payments are actually or constructively received. While it might seem that receipts under the cash method of accounting should only be recognized if the taxpayer receives cash, this is not the case. The Regulations clearly provide that gross income under the cash method includes cash, property, or services.[22] Thus, if a CPA accepts a set of golf clubs as payment from a client for services rendered, the CPA must include the fair market value of the golf clubs in his gross income. However, an accounts receivable or other unsupported promise to pay is considered to have no value and, as a result, no income is recognized until the receivable is collected. Expenses are deducted in the year paid. Because the recognition of expense is measured by the flow of cash, a taxpayer can control the year in which an expense is deductible by choosing when to make the payment. Individual taxpayers do not have the same opportunity to determine the year in which income is recognized, because the constructive receipt rule requires taxpayers to recognize income if a payment is available, even if actual payment has not been received. (See Chapter I:3 for a discussion of constructive receipt.)

---

[19] Sec. 446.

[20] Sec. 448.

[21] Reg. Sec. 1.446-1(a)(1). Examples of accounting methods for specific items include Sec. 174, relating to research and experimentation expenses; Sec. 451, relating to reporting income from long-term contracts; and Sec. 453, relating to reporting income from installment sales.

KEY POINT

A taxpayer using the cash method is entitled to certain deductions that do not involve current year cash disbursements, such as depreciation, depletion, and losses.

Capitalization Requirements for Cash-Method Taxpayers. Taxpayers who use the cash receipts and disbursements method are required to capitalize fixed assets and to recover the cost through depreciation or amortization. However, Sec. 179 does permit taxpayers to deduct up to $1,250,000 for 2025 ($1,220,000 for 2024) of equipment purchases (see Chapter I:10 for a detailed discussion).

The Regulations state that prepaid expenses must be capitalized and deducted over the life of the asset if the life of the asset extends substantially beyond the end of the tax year.[23] Typically, capitalization is required only if the life of the asset extends beyond the close of the tax year following the year of payment.[24]

EXAMPLE I:11-12 ▶ On July 1, 2025, Acme Corporation, a cash basis, calendar-year taxpayer, pays an insurance premium of $3,000 for a policy that is effective July 1, 2025, to June 30, 2026. The full $3,000 is deductible in 2025. ◀

EXAMPLE I:11-13 ▶ Assume the same facts as in Example I:11-12, except that the premium covers a three-year period beginning July 1, 2025, and ending June 30, 2028. Acme Corporation may deduct $500 in 2025, $1,000 in each of 2026 and 2027, and $500 in 2028. ◀

One notable exception to the one-year rule denies a deduction for prepaid interest. Cash-method taxpayers must capitalize such amounts and allocate interest over the prepayment period. A special rule allows homeowners to deduct points paid on a mortgage used to buy or improve a personal residence. The payment must be an established business practice in the area and not exceed amounts generally charged for such home loans. (See Chapter I:8 for a discussion of the deductibility of points.)

To be deductible, a payment must be more than just a refundable deposit. A taxpayer who has an option of cancelling delivery and receiving a refund of amounts prepaid is not normally entitled to deduct the amount of the deposit.

---

[22] Reg. Sec. 1.446-1(c)(1)(i).

[23] Reg. Sec. 1.461-1(a)(1).

[24] *Bonaire Development Co.*, 76 T.C. 789 (1981), and *Martin J. Zaninovich v. CIR*, 45 AFTR 2d 80-1442, 80-1 USTC ¶9342 (9th Cir., 1980).

Payments can be made either by a check that is honored in due course or by the use of a credit card.[25] Payment by credit card is considered to be the equivalent of borrowing funds to pay the expense. However, a taxpayer's note is not the equivalent of cash, so if a cash method taxpayer gives a note in payment, he or she cannot take the deduction until the note is paid, even if the note is secured by collateral.[26]

ACCRUAL METHOD

For an accrual basis taxpayer, there are two tests used to determine when an item of income must be reported or an expense deducted: the all-events test and the economic performance test.

ADDITIONAL COMMENT

The phrase *reasonable accuracy* means that approximate amounts are ascertainable. Although the word *accuracy* means exactness or precision, when it is used with the word *reasonable* it implies something less than an exact amount.

All-Events Test. An accrual-method taxpayer reports an item of income when "all events" have occurred that fix the taxpayer's right to receive the item of income and the amount can be determined with reasonable accuracy.[27] Similarly, an expense is deductible when all events have occurred that establish the fact of the liability and the amount of the expense can be determined with reasonable accuracy. For deductions, the all-events test is not satisfied until economic performance has taken place.

Economic Performance Test. Economic performance (of services or property to be provided to a taxpayer) occurs when the property or services are actually provided by the other party.

EXAMPLE I:11-14 ▶

The owner of a professional football team provides medical benefits for injured players through insurance coverage. Economic performance occurs over the term of the policy rather than when the team enters into a binding contract with the insurance company or during the season when the player earns the right to medical benefits. Thus, a one-year premium is deductible over the year of the insurance coverage rather than over the term of the player's contract under which the benefit is earned. But see below for a possible waiver. ◀

Similarly, if a taxpayer is obligated to provide property or services, economic performance occurs in the year the taxpayer provides the property or service.

EXAMPLE I:11-15 ▶

Assume the same facts as in Example I:11-14 except that medical benefits are required under the terms of a player's contract. Also, the team decides to pay medical costs directly. Economic performance occurs as the team actually provides the benefits. Thus, the deduction is permitted only as medical care is provided. ◀

REAL-WORLD EXAMPLE

Before the economic performance test was added to the tax law, a company engaged in strip mining coal was able to deduct the future land reclamation costs as the coal was mined because the liability was certain and the cost could be estimated. *Ohio River Collieries,* 77 T.C. 1369 (1981).

The requirement that economic performance take place before a deduction is allowed is waived if all of the following five conditions are met:

- The all-events test, without regard to economic performance, is satisfied.
- Economic performance occurs within a reasonable period (but in no event more than $8\frac{1}{2}$ months) after the close of the tax year.
- The item is recurring in nature, and the taxpayer consistently treats items of the same type as incurred in the tax year in which the all-events test is met.
- The taxpayer is not a tax shelter.
- Either the amount is not material or the earlier accrual of the item results in a better matching of income and expense.[28]

EXAMPLE I:11-16 ▶

Bass Corporation, a calendar year taxpayer, pays its annual insurance premium each year on April 30, the anniversary of the policy. The premium paid this year is \$6,000 while last year's premium was \$5,400. Accrual accounting indicates that Bass deducts \$4,000 ($\frac{8}{12} \times \$6,000$) of the premium paid this year along with \$1,800 ($\frac{4}{12} \times \$5,400$) of the premium paid last year, or a total of \$5,800. As all of the conditions for the exception to the economic performance requirements are met, Bass Corporation can deduct \$6,000 this year. This assumes that Bass has been consistently following the practice and deducted \$5,400 last year. ◀

[25] Rev. Rul. 78-39, 1978-1 C.B. 73.

[26] *Frank D. Quinn Exec. v. CIR,* 24 AFTR 927, 40-1 USTC ¶9403 (5th Cir., 1940).

[27] Reg. Sec. 1.451-1(a). (See Chapter I:3 for a discussion of the all-events test as it applies to gross income.)

[28] Sec. 461(h).

TYPICAL MISCONCEPTION

It is sometimes mistakenly believed that taxpayers can deduct warranty expenses and bad debts using the allowance method instead of the direct write-off method.

Reserves for items such as product warranty expense and uncollectible accounts are commonly encountered in financial accounting. The all-events and economic performance tests prevent the use of such reserves for tax purposes. This is because the amount of such expense is not usually determinable with sufficient accuracy.

HYBRID METHOD

KEY POINT

A taxpayer who uses the cash method in computing gross income from his or her business must use the cash method in computing expenses of such business.

Taxpayers may use a combination of accounting methods as long as income is clearly reflected. To ensure that income is clearly reflected, certain restrictions have been placed on combining accounting methods. Taxpayers who use the cash method of accounting in determining gross income from a trade or business must use the cash method for determining expenses of the same trade or business. Similarly, taxpayers who use the accrual method of accounting for expenses must use the accrual method in computing gross income from the trade or business.

The basic rules relating to accounting methods, the all-events test, and economic performance are summarized in Topic Review I:11-2.

STOP & THINK

Question: If an accountant does tax work for an automobile dealer, in exchange for free use of an automobile, does the accountant have to report any income? Does it make a difference whether the accountant uses the automobile in her business? When is any taxable income reported?

Solution: The rental value of the automobile must be included in gross income. If the automobile is used in the accountant's business, a portion of the rental value is deductible as a business expense. Although it is not entirely clear, it seems that an accrual basis accountant would report income as tax services are provided to the dealer. A cash basis taxpayer would report income over the time the automobile is used.

TOPIC REVIEW I:11-2

Accounting Methods

AVAILABLE METHODS

- Permissible overall accounting methods are the cash receipts and disbursements method, the accrual method, and the hybrid method.
- The cash method is available to taxpayers without inventories and, for 2025, to taxpayers with inventories whose average annual gross receipts during the three preceding years was $31 million or less.

ALL-EVENTS TEST AND ECONOMIC PERFORMANCE TEST

- An accrual-method taxpayer reports an item of income when all events have occurred that fix the taxpayer's right to receive the item of income and when the amount of the item can be determined with reasonable accuracy.
- An expense is deductible when all events have occurred that establish that there is a liability and when the amount of the expense can be determined with reasonable accuracy. The all-events test is not satisfied until economic performance has taken place.
- Economic performance takes place when property or services are actually provided.

INVENTORIES

OBJECTIVE 3

Determine what costs must be included in inventory

KEY POINT

Taxpayers cannot always use inventory methods for tax purposes that conform with generally accepted accounting principles.

The inventory method used by a taxpayer must conform to the best accounting practice in the trade or business, and it must clearly reflect income. However, best accounting practices (synonymous with generally accepted accounting principles) and clear reflection of income (which is determined by the IRS) occasionally conflict. The Supreme Court has held that the standard of clear reflection of income prevails in a case where the two standards conflict. In the *Thor Power Tool Co.* case, the company wrote off the cost of obsolete parts for both tax and financial accounting purposes even though the parts were kept on hand and their selling price was not reduced.[29] Regulation Sec. 1.471-4(b) states that obsolete or other slow-moving inventory cannot be written down unless the selling price is also reduced.

Although the company's practice conformed with generally accepted accounting principles, it did not, according to the Supreme Court, clearly reflect income. Hence, generally accepted accounting principles are used only when the Regulations do not specify the treatment of an item or, alternatively, when the Regulations provide more than one alternative accounting method.

Taxpayers who value inventory at cost may write down goods that are not salable at their normal price (e.g., damaged, obsolete, or shopworn goods) only after the selling price has been reduced. Items may be valued at a bona fide selling price reduced by the direct cost of disposal.[30] The option to write down this type of merchandise is available even if the taxpayers use the LIFO inventory method.

EXAMPLE I:11-17 ▶

Stone Corporation publishes books for small academic audiences in Sanskrit and other ancient languages. There is typically one printing of a few hundred or perhaps a thousand copies of each book. Stone may sell a few copies a year of each book. Only after several years can the Corporation determine whether they will ever sell all copies of a given work. Based upon the *Thor Power Tool Co.* case, Stone Corporation cannot write off unsold copies unless they are destroyed or otherwise disposed of, and they cannot write down unsold copies unless the selling price is reduced below cost. ◀

KEY POINT

The uniform capitalization rules, included in the Tax Reform Act of 1986, require the capitalization of significant overhead costs that previously were expensed.

DETERMINATION OF INVENTORY COST

Inventories may be valued at either cost or at the lower of cost or market value. Taxpayers who use the LIFO inventory valuation method (discussed later in this chapter) may not use the lower of cost or market method. In the case of merchandise purchased, cost is the invoice price less trade discounts, plus freight and other handling charges.

Unlike financial accounting, purchasing costs (e.g., salaries of purchasing agents), warehousing costs, packaging, and administrative costs related to these functions must be allocated between cost of goods sold and inventory. The costs that must be included in inventory are found in Sec. 263A and are referred to as the **Uniform Capitalization rules (UNICAP)**. The requirement is applicable only to taxpayers whose average annual gross receipts for the three preceding years exceed $31 million in 2025 ($30 million in 2024).[31]

In the case of goods manufactured by the taxpayer, cost is determined by using the UNICAP rules, which may be thought of as an expanded version of the full absorption costing method. Thus, direct costing and prime costing are not acceptable inventory methods. Direct labor and materials along with manufacturing overhead must be included in inventory. Under UNICAP, the following overhead items are included in inventory:

- Factory repairs and maintenance, utilities, rent, insurance, small tools, and depreciation (including the excess of tax depreciation over financial accounting depreciation)
- Factory administration and officers' salaries related to production
- Taxes (other than the income tax)

ETHICAL POINT

The UNICAP rules must be followed by taxpayers. To bring a business into compliance with these rules, the taxpayer may need to make certain estimates. SSTS No. 2 generally allows a CPA to use such estimates if it is impractical to obtain exact data and if the CPA determines that the estimates are reasonable. If a change in the overhead application rate is contemplated, it may be desirable to request IRS approval.

---

[29] *Thor Power Tool Co. v. CIR*, 43 AFTR 2d 79-362, 79-1 USTC ¶9139 (USSC, 1979).

[30] Reg. Sec. 1.471-2(c).

[31] Sec. 263A(i).

- Quality control and inspection
- Rework, scrap, and spoilage
- Current and past service costs of pension and profit-sharing plans
- Service support such as purchasing, payroll, and warehousing costs

Nonmanufacturing costs (e.g., advertising, selling, and research and experimentation costs) are not required to be included in inventory. Interest must be inventoried if the property is real property, long-lived property, or property requiring more than two years (one year in the case of property costing more than $1 million) to produce.

KEY POINT

Identifying the appropriate additional overhead costs to capitalize can be confusing and extremely time consuming.

The main difference between full absorption costing traditionally used for financial reporting purposes and UNICAP costing required for tax purposes is that UNICAP expands the list of overhead costs to include certain indirect costs that have not always been included in overhead for financial reporting purposes. For example, for financial reporting purposes, the costs of operating payroll and personnel departments have sometimes been considered sufficiently indirect or remote to justify omitting them from manufacturing overhead. This is true even though much of the effort of the payroll and personnel departments may be directed toward manufacturing operations. For simplicity and other reasons, overhead costs included in inventory for financial purposes are often limited to those incurred in the factory. UNICAP requires that costs associated with these departments be allocated between manufacturing and nonmanufacturing functions (e.g., sales, advertising, research and experimentation).

EXAMPLE I:11-18 ▶ Best Corporation manufactures traditional style rocking chairs in a small factory with 34 employees. The office staff consists of four employees who handle payroll, receivables, hiring, and other office responsibilities. The sales staff includes three employees who travel the region selling to furniture and craft stores. The remaining 27 employees all work in the factory. Under UNICAP, factory costs including the wages of the 27 factory workers are generally all manufacturing costs. The costs associated with the sales staff are not manufacturing costs. This would include their compensation along with related costs such as travel. Office expenses including the wages paid to the four office workers can be allocated between manufacturing overhead and sales. Reasonable allocation methods are acceptable. One possibility might be to allocate office overhead between sales and manufacturing on a basis as simple as the number of employees in sales (3) and the number in manufacturing (27). Thus, 90% of the cost of the office operation could be treated as manufacturing-related and 10% sales-related. In such case, 90% of the office expenses would be allocated to manufacturing and 10% deducted as a period cost (i.e., selling expenses). The office expenses allocated to manufacturing would in turn be allocated between cost of sales and ending inventory. This allocation could be done on a basis as simple as multiplying the allocated office expenses by the number of chairs in ending inventory and dividing by the number of chairs in the ending inventory plus the total number of chairs made during the year. ◀

A manufacturer may use standard costs to value inventory if any significant variance is reallocated pro rata to ending inventory and cost of goods sold.[32] Taxpayers may determine inventory costs by the following methods: specific identification method; **first-in, first-out method** (**FIFO**); **last-in, first-out method** (**LIFO**); or average cost method. A few taxpayers, such as an automobile or large appliance dealer, may find it practical to determine the specific cost of items in inventory. Most taxpayers, however, must rely on a flow of goods assumption (e.g., FIFO or LIFO). A discussion of the LIFO method is presented below.

LIFO Method. Many taxpayers use the LIFO cost flow assumption because, during inflationary periods, LIFO normally results in the lowest inventory value and hence the lowest taxable income. Once LIFO has been elected for tax purposes, the taxpayer's financial reports must also be prepared using LIFO.[33] This requirement to conform financial reporting often discourages companies from electing LIFO because lower earnings must be reported to shareholders. However, taxpayers may make footnote disclosure of the amount of net income that would have been reported under FIFO or other inventory methods.[34] Taxpayers may adopt LIFO by attaching a completed Form 970 (or by a statement acceptable to the IRS) to the return for the tax year in which the method is first used.

---

[32] Reg. Sec. 1.471-11(d)(3).

[33] Sec. 472(c).

STOP & THINK

Question: As noted, many publicly held companies do not use LIFO inventory valuation. This is, in part, attributed to the fact that LIFO ordinarily results in lower reported income for accounting purposes than FIFO, and management prefers to report higher profits. Many closely-held companies also use FIFO even though their earnings are not reported to the public. Why wouldn't closely-held companies use LIFO?

Solution: There are a variety of reasons. Some businesses are very interested in how their financial statements look to banks and other lenders and to potential investors. In some industries, such as electronics, FIFO may actually provide lower inventory values. Also, LIFO cannot be used with lower of cost or market. As a result, some businesses may elect FIFO to be eligible to use lower of cost or market.

Perhaps, however, the main reason is that LIFO is more complex, and small businesses prefer to simplify their accounting. The advent of computers, accounting software, and bar codes may be having some impact on inventory valuation choices. Nevertheless, many accounting packages only track units on hand and sales revenue. They do not track inventory value (cost). Thus, the company must assign a value to inventory at year-end, and the complexity of LIFO remains a deterrent.

REAL-WORLD EXAMPLE

An automobile dealer, using the dollar-value LIFO method in maintaining its inventory, was required to use one pool for new automobiles and a separate pool for new trucks. *Fox Chevrolet, Inc.,* 76 T.C. 708 (1981).

Recordkeeping under LIFO can be cumbersome. For this reason, taxpayers are permitted to determine inventories using "dollar-value" pools and government price indexes rather than by maintaining a record of actual costs.[35] Retailers use appropriate categories in the Consumer Price Index; other taxpayers use categories in the Producer Price Index. Taxpayers using the index method must divide their inventories into one or more pools (groups of similar items). Thus, a department store might create separate pools for tools, appliances, clothing, furniture, and other products. Dividing inventory into pools can be critical because of the different inflation rates associated with various goods and because, if a particular pool is depleted, the taxpayer loses the right to use the lower prices associated with past layers. An important exception permits taxpayers with average annual gross receipts of $5 million or less for the three preceding tax years to use the **simplified LIFO method**.[36] The simplified LIFO method uses a single LIFO pool, thereby avoiding problems with multiple pools.

EXAMPLE I:11-19 ▶

In 2025, King Department Store changes its inventory method from FIFO to LIFO. Because King's gross receipts have never exceeded $5 million, the simplified LIFO method is available. King's year-end inventories under FIFO are as follows:

2024	$100,000
2025	$130,000

Assume the 2024 price index is 120% and the 2025 index is 125%. King must convert its 2025 inventory to 2024 prices.

$$\frac{120\%}{125\%} \times \$130{,}000 = \$124{,}800$$

A base period inventory of $100,000 is established. The increase in inventory (the 2025 layer) is valued at 2025 prices.

Base inventory (2024)	$100,000
Plus: 2025 layer [(125% ÷ 120%) × ($124,800 − $100,000)]	25,833
2025 ending inventory	$125,833

Assume the 2026 year-end inventory valued under FIFO is $136,000 and the 2026 price index is 130%. The 2026 inventory is converted to 2024 prices.

---

[34] Reg. Sec. 1.472-2(e).

[35] Sec. 472(f).

[36] Sec. 474(c).

$$\frac{120\%}{130\%} \times \$136{,}000 = \$125{,}538$$

The 2026 increase in inventory (the 2026 layer) is valued at 2026 prices.

Base inventory (2024)	$100,000
2025 layer	25,833
2026 layer	800*
2026 ending inventory	$126,633

* [(130% ÷ 120%) × ($125,538 − $124,800)].

ADDITIONAL COMMENT

For tax purposes, the lower of cost or market method must ordinarily be applied to each separate inventory item, but for financial accounting purposes, it can be applied using an aggregate approach.

Lower of Cost or Market Method. Inventory may be valued at the **lower of cost or market.** This option is available to all taxpayers other than those who determine cost using the LIFO method.[37] The term *market* refers to replacement cost. On the date an inventory is valued, the replacement cost of each item in the inventory is compared with its cost. The lower figure is used as the inventory value. The lower of cost or market method must ordinarily be applied to each separate item in the inventory.

Recall the *Thor Power Tool* case (discussed earlier in this chapter), in which the Supreme Court distinguished market value from expected selling price. **Market value** is the price at which the taxpayer can replace the goods in question. Replacement cost is used in the lower of cost or market determination. Obsolete or other slow-moving inventory can be written down below replacement cost only if the selling price has been reduced.

Cycle Inventory Valuation. Computer technology, including bar codes and software, enables businesses to maintain real-time perpetual inventory records. Many businesses, especially those with multiple locations, do not attempt to count all inventory items on the last day of the taxable period. Instead they count inventory following a scheduled cycle. At year-end, businesses adjust quantities shown in perpetual records for shrinkage since the most recent physical count utilizing estimates based on past experiences. The IRS challenged this practice unsuccessfully arguing that the adjustments failed the "all events" test which requires that amounts must be determined with reasonable accuracy.[38] In midst of the litigation, Congress specifically permitted the method in instances where "the taxpayer makes proper adjustment to such inventories and its estimation method [for] actual shrinkage."[39]

WHAT WOULD YOU DO IN THIS SITUATION?

Jack is a new tax client. He says he and his previous accountant did not get along very well. Jack owns an automobile dealership with sales of $12 million. He has provided you with most of the information you need to prepare his tax return, but he has not yet given you the year-end inventory value. You have completed much of the work on his return, but cannot complete it without the inventory figure. You have called Jack three times about the inventory. Each time he has interrupted, and asked you what his tax liability will be at alternative inventory levels. What problem do you see?

[39] Sec. 471(b).

SPECIAL ACCOUNTING METHODS

OBJECTIVE 4

Identify the amount of income to be reported from special accounting methods

The term **method of accounting** is used to include not only overall methods of accounting (i.e., cash, accrual, and hybrid) but also the accounting treatment of specific items. Special rules have been established for two types of transactions that cover long periods of time. One rule applies to installment sales (a sale in which final payment is not received until a subsequent tax year), and a separate set of rules applies to long-term contracts (construction and similar contracts that are not completed in the same year they are started). These special rules permit taxpayers to report income from this type of transaction when they have the wherewithal to pay the tax (i.e., the year in which payment is received).

LONG-TERM CONTRACTS

Long-term contracts include building, installation, construction, or manufacturing contracts that are not completed in the same tax year in which they began.[40] A manufacturing contract is long-term only if the contract involves the manufacture of either a unique item not normally carried in finished goods inventory or items that normally require more than 12 calendar months to complete. Contracts for services (architectural, accounting, legal, and so on) do not qualify for long-term contract treatment.[41]

EXAMPLE I:11-20 ▶ Diamond Corporation manufactures two types of airplanes: small, general aviation planes that require approximately six months to complete and large jet aircrafts sold to airlines that require two years to complete. Diamond maintains an inventory of the small planes but manufactures the large planes to contract specification. Diamond can use long-term contract accounting only for the large planes. Assume Diamond also offers aircraft design assistance to the government and others who seek such services. The long-term contract method of accounting is not available for such services. ◀

HISTORICAL NOTE

The use of the completed contract method was severely restricted in the Tax Reform Act of 1986 because Congress found that several large corporations, particularly those with large defense contracts, had significant deferred taxes attributable to this method. Many of these companies had extremely low or negative tax rates for several years.

ADDITIONAL COMMENT

In general, a construction contract must involve what has historically been thought of as construction, which includes erecting buildings, building dams, roads, and power plants.

The accounting method selected by a taxpayer must be used for all long-term contracts in the same trade or business.[42] In general, the income and expenses associated with long-term contracts may be accounted for by using either the **percentage of completion method** or the **modified percentage of completion method**. In limited instances (explained below), taxpayers may use the **completed contract method**. Under the percentage of completion method, income from a project is reported in installments as the work progresses. Under the completed contract method, income from a project is recognized upon completion of the contract. The modified percentage of completion method is a hybrid that combines two methods (discussed below). Alternatively, taxpayers may use any other accounting method (e.g., the accrual method) that clearly reflects income.

Costs Subject to Long-Term Contract Rules. Direct contract costs are subject to the long-term contract rules. Labor, materials, and overhead costs must be allocated to the contract and accounted for accordingly. Thus, under the completed contract method, such costs are capitalized and deducted from revenue in the year the contract is completed. Selling, marketing and advertising expenses, expenses for unsuccessful bids and proposals, and research and development costs not associated with a specific contract may be deducted currently.

In general, administrative overhead must be allocated to long-term contracts. (See the earlier list of overhead items that must be included in inventory.) This is not required of taxpayers (other than homebuilders) using the completed contract method, but as noted below, the use of the completed contract method is limited.

As previously mentioned, interest must be capitalized if the property being produced is real property, long-lived property, or property requiring more than two years (one year in the case of property costing more than $1 million) to produce. Interest costs directly attributable to a contract and those that could have been avoided if contract costs had not been incurred must be allocated to long-term contracts.

---

[40] Reg. Sec. 1.451-3(b).

[41] Rev. Proc. 2011-18, 2011-5 I.R.B. 443 and Rev. Proc. 2004-34, 2004-1 C.B. 991, modifying and superseding Rev. Proc. 71-21, 1971-2 C.B. 549, does establish rules for service contracts that extend into the year following the receipt of payment. These rules are discussed in Chapter I:3.

[42] Reg. Sec. 1.451-3(a)(1).

Completed Contract Method. Under the completed contract method of accounting, income from a contract is reported in the taxable year in which the contract is completed. This is true without regard to whether the contract price is collected in advance, upon completion of the contract, or in installments. Costs associated with the contract are accumulated in a work-in-progress account and deducted upon completion. Several courts are in conflict with regard to determining when a contract is completed. Some courts have required total completion and acceptance of the contract.[43] Other courts have held the contract to have been completed when the only work remaining consists of correcting minor defects or furnishing incidental parts.[44]

The use of the completed contract method may only be used in two limited circumstances. The method can be used by smaller companies (those whose average annual gross receipts for the three preceding tax years is $31 million or less, for 2025) for construction contracts that are expected to take two years or less to complete and for home construction contracts.[45] It cannot be used by larger companies for manufacturing, or for other long-term contracts other than construction or for construction contracts expected to last longer than two years.

KEY POINT

In general, taxpayers with long-term contracts must compute income under the percentage of completion method.

Percentage of Completion Method. Under the percentage of completion method of reporting income, the taxpayer reports a percentage of the gross income from a long-term contract based on the portion of work that has been completed. The portion of the total contract price reported in a given year is determined by multiplying the total contract price by the percentage of work completed in the year. The percentage is determined by dividing current year costs by the expected total costs.

KEY POINT

After a taxpayer has adopted an accounting method for long-term contracts, he or she must continue to use that method unless permission to change methods is granted.

Modified Percentage of Completion Method. At the beginning of a contract, it is difficult to estimate total costs. For this reason, taxpayers may elect to defer reporting any income from a contract until they have incurred at least 10% of the estimated total cost.[46] This is called the modified percentage of completion method. Under this method, if a contract has just been started as of the end of the year, the taxpayer does not have to estimate the profit on the contract during that year. The next year, the taxpayer will report profit on all work that has been completed, including work done during the first year. Of course, this assumes that at least 10% of the work has been completed as of the end of the taxable year. If more than 10% of the costs are incurred during the first year, the modified percentage of completion method is identical to the regular percentage of completion method.

The completed contract method, the percentage of completion method, and the modified percentage of completion method are compared in Example I:11-21.

EXAMPLE I:11-21 ▶ In 2025, a contractor enters into a contract to construct a bridge for $1,400,000. At the outset, the contractor estimates that it will cost $1,200,000 to build the bridge. Actual costs in 2025 are $540,000 (45% of the $1,200,000 total estimated costs). Actual costs in 2026 are less than expected and amount to $600,000. The profits reported in both years of the contract are illustrated below.

	2025	*2026*
Completed contract method		
Revenue	0	$1,400,000
Costs incurred	0	(1,140,000)
Gross profit	0	$ 260,000

---

[43] *E. E. Black Limited v. Alsup*, 45 AFTR 1345, 54-1 USTC ¶9340 (9th Cir., 1954), and *Thompson-King-Tate, Inc. v. U.S.*, 8 AFTR 2d 5920, 62-1 USTC ¶9116 (6th Cir., 1961).

[44] *Ehret-Day Co.*, 2 T.C. 25 (1943), and *Nathan Wohlfeld*, 1958 PH T.C. Memo ¶58,128, 17 TCM 677.

[45] Sec. 460(e). The average annual gross receipts is for the three tax years preceding the tax year in which the contract was entered into.

[46] Sec. 460(a).

Percentage of completion method		
Revenue	$630,000[a]	$770,000[b]
Costs incurred	(540,000)	(600,000)
Gross profit	$90,000	$170,000

[a] $540,000/$1,200,000 × $1,400,000 = $630,000.

[b] $1,400,000 − $630,000 = $770,000. ◀

In Example I:11-21, the modified percentage of completion method results in the same income being reported each year as the percentage of completion method because more than 10% of the estimated costs were incurred during the first year. Note that the completed contract method defers reporting income until the contract is completed, causing all income from the project to be reported in a single year. Thus, the tax is deferred but the taxpayer may end up being taxed at higher rates. As noted, the completed contract is available only for home construction contracts and to certain smaller contractors for projects of two years or less.

Look-Back Interest. Certain contracts (or portions of a contract) accounted for under either the regular or modified percentage of completion method are subject to a **look-back interest** adjustment. When a contract is completed, a computation is made to determine whether the tax paid each year during the contract is more or less than the tax that would have been paid if the actual total cost of the contract had been used rather than the estimated cost.[47] Interest is paid on any additional tax that would have been paid. The taxpayer receives interest on any additional tax that was paid.

Look-back interest is applicable only to contracts completed more than two years after the commencement date. Furthermore, look-back interest is applicable only if the contract price equals or exceeds either 1% of the taxpayer's average annual gross receipts for the three taxable years preceding the taxable year the contract was completed or $1 million.[48]

Taxpayers may elect a "de minimis" exception to the "look-back" interest computation. If elected, the exception is applicable to all contracts completed within a year, and the election to use the exception can be revoked only with IRS approval. Under the exception, if income reported each year on a contract is within 10% of the recomputed "look-back income," no interest computation is made for the contract. Whether reported income is within 10% of recomputed income is determined separately for each completed contract.

EXAMPLE I:11-22 ▶ The contractor in Example I:11-21 is exempt from the look-back rule because the contract is completed within two years after the commencement date. On the other hand, if the contract took more than two years to complete, interest would be owed on the underpaid taxes for the first and subsequent contract years. The underreported income for the first year would be $33,158 [($260,000 profit × $540,000 first year's costs ÷ $1,140,000 total costs) − $90,000 first year reported income]. Assuming a 21% tax bracket, the underpaid tax for the first year is $6,963. Upon completion of the contract, interest would be paid on this amount and underpaid taxes for other years. Even if elected, the "de-minimis" exception would be inapplicable as the reported income in the first year of the contract ($90,000) is not within 10% of the income that would have been reported if actual costs had been used in the computation ($123,158 = $33,158 + $90,000). ◀

INSTALLMENT SALES METHOD

In general, the gain or loss from the sale of property is reported in the year the property is sold. If the sales proceeds are collected in years after the sale, the taxpayer may find it difficult to pay the tax on the entire amount of the gain in the year of sale. To reduce the burden, the tax law permits taxpayers to spread the gain from installment sales over the collection period. The **installment sale method** is applicable only to gains and is used to report income from an installment transaction unless the taxpayer elects not to use the

---

[47] Sec. 460(b)(3).

[48] Sec. 460(b)(3).

KEY POINT

The installment sales method allows either a cash or an accrual method taxpayer to spread the gain from the sale of property over the period during which payments are received.

installment method. An **installment sale** is any disposition of property where at least one payment is received after the close of the taxable year in which the disposition occurs. The installment method is *not* applicable to sales of:

- inventory, or
- marketable securities[49]

Computations Under Sec. 453. Income under the installment sales method is computed as follows:

SELF-STUDY QUESTION

A taxpayer sells 100 shares of Ford Motor Company stock for a gain of $800 on December 30, 2024. The taxpayer received the proceeds from the sale from the stockbroker on January 2, 2025. Can the taxpayer use the installment sales method?

ANSWER

No, the method is not applicable to sales of publicly traded property.

TYPICAL MISCONCEPTION

The selling price is sometimes confused with the contract price.

STEP 1: Compute the gross profit from the sale.

Selling price	$xx,xxx
Minus: Adjusted basis	(x,xxx)
Selling expenses	(x,xxx)
Depreciation recapture[50]	(x,xxx)
Gross profit	$ x,xxx

STEP 2: Determine the contract price.

Contract price (greater of the gross profit from above or the selling price reduced by any existing mortgage assumed or acquired by the purchaser)	$xx,xxx

STEP 3: Compute the gross profit percentage.

$$\text{Gross profit percentage} = \frac{\text{Gross profit}}{\text{Contract price}} = \text{xx}\%$$

STEP 4: Compute the gain to be reported in the year of sale.

Collections of principal received during year (exclusive of interest)	$xx,xxx
Plus: Excess mortgage (if any)*	x,xxx
Total	$xx,xxx
Times: Gross profit percentage	× xx%
Net gain recognized in year of sale	$ x,xxx
Plus: Depreciation recapture	x,xxx
Gain reported in year of sale	$ x,xxx

STEP 5: Compute the gain to be reported in subsequent years.

Collections of principal received	$ x,xxx
Times: Gross profit percent	× xx%
Gain reported in each of the subsequent years	$ x,xxx

* Mortgage − Basis − Selling expense − Depreciation recapture = Excess mortgage

ADDITIONAL COMMENT

On the sale of a capital asset, a taxpayer might elect not to use the installment sales method and report the entire gain in the year of sale if he or she has capital losses that could be used to offset the gain.

Note that depreciation recapture (see Chapter I:13) must be reported in the year of the sale even if no payment is received.

EXAMPLE I:11-23 ▶ Gina, a cash basis taxpayer, sells equipment for $200,000. The equipment originally cost $70,000, and $10,000 of MACRS depreciation has been deducted before the sale. The $10,000 of depreciation must be recaptured as ordinary income under Sec. 1245. The buyer assumes the existing mortgage of $50,000, pays $10,000 down, and agrees to pay $10,000 per year for 14 years plus interest at a rate acceptable to the IRS. Selling expenses are $13,000. The selling price is $200,000 [($50,000 + $10,000) + (14 × $10,000)]. The gain to be reported is $127,000 [$200,000 − $13,000 − ($70,000 − $10,000)]. Using the steps listed above, calculations are made as follows:

---

[49] Sec. 453(b)(2) and (k).

[50] For a discussion of depreciation recapture, see Chapter I:13.

STEP 1: Compute the gross profit from the sale.

Selling price	$200,000
Minus: Adjusted basis	(60,000)
Selling expenses	(13,000)
Depreciation recapture	(10,000)
Gross profit	$117,000

STEP 2: Determine the contract price.

Greater of gross profit of $117,000 or selling price minus mortgage assumed by purchaser ($150,000 = $200,000 − $50,000)	$150,000

STEP 3: Compute the gross profit percentage.

$$\text{Gross profit percentage} = \frac{\text{Gross profit (\$117,000)}}{\text{Contract price (\$150,000)}} = 78\%$$

STEP 4: Compute the gain to be reported in the year of sale.

Principal received during year	$ 10,000
Plus: Excess mortgage	0
Total amount realized	$ 10,000
Times: Gross profit percentage	× 0.78
Gross profit	$ 7,800
Plus: Depreciation recapture	10,000
Gain reported in year of sale	$ 17,800

STEP 5: Compute the gain to be reported in subsequent years.

Principal received	$ 10,000
Times: Gross profit percentage	× 78%
Gain reported in each subsequent year	$ 7,800

Thus, the total gain reported is $127,000 [$17,800 + ($7,800 × 14)]. This is equal to the gross profit of $117,000 (which is the amount of Sec. 1231 gain reported on the sale) plus the $10,000 of depreciation recapture. As a cash basis taxpayer, Gina will report the interest income as it is collected. (Figure I:11-1 at the end of this chapter illustrates this computation on Form 6252, Installment Sale Income.) ◀

Many taxpayers deduct the purchase price of equipment in the year of purchase under Sec. 179. In such situations, the installment method is of little use because any gain on the sale is covered by Sec. 1245. As noted, Sec. 1245 gains must be reported in the year of sale, even when the gain is greater than the amount received during the year. The installment method is often used to report real estate sales because the cost of real estate cannot be deducted in the year of purchase.

REAL-WORLD EXAMPLE

When an installment obligation is assigned as collateral for a loan, the transaction is treated as a disposition of the obligation. Rev. Rul. 65-185, 1965-2 C.B. 153.

Disposition of Installment Obligations. A taxpayer who sells property on the installment basis may decide not to hold the obligation until maturity. For example, the holder may sell the obligation to a financial institution for the purpose of raising cash. Alternatively, the holder may not be able to collect the full amount of the installments because of the inability of the buyer to make payments. In these situations, the holder must determine the adjusted basis of the obligation in order to compute the resulting gain or loss. The adjusted basis of an installment obligation is equal to the face amount of the obligation reduced by the gross profit that would be realized if the holder collects the face amount of the obligation. In general, this means the adjusted basis of an obligation is equal to

$$\text{Face amount} \times (100\% - \text{Gross profit percentage})$$

EXAMPLE I:11-24 ▶ Assume the same facts as in Example I:11-23 except that Gina immediately sells a single $10,000 installment to a bank for $9,700. Gina reports a gain of $7,500 computed as follows:

Selling price		$9,700
Minus:	Adjusted basis of installment	(2,200)*
Recognized gain		$7,500

* $10,000 face amount × (100% − 78% gross profit percentage) = $2,200

Gina would have reported a gain of $7,800 had she decided not to sell the installment but to collect the face amount. Because the obligation is discounted by $300 ($10,000 − $9,700), the reported gain is reduced by $300. If the installment had not been sold immediately, the bank would probably also pay to Gina an amount for the accrued interest. In such a situation, Gina would report the gain from the sale and the accrued interest as income. ◀

EXAMPLE I:11-25 ▶ Assume that Gina in Example I:11-24 is unable to collect the final $10,000 installment because the individual who purchases the property declares bankruptcy. Gina would be entitled to a bad debt deduction of $2,200, the basis of the installment. Gina does not receive a bad debt deduction for the accrued interest because, as a cash basis taxpayer, the interest has not been included in her gross income. ◀

KEY POINT

A donor of property does not normally recognize gain, but a gift of certain installment obligations causes the recognition of gain.

Certain dispositions of installment obligations, such as gifts, are taxable events.[51] The main objective of this rule is to prevent income from being shifted from one taxpayer to another. Thus, if a corporation distributes an installment obligation as a dividend or if a father gives his daughter an installment obligation, gain or loss is recognized. In general, the gain or loss recognized is equal to the difference between the FMV of the obligation and its adjusted basis. In the case of a gift, the gain recognized is equal to the difference between the face of the obligation and its adjusted basis. However, certain exceptions to this rule exist. Transfers to controlled corporations under Sec. 351, certain corporate reorganizations and liquidations, transfers on the taxpayer's death, transfers incident to divorce, distributions by partnerships, and contributions of capital to a partnership are exceptions to this rule. In these cases, the recipients of the obligations report income when the installments are collected.

Repossessions of Property Sold on the Installment Basis. In general, the repossession of property sold on the installment basis is a taxable event. The gain or loss recognized is generally equal to the difference between the value of the repossessed property (reduced by any costs incurred as a result of the repossession) and the adjusted basis of any remaining installment obligations.

EXAMPLE I:11-26 ▶ Yuji sells stock of a non–publicly traded corporation with a $7,000 adjusted basis for $10,000. Yuji receives a $1,000 down payment, and the balance of $9,000 is due the following year. In the year of the sale, Yuji reports a capital gain of $300 (0.30 × $1,000) under the installment method of accounting. Yuji is unable to collect the $9,000 note, and after incurring legal fees of $500, he repossesses the stock. When Yuji repossesses the stock, it is worth $8,700. The adjusted basis of the note is $6,300 (0.70 × $9,000). Yuji must report a capital gain of $1,900 ($8,700 − $500 − $6,300). The basis of the stock to Yuji is its FMV at the time it is repossessed ($8,700). ◀

The amount of gain recognized from the repossession of real property is limited to the lesser of (1) the gross profit in the remaining installments reduced by the costs incurred as a result of the repossession or (2) the cash and FMV of other property received from the buyer in excess of the gain previously recognized.[52] In the case of the repossession of either real or personal property, the gain or loss retains the same character as the gain or loss on the original sale.

EXAMPLE I:11-27 ▶ Assume the same facts as in Example I:11-26, except that the property sold is land. Yuji reports a capital gain of $700, which is the lesser of $2,200 [(0.30 × $9,000) − $500] or $700 ($1,000 − $300). The basis of the land is $7,500 [$9,000 − (0.30 × $9,000) unrealized profit + $700 gain previously recognized + $500 legal fees]. ◀

Installment Sales for More Than $150,000. Special rules apply to nondealers who sell property for more than $150,000. The special rules do not apply to sales of personal use property, to sales of property used or produced in the trade or business of farming, or to sales of timeshares or residential lots.

---

[51] Sec. 453B(a).

[52] Sec. 1038.

First, if the taxpayer borrows funds using the installment obligations as security, the amount borrowed is treated as a payment received on the installment obligation.[53] This prevents the taxpayer from using the installment method to defer tax and yet obtain cash by borrowing against the installment obligation. Second, if the installment method is used, interest must be paid to the government on the deferred tax.[54] This rule, however, applies only to deferred principal payments over $5 million.[55]

KEY POINT

Installment sales between related parties cannot be used to defer the recognition of gain by the original owner when the related purchaser receives cash as result of a resale of the property.

Installment Sales Between Related Persons. Installment sales between related persons are subject to the same rules as other installment sales except when the property is resold by the related purchaser. The primary purpose of the resale rule is to prevent the original owner from deferring gain recognition by selling the property to a related person who, in turn, resells the property.

Sec. 453(e) requires the first seller to treat amounts received by the related person (second seller) as having been personally received. Thus, the first seller would be required to report the gain in the year (or years) in which proceeds are received by the second seller. This acceleration provision is applicable only if the resale takes place within two years of the initial sale. For purposes of Sec. 453(e), the term *related person* includes a spouse, children, grandchildren, and parents. Controlled corporations, partnerships, estates, and trusts are also covered.

DEFERRED PAYMENT SALES

The installment sale rules are not applicable to all sales involving future payments. The installment method cannot be used when the sale of property produces a loss. Also, a taxpayer can elect out of the installment method when a sale results in a gain. The manner in which these transactions are reported depends on the taxpayer's accounting method. For accrual method taxpayers, the total *amount receivable* from the buyer (exclusive of interest) is treated as part of the amount realized. Thus, the entire gain or loss is reported in the year of sale. For cash method taxpayers, the FMV of the installment obligation is treated as part of the amount realized in the year of sale. The amount realized, however, cannot be considered to be less than the FMV of the property sold minus any other consideration received (e.g., cash).[56]

EXAMPLE I:11-28 ▶ USA Corporation, an accrual method taxpayer, sells land for $100,000. USA receives $50,000 down and a $50,000 note payable in 12 months plus 14% interest. Assume the basis of the land is $80,000 and that it is a capital asset. Because of the buyer's poor credit, the value of the note is only $45,000. USA affirmatively elects not to report the installment sale on the installment method. USA reports a capital gain of $20,000 ($100,000 − $80,000). If USA collects the face of the note at maturity, no additional gain or loss is recognized. If USA sells the note for $45,000, a $5,000 capital loss is recognized. ◀

EXAMPLE I:11-29 ▶ Assume the same facts as in Example I:11-28, except that USA is a cash method taxpayer. If the FMV of the land is $100,000 (the stated selling price), the treatment of the transaction is exactly the same as it is using the accrual method. If the FMV of the land is assumed to be $95,000 (cash received plus FMV of the note received), USA recognizes a $15,000 ($95,000 − $80,000) capital gain in the year of the sale. If USA collects the face of the note at maturity, $5,000 of ordinary income is recognized. If USA sells the note for $45,000, no gain or loss is recognized. ◀

ADDITIONAL COMMENT

A contingent payment sale is a sale or other disposition of property in which the aggregate selling price cannot be determined by the close of the tax year in which the sale took place.

Indeterminate Market Value. In certain transactions, the value of obligations received cannot be determined (e.g., a mineral interest is sold for an amount equal to 10% of the value of future production). Under the Regulations, the value of obligations with an **indeterminate market value** is assumed to be no lower than the value of the property sold less the value of other property received.[57] Hence, if the value of property sold is determinable, the recognized gain equals the excess of the value of the property sold over its basis. On occasion, however, neither the value of the obligation received nor the value of property sold can be determined.

Treasury Regulations specify how these types of transactions are to be treated.[58] The basic rules relating to special accounting methods are summarized in Topic Review I:11-3.

---

[53] Sec. 453A(d).

[54] The interest computation is described in Sec. 453A(c).

[55] Sec. 453A(b)(2)(B).

[56] Reg. Sec. 15A.453-1(d)(2)(ii)(A).

[57] Reg. Sec. 1.453-1(d)(3)(iii).

[58] Reg. Sec. 15A.453-1(c).

TOPIC REVIEW I:11-3

Special Accounting Methods

Long-Term Contracts

- Long-term contracts include building, installation, construction, and manufacturing contracts that are not completed in the same tax year in which they are entered into. A manufacturing contract is long-term only if the contract involves the manufacture of either a unique item not normally carried in inventory or an item that normally requires more than 12 calendar months to complete.
- Long-term contracts may be reported under the regular or the modified percentage of completion method. Under both methods, income is reported as work is completed except that, under the modified percentage of completion method, no income is reported until at least 10% of the work is completed.
- The completed contract method is available only for home construction contracts, for construction contracts expected to take two years or less to complete, and for use by smaller companies (those whose average annual gross receipts for the three preceding tax years are $31 million or less, for 2025).

Installment Method

- Under the installment method, gain is reported as the sales proceeds are collected. The installment method is generally not available for sales of inventory or publicly traded property. Furthermore, the method is available only for gains.
- Gain is reported as sales proceeds are collected. However, both depreciation recapture and any mortgage in excess of basis must be reported in the year of sale. Gain recognition is also accelerated in certain situations if the seller borrows against the installment obligation or if a related buyer resells the property within two years.

IMPUTED INTEREST

OBJECTIVE 5

Compute the amount of imputed interest in certain transactions

Before the enactment of Sec. 1274 and the amendment of Sec. 483, property could be sold on an installment basis in a contract providing for little or no interest. Instead of charging interest, the seller charged a higher price for the property. If the property sold was a capital asset, the result of the arrangement was to reduce the interest income reported by the seller and to increase the amount of favorably taxed capital gain. Sections 483 and 1274 now *impute* interest in a deferred payment contract where no interest or a low rate of interest is provided. Another impact of the **imputed interest rules** on sellers is to reallocate payments received between interest (which is fully taxable) and principal (only the gain portion of which is taxable). The result is often an increase in the income reported in early years and a decrease in later years. The rules are generally applicable to both buyers and sellers. In certain instances, the buyer may want interest to be imputed in order to increase his interest deduction in early years.

KEY POINT

Imputed interest is important because it alters the amount of gain on the sale and causes an interest expense deduction for the buyer and interest income for the seller.

The following transactions are exempt from the imputed interest rules:

- Debt subject to original issue discount provisions (basically bonds issued for less than face where amortization of the discount is required under Sec. 1274; see Chapter I:5)
- Sales of property for $3,000 or less
- Any sales where all of the payments are due within six months
- Sales of patents to the extent the payment is contingent on the use or disposition of the patent
- Certain carrying charges for personal property or educational services covered by Sec. 163(b) when the interest charge cannot be ascertained
- Charges for the purchase of personal-use property (purchaser only)[59]

TYPICAL MISCONCEPTION

Some people mistakenly assume that the imputed interest rules do not apply if the property is sold for a loss.

---

[59] Sec. 483(d). The rule lowers the basis of a personal-use asset in order to increase any gain on the future sale of the property.

EXAMPLE I:11-30 Joan is involved in several transactions during the current year. No interest is stated on any of the transactions. The terms of the transactions and the applicability of the imputed interest rules are summarized below:

Transaction	*Imputation of Interest*
Purchases furniture costing $8,000 for her residence. Full price is payable within four months.	Not applicable because property is for personal use. Also, all payments are due within six months.
Sells a boat for $2,000. Payment is due in a year.	Not applicable because sales price is not more than $3,000.
Sells land for $100,000. Payment is due in five years.	Interest must be imputed because no exception is applicable.
Purchases a newly issued bond for $650 (face of $1,000).	Not applicable because transaction is subject to the original issue discount rules in Sec. 1274. Also, the price is not more than $3,000.

IMPUTED INTEREST COMPUTATION

In order to avoid the imputation of interest, the stated interest rate must be at least equal to 100% of the applicable federal rate (110% of the applicable federal rate in the case of sale–lease back arrangements). Lower rates are specified for two types of transactions: (1) If the stated principal amount for qualified debt obligations that are issued in exchange for property under Sec. 1274A does not exceed $7,296,700 for 2025, the interest rate is limited to 9% compounded semiannually; and (2) the interest rate is limited to 6% compounded semiannually in the case of sales of land between related individuals (unless the sales price exceeds $500,000).

ADDITIONAL COMMENT

The amount of $7,296,700 is indexed annually for inflation. The original statutory amount was $2.8 million.

The **applicable federal rate** is determined monthly and is based on the rate paid by the federal government on borrowed funds. The rate varies with the terms of the loan. Loans are divided into short-term (not over three years), mid-term (over three years but not over nine years), and long-term (over nine years).

EXAMPLE I:11-31 Kasi sells land for $100,000 to Bill, an unrelated person. The sales price is to be paid to Kasi at the end of five years in a single installment with no stated interest. Kasi paid $60,000 for the land. Assume the current federal rate is 10%. Because the amount of the stated principal is less than $7,296,700, interest is imputed at a rate not to exceed 9% compounded semiannually. As a result, the effective rate is 9.2025% (9% compounded semiannually), and the present value factor is .64393 ($1 \div 1.092025^5$). Thus, the present value of the final payment is $64,393 (0.64393 × $100,000). Kasi reports a $4,393 ($64,393 − $60,000) gain on the sale of the land and $35,607 ($100,000 − $64,393) interest income instead of a $40,000 gain and no interest income. The buyer is treated as incurring $35,607 in interest and has a $64,393 basis in the land. Whether the interest is deductible depends on a variety of other factors (see Chapter I:8).

ACCRUAL OF INTEREST

Is imputed interest reported under the cash or the accrual method? In other words, is imputed interest reported when it accrues or when it is paid? In general, imputed interest is reported as it accrues. However, there are some major exceptions, as follows:

ADDITIONAL COMMENT

The amount of $5,070,500 is indexed annually for inflation. The original statutory amount was $2 million.

- Sales of personal residences
- Most sales of farms for $1 million or less
- Sales involving aggregate payments of $250,000 or less
- Sales of land between related persons unless the sales price exceeds $500,000[60]

In addition, if the borrower and lender jointly elect, and if the stated principal does not exceed $5,211,900 for 2025, accrual of interest is not required. This election is not available if the lender is an accrual method taxpayer or a dealer with respect to the property sold or exchanged.[61]

---

[60] Sec. 1274(c)(4).

[61] Sec. 1274A(c).

EXAMPLE I:11-32 ▶ Assume the same facts as in Example I:11-31. Because the aggregate payments do not exceed $250,000, the transaction is exempt from the requirement that interest be accrued. As a result, Kasi reports interest income and Bill reports interest expense in the fifth year when the final payment is made on the transaction. Under the installment method, $4,393 gain on the sale is recognized in the fifth year. ◀

GIFT, SHAREHOLDER, AND OTHER LOANS

Imputed interest rules are not limited to installment transactions. Sec. 7872 applies to transactions involving related parties whose taxes are lowered as a result of low interest or interest-free loans. These situations include

- *Gift loans*. For example, parents in higher tax brackets loan money to their adult children without charging interest. If the children invest the borrowed money and are taxed on the income at a lower rate, the family has reduced its total tax liability in the absence of imputed interest rules.
- *Corporation shareholder loans*. In the absence of imputed interest rules, taxes may be saved by a corporation that makes an interest-free loan to a shareholder. If the corporation had invested the money and paid out the resulting income as a dividend, it would have first been taxed on the profit. By making the interest-free loan, the corporation could, in the absence of imputed interest rules, reduce its taxes by avoiding the otherwise taxable income.
- *Compensation-related loans*. Employers may loan money to employees without charging interest. Without the requirement to impute interest, this could produce tax savings if the employer was unable to deduct additional compensation because of the reasonable compensation limitation or if the employee was unable to deduct the interest, say, because the borrowed funds were used to purchase personal use property.
- *Other tax avoidance loans*. Any other low-interest or interest-free loan that produces tax savings may be subject to the imputed interest rules. For example, a club may offer its members a choice of either paying dues or making a large refundable deposit. The club can invest the money and earn interest, perhaps equal to the dues. In the absence of imputed interest rules, the member avoids taxes by not having to report the income that would have been earned if the member personally invested the funds. The club is indifferent between the alternatives because both the dues and the interest income are taxable.

In general, interest is imputed on the above loans by applying the applicable federal rates discussed earlier. The resulting interest income is taxable to the lender. Whether the interest expense is deductible by the borrower is determined by applying the usual interest deduction rules (see Chapter I:8).

The imputation process involves a second step. The lender is treated as returning the imputed interest to the borrower. This is necessary because the interest was not actually paid. For example, in the case of a gift loan, the lender is treated as giving the imputed interest back to the borrower. This would not normally have income tax implications, but if the imputed interest were large enough, it could result in a gift tax. In the case of the corporation-shareholder loan, the corporation is treated as paying the imputed interest back to the shareholder as a dividend. Typically, this does not increase the corporation's tax, but it results in the recognition of dividend income to the shareholder. For compensation-related loans, the second step is to impute compensation paid by the employer and received by the employee. The compensation is taxable to the employee and, if reasonable in amount, is deductible by the employer.

There are several important exceptions intended to limit the application of imputed interest in situations where tax avoidance may be immaterial:

- Interest is not imputed on gift loans between two individuals totaling $10,000 or less, except when the borrowed funds are used to purchase income-producing property.
- If the gift loans between two individuals total $100,000 or less, the imputed interest is limited to the borrower's "net investment income" as defined by Sec. 163(d)(4). (See Chapter I:8 for a discussion of net investment income.) If the net investment income is $1,000 or less, it is not necessary to impute interest.

- Interest is not imputed on compensation-related and corporate shareholder loans totaling $10,000 or less.

These exceptions do not apply when tax avoidance is one of the principal purposes of the loans.

EXAMPLE I:11-33 ▶ Linda made interest-free gift loans to each of her four children: Andy, Bob, Cathy, and Donna. Andy borrowed $9,000 to purchase an automobile. Bob borrowed $25,000 to buy stock. Bob's net investment income is $800. Cathy also borrowed $25,000 to buy stock, but her net investment income is $1,100. Donna borrowed $120,000 to purchase a residence, and her net investment income is $500. Tax avoidance is not a motive for any of the loans. Imputation of interest is not required for the loans to Andy or Bob. The loan to Andy is exempt because the amount is less than $10,000, and the loan to Bob is exempt because his net investment income is under $1,000. Imputation of interest is required for the loans to Cathy and Donna. In the case of Cathy, the amount of imputed interest is limited to her net investment income of $1,100. The imputed interest for Donna, however, is not limited to her net investment income because the amount of the loan is over $100,000. ◀

The imputed interest rules are summarized in Topic Review I:11-4.

CHANGE IN ACCOUNTING METHODS

OBJECTIVE 6

Determine the tax treatment that results from changes in accounting methods

In general, a new taxpayer elects an accounting method by simply applying the selected method when computing income for the initial tax return.[62] If a particular item does not occur in the first year, the accounting method is elected the first year in which the item occurs.

EXAMPLE I:11-34 ▶ Gordon opened a beauty shop several years ago. Because he had no inventory, no inventory method was selected. In the current year, Gordon expanded his business to offer beauty supplies to his customers. Gordon can delay electing an inventory method until the year in which he first has an inventory. ◀

TOPIC REVIEW I:11-4

Imputed Interest

PURPOSE

The imputed interest rules are intended to prevent taxpayers from reducing their taxes by charging little or no interest on installment payment transactions and loans.

APPLIES TO

In most cases applies to both parties, the debtor and the creditor. The result is to impute interest income to the lender and interest expense to the borrower. Several exceptions exempt small transactions from imputed interest. For example, sales involving payments of $3,000 or less are generally exempt as are loans of less than $10,000.

RATE

Interest is imputed at the applicable federal rate if the stated interest rate is lower. The applicable federal rate is the rate the federal government pays on borrowed funds and is determined monthly. In general, the current rate at the time of the transaction is used throughout the term of the loan. The rate varies with the term of the loan. Loans are divided into short-term (not over three years), mid-term (over three years but not over nine years), and long-term (over nine years).

---

[62] Reg. Sec. 1.446-1(e)(1).

In general, once an accounting method is chosen, it cannot be changed without IRS approval. There are a few exceptions. For example, taxpayers may adopt the LIFO inventory method without prior IRS approval.[63] Once such methods are adopted, however, they cannot be changed without IRS approval.

As previously noted, the term *accounting method* indicates not only the overall accounting method used by the taxpayer, but also the treatment of any item of income or deduction.[64] A change of accounting methods should not be confused with the correction of an error. Errors include mathematical mistakes, posting errors, deductions of the wrong amount for an expense, omission of an item of taxable income, or incorrect computation of a credit. An error is normally corrected by filing an amended return for the tax year or years in which the error occurs. In general, there is a three-year statute of limitations on the correction of errors. After three years, the tax year is closed and changes cannot be made.[65]

REAL-WORLD EXAMPLE

The write-down of soil aggregate to its market value by a paving company was a change in accounting method rather than the mere correction of an accounting error. The soil aggregate was included in its election to adopt the LIFO inventory method, and the use of this method required that the soil aggregate be included at cost regardless of market value. *First National Bank of Gainesville, Trustee,* 88 T.C. 1069 (1987).

REAL-WORLD EXAMPLE

An extension of time to file the application for change of accounting method was granted because of the death of the accountant in charge of filing the application. Rev. Rul. 79-417, 1979-2 C.B. 202.

Taxpayers wishing to change accounting methods must file Form 3115 with the IRS, on or before the due date of the tax return including extensions. A duplicate copy of Form 3115 must be filed with the tax return for the year. A taxpayer who amends the original income tax return within six months of its due date may request a change of accounting methods with the amended return.[66]

In general, taxpayers initiate a change in accounting methods from an incorrect to a correct method are exempt from penalty and from retroactive application of the new reporting method. Although changes in accounting methods require IRS approval, the IRS states that approval will automatically be granted for a wide variety of changes if the taxpayer meets specific requirements that include proper filing of both Form 3115 and the current year's tax return, agreeing to take into account the Sec. 481(a) adjustment (as described below), not being under examination, and not having changed the same method of accounting within the last four years.[67] Although the IRS retains the right to again change any method of accounting adopted under these procedures, it states that such changes will not be retroactive except in rare or unusual circumstances. Examples of situations where retroactive application may occur include misstatement or omission of material facts, change in material facts, and changes in applicable authority.

AMOUNT OF CHANGE

A change in accounting methods usually results in duplications or omissions of items of income or expense.

EXAMPLE I:11-35 ▶ Bonnie, a practicing CPA, has been reporting income using the cash method. In the current year, Bonnie obtains permission to change to the accrual method. At the beginning of the current year, Bonnie has $80,000 of receivables that have not been reported in prior years. The receivables were not reported in prior years because they were not collected. Although the receivables are collected in the current year, they are not taxable because, under the accrual method, Bonnie now reports income as it is earned, and the income is not earned in the current year. In this case, the income was earned in prior years.

Also, assume Bonnie has accounts payable of $15,000 at the beginning of the current year. The accounts payable were not deducted in prior years because the expenses had not been paid. Furthermore, the accounts payable are not deductible in the current year even if they are paid. This is because the expenses were incurred in prior years. Obviously, the IRS expects to collect the tax on the $80,000 of receivables, and Bonnie is entitled to deduct the $15,000 of payables. In the absence of any special provision, both amounts would be omitted from the computation of taxable income. On the other hand, if the change were from the accrual method to the cash method, both amounts would be reported twice (in the year prior to the change because they had accrued and in the year of the change because they are collected or paid). Thus, a special provision is also needed for duplications. ◀

---

[63] A taxpayer may adopt LIFO by merely determining year-end inventory by that method and attaching Form 970 to the tax return for the year (Reg. Sec. 1.472-3(a)).

[64] Reg. Sec. 1.446-1(e)(2)(ii)(b).

[65] Exceptions are applicable when the taxpayer omits from the return an amount of income that is over 25% of the gross income stated on the return (6 years) or where fraud occurs (no limitation).

[66] The extension will be granted if the taxpayer follows procedures outlined in Rev. Proc. 2002-9, 2002-1 C.B. 327.

[67] Rev. Proc. 97-37, 1997-2 C.B. 455.

REPORTING THE AMOUNT OF THE CHANGE

The net amount of the change must be taken into account.[68] A positive adjustment is added to income, whereas a negative adjustment is subtracted from income. This adjustment can, of course, be made in the year of the change. If the amount is small, recognizing the full amount of the net adjustment in the year of the change is both simple and equitable. This is the only option available when the amount of the change is $3,000 or less. On the other hand, reporting a large positive adjustment in one year could push the taxpayer into a higher marginal tax bracket and result in a significant tax increase. Because the extra income is due to changing accounting methods, not increasing cash flows, the taxpayer may not have the wherewithal to pay the additional tax.

As a result, there are alternative methods that may be used to report the amount of the change. The methods that are available depend on whether the change is voluntary (a change that is initiated by the taxpayer) or involuntary (a change from an unacceptable to an acceptable method that is required by the IRS).

In the case of an involuntary change, several alternative methods are available to the IRS.[69]

In the case of voluntary changes, taxpayers must agree to report the adjustment over a period not to exceed four years. When the amount of the adjustment is $25,000 or less, taxpayers may elect to include the full amount in the current year.[70] In the case of a change spread over four years, equal portions of the change are reported in each of the four years beginning with the year of the change.

EXAMPLE I:11-36 ▶ Diana obtains permission to change from the accrual to the cash method of reporting income. The change results in a $30,000 negative adjustment to income. The IRS requires Diana to spread the adjustment over four years. As a result, she may deduct $7,500 per year for four years. Note that, because the amount of the adjustment is spread over the current and future years, the tax savings associated with the deduction are deferred. ◀

In general, the amount of the adjustment cannot be spread over a period longer than the method being changed has been used.

REAL-WORLD EXAMPLE

A pipeline company was required to capitalize reconditioning costs on its natural gas pipelines instead of expensing these costs. *Mountain Fuel Supply Co. v. U.S.*, 28 AFTR 2d 71-5833, 71-2 USTC ¶9681 (10th Cir., 1971).

OBTAINING IRS CONSENT

Most changes in accounting method require IRS approval. Sec. 446(e) states that a taxpayer changing the method of accounting "on the basis of which he regularly computes his income in keeping his books" must obtain consent before computing taxable income under the new method. This implies that a taxpayer who has been computing taxable income on a method other than that used in computing book income does not need approval to conform the computation of taxable income to the method regularly used on the taxpayer's books. This conclusion is supported by Sec. 441(a), which requires that the same method of accounting be used in computing taxable income as is used in keeping the books. The alternative might be to require the taxpayer to conform his or her book accounting method with the tax accounting method. The answer may well be in how one defines "books." The IRS has ruled that a reconciliation of taxable income with accounting income was a part of the taxpayer's auxiliary records.[71] Hence, the taxpayer was using the same accounting method for book and tax reporting. As a result, a taxpayer who changes the method of accounting used for financial reporting may not be required to change the method of accounting used for tax reporting as long as financial income and book income are reconciled.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 7

Describe tax planning considerations for accounting periods and methods

KEY POINT

C corporations and estates have more flexibility than S corporations and partnerships in the selection of a tax year.

ACCOUNTING PERIODS

In the past, taxpayers were able to defer income by selecting different tax years for partners and partnerships or S corporations and shareholders. Current law limits this opportunity. Nevertheless, partnerships and S corporations may adopt a tax year that differs from that of their owners if that year qualifies as a natural business year (i.e., at least 25% of revenues occur during the last two months of the year). Furthermore, deferral is possible in the case of estates, because they are not subject to similar restrictions on the choice of tax years.

KEY POINT

The election to use an accounting method is made by filing the first tax return on the basis of that method.

ACCOUNTING METHODS

New businesses should consider the tax implications of electing an accounting method. For example, taxpayers may benefit from the LIFO inventory method because LIFO typically reduces gross profit and defers the payment of taxes during inflationary periods. Similarly, service companies usually choose the cash method of reporting income because it permits receivables to be reported when collected rather than when the income is earned. Choosing an accounting method requires an understanding not only of the available accounting methods, but also the nature of the taxpayer's business. Will a specific election be to the tax advantage of the taxpayer? LIFO inventory is often recommended because, during inflationary periods, it tends to reduce inventory values and increase the cost of goods sold. In certain industries, such as the computer industry, however, costs are declining, and LIFO actually may result in a higher inventory value.

In other industries, inventories may fluctuate widely from one year to the next because of changing demand, shortages of materials, strikes, or other causes. LIFO layers may have to be depleted simply to continue business operations. This can cause one of two things to happen: (1) incurring extra recordkeeping costs of LIFO for little or no benefit because the inventories are depleted before they produce significant tax deferrals or (2) depleting low-cost layers from years past, resulting in a substantial increase in taxable income in the year of occurrence.

INSTALLMENT SALES

Taxpayers normally choose the installment method of reporting income from casual sales of property. By spreading the gain from a sale over more than one tax year, the taxpayer normally remains in lower tax brackets and defers the tax. A taxpayer with low current taxable income may elect not to use the installment sale method in order to take advantage of the lower current tax rates.

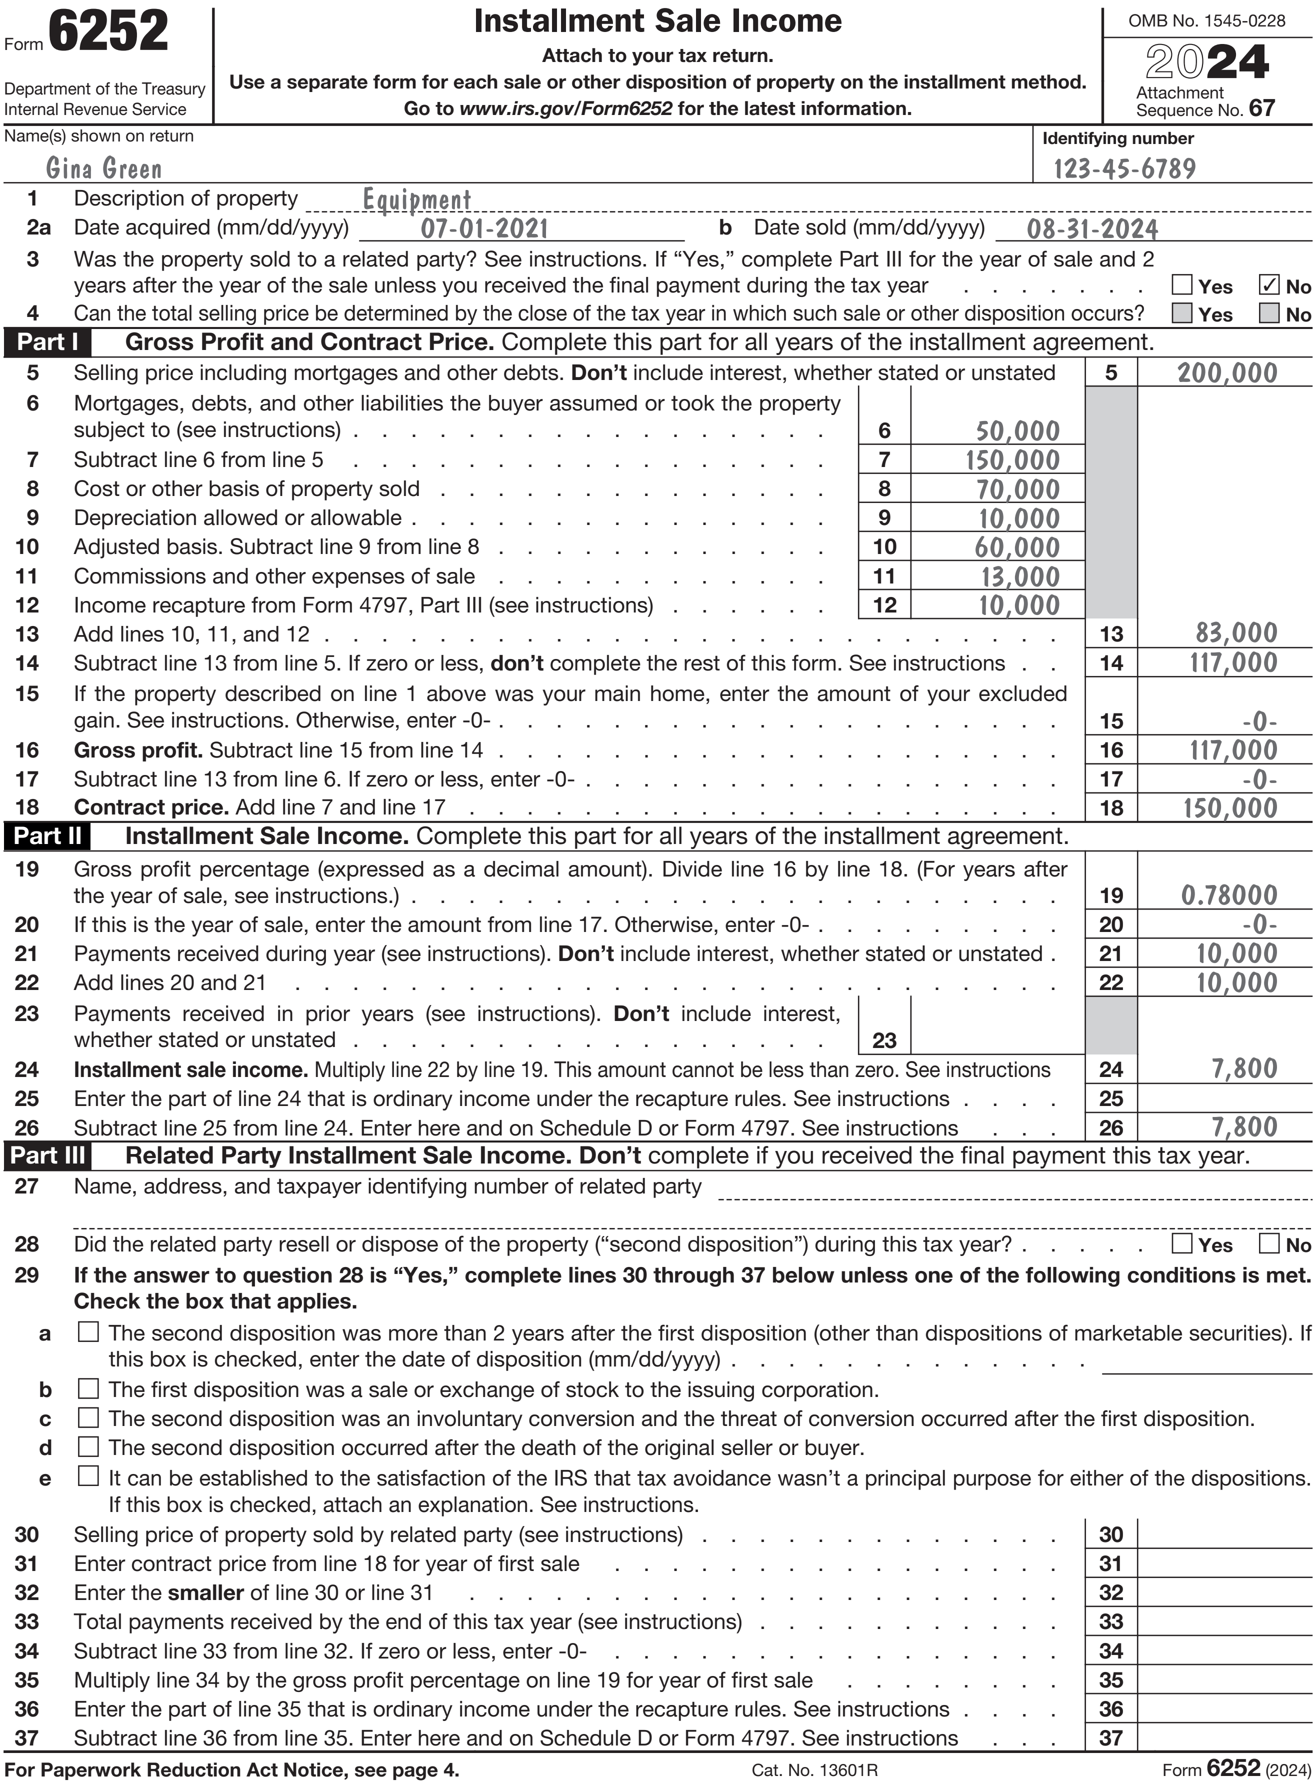
COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 8

Describe compliance and procedural considerations for accounting periods and methods

REPORTING INSTALLMENT SALES ON FORM 6252

Form 6252 (Installment Sale Income) is used to report income under the installment method from sales of real property and casual sales of personal property other than inventory. Figure I:11-1 illustrates how an installment sale transaction is reported. The illustration is based on Example I:11-23. A separate Form 6252 is normally used for each installment sale. Form 6252 is used in the year of the sale and any year in which the taxpayer receives a payment from the sale. Taxpayers who do not wish to use the installment method may report the transaction on either Schedule D or on Form 4797.



Form **6252**

OMB No. 1545-0228

2024

Attachment
Sequence No. **67**

Name(s) shown on return: Gina Green

Identifying number: 123-45-6789

1 Description of property Equipment

2a Date acquired (mm/dd/yyyy) 07-01-2021 **b** Date sold (mm/dd/yyyy) 08-31-2024

3 Was the property sold to a related party? See instructions. If “Yes,” complete Part III for the year of sale and 2 years after the year of the sale unless you received the final payment during the tax year ☐ **Yes** ☑ **No**

4 Can the total selling price be determined by the close of the tax year in which such sale or other disposition occurs? ☐ **Yes** ☐ **No**

Part I **Gross Profit and Contract Price.** Complete this part for all years of the installment agreement.

5	Selling price including mortgages and other debts. **Don’t** include interest, whether stated or unstated			5	200,000
6	Mortgages, debts, and other liabilities the buyer assumed or took the property subject to (see instructions)	6	50,000		
7	Subtract line 6 from line 5	7	150,000		
8	Cost or other basis of property sold	8	70,000		
9	Depreciation allowed or allowable	9	10,000		
10	Adjusted basis. Subtract line 9 from line 8	10	60,000		
11	Commissions and other expenses of sale	11	13,000		
12	Income recapture from Form 4797, Part III (see instructions)	12	10,000		
13	Add lines 10, 11, and 12			13	83,000
14	Subtract line 13 from line 5. If zero or less, **don’t** complete the rest of this form. See instructions			14	117,000
15	If the property described on line 1 above was your main home, enter the amount of your excluded gain. See instructions. Otherwise, enter -0-			15	-0-
16	**Gross profit.** Subtract line 15 from line 14			16	117,000
17	Subtract line 13 from line 6. If zero or less, enter -0-			17	-0-
18	**Contract price.** Add line 7 and line 17			18	150,000

Part II **Installment Sale Income.** Complete this part for all years of the installment agreement.

19	Gross profit percentage (expressed as a decimal amount). Divide line 16 by line 18. (For years after the year of sale, see instructions.)			19	0.78000
20	If this is the year of sale, enter the amount from line 17. Otherwise, enter -0-			20	-0-
21	Payments received during year (see instructions). **Don’t** include interest, whether stated or unstated			21	10,000
22	Add lines 20 and 21			22	10,000
23	Payments received in prior years (see instructions). **Don’t** include interest, whether stated or unstated	23			
24	**Installment sale income.** Multiply line 22 by line 19. This amount cannot be less than zero. See instructions			24	7,800
25	Enter the part of line 24 that is ordinary income under the recapture rules. See instructions			25	
26	Subtract line 25 from line 24. Enter here and on Schedule D or Form 4797. See instructions			26	7,800

Part III **Related Party Installment Sale Income. Don’t** complete if you received the final payment this tax year.

27 Name, address, and taxpayer identifying number of related party

28 Did the related party resell or dispose of the property (“second disposition”) during this tax year? ☐ **Yes** ☐ **No**

29 **If the answer to question 28 is “Yes,” complete lines 30 through 37 below unless one of the following conditions is met. Check the box that applies.**

- a ☐ The second disposition was more than 2 years after the first disposition (other than dispositions of marketable securities). If this box is checked, enter the date of disposition (mm/dd/yyyy)
- b ☐ The first disposition was a sale or exchange of stock to the issuing corporation.
- c ☐ The second disposition was an involuntary conversion and the threat of conversion occurred after the first disposition.
- d ☐ The second disposition occurred after the death of the original seller or buyer.
- e ☐ It can be established to the satisfaction of the IRS that tax avoidance wasn’t a principal purpose for either of the dispositions. If this box is checked, attach an explanation. See instructions.

30	Selling price of property sold by related party (see instructions)	30	
31	Enter contract price from line 18 for year of first sale	31	
32	Enter the **smaller** of line 30 or line 31	32	
33	Total payments received by the end of this tax year (see instructions)	33	
34	Subtract line 33 from line 32. If zero or less, enter -0-	34	
35	Multiply line 34 by the gross profit percentage on line 19 for year of first sale	35	
36	Enter the part of line 35 that is ordinary income under the recapture rules. See instructions	36	
37	Subtract line 36 from line 35. Enter here and on Schedule D or Form 4797. See instructions	37	

For Paperwork Reduction Act Notice, see page 4. Cat. No. 13601R Form **6252** (2024)

FIGURE I:11-1 ▶ Reporting Installment Sale Income on Form 6252 (Based on Example I:11-23)

PROCEDURES FOR CHANGING TO LIFO

The LIFO method may be adopted in the initial year that inventories are maintained by merely using the method in that year. In addition, advance approval (e.g., within 180 days following the start of the year) from the IRS is not required for an adoption of the LIFO method in the initial year that inventories are maintained on the LIFO method. However, Form 970 should be filed along with the taxpayer's tax return for the year of the change.[72] The application must include an analysis of the beginning and ending inventories. Further, if a taxpayer is changing to the LIFO method from another method (e.g., FIFO), advance approval from the IRS is also not required. Form 970 must be filed with the return and the beginning inventory for LIFO purposes is the same as under the former inventory method.[73]

If the former inventory is valued based on the lower of cost or market (LCM) method, an adjustment is required to restate the beginning inventory to cost because the LCM method cannot be used under LIFO. Generally, the beginning LIFO inventory is the same as the closing inventory for the prior year, except for the required restatement of previous write-downs to market. This adjustment to the beginning inventory can be spread ratably over the year of the change and the next two years.[74]

EXAMPLE I:11-37 ▶ Delaware Corporation elects to change to the LIFO inventory method. Delaware's inventories are valued using the LCM method based on the FIFO cost-flow assumption. The FIFO cost for the ending inventory is $50,000, and its LCM amount is $35,000. The initial inventory under LIFO must be restated to its cost, or $50,000. The $15,000 ($50,000 cost − $35,000 LCM value) difference can be included in taxable income over the current year and the next two years. $5,000 is added to taxable income in each year. ◀

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:11-1 Do accounting rules determine the amount of income to be reported by a taxpayer?

I:11-2 How does a taxpayer's tax accounting method affect the amount of tax paid?

I:11-3 Most individuals use the calendar year as their tax year. What requirement, if any, in the tax law causes this?

I:11-4 Why is it desirable for a new taxpayer to select an appropriate tax year?

I:11-5 What restrictions apply to partnerships selecting a tax year?

I:11-6 Does a similar restriction apply to S corporations? Explain.

I:11-7 How could the 52–53-week year prove to be beneficial to taxpayers? Explain.

I:11-8 Under what circumstances can an individual taxpayer change tax years without IRS approval?

I:11-9 Is there any instance in which a change in tax years is required? Explain.

I:11-10 **a.** In what situations will a tax year cover a period of less than 12 months?
b. Under what conditions is a taxpayer required to annualize income?
c. Does annualizing income increase or decrease the taxpayer's tax liability? Explain.

I:11-11 When is a final tax return due for an individual who uses a calendar year and who dies during the year?

I:11-12 **a.** Is it correct to say that businesses with inventories must use the accrual method?
b. What other restrictions apply to taxpayers who are choosing an overall tax accounting method?
c. Why is the cash method usually preferred to the accrual method?

I:11-13 **a.** Does the term *method of accounting* refer only to overall methods of accounting? Explain.

---

[72] An acceptable election is considered to have been made even if Form 970 is not filed as long as all of the information required by Reg. Sec. 1.472-3(a) is provided by the taxpayer.

[73] Reg. Sec. 1.472-2(c).

[74] Sec. 472(d).

b. Does a taxpayer's accounting method affect the total amount of income reported over an extended time period?

c. How can the use of an accounting method affect the total amount of tax paid over time?

I:11-14 **a.** When are expenses deductible by a cash method taxpayer?

b. Are the rules that determine when interest is deductible by a cash method taxpayer the same as for other expenses?

c. Is a cash method taxpayer subject to the same rules for depreciable assets as accrual method taxpayers?

I:11-15 Who may use the completed contract method of reporting income from long-term contracts?

I:11-16 When is a cash method taxpayer allowed to deduct deposits?

I:11-17 What constitutes a payment in determining when a cash-basis taxpayer is entitled to deduct an expense?

I:11-18 What is meant by economic performance?

I:11-19 What conditions must be met if the economic performance test is to be waived for an accrual-method taxpayer?

I:11-20 Is an accrual method taxpayer permitted to deduct estimated expenses? What about prepaid expenses? Explain.

I:11-21 What is the significance of the *Thor Power Tool Co.* decision?

I:11-22 **a.** How are overhead costs treated in determining a manufacturing company's inventory?

b. Do retailers have a similar rule?

c. Are these rules the same as for financial accounting? If not, explain.

I:11-23 What transactions are subject to the long-term contract method of reporting?

I:11-24 **a.** What conditions must be met in order to use the installment method?

b. Why would a taxpayer elect not to use the installment method?

I:11-25 What is the impact of having the entire gain on an installment sale consist of ordinary income from depreciation recapture?

I:11-26 What impact does the gifting of an installment obligation have on the donor?

I:11-27 What treatment is given to an installment sale involving related people?

I:11-28 What is the primary impact of the imputed interest rules on installment sales?

I:11-29 What changes in accounting method can be made without IRS approval?

I:11-30 Can the IRS require a taxpayer to change accounting methods?

I:11-31 Explain the purpose of the four-year method used in computing the tax resulting from a net adjustment due to a change in accounting methods.

I:11-32 If a taxpayer changes the method of accounting used for financial reporting purposes, must the taxpayer also change his or her method of accounting for tax purposes?

ISSUE IDENTIFICATION QUESTIONS

I:11-33 Judy's Cars, Inc., sells collectible automobiles to consumers. She employs the specific identification inventory valuation method. Prices are negotiated by Judy and individual customers. Judy accepts trade-ins when she sells an automobile. Judy negotiates the allowance for trade with the customer. Occasionally, Judy finds that it can take two or three years to sell a given automobile. Judy now has four automobiles that she has held for over two years. She expects to eventually sell those automobiles, but expects that they will sell for less than their original cost. What tax issues should Judy consider?

I:11-34 Lana operates a real estate appraisal service business in a small town serving local lenders. After noting that lenders must pay to bring in a surveyor from out of town, she completes a course and obtains a surveyor's license that enables her to provide this service also. She now provides both services as a proprietor. What tax issues should Lana consider?

I:11-35 John owns a small farm on a lake. A local developer offers John $400,000 cash for his farm. The developer believes John's farm will be very attractive to home buyers because it is on a lake. After John turns down the initial offer, the developer offers to pay John $250,000 plus an amount equal to 10% of the selling price for the homes that are developed and sold. Identify the tax issues John should consider if he accepts the offer.

I:11-36 Lee is starting a small lawn service. On the advice of his accountant, Lee has formed a corporation and made an S corporation election. The accountant has asked Lee to consider electing a fiscal year ending on the last day in February. The accountant pointed out that Lee's business is likely to slow down in the winter. Also, the accountant indicated that the February year end would permit the accountant to do Lee's accounting work after the busy season in accounting is over. What tax issues should Lee consider?

PROBLEMS

I:11-37 *Allowable Taxable Year.* For each of the following cases, indicate whether the taxpayer has selected an allowable tax year in an initial year. If the year selected is not acceptable, indicate what an acceptable year would be.

a. A corporation selects a January 15 year-end.
b. A corporation selects a March 31 year-end.
c. A corporation selects a year that ends on the last Friday in March.
d. A partnership selects a year that ends on December 31 and has three equal partners whose years end on March 31, April 30, and June 30.
e. An S corporation selects a December 31 year-end.

I:11-38 *Change in Accounting Period.* In which of the following instances is a taxpayer permitted to change accounting periods without IRS approval?

a. A calendar-year taxpayer who wishes to change to a year that ends on the last Friday in December.
b. ABC Partnership has filed its tax return using a fiscal-year ending on March 31 for over 40 years. The partnership wishes to change to a calendar year-end that coincides with its partners' year-end.
c. Iowa Corporation, a newly acquired subsidiary, wishes to change its year-end to coincide with its parent.

I:11-39 *Annualization.* Each of the following cases involves a taxable year of less than 12 months. In which situations is annualization required?

a. A new corporation formed in September elects a calendar year.
b. A calendar-year individual dies on June 15.
c. Jean, who has been using a calendar year, marries Hank, a fiscal-year taxpayer. Soon after the marriage, Jean changes her tax year to coincide with her husband's tax year.
d. A calendar-year corporation liquidates on April 20.

I:11-40 *Short Period Return.* Lavanya, a single individual, is a practicing accountant. She obtains permission to change her tax year from the calendar year to a year ending July 31. Her practice income for the seven months ending July 31 is $38,500. In addition, Lavanya has $3,000 of interest income and $6,500 of itemized deductions. What is her tax for the short period? Ignore the deduction for one-half of the self-employment tax.

I:11-41 *Cash Basis Expenses.* How much of the following expenses are currently deductible by a cash basis taxpayer?

a. Medical prescriptions costing $20 paid by credit card (medical expenses already exceed the AGI floor).
b. Prepaid interest (not related to points) of $200 on a residential loan.
c. Taxpayer borrows $300 from the bank to make a charitable contribution. The $300 is paid to the charitable organization before the end of the tax year.
d. Taxpayer gives a note to his church indicating an intent to contribute $300.
e. A calendar-year individual mails a check for $200 to his church on December 31. The check is postmarked December 31 and clears the bank on January 4.

I:11-42 *Economic Performance.* In light of the economic performance requirement, how much is deductible by the following accrual-basis corporate taxpayers this year?

a. Camp Corporation sells products with a one-year warranty. Camp estimates that the warranty costs on products sold during this year will amount to $80,000. Camp performs $38,000 of warranty work on products sold last year and $36,000 of warranty work on products sold this year.
b. Data Corporation agrees to pay $10,000 this year and $10,000 next year to a software developer. The developer completes all work on the software and delivers the product to Data this year.
c. Palm Corporation pays $5,000 to a supplier to guarantee delivery of raw materials. The $5,000 is refundable if Palm decides not to acquire the materials.
d. This year North Corporation pays a $1,000 security deposit on space it rents for a new office. In addition, North pays current year rent of $18,000. The security deposit is refundable if the property is returned in good condition.

I:11-43 *Manufacturing Inventory.* Which of the following costs must be included in inventory by a manufacturing company subject to the UNICAP rules?

- **a.** Raw materials
- **b.** Advertising
- **c.** Payroll taxes for factory employees
- **d.** Research and experimental costs
- **e.** Factory insurance
- **f.** Repairs to factory equipment
- **g.** Factory utility costs
- **h.** Factory rent

I:11-44 ***Single-Pool LIFO.*** Prime Corporation begins operations in late 2025. Prime decides to use the single-pool LIFO method. Year-end inventories under FIFO are as follows:

2025	$110,000
2026	134,000
2027	125,000

The price index for 2025 is 130%; for 2026, 134%; and 2027, 140%. What are 2026 and 2027 year-end inventories?

I:11-45 ***Installment Sale.*** Ace Construction Company sells a used crane to Go Construction for $80,000. The crane, which originally cost $900,000, is fully depreciated. Under Sec. 1245 depreciation recapture rules, the entire gain is taxable as ordinary income. Ace receives a down payment of $20,000 and is to receive $20,000 per year for three additional years plus interest of 8%, which is greater than the applicable federal rate.

- **a.** Compute the gain from the sale.
- **b.** How much gain is taxable in the year of the sale?
- **c.** What income does Ace report in each of the next three years?

I:11-46 ***Inventory Method.*** Zap Company manufactures computer hard drives. The cost of hard drives has been declining for years. Sales totaled $4,000,000 last year. Zap's ending inventory was valued at $300,000 under FIFO. The company's new president is trying to cut taxes and asks you whether the company should switch to LIFO. What do you recommend?

I:11-47 ***Installment Sales.*** First Company sold the following assets during the year. Indicate whether First Company can use the installment method to report each transaction. If not, how is the transaction reported? Assume First Company is an accrual basis taxpayer.

- **a.** First Company sold stock in a publicly held company costing $35,000. First Company received a $20,000 down payment and is to receive $20,000 per year for two years plus interest.
- **b.** First Company sold land costing $150,000. First Company received a $20,000 down payment and is to receive $20,000 per year for five years plus interest.
- **c.** First Company initiated credit sales of merchandise. The company previously sold merchandise only to cash customers. Cash sales this year totaled $4,000,000. Credit sales totaled $500,000. At year end, First Company has receivables of $100,000. The company expects to collect only $85,000 of the current receivables.

I:11-48 ***Installment Sale.*** In December, Dan sells unlisted stock with a cost of $14,000 for $20,000. Dan collects $5,000 down and is scheduled to receive $5,000 per year for three years plus interest at a rate acceptable to the IRS.

- **a.** How much gain must Dan recognize in the year of the sale? Assume Dan uses the installment method to report the gain.
- **b.** The following January, Dan sells the three remaining installments for a total of $13,800. How much gain or loss must Dan recognize from the sale of the remaining installments?

I:11-49 ***Repossession.*** Lina, an attorney, sold an antique rug for $45,000 that had been in her home. The rug cost Lina $12,000 several years ago. Lina collected $15,000 down and received a one-year interest bearing note for the balance. She is unable to collect the balance, and after incurring court costs of $500, she repossesses the rug. The rug is damaged when she recovers it and is now worth only $30,000.

- **a.** How much gain must Lina report in the year of the sale?
- **b.** How much gain, if any, must Lina report in the year she repossesses the rug?
- **c.** What is the basis of the rug after the repossession?

I:11-50 ***Deferred Payment Sale.*** Joe sells land with a $60,000 adjusted basis for $42,000. He incurs selling expenses of $2,000. The land is subject to a $10,000 mortgage. The buyer, who assumes the mortgage, pays $8,000 down and agrees to pay Joe $8,000 per year for three years plus interest. The installment obligations are worth $24,000.

a. How much gain or loss does Joe report in the year of the sale?
b. When does Joe report the interest income from the sale?
c. Does Joe report gain or loss when he collects the installment payments?

I:11-51 ***Imputed Interest.*** On January 30, 2025, Amy sells land to Bob for a stated price of $200,000. The full $200,000 is payable on January 30, 2027. No interest is stated. Amy, a cash-method taxpayer, purchased the land in 2020 for $130,000.
a. How much interest income must be reported by Amy on the sale? Assume a 9% rate compounded semiannually. The present value factor is 0.83856.
b. In what year is the interest reported?
c. How much gain is reported by Amy on the sale?
d. In what year is the gain reported?
e. What is Bob's basis in the land?

I:11-52 ***Change of Accounting Method.*** Dana manages real estate and is a cash method taxpayer. She changes to the accrual method in 2026. Dana's business income for 2026 is $30,000 computed on the accrual method. Her books show the following:

	December 31, 2025	*December 31, 2026*
Accounts receivable	$16,000	$25,300
Accounts payable	15,200	11,800

a. What adjustment is necessary to Dana's income?
b. How should Dana report the adjustment?

I:11-53 ***Required Payment.*** BCD Partnership has, for many years, had a March 31 year-end. The partnership's net income for the fiscal year ended March 31, 2026, is $400,000. Because of its fiscal year, BCD has $100,000 on deposit with the IRS from 2025.
a. How much must BCD add to the deposit?
b. When must BCD make the addition? Ignore the possibility that this date might be a Saturday, Sunday, or legal holiday in the District of Columbia.
c. Will the partners receive any credit for the deposit? That is, are they permitted to treat the amount as estimated payments?

I:11-54 ***Change to LIFO.*** Lance Corporation's management has asked whether they may change their inventory valuation method to LIFO. They now report their inventory using FIFO. If they can change, how would they go about it? How is the related adjustment handled?

I:11-55 ***Imputed Interest.*** Jane loans $80,000 to John, her son, to permit him to purchase a principal residence. The loan principal is secured by John's residence, but the agreement does not specify any interest. The applicable federal rate for the year is 8%. John's net investment income is $800.
a. How much interest is imputed on the loan each year?
b. Assume that the amount of the loan is $125,000. How much interest is imputed on the loan?
c. Is John allowed to deduct the imputed interest?
d. What other tax implications are there for the loan?

I:11-56 ***Long-Term Contract.*** King Construction Company is engaged in a road construction contract to build a highway over a three-year period. King will receive $11,200,000 for building five miles of highway. King estimates that it will incur $10,000,000 of costs before the contract is completed. As of the end of the first year, King incurred $3,000,000 of costs allocated to the contract.
a. How much income from the contract must King report during the first year?
b. Assume King incurs an additional $5,000,000 of costs during the second year. How much income is reported during that year?
c. Assume that King incurs an additional $2,500,000 of costs in the third and final year of the contract. How much does King report during the third year?
d. Will King receive or pay look-back interest? Explain.

COMPREHENSIVE PROBLEM

I:11-57 Dan turned age 65 and retired this year. He owned and operated a tugboat in the local harbor before his retirement. The boat cost $100,000 when he purchased it two years ago. A tugboat is 10-year property. Dan deducted $10,000 of depreciation on the boat the year he purchased it and he deducted $18,000 of depreciation last year. He did not elect Section 179 expensing or bonus depreciation. He sold the tugboat in November of this year for $90,000, collecting an $18,000 down payment. The buyer agreed to pay 8% interest annually on the unpaid balance and to pay $18,000 annually for four years toward the principal. The four $18,000 principal payments and related interest payments begin next year. Dan received $72,000 of business income and incurred other business expenses of $30,000 this year before he retired. He received Social Security benefits of $2,000 and withdrew $20,000 from a regular IRA account. He contributed $5,000 to his church, paid real property taxes of $2,000, and home mortgage interest of $6,500. Dan paid $200 of state income taxes when he filed last year's return earlier this year and he made estimated state income tax payments of $800 during this year and $220 after year end. In addition, Dan made federal estimated payments of $8,000. Dan is a single, cash basis taxpayer. Ignore self-employment taxes.

a. Compute the depreciation for the current year on the tugboat.
b. Compute the amount of gain to be reported currently on the sale of the tugboat. Assume that Dan wants to use the installment method if it can be used. The accumulated depreciation on the tugboat is subject to Sec. 1245 depreciation recapture and must be reported currently.
c. How much interest, if any, must Dan report this year?
d. What is the income from the business, excluding the gain on the sale of the tugboat?
e. What is Dan's AGI?
f. What is the amount of Dan's itemized deductions?
g. What is Dan's taxable income?

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:11-58 Leon has a substantial portfolio of stocks and bonds, as well as cash from some bonds that have recently matured. He has been looking at investing $200,000 in corporate bonds that pay 7% interest. The $14,000 of annual interest would be used to pay his 24-year-old son's tuition at State University. A friend suggested that Leon loan the money "interest free" to his son, a student who has no other income. The son would then invest the $200,000 in the corporate bonds and use the $14,000 interest to pay his tuition. Leon is in the 24% tax bracket. Would such a strategy reduce his family's tax? Assume the applicable federal rate is 6.5%.

I:11-59 Linda is selling land she has owned for many years. The land cost $80,000 and will sell for $200,000. The buyer has offered to pay $100,000 down and pay the balance next year plus interest at 8%. Assume that Linda's after-tax rate of return on investments is 10%. Would she be better off receiving the installment payments or receiving cash? Assume her ordinary income is taxed at 24% and that long-term capital gains are taxed at 15%.

TAX FORM/RETURN PREPARATION PROBLEM

I:11-60 ***Short Tax Form.*** Barbara B. Kuhn (SSN 987-65-4321) purchases a fourplex on January 8, 2021, for $175,000. She allocates $25,000 of the cost to the land, and she deducts MACRS depreciation totaling $16,364. Barbara sells the fourplex to an unrelated person on January 6, 2024, for $225,000. The buyer assumes the existing mortgage of $180,000, pays $15,000 down, and agrees to pay $15,000 per year for two years plus 12% interest. Barbara incurs selling expenses of $18,000. Complete Form 6252.

CASE STUDY PROBLEMS

I:11-61 Lavonne just completed medical school and residency. She plans to open her medical practice soon. She is not familiar with the intricacies of accounting methods and periods. On advice of her attorney, she plans to form a professional corporation (a form of organization permitted under the laws of most states that does not have the usual limited liability found with business corporations, but is taxed as a corporation). She has asked you whether she should elect a fiscal year and whether she should use the cash or accrual method of reporting income. Discuss whether the options are available to her and the implications of available choices.

I:11-62 Don owns equipment that he purchased several years ago for $400,000. Over the years, he properly deducted $110,000 of depreciation. The depreciation will have to be recaptured as ordinary income on the sale. There is a $90,000 mortgage on the property. Don has an offer for the equipment from an individual who says he will pay $100,000 down and $100,000 per year for five years. There is no mention of interest. As the mortgage is nonassumable, Don will pay off the mortgage using most of the down payment. Don is age 61, and proceeds from the sale along with a pension from his employer will provide for his retirement. Don plans to retire next year. He currently has a 24% marginal tax rate. Discuss the tax implications of the sale. Is there anything Don can do to improve his situation?

I:11-63 Troy Tools manufactures over 100 different hand tools used by mechanics, carpenters, and plumbers. Troy's cost accounting system has always been very simple. The costs allocated to inventory have included only materials, direct labor, and factory overhead. Other overhead costs such as costs of the personnel department, purchasing, payroll, and computer services have never been treated as manufacturing overhead even though many of the activities of the departments relate to the manufacturing operations. You are preparing Troy's tax return for the first time and determine that the company is not following the uniform capitalization rules prescribed in the tax law. You have explained to the company's president that there is a problem, and she is reluctant to change accounting methods. She says allocating these costs to the many products the company makes will be a time-consuming and expensive process. She feels that the cost of determining the additional amounts to include in inventory under the uniform capitalization rules will probably be more than the additional tax that the company will pay. What is the appropriate way to handle this situation? (See the *Statements on Standards for Tax Services* section in Chapter I:15 for a discussion of these issues.)

TAX RESEARCH PROBLEMS

I:11-64 Eagle and Hill Corporations discuss the terms of a land sale, and they agree to a price of $230,000. Eagle wants to use the installment sale method, but is not sure Hill is a reliable borrower. As a result, Eagle requires Hill to place the entire purchase price in escrow to be released in five yearly installments by the escrow agent. Is the installment method available to Eagle?

A partial list of research sources is:

- Rev. Rul. 77-294, 1977-2 C.B. 173
- Rev. Rul. 79-91, 1979-1 C.B. 179
- *H. O. Williams v. U.S.*, 46 AFTR 1725, 55-1 USTC ¶9220 (5th Cir., 1955)

I:11-65 Texas Corporation disassembles old automobiles for the purpose of reselling their components (i.e., different types of metals, plastics, rubber, and other materials). Texas sells some of the items for scrap, but must pay to dispose of environmentally hazardous plastics and rubber. At year-end, Texas Corporation has a difficult time determining the cost of the individual parts that are stacked in piles. In fact, it would be very expensive to even weigh some of the materials on hand. Texas has followed the practice of having two experienced employees estimate the weight of different stacks and then price them based on quotes found in trade journals. If Texas must pay to dispose of an item, it is assigned a value of zero. In other words, Texas does not value its inventory using standard FIFO or LIFO methods. Is such a practice acceptable?

A partial list of research sources is:

- Reg. Secs. 1.471-2(a) and 1.471-3(d)
- *Morrie Chaitlen*, 1978 PH T.C. Memo ¶78,006, 37 TCM 17
- *Justus & Parker Co.*, 13 BTA 127 (1928)

I:11-66 Apple Corporation has never been audited before the current year. An audit is now needed from a CPA because the company is expanding rapidly and plans to issue stock to the public in a secondary offering. A CPA firm has been doing preliminary evaluations of the Apple Corporation's accounts and records. One major problem involves the valuation of inventory under GAAP. Apple Corporation has been valuing its inventory under the cost method and no write-downs have been made for obsolescence. A review of the inventory indicates that obsolescence and excess spare parts in the inventory are two major problems. The CPA states that for GAAP the company will be required to write down its inventory by 25% of its stated amount, or $100,000, and charge this amount against net income from operations for the current period. Otherwise, a "clean opinion" will not be rendered. The company controller asks your advice regarding the tax consequences from the obsolescence and spare parts inventory write-downs for the current year and the procedures for changing to the LCM method for tax purposes. Apple Corporation is on a calendar year, and the date of your contact with the company is December 1 of the current year.

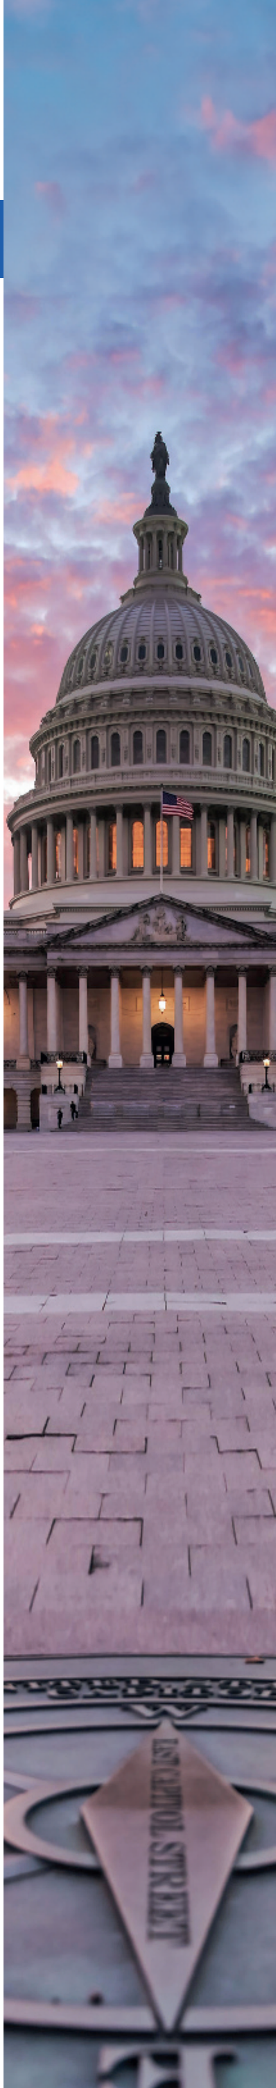
CHAPTER

12

PROPERTY TRANSACTIONS: NONTAXABLE EXCHANGES



LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Examine the tax consequences arising from a like-kind exchange
2. Determine whether gain from an involuntary conversion may be deferred
3. Determine when a gain resulting from the sale of a principal residence is excluded
4. Describe tax planning considerations for nontaxable exchanges
5. Describe compliance and procedural considerations for nontaxable exchanges

James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Like-Kind Exchanges...12-2
Involuntary Conversions...12-9
Sale of Principal Residence...12-15
Tax Planning Considerations...12-20
Compliance and Procedural Considerations...12-22

Taxpayers who sell or exchange property for an amount greater or less than their basis in that property have a realized gain or loss on the sale or exchange. Almost any transfer of property is treated as a sale or other disposition (see Chapter I:5). The realized gain or loss must be recognized unless a specific Code section provides for nonrecognition treatment. If the realized gain or loss is not recognized at the time of the transaction, the nonrecognized gain or loss may be deferred in some cases and excluded in others.

The general rules related to the computation of realized and recognized gains or losses are covered in Chapter I:5. Three of the most common transactions that may result in *nonrecognition* of a realized gain or loss are explained in this chapter:

- Like-kind exchanges under Sec. 1031 (deferred gain or loss)
- Involuntary conversions under Sec. 1033 (deferred gain)
- Sales of a personal residence under Sec. 121 (excluded gain)

KEY POINT

The transactions examined in this chapter override the normal rule that provides for the recognition of realized gains and realized losses on property used in a business or held for investment.

Nonrecognition of gain treatment for like-kind exchanges, involuntary conversions, and the sale of a residence may be partially justified by the fact that taxpayers may lack the wherewithal to pay the tax despite the existence of a realized gain. For example, a taxpayer who realizes a gain due to an involuntary conversion of property (damage from fire, storm, etc.) may have to use the amount received to replace the converted property.

A typical requirement in a nontaxable exchange is that the taxpayer is required to maintain a continuing investment in comparable property (e.g., a building is exchanged for another building). In essence, a change in form rather than a change in substance occurs.

A transaction generally considered to be nontaxable may be taxable in part. In a like-kind exchange of real property, the taxpayer may also receive money or property that is not like-kind property. If non–like-kind property or money is received, the realized gain is taxable but not more than the sum of the money and the fair market value (FMV) of the non–like-kind property received.[1]

LIKE-KIND EXCHANGES

OBJECTIVE 1

Examine the tax consequences arising from a like-kind exchange

Section 1031(a) provides that "No gain or loss shall be recognized on the exchange of real property held for productive use in a trade or business or for investment if such real property is exchanged solely for real property of like-kind which is to be held either for productive use in a trade or business or for investment."[2]

In a **like-kind exchange**, both the property transferred and the property received must be held either for productive use in the trade or business or for investment. An exchange of real property held primarily for sale is not a like-kind exchange.[3]

EXAMPLE I:12-1 ▶ Tom owns land used in his trade or business. He exchanges the land for other land, which is to be held for investment. No gain or loss is recognized by Tom because he has exchanged property used in a trade or business for like-kind property to be held for investment. ◀

EXAMPLE I:12-2 ▶ Joyce owns land used as a baseball field and held for personal use. She exchanges the land, with a $10,000 basis, for stock of AT&T with a $12,000 FMV. The stock is held for investment. A $2,000 gain is recognized because the land is not used in Joyce's trade or business or held for investment. The exchange is not a like-kind exchange because neither personal-use assets nor stock qualify as like-kind property. ◀

Section 1031 is not an elective provision. If the exchange qualifies as a like-kind exchange, nonrecognition of gain or loss is mandatory. To qualify for like-kind exchange treatment, a direct exchange must occur and the property exchanged must be **like-kind property**. A taxpayer who prefers to recognize a loss on an exchange must structure the transaction to avoid having the exchange qualify as a like-kind exchange.

ADDITIONAL COMMENT

The mandatory nonrecognition of loss under Sec. 1031 can be avoided by selling the old property in one transaction and buying the new property in a separate, unrelated transaction.

LIKE-KIND PROPERTY DEFINED

Character of the Property. To be a nontaxable exchange under Sec. 1031, the property exchanged must be like-kind. The Treasury Regulations specify that "the words 'like-kind' have reference to the nature or character of the property and not to its grade or quality."[4] Thus, exchanges of real property qualify even if the properties are dissimilar.

---

[1] Sec. 1031(b).
[2] Sec. 1031(a).
[3] Sec. 1031(a)(2).

EXAMPLE I:12-3 ▶ Eric owns an apartment building held for investment. Eric exchanges the building for farmland to be used in his trade or business. The exchange is a like-kind exchange because both the building and the farmland are classified as real property and both properties are used either in business or held for investment. ◀

EXAMPLE I:12-4 ▶ Trail Corporation exchanges improved real estate for unimproved real estate, both of which are held for investment. The exchange is a like-kind exchange.[5] ◀

ADDITIONAL COMMENT

Real property is often referred to as real estate.

Location of the Property. Transfers of real property located in the U.S. and real property located outside the U.S. after July 9, 1989, are not like-kind exchanges.

Property Must Be the Same Class. An exchange is not a like-kind exchange when property of one class is exchanged for property of a different kind or class.[6] For example, if real property is exchanged for personal property (or vice versa), no like-kind exchange occurs.[7]

EXAMPLE I:12-5 ▶ Gail exchanges an office building with a $400,000 adjusted basis for an airplane with a $580,000 FMV to be used in business. This is not a like-kind exchange because the office building is real property and the airplane is personal property. Gail must recognize a $180,000 ($580,000 − $400,000) gain. ◀

Exchange of Personal Property Which Is Not Personal-Use Property Prior to the Tax Cuts and Jobs Act, a like-kind exchange of personal property used in a trade or business or held for investment qualified for nonrecognition of gain or loss under the like-exchange rules. However, after 2017, an exchange of like-kind assets such as equipment, livestock, computers and other personal property no longer qualifies for nonrecognition of gain or loss.

EXAMPLE I:12-6 ▶ Wyatt exchanged a business truck in 2017 for another truck to use in his business. This was an exchange of qualifying like-kind property, and no gain or loss was recognized. Today, this exchange would not qualify as a like-kind exchange. ◀

Exchange of Securities. The like-kind exchange rules do not apply to stocks, bonds, or notes.[8] However, Sec. 1036 provides that no gain or loss is recognized on the exchange of common stock for common stock or preferred stock for preferred stock in the same corporation. Sec. 1036 applies even if voting common stock is exchanged for nonvoting common stock of the same corporation. The nontaxable exchange of stock of the same corporation may be between two stockholders or a stockholder and the corporation.[9]

Section 1036 does not apply to exchanges of common stock for preferred stock; stock for bonds of same corporation; or any kind of stock in different corporations.

EXAMPLE I:12-7 ▶ Kelly owns common stock of Best Corporation. Best issues class B common stock to Kelly in exchange for her common stock. No gain or loss is recognized because this is an exchange of common stock for common stock in the same corporation. If Best issues its preferred stock for Kelly's common stock, Kelly will have a recognized gain or loss unless the exchange is part of a tax-free reorganization. ◀

---

[4] Reg. Sec. 1.1031(a)-1(b).

[5] *Ibid.*

[6] *Ibid.*

[7] Real property includes land and property attached to land in a relatively permanent manner. Personal property that is affixed to real property in a relatively permanent manner is a fixture and is considered part of the real property. Personal property is all property that is not real property or a fixture.

[8] Reg. Sec. 1.1031(a)-1(a)(1)(ii).

[9] Reg. Sec. 1.1036-1(a).

EXAMPLE I:12-8 ▶ Shirley owns 100 shares of Top Corporation common stock. The stock has a $40,000 adjusted basis and a $50,000 FMV. Bob owns 100 shares of Star Corporation common stock with a $50,000 FMV. If Shirley and Bob exchange their stock, the exchange is taxable, and Shirley has a $10,000 ($50,000 − $40,000) recognized gain. The exchange is neither a like-kind exchange nor an exchange of stock for stock of the same corporation. ◀

A DIRECT EXCHANGE MUST OCCUR

To qualify as a like-kind exchange, a direct exchange of property must occur.[10] Thus, the sale of property and the subsequent purchase of like-kind property does not qualify as a like-kind exchange unless the two transactions are interdependent.

EXAMPLE I:12-9 ▶ Natalie sells a building used in her business to Rashad for an amount greater than the building's adjusted basis. After the sale, Natalie purchases another building for her business from David. The gain is recognized because these two transactions do not qualify as an exchange of like-kind property. ◀

A sale and a subsequent purchase may be treated as an exchange if the two transactions are interdependent. The IRS indicates that a nontaxable exchange may exist when the taxpayer sells property to a dealer and then purchases like-kind property from the same dealer.[11]

KEY POINT

Transfers of property in a three-party exchange must be part of a single, integrated plan. It is important that the taxpayers can show their intent to enter into a like-kind exchange even though contractual interdependence is not necessary to the finding of an exchange.

THREE-PARTY EXCHANGES

The typical two-party exchange is not always practical. If both parties do not own like-kind property that meets each other's needs, a three-party exchange might be necessary. A three-party exchange is also useful when the taxpayer is willing to exchange property for like-kind property but is not willing to sell the property to a prospective buyer. The taxpayer's unwillingness to sell the property may be motivated by the desire to avoid an immediate tax on a gain resulting from the sale of the property. Therefore, the taxpayer may arrange to have the prospective buyer purchase property from a third party that fulfills the taxpayer's needs. The three-party exchange can be an effective way of allowing the taxpayer to consummate a like-kind exchange.

EXAMPLE I:12-10 ▶ Kathy owns a farm in Nebraska, which Dick offers to purchase. Kathy is not willing to sell the farm but is willing to exchange the farm for an apartment complex in Arizona. The complex is available for sale. Dick purchases the apartment complex in Arizona from Allyson and transfers it to Kathy in exchange for Kathy's farm. The farm and the apartment complex each have a $900,000 FMV. For Kathy, the transaction qualifies as a like-kind exchange because it is a direct exchange of business real property (the farm) for investment real estate (the apartment complex). For Dick, the exchange is not a like-kind exchange. ◀

ADDITIONAL COMMENT

In Example I:12-10, Dick is not likely to have a realized gain because his basis for the purchased apartment complex is probably the same as the FMV of Kathy's farm.

In the example above, the exchange is convenient for all the parties. However, it is not always this convenient to execute a three-party exchange. For example, Kathy may want to own an apartment complex in Arizona, but the property she prefers may not be currently available. In this case, a nonsimultaneous exchange may occur.

TAX STRATEGY TIP

Deferred like-kind exchanges are typically used for real estate transactions. A taxpayer who has highly appreciated real estate can use a deferred, three-party, like-kind exchange to exchange the highly appreciated real estate for other real estate that is more desirable to him.

Nonsimultaneous Exchange. A nonsimultaneous exchange is treated as a like-kind exchange if the exchange is completed within a specified time period. The property to be received in the exchange must be identified within 45 days after the date of the transfer of the property relinquished in the exchange. The replacement property must be received within the earlier of 180 days after the date the taxpayer transfers the property relinquished in the exchange or the due date for filing a return (including extensions) for the year in which the transfer of the relinquished property occurs.[12]

---

[10] Sec. 1031(a).
[11] Rev. Rul. 61-119, 1961-1 C.B. 395.
[12] Secs. 1031(a)(3)(A) and (B).

EXAMPLE I:12-11 ▶ On May 5, 2025, Joal transfers property to Lauren, who transfers cash to an escrow agent. The escrow agent is to purchase suitable like-kind property for Joal. Joal does not have actual or constructive receipt of the cash during the delayed period. To be a like-kind exchange for Joal, the suitable like-kind property must be identified by June 19, 2025 (45 days after the transfer), and Joal must receive the property by November 1, 2025 (180 days after the transfer). ◀

EXAMPLE I:12-12 ▶ Assume the same facts as in the above example except that the transfer by Joal occurs on November 8, 2025. To be a like-kind exchange for Joal, the suitable like-kind property must be identified by December 23, 2025, and Joal must receive the property by April 15, 2026, unless Joal files an automatic six-month extension for the filing of his return (i.e., the due date is extended until October 15, 2026. In such a case, the property must be received no later than 180 days following the transfer of the property relinquished in the exchange, or by May 7, 2026 (i.e., 180 days after November 8, 2025). ◀

RECEIPT OF BOOT

Taxpayers who want to exchange property do not always own property of equal value. To complete the exchange, non–like-kind property or money may be given or received. Cash and non–like-kind property constitute **boot.**

Gain is recognized to the extent of the boot received. However, the amount of recognized gain is limited to the amount of the taxpayer's realized gain.[13] In effect, the realized gain serves as a ceiling for the amount of the recognized gain. The receipt of boot as part of a nontaxable exchange does not cause a realized loss to be recognized.[14]

TYPICAL MISCONCEPTION

In calculating the amount of gain to be recognized when boot is received, a proportionate approach is used sometimes for financial accounting purposes.

EXAMPLE I:12-13 ▶ Mario exchanges business real estate with a $50,000 adjusted basis for $10,000 cash and business real estate with a $65,000 FMV. The realized gain is $25,000 ($75,000 − $50,000). The recognized gain is $10,000 because the $10,000 of boot received is less than the $25,000 realized gain. ◀

EXAMPLE I:12-14 ▶ Mary exchanges business real estate with a $70,000 adjusted basis for $20,000 cash and business real estate with a $65,000 FMV. Her realized gain is $15,000 ($85,000 − $70,000). The $20,000 of boot received is more than the $15,000 realized gain, so $15,000 of gain is recognized. ◀

TYPICAL MISCONCEPTION

It is possible to erroneously assume that the receipt of boot causes the recognition of loss.

Taxing part or all of the gain when cash is received in like-kind exchanges is consistent with the wherewithal-to-pay concept. However, boot may not always be in the form of a liquid asset. If non–like-kind property other than cash is received as boot, the amount of the boot is the property's FMV.

EXAMPLE I:12-15 ▶ Jane exchanges land held as an investment with a $70,000 basis for other land to be held for investment with a $100,000 FMV and a motorcycle for personal use with a $2,000 FMV. Personal-use property is non–like-kind property and constitutes boot. Jane's realized gain is $32,000 [($100,000 + $2,000) − $70,000]. The amount of boot received is equal to the FMV of the motorcycle. The recognized gain is $2,000, the lesser of boot received ($2,000) or realized gain ($32,000). ◀

EXAMPLE I:12-16 ▶ Assume the same facts in Example I:12-15 except that Jane uses the motorcycle in a business. The motorcycle is boot, and a $2,000 gain is still recognized because the exchange of real property for personal property is not a like-kind exchange. ◀

SELF-STUDY QUESTION

Why is the relief of a liability treated as if one has received cash?

ANSWER

If it were not treated as such, a taxpayer could receive cash shortly before the exchange by borrowing from a bank, using the property as collateral. Then, if the taxpayer is relieved of the debt in the like-kind exchange, he or she would still have cash without having paid a tax on the gain.

Property Transfers Involving Liabilities. If a liability is assumed (or the property is taken subject to a liability), the amount of the liability is considered money received by the taxpayer on the exchange.[15] One who assumes the debt or takes the property subject to a liability is treated as having paid cash, while the party that is relieved of the debt is treated as having received cash. If each party assumes a liability of the other party, only the net liability given or received is treated as boot.[16]

---

[13] Sec. 1031(b).
[14] Sec. 1031(c).

[15] Sec. 1031(d). If a liability is assumed, the taxpayer agrees to pay the debt. If property is taken subject to the liability, the taxpayer is responsible for the debt only to the extent that the property could be used to pay the debt.
[16] Reg. Sec. 1.1031(b)-1(c).

EXAMPLE I:12-17

Mary exchanges land with a $550,000 FMV that is used in her business for Doug's building, which has a $450,000 FMV. Mary's basis in the land is $400,000, and the land is subject to a liability of $100,000, which Doug assumes. Mary's realized gain is $150,000 [($450,000 + $100,000) − $400,000]. Because assumption of the $100,000 liability is treated as boot, Mary recognizes a $100,000 gain.

EXAMPLE I:12-18

Matt owns an office building with a $700,000 basis, which is subject to a liability of $200,000. Susan owns an apartment complex with a $900,000 FMV, which is subject to a $150,000 liability. Matt and Susan exchange buildings and assume the related liabilities. Matt's realized gain is $250,000 [($900,000 + $200,000) − ($700,000 + $150,000)]. Matt receives boot of $50,000 ($200,000 − $150,000) and recognizes a $50,000 gain.

BASIS OF PROPERTY RECEIVED

Like-Kind Property Received. The basis of property received in a nontaxable exchange is equal to the adjusted basis of the property exchanged increased by gain recognized and reduced by any boot received or loss recognized on the exchange.[17]

Basis of property received in a nontaxable exchange = Basis of property exchanged − Boot received + Gain recognized − Loss recognized[18]

EXAMPLE I:12-19

The Belken Corporation exchanged a motel in Oklahoma with a basis of $700,000 for another motel in Texas with an $850,000 FMV and cash of $40,000. The realized gain is $190,000 [($850,000 + $40,000) − $700,000], and $40,000 of the gain is recognized because the boot received is less than the realized gain. Belken's basis for the motel in Texas is $700,000 ($700,000 basis of property exchanged − $40,000 of boot received + $40,000 of gain recognized).

ADDITIONAL COMMENT

In effect the formula used to calculate the basis of the new property involves nothing more than journalizing the transaction and adjusting the basis of the new property by an amount needed to make the entry balance.

The basis of the like-kind property received can also be computed by subtracting the unrecognized gain from its FMV or by adding the unrecognized loss to its FMV. Belkin's $700,000 basis for the motel in Example I:12-19 may be computed by subtracting the $150,000 of unrecognized gain from the $850,000 FMV.

EXAMPLE I:12-20

The ABC Partnership exchanged an office building in Kentucky with an adjusted basis of $1,000,000 for another office building in Ohio with a FMV of $900,000 and cash of $80,000. The $20,000 realized loss is not recognized [($900,000 + $80,000) − $1,000,000]. The receipt of boot does not cause a realized loss to be recognized. ABC's basis for the office building in Ohio is $920,000 ($1,000,000 basis of property exchanged − $80,000 of boot received).

KEY POINT

The basis adjustment is the mechanism that ensures that gain or loss is temporarily postponed rather than permanently excluded.

Realized gains and losses resulting from nontaxable exchanges are deferred. This deferral is reflected in the basis of property received and is illustrated in the two preceding examples. In Example I:12-19, the $150,000 ($190,000 − $40,000) unrecognized gain may be recognized when the motel in Texas is sold or exchanged in a taxable transaction, because the basis of the replacement property is less than its FMV by the amount of the deferred gain. For example, if the motel in Texas is sold in a taxable transaction for its $850,000 FMV, the $150,000 ($850,000 − $700,000 basis) of previously unrecognized gain would be recognized. In Example I:12-20, the $20,000 unrecognized loss is reflected in the basis of the Ohio office building. If ABC Partnership sells the Ohio office building for its $900,000 FMV, a $20,000 loss ($900,000 − $920,000 basis) is recognized.

If more than one item of like-kind property is received, the basis is allocated among the properties in proportion to their relative FMVs on the date of the exchange.

---

[17] Sec. 1031(d).

[18] A loss is recognized only when the taxpayer transfers boot with a basis greater than its FMV. Transfers of non–like-kind property (i.e., boot) are discussed in a separate section of this chapter.

EXAMPLE I:12-21 ▸ The Pickens Corporation exchanged land with a basis of $360,000 held as an investment for a farm that contained a barn with a FMV of $100,000 and land with a FMV of $900,000. The $640,000 realized gain is not recognized. Pickens' basis for the barn is $36,000 [($100,000/$1,000,000) × $360,000], and the basis for the land is $324,000 [($900,000/$1,000,000) × $360,000]. ◂

Non–Like-Kind Property Received. The basis of non–like-kind property received is "an amount equivalent to its FMV at the date of the exchange."[19]

EXAMPLE I:12-22 ▸ Rachel exchanges land with a basis of $80,000 and held as an investment for land with a FMV of $150,000 and marketable securities with a FMV of $22,000. Rachel's realized gain is $92,000 [($150,000 + $22,000) − $80,000], and $22,000 of the gain is recognized due to the receipt of boot. Rachel's basis for the marketable securities is $22,000 and the basis of the land received is $80,000 ($80,000 basis of land exchanged − $22,000 boot received + $22,000 gain recognized). ◂

KEY POINT

Rachel had basis of $80,000 before the exchange. Since she recognized gain of $22,000, the total basis of the two assets should be $102,000.

STOP & THINK

Question: Chris Reedy owns 40 houses that he uses as rental property. All houses have a FMV greater than their adjusted basis. Chris wishes to diversify his investments and is considering selling ten of his houses and using the proceeds to purchase other types of investment assets such as stocks, bonds, commercial parking lots and land that he expects to increase in value. He asks you for advice.

Solution: If he sells the ten houses, he will have taxable gains. He could defer the gains by exchanging the houses for like-kind property. Stocks and bonds are not like-kind property, but the commercial parking lots and the land should qualify as like-kind property, therefore the tax law encourages him to exchange the houses for the commercial parking lot and/or the land.

ADDITIONAL COMMENT

The running of the two-year holding period is suspended during any period in which the property holder's risk of loss is substantially diminished.

EXCHANGES BETWEEN RELATED PARTIES

Prior to 1990, related taxpayers could often use the like-kind exchange provisions to lower taxes because the tax basis for the property received is determined by the basis of the property exchanged. Related taxpayers could take advantage of the shift in tax basis to transfer a gain on a subsequent sale to a related party.[20] However, exchanges of property between related parties are not like-kind exchanges under current law if either party disposes of the property within two years of the exchange. Any gain resulting from the original exchange is recognized in the year of the subsequent disposition.[21] Dispositions due to death or involuntary conversion, or for non–tax avoidance purposes are disregarded.[22]

EXAMPLE I:12-23 ▸ Melon Corporation, 100% owned by Linda, owned land with a basis of $200,000 that was held for investment. Rick wanted to purchase the land for $900,000. Linda owned an office building with a basis of $750,000 and a FMV of $900,000. Instead of selling the land to Rick, Melon Corporation exchanged the land for Linda's office building in December 2024.

Two months later, Linda sells the land to Rick for $900,000. The exchange of the land for the office building is not a like-kind exchange because one of the related parties disposes of the property within two years of the exchange. In 2025, Melon's recognized gain on the exchange of the land is $700,000 ($900,000 − $200,000) and Linda's recognized gain on the exchange of the office building is $150,000 ($900,000 − $750,000). Because Linda's basis for the land is now $900,000, no gain is recognized on the sale of the land to Rick. ◂

ADDITIONAL COMMENT

If Linda in Example I:12-23 sells the land to Rick for $910,000, she has a $150,000 recognized gain on the exchange and a $10,000 recognized gain on the sale.

If the parties in Example I:12-23 were not related, a like-kind exchange occurred in 2024 and Linda's gain on the sale of the land to Rick is $150,000 ($900,000 − $750,000). Of course, the exchange is not a like-kind exchange if Linda does not hold the land for investment or for use in her trade or business after receiving it from Melon.

---

[19] Reg. Sec. 1.1031(d)-1(c).

[20] The definition of *related parties* is the same as those for Sec. 267(a) which is discussed in Chapter I:6, and includes brothers, sisters, parents, children, and corporations where the taxpayer owns at least 50% in value. (See Sec. 1031(f)(3).)

[21] Sec. 1031(f)(1)(C).

[22] Sec. 1031(f)(2).

TRANSFER OF NON–LIKE-KIND PROPERTY

In all of the preceding examples that include a transfer of boot, the transferor (i.e., the taxpayer) received boot. If the taxpayer transfers non–like-kind property, gain or loss equal to the difference between the FMV and the adjusted basis of the non–like-kind property surrendered must be recognized. However, losses on the sale or exchange of personal use assets are not recognized, so the loss is not recognized if the non–like-kind property is a personal use asset.

EXAMPLE I:12-24 ▶ Shirley exchanges land with a $30,000 basis ($46,000 FMV) and marketable securities with a $10,000 basis ($14,000 FMV) to David for land with a $60,000 FMV in a transaction that otherwise qualifies as a like-kind exchange. Because the non–like-kind property that Shirley transfers has a FMV greater than its basis, she recognizes $4,000 ($14,000 − $10,000) of gain. Shirley's basis for the land received is $44,000 ($30,000 + $10,000 + $4,000), which is the basis of both assets exchanged plus the gain recognized on the exchange. ◀

EXAMPLE I:12-25 ▶ Paul exchanges timberland held as an investment for undeveloped land with a $200,000 FMV to use in his business. Paul's basis for the timberland is $125,000. His tractor with a $6,000 basis and a $4,000 FMV is also transferred. Because the non–like-kind property (i.e., the tractor) that Paul transfers has a FMV less than its basis, he recognizes a $2,000 ($4,000 − $6,000) loss. Paul's basis for the undeveloped land is $129,000 ($125,000 + $6,000 − $2,000). ◀

In Example I:12-25, Paul recognizes a loss on the non–like-kind property he surrenders, despite receiving property in the aggregate with a FMV greater than the total adjusted basis of the transferred assets. Paul is actually making two exchanges. His exchange of timberland with a basis of $125,000 for undeveloped land with a $196,000 FMV is a like-kind exchange, but his exchange of the tractor with a basis of $6,000 for undeveloped land with a $4,000 FMV is a taxable exchange. In Example I:12-26 below, Ed also makes two exchanges. He has a realized and recognized gain as well as a realized but unrecognized loss.

EXAMPLE I:12-26 ▶ Ed owns land used in business with a $20,000 adjusted basis and a $15,000 FMV and marketable securities with a $10,000 basis and an $18,000 FMV. Ed exchanges the marketable securities and the land for other land with a $33,000 FMV. Although the net realized gain is $3,000 [$33,000 − ($20,000 + $10,000)], Ed recognizes an $8,000 gain because he has transferred non–like-kind property with a $10,000 basis and an $18,000 FMV. The $5,000 realized loss on the transfer of land is not recognized due to the nonrecognition of gain or loss rules of Sec. 1031. Ed's basis for the land received is $38,000 ($20,000 + $10,000 + $8,000). ◀

KEY POINT

A taxpayer who exchanges like-kind property and non–like-kind property is actually making two exchanges.

ADDITIONAL COMMENT

The holding period is relevant only when the asset is a capital asset or a Sec. 1231 asset.

HOLDING PERIOD FOR PROPERTY RECEIVED

Like-Kind Property. The holding period of like-kind property received in a nontaxable exchange includes the holding period of the property exchanged if the like-kind property surrendered is a capital asset or an asset that is Sec. 1231 property. In essence, the holding period of the property exchanged carries over to the holding period of the like-kind property received.[23] The rule regarding the holding period carryover is consistent with the notion of a continuing investment in the underlying property that has been transferred.

Boot. The holding period for the boot property received begins the day after the date of the exchange.[24]

EXAMPLE I:12-27 ▶ Mario owns land acquired on May 1, 2006, as an investment. He exchanges the land on April 10, 2025, for a warehouse and marketable securities to be held as investments. The holding period for the warehouse begins on May 1, 2006, and the holding period for the marketable securities starts on April 11, 2025. ◀

The like-kind exchange provisions are summarized in Topic Review I:12-1.

---

[23] Sec. 1223(1) and Reg. Sec. 1.1223-1(a).

[24] Sec. 1223 and Reg. Sec. 1.1223-1(a).

TOPIC REVIEW I:12-1

Section 1031—Like-Kind Exchanges

- Gains and losses are not recognized for like-kind exchanges.
- Nonrecognition of gains and losses is mandatory if the exchange is a like-kind exchange.
- Section 1031 applies to exchanges of real property used in a trade or business or held for investment.
- Property exchanged and received must be like-kind.
- Subject to certain time constraints, a nonsimultaneous exchange may qualify as a like-kind exchange.
- Some gain may be recognized if the taxpayer receives or gives non–like-kind property (boot) in an otherwise like-kind exchange.
- A loss may be recognized if the taxpayer transfers non–like-kind property (boot) in an otherwise like-kind exchange.
- The basis of property received in an exchange is the basis of the property exchanged less the boot received plus the gain recognized and less any loss recognized.
- The nonrecognized gain or loss is deferred.
- The holding period of like-kind property received includes the holding period of the like-kind property exchanged.
- Like-kind exchange treatment does not apply between related parties if property is disposed of within two years of exchange.

INVOLUNTARY CONVERSIONS

OBJECTIVE 2

Determine whether gain from an involuntary conversion may be deferred

Taxpayers who realize a gain due to the involuntary conversion of property may elect to defer recognition of the entire gain if qualifying replacement property is acquired within a specified time period at a cost equal to or greater than the amount realized from the involuntary conversion. No gain is recognized if the property is converted "into property similar or related in service or use to the property so converted."[25]

The opportunity provided in Sec. 1033 to defer recognition of the gain reflects the fact that the taxpayer maintains a continuing investment and may lack the wherewithal to pay tax on the gain that would otherwise be recognized. Furthermore, the involuntary conversion is beyond the taxpayer's control.

Note that the gain is deferred, not excluded. The basis of the replacement property is the property's cost reduced by the amount of gain deferred. The tax treatment for an involuntary conversion is similar to the tax treatment of a like-kind exchange.

KEY POINT

Unlike the like-kind exchange provisions which are mandatory, the involuntary conversion provisions are elective unless property is converted directly into similar property. Further, the involuntary conversion rules apply only to gains, not losses.

EXAMPLE I:12-28 ►

Lenea's warehouse with a $500,000 basis is destroyed by a hurricane. She collects $650,000 from the insurance company and purchases a new warehouse for $720,000. Lenea may elect to defer recognition of the $150,000 gain ($650,000 – $500,000). If the election is made, the basis of the new warehouse is $570,000 ($720,000 – $150,000). The $150,000 gain is merely deferred rather than excluded, because an immediate sale of the replacement property at its $720,000 FMV results in a recognized gain equal to the deferred gain on the involuntarily converted property. For example, if the new warehouse is sold for $720,000, the recognized gain is $150,000 ($720,000 – $570,000). ◄

ADDITIONAL COMMENT

Property involved in an involuntary conversion need not be used in a trade or business or held for investment to qualify for the deferral of gain.

Section 1033 does not apply to losses realized from an involuntary conversion. A taxpayer may not elect to defer recognition of a loss resulting from an involuntary conversion.

TYPICAL MISCONCEPTION

Occasionally, taxpayers fail to realize that Sec. 1033 applies only to gains, not losses.

EXAMPLE I:12-29 ►

Barry's offshore drilling rig with an $800,000 adjusted basis is destroyed by a tsunami. He collects $700,000 from the insurance company and purchases a new drilling rig for $760,000. The $100,000 loss ($700,000 – $800,000) is recognized as a casualty loss, and the basis of the new drilling rig is its $760,000 purchase price. ◄

[25] Sec. 1033(a)(1).

INVOLUNTARY CONVERSION DEFINED

ADDITIONAL COMMENT

Typically, an involuntary conversion consists of either a casualty or a condemnation.

For Sec. 1033 to apply, property must be compulsorily or involuntarily converted into money or other property. An **involuntary conversion** may be due to theft, seizure, requisition, condemnation, or destruction of the property. Destruction of the property may be complete or partial.[26] For purposes of Sec. 1033, destruction of property does not have to meet the "suddenness" test if the cause of destruction otherwise falls within the general concept of a casualty.[27]

An involuntary conversion occurs when a governmental unit exercises its power of eminent domain to acquire the taxpayer's property without the taxpayer's consent. Furthermore, the threat or imminence of requisition or condemnation of property may permit a taxpayer to defer recognition of gain from the sale or exchange of property under the involuntary conversion rules. Taxpayers who transfer property due to such a threat must be careful to confirm that a decision to acquire their property for public use has been made.[28] Written confirmation of potential condemnation is particularly helpful.[29]

EXAMPLE I:12-30 ▶ Bruce owns an automobile dealership near a state university campus. On a number of occasions, the president of the university expressed an interest in acquiring Bruce's property for additional parking space. The president is not certain about the availability of funds for the purchase, and the university is reluctant to have the property condemned for its use. Based on the university's interest in the property, Bruce sells the property to the Jet Corporation. The threat or imminence of conversion does not exist merely because the property is being considered for acquisition. The sale does not constitute an involuntary conversion.[30] ◀

Threat of Condemnation. If a threat of condemnation exists and the taxpayer has reasonable grounds to believe that the property will be condemned, Sec. 1033 applies even if the taxpayer sells the property to an entity other than the governmental unit that is threatening to condemn the property.[31]

EXAMPLE I:12-31 ▶ At its regular meeting on Tuesday night, the city commission authorized the city attorney to start the process of condemning two lots owned by Beth for use as a public park. On Wednesday afternoon, Beth sells the two lots to Marty at a gain. The sale of property to Marty is an involuntary conversion, and Beth may elect to defer recognition of the gain if she satisfies the Sec. 1033 requirements. ◀

ADDITIONAL COMMENT

If Beth does not sell the property in Example I:12-31 and it is later condemned, Marty may be able to defer part or all of the gain.

Conversion Must Be Involuntary. The conversion must be involuntary. For example, an involuntary conversion does not occur when a taxpayer pays someone to set fire to his or her building.[32] An involuntary conversion also does not occur when a taxpayer who is developing a subdivision reserves certain property for a school site and later sells the property to the school district under condemnation proceedings. In this situation, the taxpayer was required to reserve property for a school site in order to receive zoning approval for development of the subdivision.[33]

Although the typical involuntary conversion generally results from a casualty or condemnation, Sec. 1033 provides that certain transactions involving livestock are to be treated as involuntary conversions.[34] For example, the destruction or sale of livestock because of disease is an involuntary conversion.

REAL-WORLD EXAMPLE

Because of mounting losses and declining property values, a taxpayer decided to burn down his building to collect the fire insurance proceeds. Although the building was converted into money (insurance proceeds) as a result of its destruction, this conversion was not involuntary within the meaning of Sec. 1033. Rev. Rul. 82-74, 1982-1 C.B. 110.

TAX TREATMENT OF GAIN DUE TO INVOLUNTARY CONVERSION INTO BOOT

Gain may be deferred if the property is involuntarily converted into money or property that is not similar or related in service or use to the converted property.[35] The taxpayer must make a proper replacement of the converted property within a specific time period and elect to defer the gain.
